

HENRY McMASTER, Governor
BRYAN P. STIRLING, Director

April 29, 2019

VIA EMAIL

Mr. Edward R. Tallon, Sr.
South Carolina House of Representatives
Post Office Box 11867
Columbia, South Carolina 29211

RE: Follow-up to March 21, 2019 Subcommittee meeting

Dear Representative Tallon:

Please see attached responses to your follow-up from the meeting on March 21, 2019.

Early Release Inmates

1. Please provide the following information for each of the inmates released early:
 - a. Initial charge;
 - b. Amount of time served;
 - c. Amount of time remaining on sentence; and
 - d. Timeline of events since initial apprehension, including name and judicial decisions.
 - Please see attached spreadsheet.
2. For any judicial decisions which did not result in the inmate returning to SCDC, is the decision appealable and, if so, who has standing to appeal the decision? Does SCDC know if the decision will be appealed and if so, what is SCDC's understanding as to why or why not?
 - It is SCDC's opinion that the decision regarding whether or not to appeal should be made by the prosecuting agency, since the underlying case is a criminal matter.
3. Please explain steps SCDC has taken, or is in the process of taking, to ensure inmate release dates are correct. Please provide an estimated date for implementation of each step.

Answer: The following Offender Management System changes will be implemented to increase accountability and reduce the likelihood of data entry error:

- Effective February 15, 2019, SCDC implemented further restricted access to modify certain fields on the conviction record.
- Effective March 15, 2019, release audits must be conducted by two separate Record Analysts III for all inmates released through the MAXREL. Any sentencing discrepancies must be submitted to the General Counsel's Office for clarity.
- Simplify offense data entry by adding a CDR code/violation statute validation and search feature. (Estimate-90 days for development awaiting General Counsel's Office to complete code table)
- Store a complete audit trail of every change (who/what/when) to conviction records. (programming completed and in testing -early April implementation)

P.O. Box 21787 - 4444 Broad River Road - Columbia, SC 29221-1787 - Telephone (803) 896-8555
<http://www.doc.sc.gov> E-mail: corrections.info@doc.sc.gov

Sentencing Sheets

4. On average, approximately how many sentencing sheets does SCDC receive, review, and enter into their database, in a month?
 - In Fiscal Year 2018, SCDC processed a monthly average of 1,812 sentencing sheets.
5. Please provide a sample sentencing sheet.
 - Please see attached sample sentencing sheet.
6. For each piece of information SCDC utilizes from a sentencing sheet or court order, please explain what SCDC does with the information (e.g., re-types it into the SCDC database) and how the information impacts SCDC actions (e.g., when SCDC releases an inmate, etc.)
 - Sentencing county-Entered into SCDC database and used for detainer and release notification. This information does not affect projected release dates.
 - Personal Information-alias, race, sex, age, DOB, social security number, driver's license number, state identification number are entered into the SCDC database and used for personal identification purposes. This information does not affect projected release date.
 - Indictment Information-indictment/case number and warrant number is entered into the SCDC database. This information does not affect projected release dates.
 - SC Statute/CDR Code-Entered on conviction screen and used for sentence calculation. This does affect parole eligibility.
 - Date of Offense- Entered into SCDC database. Depending on the CDR code violation and the date the law went into effect the offense date could determine release date, parole eligibility and early release eligibility.
 - Sentence Information-(Inmate plea, written verbiage of sentence convicted of, state statute number, CDR code, indicator of non-violent, violent, serious, mandatory GPS)- Entered in SCDC database and used to determine violent/nonviolent classification of crime, determine time to serve, determine if the sentence is 85% mandatory minimum and calculation of projected release dates.
 - Plea-entered in the SCDC database but not used for calculation of projected release dates
 - Youthful Offender Act or Adult Straight sentence-Entered into SCDC database and used to determine sentence type, which determines sentence calculation. This can also determine programming schedule and based outcome could affect release date.
 - Concurrent or Consecutive indicator-Entered into SCDC database and used to determine sentence calculation.
 - Credit for time served-Entered into SCDC database and applied toward release date calculation in accordance with SC Code 24-13-40.
 - Restitution-Entered restitution requirement and amount in the SCDC database and used to determine payment amount if the inmate is assigned to the Work Program. Entry does not affect projected release date.
 - Special conditions-Entered any special conditions noted into the SCDC database. Entry does not affect projected release date.
 - Presiding Judge Name-Entered first initial and last name in SCDC database and used as part of sentencing information. Entry does not affect projected release dates.
7. Please provide a list of information SCDC receives in orders from the court, which in the past, has been unclear and led to additional time and interpretation from SCDC staff, approximately how often each occurs, and photos or screen shot examples of some of these orders.

- a. Has the agency identified any trends (e.g., handwriting, inaccurate CDR codes)? If yes, please identify these trends.
 - Please see attached list of identifying the unclear sentence sheets received from the courts.
 - Please also see attached examples of unclear sentencing system highlighting what is unclear.
 - Our Deputy General Counsel who oversees sentencing issues has identified a trend with CDR codes not matching statute and/or verbiage on sentence sheets. SCDC is not currently tracking trends; however, we are developing a tool to track trends to enable us to identify additional items, other than CDR codes, that need to be addressed with the courts. Our Deputy General Counsel speaks at multiple conferences for attorneys and judges each year and raises this and other issues with sentencing sheets at every opportunity. SCDC welcomes any assistance/recommendations on how to correct this very serious issue. More examples can be provided if necessary.
8. Please provide a summary of SCDC's recommended revisions to the current sentencing sheet and/or process and how each of the revisions would assist in more efficient and effective use of the information by SCDC.
 - Please see attached recommended changes to the current Sentencing Sheet.

Inmate Processing

9. For each state in the southeastern region, please provide information on the length of sentence required for a state correctional institute to house an inmate and any other pertinent differences in correctional operations compared to South Carolina.
 - South Carolina requires offenders to go to state prison with shorter sentences (91 days or more) than any other state in the southeastern region. Please see below for the general requirements for entry into state prison for each state in the southeastern region.
10. Please provide a list of each item of information SCDC obtains about an inmate as part of processing and classifying the inmate, along with the following for each item:
 - a. Type of information (e.g., sentence, medical records, criminal background);
 - Requested information includes the sentencing sheet, jail time credit form, revocation order (if applicable), victim information, detainers, demographics, and medical information form.
 - b. Source of the information (e.g., county facility, court);
 - Information is received from the County Detention Center, Clerk of Court, Solicitor's Office, Attorney General's Office, and Department of Probation, Parole & Pardon Services.
 - c. How the information is requested (e.g., SCDC emails or calls the entity to request the information, information is automatically sent when inmate arrives);
 - Information is received via email, fax, telephone, mail, or hand delivered upon inmate arrival. This information is standard and is expected to be a part of each new inmates' arrival.
 - d. Average amount of time required to receive the information;
 - For new admissions to SCDC, information is received when the inmate arrives. When additional/missing information is requested, it is received within 1 – 3 days. If a signature or correction is needed from the Judge, time may vary from 1 - 2 weeks.
 - e. Format in which the information is received (e.g., typed report, handwritten report, phone call), if the information is included on a standard form, the entity responsible for creating the form;
 - Information is received both handwritten and typed.
 - f. What SCDC does with the information (e.g., re-types it into SCDC database, makes copy of document for inmate's physical file) to make it usable for SCDC operations;

- All received information is entered into the SCDC database and filed in the inmate institutional and central record.
 - g. If the information impacts the inmate's release date; and
 - If an amendment /modification results in the immediate satisfaction of the inmate's sentence, the Inmate Records Office will authorize release the same day.
 - h. Average SCDC personnel time required from requesting information to having it in the format and location needed for SCDC operations.
 - The average staff research time ranges from 1 hour to several weeks depending on the county and information requested.
11. Which counties/entities provide information, which SCDC needs to process inmates, in an efficient and effective manner and which entities may need more assistance in this area?
- Counties that provide accurate sentencing information are as follows: Charleston, Florence, Horry, Laurens and Orangeburg.
 - Counties in need of improvement are as follows: Greenville, Lexington, Richland, Spartanburg and York.
 - The above references sentencing information only. An ongoing issue for SCDC medical staff is the failure of counties to provide a continuity of care form, please see attached example.
12. Please explain the purpose of the offense code matrix. Also, what is the anticipated implementation date of this project?
- The purpose of the creation of the offense code matrix is to streamline the sentence entry process and reduce the chance of human error. The project is underway and is expected to take several months to complete due to the very large number of offense codes to review.
13. Please provide a breakdown of each of the different costs involved in processing an inmate, including, but not limited to, transportation to the reception and evaluation center, daily cost to house/feed/clothe, medical examinations, etc.
- In relation to the costs of the R & E portion of Kirkland Correctional Institution, these are not broken out; however, we are working on a plan to break these costs out via the SCEIS Accounting System. Total inmate State Funded Costs for FY18 are:
 - Average Daily cost per inmate Agency-wide is \$59.61, which includes health, food, clothing, institutional and Agency costs.
 - Average Daily cost for Healthcare per inmate Agency-wide is \$11.67, which is included in the \$59.61 daily cost.
 - Average Daily cost for Food per inmate Agency-wide is \$3.23, which is included in the \$59.61 daily cost.
 - The inmates are transported to the Agency via the counties who pay for those expenses.
14. Please provide a chart which shows, for each of the last three years separated by male and female inmates, the following information related to reception and evaluation centers:
- a. Number of inmates who enter;
 - Please see attached excel spreadsheet for admissions.
 - b. Number of inmates who enter, max out their sentence and are released before assignment to an SCDC facility;
 - Please see attached excel spreadsheet for admissions.
 - c. Number of inmates who enter, max out their sentence within one month of entering the center, and are released;

- Please see attached excel spreadsheet for admissions.
- d. Number of inmates who complete processing and are assigned to an SCDC facility;
 - Please see attached excel spreadsheet for admissions.
- e. Shortest, longest, and average amount of time to process an inmate; and
 - Please see attached excel spreadsheet for admissions.
- f. If processing times have shortened, potential reasons the agency has been able to shorten the processing time.
 - Camille Graham R&E- Female processing time has improved due to designating females as priority for institutional assignments and record audits because of limited bed space at Camille and Leath.
 - Additionally, mental health and medical designations are also priority and a number of female offenders fall into this category.
 - Designation at a Female R&E Intake Coordinator has also improved the process at Camille Graham.
 - Kirkland R&E Male processing time has improved from 2017 to 2018 due of the addition of mental health, medical and psychiatric staff to assist with intake processing.
 - The processing time for CY18 is shorter than CY17 but higher than CY16 for males.

Inmate Composition

15. Please provide charts which show, for each of the last three years separated by male and female inmates, the following information:
 - a. Number of individuals admitted to a SCDC reception and evaluation center, grouped by length of sentence;
 - Please see attached Sentence Length Distribution of Inmates Admitted by Fiscal Year.
 - b. Number of individuals admitted to a SCDC reception and evaluation center, with:
 - No high school diploma;
 - General Educational Development or high school diploma;
 - Degree from a technical college; and
 - Degree from four-year college or higher degree.
 - Please see attached report for Highest Degree Reported by Inmates Admitted to SCDC.
16. Please provide a chart that shows, for each year from 2013-14 through 2017-18, demographic information about inmates, including ethnicity and age.
 - Please see attached Inmate Profile Chart by Fiscal Year.
17. Please provide charts which show, for each of the last three years separated by male and female inmates, the following information:
 - a. Number of illegal aliens housed at SCDC facilities with a state conviction other than a violation of immigration laws;
 - b. State offenses committed;
 - c. Sentence length;
 - d. Projected release date; and
 - e. Number on which U.S. Immigration and Customs Enforcement have detainers.
 - Please see attached Non-Citizen Spreadsheets by Gender and Fiscal Year.

Classification System

18. Please explain the current classification system utilized by the agency and provide copies of any relevant policies.

- Please find attached SCDC Policy Op-21.04, “Inmate Classification Plan,” issue date: December 13, 2017, NOT RESTRICTED; and SCDC Policy OP-21.09, “Inmate Records Plan,” issue date: November 16, 2017, NOT RESTRICTED.
- The classification system is a management tool used to guide and structure decision-making on institutional security placement (whether an inmate needs to be housed in a maximum-security institution or a minimum-security institution), and custody level of inmates. The classification assessment evaluates and groups inmates based on numerous factors to include current offense, remaining time to serve, prior criminal history, pending warrants, security threat group affiliation, institutional disciplinary history, medical history and prior arrest. The system uses this objective scoring assessment tool and a committee of correctional professionals to make custody, security and housing decisions based on a set of defined criteria.

19. Please discuss why the agency believes the current classification system should be updated, including pros and cons of the current system.

- The current classification system should be updated because experts suggest that an independent contractor should conduct a validation study that examines the results of the risk assessments every 3–5 years, and the agency should implement necessary improvements. SCDC has not conducted a validation study on the classification system 1995/96. The current system also lacks a risk/needs assessment component at intake or reassessment to determine needs and treatment program recommendations. SCDC did have a risk/needs assessment at one time; however, its use stopped after budget cuts in the early 2000s, which resulted in a significant number of programs staff positions being eliminated. Without the programs staff to deliver programs, the need to utilize the system ceased. Given Director Stirling’s push to reestablish rehabilitative programs to the inmate population, SCDC now requires this tool.
 - Pros:
 - Familiarity with system.
 - Has provided proper bed management utilization.
 - Although created in mid 90’s, the current system has been modified to meet the needs of the agency.
 - Cons:
 - Does not factor age.
 - Does not factor education.
 - Does not limit time consideration for criminal history.
 - Strict sentence adherence – no consideration for first time offenders with longer sentences.
 - Has not been validated.
 - No Risk/Need assessment.

20. Please further explain why the agency wants the classification system to be more “behavioral” based, as opposed to only based on length of sentence including: (a) what would be needed to make it more “behavioral” based and (b) what are the pros and cons of making it more “behavioral” based.

- SCDC desires an objective classification system to address behavioral aspects of inmates that are currently not considered. Some examples are:
 - The current system takes prior criminal history into consideration; however, there is no limit to when the offenses occur. It is our belief that limiting the consideration of prior criminal history to a set number of years would provide inmates an opportunity to show good or improved behavior.

- The current system takes prior institutional behavior into consideration; however, it is our belief that limiting the consideration of prior institutional behavior to those incidents related to violence and/or escape would allow a more appropriate security classification resulting in an increase in safety to the public. In contrast, this would provide inmates with certain non-violent disciplinaries the opportunity to advance and take advantage of programs the agency provides.
- The current system does not consider an inmates age in assigning a custody level. The relationship between age and crime is one of the most solid measures within the field of criminology. It is understood that crime begins to decrease over the course on one's life. Given this fact, age must be considered when making classification decisions.
- The current system does not consider an inmates education in the classification process. The relationship between education attainment and crime has been verified in numerous studies. Given this fact, education must be considered when making classification decisions. SCDC will require assistance from other state agencies to verify education status unless completed during incarceration.
- With the addition of the above considerations included in SCDC's initial and reclassification instruments, it is anticipated that an inmate's scored custody level would be impacted to a degree allowing inmates to progress through the system based upon time elapsed since criminal offense, time elapsed since institutional violations, increase in age, and participation in education/programming.

21. When did the agency begin its current efforts to update the classification system which was created in 1996? Is the agency aware of any prior attempts to update the system?

- The process began in 2017.

Is the agency aware of any prior attempts to update the system?

- The agency began its current efforts to update the classification system prior to September 2017 as we entered into a contract with a classification expert on September 22, 2017. Prior to this there have been no attempts to update the entire system. SCDC made incremental modifications to the current system over the years in order to meet performance measures for bed space management (overcrowding in Level II and III, underutilization in Level I institutions).

22. Please explain the steps necessary for updating the classification system. In this explanation, please indicate any necessary approvals and the entity from whom the approval is needed. Also, please identify which step the agency is at in the update process.

- The following is the process identified in Exhibit 5 "Time-Task Line for Effective Classification Implementation" from the National Institute of Corrections publication *Objective Prison Classification: A Guide for Correctional Agencies*.
 - Phase I: Mobilization—Determining the Need for Change. (Director Stirling)
 - Phase II: Comprehensive Assessment of Current Classification System. (Interim DDO)
 - Phase III: Planning. (Interim DDO)
 - Phase IV: Implementation. (Interim DDO)
 - The only authorization or approval required in this process is from the agency Director. (Director Stirling)
 - The agency is currently in phase II.

23. Under the current classification system, how could an inmate's classification change while the individual is incarcerated? What would serve as the basis for it changing? What does a change in the classification mean for the inmate (e.g., where housed, privileges available, etc.)?
- An inmate's classification can change as follows:
 - institutional security level can change from level 1, 2 or 3;
 - custody level can change from minimum out, minimum in, medium or a restrictive housing custody such as: disciplinary detention, security detention or statewide protective custody.
 - An inmate's classification can change for the following reasons:
 - if additional sentences are received;
 - sentences are overturned in PCR;
 - placement or removal of detainers;
 - placement or release from Restrictive Housing (lockup);
 - medical classification is changed requiring an institutional assignment review;
 - convictions of chronic or major disciplinary infractions;
 - change in PREA status; or
 - change in Security Threat Group affiliation.
 - A change in classification may result in a change in the inmate's projected release date, parole eligibility date, job, housing, institution, visitation privileges, amount of money that an inmate is eligible to spend in the canteen and the number of privileges received.
24. Please provide any internal or external reports, from the last five years, which evaluate SCDC's classification system.
- SCDC procured an outside consultant, Dr. Austin, to review various factors/components of our current system. Dr. Austin has met with staff on numerous occasions to discuss his recommendations. The Interim Deputy Director for Operations will be meeting with him in the near future to further discuss these recommendations to determine if they should be incorporated into a behavioral driven classification system.

Inmate Release Date, Actions Impacting

25. Please list what can reduce or increase (i.e., impact) an inmate's release date and include the following with each item:
- a. Amount it can impact an inmate's release date (e.g., number of days reduced or increased);
 - The amount of impact and the number of days reduced or increased varies depending on the number of days and credits that inmate has accrued.
 - b. Source of authority for the impact (e.g., law, policy, etc.)
 - Goodtime – SC Code 24-13-210 and SCDC 21.11- Loss of Goodtime Credit
 - Earned Work Credit – SC Code 24-13-230 and SCDC 21.07 – Earned Work Credits
 - Earned Education Credit – SC Code 24-13-230 and PS-08.05 Educational Programs
 - Jail time Credit – SC Code 24-13-40 and SCDC OP-21.09
 - Disciplinary Infraction – SCDC OP-22.14 Disciplinary Infractions
 - Service time – SC Code 24-13-40 and SCDC OP-21.09 – Inmate Records Plan
 - c. Whether the amount of impact is objective (i.e., required by law or policy) or subjective (e.g., based on agency personnel's discretion);
 - If subjective, who makes the determination;
 - Goodtime – Required by law
 - Earned Work Credits – Required by law
 - Earned Education Credits – Required by law

- Jail time credit – Required by law
 - Disciplinary Infraction- Based on agency personnel discretion (determined by Disciplinary Hearing Officer, in compliance with SCDC Policy OP 22.14 Inmate Disciplinary System)
 - Service time – Required by law
- d. Who enters the information in the SCDC system tracking inmate release dates; and
- Information is entered by various staff to include Record Analysts, Classification Caseworkers, Disciplinary Hearing Officers/Recorders, Educational staff, Inmate Records staff and Central Classification staff.
- e. Where, or from whom, the personnel who enter the information, receive the information.
- Information is received from various documents, entered in the automated system and then filed in the institutional and central record.

26. Are there different types of early release or discharge? If so, should S.C. Code Section 24-13-150(A) be more specific as to which types of those it applies?

- There are several different types of early release. These include the “old” supervised furlough program (“SF-IIA”), which only applies to offenses occurring between June of 1983 and July of 1993, supervised reentry under S.C. Code § 24-21-32, parole, medical parole, and medical furlough. The term “discharge” is not a term normally utilized in SCDC, except that under the Youthful Offender Act, youthful offenders are unconditionally “discharged” upon successful completion of intensive supervision (often called “YOA parole”).

In our opinion, S.C. Code 24-13-150(A) needs to be changed to remove the language regarding “early release or discharge” because - with the exception of medical furlough, which is rarely granted and only applies to the terminally ill - none of the types of early release or discharge that are mentioned above apply to 85% offenders. Further, under S.C. Code 24-21-560, 85% offenders can only be released to community supervision. Therefore, we would propose to amend S.C. Code 24-13-150(A) as follows:

(A) Notwithstanding any other provision of law, except in a case in which the death penalty or a term of life imprisonment is imposed, an inmate convicted of a "no parole offense" as defined in Section 24-13-100 and sentenced to the custody of the Department of Corrections, including an inmate serving time in a local facility pursuant to a designated facility agreement authorized by Section 24-3-20 or Section 24-3-30, is not eligible for ~~early release, discharge, or~~ community supervision as provided in Section 24-21-560, until the inmate has served at least eighty-five percent of the actual term of imprisonment imposed. This percentage must be calculated without the application of earned work credits, education credits, or good conduct credits, and is to be applied to the actual term of imprisonment imposed, not including any portion of the sentence which has been suspended. Nothing in this section may be construed to allow an inmate convicted of murder or an inmate prohibited from participating in ~~work release, early release, discharge, or~~ community supervision by another provision of law to be eligible for ~~work release, early release, discharge, or~~ community supervision.

If these changes are made to S.C. Code § 24-13-150(A), then S.C. Code § 24-21-560 should also be amended as follows:

(A) Notwithstanding any other provision of law, except in a case in which the death penalty or a term of life imprisonment is imposed, any sentence for a "no parole offense" as defined in Section 24-13-100 must include any term of incarceration and completion of a community supervision program operated by the Department of Probation, Parole, and Pardon Services. No prisoner who

is serving a sentence for a "no parole offense" is eligible to participate in a community supervision program until he has served the minimum period of incarceration as set forth in Section 24-13-150. ~~Nothing in this section may be construed to allow a prisoner convicted of murder or a prisoner prohibited from early release, discharge, or work release by any other provision of law to be eligible for early release, discharge, or work release.~~

The above stricken language appears out of place and does not add anything to this part of the statute, which discusses only community supervision.

Data Entry

27. Please provide a list of the types of data SCDC maintains on each inmate (e.g., programs participated in, disciplinary action, etc.), and for each: (a) when the data is initially obtained/entered, (b) source of the data, and (c) on average, how often the data is updated after initial entry, if updated.

- Type of data maintained by Programs
 - Program/Course Participation –
 - PROG Screen in the OMSEducational Attainment (HS Diploma or GED) - Educational Services Application (ESA)
 - TABE Assessments – Educational Services Application (ESA)
 - Vocational Certificates – Educational Services Application (ESA)
 - WorkKeys/WIN – Educational Services Application (ESA)
 - DOL Certificates – Educational Services Application (ESA)
 - OJT – On the Job Training – Educational Services Application (ESA)
 - Personal Development Certificates – Educational Services Application (ESA)
- Please see attached Types of Data spreadsheet.
- a) When the data is initially obtained/entered
 - Upon the start of a program/course, initial participation date.
 - Upon initial TABE testing, education attainment, or earning of a certificate.
 - Please see attached Types of Data spreadsheet.
- b) Source of data
 - Recording of attainment of H.S. Diploma or GED earned through PUSD
 - For OJT's, work or duties performed, the staff work supervisor must record each inmate's working hours. The school leader, in the institution, enters certificate hours in the ESA where the certificate is generated and recorded.
 - Individual program participation, and completion, is captured by using sign in rosters/outcounts, with verification of attendance by staff or volunteers, then entered into the OMS system by staff.
 - Please see attached Types of Data spreadsheet.
- c) How often is the data updated
 - The PROG screen should be updated with a termination reason at the conclusion of the Program or with a change of events.

Examples – 1. Successful Completion of Program

2. Institutional Transfer

3. Paroled

4. Released

5. Terminated – Insufficient Progress

- ESA information is updated as the offender attains each certificate.
 - Please see attached Types of Data spreadsheet.

28. Does SCDC have a way to track the error rate in data entry at the agency? If so, would SCDC oppose tracking this information as a performance measure?

- No, SCDC does not have a way to track the error rate in data entry at the agency.

Facilities and Overtime

29. What is the inmate capacity of each SCDC facility?

- This information is updated every morning on our public website.
<http://www.doc.sc.gov/research/SystemOverview/population-report.pdf>

30. Please indicate the total amount of correctional staff overtime, sick time, or vacation time, not utilized, for each of the last five years, overall and by institution.

- Please see attached Overtime spreadsheet.
- Please see attached Annual and Sick Leave Forfeited spreadsheet.

Lockdown

31. Please provide a timeline of the process that occurs from the time the agency decides a unit, or entire facility, is on lockdown to the time the unit or facility lockdown is lifted. Please include one timeline for males and another timeline for females, if the timelines are different.

- SCDC is unable to provide a timeline as there are too many variable factors that enter in to the decision making to place institution on lockdown and this is handled on a case by case basis. SCDC provided a zip file (#33) for Management Information Notes that included all lockdowns from 2014 – 2018. Per SCDC policy, an institutional lockdown can be ordered by the Warden, the Deputy Director for Operations, the Agency Director, or an approved designee for any of the above when it is believed that such an action is necessary to suppress or prevent a major disruption and protect the safety and security of an institution(s) or a portion(s) of an institution, staff, and inmates. Multi-institutional lockdowns can only be ordered by the Agency Director or the Deputy Director for Operations, or a designee approved by the Agency Director. The imposition of a lock-down is a serious step indicating an immediate danger to the security and secure order of an institution(s) or portion(s) of an institution(s). Examples of situations where a lockdown may be an appropriate response are as follows:
 - A sudden and significant increase in the incidents of violence at an institution;
 - A sudden and significant increase in tempers among inmates, or an uncomfortable tenor throughout the living areas or the entire institution, and staff are anticipating a major upsurge in violence and/or disorder;
 - A major pattern of disruption is in progress (e.g., more than just localized throwing of food, destruction/damage of personal property, or throwing of other objects at a staff member(s), etc.);
 - Work stoppage by inmates;
 - Intelligence reports from staff that indicate significant unrest and/or that a serious disorder may occur; and/or
 - Any other appropriate reason, i.e., power outage, contraband searches, significant staff shortage, etc.
 - When a lockdown is ordered, either at the institutional level or from central administration, inmates are immediately returned to their cells and locked in. Lockdowns are lifted when the situation that generated the lockdown has been resolved. Subsequently, a lockdown release is immediately implemented and inmates and staff return to normal operations identified in the institutions controlled movement schedule unless it is determined that a Progressive Release Lockdown Schedule be implemented.

In each timeline, please include as many details as possible and the following for each step:

- a. During the last five years, the longest length of time to complete, shortest length of time to complete, and average amount of time to complete;
 - SCDC has not tracked the length of time institutions or units have been on lockdown and there we cannot provide this data.
 - b. SCDC organizational unit(s) responsible; and
 - Designee is responsible for any lockdown at the institutional level and subsequent release from lockdown. Lockdowns from central administration is the responsibility of the Deputy Director for Operations.
 - c. External entities involved and how they are involved.
 - Normally outside agencies are not involved in lockdowns. There have been a few occasions during institutional disturbances whereby outside law enforcement assisted with the initial lockdown to include securing inmates in their assigned cells.
32. Please provide a timeline of a day for inmates in a unit or facility that is on lockdown. Please provide the same for an inmate that is in lockup. Please include one timeline for males and another timeline for females, if the timelines are different.
- Please see attached Timeline of an Inmate Day in RHU. If the entire institution is locked down, the inmate's timeline reflects that of an inmate in RHU.
33. Please provide a list of all agency facilities that, at any time during the last three years, were on lockdown as an entire facility, or had a unit or other subgroup of the facility on lockdown, and the following information for each lockdown:
- a. Facility name; b. Unit or subgroup of facility, if entire facility not on lockdown; c. Basis for lockdown; d. Lockdown start date; e. Lockdown end date; and f. Number of inmates impacted.
 - All Level II and Level III institutions have been on lockdown at some point during the last three years for various reasons to include staff shortages. To provide this level of detailed information could endanger staff and inmates as it would allow individuals to determine the pattern in which our institutions are on lockdown and make that facility more vulnerable. It would show institutional trends of staffing and enable inmates and/or intruders to take advantage of any one of our facilities. Additionally, to the extent the request asks for information related to the mediation, such information is subject to the confidentiality rules of the mediation.
34. Are there any studies or evaluations, performed internally or externally, which include information on the impacts of a lock-down on inmates and/or operations? If so, please provide copies.
- Please see attached multiple reports regarding solitary confinement.

Performance

35. Are there any metrics which national or regional correctional associations recommend correctional facilities track? If so, please list the metrics, indicate which ones SCDC tracks, and of those SCDC tracks, indicate how SCDC compares to other comparable states.
- No
36. In SCDC's metrics related to inmate on inmate assaults and inmate on staff assaults, SCDC indicates "serious injuries" are tracked. How does SCDC define "serious injury"?

- Inmate on Inmate assaults-serious injury is defined as requiring immediate outside medical attention.
- Inmate on Employee assaults-serious injury is defined as one that requires outside medical treatment for injuries sustained because of the assault.

37. In SCDC's metric on number of escapes, what does SCDC consider an "escape" (e.g., out of custody for at least twenty-four hours, etc.)?

- SCDC uses the definitions of "escape" in SCDC Policy OP-22.14 Inmate Disciplinary System. This policy separates escapes into two categories, Class I and Class II, based on seriousness. Those definitions are as follows:
 - Disciplinary Offense 901 Class I Escape: Any escape, attempted escape, or aiding/abetting escape from a Level 2 or 3 institution or from medium or maximum custody at a local detention center. Also includes escapes from a Level 1 institution or minimum custody at a local detention center that involves any threat of violence, physical harm, or other aggravating circumstances; to include actual or constructive possession of tools or items, which are intended to be used to facilitate an escape. Aggravating circumstances may also include any criminal behavior that occurs while the inmate is on escape status. Note: Should an inmate assigned to an outside detail, at any level institution, walk-off (with no aggravating circumstances), this should be classified as a Class II escape.
 - Disciplinary Offense 902 Class II Escape: Any escape, attempted escape, or aiding/abetting escape from a Level 1 institution or minimum custody at a local detention center that does not involve any threat of violence, physical harm, or other aggravating circumstances.
- Please note that there are several South Carolina statutes, which discuss and define the term "escape." See SC Code §§ 24-13-410, 24-13-420, 16-9-410, 16-9-420, & 16-9-430. These statutes define criminal offenses that must be proven beyond a reasonable doubt in a court of law. SCDC's disciplinary offenses must be proven by a preponderance of the evidence in an administrative hearing. As such, measurements using criminal convictions under these statutory definitions would potentially be very different from SCDC's measurements discussed above.

38. Please explain what falls within "academic programs," in terms of SCDC's metric on number of inmates enrolled in academic programs.

- SCDC Policy PS 08-06, Section 2.2 Educational Programming provides the following on "academic programming." "The academic curriculum will be on the High School Equivalency and/or South Carolina High School Diploma standards. Student academic needs will be identified through the TABE (Test of Adult Basic Education)."
- SCDC Policy PS 08-06, Section 7 Definitions indicates, "High School Equivalency (HSE) refers to a nationally recognized standardized test which validates that an individual possesses the academic and functional skills equivalent to that of a high school graduate."
- The South Carolina Board of Education Regulation 43-234 Defined Program, Grades 9–12 and Graduation Requirements, establishes the academic requirements for earning a High School Diploma.
- High School Equivalency refers to the GED.

39. Please list all costs included in SCDC's metric on total cost per inmate per year.

- Please see attached Total Agency Expenditure Comparison.

40. Please explain what falls within “pre-release program,” in terms of SCDC’s metric on the recidivism rate of inmates involved in a pre-release program.

- Pre-Release programming is an all-encompassing term for readying the offender to make a successful transition from prison back to the community. Strategic partners, in conjunction with SCDC staff, enable and connect offenders to the services necessary to be self-sustaining. These services include resume building, job placement, housing, transportation, employment skills training, soft skills training, employment, and connection to temporary benefits like SNAP, TANF, Medicaid, Welvista, SSI, and others. Through these partners a warm hand off is created from life within SCDC to life on the outside.
- Some of these partners include: the Department of Employment and Workforce, Goodwill Industries of the Upstate/Midlands, SC Thrive, Catholic Charities, Prison Fellowship Ministries, Jumpstart, Fresh Start Visions, Vocational Rehabilitation, SCDMV, SCDSS, SCPPP, SCDAODAS, SCHHS, SC Works, SC Vocational Rehabilitation, SCDHEC, SC Healthy Connections, SC Voters Registration, Turning Leaf, United Way, Goodwill, Prison Fellowship, Alston Wilkes, Telamon, Veterans Affairs, Richland County Library, Jump Start, Fresh Start and Oxford House.

Inmate Work

41. Please provide a list of all ways in which inmates can earn income while incarcerated.

- Prison Industry Private Sector Program.
- Prison Industry Service Program.
- Community Work Program.
- Designated Facility Programs.
- Inmates assigned a job as of 1/20/98 who are receiving inmate pay and have not been convicted of a disciplinary conviction continue to receive pay for the remainder of their sentence.

42. Please provide a chart summarizing the different ways in which SCDC categories “work,” and note the applicable statutory authority. Also, please compare and contrast these categories with the categories SCDC uses for its performance measures. Below are some examples of terms and categories in statutes and SCDC performance measures.

- Please see attached EWC Jobs of Custody Population spreadsheet.
- Please see attached Inmate Work Related Performance Measures.

SCDC Performance Measures

- Percentage of inmates participating in “work program” or “earned work credit jobs;”
- Recidivism rate of inmates who participate in a “work program;”
- Recidivism rate of inmates who participate on a “labor crew;” and
- Recidivism rate of inmates who participate in “prison industries.”

South Carolina Statutes

- Work release: S.C. Code Sections 24-3-20(B) and (C); 24-3-40(A) and (B); 24-13-60; 24-13-640; 24-13-125(A); 2018-19 Proviso 65.17
- Work camp: S.C. Code Sections 24-13-130(C)
- Offender employment preparation program: S.C. Code Section 24-13-2110
- Paid employment in the community: S.C. Code Section 24-3-20(B)
- Work at paid employment in the community: S.C. Code Sections 24-3-40(A)
- Prison industries – Private sector service businesses: S.C. Code Sections 24-1-290; 24-1-295

- Prison industry program (traditional): S.C. Code Sections 24-3-315 through 24-3-380; 24-3-400; 24-3-410; 2018-19 Proviso 56.9; 2018-19 Proviso 117.25
- Labor on public improvement or development project: S.C. Code Sections 24-3-130; 24-3-131; 24-3-210
- Labor for public service work or related activities: S.C. Code Section 24-13-660
- Labor on public works and ways: S.C. Code Sections 24-13-235; 24-13-910; 24-13-940; 24-13-950
- Litter control program: S.C. Code Sections 24-3-20(C); 24-13-65
- Statehouse landscaping: S.C. Code Section 24-3-140
- State institutions utilizing inmate labor: S.C. Code Sections 24-3-160; 24-3-170
- Work credits: S.C. Code Sections 24-13-125(B); 24-13-150;(B); 24-13-230; 24-13-730; 24-27-220
- Nonprofit projects: S.C. Code Sections 24-3-430
- Produce metal license plates and road signs: S.C. Code Sections 24-3-110

- Adult work activity center: S.C. Code Sections 2018-19 Proviso 65.12
- Maintenance and construction projects on SCDC grounds and facilities: S.C. Code Sections 2018-19 Proviso 65.26; 2018-19 Proviso 117.67

Statutes

43. Please provide a recommendation for revision or repeal of S.C. Code Section 24-23-10 (*Plans to be developed for statewide case classification system and community-based correctional programs*), which references a “board” the agency testified no longer exists.
- We recommend repeal of S.C. Code § 24-23-10 as the “board” it references no longer exists and it appears that the purpose of the statute was accomplished/completed many years ago.
44. Please review S.C. Code Sections 24-13-710 (*Implementation of supervised furlough program; search and seizure; fee; guidelines; eligibility criteria*) and 24-13-720 (*Inmates who may be placed with program; search and seizure*) and explain the agency’s interpretation of the differences in the two statutes, if any. If the statutes are duplicative, please provide a recommendation for revision or repeal.
- There is not currently a supervised furlough program under S.C. Code § 24-13-710 & -720. Supervised reentry under S.C. Code § 24-21-32, which went into effect in January 2011, has essentially replaced programs under these two statutes. We recommend repeal of both. (Please note that S.C. Code § 24-13-730 states that “[a]ny new program established under §§ 14-1-210, 14-1-220, 14-1-230, 16-1-60, 16-1-70, 16-3-20, 16-3-26, 16-3-28, 16-23-490, 17-25-45, 17-25-70, 17-25-90, 17-25-140, 17-25-145, 17-25-150, 17-25-160, 63-3-620, 24-3-40, 24-3-1120, 24-3-1130, 24-3-1140, 24-3-1160, 14-3-1170, 24-3-1190, 24-3-2020, 24-3-2030, 24-3-2060, 24-13-210, 24-13-230, 24-13-610, 24-13-640, 24-13-650, 24-13-710, 24-13-910, 24-13-915, 24-13-920, 24-13-930, 24-13-940, 24-13-950, 24-21-13, 24-21-430, 24-21-475, 24-21-480, 24-21-485, 24-21-610, 24-21-640, 24-21-645, 24-21-650, 24-23-115, and 42-1-505 or any

change in any existing program may only be implemented to the extent that appropriations for such programs have been authorized by the General Assembly.”)

45. Please review S.C. Code Sections 24-19-110(D) (*Procedure for conditional release of youthful offenders; search and seizure; fee; victim notification*) and 24-19-120(B) (*Time for release of youthful offenders*) and explain the agency’s interpretation of the differences in the two statutes, if any. If the statutes are duplicative, please provide a recommendation for revision or repeal.

- Youthful offenders are usually conditionally released to intensive supervision (often called “YOA parole”) after serving a fairly short term of incarceration – often a six or nine-month term. The period of intensive supervision is one year, assuming the offender is compliant with the terms of such supervision. At the end of this one-year period, the offender is unconditionally discharged from the Youthful Offender Act sentence.

SCDC has been able to harmonize S.C. Code § 24-19-110(D) and S.C. Code § 24-19-120(B). Both statutes require victim notification prior to conditional release or unconditional discharge. S.C. Code § 24-19-120(B) provides a “hard deadline” of when a youthful offender must be conditionally released (four years from the date of conviction) or unconditionally discharged (six years from the date of conviction). We interpret S.C. Code § 24-19-110(D) as indicating that as long as the hard deadline of S.C. Code § 24-19-120(B) has not been reached, the YOA Division has the authority to deny conditional release or unconditional discharge based upon information received from the victim as to the suitability of the offender for release.

46. Please review S.C. Code Sections 24-13-30 (*Use of force to maintain internal order and discipline and to prevent escape of inmates*) and 24-3-710 (*Conduct in state prison system*) and explain the agency’s interpretation of the differences in the two statutes, if any. If the statutes are duplicative, please provide a recommendation for revision or repeal.

- These two statutes potentially have some overlap, but each has its own purpose. S.C. Code § 24-13-30 outlines, in general, the type of force that may be used against an inmate and the circumstances under which such force may be used. The first sentence of S.C. Code § 24-3-710 broadly addresses the SCDC Director’s authority to investigate and punish misconduct in the prison system, while the second sentence addresses the Director’s authority to suppress disorders, riots, and insurrections in the prison system and his power to create rules and regulations to attempt to prevent such occurrences. S.C. Code § 24-3-710 is part of an Article dealing specifically with suppression of disorders and riots.

47. What is the agency’s interpretation of the difference in the phrase “remain at liberty under supervision” in S.C. Code Section 24-19-140 (*Supervisory agents*) and the phrase “conditionally released under supervision” used in S.C. Code Section 24-19-120(A) (*Time for release of youthful offenders*)?

- A youthful offender permitted to “remain at liberty under supervision” would refer to a youthful offender who is sentenced to a Youthful Offender Act sentence, but is not assigned to an incarcerative term and is instead conditionally released to intensive supervision. Although S.C. Code § 24-19-110 gives the Youthful Offender Division such authority, it would be very rare for this to occur.

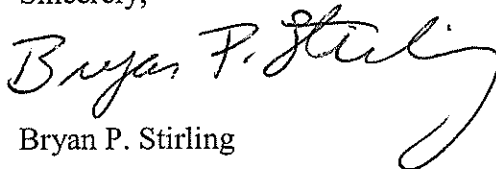

On the other hand, “conditionally released under supervision” refers to a youthful offender who has served an incarcerative term and is then conditionally released to intensive supervision (YOA parole).

48. What type of information falls within the terms “industry,” “habits,” and “deportment” in S.C. Code Section 24-21-70 (*Records of prisoners*)?

- The Department of Corrections keeps records of all activities of its inmates. “Industry,” “habits,” and “deportment” would include records of an inmate’s work activity, educational activity, program participation, transfer history, and behavior (disciplinary) history. It would also include any other activity pertaining to an inmate’s time in custody if relevant to his safety, security, or status.

Please let me know if you have additional questions or require further documentation. Thank you.

Sincerely,

A handwritten signature in black ink, reading "Bryan P. Stirling". The signature is fluid and cursive, with a large, sweeping flourish at the end of the last name.

Bryan P. Stirling

Inmates Released Early – Data

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "1. Please provide the following information for each of the inmates released early: (a) initial charge; (b) amount of time served; (c) amount of time remaining on sentence; and (d) timeline of events since initial apprehension, including name and judicial decisions."

Error Release Data

Inmate Released Early	Conviction County	Charge(s) requiring at least 85% service	Sentence	Sentence Start Date	Released (early in error)	Timeline of events	85% of sentence release date (correct release date)	Sentence supposed to serve - 85% (months)	Sentence served (months)	Sentence remaining (months)
Inmate 1	Greenville	Entering bank with intent to steal	10 years	2/21/2013	5/1/2018	Leaves SCDC 5/1/2018; Out for 10 months; Judge Edward Miller issues Order for return; Judge Paul B. Wickensimer issues bench warrant; Returns to SCDC 2/14/2019	8/20/2021	103	63	40
Inmate 2	Cherokee	Distribution of Marijuana 3rd (2 counts)	5 years	1/28/2016	2/1/2018	Leaves SCDC 2/1/2018; Out for 13 months; Completes supervised reentry program through Department of Probation, Parole, and Pardon in August 2018; Judge Derham Cole signs Rule to Show Cause; Returns to SCDC 3/8/2019	4/27/2020	52	25	27
Inmate 3	Charleston	Entering bank with intent to steal	15 years	6/16/2009	8/1/2018	Leaves SCDC 8/1/2018; Judge Markley Dennis holds Rule to Show Cause hearing and rules he has no jurisdiction to send the inmate back to SCDC custody; SCDC awaits written order	3/13/2022	155	111	44
Inmate 4	Greenville	Hit and run with death resulting	10 years	5/21/2012	6/1/2018	Leaves SCDC 6/1/2018; Out for 9 months; Completes supervised reentry program through Department of Probation, Parole, and Pardon in December 2018; Judge Letitia H. Verdin issues bench warrant for return; Returned to SCDC 3/6/2019	11/17/2020	103	73	30
Inmate 5	McCormick	Distribution of cocaine 3rd	15 years	7/10/2009	12/30/2016	Leaves SCDC 12/30/2016; Judge William Keesley holds Rule to Show Cause hearing and takes it under advisement	4/6/2022	155	91	64
Inmate 6	York	Possession with intent to distribute marijuana 3rd	5 years	12/28/2015	2/1/2018	Leaves SCDC 2/1/2018; Completes supervised reentry program through Department of Probation, Parole, and Pardon in August 2018; Judge Daniel Hall rules inmate will not return to SCDC; Solicitors Office appeals Judge Hall's ruling	3/27/2020	52	26	26
Inmate 7	Marion	Administer, distribute, etc., drugs with intent to commit a crime, 2nd	6 years	11/12/2015	10/1/2018	Leaves SCDC 10/1/2018; Out for 5 months; Judge Thomas A. Russo issues Order for Arrest and Remand; Returns to SCDC 2/15/2019	12/16/2020	62	35	27
Inmate 8	Spartanburg	Distribution of cocaine base 3rd and PWID cocaine base 3rd	12 years	12/2/2012	11/30/2018	Leaves SCDC 11/30/2018; Out for 3 months; Judge Derham Cole signs Rule to Show Cause; Returns to SCDC 3/8/2019	2/10/2023	124	73	51
Inmate 9	Colleton	Assault and battery of a high and aggravated nature	5 years	6/13/2007	6/14/2015	Leaves SCDC 6/14/2015; Completes supervised reentry program through Department of Probation, Parole, and Pardon in February 2018; Judge Carmen Mullen rules inmate should return to House Arrest, instead of SCDC, which starts 3.20.19	9/4/2019	149	97	51
Inmate 10	Greenville	Criminal sexual conduct with a minor	18 years	12/9/2008	2/1/2018	Leaves SCDC 2/1/2018; Out for 12 months; Judge Edward Miller issues Order for return; Judge Paul B. Wickensimer issues bench warrant; Returns to SCDC 2/14/2019	3/24/2024	186	111	75

Sample Sentencing Sheet

List of Unclear/Problematic Information Received in Sentencing Sheets

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "7. Please provide a list of information SCDC receives in orders from the court which, in the past, has been unclear and led to additional time and interpretation from SCDC staff, approximately how often each occurs, and photos or screen shot examples of some of these orders. Has the agency identified any trends (e.g., handwriting, inaccurate CDR codes)? If yes, please identify these trends."

List of Unclear or Problematic Sentence Sheets:

1. Jamiroquan Frazier – CDR code/statute mismatch (statute is incorrect)
2. Jonathan Lanning – CDR code/statute mismatch (statute is incorrect)
3. Ricky Lomax – CDR code/statute mismatch (statute is incorrect)
4. Michael Haggard – verbiage/statute & CDR code mismatch (it appears that both the statute and CDR code are incorrect)
5. Johnathan McAbee – CDR code/statute mismatch (CDR code is incorrect)
6. Paula Kinzle – illegible sentence sheet
7. Edward Garvin – inmate came to SCDC with two sentence sheets, one listing a sentence date of 3/28/18 and one listing 3/28/19
8. Tristan Cummings – five sentence sheets – four say jail time of 1030 days and one says 1130 days; jail time form says all have the same jail time credit
9. Jonathan Shelton – wrong original sentence listed on one of the HIP (house arrest) termination orders
10. Meghan Reynolds – sentence date is missing, cannot read judge's name and no judge code is listed
11. Lakeith Ferguson – wrong year listed (2018 instead of 2019)
12. Joseph Langley – wrong HIP (house arrest) time listed on violation order
13. Michael Rondeau – did not receive all sentence sheets when county brought the offender to SCDC; jail had no record of the missing offense
14. Martell Kennedy – inmate arrived at SCDC with no drug court revocation order accompanying his sentence sheet

15. Joshua Fetter – “no credit for time served” is written on the sentence sheet, in violation of S.C. Code 24-13-40 and State v. Boggs, 388 S.C. 314, 696 S.E.2d 597 (Ct. App. 2010)
16. Donald Baker – indictment number missing from top right corner
17. Nicholas Poole – weapons statute requires a 5-year sentence, judge imposed a 3-year sentence
18. Jeffrey Martin – unclear on what judge meant by “not to be given credit for initial SCDC time – took into consideration when revocation issued” – it would appear this inmate would be entitled to credit under Hayes v. State, 413 S.C. 553, 777 S.E.2d 6 (Ct. App. 2015)
19. Samuel Goodwin – unclear on what judge meant by “not to receive credit for initial SCDC time” - it would appear this inmate would be entitled to credit under Hayes v. State, 413 S.C. 553, 777 S.E.2d 6 (Ct. App. 2015)
20. Stephen Prather – active service time “12” – days/months/years not circled
21. Jason Spann – cannot read judge’s signature

Unclear or Problematic Sentencing Sheet Examples

1-42-18-0008

Name of Original Offense: Breaking into Motor Vehicle

Original A/W#: 2016A4210108332

Date of Original Offense: 6-24-2016

Conviction S.C. Code §: 16-13-016D(A)(1)

Conviction CDR Code #: 0121518

Original Sentence: 5 yrs. susp. for 5 yrs. prob.

ORDER

The above named defendant has been charged with violating the conditions of probation ordered on 6-18-17 in the Court of General Sessions of Spartanburg County, and/or the additional conditions ordered by the Court in probation continuation orders(s) issued on 1-3-18, as set forth in the attached warrant(s) or citation(s) dated 1-3-18. After hearing the evidence and being duly advised, in the (presence/absence) of the defendant, I find that the above named defendant has violated the following condition(s) of probation. (List by number to indicate special conditions as provided in the affidavit)

1, 4, 6, & 10

Therefore, IT IS ORDERED that:

- ☒ the suspended sentence be revoked and the above named defendant be required to serve 5 months/years, the remainder of the original sentence, and/or pay \$.
- ☐ the suspended sentence be revoked and the above named defendant be required to serve months/years of the original sentence and/or pay \$; thereupon to be reinstated on probation, subject to the conditions set forth in the attached order and not inconsistent with this order.
- ☐ the above named defendant is continued on probation as provided for in the original sentence, subject to the conditions set forth therein and not inconsistent with this order.
- ☐ probation is reduced to time served under supervision and the defendant is discharged from supervision on this date.
- ☐ the above named defendant is placed on electronic monitoring pursuant to §23-3-540 (mandatory if convicted of first or third degree criminal sexual conduct with a minor or lewd act, discretionary if convicted of any other applicable sex offense against a minor).
- ☒ Financial Obligations: Order satisfies: ☒ Department fees (arrearage) Civil judgment: ☐ Department fees
☒ Fines and other fees (arrearage / balance) ☐ Fines and other fees
☐ Restitution (and 20%) (arrearage / balance) ☐ Restitution (and 20%)

☒ Additional Conditions ordered by the Court:

Terminate Probation

- ☐ The defendant is given credit for pre-revocation hearing detention time on current probation violation to be calculated and applied by the SC Department of Corrections.
- ☐ The defendant is to be given credit for pretrial detention time served (N/A if defendant has served prior SCDC time).
- ☒ The defendant has served 0 days/months/years of prior revocations and/or initial SCDC time.
- ☐ The defendant was previously placed on active electronic monitoring pursuant to §23-3-540.

This 12 day of April, 2018, SC

Presiding Judge

Howard Keith Kelly

Judicial Circuit

You are hereby advised that under the law the Court may at any time revoke or modify any condition of this probation; impose any lawful conditions it deems proper; or extend your period of probation not to exceed five (5) years. At any time within the period of your probation, the Court may require you to serve any part of the original sentence imposed.

This is to certify that I have read, or have had read to me, the order and the conditions set out therein. I agree to comply with such conditions and the probation order during the period of my probation. I have received a copy of this Court's order and all attachments.

Langley, Joseph

The attached order for activation of sentence indicates to Revoke 5 Years Credit for 605 days.
One sentence can be revoked for 5 years, the others are 1 year, 1 year and 2 years. There is no verbiage on the order to extend the time to 5 years from the original time given. We have entered as revoking original (5 years, 1 year, 1 year, 2 years all concurrent)

2018-GS-39-494

CLERK OF COURT
PICKENS COUNTY
SOUTH CAROLINA
MAR 22 P 12:00

This matter appears before me on Motion of the staff of the Pickens County Sheriff's Office seeking an Order terminating the Defendant's participation in the HIP Reporter program. On 3/22/2019 a hearing was held on the matter in open Court and on the record.

It appears that on 10/30/2018 the Defendant was sentenced to 5 yrs provided upon service of 2 yrs HIP; 18 mos prob. It appears further that he / she did fail to comply with the terms and conditions of HIP. He / She has 5 years of the original suspended sentence remaining on the suspended portion of this this sentence.

THEREFORE IT IS ORDERED:

That the Defendant is remanded to the custody of the Pickens County Detention Center / the South Carolina Department of Corrections to serve the remainder of his/her sentence.

That the Defendant be reinstated to the HIP/Weekender/Day-reporter program.

✓ That Revoke 5 years Credit For 605 days, ATU while incarcerated.

IT IS SO ORDERED.

Dated: 3/22/19
Pickens, South Carolina

To: Andrew Carson (C049204)
Subject: FW: Scanned from a Xerox Multifunction Printer
Attachments: Scanned from a Xerox Multifunction Printer.pdf

Ref: Inmate Rondeau, Michael SCDC #262630

Andrew,

The listed inmate's record was audited Friday, April 5, 2019. Upon auditing, I discovered on the NCIC sheet, page 8, a charge of Burglary 1st on 11/14/18, that was **not included with the 19 convictions.** I looked at the Sumter County Web site and saw the inmate was sentenced to 15 years for Burglary 2nd - Violent. I called the Sumter County Clerk of Court for the sentencing sheet. I received the sentencing sheet via fax on Monday, 4/8/19. I called Sumter County Detention Center and spoke with Lt. Neal for the jail time credit. Lt. Neal informed me that she has **no record on the inmate serving time on this charge, that she has no record of the warrant number.** I entered the conviction and the inmate's maxout date changed from 10/31/27 to 3/12/28.

ORDER

The above named defendant has been charged with violating the conditions of probation ordered on 02/25/2015 in the Court of General Sessions of ANDERSON County, and/or the additional conditions ordered by the Court in probation continuation order(s) issued on _____ as set forth in the attached warrant(s) or citation(s) dated 02/09/2016. After hearing the evidence and being duly advised, in the (presence/absence) of the defendant, I find that the above named defendant has violated the following condition(s) of probation: (list by number or indicate special conditions as provided in the affidavit) 1, 2, 7, 9, 10

Therefore, IT IS ORDERED that:

☐ the suspended sentence be revoked and the above named defendant be required to serve _____ months/years the remainder of the original sentence, and/or pay \$ _____

☒ the suspended sentence be revoked and the above named defendant be required to serve 90 days months/years of the original sentence and/or pay \$ _____, thereupon to be reinstated on probation, subject to the conditions set forth in the attached order and not inconsistent with this order

☐ the above named defendant is continued on probation as provided for in the original sentence subject to the conditions set forth therein and not inconsistent with this order.

☐ probation is reduced to time served under supervision and the defendant is discharged from supervision on this date

☐ the above named defendant is placed on active electronic monitoring pursuant to §23-3-540 (mandatory if convicted of first degree criminal sexual conduct with a minor or lewd act, discretionary if convicted of any other applicable sex offense against a minor).

☒ Financial Obligations: Order satisfies: ☒ Department fees (arrearage) Civil judgment: ☐ Department fees
☐ Fines and other fees (arrearage / balance) ☐ Fines and other fees
☐ Restitution (and 20% arrearage / balance) ☐ Restitution (and 20%)

☒ Additional Conditions ordered by the Court:

Served: Hold in Jail 90 days; No credit for time of rest. Toll while incarcerated. Extend probation 1 year. Restriction

☐ The defendant is given credit for pre-arrest hearing detention time on current probation violation to be calculated and applied by the SC Department of Corrections.

☒ The defendant has previously served 57 days months/years on this sentence (rept sentence time and or prior part at revocation time)

☐ The defendant was previously placed on active electronic monitoring pursuant to §23-3-540.

You are hereby advised that under the law the Court may at any time revoke or modify any condition of this probation, impose any lawful conditions it deems proper, or extend your period of probation not to exceed five (5) years. At any time within the period of your probation, the Court may require you to serve any part of the original sentence imposed. This is to certify that I have read, or have had read to me, the order and the conditions set out therein. I agree to comply with such conditions and the conditions of my attached probation order during the period of my probation. I have received a copy of this Court's order and all attachments.

ORDER

Ray veshion

The above named defendant has been charged with violating the conditions of probation ordered on 9/25/11 in the Court of General Sessions of Georgetown County, and/or the additional conditions ordered by the Court in probation continuation orders(s) issued on 08-29-13, as set forth in the attached warrant(s) or citation(s) dated 5/6/14. After hearing the evidence and being duly advised, in the (presence/absence) of the defendant, I find that the above named defendant has violated the following condition(s) of probation: (Use by number and indicate special conditions as provided in the affidavit)

1, 2, 9, 10 & 11

Therefore, IT IS ORDERED that:

- ☒ the suspended sentence be revoked and the above named defendant be required to serve 3 months/years, the remainder of the original sentence, and/or pay \$ _____.
- ☐ the suspended sentence be revoked and the above named defendant be required to serve _____ months/years of the original sentence and/or pay \$ _____; thereupon to be reinstated on probation, subject to the conditions set forth in the attached order and not inconsistent with this order.
- ☐ the above named defendant is continued on probation as provided for in the original sentence, subject to the conditions set forth therein and not inconsistent with this order.
- ☐ probation is reduced to time served under supervision and the defendant is discharged from supervision on this date.
- ☐ the above named defendant is placed on electronic monitoring pursuant to §23-3-540 (mandatory if convicted of first or third degree criminal sexual conduct with a minor or lewd act, discretionary if convicted of any other applicable sex offense against a minor).
- ☒ Financial Obligations: Order satisfies: ☒ Department fees (arrearage) Civil judgment: ☐ Department fees
☐ Fines and other fees (arrearage / balance) ☐ Fines and other fees
☐ Restitution (and 20%) (arrearage / balance) ☒ Restitution (and 20%)

☒ Additional Conditions ordered by the Court:

Not to be reinstated on probation

Not to be reinstated on probation

- ☒ The defendant is given credit for pre-arrest hearing detention time on current probation violation to be calculated and applied by the SC Department of Corrections.
- ☒ The defendant is to be given credit for pretrial detention time served (N/A if defendant has served prior SCDC time).
- ☒ The defendant has served _____ days/months/years of prior revocations and/or initial SCDC time.
- ☐ The defendant was previously placed on active electronic monitoring pursuant to §23-3-540.

This 13th day of Dec, 2013,
Georgetown, SC

Presiding Judge

15th

Judicial Circuit

You are hereby advised that under the law the Court may at any time revoke or modify any condition of this probation; impose any lawful conditions it deems proper; or extend your period of probation not to exceed five (5) years. At any time within the period of your probation, the Court may require you to serve any part of the original sentence imposed.

This is to certify that I have read, or have had read to me, the order and the conditions set out therein. I agree to comply with such conditions and the conditions of my attached probation order during the period of my probation. I have received a copy of this Court's order and all attachments.

The above named defendant has been charged with violating the conditions of probation ordered on 12 / 13 / 17 in the Court of General Sessions of Lexington County, and/or the additional conditions ordered by the Court in probation continuation order(s) issued on 5/22/18, as set forth in the attached warrant(s) or citation(s) dated 5/22/18. After hearing the evidence and being duly advised, in the (presence/absence) of the defendant, I find that the above named defendant has violated the following condition(s) of probation: (List by number or indicate special conditions as provided in the affidavit)
1, 6, 7, 11, 18

Therefore, IT IS ORDERED that:

- ☐ the suspended sentence be revoked and the above named defendant be required to serve _____ months/years, the remainder of the original sentence, and/or pay \$ _____.
- ☒ the suspended sentence be revoked and the above named defendant be required to serve 3 months/years of the original sentence and/or pay \$ _____; thereupon to be reinstated on probation, subject to the conditions set forth in the attached order and not inconsistent with this order.
- ☐ the above named defendant is continued on probation as provided for in the original sentence, subject to the conditions set forth therein and not inconsistent with this order.
- ☐ probation is reduced to time served under supervision and the defendant is discharged from supervision on this date.
- ☐ the above named defendant is placed on electronic monitoring pursuant to §23-3-540 (mandatory if convicted of first or third degree criminal sexual conduct with a minor or lewd act, discretionary if convicted of any other applicable sex offense against a minor).
- ☒ Financial Obligations: Order satisfies: ☒ Department fees (mensural) Civil Judgment: ☐ Department fees
Restraint Dry Test Fee ☒ Fines and other fees (mensural / balance) ☐ Fines and other fees
☐ Restitution (and 20%) (mensural / balance) ☐ Restitution (and 20%)
- ☐ Additional Conditions ordered by the Court:

ENTERED

- ☒ The defendant is given credit for pre-arrest detention time on current probation violation to be calculated and applied by the SC Department of Corrections.
- ☒ The defendant is to be given credit for pretrial detention time served (N/A if defendant has served prior SCDC time).
- ☒ The defendant has served 6 days/months/years of prior revocations and/or initial SCDC time.
- ☐ The defendant was previously placed on active electronic monitoring pursuant to §23-3-540.

This 15 day of March, 2019
Lexington SC

[Signature]
Presiding Judge 11 PM Judicial Circuit

You are hereby advised that under the law the Court may at any time revoke or modify any condition of this probation; impose any lawful conditions it deems proper; or extend your period of probation not to exceed five (5) years. At any time within the period of your probation, the Court may require you to serve any part of the original sentence imposed.

This is to certify that I have read, or have had read to me, the order and the conditions set out therein. I agree to comply with such conditions and the conditions of my attached probation order during the period of my probation. I have received a copy of this Court's order and all attachments.

Sentence Length Requirement for Housing in State Correctional Institute

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "9. For each state in the southeastern region, please provide information on the length of sentence required for a state correctional institute to house an inmate and any other pertinent differences in correctional operations compared to South Carolina."

Sentence Length Requirement for Housing in State Correctional Institute (Southeastern States)

Number of states	Sentence Length	States
10	12 months	Alabama, Arkansas, Florida, Georgia, Kentucky, Maryland, Mississippi, Tennessee, Virginia and West Virginia
1	6 months	North Carolina
1	3 months	South Carolina
1	Hard labor (felonies)	Louisiana

Alabama – Sentences of twelve months or less go to county jail; sentences of more than twelve months but not more than three years can go to county jail or state prison; sentences of more than three years go to state prison.

Arkansas – Sentences of twelve months or more go to state prison.

Florida – Sentences of more than one year go to state prison.

Georgia – Sentences of twelve months or more go to state prison.

Kentucky – Sentences of twelve months or more go to state prison.

Louisiana – Sentences to imprisonment at hard labor (felonies) go to state prison.

Maryland – Sentences of twelve months or more go to state prison.

Mississippi – Sentences of twelve months or more go to state prison.

North Carolina – Sentences of six months or more go to state prison.

South Carolina – Sentences exceeding three months (91 days or more) go to state prison.

Tennessee – Sentences of twelve months or more go to state prison.

Virginia – Sentences of one year or more go to state prison.

West Virginia – Sentences of one year or more go to state prison.

Continuity of Care for Transfer to Court - Sample Form

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "11. Which counties/entities provide information, which SCDC needs to process inmates, in an efficient and effective manner and which entities may need more assistance in this area?"

10/24/2012 04:26 3039355084

Intake Processing Times

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "14. Please provide a chart which shows, for each of the last three years separated by male and female inmates, the following information related to reception and evaluation centers: (a) Number of inmates who enter, (b) Number of inmates who enter, max out their sentence and are released before assignment to an SCDC facility, (c) Number of inmates who enter, max out their sentence within one month of entering the center, and are released, (d) Number of inmates who complete processing and are assigned to an SCDC facility, (e) Shortest, longest, and average amount of time to process an inmate."

SCDC Admissions and Processing Times for FY16 - FY18

	FY18		FY17		FY16	
	Males	Females	Males	Females	Males	Females
Number of Admissions to SCDC *	6,539	1,000	7,187	1,118	7,659	1,102
Number Admitted who were released before assignment to a SCDC facility	866	111	1,257	133	1,090	139
Number Admitted who were released or had an early detainer pickup (prior to actual release) within one month of admission to SCDC	405 (of the 866)	64 (of the 111)	385 (of the 1,257)	62 (of the 133)	409 (of the 1,090)	39 (of the 139)
Number assigned to a SCDC facility	5,673	889	5,930	985	6,569	963
Minimum processing time (among all placements)	0	0	0	1	0	1
Maximum processing time (among all placements)	204	137	630	109	281	195
Average processing time (among all placements)	57	41	67	43	47	39
Median processing time (among all placements)	54	40	63	41	45	35
Minimum processing time (excluding cases that went to court/medical while at intake)	0	0	0	1	0	1
Maximum processing time (excluding cases that went to court/medical while at intake)	200	111	411	107	281	102
Average processing time (excluding cases that went to court/medical while at intake)	56	39	64	41	45	37
Median processing time (excluding cases that went to court/medical while at intake)	52	39	62	40	44	35

* This number excludes SCDC jurisdictional admissions who are serving sentences for both SCDC and another state/federal jurisdiction and are admitted to the other jurisdiction first. Thus, these figures will not exactly match SCDC's published jurisdictional admissions figures.

Sentence Length Distribution of Inmates Admitted by Fiscal Year

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to question 15(a) in LOC's March 27, 2019 letter to the Department of Corrections. The complete question states: "Please provide charts which show, for each of the last three years separated by male and female inmates, the following information: (a) Number of individuals admitted to a SCDC reception and evaluation center, grouped by length of sentence, and (b) Number of individuals admitted to a SCDC reception and evaluation center, with: No high school diploma; General Educational Development or high school diploma; o Degree from a technical college; and Degree from four-year college or higher degree."

* If an inmate should have a "suspended" sentence, only his/her prison term is reflected.

** This average does not include inmates with life, death, or YOA sentences.

Note: Percentages may not add up due to rounding.

Highest Educational Degree Reported by Inmates Admitted to SCDC

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to question 15(b) in LOC's March 27, 2019 letter to the Department of Corrections. The complete question states: "Please provide charts which show, for each of the last three years separated by male and female inmates, the following information: (a) Number of individuals admitted to a SCDC reception and evaluation center, grouped by length of sentence, and (b) Number of individuals admitted to a SCDC reception and evaluation center, with: No high school diploma; General Educational Development or high school diploma; o Degree from a technical college; and Degree from four-year college or higher degree."

Highest Degree Reported by Inmates Admitted to SCDC R&E, FY 2016 - 2018 *

HIGHEST DEGREE RECEIVED **	FISCAL YEAR OF ADMISSION					
	2016		2017		2018	
	MALES	FEMALE	MALE	FEMALES	MALES	FEMALES
NO H.S. DIPLOMA OR GED	3,350	440	3,198	452	2,794	399
H.S. DIPLOMA OR GED	4,045	575	3,728	584	3,504	522
TECHNICAL COLLEGE/ASSOCIATES	141	42	138	48	134	52
FOUR-YEAR COLLEGE OR HIGHER	118	40	113	34	104	26
NOT REPORTED	5	5	10	0	3	1
TOTAL	7,659	1,102	7,187	1,118	6,539	1,000

* These figures exclude SCDC jurisdictional admissions who are serving sentences for both SCDC and another state/federal jurisdiction and are admitted to the other jurisdiction first. Thus, these figures will not exactly match SCDC's published jurisdictional admissions figures.

** Self-reported by inmates during the R&E process.

Inmate Profile Chart by Fiscal Year

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "16. Please provide a chart that shows, for each year from 2013-14 through 2017-18, demographic information about inmates, including ethnicity and age."

Non-Citizen Inmates by Gender (FY2016-FY2018)

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "17. Please provide charts which show, for each of the last three years separated by male and female inmates, the following information: (a) Number of illegal aliens housed at SCDC facilities with a state conviction other than a violation of immigration laws; (b) State offenses committed; (c) Sentence length; (d) Projected release date; and (e) Number on which U.S. Immigration and Customs Enforcement have detainers."

Current Offenses for Female SCDC Inmates who are not U.S. Citizens as of June 30, 2016

Number of Inmates = 19; Number who Have Ever Had an I.C.E. Detainer = 8

SCDC Policy Op-21.04, "Inmate Classification Plan," Issue date: December 13, 2017, NOT RESTRICTED

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "18. Please explain the current classification system utilized by the agency and provide copies of any relevant policies."

See also, SCDC Policy OP-21.09, "Inmate Records Plan," Issue date: November 16, 2017, NOT RESTRICTED

STATE/FEDERAL STATUTES: Section 17-25-65, South Carolina Code of Laws, 1976; Section 24-1-140, South Carolina Code of Laws, 1976, as amended; Prison Rape Elimination Act (PREA) Statute 42 USC 15601; PREA Standards 115.41, 115.42, 115.43, 115.81.

PURPOSE: To provide a general outline of the Agency's inmate classification plan and to establish the general criteria by which inmates will be classified and assigned to housing within the Agency.

POLICY STATEMENT: The South Carolina Department of Corrections is committed to upholding public safety and to operating a safe, secure, and humane prison system. To this end, the Agency will develop and implement an inmate classification system designed to assess an inmate's risk based on his/her past criminal behavior and to assign him/her to appropriate institutional housing based on the results of such risk assessment. To promote positive behavior, an inmate's custody level and privileges while assigned to an institution will be based on behavior driven criteria.

Inmate custody classification is based on different factors and embodies correctional discretion. An inmate has no right to any particular custody level.

SECTION ONE: INTRODUCTION

1. POLICY DIRECTIVES:

1.1 The South Carolina Department of Corrections will develop, implement, and publish an Inmate Classification Plan in compliance with applicable state and federal statutes and American Correctional Association Standards. With the approval of the Agency Director and the Deputy Director of Operations, responsibility for the development and implementation of the plan will rest with the Division Director of Classification and Inmate Records. The Classification Plan will be reviewed at least annually and updated as necessary.

1.2 A copy of the Inmate Classification Plan will be provided to each Warden, Regional Director, Division Director, Classification staff member, policy manual holders, the Agency Director, the General Counsel, and other members of the Executive Staff. Inmates will be afforded access to the plan through publication of the same in the SCDC Operations Operational Manual available for their review in each institutional library (or area within the institution

generally accessible to all inmates). When necessary, updates to the plan will be published and distributed to staff by the Division Director of Classification and Inmate Records and the Branch Chief of Policy Development.

1.3 The Inmate Classification Plan will generally be designed to:

- Assign inmates to institutional housing based on risk assessment criteria;
- Establish regular reviews and multiple custody levels within institutions;
- Assign inmates to various custody levels and provide privileges to inmates based on behavior driven criteria;
- Increase supervision and control of disruptive inmates in maximum and medium custody units;
- Establish graduated release for eligible inmates through a systematic decrease in supervision and corresponding increase in responsibility pertaining to work release and/or placement in a pre-release center; (In preparation for final release, inmates will be encouraged and provided opportunities for involvement with family and participation in community activities in accordance with SCDC Policies OP-22.09, "Inmate Visitation," and PS-10.04, "Volunteer Services Programs.")
- Retain inmates at assigned institutions for longer periods of time to reduce transfers and stabilize the inmate population; and
- Standardize inmate record keeping to ensure that consistent, up-to-date information is maintained on each inmate from which classification decisions may be based.

1.4 At a minimum, an inmate's classification status will be reviewed at regular intervals to ensure the proper classification of each inmate during his/her term of incarceration. Inmates may also be reviewed as a result of a change in their status, i.e., disciplinary infractions, changes in their sentence, criminal charges, etc.

1.5 Inmates will be afforded the opportunity to appeal classification decisions through the Agency's Inmate Grievance System. (See SCDC Policy GA-01.12, "Inmate Grievance System.")

1.6 The Division Director of Classification and Inmate Records or designee will monitor classification programs within each institution at least annually with formal on-site visits to ensure that classification procedures are properly administered.

2. CLASSIFICATION PLAN CRITERIA AND OBJECTIVES:

2.1 This classification plan uses detailed information on the inmates that is gathered and entered into the automated system during intake processing at the R&E Center. Inmates will then be assigned and transferred to the correct security level. Privileges and Earned Work Credit/Earned Educational Credit (EWC/EEC) accrual rates will be determined by behavior at the receiving institution where an inmate can move to less or more restrictive custody (supervision).

2.2 The format for the classification criteria is designed to:

- Simplify and standardize the process;

- Meet the public's perception and demand for justice and safety;
- Account for risk as presented by past criminal behavior;
- Specifically address institutional behavior; and
- Develop policy/procedural guidelines for custody and security level placements with the concurrence of many field personnel.

2.3 Objectives of Classification Training:

- Allow field personnel active participation in case-by-case evaluation.
- Ensure common understanding among staff in the interpretation of the classification system.
- Ensure that, despite simplification, the essential elements of an objective and consistent classification system based on risk and protection of the public are not compromised.
- Obtain feedback to finalize a set of system wide policy/procedural guidelines from which the system can be automated and reports generated for monitoring and evaluation.

2.4 System Design: The system is designed to:

- Establish multiple custody levels within facilities;
- Base custody and privileges on inmate behavior;
- Increase supervision and control of disruptive inmates with maximum and medium custody units; and
- Emphasize work, programs, and good behavior.

2.5 Format for *Central* Classification Security Level Review: The format evaluates inmates on six (6) placement criteria: Severity of current offense; Incarcerative sentence based on time to max out; Prior commitments over 90 days; Assaultive disciplinary convictions; Escape history; and Detainers. Also considered are assessed special needs such as: Mental Health, Sex Offender, Medical, Mental Retardation, and Substance Abuse. In addition, the following are considered: Security Threat Group Affiliation; Separation Requirements; Resident Stability; and NCIC Offense Information.

2.6 Institutional Classification Custody Review: The custody is determined by analysis of "behavior driven" criteria to assess the level of supervision based on:

- Assaultive disciplinaries with a weapon;
- Assaultive disciplinaries without a weapon;
- Assaults against staff;
- Assaults against inmates;
- Escapes;
- Chronic/major disciplinary history;
- Criminal offenses committed while incarcerated;
- Resident stability;
- Detainers; and
- Security Threat Group Affiliation.

2.7 Custody Assignment: The Institutional Classification Committee (ICC) will be the decision-making body for institutional custody decisions. Classification committees will be chaired by the Classification Case Manager/Caseworker (CPS II/CPS I in level 1A institutions). The ICC will make decisions regarding custody with the exception of placement in Protective Custody and Minimum Out/Minimum Restricted custody in Security Level 2 and 3 facilities. The ICC will make recommendations and **Central** Classification will make final decisions to approve or disapprove the custody assignment in these situations. All inmates will be classified for custody and housing. The principal custody designations are: Minimum Out (MO); Minimum Restricted (MR); Minimum In (MI); Medium (ME); Maximum (MX); Security Detention (SD); **Short term Detention (ST)** with Protective Custody Concerns (SP); Protective Custody (PC); Disciplinary Detention (DD); Disciplinary Yard (DY).

2.8 Inmate custody classification is based on different factors and embodies correctional discretion. An inmate has no right to any particular custody level.

2.9 The inmate's custody should be based on behavior and criminal history. The custody will determine the inmate's privileges and EWC/EEC level. Criminal history is considered when evaluating an inmate for MO and MR custody.

3. SECURITY AND INSTITUTION ASSIGNMENT:

3.1 Central Classification will be the decision-making body for security level and institution assignment. The principal security level designations are: 1A, 1B, 2, and 3.

3.2 USE OF AUTOMATION: Data in the automated system is being enhanced through transfer of information from the manual record; entering additional data in areas such as medical and mental health; and auditing records to increase the accuracy of the information.

SECTION TWO: RECEPTION AND EVALUATION (R&E) CENTERS

4. INITIAL RECEPTION AND EVALUATION PROCEDURES: All inmates who arrive at an R&E Center will immediately be processed through the following steps of receiving and evaluation (paragraphs 4.1 through 4.15).

4.1 The R&E Records staff will be responsible for creating both an institutional and a central record for each inmate. The institutional record will accompany the inmate upon transfer from R&E and upon every institutional transfer thereafter, with the exception of inmates being transferred to regional court hubsites, medical/doctors appointments, outside (non-SCDC) hospital admissions, and overnight court transports/overnight PCR hearings.

4.2 Each inmate's commitment papers will be reviewed by the receiving person and delivered to the appropriate R&E records person for processing. The R&E Records staff will review the commitment papers to ensure that the inmate has a valid South Carolina sentence. Inmates who do not have valid commitment papers or a valid South Carolina sentence will not be accepted by the SCDC.

4.3 Each inmate will be searched for contraband as indicated in SCDC Policy OP-22.19, "Searches of Inmates."

4.4 Medical and trained security staff will conduct a medical screen to determine immediate action to be taken if inmate appears to be suicidal (i.e., referral to mental health counselor) and/or identify medical conditions that need immediate attention. Medical, mental health, and dental screening will be conducted in accordance with SCDC Policy HS-18.13, "Health Screening and Exams."

4.5 Inmates arriving at the R&E Center with a GBMI (Guilty But Mentally Ill) conviction will automatically be sent to Gilliam Psychiatric Hospital (males) or to Camille Graham Correctional Institution (Special Needs Facility) (females) for evaluation.

4.6 See SCDC Policy OP-22.16, "Death Row," for information regarding the reception and evaluation process for inmates with death sentences.

4.7 Each inmate's property and money will be processed in accordance with established SCDC procedures. (Refer to SCDC Policy OP-22.03, "Authorized Inmate Property and Disposition of Unauthorized Property," and ADM-15.12, "E.H. Cooper Trust Fund," for further information.)

4.8 Each inmate will receive hygienic attention (shower, shave, hair cut, etc.) and will be issued clothing and any additional items approved for issuance to the newly-arrived inmate. (Refer to SCDC Policy OP-22.13, "Inmate Grooming Standards.")

4.9 Each inmate will be questioned to determine age and any other questions necessary in order to assist in making cell assignment.

4.10 Each inmate will be fingerprinted and photographed (to include notation of identifying marks or other unusual physical characteristics for identification). An Identification Card will be issued to the inmate with assignment of an SCDC number.

4.11 Each inmate will be given assistance in notifying **his/her** next of kin and family of admission, if necessary.

4.12 Initial Housing Assignments: Initial housing assignments at the R&E will be made by the Operations Coordinators in charge on the basis of the inmate's age, physical size, and any other available security-related characteristics, including information received prior to the inmate's arrival or from the law enforcement or jail personnel who transported the inmate to the R&E Center. Housing for inmates undergoing reception and diagnostic processing will be in cells specifically designated for R&E.

4.13 Immediate Care Requirements: Each inmate will be interviewed to determine if s/he requires immediate medical or mental health care in compliance with related Health Services procedures. Inmates who require immediate medical or mental health care will be referred to the appropriate health services professional staff for evaluation and treatment.

4.14 Prescriptions and Medications: Each inmate will be required to present prescriptions and all medications (prescribed and over-the-counter) that the inmate obtained prior to arrival at the R&E Center. The medical staff will review all prescriptions and medications and confer with a SCDC physician to decide upon continuation of these medications. When the inmate is examined by a physician, a final determination will be made as to what medications the inmate will require.

4.15 Initial Orientation: Each inmate will receive a brief orientation concerning the reception process. All newly arrived inmates will receive written orientation by the R&E personnel on the following minimum topics:

- SCDC policies and rules;
- Intake process;
- Prison Rape Elimination Act (PREA);
- Inmate grievance system;
- Institutional programs and services;
- Consular Notification;
- International treaty;
- Mail and visitation procedures; and
- HIV education.

5. INITIAL MEDICAL ASSESSMENT, ORIENTATION, INTAKE ASSESSMENT, AND REFERRALS:

5.1 Preliminary Medical Examination: During the receiving and screening phase at the Reception and Evaluation Center, medical staff will screen the incoming inmate within **72 hours**, using SCDC Form M-14 and the history portion of the R&E Physical in the automated medical record (AMR). Additional medical information will be requested from outside sources, i.e., inmate's physician prior to admission to verify an inmate's claim of previous medical treatment. (PREA Standards 115.41 and 115.42)

5.1.1 On a case by case basis, the **Gender Dysphoria Multi-Disciplinary Team** will determine whether to assign a transgender or intersex inmate to an institution for male or female inmates. The placement decision will be based on the inmate's own views with respect to his or her health and safety, and whether such decision will present a management or security problem. (PREA Standard 115.42)

5.1.2 Inmates with special medical and/or mental health needs will be referred to the appropriate professional medical staff for further evaluation and treatment.

5.1.3 The results of the preliminary medical examination will be recorded on SCDC Supply S-15, "Comment Sheet," and other appropriate forms, which will be filed in the inmate's medical record. A copy of the Comment Sheet will be forwarded to the assessment classification section. This information is also included in the automated record.

5.1.4 Initial Screening for Risk of Victimization or Abusiveness: Inmates must be screened for risk of sexual victimization or risk of sexually abusing other inmates within 72 hours of arrival at SCDC and again at each subsequent transfer. A trained designated staff member will use the automated PREA screening instrument (SCDC Form 18-79, "PREA Screening Checklist") to interview the inmate and complete the checklist. Inmates who have experienced prior sexual victimization or perpetrated sexual abuse on others whether it occurred in an institutional setting or in the community will be offered a follow-up meeting with a qualified medical/mental health staff within 14 calendar days of the initial screening. The screening interview will be individualized to ensure the safety of each inmate and will be conducted in a private area that is conducive to obtaining complete and accurate information. Inmates will not be disciplined for failure to disclose or *for* refusal to answer questions related to prior sexual abuse. (PREA Standards 115.41 and 115.81)

5.1.5 Within 30 days of transfer, the Classification Caseworker/CPS will reassess the inmate's risk of victimization or abusiveness based upon any additional, relevant information received since the inmate's transfer. If additional, relevant information has been received, the classification caseworker will assess the inmate's risk using the automated PREA screening instrument. If no additional, relevant information has been received, the classification caseworker will indicate that on the automated PREA DUE LIST.

5.1.6 The inmate's PREA status will be used when making decisions regarding cell assignment, job assignment, education, and program assignment. Inmates designated as PREA perpetrators will be kept to the extent possible from those designated as PREA victims. (PREA Standard 115.42)

5.1.7 Initial Housing of LGBT (lesbian, gay, bisexual, and transgender) inmates: Lesbian, gay, bisexual, transgender, or intersex inmates will not be housed solely on the basis of such identification unless placed for the purpose of protecting the inmate. Transgender and intersex inmates will be given the opportunity to shower separately from other inmates. Placement and program assignment of transgender and intersex inmates will be reassessed every six months to review any threats to safety experienced by the inmate. (PREA Standard 115.42)

5.1.8 Information from the risk screening instrument will be considered when making housing, work, education, and program assignments with the goal of keeping separate those inmates at high risk of being sexually victimized from those at high risk of being sexually abusive, and ensuring that determination about how to ensure the safety of each inmate is individualized.

5.2 Orientation: Each inmate will receive a brief orientation through written material and video tapes and/or by a short presentation conducted by the assessment classification staff. Assistance will be provided to those inmates unable to understand or speak English. This orientation will be documented on SCDC forms 18-69, "Certificate Of Inmate Orientation," and 18-78, "Certification Of Prison Rape Elimination Act (PREA) Orientation."

The following topics will be addressed:

- Inmate process;
- Improper behavior between staff and inmates;
- Prison Rape Elimination Act (PREA) Guidelines;
- SCDC institutions;
- Consequences of rules violations;
- Programs; and
- HIV education.

5.3 Assessment Testing: All newly received inmates and those who have not been evaluated in the past three (3) years will be administered the math portion of the Wide Range Achievement Test (WRAT) and the Drug Dependence Screen (DDS) test in a group setting. Those unable to read will have the DDS read to them. The reading portion of the WRAT will be administered separately during the Intake Assessment Interview. Substance Abuse Services staff will grade the DDS test, and the Educational and Classification personnel will grade all other tests and record the scores.

5.4 Intake Assessment Interview: The Intake Assessment Interview will be conducted with each newly received inmate by an assessment classification caseworker after the tests described in 5.3, above, are completed.

5.5 Inmate assessment data will be entered in the automated Offender Management System as the inmates are interviewed. The Intake Assessment Interview will be conducted with each newly received inmate by an assessment classification caseworker on the first day of intake when feasible. If for any reason newly received inmates can not be interviewed on their first day of admission, emergency contact information will be entered, and the inmate will be re-scheduled for a complete interview the next work day. The interviews will consist of the following personal data information: Marital/family/social history (to include last known address and emergency contact information); Education/Vocational history; Juvenile history; Employment history; Substance abuse history; Medical/Dental/Mental health history; Needs Assessment and Program Adult criminal record/Legal aspects of the case; Sexual misconduct data; Court ordered recommendations; Staff recommendations; and date information was gathered.

5.6 Assessment Referrals/MEDCLASS: Once the Intake Assessment Interview is entered in the Automated Offender Management System, the computer will generate an Intake Referral Form if certain questions or parts of the interview are answered in the affirmative. The Intake Referral Form will indicate which assessment questions triggered the referral.

5.7 The Intake Assessment Referral will be forwarded to mental health staff for evaluation, and the following steps will be taken:

- Upon evaluation, mental health staff will forward the referral to appropriate medical staff with recommendations for treatment or further evaluation.
- Medical staff will then initiate any other actions for approval in special needs programs, if necessary.

- Medical staff will then complete the MEDCLASS screen and indicate any institutional, cell, work, or transportation restrictions. This screen will be viewed by classification staff before institutional assignments are made.

6. INITIAL CLASSIFICATION AND ASSIGNMENT PROCEDURES: All inmates processed through an R&E Center will be initially classified for a security and custody level and assigned to an institution that best meets their needs. The same procedures will apply to all inmate readmissions and reassignments to R&E Centers.

6.1 Initial Classification: Once the records audit is completed, the security review can be created under the CLASSP screen of the automated Offender Management System. The computer will automatically rate each of the six (6) security criteria and recommend a security level. Each criteria should be reviewed with the manual record, to include any open dispositions, plea bargained, or dismissed/nol prossed sex offenses on the NCIC. If discrepancies are found, the records auditors will be contacted to update the automated record.

PART I:

Security Criteria - See chart for levels (Paragraph 8) :

- 1. Severity of current offense** - based on category of the most serious current offense (1-5).
- 2. Incarcerative sentence** - based on remaining time to serve until max-out.
- 3. Prior criminal history** - commitments of more than 90 days, counted as violent or non-violent per statute.
- 4. Disciplinary convictions** - will be major or administrative All assaultive disciplinaries will be recorded as against a staff member or an inmate, and with or without a weapon.
- 5. Detainers** - (includes wanteds and holds) are based on the offense category of each detainer (1-5). Notifies are reviewed on a case-by-case basis.
- 6. Escapes** - any escape from custody or confinement, based on date returned from escape, if known. Categorize as Class I or Class II escape. See escape definitions. (Note: Other escape related offenses are reviewed on a case-by-case basis.)

Resident Stability - based on arrest record from the NCIC and indication of citizenship status.

Violent Offense with Prior Violent Conviction- "Y" or "N" will appear based on inmate's criminal history.

Inmate Labor Crew Date - if eligible, date will appear.

Recommend Screening for Labor Crew Now - "Y" or "N" will appear based on when the labor crew date occurs.

PART II:

Special Needs Per Intake Assessment/Medical - "Y" or "N" will appear if the inmate was referred for evaluation in a specific area. This does not necessarily mean that the inmate needs this program, only that an evaluation was done in this area.

Security Threat Groups - will be indicated.

Separation Requirement - "Y" or "N".

Resident Stability - appears again for reference.

PART III:

Recommend Security - level recommended based on security criteria.

Assigned Security - level recommended by classification staff.

Institutional Override - see override codes - must thoroughly explain justification in remarks section. (Note: First and second lines of text.)

Central Classification Approved Security - approved security level.

Central Classification Override - must thoroughly explain justification in remarks section. (Note: Third line of text.)

Review Reason - indicates reason that the review is being conducted.

6.2 Completing Security Review: Before the classification caseworker completes the "assigned security," several areas need to be reviewed:

6.2.1 Check the MEDCLASS screen for any restrictions.

6.2.2 Check the CLASSINQ screen to review the inmate's past history for prior commitments and disciplinarys.

6.2.3 Document security level as deemed appropriate after the review of the above information. If the assigned security is different from the recommended security level, then an override code will be needed. Also, text must be provided to justify the override code utilized.

6.2.4 Transfer requests will be coordinated by **Central** Classification on an as-needed basis.

SECTION THREE: **CENTRAL CLASSIFICATION**

7. CENTRAL CLASSIFICATION: *Central Classification (CC)* will have the primary responsibility for all transfers and bed management in the Agency. The main duties and responsibilities of **CC** are as follows: bed space management (all institutions); transfers; special needs/programs; assignment to Minimum Out/Minimum Restricted custody; placement of Separations/Cautions; Labor Crew/Work Program; Pre-Release assignments; **Young** Offender Institutional Service (YOIS) (Transfers); Designated Facilities (Transfers); Interstate Corrections Compact Agreement (ICC); Immigration and Customs Enforcement (ICE) Coordination; International Prison Transfers; *Interstate Agreement on Detainers (IAD), Extradition, Other Jurisdiction*, Court Coordination Transfers; Statewide Protective Custody Placement and Removal; and Approval for Security Level 1. Authority may be delegated to individual **CC** members for the purposes of making routine, case-by-case decisions relative to daily operations. However, decisions regarding difficult or unusual cases will be referred by **CC** members to the *Assistant Division Director CC* will have the authority to override Institutional Classification decisions in the interests of safety, security, and orderly management of inmates and institutions.

8. SECURITY CRITERIA CHART:

CRITERIA	LEVEL 1A LABOR CREW/WORK PROGRAM CONDITIONS LC/WP	LEVEL 1B CONDITIONS	LEVEL 2 CONDITIONS	LEVEL 3 CONDITIONS
Severity of current offense Manual check-	No sex offenses Non-violent offense No Category 4 or 5 offenses except certain violent offenses pursuant to Sentencing Reform Act of 6/2/2010**	First time Category 5 offenses. First time violent offense. No sex offenses or sex registry offenses.	All Categories except Life without Parole.	All Categories, Life without parole
Incarcerative Sentence	Five (5) years or less to max-out for Labor Crew YOA's must be referred by YOIS	Eight (8) years or less to max-out	Ten (10) years served in SCDC or ten (10) years to Max-out	All categories, Life without Parole
Prior Criminal History	No prior violent or any Category 4 or 5 convictions/commitments No prior sex or plea-bargained sex conviction, commitments, arrests, or not <i>prossed</i> .	Unlimited non-violent priors May have one (1) prior Category 4 dominant commitment No prior kidnapping convictions, commitments, or arrests. <i>except certain violent offenses pursuant to Sentencing Reform Act of 6/2/2010**</i> No prior sex or plea bargained sex conviction or commitment (do not count by dominant commitment) No prior sex arrest, dismissed/nol prossed within last 10 years	No more than two (2) Category 4 or 5 prior dominant commitments, if current offense is non-violent One (1) violent prior dominant commitment, it current offense is violent No more than two (2) violent prior dominant commitments if current offense is non-violent	Three (3) or more Category 4 or 5 prior dominant commitments, if current offense is non-violent Two (2) prior violent dominant commitments, if current offense is violent. Three (3) or more prior violent dominant commitments, if current offense is non-violent.

Disciplinary Convictions	<p>No pending disciplinary for eligibility</p> <p>No major disciplinary conviction within past 6 months for eligibility</p> <p>No more than two (2) "Major" disciplinary convictions within past 12 months (different dates) for eligibility</p> <p>Unlimited "Administrative" disciplinary convictions after placement and no "Major" disciplinary convictions after placement</p> <p>No drug disciplinary convictions within past 24 months for eligibility.</p> <p>No removal for disciplinary convictions from a LC/WP within past 24 months for eligibility. Male inmates will be placed in a facility other than the one where the disciplinary occurred.</p> <p>No assaultive disciplinary conviction within past 24 months for eligibility.</p> <p>* No Sexual Misconduct and/or Exhibitionism or Public Masturbation disciplinary convictions within the last 24 months for eligibility.</p>	<p>No pending disciplinary for eligibility</p> <p>No major disciplinary conviction within past 6 months for eligibility.</p> <p>* No Sexual Misconduct and/or Exhibitionism or Public Masturbation disciplinary conviction within the past twenty-four (24) months for eligibility.</p> <p>No more than two (2) "Major" disciplinary convictions within past 12 months (different dates) for eligibility.</p> <p>Unlimited "Administrative" disciplinary convictions after placement and no "Major" disciplinary convictions after placement</p> <p>No drug disciplinary conviction within past 24 months for eligibility</p> <p>No assaultive disciplinary conviction within past 24 months for eligibility.</p>	<p>Major disciplinary conviction within past six (6) months, review on case-by-case basis.</p> <p>No more than four (4) major disciplinarys in last twelve months for eligibility</p> <p>* No more than two (2) Sexual Assault, Sexual Misconduct, and/or Exhibitionism or Public Masturbation disciplinary convictions within the last twelve months for eligibility</p> <p>For lifers with parole, no major disciplinary conviction for ten (10) years.</p>	<p>* Three (3) or more sexual assault and/or sexual misconduct and/or Exhibitionism or Public Masturbation disciplinary convictions within 12 months.</p> <p>Five (5) or more "Major" disciplinary convictions within 12 months.</p>
Adjustment	<p>No removal for adjustment problems from a Designated Facility within 6 months prior to placement date (i.e., any removal of a disciplinary)</p> <p>No termination from a job or program within past 6 months</p> <p>If age 17-20, must have H S. Diploma or GED</p>	<p>If age 17-20, must have H. S. Diploma or GED</p> <p>No substantiated security concerns</p>		
Detainers	<p>No Category 4 or higher (wanted or hold)</p> <p>No out-of-state/federal detainers (wanted/notify/hold)</p> <p>No ICE detainers</p> <p>No Category 4 or 5 open arrest (Notify only)</p>	<p>No Category 4 or higher (wanted or hold)</p> <p>No out-of-state/federal detainers (wanted/notify/hold)</p> <p>No ICE detainers</p> <p>No Category 4 or 5 open arrest (Notify only)</p>	<p>No Category 5 (wanted or hold)</p>	
Escapes	<p>No Class I or Class II escapes</p> <p>Other escape-related offenses, review on case-by-case basis</p>	<p>No Class I escapes</p> <p>No Class II escape within last 10 years</p> <p>Other escape-related offenses, review on case-by-case basis</p>	<p>No Class I escape within last 10 years of return</p> <p>No more than (1) class II Escape within 10 years</p>	
Resident Stability	<p>No NC (non US citizens)</p> <p>No UO</p>	<p>No NC (non US citizens)</p> <p>No UO</p>		
STG	No validated STG	No validated STG	Validated STG-GP	Validated STG GP

**** Reference paragraph 49.1 (Voluntary Manslaughter, Kidnapping, Carjacking with/without Bodily Injury, Burglary 2nd - violent, Armed Robbery, Attempted Armed Robbery, Manufacturing/Distribution of Meth, 1st, 2nd, & 3rd and the crime did not involve any criminal sexual conduct and the offender is within five (5) years of max-out.)** Inmates who are in

possession of a firearm during the commission (Firearm Provision) of the above listed violent crimes are eligible for consideration for the Labor Crew/Work Program. Offense date occurred on or after 6/2/10. Level 1B Inmates will be eligible for labor crews in Level 1B, Level 2 and Level 3 institutions upon meeting other specific classification criteria. Only statutory non-violent inmates with no prior history of violent convictions may be assigned to contract labor crews.

9. BEDSPACE MANAGEMENT:

9.1 Restrictive Housing Unit Beds:

9.1.1 *Short term Detention (ST):* *ST* beds allow institutions to move inmates between the general population and RHU to accommodate their needs. *ST* beds also hold inmates with protective concerns.

9.1.2 Protective Custody Concerns (SP): General population bed is reserved.

9.1.3 Disciplinary Detention (DD): General population bed is not reserved if DD time is greater than 60 days.

9.1.4 Security Detention (SD): General population bed is not reserved.

NOTE: Exception to OP-21.04: Security Level 3 inmates may be housed in Security Level 2 Restrictive Housing Units (RHUs), if no bedspace is available in Security Level 3 institutions. All inmates must meet the criteria for placement, and operational mandates will be maintained as outlined in SCDC Policy OP-22.38, "Restrictive Housing Unit." (Exception approved as of December 29, 2015.)

9.2 General Population Beds: General population beds are considered as minimum and medium. All other bed types, **excluding** *ST* and HOSP beds, are considered special designated beds, such as habilitation unit beds, safekeeper beds, intermediate care unit beds, addictions treatment unit beds, SPICE beds, Sex Offender Treatment beds, behavioral management beds, protective custody beds, and labor crew/work release program beds.

9.2.1 Disciplinary Yard (DY): Inmates who receive disciplinary convictions and disciplinary detention time to serve while in Reception and Evaluation (R&E) Intake status. Inmates who have fully completed the R&E process and receive DD time to serve will be transferred to their initial institution assignment in DY custody status. Entry should be made on the Inmate Custody Screen (CUST Screen) as DY custody status and the change reason #32: DD time to serve/Refer to Warden. (NOTE: This status is reserved for R&E use only.)

9.2.1.1 Inmates received in DY status must be reviewed by the ICC within 48 hours of arrival (exclude weekends and holidays). The institutional record will be referred to the Warden/Designee who will make a final decision to determine if the DD time will be waived or the inmate will be placed in RHU to complete the DD time. The Warden/Designee will document his/her decision on the 18-68 Staff Memoranda. If the DD time is waived, the Classification Caseworker will notify

via e-mail the institution disciplinary recorder and modifier who will update the disciplinary narrative screen.

9.3 Procedures for Maintenance: When an inmate leaves a general population bed (MIN or MED) and is placed in a **ST**, SP, bed or a hospital/infirmarary bed (**ST** or HOSP), there will be a bed held by the automated Offender Management System. This is because the inmate's stay is only temporary. **Central** Classification will not fill that general population bed, unless the inmate transfers to security detention, disciplinary detention, a special designated bed, or out of the institution. When an inmate comes out of a ST, SP, or HOSP bed, s/he will have an available general population bed (MIN or MED) to go back into. A specific custody bed will not be held, only a general population bed. The NUMBED screen of the BEDS menu will still indicate available beds next to each bed type. However, it will not be a true indicator of available beds for **Central** Classification to schedule transfers into. Only the row labeled Transportation-General Population will indicate the total number of general population beds for which **Central** Classification can schedule transfers.

Example of ST: Suppose there are 500 MIN beds and 200 MED beds in the general population. Five (5) inmates go to **ST**. Two (2) inmates go to infirmarary beds (HOSP). One (1) inmate transfers to another institution. The seven (7) inmates in **ST** and HOSP beds will have general population beds held for them until they return. **Central** Classification can only fill the one (1) bed where the inmate transferred out of the institution. If one (1) of the inmates in **ST** is approved by the ICC/Warden to go to Security Detention (SD), then his/her general population bed will become available and **Central** Classification can fill it.

10. TRANSFERS: The **Central Classification** staff will handle all inmate transfers. **CC** will approve the transfer and locate appropriate beds. (See Paragraph 69., "Inmate Hardship Transfer Requests," for additional information.) Due to Agency needs and bedspace availability, groups of inmates may transfer to other institutions. Institutions may be contacted to screen inmates for any medical/mental health conditions that would exclude them from being transferred to targeted institutions. Once the screening is complete, **CC** will initiate the transfers and enter these transfers in the automated system. Transfers initiated at institutions should be handled in the following manner: **Central** Class will note the approved custody at the receiving institution in the comment section of the TRANREQ screen. If the inmate is being transferred from a Restrictive Housing Unit to a general population bed, Institutional staff should review the TRANREQ and ensure that the inmate is dressed in the correct uniform (tan if inmate will be assigned to a general population bed, yellow jumpsuit if inmate will be assigned to a RHU bed). Operations staff must update the inmate's custody on the CUST screen prior to transfer.

10.1 Change in Security Level: If there is a change in the security level of the inmate, the following steps will be taken:

- ICC creates a security status review recommending a new security level.
- **CC** approves/disapproves new security level from the on-line pending security review list.
- If the new security level is approved and warrants a transfer, **CC** will initiate the transfer.
- **CC** will enter TRANREQ notating reason for transfer in remarks section.

- ICC can review the **CC** final decision by viewing the completed security review.

NOTE: Security level may change due to disciplinary convictions, detainers placed/removed, reduction/additional time or sentence, or STG status change or resident stability. Security reviews will not be conducted on inmates in Security Detention, Disciplinary Detention, Substantiated Security Risk Unit (SSR), or Death Row; however, custody reviews will be conducted as required by SCDC Policy OP-22.38, "Restrictive Housing Unit," and OP-22.16, "Death Row." Security reviews will be conducted at least annually on all other inmates.

10.2 Change in Custody Level: If there is a change in the custody level of the inmate, the following steps will be taken when this custody level is not available at the inmate's current institution:

- ICC initiates the custody review.
- ICC sends an **email** to **CC** advising them of the need to transfer the inmate due to custody change.
- If the transfer is warranted, **CC** will create the TRANREQ and the inmate will move as bedspace becomes available. Reason for transfer will be noted in remarks section of TRANREQ.
- If the transfer is not warranted, **CC** will contact ICC.

10.3 Protective Custody (PC) (See SCDC Policy OP-22.23, "Statewide Protective Custody," for in depth information):

- The IPCC-Institutional Protective Custody Committee holds a PC review board.
- If the inmate can be validated for statewide protective concerns, the Case Manager/Caseworker for the IPCC will create a custody review with justification for PC.
- The ICC Case Manager/Caseworker for the IPCC will fax SCDC Form 19-47, "Protective Custody Evaluation," and all supporting documentation to **Central** Classification for final disposition.
- **CC** will create the TRANREQ and initiate the transfer to the institution designated to house protective custody. Reason for transfer will be noted in remarks section of TRANREQ.
- If the inmate cannot be validated for statewide protective concerns, the Case Manager/Caseworker for the IPCC will create a custody review with justification for the appropriate custody. The inmate will return to general population.
- If protective concerns exist at that particular institution and the concerns can be alleviated through a transfer, the SCDC Form 19-47, along with supporting documentation, should be faxed to **Central** Classification for review and final disposition.

10.4 Separation/Caution:

- ICC will complete the SCDC Form 19-141, "Separation/Caution Memorandum," to initiate a separation/caution and forward to **CC** for review.
- If separation/caution is approved, **CC** will create the TRANREQ and enter the reason for the transfer in the remarks section.

- If separation/caution is disapproved, **CC** will contact ICC.

10.5 Disciplinary (Institutions without Restrictive Housing Units (RHUs)):

- Upon entry of major disciplinarys, the ICC should send an **email** to **CC** explaining the circumstances for the transfer request.
- **CC** will create the TRANREQ and enter the reason for transfer in the remarks section.
- The Case Manager/designee at the receiving institution creates a new custody/security review to the appropriate level based on the "pending disciplinary" disposition.

NOTE: If disciplinary charges are dropped or overturned, or the inmate is found not guilty, s/he will normally return to the sending institution. If an RHU bed is needed for an inmate because of a disciplinary situation during normal working hours, the institution will contact **CC**. If a transfer is requested because of a security reason, the inmate must be charged with a formal disciplinary infraction or documented as being under official investigation which may lead to disciplinary charges. Institutions should maximize the use of their **short term** detention beds to manage disciplinary infractions/rule violations. In cases where an inmate is not charged with a major disciplinary however poses an institutional security concern, the institution may request a transfer when the circumstances of the concern can be verified.

10.6 Inmates with Life Sentences with the Possibility of Parole: Inmates with life sentences with the possibility of parole who have served ten (10) years of their sentence without a major disciplinary conviction for a continuous ten (10) year period of time may advance in security level providing they meet all other Level 2 criteria. If a lifer is released from SCDC (i.e., paroled, released on appeal bond, sentence remanded, etc.) and subsequently returns to SCDC, the 10 years will begin from the date of return to SCDC. Institutional assignments for these inmates will be Kershaw CI, Allendale CI, Tyger River CI, or Evans CI. Administrative resolution convictions will not score on the custody and security instrument, but may be considered as a disqualifier for advancement. Lifers approved for advancement to L2 that choose not to be transferred to a L2 institution may request to remain at the L3 institution where advancement occurred. This request should be made clear in the remarks section of the annual classification review. However, should they receive a major disciplinary conviction after advancement, they will be reduced to L3 and subsequently transferred.

10.7 Educational Funding Act: Inmates admitted to SCDC who are under twenty one years old and who do not have a GED or a high school diploma will be assigned to designated Education Funding Act (EFA) institutions.

11. **CC REVIEW OF INMATES FOR EMERGENCY/IMMEDIATE INSTITUTIONAL TRANSFERS:**

11.1 During normal operating hours - Monday through Friday, 8:30 a.m. to 4:30 p.m.: The institution will notify **Central** Classification (**CC**) of requested emergency/immediate transfer by automated message system (CRT). Detailed circumstances will be given relative to the requested emergency/immediate transfer. Examples of potential emergency/immediate transfers include: Inmate assaultive behavior/serious assault on staff, potential escape risk, a

potential threat to the institution, emergency/immediate medical situation, or violation of community programs procedures which would necessitate an immediate transfer. If additional information is required by **CC**, it will be requested via CRT message system or by telephone. **CC** will be responsible for reviewing all information regarding the request for emergency/immediate transfers. If an emergency/immediate transfer is approved by **CC**, the institution will be notified and a specific assignment will be made.

11.2 After normal operating hours - Monday through Friday (4:30 p.m. to 8:30 a.m.), weekends, and holidays: The institution will locate an available bed (RHU or general population). This information is accessible through the OMS Main Menu, selecting "BEDS," then "NUMBED," and entering the desired institution's location code. The last line of this screen will indicate under "TRANSPORTATION" the type and number of beds which can be utilized at the desired location. If the sending institution is unable to locate a bed (RHU or general population) for an emergency transfer, the institution may contact the Emergency Action Center (EAC). The EAC will contact **CC** on-call employee for assistance. The sending institution will be responsible for checking any separations/cautions and coordinating transportation and notification to receiving institution. **CC** will be notified via CRT message by the sending institution no later than the beginning of business the following work day and apprised of circumstances regarding the emergency/immediate transfer. **CC** will review the transfer and determine if additional reassignment is necessary.

12. SPECIAL JOB SKILLS/SPECIAL PROGRAMS: **CC** will be responsible for approving and disapproving all inmates for the following specially skilled jobs or programs: Division of Facilities Management construction crews, Get Smart Program, Governor's Mansion, Addictions Treatment Unit, Department of Public Safety, SLED, **and** Bloodhound Detail. **CC** will also be responsible for approving and disapproving Security Level 2/3 Minimum Out assignments, and Minimum Restricted assignments. The criteria and procedures for special job skills and programs vary. Once the criteria have been met, the following guidelines must be checked: Pending disciplinaries, assaultive disciplinary convictions, or positive drug tests will disqualify inmates from participation; Separations/Cautions from the institution where the job or program is offered must be evaluated; and MEDCLASS - check for institutional restrictions. Required medical/mental health services may not be available at the institution offering the job program. **CC** will also be responsible for coordinating any requests from outside agencies for community or outside crews and details. Institutions that receive such requests from outside agencies should contact **CC** for guidance.

12.1 Inmate Approval/Retention for Statewide Travel: Inmates must be in MO/1B custody and meet established criteria to be considered for placement and retention for statewide travel for the purpose of completing a job assignment. The job supervisor will submit the names of persons to be screened to the Institutional Case Managers using SCDC Form 18-25, "Memo to Request Statewide Travel/Transfer Request for Inmate Worker." The Case Manager will screen MO-1B inmates for statewide travel using the following criteria and submission to the Warden for final approval. **Central** Classification will approve inmates for Statewide Travel if the inmate is transferring from one institution to another in order to work on a specific job.

- No drug disciplinary convictions within 24 months;

- If an Administrative disciplinary is committed after assignment to statewide travel status, the inmate may, depending on the circumstances of the disciplinary, be reassigned to SHOP ONLY status. Inmates in SHOP ONLY status can not travel away from their designated job site; and
- No Separations from incarcerated inmates, or currently employed staff members.

NOTE: The Warden/designee will in consultation with the appropriate Division Director determine whether or not the inmate will be reassigned to SHOP ONLY status. The Classification Casemanager/designee will conduct quarterly audits of inmates assigned to statewide travel. All decisions or changes in an inmate's travel status will be documented on the staff memoranda in the institutional record.

NOTE: Victim Witness Notification: If an inmate has a Victim Witness Notification(s), the victim(s) will be notified by the Warden/Designee via U.S. Mail that SCDC, in accordance with OP-22.11, "Victim Witness Notification," will be assigning the inmate to a job that requires travel throughout the state under direct supervision of trained SCDC employees. The inmate must not be allowed to report to work on the detail until at least five working days after the letter is mailed. Copies of the letter with clear indication of the date mailed will be maintained on file at the institution. Under no circumstances will copies of this information be placed in the inmate's institutional or central record. A copy will also be provided to the Division of Victim Services. Letters returned due to inadequate address provided by the Victim will be forwarded to the Division of Victim Services. Entry will be made in the automated record concerning contact and attempts to contact the victim by the institutional Casemanager/designee. Any questions concerning matters not adequately addressed will require consultation with the Division of Victim Services. If additional information is received from community responses regarding the inmate's job assignment, this information will be considered for possible reassignment.

13. SPECIAL NEEDS: The South Carolina Department of Corrections provides medical and mental health care to inmates in an effective manner with efficient utilization of personnel by concentrating inmates in designated areas according to their level of need. A list of services provided at specific institutions will be published and updated periodically.

The following are brief descriptions of special needs programs provided at designated institutions:

13.1 24-Hour Nursing Care - Institutions that provide in-patient and/or out-patient medical services 24 hours per day. There is a concentration of medical staff available to meet the needs of chronically ill inmates.

13.2 Daily Nursing Coverage - Nursing services are provided seven (7) days per week, eight (8) to 12 hours per day.

13.3 Chronic Infirmary Care - In-patient nursing care available to inmates whose medical condition carries a prognosis of not being able to live in institutional housing for a period of three (3) months or more.

13.4 Handicapped Unit - For inmates who have ambulatory problems, substantial hearing or visual impairment, and/or need assistance in daily living. Prior approval by the Medical Chief of Staff (or designee) is required.

13.5 Gilliam Psychiatric Hospital (GPH) - Facility where male inmates receive in-patient psychiatric care.

13.6 In-Patient Psychiatric Care for Females - Questions on in-patient psychiatric care for female inmates should be referred to the Division of Mental Health Services.

13.7 Area Mental Health Centers - Institutions with a concentration of mental health staff that can provide group and individual counseling for inmates with moderate to severe mental illnesses.

13.8 Intermediate Care Services - Housing for inmates with a major mental illness, often of a chronic nature, who are usually on psychotropic medication. These inmates need a more structured environment than the general population, but are not ill enough for in-patient treatment at a hospital. Prior approval by the Behavioral Medical Staff is required.

13.9 Umbrella Services - This is a step-down program from Intermediate Care Services with less structure. Medications are monitored, and assistance and counseling are provided.

13.10 *Intellectual Disability Program* - (Habilitation Unit) - Services available for adult inmates identified with developmental disabilities. Prior approval by the Behavioral Medical Staff is required.

13.11 Out-Patient Mental Health Services - For inmates with mild to moderate mental illness who need intermittent mental health services that will be provided on referral and as needed. Assignments can be made to any institution except Trenton, Goodman, Wateree, and Level 1A institutions.

13.12 Assisted Living - Living area that houses inmates who require assistance with activities of daily living.

13.13 Dialysis Care - Services and medical care available for inmates requiring dialysis treatment.

13.14 Sex Offender Treatment Program (SOTP) – Residential treatment unit for inmates with current, active commitments for sex offenses.

13.15 Addiction Treatment Unit: For specific details, refer to SCDC Policy PS-10.02, "Inmate Substance Abuse Programs."

14. PROCEDURES FOR APPROVING MINIMUM OUT/MINIMUM *OUT* RESTRICTED CUSTODY AND 1B SECURITY PLACEMENTS:

14.1 The inmate will be reviewed by Institutional Classification and will be recommended for Minimum Out/Minimum **Out** Restricted custody and Level 1B security placement.

14.2 Central Classification will be informed of recommendation for Minimum Out/Minimum **Out** Restricted or Security Level 1B by Institutional Classification. This will be accomplished by appropriate entry being made in the automated system on the custody or security status review. The ICC will document the name of the committee chairperson in the review. **Central** Classification will retrieve information from the automated system and Central Record concerning recommendation for Minimum Out/Minimum **Out** Restricted custody status and security level 1B placement. Appropriate information regarding the inmate which is available in the automated system and Central Record will be reviewed. The information reviewed will include the following:

- a. Current security requirements
- b. Prior custody history
- c. Disciplinary history
- d. Detainer information
- e. Escape history
- f. Cautions or separations
- g. Medical class summary
- h. Work record/job skills
- i. Education record
- j. Security Threat Group affiliation
- k. Resident Stability
- l. NCIC Offense Information

14.3 Items a. through k. in paragraph 14.2, above, may be obtained by inquiry on Classification Inquiry Report Screen of Classification Menu. Further detail will also be available on individual screens in the automated system. NCIC offense information may be obtained from the central/institutional record. Upon obtaining all necessary and required information, **CC** will approve/disapprove recommendation for Minimum Out/Minimum **Out** Restricted custody or security level 1B by completion of the automated custody review.

15. HEALTH INFORMATION FOR INSTITUTIONAL ASSIGNMENTS: If "No Restriction" is indicated, the inmate can be assigned to any institution from a medical perspective.

24-HOUR NURSING CARE

Males: Broad River Correctional Institution, Evans Correctional Institution, Lee Correctional Institution, Lieber Correctional Institution, Perry Correctional Institution, Kirkland R&E Center, Kirkland Correctional Institution, Ridgeland Correctional Institution, Turbeville Correctional Institution, McCormick Correctional Institution

Females: Camille Graham Correctional Institution

AREA MENTAL HEALTH CENTER

Males: Lee Correctional Institution, Lieber Correctional Institution, Perry Correctional Institution, Turbeville Correctional Institution (young offenders only)

Females: Camille Graham Correctional Institution

DAILY NURSING COVERAGE

Males: Tyger River Correctional Institution, Kershaw Correctional Institution, MacDougall Correctional Institution, Manning Correctional Institution, Trenton Correctional Institution, Allendale Correctional Institution (plus Handicap Unit), *Wateree River Correctional Institution*

Females: Leath Correctional Institution

DIALYSIS ACCESSIBLE

Males: Broad River Correctional Institution

Females: Camille Graham Correctional Institution (Treated at Broad River Correctional Institution)

INTERMEDIATE CARE UNIT

(**Note:** Prior approval by the Director of Mental Health Services/Designee is required.)

Males: Kirkland Correctional Institution

Females: Camille Graham Correctional Institution

HANDICAP UNIT

(**Note:** Prior approval by the Medical Director/designee is required.)

Males: Allendale Correctional Institution (No 24 hour care), Evans Correctional Institution, Lee Correctional Institution (Four [4] beds only), Turbeville Correctional Institution (Young Offenders Only)

Females: Camille Graham Correctional Institution

INTELLECTUAL DISABILITY PROGRAM

(**Note:** Prior approval by the Mental Health Director/designee is required.)

Males: Kirkland Correctional Institution

Females: Camille Graham Correctional Institution

NOTE: If “No Restriction” is indicated, the inmate can be assigned to any institution from a medical perspective.

OUTPATIENT MENTAL HEALTH

Inmates with Outpatient Mental Health medical classifications can be assigned to any institution, except Goodman, Trenton, Wateree, and Level 1A institutions for LC/WP.

- All inmates identified as mentally ill (Mental Health Classification L1, L2, L3, L4, or L5) must be monitored by mental health staff regardless of whether or not psychotropic medication is prescribed, or whether or not the inmate is compliant with his/her prescription medication.
- **BL - Low Level BMU**
- **BU - High Level BMU**
- L1 **GPH** - Male inmates are placed in Gilliam Psychiatric Hospital (**GPH**). Female inmates are placed in a contract facility. Mental health professionals see the inmate weekly.
- L2 Intermediate Care Services (ICS) - Inmates' ability to function is severely impaired due to mental illness. There are active symptoms of major mental illness with impaired reality testing or multiple failures to conform behavioral functions in a lowered level of care. Inmates are seen twice a month by mental health professionals.
- L3 Area Mental Health - Inmates' ability to function in a general population is moderately impaired due to mental illness. They are easily overwhelmed by everyday pressures, demands, and frustrations, resulting in disorganization, impulsive behavior, poor judgment, delusions, hallucinations, or other exacerbations. They are seen by mental health professionals at least monthly, and require treatment update every six months.
- L4 Outpatient - Inmates may be housed in general population or structured living unit. Inmates' ability to function in general population is mildly impaired or needs monitoring due to change in medication, recent move from higher level of care, or history of self-injurious behavior. They are seen by mental health professionals at least every 90 days.
- L5 Stable - Inmates carry a mental health diagnosis, symptoms in remission, eligible for KOP (carry on person) medication. Inmates' ability to adjust and function in general population is not impaired due to mental illness. They are seen by mental health professionals at least every six months.
- **LC - former SIB**
- Inmates are considered admitted to Mental Health Services after the Health Summary has been revised to indicate MI status. They will subsequently be assigned to institutions that provide the appropriate level of mental health care.
- **MR - Intellectual Disability Program - Habilitation Unit.**

16. RESTRICTIVE HOUSING UNIT (RHU) SECURITY DETENTION: For more specific details, refer to SCDC Policy OP-22.38, "Restrictive Housing Unit (RHU)."

16.1 When reviewing inmates for release from security detention to a less restrictive custody, the reasons for initial placement in SD and overall behavior while in RHU will be taken under consideration. If this review indicates that the inmate was placed in SD for life threatening circumstances, serious injury/assault, or criminal charges as a result of the incident, the inmate will be placed in medium custody. Inmates may be placed in minimum custody if disciplinary convictions/incidents are of a less serious nature.

17. PROTECTIVE CUSTODY: For more specific details, refer to SCDC Policy OP-22.23, "Statewide Protective Custody."

18. SEPARATIONS/CAUTIONS: To establish guidelines to flag the records of inmates for whom special caution must be taken for certain actions involving these inmates.

18.1 *The Central Classification Separation Committee is* responsible for issuing the official caution to be placed in the inmate's records when conditions or circumstances exist that would potentially jeopardize the safety and security of the inmate, employee(s), or other persons. SCDC Form 19-141, "Separation/Caution Memorandum," will be submitted to **Central Classification (CC)**.

18.2 The reasons an inmate may be identified with a Separation/Caution include:

- The inmate has testified against another inmate, and this is verified through court documentation, solicitor's office, or law enforcement.
- *Co-defendants are assessed on a case-by-case basis. Known hostility must exist or inmate must have a separation order from an appropriate law enforcement agency.*
- The victim, victim's family members, or known associates are incarcerated or employed at the inmate's assigned institution, and this is verified through court documentation, solicitor's office, law enforcement, victim/witness office, or employee.
- There are known strong hostilities between inmates, and this is verified by MINs and/or SCDC Form 19-29, "Incident Report."
- The inmate has physically assaulted and/or caused serious injuries to an SCDC employee who works at an institution, and this is verified by MINs and/or SCDC Form 19-29.
- The inmate makes written or verbal threats against an employee(s) or other inmate(s) that are found to be credible by institutional or Agency personnel.
- *Relatives of an inmate employed at the institution or with the SCDC will be evaluated on a case-by-case basis to determine if potential concerns exist between the inmate and the employee.*
- *Parent, child or current spouse of the inmate. Siblings will be assessed on a case-by-case basis.*

18.3 When an employee determines that circumstances warrant the placement of a separation in an inmate's record, s/he will complete SCDC Form 19-141, "Separation/Caution Memorandum," verify the information, attach any documentation, and forward it to the Warden/Duty Warden for approval. The Warden/Duty Warden will sign the SCDC Form 19-141 and forward it to **Central Classification** if approved. Documentation of the Warden/Duty Warden's disapprovals will be

noted on the staff memorandum and filed in the institutional record, central record, and maintained in the Warden's office.

NOTE: For Kirkland R&E Center only: The R&E Manager can sign the 19-141 as would a Duty Warden. The R&E Manager will also determine if the 19-141 is invalid due to insufficient evidence and disapprove the Separation Request at that time instead of forwarding it to **Central Classification**. Documentation of disapproved request will be noted on the staff memorandum and filed in the institutional record, central record, and maintained at the Kirkland R&E Center.

18.4 Upon receipt of SCDC Form 19-141, "Separation/Caution Memorandum," **the Central Classification Separation Committee** will review for approval or disapproval. When a separation is approved, the information is entered into the automated system and SCDC Form 19-141 and documentation will be filed in **Central Classification automated** separation files. Temporary placement of SCDC Form 19-141 in Section 2 may be permitted only until the automated form is returned. An automated form (golden rod copy) will be printed and filed in the inmate's Central Record and Institutional Record. This copy will be placed in Section 2 of both records with nothing being filed on top of the Caution (golden rod). When **the Central Classification Separation Committee** disapproves a Separation/Caution, a return memo will be forwarded to the institution with an explanation as to the reason for disapproval. **Classification staff will file it in Section 3 of the Inmate Record.**

18.5 All active cautions will be reviewed for accuracy and applicability once every two (2) years. The Division Director of Classification and Inmate Records will be responsible for establishing a review schedule and procedures. If modifications to the Caution are necessary, a written request must be forwarded to the Division Director.

18.6 Cautions will not be removed from any record unless the original conditions causing the placement of the Caution are no longer a factor. When it is determined that a Caution is no longer necessary, the appropriate employee will request removal of the Caution by completing SCDC Form 19-141, "Separation/Caution Memorandum," with the Warden's approval and signature. When forwarded to **CC** for removal, an explanation must accompany the request. The Division Director of Classification and Inmate Records or designee will make the final decision to approve or disapprove removal of the Caution. If approved for removal, **CC** will be responsible for dropping the Caution from the automated system and for notifying Inmate Records via CRT message to remove it from the Central Record. The appropriate staff at the institution will be notified to remove it from the Institutional Record. (Note: A hard copy will be maintained by **CC** for historical information.)

18.7 When an inmate is released or paroled from the SCDC, any Caution information will remain in his/her records and will not be purged. In the event the inmate is reincarcerated, the Classification Coordinator at the Reception and Evaluation Center will review the inmate's record for Caution information when s/he is readmitted. If the inmate has previously had a designated Caution, the Classification Coordinator will ensure that both the manual and the automated records are properly flagged. If necessary, SCDC Form 19-141 will be completed and forwarded to **CC**.

18.8 When an initial or scheduled review is conducted by the ICC, the Classification Caseworker/Community Programs Supervisor will be responsible for checking the inmate's record for Cautions to verify that the manual and automated systems coincide. If they do not match, **Central** Classification will be notified to initiate any necessary corrective actions. If it is discovered that two (2) or more inmates housed in the same institution have Cautions against each other, an immediate transfer request should be made to **Central** Classification.

18.9 It is the responsibility of the Institutional Operations Section at both the sending and receiving institutions to carefully check the inmate's Institutional Record and automated system for placement of a Separation/Caution.

18.10 If an inmate with a Caution is inadvertently transferred to an institution to which s/he should not be assigned, immediate steps must be taken to isolate the inmate until s/he can be moved to another facility.

19. Labor Crew/Work Program:

Central Classification will screen inmates for Labor Crew/Work Program (LC/WP) based on LC/WP eligibility dates, as calculated through the automated system. For detailed guidelines, refer to Section Five (5), paragraph 49.

20. PRE-RELEASE PROGRAM: MANNING CORRECTIONAL INSTITUTION

20.1 All institutions will be responsible for ensuring that all inmates have access to a program of release preparation prior to their release.

20.2 The mission of the pre-release program is to provide rehabilitative services through programs/training and other life skills programs in an effort to prepare offenders for re-entry into the community.

Male offenders being considered for the pre-release program at Manning Correctional Institution must meet the following criteria:

20.2.1 Central Classification will screen inmates for placement and participation in the Pre-Release Program. When an inmate is within **90-180** days of maxout/**SRP eligibility date**, he will be eligible to be considered for the program ~~at Manning Correctional Institution~~. A computer generated eligibility list will be provided to **CC**. **CC** will screen each inmate's automated record for assignment and transfer to the program. Long term violent offenders who are being granted conditional parole provided that they participate in a pre-release program may be assigned to the designated pre-release center program. Kirkland Reception & Evaluation Center inmates assigned to security level 1B at admission who meets all other pre-release criteria may be assigned to pre-release. All inmates assigned to the pre-release program at Manning Correctional Institution must meet the following criteria: **(Changes in BLUE amended by Change 1 dated April 18, 2018; Changes in GREEN amended by Change 2 dated June 13, 2018)**

- No pending disciplinary.

- No ~~major~~ **assaultive** disciplinary in the last six months.
- **~~No extensive disciplinary history during current incarceration.~~**
- No more than three (3) major disciplinarys in the last twelve (12) months.
- No Class 1 or Class 11 escapes within ten (10) years.
- No Category 4 or higher detainers (Wanted); Holds and Notifies may be considered.
- No current or prior sex convictions or commitments (Plea Bargain or Nol Prose may be considered).
- No open sex related arrests.
- Daily nursing coverage institutional assignment.
- Outpatient Mental Health (L-4) mental health assignment.
- No Category 5 open arrest(s).
- No out-of-state detainers (wanteds or holds).
- No Validated STG.

Female inmates being considered for the pre-release program at **Camille Graham** Correctional Institution must meet the following criteria:

- No pending disciplinary.
- No ~~major~~ **assaultive** disciplinary in the last six months.
- No validated STG.

Male inmates being considered for the pre-release program at Kershaw Correctional Institution must meet the following criteria:

- ***No pending disciplinary.***
- ***~~No major disciplinary in the last six months.~~***
- ***No assaultive disciplinary in the last six (6) months.***
- ***No more than three (3) major disciplinarys in the last (12 months.***
- ***~~No extensive disciplinary history during current incarceration.~~***
- ***~~No assaultive disciplinary within two years.~~***
- ***Meet the medical/mental health institutional assignment.***
- ***No Category 4 or higher detainers (Wanted); Holds and Notifies may be considered;***
- ***No Category 5 Open Arrests(s);***
- ***No out-of-state detainers (Wanted or Holds);***
- ***No validated STG.***

20.3 Inmates in the following status will not be considered for placement in the Pre-Release Program at Manning Correctional Institution:

- Housed at and/or participating in formal ATU program.
- Housed at Pre-Release Center on Labor Crew/Work Program.
- Housed at a Designated Facility.
- Housed in Gilliam Psychiatric Hospital (GPH).
- ***~~Currently in Medium Custody.~~***

- **Young** Offender.
- Lock up Status.
- Protective Custody Status.
- Security Detention Status.
- Maximum Security Status.
- ~~Self Paced In-Class Education Program (SPICE).~~
- ~~Out to Court Status.~~
- Interstate Corrections Compact Status.

20.4 When an inmate is approved for the pre-release program, **CC** will arrange the inmate's transfer to the appropriate institution. Inmates will be assigned to Minimum-Out Custody and 1B Security Level. Transfer is mandatory if approved for the pre-release program by **Central** Classification.

20.5 The initial ICC will be conducted in the same format as listed in Paragraph 29 of this policy with the exception that ICC hearings can be conducted solely by the Classification Caseworker with the option for a full Institutional Classification Committee. The Warden can designate cases in which the Classification Caseworker must conduct a full committee hearing.

21. YOUNG OFFENDER PAROLE AND REENTRY SERVICES (YOPRS): The South Carolina Department of Corrections has established a **Young** Offender *program* to provide progressive programming and strict discipline to inmates sentenced under the Youthful Offender Act (YOA). **Central** Classification will initiate necessary transfers *upon request of YOPRS*. The Case Management Team (CMT) will conduct initial reviews, initial orientation, and regularly scheduled reviews of inmates sentenced under the Youthful Offender Act. Reviews will be conducted as required by SCDC Policy PS-10.09, "**Young** Offender *Parole and Re-entry Services (YOPRS)*." Refer to PS-10.09, "**YOPRS**," for additional procedures.

NOTE: Exemption to policy exists for the **Young** Offenders who simulate custody and/or security level ME3. *Exception dated August 21, 2017: Young Offenders who stimulate custody/security level ME3 can be assigned to a specialized unit at Turbeville Correctional Institution or YOIS Second Chance Program at Allendale Correctional Institution, both of which are level two (2) institutions.*

21.1 Young Offenders will be exempt from the cell assignment procedures specified in paragraphs 47 through 48 of this policy. Instead, **Young** Offenders will be assigned to cells/beds as in accordance with procedures of the **Young** Offender Institutional Services (YOIS).

21.2 "Y" Prefix: Effective March 1, 2007, inmates admitted to SCDC sentenced under the Youthful Offender Act will no longer be assigned an inmate number with a "Y" prefix. **Young** offenders admitted as of March 1, 2007, will be identified by their offender type. **Young** offenders currently in SCDC will maintain their current number.

21.3 YOA Conversion: Effective March 1, 2007, the OFFTYPE screen on the OMS will show the date of **Young** Offender conversions.

22. SHOCK INCARCERATION PROGRAM: *Refer to SCDC Policy P.S - 10.12, "Shock Incarceration."*

23. DESIGNATED FACILITY INMATE TRANSFERS: Refer to SCDC Policy OP-21.05, "Designated Facility Inmate Transfers."

24. INTERSTATE CORRECTIONS COMPACT: Refer to SCDC Policy OP-21.03, "Interstate Corrections Compact," and procedures as defined in Articles I through X of the South Carolina Code of Laws, § 24-11-10 et seq.

24.1 The Classification Caseworker will review the inmate's request for transfer to another state and determine if all eligibility requirements are met. The Classification Caseworker will forward the application to **Central** Classification (**CC**) for review.

24.2 CC will review inmate's request for an ICC transfer. If approved, the application will be forwarded to the requested state for its review and approval/disapproval.

25. INMATES PAROLED TO IMMIGRATION AND CUSTOMS ENFORCEMENT (ICE):

The United States Immigration and Customs Enforcement (ICE), the South Carolina Department of Probation, Parole and Pardon Services (DPPPS), and the South Carolina Department of Corrections (SCDC) have entered into a formal agreement to ensure that inmates who are illegally in the United States and are in the custody of the SCDC are appropriately paroled to the custody of the ICE. This agreement makes possible the pickup and deportation of aliens from the United States conditionally paroled to the ICE detainees. DPPPS will notify inmates who are in the United States in violation of the law and who become subject to ICE immigration deportation proceedings as a result of their conviction. **Central** Classification will coordinate the pickup with the United States Federal Government (ICE) once the SCDC inmate has been paroled to ICE by DPPPS. The DPPPS will fax a copy of the parole papers to the SCDC (**CC**) for each inmate conditionally paroled to the ICE. **Central** Classification and the officials of the ICE will mutually agree upon a date and location to effect the parole and transfer of such inmates to the custody of the ICE. **Central** Classification will review the record of ICE conditionally paroled inmates for significant changes to include disciplinaries, new criminal charges, or other detainees. Further detailed procedures concerning preparations to transport inmate for ICE pickup are outlined in SCDC Policy OP-21.02, "Inmates Paroled to ICE Detainers."

26. EXTRADITIONS:

26.1 For the purpose of this plan, extradition refers to the return from another state of an inmate who is wanted by the SCDC (i.e., escape, to begin or complete service of an active South Carolina sentence, improper release, or other applicable situations). The Central Classification Program Coordinator will be the responsible authority for coordinating all extradition proceedings prior to the actual transport of the inmate (i.e., maintaining records, placing detainees, monitoring release dates where the inmate is serving time/being held).

26.2 There are specific SCDC procedures for the extradition of inmates to the custody of SCDC. Extradition procedures must be completed in strict compliance with all applicable state and federal statutes and regulations.

26.3 Bringing an inmate into the state of South Carolina from another state or country (international extradition) may require extradition procedures of a legal nature that vary from state to state (i.e., facility where inmate is serving/being held initiates the necessary extradition process or the local sheriff takes custody of the inmate and processes extradition). The rights of inmates are protected by the Uniform Criminal Extradition Act.

26.4 Governor's rendition orders are used between states and rendered through the individual state's court system. International treaties are signed and international courts administer rulings regarding the extradition of country's private citizen.

26.5 An inmate may elect to "waive" extradition to SCDC. To "waive" extradition means the inmate knowingly agrees to give up his/her legal right to an extradition hearing and consents to be returned to SCDC. This consent is documented on a "Waiver of Extradition" Form which the inmate is required to sign.

26.6 If Central Classification is notified that an inmate, whom SCDC is seeking to return to South Carolina, refuses to sign a Waiver of Extradition, then a Governor's rendition order will be necessary. The Central Classification Program Coordinator will coordinate with the General Counsels office to secure, from the Clerk of Court where the charges originated, three (3) individual sets of certified true copies of the original indictment/commitment order and the arrest warrant. If applicable, the sets will also include the outstanding warrant for the crime committed by the inmate within SCDC (i.e., escape warrant).

26.7 Upon receipt of the above documents, it will be the responsibility of the Central Classification Program Coordinator to forward three (3) sets of certified true copies, including an additional three (3) certified true copies of the current NCIC rap sheet, fingerprint card, and photograph, to the Governor's Office. A letter from Central Classification will also be generated, requesting extradition of the inmate. All subsequent correspondence with the detaining state and South Carolina, up to the granting of extradition, will be made through the Governor's Office.

26.8 Upon receipt of notification from the detaining state or the Governor's Office that the inmate will be returned to SCDC's custody, the Central Classification office will coordinate with the Transportation Unit (Division of Security) to determine whether or not to use SCDC Transportation Officers or use a private extradition company in the return of the SCDC inmate.

26.9 The SCDC Transportation Unit or the transporting authority will be provided the following:

- Inmate's Name, SCDC Number, Booking Number, or OJ Inmate Number;*
- The name and telephone number of the contact person at the inmate's location;*

- *The appropriate SCDC delivery location (this will be the Kirkland or Camille Graham Reception and Evaluation (R&E) Center).*

26.10 Central Classification will notify the appropriate institution's designees and the Director of Classification and Inmate Records Office as to where/when the inmate is to be delivered to SCDC.

26.11 The IRO will forward the inmate's Central Record and Institutional Record to the appropriate facility (Kirkland or Camille Graham R&E Center) for processing. Afterward, the Central Record is to be returned to the IRO for storage and the Institutional Record will follow the inmate to his/her institutional assignment(s).

27. INTERSTATE AGREEMENT ON DETAINERS:

27.1 The Interstate Agreement on Detainers (IAD) (S.C. Statute 17-11-10) establishes uniform procedures for transferring an inmate who is incarcerated in one (1) state to the temporary custody of another state to resolve untried criminal charges. An inmate requesting IAD must have at least six (6) months to serve on his/her SCDC incarceration to allow for processing of paperwork.

27.1.1 Detainers: Detainers are received by the Inmate Records Office and entered on the DETAIN Screen. Notification is filed and the inmate's assigned institution is notified via the automated DETAIN messaging system of pending criminal charges in another jurisdiction.

27.1.2 Sending State: the state in which trial is to be held on untried criminal charges.

27.1.3 Receiving State: The state in which trial is to be held on untried criminal charges.

27.1.4 Circumstances Under Which the IAD Applies: There are three (3) prerequisites that must be met prior to transferring an inmate to resolve untried criminal charges as follows:

- *Both sending and receiving state must be signatories on the IAD;*
- *The individual against whom a detainer is filed must be a sentenced inmate serving a term of imprisonment; and*
- *The Detainer lodged against the inmate must be based upon on untried indictment, information, or complaint.*

27.1.5 Detainers That Cannot be Resolved Under the IAD: The IAD will apply to detainers based on untried indictments, information, or complaints. The IAD will not apply to the following:

- *Parole violation;*
- *Probation violation;*
- *Detainers filed by a Department of Corrections in another state requesting inmate's return to serve an unexpired portion of his/her sentence;*
- *Detainers lodged from Louisiana or Mississippi; and*
- *Immigration and Customs Enforcement detainers for deportation.*

27.1.6 Two (2) Methods a Detainer can be resolved:

- *IAD requested by the inmate; or*

- *IAD requested by the Prosecuting Attorney of the jurisdiction where charges are pending.*

NOTE: Only the above can activate the IAD procedures. If an inmate requests final disposition, this request will be an automatic waiver of extradition; however, most states will still request a signed waiver of extradition. If a prosecutor requests temporary custody, a pre-transfer hearing will be required, unless the inmate executes a formal waiver of extradition.

27.1.7 If an inmate receives an out-of-state detainer, the caseworker will provide the inmate with the following information:

- *Source of detainer;*
- *Contents of detainer; and*
- *His/Her right to request final disposition.*

27.2 Activating a Request for Final Disposition: Inmate sends SCDC Form 19-11, "Request to Staff Member, " to a Classification Caseworker who will forward the form to the IAD Coordinator. The following will apply:

- *The IAD Coordinator will send the Interstate Agreement on Detainers (IAD) Form II, "Inmate's Notice of Place of Imprisonment and Request for Disposition of Indictments, Information, or Complaints"; IAD Form III, "Certificate of Inmate Status"; IAD Form IV, "Offer to Deliver Temporary Custody"; and a "Waiver of Extradition" to the Classification Caseworker to be signed by the inmate and appropriate institution officials as indicated on the forms.*
- *When the forms are appropriately signed and the "Waiver of Extradition" is notarized, they will be send back to the IAD Coordinator.*
- *The signed documents will be forwarded to the appropriate out-of-state District Attorney (D.A.) with a cover letter and copies of the warrants.*
- *The D.A.'s Office will send IAD Form VII, "Prosecutor's Acceptance of Temporary Custody," and IAD Form VI, "Evidence of Agent's Authority to Act for Receiving State," back to the IAD Coordinator. The cover letter will either indicate a definite pick-up or give directions on who to contact to set up a date. The Form VI will indicate who will pick up the inmate.*
- *In all cases, after the inmate has been sentenced and s/he is ready for return, the IAD Form IX, "Prosecutor Report on Disposition of Charges, " will be sent to the original place of incarceration.*
- *All mail will be sent certified.*

27.3 If the other state initiates the IAD request, the following procedures will apply:

- *Prosecutor sends a letter to Central Classification. If the institution receives a letter from the Prosecutor, it will be forwarded immediately to the IAD Coordinator.*

- *The prosecutor will send the IAD Coordinator on IAD Form V, "Agreement on Detainers" (which will initiate the IAD Procedure), along with a certified copy of the Bench Warrant.*
- *Once the receiving state is prepared to accept temporary custody, it must send the following two (2) documents to the IAD Coordinator:*
 - *IAD Form VI, "Evidence of Agent's Authority to Act for Receiving State"; and*
 - *IAD Form VII, "Prosecutor's Acceptance of Temporary Custody Offered in Connection with a Prisoner's Request for Disposition of the Detainer."*
- *When the IAD Coordinator is notified by the District Attorney of an exact date for pick-up, a message will be sent to Institutional Operations and the Case Manager. The message will notify the institution if any additional paperwork is required. Prior to transport, the receiving state will contact the institution to be sure that all paperwork is completed and the inmate is available at a particular date and time (outlined in the IAD Agreement).*
- *When the receiving state is ready to transport the inmate, they must present the following documentation upon demand:*
 - *Proper identification (picture ID, driver's license, employment ID, etc.);*
 - *IAD Form VI, "Evidence of Agent's Authority to Act for Receiving State," - unless this form was mailed prior to the date of pick-up. The IAD Coordinator will let the institution know via message whether or not this form is needed; and*
 - *Duly certified copy of indictment, information, or complaint upon which the detainer is based.*

27.4 Time Limit:

27.4.1 Article III of the IAD Law states that an inmate who requests final disposition must be brought to trial within 180 days after s/he filed written notice of imprisonment and request for final disposition to be delivered to the prosecutor and appropriate court in receiving state.

Article IV of the IAD Law states that a court official from another state who requests temporary custody of an inmate for trial pursuant to the IAD will have 120 days to be brought to trial.

27.4.2 If the inmate or the action is not brought to trial within the 180 days time limit of Article III, the appropriate court in the jurisdiction where charges are pending will enter an order dismissing the same with prejudice, and any detainer based thereon will cease to be of any force or effect. The CC Program Coordinator will send a letter requesting resolution documentation to the prosecuting attorney, and will remove and return the detainer once this information is received from the prosecuting attorney.

27.4.3 At the earliest possible time after trial and sentencing are completed in the receiving state, the inmate must be returned to the custody of officials in the sending state and notified of the disposition of the charges.

27.4.4 Escape from Custody: An inmate's request for final disposition will become void when an inmate escapes from the sending state's custody before transfer.

27.4.5 Tolling of Prisoner's Earned Work Credit (EWC)/Earned Educational Credit (EEC): An inmate's time of imprisonment will continue to run while the inmate is subject to temporary custody of the receiving state. The inmate will continue to earn good time (GT) but will not earn earned work credits and/or earned educational credit.

27.4.6 Other Claims: An inmate may be prosecuted in the receiving state only for charges upon which the detainer is based. Crimes for which no detainer has been lodged may not be prosecuted while inmate is in temporary custody.

27.4.7 Costs: The costs of transportation and housing an inmate who is transferred under the IAD will be borne by the receiving state.

27.4.8 Tolling of Time Periods for Trial: When an inmate is able to stand trial, there will be 180 day time limit (inmate request) and 120 day time limit (prosecutor request). This toll will begin when the prosecutor for the receiving state receives all paperwork.

27.4.9 Mental Illness: An inmate who is medically determined to be mentally ill cannot be transferred under the IAD. The inmate's CONVICT screen should be reviewed for Guilty but Mentally Ill (GBMI) finding.

28. OTHER JURISDICTION INMATES:

28.1 Other Jurisdiction (OJ) refers to an inmate that has either a concurrent or consecutive South Carolina (SC) sentence and is currently incarcerated in the other jurisdiction serving another state or federal sentence.

28.2 The Inmate Records Office (IRO) receives commitment orders from the Solicitors, County Clerks of Clerk, parole/probation revocations from the S.C. Department of Probation, Parole and Pardon Services, or from other jurisdiction facilities where an inmate is incarcerated. The S.C. sentence must be 91 days or more.

28.3 All YOA Parole Revocations on inmates in OJ status are forwarded to the YOA Division, S.C. Department of Corrections (SCDC), to determine the length of time left to serve on the YOA sentence and if a detainer is required. The YOA Division will then advise the IRO to process the YOA inmate within the OJ guidelines.

28.4 It is the responsibility of the IRO to process the commitment order(s) and generate a criminal history rap sheet, and to determine if the inmate is to be assigned his/her previous SCDC inmate number. The Central Classification OJ/Extradition Section will indicate, on the Offender Management Screen (OMS), all appropriate information to include the SCDC inmate number, commitment information, and location. The OJ Program Coordinator is responsible for sending a letter to the S.C. Law Enforcement Division (SLED), listing pertinent information on the OJ inmate, so that SLED can update the inmate's criminal history rap sheet.

28.5 Upon completion of the above, it is the responsibility of the OJ Program Coordinator to process and forward to the OJ facility, via fax or US mail, a detainer letter for the SCDC

requesting that a "Hold" be placed on the individual inmate. Written confirmation of receipt of the SCDC letter is requested and any changes in the inmate's release from the other jurisdiction should be forwarded to Central Classification. The inmate's OJ release date is entered in the SCDC automated system and monitored by the OJ Program Coordinator on a weekly basis.

28.6 As an inmate's OJ release date approaches, the inmate record is reviewed to determine if the inmate will satisfy the S.C. sentence prior to release from the OJ. If so, a letter is forwarded to the authorities in the OJ, advising them of the date the inmate satisfies the S.C. sentence and instructing them to remove the SCDC detainer. The record is then relocated to the Release Section (IRO) for processing.

28.7 YOA inmates in OJ status must be reviewed by the YOA Division to determine the completion status of the YOA sentence. The record will remain in the OJ Section until notification in writing is received from the YOA Division that the YOA sentence has been satisfied and the detainer can be lifted.

28.8 Should the inmate complete time served in OJ prior to completion of the S. C. sentence, the inmate will be returned to SCDC.

29. MEDICAL FURLOUGH/MEDICAL PAROLE:

29.1 MEDICAL FURLOUGH: Inmates who are terminally ill with a life expectancy of one (1) year or less may be referred by Health Services to be considered for a Medical Furlough for the Terminally Ill. Applications will be initiated by the Health Services staff and processed through the Warden at the institution of assignment. In order to be initially considered, the inmate must have an approved immediate, in-state family member to act as sponsor, must have established outside medical care and treatment, and must have a prognosis of less than one year remaining to live. Refer to SCDC Policy HS-18.01, "Specialized Health Services Programs," and to Health Services Procedures pertaining to furloughs for terminally ill inmates for additional information.

29.1.1 The application packet will be submitted to **Central** Classification through the Office of the Deputy Director of **Health Services/designee** for processing. The packet will include at a minimum: SCDC Form 27-17, "Medical Furlough Application/Sponsor Agreement"; statement from a SCDC physician that the inmate has one (1) year or less to live and status of ambulation; notarized letter from the inmate's sponsor agreeing to assume all financial responsibility and care of the inmate; letter from a community physician agreeing to assume health care for the inmate

and indicating that it is understood that the SCDC will be released from financial responsibility; and a statement from the Deputy Director *of Health Services/designee* concurring with the physician's opinion and recommending the furlough.

29.1.2 Upon processing by **Central** Classification, a criminal history review will be conducted and all facts regarding the inmate's criminal history and institutional record will be compiled.

29.1.2.1 As required by state statute, law enforcement officials and victim/witnesses will be contacted for any violent offender who applies to return to the county of commitment. Law enforcement and victim witness written recommendations must be received as appropriate. Victim witness notification will be made in all cases. Written response is only required for violent offenders as mandated by statute.

29.1.2.2 Should community opposition be received for the violent offender, **Central** Classification will submit the application packet to the Division Director of Classification and Inmate Records for final disposition.

29.1.2.3 Upon completion of the criminal history review and notification, with no community opposition, the application packet and criminal history review will be submitted through the Division Director of Classification and Inmate Records to the General Counsel **Office** and the Deputy Director of Operations. The Deputy Director of Operations/Designee will review the application packet and criminal history review and forward a recommendation to the **Agency** Director. The **Agency** Director will consider recommendation from the law enforcement community, victim/witness recommendation, and/or staff recommendation for final approval or disapproval of the medical furlough for the terminally ill.

29.1.3 If a Medical Furlough is approved, appropriate forms will be completed and required orientations will be given to the inmate and sponsor. **Central** Classification will coordinate medical furlough orientation with the inmate's assigned institution. Approved inmates who are released to the Medical Furlough must reside at the approved residence, and will be monitored by geographically located Pre-Release Center staff.

29.1.4 Required Forms: SCDC Form 27-17, "Medical Furlough Application/Sponsor Agreement," and SCDC Form 27-18, "Inmate and Sponsor Agreement for Medical Furlough."

29.1.5 The Community Program Supervisor, along with a uniformed security staff member, *will be responsible for making monthly home or hospital visits. The Community Program Supervisor will complete monthly status reports for inmates on medical furlough and comments will be documented on SCDC Form 18-68, "Staff Memoranda," and submitted to Central* Classification on a monthly basis.

29.1.6 Per SCDC Form 27-18, "Inmate Sponsor Agreement for Medical Furlough," upon receipt of a copy of the death certificate from the sponsor, the Community Program Supervisor will forward the death certificate to **Central** Classification.

29.2 MEDICAL PAROLE: Inmates who meet the following criteria may be considered for Medical Parole:

- Terminally Ill- means an inmate who, as determined by a licensed physician, has an incurable condition caused by illness or disease that was unknown at the time of sentencing or, since the time of sentencing, has progressed to render the inmate terminally ill, and that will likely produce death within two years, and that is so debilitating that the inmate does not pose a public safety risk.
- Geriatric- means an inmate who is seventy years of age or older and suffers from chronic infirmity, illness, or disease related to aging, which has progressed so the inmate is incapacitated as determined by a licensed physician to the extent that the inmate does not pose a public safety risk.
- Permanently incapacitated- means an inmate who no longer poses a public safety risk because of a medical condition that is not terminal but that renders the inmate permanently and irreversibly incapacitated as determined by a licensed physician and which requires immediate and long term residential care.
- Inmates who meet these criteria may be referred by Health Services to be considered for a Medical Parole. Applications will be initiated by the Health Services staff and processed through the Warden at the institution of assignment. In order to be initially considered, the inmate must have established outside medical care and treatment. SCDC and the SCDPPPS will be released from all financial responsibility. Refer to SCDC Policy HS-18.01, "Specialized Health Services Programs," and to Health Services Procedure (HSP) #300.25 pertaining to medical parole.
- The application packet will be submitted to **Central** Classification through the Office of the Deputy Director of **Health Services** for processing. The packet will include at a minimum: SCDC Form 27-17, "Medical Furlough Application/Sponsor Agreement," and a statement from a SCDC physician that the inmate meets the Medical Parole criteria; notarized letter from the inmate's sponsor agreeing to assume all financial responsibility and care of the inmate; a statement from the **Health Services** Deputy Director concurring with the physician's opinion and recommending the furlough.
- Upon processing by **Central** Classification, a criminal history review will be conducted and all facts regarding the inmate's criminal history and institutional record will be compiled. Upon completion of the criminal history review and notification, the application packet and criminal history review will be submitted through the Division Director of Classification and Inmate Records to the Agency General Counsel and the Deputy Director of Operations. The Deputy Director of Operations/Designee will review the application packet and criminal history review and forward a recommendation to the **Agency** Director. The **Agency** Director will consider the application packet and, if approved, will forward the packet under cover letter to the Director, SCDPPPS, for Medical Parole consideration.
- SCDPPPS will process the Medical Parole application in the same manner as a normal parole, to include any required victim/law enforcement notifications and the scheduling of the parole hearing before the Parole Board. If the Board grants parole, the inmate will be processed in the same manner as an inmate being granted parole.

SECTION FOUR: INSTITUTIONAL CLASSIFICATION

30. OVERVIEW: INSTITUTIONAL LEVEL CLASSIFICATION:

30.1 Initial Housing Assignment: As a general rule, inmates newly-assigned to an institution may be assigned to temporary housing until their permanent housing is available and has been approved by the Institutional Classification Committee (ICC).

30.2 Initial Appearance Before the ICC: Inmates will meet with their assigned Classification Caseworker/Committee Program Supervisor (CPS) generally within 72 hours (excluding weekends and holidays). Inmates can not waive appearance before initial classification hearings. A custody review (only) must be completed on all initial institutional assignments. Security reviews are conducted at the annual hardship review and in cases where the ICC is recommending a security level change or a review has not been conducted.

30.3 Inmates newly assigned to an institution will receive orientation within ten (10) working days of arrival unless exceptional circumstances exist. During orientation, a staff member must verbally explain the Agency's policy regarding sexual misconduct between staff and inmates. Each inmate must be provided with a written memo that explains said policy and procedures. This memo can be obtained from the Division of Classification and Inmate Records.

30.4 Records Checklist: "The Records Checklist," SCDC Form S-13, and the initial audit of the inmate's institutional record, to include a check of the NCIC report, court orders, and other legal documents must be completed within ten (10) working days of arrival at the institution.

30.5 Custody Assignment: Each inmate will be assigned a custody which is compatible with the inmate's disciplinary record, escape history, proximity to release, detainer record, and security score. The principal custody designations are Minimum Out (MO), Minimum Restricted (MR), Minimum In (MI), Medium (ME), and Maximum (MX). The special status categories to which inmates may be assigned are death row (DR), medical, mental health, handicapped, protective concerns (SP), protective custody (PC), safekeeper (SK), intake (IN), *short term* detention (*ST*), disciplinary detention (DD), security detention (SD), and disciplinary yard (DY) *status*.

30.6 Institutional Classification Process: The Institutional Classification Committee (ICC) will be responsible for making classification decisions and/or recommendations relative to an inmate's needs at the institutional level. Most new arrivals/reassignments will be recommended by the Reception and Evaluation Center for assignment to minimum-in custody. If information contained in the inmate's official record indicates a need for a more restrictive custody, the Reception and Evaluation Center may recommend that an inmate be assigned to medium custody. Upon an inmate's arrival at a unit of assignment, the inmate's recommended or previously assigned custody will be reviewed, and either approved or changed, by the Classification Caseworker/CPS. The Classification Caseworker/CPS will also review the inmate's record and criminal history to ensure that s/he is appropriately assigned. Appropriate documentation will be required in the narrative of all custody reviews.

30.7 Review/Assessment Schedule:

30.7.1 Reviews of each inmate's custody, job assignment, housing assignment, and treatment programming should be conducted on a regular basis. A reclassification review will take place on an annual basis. Classification reviews may also be conducted as a result of a status change. Inmates will be provided with written notice of their hearing (SCDC Form 18-34, "48 Hour Notice") at least 48 hours prior to the same. Inmates will be afforded the opportunity to waive their appearance at reclassification hearings. (Note: See Section Five, Labor Crew/Work Program, for the review requirements for inmates assigned to Labor Crew or Work Programs at Pre-Release Centers.)

30.7.2 The classification caseworker will be responsible for scheduling each inmate to appear before the Institutional Classification Committee (ICC) annually. Whenever feasible, the caseworker will meet with the inmate prior to the hearing to review the report and answer questions.

30.8 Status Change: Classification reviews or committee actions will also be conducted as a result of a significant change involving the inmate. The Classification Caseworker is responsible for reviewing the automated and/or manual records of inmates referred to the custody due list because of status changes to determine if the inmate is simulating a more or less restrictive custody/security change. All custody and security advancements, reductions, and job terminations must be approved by the ICC. Examples of reclassification resulting from a status change are:

- Return from court with additional sentences;
- Placement or removal of detainer that changes the security level simulation;
- Placement/release from Restrictive Housing Unit;
- Discharge from hospital or psychiatric unit with changes on the MEDCLASS screen;
- Convicted of major or chronic administrative disciplinary infraction(s); (Note: Status change reviews of inmates convicted of major disciplinary convictions will only be conducted if the disciplinary results in a change of status for the inmate. When the inmate is convicted of a major disciplinary, the Caseworker/CPS will do an automated simulation on the CLASSP. If the conviction does not change the inmate's custody/security status, the conviction will be considered at his next regularly scheduled review. If the conviction results in a simulated change in custody/security, the inmate will be referred to the ICC for review of status change.);
- Criminal charge (warrant/detainer) for an offense committed while incarcerated;
- Custody re-assignment;
- Major program change;
- Overturn of criminal conviction;
- Change in cell assignment status;
- Change in job assignment from one area to another is conducted by the Classification Caseworker (The ICC must approve all job terminations);
- Change in Security Threat Group Status (STG);
- When an inmate is reviewed by the ICC as a result of a Guilty But Not Accountable (GBNA) disciplinary conviction, the mental health counselor (MHC) will participate in

the ICC hearing. The MHC input should be used in conjunction with other risk factors to determine the correct security and custody recommendation.

30.9 MEDCLASS Summary: The MEDCLASS Summary for Classification and Assignment will be completed by R&E Medical or the Institutional Medical Section. This will indicate any medical or mental health requirements which need to be taken into consideration when determining the inmate's job or housing assignment. In certain cases a representative from Medical and Professional Health Services may be contacted to serve on the Institutional Classification Committee.

30.10 Central Classification Office Review/Override Authority: *Central Classification Office (CC)* will be responsible for the review and approval of all inter-institutional transfers, all assignments to Minimum Out/Minimum *Out* Restricted custody, and Protective Custody. *Central Classification Office* will have the authority to override Institutional Classification decisions in the interest of the safety, security, and orderly management of inmates and institutions.

31. INSTITUTIONAL RECEPTION PROCESS AND INITIAL CLASSIFICATION REVIEW:

31.1 Reception of Newly-Assigned Inmates/Housing: Upon an inmate's arrival at the initial institutional assignment, the receiving officer will ensure that all records are received (inmate's institutional record and medical record). The institutional record will be forwarded to the classification office, and the medical record will be forwarded to the medical division. The institutional record will be used by the Classification Caseworker/CPS during initial classification reviews and all subsequent classification reviews. Inmates will be classified within 72 hours of their arrival at the institution (excluding weekends and holidays). If appropriate permanent housing is not available for the inmate, the inmate will be assigned to temporary housing until such time as appropriate permanent housing becomes available.

31.2 Upon arrival at the institutional assignment, each inmate will be assigned a Classification Caseworker/Community Programs Supervisor who will be the primary contact person and will handle classification needs/requirements for the inmate. The Classification Caseworker will be responsible for answering questions regarding the inmate's sentence and eligibility dates. Upon initial transfer to the institution, the Classification Caseworker will be responsible for conducting an audit of the inmate's institutional record. Audits will be conducted using the SCDC Form S-13, "Records Checklist," and will be documented on the SCDC Form 18-68, "Staff Memorandum," within ten (10) working days of arrival. At the inmate's annual review, the classification caseworker will be responsible for conducting an automated audit of the inmate's court orders. This review will be documented on the SCDC Form 18-68, "Staff Memorandum."

31.3 All documents relative to the inmate's medical or mental health evaluations and assessment will be reviewed by the institutional health services and educational professional staff.

31.4 During the reception period, information will be distributed to inmates on available programs and services. Inmates will also be permitted to participate in general services (i.e., religion, library, recreation, etc.).

31.5 Institutional Orientation: Inmates will receive institutional orientation within ten (10) working days of arrival at the institution of assignment. This orientation will be documented on SCDC Form 18-69, "Certificate of Inmate Orientation." The orientation will include information on: Scheduled meal times, classification, institutional rules, sexual misconduct, Prison Rape Elimination Act (PREA) guidelines, HIV education, educational and/or vocational opportunities, work assignments, canteen, and commissary. Each inmate will sign the 18-78, "Prison Rape Elimination Act Orientation" form. Note: Information on sick call and visitation will be communicated orally to inmates upon arrival in the institution and will be made available to each inmate in writing within 24 hours.

31.5.1 Initial Screening for Risk of Victimization or Abusiveness: Inmates must be screened for risk of sexual victimization or risk of sexually abusing other inmates within 72 hours of transfer. A trained designated staff member will use the automated PREA screening instrument to interview the inmate and complete the checklist. Inmates who have experienced prior sexual victimization or perpetrated sexual abuse on others, whether it occurred in an institutional setting or in the community, will be offered a follow-up meeting with a qualified medical/mental health staff within 14 calendar days of the initial screening. The screening interview will be individualized to ensure the safety of each inmate and conducted in a private area that is conducive to obtaining complete and accurate information. Inmates will not be disciplined for failure to disclose or refusal to answer questions related to prior sexual abuse. (PREA Standard 115.42.)

31.5.2 Information received in response to answers on the PREA screening checklist or other sensitive information will not be used to the inmate's detriment by staff or other inmates. Inmate must not be disciplined for failure to disclose or refuse to answer questions related to prior sexual abuse.

31.5.3 Within 30 days of transfer, the classification caseworker/CPS will reassess the inmate's risk of victimization or abusiveness based upon any additional, relevant information received since the inmate's transfer. If additional information has been received, the classification caseworker will assess the inmate's risk using the automated PREA screening checklist. If no additional, relevant information has been received, the classification caseworker will indicate that on the automated PREA DUE LIST.

31.5.4 The inmate's PREA status will be used when making decisions regarding cell assignments, job assignments, and education and program assignments. Inmates who are designated as PREA perpetrators will be kept to the extent possible from those designated as PREA victims.

31.6 The Classification Case Manager will be responsible for ensuring that all newly-assigned inmates receive an institutional orientation and ensuring that all newly-assigned inmates are advised of, and have access to, the information relevant to custody assignments, transfers, and

general classification information; information advising the inmate of his/her assigned Classification Caseworker; and information regarding classification review schedules. Caseworkers will generally respond to an inmate's request to staff within 30 working days.

31.7 Classification Decisions and Recommendations (Custody, Housing, and Job Assignment): After thorough review and consideration of all available information, the ICC/Classification Caseworker/CPS will determine the inmate's appropriate custody designation. Most new arrivals/reassignments will be recommended by the Reception and Evaluation Center for assignment to "minimum-in custody." If information contained in the inmate's official record indicates a need for a more restrictive custody, the Reception and Evaluation Center may recommend that an inmate be assigned to medium custody. The ICC will also determine specific housing and job assignment for the inmate. At the inmate's initial assignment, the ICC will determine the inmate's cell assignment status (i.e., the identification of any restrictions). Custody, housing, and job assignment will be made in accordance with established criteria and correlate with the inmate's current classification. Recommendations and restrictions noted on the inmate's MEDCLASS Summary will be considered by the ICC. The Classification Caseworker will review the PREA risk screening for each inmate when making housing, work, education, and other program assignments. An individualized determination concerning placement will be made on inmates who are identified as being high risk of victimization and those having potential for sexual aggression.

32. RESPONSIBILITIES OF THE ICC: The ICC will be responsible for making classification decisions and/or recommendations relative to an inmate's needs at the institutional level. Decisions on custody and security advancement, reduction, and job terminations will be made as a formal committee to ensure that decisions are made in a rational, objective, and equitable manner. Reviews of each inmate's custody designation, housing assignment, placement in/release from security detention status, and treatment programming will be conducted by the ICC. Classification reviews may also be conducted as a result of changes in an inmate's security and/or treatment needs. The Classification Caseworker/CPS will also be responsible for reviewing and updating each inmate's relative and emergency contacts screens. **(NOTE: See Section 29.2 for in depth information.)**

32.1 It is the policy of the South Carolina Department of Corrections that all ICC hearings will be conducted in such a manner as to ensure that each inmate appearing before a committee is properly classified through the consistent and objective application of classification criteria and on the basis of the inmate's safety, security, and treatment needs.

32.2 RESPONSIBILITIES:

- Initial classification of all newly received inmates and inmates transferred from other institutions.
- Custody designations involving security detention status, medium, minimum-in, minimum-out restricted, and minimum-out custody inmates.
- Review of inmates convicted of major or chronic administrative disciplinary rule violations if the conviction results in a change in status.

- Recommendations to **Central Classification (CC)** for transfer of inmates, placement in minimum out/minimum **out** restricted custody, assignment to or removal from protective custody status.
- Recommendations for placement in/release from security detention status.
- Recommendations for inter-institutional transfers.
- Review of special placement of inmates for treatment or educational programs.
- Changes in job assignment (approve all job terminations).
- Rescheduling of inmates for subsequent classification review.
- Review any changes in the inmate's status to include: Return from court with additional sentence; Placement or removal of detainers resulting in a security simulation change; Release from security detention or disciplinary detention status; Discharge from hospital or psychiatric unit with changes to the MEDCLASS screen; or Criminal charge (warrant/detainer) for an offense committed while incarcerated.
- Review and update the inmate relative screen as needed at the annual classification review. Requests for update should be submitted by the inmate on SCDC Form 19-11, "Request to Staff Member." A copy of one of the following documents must be attached to the SCDC Form 19-11 for each added family member: A copy of a birth certificate (long form that includes both parents' names); legal court records showing guardianship; legal documents verifying paternity with DNA test results; marriage license; or to verify common-law status, lease agreement or mortgage statement with both names, or utility or phone bill with both names. The SCDC Form 19-11, along with the required document, will be forwarded to the Division of Visitation and Inmate Drug Testing for appropriate action.
- The caseworker will review the inmate's emergency contact screen (ADMITINQ, ADDRESS) during each review and will correct any information. The caseworker must enter the updated emergency contact information on the CLASSP (address) menu. Information must be updated at the annual review or as needed.
- Inmate relative data will not be deleted from the automated system except in case of divorce and the inmate can provide a copy of the divorce decree.

32.3 TRAINING FOR ICC MEMBERS: The Division of Classification and Inmate Records/designee will conduct training sessions for ICC members at the Institution, as needed.

33. MEMBERSHIP OF THE ICC: The Warden will designate a security representative to sit on the ICC to represent security.

33.1 CHAIRPERSON/RESPONSIBILITIES: The Classification Case Manager/Caseworker will serve as chairperson.

- To preside over the proceedings to ensure that all of the presented cases are handled in accordance with the policies/procedures of the Classification Plan.
- To ensure that each member is given the opportunity to have input regarding each presented case.
- To ensure that each voting member votes of his/her own free will.
- To ask each inmate if s/he has any questions or statements pertinent to the committee proceedings.

- To maintain a professional attitude and unbiased demeanor during the hearing.
- To analyze the information presented and to ensure that the committee makes an unbiased, objective decision.

33.2 ICC MEMBERS' RESPONSIBILITIES: Security or non-security staff members, i.e., job supervisors, Chaplain, Education (i.e., guidance counselor, academic, or vocational supervisor).

- To be punctual and dependable in participation in the classification hearings.
- To review and understand SCDC policies/procedures relating to Institutional Classification.
- To make a determination of the most suitable action by the committee and to vote accordingly.
- To maintain a professional and unbiased demeanor during the hearing.

33.3 Classification Case Manager or Caseworker Responsibilities: Under no circumstances should classification staff represent the majority of members on the committee or two (2) classification persons serve as voting members of the ICC. The Classification Case Manager/Caseworker will prepare the docket and schedule the committee's hearings, and has the following responsibilities:

- To present all relevant information regarding the inmate's current and prior criminal history to the ICC.
- To analyze the details of each case in light of the classification issue at hand.
- To initiate and complete the Committee Docket.
- To make determination of the most suitable action to be taken by the committee and vote accordingly.

33.4 Additional Member(s): Physician, Registered Nurses, Clinical Correctional Counselors - The Clinical Counselor is a required member of the committee if the inmate has a mental health designation.

33.5 QUORUM: Chairperson and two (2) voting members. Each member will have one (1) vote and the majority vote will rule.

34. PROCEDURES BEFORE ICC HEARINGS: The following steps will be taken by the Classification Case Manager/Caseworker prior to the hearing:

- Plan the schedule for the ICC hearing.
- Review the records of each inmate scheduled for review.
- Verify the eligibility status of inmates whose requested actions have established minimum requirements.
- Gather and organize the necessary paperwork for each action to be presented at the hearing.
- Notify the inmates who are scheduled to appear before the committee in writing at least 48 hours prior to the hearing. If an inmate requests to waive the 48-hour period or does

not want to appear for the hearing, complete the SCDC Form 18-39, "Classification Waiver."

- Whenever feasible, interview each inmate prior to the hearings to review the report, explain the procedures, answer the inmate's questions, and obtain additional information. This will enable the hearing to proceed more efficiently.

35. ICC PROCEEDINGS:

35.1 Inmates will be present, except during the deliberations, at all classification hearings that may affect custody, security assignment, loss/forfeiture of good time, job assignment, or treatment programs, except when the inmate waives the right to appear at the classification hearing using SCDC Form 18-39, "Classification Waiver."

35.1.1 Inmates who fail to appear for ICC: The ICC hearing can be held in the inmate's absence if the inmate has been notified via SCDC Form 19-45, "Order to Report," and/or SCDC Form 18-34, "48 Hour Notice," and the inmate fails to appear. The Caseworker will file the Order to Report and/or 48 Hour Notice for documentation. The Caseworker must also note that the committee was held in the inmate's absence on the SCDC Form 18-1 "Committee Docket," and in the comment sections of the custody and security review.

35.2 Inmates will be given notice dated and signed by the appropriate caseworker 48 hours prior to the hearing and may waive, in writing, the waiting period using SCDC 18-39, "Classification Waiver." An inmate who does not wish to appear before the ICC must sign a waiver stating the reason. Inmates who waive their rights to appear will also waive any grievance rights regarding any decision made by the ICC. In the event of a waiver, the Classification Caseworker can review the reclassification reports with the inmate. The inmate must sign the SCDC Form 18-39, "Classification Waiver." If the inmate refuses to sign, it must be documented and witnessed by the Classification Caseworker.

35.3 Each inmate will appear individually before the committee. The reasons for the hearing will be fully explained to the inmate. Inmates who cannot speak or understand English will be assisted by an employee who can act as an interpreter. Inmates who are hearing or sight impaired will be provided with assistance to ensure that they understand the deliberations.

35.4 The inmate will be given the opportunity to ask questions and to present information at the hearing which may affect the committee's decisions. The information used by the committee in making classification decisions will be available to the inmate so that the inmate may participate in the classification process. The committee members will ask the inmate any relevant questions concerning his/her request or review. The inmate can be allowed to participate in assessing his/her needs and in selecting programs to meet those needs.

35.5 Each inmate's case will be presented to the ICC by the Classification Caseworker/Case Manager. All relevant documents and information contained in the inmate's record, as well as information obtained from the automated system, will be presented to the committee. Committee members will review the inmate's record. The inmate's record can be

reviewed in the presence of the inmate; however, psychiatric and mental health information as well as confidential information from the community will be withheld. The inmate will have access to the portion of his/her records considered by the ICC except for the confidential information.

35.6 The chairperson will moderate the committee proceedings. Each committee member will have one (1) vote, with the chairperson voting last. The majority vote will rule. The classification caseworker presenting to the committee may be a voting member only if no other classification employees are participating as voting members. All committee members and persons involved in the committee hearing must introduce themselves and state their name and job title.

35.7 The information on which the ICC bases its decisions will be documented in the inmate's institutional record as well as in the automated system.

35.8 After all of the information has been reviewed and input has been heard, the inmate may be excused from the hearing for the committee's deliberation.

35.9 Each inmate will be advised of the ICC's decision directly by the committee at the conclusion of the hearing. Inmates who do not attend the ICC hearing will be informed of the committee's decision by the Institutional Classification Caseworker/Case Manager within ten (10) working days.

35.10 The Institutional Classification Case Manager will be responsible for the completion and maintenance of the SCDC Form 18-1, "Committee Docket," for each inmate who appears before the ICC.

35.11 The Institutional Classification Caseworker/Case Manager will be responsible for entering all decisions made at the committee hearings in the automated Offender Management System (OMS). All entries should be made no later than the following working day after the committee hearing. The Institutional Classification Caseworker/Case Manager will update the appropriate OMS screens, enter detailed comments to document ICC decisions, ensure that all sections of the "Classification Committee Docket" are completed, and provide notification to the inmate within ten (10) days if s/he waived appearance before the ICC.

36. APPEAL PROCEDURES: Inmates may appeal the decisions of the Institutional Classification Committee through established inmate grievance procedures. (See SCDC Policy GA-01.12, "Inmate Grievance System," for further information.)

37. TAPE RECORDING: All ICC hearings involving security levels and custody level changes, and loss of credits must be recorded, except in cases where the inmate signs the SCDC Form 18-39, "Classification Waiver." Inmates who sign the Form 18-39, "Classification Waiver," will waive any grievance rights regarding any decision made by the ICC. In these cases, tape recordings will not be required. If the inmate signs a waiver, the Caseworker/CPS must file a copy of the waiver in the inmate's institutional record and document on the Committee Docket.

37.1 *The Case Manager/designee is responsible for properly labeling and downloading the ICC hearings into the institution's automated file on the Intranet.* The tape number will be recorded on SCDC Form 18-1, "Committee Docket." The tape recording will be made available to the appropriate reviewing authority (SCDC Grievance employee), if it is needed to determine the outcome of an appeal. The factors considered by the Committee and reasons supporting the particular decision regarding custody will be clearly documented on the Committee Docket.

38. SUBSEQUENT CLASSIFICATION REVIEWS:

38.1 It is the policy of the Division of Classification and Inmate Records that all inmates will be reviewed for the purposes of classification on a routine basis and as required by the inmate's current needs and circumstances. This will ensure that each inmate receives appropriate and adequate supervision, and housing, job, and program assignments which are commensurate with changing needs and requirements during his/her entire period of incarceration. All classification decisions will be made on the basis of the inmate's total record. No inmate will be denied access to work, recreation, education, or other programs or opportunities because of health status unless such denial is required for medical or mental health reasons, as determined by a medical/mental health professional. The primary function and objective of all classification committees and classification staff (including individuals with authority to make classification-related decisions) will be to ensure that each inmate's safety, security, and that treatment needs are met and the safety and security of staff, the institution, and the public are maintained.

38.2 Review Schedule: Full status reviews will be conducted annually as a formal classification committee hearing.

39. INMATE REQUESTS FOR CLASSIFICATION REVIEWS:

39.1 Inmates may request classification reviews by forwarding such requests to the Classification Caseworker. Reviews may be requested for placement in, or release from, protective custody status; or other review requests (e.g., change in cell assignment status, overturn of criminal convictions, changes in STG status). An inmate cannot request a review because the time frame for the disciplinary conviction to affect classification status has expired or because the remaining time left to serve has lessened to make him/her eligible for advancement.

39.2 The Classification Caseworker will review the institutional record to determine the inmate's eligibility for review by the Institutional Classification Committee, in accordance with the classification characteristics, boundaries, and criteria outlined in these procedures. Requests for reviews may be denied if unreasonable, if duplication of a recent review, or if the inmate does not meet minimum eligibility requirements. *Upon determining that the inmate is eligible for review consideration, the Classification Caseworker will schedule him/her to appear before the Institutional Classification Committee.*

40. JOB/SCHOOL ASSIGNMENT BY ICC:

40.1 The ICC will be responsible for inmate job assignments. This will include newly received inmates from the Kirkland R&E Center and the Camille Graham R&E Center, inmates

transferred from other institutions, and all job re-assignments to include terminations, return from lock-up, return from court, medical, etc.

40.2 The Classification Caseworker/CPS will have the authority to make changes in job/school assignments *within areas after the initial assignment by the ICC*. The inmate will be required to remain on his/her assigned job for at least one (1) year before the inmate can request a job change. The Warden/designee may reduce the length, if deemed necessary.

40.3 MEMBERSHIP:

CHAIRPERSON: The Classification Case Manager or Caseworker will serve as chairperson. The Case Manager will be the voting member if the Classification Caseworker is presenting the case to the committee. Under no circumstances should classification staff represent the majority of members on the committee or two (2) classification persons serve as voting members.

MEMBERS:

The Warden will designate a security representative to sit on the ICC to represent security.

Security or non-security staff members, i.e., job supervisors, Chaplain, Education (i.e., guidance counselor, academic or vocational supervisor).

Additional Member(s): Physician, Registered Nurse - The appropriate health services specialist(s) will be a required member of the committee in those cases where the chairperson has determined that there is a need for more information than is provided on the inmate's current Health Summary for Classification Form.

40.5 QUORUM : Chairperson and two (2) voting members. Each member will have one (1) vote and the majority vote will rule. The Classification Caseworker/CPS can conduct the ICC review of inmates in Level 1A institutions, Manning and Goodman Pre-Release, custody/security reviews with no change in status, job assignment/reassignments, and treatment programming.

40.6 Health Services Professional Staff (i.e., physician, psychiatrist, clinical counselor, registered nurse, etc.) will be responsible for updating an inmate's MEDCLASS Summary for Classification and providing appropriate notification with request to any changes in an inmate's health status which requires a job change for health-related reasons. Job-related restrictions and recommendations of health services professional treatment staff, as noted on the MEDCLASS Screen, will be followed by all classification committees and all individuals with authority to make specific decisions related to offender jobs.

40.7 Job assignments will be made on the basis of an inmate's total record and as required by the inmate's current needs and circumstances, as reflected in the inmate's institutional record, MEDCLASS Summary for Classification, PREA status and the automated record, in order to ensure that each inmate receives an appropriate job with adequate safety, supervision, and treatment.

40.8 The work force requirements of the institution, and specialized skills of an individual inmate (e.g., welder, carpenter, baker, typist), will be considered when making job assignments. Staff should attempt to match the work force needs of the institution with the skills of the available inmate workers whenever possible.

40.9 The Classification Caseworker/CPS will assign inmates to EWC jobs using standardized criteria which include such factors as:

- **Risk Factor:** Escape risk, security threat group, custody designation, disciplinary history, current institutional adjustment, current offense, violent tendencies, and PREA status.
- **Institutional Need:** Work force requirements of the unit, skills possessed by each inmate, and skill requirements of vacant jobs.
- **Job Restrictions:** Limiting physical and psychological factors (as noted on each inmate's health summary) for classification will be followed by the ICC. This will also include any recommendations of health services professional treatment staff.
- **Educational/Vocational:** The inmate's need or desire to attend academic or vocational school. Inmates reading on or below the 8th grade level will require mandatory placement in an education program.
- **Food Service Assignments:** Inmates assigned to food service duties must be screened by health services personnel and should be thoroughly instructed regarding sanitation and personal hygiene by the food service supervisor prior to actually working in food service.
- **Health-Related Criteria:** (treatment program, psychiatric, handicapped, mentally retarded, ATU, etc.) Current medical status (i.e., no exposure to direct sunlight or other special job assignment needs due to medical conditions) and current mental health, intellectual impairment, physical handicap, or disability status.

NOTE: Consideration will be given to all criteria to ensure that safety, security, and treatment needs of all inmates are being met and that the safety and security of staff and the institution are maintained.

40.10 Refusing to Work/Failure to Work/Refusing to Attend the Compulsory School Program: An inmate will not be allowed to refuse any work or mandatory educational assignment or other mandatory program. Such refusal will subject the inmate to disciplinary action. (See Policy OP-22.14, "Inmate Disciplinary System.")

40.11 No Work Pass and/or Change in Medical Status: When a change in an inmate's medical condition occurs that causes a job restriction(s) to be placed on the inmate, the MEDCLASS screen should be updated immediately by the appropriate health services staff and notification made to the Classification Case Manager/designee. The Classification Caseworker/CPS will review the MEDCLASS screen and make an appropriate job change, if necessary. The inmate should be given a SCDC Supply M-31, "Medical No Work Pass," with specified dates. If the medical no-work pass exceeds three (3) days, EWC/EEC will be terminated effective the 1st day of the medical no-work pass per policy. An inmate who is unable to perform his/her current job assignment due to a temporary medical condition, i.e., flu, cold, fever, etc., as determined by appropriate health services staff, will also be given a no-work pass with a specified length of

time that the inmate is to be absent from work. Medical will forward a copy of all SCDC Supply M-31s to the Case Manager.

40.12 Recording of Job/School Assignment: The SCDC Form 18-1, "Committee Docket," and the SCDC Form 19-54, "Inmate Job/School Assignment," with dispositions, will be used for recording all initial job/school assignments and subsequent changes (including custody changes and terminations). Inmates assigned to jobs and/or to school will be directed to the appropriate supervisor following the classification hearing. Individual work supervisors will receive notice from the Case Manager of the inmate's assignment within 24 hours of the hearing.

40.13 Offender Management System (OMS) Entry: Job/School assignment information will be entered into the OMS indicating the inmate's SCDC number, job classification code, effective date of hire, job location, and number of days/hours to be worked. The designated institutional employee will make appropriate entries on the Earned Work Credit/Earned Educational Credit (EWC/EEC) screens of the OMS within three (3) working days after the ICC hearing.

40.14 Job Pool: The Classification Case Manager will monitor job vacancies. The Case Manager will provide information on job vacancies and the need for inmate workers in specific areas to **Classification staff weekly**. Job supervisors are required to keep the Case Manager informed of vacancies and the need for additional workers.

41. GENERAL JOB RE-ASSIGNMENTS:

41.1 Inmate Request: An inmate who has successfully completed at least one (1) year in an assigned job may request a job change. The inmate must appear before the Classification Caseworker/CPS for approval/disapproval.

41.2 Terminations: An inmate may be recommended for termination from a job by his/her supervisor for unsatisfactory job performance, inability to perform work, or other appropriate reasons. Prior to termination, the inmate should be given a SCDC Form 19-123, "EWC Performance Evaluation, Warning Notice," by his/her supervisor explaining how his/her performance may be improved. Depending on the circumstances surrounding the termination, the inmate may be charged with a rules violation. (A warning notice will not be required prior to termination; however, an incident report will be prepared if appropriate.) All terminations must be approved by the Institutional Classification Committee. If the inmate is terminated by the ICC, the effective date of termination will be the date signed by the job supervisor on the SCDC Form 19-54, "Inmate Job/School Assignment."

41.3 Administrative Request: An inmate may be reassigned at the discretion of the Warden or designee when it is deemed necessary for the safety and security of the facility.

41.4 Return from RHU: Upon return from **Short Term** Detention (**ST**), Disciplinary Detention (**DD**), or Security Detention (**SD**), the inmate must appear before the ICC to determine if s/he should return to his/her previous job or be reassigned. If the inmate was convicted of disciplinary offense 903, The Use or Possession of Narcotics, Marijuana, or Unauthorized Drugs, Including Prescription Drugs, or Inhalants (Old Disciplinary Code 1.10 and 2.02), the

Warden/designee may instruct the ICC not to reassign the inmate to his/her previous job or to a job in the same work section.

41.5 Return from Medical: When a change in an inmate's medical condition occurs and a job restriction(s) is placed on the inmate by the physician, the inmate will be referred to the ICC to determine if job reassignment is necessary.

41.6 Assignment of Inmates (as Clerks/Supervisors): Inmates will not be permitted to exercise authority over other inmates in any aspect. This stipulation will not prohibit the use of inmates who oversee work provided that they do not discipline, hire, retain, fire, determine pay, or evaluate the performance of other inmates. Under no circumstances will inmate clerks have access to inmate records or any other confidential information. Inmates will not type classification forms or assist with the performance of any classification duty.

41.7 Back Dating of EWC/EEC by Institutional Classification Central Office: Any EWCs awarded retroactively must be requested by the Warden with at least two (2) supporting statements and documentation from SCDC or supervising employees verifying the work and the dates performed. All Earned Work Credits awarded retroactively must be approved by the Division Director of Classification and Inmate Records/*designee*.

42. ICC REVIEW HEARINGS FOR RESTRICTIVE HOUSING UNITS: Inmates assigned to RHUs will be classified in accordance with the conditions of this confinement as outlined in SCDC Policy OP-22.38, "Restrictive Housing Unit."

43. SUBSTANTIATED SECURITY RISK UNIT (SSR) (KIRKLAND): Level reviews will be conducted pursuant to SCDC Policy OP-22.38, "Restrictive Housing Unit." Inmates will not receive annual reviews while in SSR. A full status change review should be conducted before release.

44. CUSTODY DESIGNATIONS AND CREDITS: The ICC will evaluate the inmate's behavior and other relevant factors and make a custody determination. Any decision which differs from the recommendation from the automated criteria must be coded as an override and fully explained in the comment section of the custody review. All privileges (to include level of supervision within and outside of the institution, meal schedule, controlled movement, access to programs and activities, access to jobs, EWC/EEC level, access to canteen, access to visits, and access to telephone) will be based on the inmate's custody level. When a decision is made regarding the custody, the inmate's privileges (for inmates assigned and eligible to earn credits) will be consistent.

Minimum Out	Level 2
Minimum Restricted	Level 2
Minimum In	Level 3 (Level 2 if meets behavior and time requirements)

Medium	Level 5
<i>Close Custody</i>	<i>Reserved for inmates assigned to specialized units in restrictive housing (Step Down Program, Behavioral Management Units)</i>
<i>Restrictive Housing Unit</i>	N/A

44.1 Custody Criteria Applicable to Wateree River Correctional Institution Only: *Inmates with drug disciplinary convictions that are at least six (6) months old and inmates with an arrest record (not conviction) of a sex related offense and/or plea bargain to include nol prossed/dismissed arrests may be assigned to Wateree River Correctional Institution in Minimum Restricted (MR) custody.*

44.2 Special Status Categories:

44.2.1 Death Sentence Status: *Offenders in death sentence status require the highest level of custody supervision available. Inmates in this status (referred to as Death Row) are precluded from assignment to a principal custody designation.*

44.2.2 Safekeeping Status: *Individuals in safekeeping status will be assigned to unit housing which is specifically designated for safekeeping status. Such housing will be commensurate with the specific safety needs of the individuals assigned there. Refer to SCDC Policy SK-22.02, "Safekeepers," for additional information.*

44.2.3 Medical Status: *Offenders who require special consideration due to their medical conditions (e.g., offenders who are assigned to special medical treatment programs or those who have medical restrictions with regard to housing, job, and other assignments) will be assigned to units and given housing, job, and program assignments which are commensurate with their special medical needs. All medical status offenders will be assigned to an appropriate custody designation and given housing, job, and program assignments commensurate with their special medical needs. All health-related restrictions regarding basic housing requirements, bunk assignment, row assignment, job assignment, or disciplinary procedures, as noted on the MEDCLASS screen, will be followed by all classification staff, classification committees, and security personnel.*

44.2.4 Intellectual Disability status: *A designation of **intellectual disability** will be assigned to those offenders who require special consideration due to their retardation or developmental disability. **This status is** assigned to an offender who has a WAIS-R full scale IQ of 73 or below or a social history indicative of mental retardation. Housing and other restrictions for **these** offenders (II), as identified by professional treatment staff, will be specified on the MEDCLASS screen. Offenders housed in an **intellectual disability unit** will be placed in a cell with inmates of similar status.*

44.2.5 Physically Disabled Offender Status: *Offenders who require special consideration due to a permanent physical disability will be assigned to institutions and given housing, job, and program assignments which are commensurate with their special needs. The term "physically disabled" refers to offenders with a mobility impairment, or visual, hearing, or speech impairment. The ICC will determine the inmate's housing assignment based upon behavioral characteristics, institutional history, and the need to separate specific offenders. Housing and other restrictions for offenders in physically disabled offender status, as identified by appropriate medical staff and noted on the MEDCLASS screen, will be binding on all classification staff, classification committees, and security personnel.*

The meeting of custody criteria does not guarantee placement at any particular level. An inmate's custody classification involves the exercise of discretion in regard to security needs and overrides may be used.

45. CUSTODY AND PRIVILEGES: NOTE: *Exemption to Section #43, dated April 8, 2016, as it relates to inmates in GPH. Inmates in GPH will have a spending limit of \$30.00 per week.*

	MINIMUM OUT	MINIMUM RESTRICTED	MINIMUM IN	MEDIUM	CLOSE	MAXIMUM
ACCESS TO PROGRAMS AND ACTIVITIES	Outside the perimeter, off institutional property	Inside the perimeter or outside the perimeter on institutional property	Inside the perimeter	Inside the perimeter	<i>Inside the unit. Selected activities outside of the unit on institutional property.</i>	Selected cell activity only
ACCESS TO JOBS	Outside the perimeter off institutional property	Inside the perimeter or outside the perimeter on institutional property	All inside the perimeter; Under armed supervision outside the perimeter	All inside the perimeter; Under armed supervision outside the perimeter	<i>Refer to program policy and guidelines.</i>	None except job assignments within unit for Statewide protective custody
EWC/EEC LEVEL	2	2	3 until meets behavior and time requirements to MOR, then automatically to 2	5	<i>7 for inmates assigned to jobs.</i>	None, except 7 for Statewide protective custody
ACCESS TO CANTEEN	\$150.00 week limit	\$150.00 week limit	\$150.00 week limit	\$50.00 week limit	<i>Refer to program policy and guidelines.</i>	Refer to OP-22.16 for Death Row, OP-22.23 for Statewide Protective Custody, OP-22.38 for RHU. Pre-Trial SK inmates are eligible for Canteen privileges.
ACCESS TO VISITS	See SCDC Policy OP-22.09, "Inmate Visitation," OP-22.38, "Restrictive Housing Unit," or OP-22.23, "Statewide Protective Custody," for information on Visitation Privileges.					
ACCESS TO TELEPHONE (This does not affect access to legal telephone calls.)	Normal	Normal	Normal	4 calls per month	<i>Refer to program policy and guidelines.</i>	Up to 1 call per month (Depending upon Security Detention level designation.) Refer to OP-22.38, Restrictive Housing Unit," for SSR, and OP-22.23 for Statewide Protective Custody.

46. CUSTODY CRITERIA:

CUSTODY CRITERIA	*MINIMUM OUT (MO) LEVEL 1	MIN OUT/ RESTRICTED (MR) LEVEL 2 / LEVEL 3	MINIMUM IN (MI)	MEDIUM (ME)	SECURITY DETENTION (SD)
Assaultive Disciplinaries	No assaultive disciplinaries within past 24 months.	No assaultive disciplinary within past 24 months.	No assaultive disciplinary conviction within 24 months.	One (1) or more assaultive disciplinary convictions within 24 months.	Threat to physical safety of other inmates or staff.
Chronic or Major Disciplinaries (Non-Assaultive)	No Major disciplinary within past 6 months for placement. No Major disciplinary convictions after placement. No pending disciplinary. No drug disciplinary conviction within past 24 months for eligibility. *1A No sexual misconduct, no exhibitionism, and no public masturbation disciplinary convictions within the last 24 months for eligibility. *1B No sexual misconduct, no exhibitionism, and no public masturbation disciplinary convictions within the last 24 months for eligibility.	No Major disciplinary within past 6 months for placement. No pending disciplinary for placement. No more than two (2) major disciplinary convictions within 12 months for eligibility. (Different dates) No drug disciplinary conviction within past 24 months for eligibility. No Major disciplinary convictions after placement. No sexual misconduct, no exhibitionism, and no public masturbation disciplinary convictions within the past 24 months for eligibility.	Three (3) major disciplinary convictions within past 12 months (different dates).	Four (4) or more major disciplinary convictions within past 12 months (different dates).	Threat to order and security of the institution. Threat to integrity of an investigation.
Escapes	1A No Class I or Class II escapes. 1B No Class I or Class II escapes within past 10 years. Other escape-related, review on case-by-case basis.	No Class I escapes. No Class II escapes within past 10 years. Other escape-related, review on case-by-case basis.	No Class I escape within past 30 months No Class II escape within 18 months.	No Class I escape within past 6 months Class II escape upon return Class II must serve a minimum of 18 months in Medium Class I escape from County Jail/Detention Center, prior to admission to SCDC with no aggravating circumstances	Current escape risk. Class I escape <i>for a minimum of a 6 months</i> upon return.
Behavior/ Adjustment	Stable work record for six (6) months. No substantiated security concerns	Stable work record for six (6) months. No substantiated security concerns			
Sex Offense History	No sex offenses. No current, prior, or plead sex offense convictions or commitments. No prior sex arrests, dismissed/nol prossed within past ten (10) years.	No sex offenses. No current, prior, or plead sex offense convictions or commitments. No prior sex arrests, dismissed/nol prossed within past ten (10) years.			

Proximity to Release	1A Five (5) years or less to max-out 1B Eight (8) years or less to maxout.	Eight (8) years or less to maxout.			
Detainers/Resident Stability	No category 4 or higher (wanted or hold) No out-of-state/federal detainers (wanted/notify/holds) No ICE detainers No category 4 or 5 open arrest (notify only) No NC (non-US citizen) No UO (unstable out of state)	No Category 4 or higher (wanted or hold.). No out-of-state/federal detainers (wanted/notify/holds) No ICE detainers No category 4 or 5 open arrest (notify only) No NC (non- US citizen) No UO (unstable out of state)			
Current Custody					Current MX Custody scores to SD Upon removal.
Security Threat	No validated STG	No validated STG	Validated-STG-GP	Validated STG-GP	Validated STG

Note: Inmates in Minimum In custody will advance to EWC Level 2 when s/he meets the criteria for MO/MR.

* At Level 1, minimum out restricted (MR) will be reflected. At Level 2 or 3, minimum in (MI) will be reflected with indicator for minimum out restricted (MR) eligibility.

* EWC and EEC will automatically convert at eight (8) years or less to max-out, providing that all behavior and custody criteria are met. Specifically, the criteria for level 2 (EWC and EEC) is as follows:

- Minimum In Custody;
- Employed or assigned to school;
- Eight (8) years or less to max-out;
- No assaultive disciplinary convictions within past 24 months;
- No major disciplinary convictions within past six (6) months;
- No drug disciplinary within past 24 months;
- No class I escape within 30 months;
- No class II escape within 18 months;
- The inmate's offense and resident stability status does not affect EWC/EEC level 2 eligibility.

47. RESIDENT STABILITY CODES: Resident Stability Codes are utilized to flag resident status when inmates are being considered for assignment to unfenced institutions and outside assignments. This code is an indicator of potential escape risks and extensive criminal activity. The code is also used to flag inmates who are non-United States citizens. It does not replace a manual review of the institutional record. Data is entered by the Records Audit Section and the

Kirkland Reception and Evaluation Center Intake Section to code resident stability on the priors screen. Information is interpreted from a review of the NCIC and FBI rap sheets, commitment orders, intake interview, and other documents in the manual record. The resident stability code will be indicated on CLASSP state and custody reviews through the automated system. The automated system will automatically assign a code of N/A if the resident stability code is other than Unstable Out-of-State.

UNSTABLE OUT-OF-STATE (UO): Inmate who has one or more criminal arrest(s) in another state AND has no apparent residence in South Carolina, North Carolina, or Georgia. NOTE: Inmates must meet both the criminal arrest and residence criteria in order to be classified as Unstable Out-Of-State (UO).

CITIZEN: Born in the United States (US) or born to parents who are citizens of the US living abroad, or a person born in a country other than the US but has completed the process to become a citizen of the US.

NON-CITIZEN (N/C) OR ALIEN: Inmate who holds citizenship in a country other than the United States (US).

48. OVERRIDE OF CUSTODY: A custody override code and a detailed justification statement will be required when the custody assigned to an inmate by the ICC is different from the automated recommended custody. The automated recommended custody will be based on criteria included in the Classification Plan. Documentation for overrides (logic/reason for the override) will be provided by the ICC. If the ICC determines that it is necessary to override the inmate's custody, the committee will inform the Case Worker of the justification for that decision. The ICC will clearly state the reasons for the override and explain the reasons in sufficient detail. Note: The Division of Classification and Inmate Records will provide an Override Code List to all Classification Caseworkers and will update the list as required. Classification Caseworkers will maintain this list in the Classification Manual.

48.1 Institutional Classification Committees (ICCs) will have the authority to override principal custody designations which would otherwise be indicated by established custody assignment specifications (classification characteristics and boundaries). These overrides, however, will only be initiated in the interests of good correctional practice, and in accordance with the following guidelines:

- The decision of an Institutional Classification Committee to override custody criteria will be based on unusual or peculiar circumstances relative to individual classification considerations and issues not otherwise covered by established custody and security criteria.
- Lack of bed space in an appropriate custody housing area for an offender will never be grounds for exercise of an override.
- When professional judgment and discretion compel classification decisions which constitute a departure from established classification criteria, the reasons for such decisions will be clearly stated and explained in sufficient detail by the Institutional Classification Committee on the SCDC Form 18-1, "Committee Docket," and other

appropriate documents. Documentation will include entry of such overrides in the automated system and detailed reasons explained in the comment section of the review.

48.2 If the Warden disagrees with the recommendation of the ICC, the Warden must submit his/her concerns in a memorandum, through Division Director of Classification and Inmate Records, to the Deputy Director of Operations. The Deputy Director of Operations will be responsible for resolving any disagreements.

48.3 Central Classification (**CC**) will have the authority to override Institutional Classification Committee decisions when such overrides are deemed by **CC** to be necessary in the interests of good correctional practice, i.e., in order to ensure the safety, security, and orderly management of offenders and institutions. In the event of such an override, **CC** will clearly state the reasons for the override and explain the reasons in sufficient detail. The ICC may appeal **CC** decisions to the Division Director of Classification and Inmate Records.

49. INMATE HOUSING ASSIGNMENTS: It is the policy of the South Carolina Department of Corrections that each inmate will be housed in such a manner so as to ensure, to the maximum extent possible, that the safety, security, and treatment needs of all inmates are being met, and the safety and security of staff and the institution are maintained. All inmate housing assignments, to include assignment to an institution and to specific housing areas, will be made on the basis of rational, objective criteria. The ICC for inmate housing and cell assignment will consist of the Classification Case Manager/Caseworker assigned to the inmate and the Unit Lieutenant/Security Designee. All ICC hearings for cell assignments will be documented on the SCDC Form 18-3, "Cell Assignment."

49.1 General Housing Guidelines: The following guidelines for inmate housing assignments, to include assignment to the institution and to a specific housing area, will be followed by all classification committees and by all individuals with authority to make specific decisions related to inmate housing. Housing assignments will be made on the basis of an inmate's total record, as required by the inmate's current needs and circumstances as documented in the inmate's institutional record, medical and health summary, cell assignment form, and automated record. The Division of Classification and Inmate Records will identify housing areas to separate inmates in cells by custody designation.

49.2 Inmates Assigned Out of Custody Level: If a bed in an inmate's assigned custody is not available or the custody designation itself is not available at the institution, the inmate will be assigned by the Institutional Classification Committee (ICC) to housing which can best provide for the safety and security of the inmate, other inmates and staff, and the institution. The Case Manager/designee will monitor inmates housed out of custody for more than 30 calendar days and assure that appropriate action is taken. Inmates assigned to cells will be assigned to share a cell only with inmates of the same custody designation.

49.3 Special Considerations: Consideration may also be given to an inmate's job assignment if such consideration is consistent with the inmate's needs and requirements relative to safety, security, and treatment.

49.4 No inmate will be assigned to any housing area solely on the basis of race, color, or ethnic origin.

49.5 The ICC will be responsible for making and monitoring cell assignments. The committee will ensure that vulnerable inmates are separated to the extent possible from those inmates with histories of assaults.

49.6 Housing-related restrictions and recommendations of health services professional treatment staff, as noted on the MEDCLASS Screen, will be followed by all classification committees and classification and security staff. If the ICC determines that conflicting security and treatment concerns exist in terms of an appropriate housing assignment for an inmate (e.g., single-celling vs. double-celling), the committee will immediately refer the matter to the Warden or designee and the Institutional Health Care Authority for resolution.

49.7 Housing restrictions and recommendations of health services will be followed by the ICC. A representative from the treatment staff will be included on all ICC reviews of cell assignment in special needs units. Inmates assigned to special needs units will be housed according to their treatment needs. The ICC will continue to work with the treatment staff to ensure that inmates with patterns of assaultive or disruptive behavior are separated from more vulnerable inmates.

50. CELL ASSIGNMENT FORM: The SCDC Form 18-3, "Cell Assignment Form," will be used to determine the appropriate cell assignment for inmates and will be completed on all inmates housed in cells. The SCDC Form 18-3 is not used for wards or open bay areas. The cell assignment checklist consists of a series of questions designed to record pertinent information which will affect the inmate's housing assignment. The SCDC Form 18-3 and other relevant information and criteria will be used by the ICC or individuals with authority to make specific decisions related to inmate housing (e.g., Warden, Associate Warden, or Major) to determine the inmate's cell assignment. All inmate cell assignments should be made on the basis of rational, objective criteria, taking into consideration each individual inmate's safety, security, treatment, and rehabilitation needs. The SCDC Form 18-3 of all cell partners must be reviewed and updated to ensure compatibility. The SCDC Form 18-3, "Cell Assignment Form," must be updated each time that inmates are moved. Inmates in specialized treatment programs who are assigned to a cell will be exempt from the cell assignment process and completion of the SCDC Form 18-3, "Cell Assignment Form." Inmates in specialized treatment programs will be assigned to cells in accordance with their respective treatment. 1B inmates housed in labor crew dorms and specialized work units at Level 2/3 institutions will be exempt from the cell assignment process (designated dorms must house labor crew inmates only).

50.1 PROCEDURES: Upon arrival at the institution, each newly received inmate will appear before the Institutional Classification Committee within 72 hours (excluding weekends and holidays). The ICC chairperson or classification caseworker assigned to the inmate will complete the SCDC Form 18-3 and determine the inmate's cell assignment status. The following guidelines for cell assignment will be observed by the ICC or individuals with authority to make specific decisions related to inmate housing (e.g., Warden, Associate Warden, Major, Operations).

50.2 GENERAL HOUSING GUIDELINES: Cell assignment will be made on the basis of an inmate's criminal and behavior profile, physical and mental health restrictions, prior history of assaultive behavior, Security Threat Group affiliation, and separation requirements. Inmates should be matched with respect to similar characteristics to other inmates in order to determine cell assignment partners. The ICC will compare these characteristics when determining compatible cell/housing partners. Housing restrictions and recommendations of health services professional staff as noted by Health Services will be followed by the classification committee and security staff. Any inmate identified by the classification committee as being too assaultive or too vulnerable to be safely housed with another inmate will be housed in a cell alone. The inmate can request a cell change once a year at his/her annual review. The ICC will review the inmate's request and make a decision related to inmate housing.

50.3 CELL ASSIGNMENT: Cell assignments will be made on the basis of the criteria listed below. Consideration will be given to all criteria to ensure that the safety and security of all inmates and the institution are maintained.

INSTRUCTIONS FOR COMPLETING

SCDC FORM 18-3, "CELL ASSIGNMENT FORM"

The following criteria will be considered in making cell assignments:

1. Prior history of assaultive or violent offenses;
2. Violent or passive tendencies; and
3. PREA status - Aggressive sexual behavior, sexual victimization.

Health related criteria as indicated by Health Services, on the MEDCLASS, will *be used to record any current medical conditions which make it difficult for the inmate to climb stairs, to climb into an upper bunk, or to be housed on the upper tier. The current mental health status as well as intellectual impairments (i.e., mental retardation), as determined by Health Services, must be considered in making cell assignment. In making any housing assignment, the health related criteria determined by Health Services must be followed.*

INMATE REQUEST FOR HOUSING ASSIGNMENT

The ICC will review all inmate requests for housing changes to determine the reason for the inmate's request. The review should be done in accordance with good correctional practices to ensure that security requirements are met. When it is determined that a request for cell assignment is due to incompatibility with the cell partner, the Warden/designee can initiate an emergency housing change if it is operationally feasible. All permanent housing changes must be approved by the classification committee. The inmate does not have to be present during the ICC's review of housing changes.

SECTION FIVE: LABOR CREW/WORK PROGRAM

51. LABOR CREW/WORK PROGRAM:

Central Classification will screen inmates for Labor Crew/Work Program (LC/WP) based on the LC/WP eligibility date as calculated through the automated system. During the **CC** review, the Labor Crew program screens will be initiated and completed in the automated system. Inmates will be eligible for the Labor Crew/Work Program with five (5) years or less remaining to maxout or supervised re-entry eligibility and upon meeting other specific classification criteria. Inmates who are eligible for Labor Crew/Work Program must meet conditions set forth in the Security Criteria for 1A institutions. Upon approval by **CC** for the Labor Crew Program, inmates will be transferred to an **appropriate** Pre-Release Center/**Institution** in Labor Crew status. An inmate assigned to the Labor Crew Program will either be assigned to a job within the Pre-Release Center, to a Correctional Officer supervised **litter** crew, or to an outside Contracted Agency crew.

51.1 In accordance with the Omnibus Sentencing Reform Act (6/2/10), certain violent offenders are eligible to be considered for the Labor Crew/Work Program. An offender is eligible for the program if the offender is sentenced for voluntary manslaughter (Section 16-3-50), kidnapping (Section 16-3-910), carjacking with or without Bodily Injury (Section 16-3-1075), burglary in the 2nd degree (Section 16-11-312 (B)), armed robbery (Section 16-11-330 (A)), or attempted armed robbery (Section 16-11-330 (B)), or Manufacturing/Distribution of Methamphetamine, 1st, 2nd, & 3rd (Section 44-53-370 (B)), and the crime did not involve any criminal sexual conduct, and the offender is within five (5) years of max-out **or supervised re-entry eligibility** date. Offenders that are eligible to be screened pursuant to this Act are only those offenders whose offense date occurred on or after 6/2/10. The offenses listed above will be eligible for the Work Program if convicted of Possession of a Firearm (Firearm Provision) during the commission of these violent crimes.

51.2 Inmates in special programs are not eligible to be screened for the labor crew/work program. Programs include PRE-RELEASE, SPICE, ATU, SHOCK, JUMPSTART, **VETERANS DORM at MacDougall**, and **YOPRS**. Inmates assigned to a designated facility will only be screened upon request. Inmates in lock-up and in R&E status are also not eligible to be screened.

52. INSTITUTIONAL CLASSIFICATION PROCEDURES IN LEVEL 1A INSTITUTIONS:

52.1 To be eligible for the Work Program, an inmate must first be approved for assignment and transferred to the Labor Crew Program at an **appropriate** Pre-Release Center/**Institution that houses 1A inmates**. Upon arrival at the Pre-Release Center/**Institution**, the Community Programs Supervisor or designated staff will project the Work Program rollover date based on time remaining to maxout **or supervised re-entry eligibility date**.

52.2 An inmate, excluding 85% sentences, can expect to spend at least half the amount of time remaining to maxout on the Labor Crew Program. No inmate will be permitted to roll to the Work Program with more than 36 months remaining to maxout or supervised re-entry eligibility date. In accordance with the Omnibus Sentencing Reform Act and Truth in Sentencing (1/1/96), an inmate serving an 85% non-parolable sentence will not be permitted to participate on the

work program until s/he has served 80% of his/her sentence. Eligibility dates will be calculated through the automated system for each affected inmate after labor crew placement.

52.3 Assignment to the Work Program is a privilege, and rollover will be contingent upon satisfactory adjustment and behavior at the Pre-Release Center/*Institution* on the Labor Crew Program. An inmate could remain on the Labor Crew Program for the duration of his/her sentence should his/her adjustment and behavior not warrant being rolled over to the Work Program. After placement on the Labor Crew, inmates must have no administrative disciplinary conviction for at least six (6) months before being allowed to enter the Work Program. Depending on the circumstances of the administrative disciplinary conviction, the Warden/*designee* can waive the suspension after 90 days and allow the inmate to roll over to the Work Program. An inmate with a short time to serve prior to maxout may be placed in the Work Program if employment is available, particularly if s/he plans to reside in the area and can maintain his/her job after release.

52.4 Prior to an inmate's Work Program roll over, the ICC must ensure that mandated notifications have been made by the **CC**. As notifications are made by **CC**, the date of the notification will either be autoloading or manually entered onto the applicable program screen(s) in the automated system. No inmate will be rolled over to the Work Program before these notifications are made by **CC**. When the inmate is rolled to the Work Program by the ICC and the inmate's status is changed to Work Program in the automated system, **CC** will initiate and complete the Work Program screens.

52.5 All Agency Rules and Regulations and State Laws will apply to inmates on the Labor Crew and Work Programs. Disciplinary action will be enforced pursuant to SCDC Policy OP-22.14, "Inmate Disciplinary System."

53. PROCEDURES FOR LABOR CREW/WORK PROGRAM :

53.1 Purpose: To establish a uniform and consistent approach to program management within Labor Crew/Work Program Pre-Release Centers/*Institutions* in order to provide for needed transitional services for inmates prior to and subsequent to release from incarceration.

53.2 General Overview: To be eligible for the Work Program, an inmate must first be approved for assignment and transferred to the Labor Crew Program at an *appropriate* Pre-Release Center/*Institution*. Upon arrival at the Pre-Release Center Institution, the Community Program Supervisor (CPS) or designated staff will project the Work Program roll over date based on time remaining to maxout and required amount of time to be spent on Labor Crew Program. An inmate can expect to spend at least half of the amount of time remaining to maxout or supervised re-entry eligibility date on the Labor Crew Program (i.e., an inmate with 14 months remaining to serve should expect to serve at least seven (7) months on the Labor Crew prior to Work Program roll over).

53.3 SCDC does not accept inmate referrals from other agencies.

53.4 Procedural Guidelines: Each Pre-Release Center/**Institution** Warden and other designated program and security personnel will ensure that all guidelines addressed as specific procedures are adhered to in order to facilitate consistent and efficient program management within the Pre-Release Centers. Specific operational procedures will be in accordance with Agency guidelines. In accordance with SCDC Policy GA-03.03, "Inmate Drug Testing/Screening Program," drug screening/testing will be conducted for all inmates prior to transfer to the Labor Crew/Work Program and randomly after placement.

53.5 Community Interaction/Resources:

53.5.1 Citizens Advisory Committee: Each Pre-Release Center/**Institution** Warden will establish a Citizens Advisory Committee which is representative of the total community to provide for interaction between the center and the community. The Warden/designee will ensure that meetings will be held at least annually to address issues of mutual concern in reference to programs, policies, procedures, etc.

53.5.2 Volunteer programs will be established and maintained in accordance with SCDC Policy PS-10.04, "SCDC Volunteer Services Program."

53.5.3 Public Information and Education: Each Warden will be responsible for community interaction with law enforcement and judicial agencies and local governing bodies and participation in professional organizations and associations. Interaction with the public and the news media will be in accordance with SCDC Policy GA-02.01, "Inmate and Employee Relations with News Media and Others."

53.5.4 Community Resource Manual: Each center will develop and utilize contacts with public and private resource agencies for referral assistance. A current Community Resource Manual will be maintained by each center for use by staff and inmates for all counties under its geographical jurisdiction. Referral sources will be current. Agencies to meet inmate needs will include, but are not limited to: Education, vocation, employment, housing, religion, psychological/medical, drug abuse, etc. Referral services will include any public or private agency which can render assistance to inmates in meeting personal, family, program, and/or Agency goals. Information contained in the resource manual may include, but will not be limited to: agency name; agency address/location; description of services; qualifications for services eligibility; area served; application procedures; schedule of services to include cost; and contact persons.

54. LABOR CREW/WORK PROGRAM ELIGIBILITY AND ASSIGNMENT:

54.1 Program eligibility will be based on approved program conditions as established through this Inmate Classification Plan. SCDC prohibits discrimination based on an inmate's race, religion, national origin, sex, disability, or political views.

54.2 Inmates will automatically be screened by **Central** Classification for **1A** Labor Crew assignment based upon date, security, and custody eligibility.

54.3 Inmates approved for **IA** Labor Crew (LC) will be transferred to an appropriate Pre-Release Center/**Institution** as space becomes available. Upon approval, an automated transfer request will be created.

54.4 Intake: Any applicable restrictions regarding the inmate's assignment will be noted as a provision of the inmate's approval, will be included in the inmate's institutional record, and will be closely monitored by the center personnel to ensure compliance. The Institutional Classification Committee (ICC) will verify that all inmates received have been properly cleared and approved for assignment to the center and are placed in the appropriate status.

54.5 The initial ICC will be conducted in the same format as listed in paragraph 28.5 of this policy with the exception that ICC hearings can be conducted by the Community Programs Supervisor (CPS) with the option for a full Institutional Classification Committee.

54.6 Orientation: A complete orientation will be conducted by the Community Program Supervisor in accordance with the Inmate Classification Plan guidelines after the inmate's arrival at the center. Orientations will address all pertinent information, program goals, rules/regulations, employment, program service issues as related to the inmate, and collection and payment of fees. Orientations will be documented on SCDC Form 18-69, "Certificate of Inmate Orientation," and SCDC Form 27-67, "Certificate of Outside Labor Crew Orientation." The inmate will review a copy of SCDC "Inmate Information Guide." This guide will be posted and available for inmates to review. The orientation should allow the inmate an opportunity to discuss any behavioral problems, program restrictions, etc., noted in the inmate's institutional record. The inmate will be assigned to the caseload of a Community Program Supervisor. This supervisor will assume and retain the responsibility for the inmate's program involvement while assigned to that center. Each supervisor will be required to maintain and report caseload data on the SCDC Form 18-6, "Classification Monthly Report," by the 5th of each month to the Division of Classification and Inmate Records.

54.7 Special attention and assistance will be provided to inmates with specific learning disabilities and/or physical handicaps to ensure maximum program understanding and assistance with individual needs and program objectives.

54.8 Each inmate's progress will be reviewed on an annual basis and evaluated during the ICC pursuant to this Inmate Classification Plan with the results documented, dated, and signed.

54.9 The Community Program Supervisor will explain Work Program roll-over eligibility to Labor Crew inmates. Ideally, inmates will serve half of the amount of time to max out on Labor Crew. Upon positive adjustment and after all required notifications have been made, Labor Crew inmates will be eligible to roll to the Work Program. Early roll-overs may be coordinated by the ICC for purposes of bed space when it is in the best interest of the Agency. Explanation and justification will be documented for all early roll-overs.

54.10 Law enforcement agency and victim/witness notifications will be required prior to assigning an inmate to a Work Program job. The Community Program Supervisor (CPS) will be responsible for verifying notifications by viewing the Community Programs (CPREV) OMS

screen for date entries. If these notifications are not documented, the CPS will be responsible for contacting **CC** via automated system messaging.

55. WORK PROGRAM ORIENTATION:

55.1 During orientation, the inmate will read, or have explained to him/her by center personnel, the SCDC Form 27-4, "Work Program Agreement," which will be properly completed, dated, and signed by center personnel and dated and signed by the inmate.

56. WORK PROGRAM CASE MANAGEMENT:

56.1 The Following SCDC Forms Will Be Utilized for Work Program Inmates:

- SCDC Form 27-16, "Inmate Payroll Receipt/Financial Report";
- SCDC Form 27-53, "Work Program Initial Loan"; and
- *SCDC Form 27-5, "Personalized Budget Plan/Deductions".*

57. LABOR CREW/WORK PROGRAM JOB DEVELOPMENT, PLACEMENT, AND EMPLOYMENT GUIDELINES:

57.1 The Community Programs Supervisor (CPS) will be responsible for employment development and placement, as well as assistance in other needs for each inmate assigned to his/her caseload at the respective center. All inmates will be assigned to a supervisor's caseload until release or removal from the center. Assignments will be made in an equitable, fair, and rational manner without regard to race, creed, or national origin.

57.2 Inmates will not be permitted to develop or secure employment on their own.

57.3 Labor Crew Inmates: After admission to the Pre-Release Center/**Institution**, the ICC will conduct job assignment boards in accordance with this policy/procedure. Labor Crew job assignments will be made based on the institutional needs, outside labor crew needs, and the inmate's ability/skill. Every effort will be made to assign inmates with specialized skills to an area where that skill can be utilized to the fullest. However, if such is not located and approved, the inmate will be assigned to an appropriate labor crew. Assignment of inmates to outside/contracted labor crews will be in accordance with OP-21.08, "Contracted Labor Crews." Inmates must be on the labor crew/work program for a minimum of six (6) months before they are eligible to apply for a transfer to a designated facility.

57.4 Work Program Inmates Initial Job Placement: At the time of actual employment, SCDC Form 27-4, "Work Program Agreement," will be completed and signed by the employer, inmate, and the CPS. The CPS will thoroughly explain all program procedures and regulations governing overtime work as stipulated on the form. The employer is to be advised that all civilian employees are to be made aware of the rules and regulations relating to the inmate's employment.

57.4.1 An inmate may be placed on the Work Program for one (1) - two (2) months if employment is available, particularly if s/he plans to reside in the area and can maintain his/her job after release. Nothing in these guidelines precludes an inmate from remaining on a labor crew for the duration of his/her sentence.

57.5 Work Program Follow-up: The CPS will personally visit the employer and job site for progress reports at least once per month. These visits will be documented on SCDC Form 27-69, "Job Site Monthly Visit." Rules and regulations are to be reiterated during each visit.

57.6 Loss of Employment: Quitting a job without proper authorization or being fired from a job will be considered a direct violation of the Work Program Agreement. In both cases, the CPS will investigate the situation to determine the exact circumstances by conferring with the inmate and the employer and will provide a report to the Warden/*designee*. If it is determined that the job loss is the fault of the inmate, it will be dealt with as a major violation of work program regulations, and disciplinary action will be taken pursuant to SCDC Policy OP-22.14, "Inmate Disciplinary System." If it is determined that the inmate was not physically or mentally capable of performing his/her job, or the job loss was by no fault of the inmate (i.e., layoff), consideration will be given to other appropriate employment and/or assignment.

57.7 Job Terminations: An inmate assigned to the Work Program may be recommended for termination from a job by his/her supervisor for unsatisfactory job performance, inability to perform work, or other appropriate reasons. Prior to termination, the inmate should be given a SCDC Form 19-123, "EWC Performance Evaluation, Warning Notice," by his/her supervisor explaining how his/her performance may be improved. Depending on the circumstances surrounding the termination, the inmate may be charged with a rules violation. (A "Warning Notice" will not be required prior to termination.) In case of termination, the supervisor will submit to the Classification Section a completed SCDC Form 19-54, "Inmate Job/School Assignment," indicating the circumstances surrounding termination. Copies of any warning notices, counseling forms, or incident reports should be attached. The CPS will distribute copies as indicated on the form. The ICC will review all documentation, interview the inmate, and determine whether the termination was legitimate. The inmate will be transferred if s/he is charged with a major disciplinary. If not legitimate/substantiated, the inmate will be reassigned to another job by the ICC.

57.8 Establishing Work Program Employers: Every effort should be made by the CPS to ensure that only quality employment with respectable and reliable employers is secured for Work Program inmates. Employers who, through previous association, have proven to be unfavorable for Work Program employment will not be utilized. The employer will not be under active supervision of the Department of Probation, Parole and Pardon Services (DPPPS). An inmate will be permitted to work under the supervision of another inmate or former inmate in a community job with the approval of the Warden/*designee*; however, such will not be permitted in the center.

57.9 Types of Work Program Employment/Acceptable Jobs:

57.9.1 Self/Family-employment: Self-employment and employment in family operated businesses will not be permitted. SCDC personnel should exercise good judgment in the purchase of goods and services from such businesses in order to avoid the appearance of impropriety.

57.9.2 Alcoholic Beverages: Employment requiring selling, serving, and/or dispensing alcoholic beverages will **not** be permitted. The Warden/**designee** will be responsible for determining which establishments will be permissible for inmate employment.

57.9.3 The preferred work schedule will be day shift (6:00 a.m. to 6:00 p.m.) employment. Every effort will be made to assign inmates to jobs during these hours.

57.10 Work Program Union Benefits: When contacting employers for the purpose of placing work program inmates on a particular job, the CPS will inquire as to the company's union status. If unionized, the CPS will contact the local union representative or a statewide union control body and get its policy concerning the placement of an inmate in that particular position. If the work force is completely unionized, the inmate must join the union. If a strike occurs within a unionized company, no inmate will be permitted to either participate in strike activities or to work during the strike period. If the strike is of a prolonged nature, additional/other employment will be considered for the inmate.

57.11 Work Program Employee Group Insurance: Work Program inmates will not be required to participate in insurance programs provided by the employer. However, if offered by the employer, the Work Program inmate may participate.

57.12 Workers' Compensation: All work program inmates must be covered by individual employer insurance or State Workers' Compensation. Job placement personnel will verify, using SCDC Form 27-4, "Work Program Agreement," that all prospective employers are covered by Workers' Compensation Insurance or otherwise meet those requirements under SCDC Workers' Compensation Regulations.

57.13 Unemployment Compensation: Work program inmates will be eligible for, and subject to, state unemployment compensation laws through the Employment Security Commission. However, for the purposes of this plan, this will be restricted to those inmates who have been employed on the work program and have been terminated by their employers due to reductions in force or other similar lay-offs. These inmates will be re-employed as soon as possible. Any inmate who obviously delays reemployment for the purpose of continuing to receive unemployment benefits will be charged as appropriate and may be removed from the center, and unemployment benefits will be discontinued. Inmates whose employment is severed as a result of program removal will not be eligible for unemployment compensation.

57.14 Hours Worked/Overtime: Each employer will present the center with a weekly schedule of the inmate's required work hours. Each inmate will be expected to work overtime when required, and it will be the responsibility of the employer to notify the center well in advance of the regularly scheduled quitting time. Center personnel will verify the overtime request by return telephone call to the job site and job supervisor. Inmates will be limited to working no more than

12 hours per workday. Split shifts are not permitted. It will be the employer's responsibility to notify the center in advance to request additional working days not regularly scheduled. The automated system for the institution's time clock will be closely monitored by the center personnel to verify and ensure time worked. SCDC Form 27-9, "Verification of Overtime Work," will be completed on each inmate required to work overtime, and all overtime will be verified with the employer by the center personnel.

57.15 Provisional Parolees: Center personnel will provide employment related assistance to provisional parolees by working with local DPPPS supervisors.

57.16 Conditional Parolees: If approved for Labor Crew, conditional parolees may be referred to the Pre-Release Centers for placement. The CPS will assist the inmate in notifying the parole supervisor in the inmate's geographical area to address parole placement needs.

58. MANDATORY DEDUCTIONS FOR WORK PROGRAM INMATE WAGES: (Note: SCDC Policy ADM-15-10, "Work Release Accounting," governs Work Program inmate wages.)

58.1 Twenty (20%) percent of gross wages will be deducted for victims. Court ordered victim restitution will be distributed to the courts. If no court ordered restitution exists or if the restitution order(s) is satisfied, then 20% will be distributed to victim programs as provided by law.

58.2 Thirty-five percent (35%) of gross wages will be deducted for child support. If court ordered child support exists, 35% will be paid for all orders. If no court order(s) exists, then allotments at 35% will be made directly to the family for child support. If the inmate has no children or if the order(s) has been satisfied, then the 35% is distributed at a rate of twenty-five percent (25%) to the S.C. General Fund for room and board; and ten percent (10%) remains in the inmate's Work Release account. SCDC Form 27-23, "Verification of Dependents," will be used to document each inmate's dependent children. If the inmate is subject to DNA testing and the associated \$250.00 testing fee, up to 5% of the inmate's wages will be deducted to pay the DNA fee. The DNA fee will be deducted after all other deductions required by law and after the mandatory savings has been met.

58.3 The above deductions will be made from all Work Program inmate Work Release accounts commencing with the August 4, 1999, payroll cycle.

58.4 Work Program participants will be assessed a transportation charge as provided for by state law of \$4.00 per day to offset the cost of transportation to and from the job site. Deductions will be made from all Work program inmates' work release accounts commencing on January 10, 2006. Deductions will be made commensurate to each inmate's pay cycle.

58.5 All Work Program inmate funds will remain in the inmate's Work Release account, except for the portion currently being transferred to E.H. Cooper Trust Fund account.

58.6 Effective August 1, 1999, the unspendable portion of the inmate's account will be the August 1, 1999, mandatory savings balance, plus the 10% of gross wages recorded on or after August 4, 1999.

58.7 Work Program inmates will continue to receive weekly allowance through the Work Release account.

58.8 Other deductions (employment needs, family needs, attorney fees, etc.) will be permitted from the inmate's Work Release account; however, mandatory savings funds will not be available for payment of these deductions. Special requests for these deductions will be evaluated and approved only by the Warden.

58.9 Hair cuts will be provided by SCDC at no charge.

59. WORK PROGRAM EMPLOYMENT TRANSPORTATION: The Pre-Release Center/*Institution* will provide transportation for inmates to and from the place of employment unless prior approval for some other means of transportation is given by the Warden/*designee*. A daily work-trip schedule will be established by the Warden/designee, and each inmate will be notified as to the mode and time his/her ride will depart and arrive. The inmate will be responsible for meeting this schedule. All inmates will be transported in state vehicles unless otherwise approved, i.e., transported by employer/coworker. The SCDC Form 27-10, "Release of Liability," will be signed by the inmate and designated persons prior to transport. No inmate will be permitted to cross state lines for any reason. Should pick-up times change during the workday, only the job supervisor will be permitted to call the center for pick-up. The inmate will not be permitted to call. Drop off points are to be avoided. However, either the job supervisor or the SCDC driver will remain with the inmate until an exchange of custody is physically made.

60. WORK CLOTHING/PERSONAL HYGIENE: Work Program inmates will wear clothing suitable for their assignment. The inmate will be neat, clean, and well groomed at all times in accordance with SCDC Policy OP-22.13, "Inmate Grooming Standards." Labor Crew inmates will wear the designated SCDC inmate uniform. All inmates will be required to comply with Agency grooming guidelines.

61. VIOLATIONS OF PROGRAM RULES AND REGULATIONS: Labor Crew/Work Program participation is a privilege granted to SCDC inmates. Considering the Agency's sensitive position in the community, and the need to maintain adequate community/employer relations, problem inmates who do not abide by program regulations will not be retained on the Work Program. All program infractions will be thoroughly investigated by designated staff members or a committee appointed by the Warden and fully documented prior to taking action. Disciplinary action will be in accordance with SCDC Policy OP-22.14, "Inmate Disciplinary System." The inmate will be formally charged and/or removed, as appropriate.

61.1 ADMINISTRATIVE/INFORMAL INFRACTIONS: Those infractions graded as administrative/informal in accordance with Agency disciplinary procedures may be handled in varying ways by the Major/Responsible Authority. Each violation will be appropriately weighed

for type action. Program sanctions may be taken instead of formal disciplinary action, as appropriate. Program sanctions will include, but will not be limited to, the following:

- **Verbal reprimand or warning;**
- **Restriction to the Center, such as job reassignment;**
- **Suspension from Work Release and return to labor crew status for a specified period of time;**
- **Payment of a donation to be contributed to the Inmate Welfare Fund (not to exceed \$50.00);**
- **Other sanctions as approved through SCDC Policy OP-22.14, "Inmate Disciplinary System."**

61.2 Any formal disciplinary action will be taken pursuant to SCDC Policy OP-22.14, "Inmate Disciplinary System." If an inmate is charged with and convicted of an Administrative disciplinary conviction, Work Program privileges may be suspended for at least six (6) months from the infraction date or date of discovery. Work Program inmates may be rolled back to Labor Crew status. Depending on the circumstances of the administrative disciplinary conviction, the Warden can waive the suspension after 90 days and return the inmate to the Work Program. **CC** will make appropriate program screen entries placing the inmate back on the Labor Crew program.

61.3 MAJOR INFRACTIONS: When an inmate is charged with an infraction graded as major in accordance with Agency disciplinary procedures, that inmate will be removed from the Labor Crew/Work Program and the Pre-Release Center. When an inmate is charged with a major disciplinary, the institution will submit a CRT message to **CC** requesting the removal of the inmate. **CC** will arrange the transfer of the inmate, as appropriate.

62. WORK PROGRAM REMOVAL: All removal requests must be submitted and approved by **CC**. If continuous program violations occur and the inmate is apparently unsuited for the Pre-Release Center/**Institution**, the inmate will be formally charged and/or removed from the Center as deemed appropriate. When segregation (Restrictive Housing Unit (RHU)) is necessary, contact **Central Classification** during normal business hours. After normal business hours, contact the Emergency Action Center, or the nearest secure SCDC institution. If an inmate is determined by Medical not to be mentally competent to function under Pre-Release Center regulations and limited supervision, the inmate will be removed from the Center for appropriate reassignment and treatment. If it is determined by Medical that an inmate is not medically fit for Labor Crew/Work Program assignment, the inmate will be removed from the Center for appropriate reassignment and treatment. If an inmate receives a Category 4 or higher detainer/wanted, s/he will be removed from the Center for appropriate reassignment.

63. MEDICAL/DENTAL/ILLNESS/INJURY:

63.1 Labor Crew Inmates: Medical and dental services will be provided through the appropriate SCDC facilities.

63.2 Work Program Inmates: Medical and dental services will be arranged by the Warden and the HCA at the covering institution. Emergency situations will be handled as outlined in SCDC HS-18.02, "Emergency Care." Co-payments will be assessed as outlined in SCDC HS-18.17, "Medical Co-Payment."

63.2.1 Temporary Injury: A Work Program inmate injured on the job or elsewhere which might cause him/her to be out of work for a period not exceeding three (3) weeks may remain in the center. The injury must be verified by a physician. If the inmate remains at the center, mandatory deductions will not be required for the second and third weeks unless Workers' Compensation is received. When the recuperation period exceeds three (3) weeks, a waiver must be submitted to the Division Director of Classification and Inmate Records. The decision whether to leave the inmate at the center or return the inmate to a facility where such services are available will be made by the Warden and the covering HCA.

63.2.2 Permanent and/or Extended Injury: If an injury is of a permanent nature and the inmate will not be permitted to return to work, s/he will be transferred to a facility where medical treatment is available. If constant medical treatment is not required and a Labor Crew position is available that the inmate can perform, s/he may remain at the center in that capacity. Involvement of the Division of Health Services will be required.

63.2.3 Terminal Illness: If a Work Program inmate becomes terminally ill and hospital treatment or isolation is deemed necessary by a physician, s/he may be placed on furlough in accordance with SCDC Policy HS-18.01, "Specialized Health Services." Otherwise, s/he will be transferred to a facility where medical services are available.

63.2.4 Temporary Illness: If the illness is of a temporary nature, not exceeding three (3) weeks, and hospitalization or isolation is not necessary, the inmate may remain at the Center. Mandatory deductions for the second and third weeks will not be required unless sick pay or insurance, etc., is received. If the convalescence period exceeds the three (3) weeks, and if the medical conditions allow, the inmate may be assigned to duties and retained as a Labor Crew inmate until s/he is able to return to his/her community job.

64. LABOR CREW/WORK PROGRAM INMATE VISITATION: Inmates will be permitted visitors as authorized pursuant to SCDC Policy OP-22.09, "Inmate Visitation."

65. PROCEDURES FOR LABOR CREWS/WORK PROGRAM IN LEVEL 1B, LEVEL 2, AND LEVEL 3 INSTITUTIONS:

65.1 General Overview: Level 1B Inmates will be eligible for the Labor Crews upon meeting other specific classification criteria. The ICC will determine job assignments to Institutional Labor Crews.

65.2 Victim Witness Notification: Notification for transfer to all institutions for potential placement on outside labor crew details will be completed by institutional personnel designated

by the Warden. When the inmate is assigned a job on a Labor Crew, a letter to *each* registered victim must be placed in the mail as soon as possible. The inmate must not be placed on the detail until at least five (5) working days after the letter is mailed. Copies of the letter with clear indication of the date mailed (or the letter and envelope if returned) will be maintained on file at the institution. This is NOT to be filed in the inmate's institutional or central record. In extreme cases, institutional staff should contact the Division of Victim Services by telephone.

SECTION SIX: SPECIAL *PROGRAMS*

66. COURT ORDERED SUPERVISED FURLOUGH EARLY RELEASE PROGRAM:

66.1 Purpose: To allow carefully screened inmates to be placed on furlough from the South Carolina Department of Corrections (SCDC) under the supervision of Probation and Parole Agents from the Department of Probation, Parole, and Pardon Services (DPPPS) for the purpose of pre-release preparation, securing employment, or obtaining rehabilitation services.

66.2 When an inmate is eligible for release under the Court Ordered Supervised Furlough Early Release Program, his/her record will be screened to ensure that s/he meets the criteria as set forth, and a proposed residence will be verified by DPPPS. When it is certified that s/he meets all requirements for participation, s/he will be released from the SCDC on a pre-determined release date to the supervision of the DPPPS Probation and Parole Agents until his/her established maxout date.

66.3 Eligibility Criteria: In order to be released under the Court Ordered Supervised Furlough Early Release Program, the inmate must meet the following requirements:

- The dominant offense (offense that results in the maxout date) must have an offense date between 6/14/83 and 6/13/93 (includes dates 6/14/83 and 6/13/93);
- The individual must have a claimed residence in South Carolina that is verified and approved by the DPPPS;
- The inmate must be within six (6) months of maxout;
- The inmate must have served six (6) months in SCDC disciplinary free prior to his/her eligibility date;
- The inmate must have an approved in-state address (no post office box numbers); and
- There must be no detainers/wanted or holds against the inmate.

66.4 Procedural Guidelines:

66.4.1 The Division Director of Resource and Information Management (RIM) or designee will produce a monthly automated listing of potentially eligible inmates. An automated record of eligibility status and the screening process will be produced at this time on the "SFREV" Screen for each of these inmates.

66.4.2 The Institutional Classification Case Managers/Case Workers will manually review the record of each inmate appearing on the computer listing daily to verify that s/he meets the established criteria, obtain address information, and make

appropriate approval/disapproval entries in the automated system. The designated classification personnel will contact each inmate to discuss the program and determine whether the inmate chooses to participate since participation is voluntary. If the inmate wishes to participate, s/he must provide the address at which s/he will reside. Notification to the inmate will be documented on the SCDC Form 27-70, "Supervised Furlough Early Release Notification." This address will then be entered into the automated record (SFREV Screen) by the designated classification personnel.

66.4.3 Upon completion of the second screening by the Institutional Classification Central Office, the inmate's SFREV record will be referred to the Inmate Records Branch for audit of offense and conviction dates to ensure accurate entry. The Inmate Records Branch will enter a "Y" in the SFREV screen if date is correct and the inmate is eligible.

66.4.4 Upon completion of a "Y" entry by the institution, Institutional Classification Central Office, and Inmate Records, the SFREV screen is referred to DPPPS for verification of residence. DPPPS Probation and Parole Agents will verify the acceptability of each residence. If a residence is not approved, the inmate will be given the opportunity to provide additional addresses which will be checked. These approvals or disapprovals will be entered into the automated record (SFREV Screen) by DPPPS.

66.4.5 If the address is approved, DPPPS staff will enter a "Y" in the appropriate field and the SFREV screen will be referred to the MAXREL for audit. If the address is not approved, DPPPS staff will enter a "n" in the appropriate field and the inmate's name will be referred back to the institution's list for a second/subsequent address entry.

66.4.6 Upon address approval entry by DPPPS, an audit will be conducted by the Inmate Records Office using the MAXREL screen. Upon verification of accurate data entries, the inmate's name will be referred to the Institution's Tentative Release list.

66.4.7 Each inmate who has an acceptable residence in the community will be released into the community on the established release date after signing the Supervised Furlough certificate prepared and issued by DPPPS. At the time of the release, the terms of the program will be discussed with each individual by the Parole Examiner.

66.4.8 The inmate's name will appear on the Authorized Release List on the date of eligibility. The inmate is not to be released until his/her name appears on the final Authorized Release List and DPPPS has issued the Supervised Furlough Certificate.

66.4.9 Inmates released to the Court Ordered Supervised Furlough Early Release Program will continue to earn Earned Work Credit, Earned Educational Credit, and good time at their current rate upon release.

66.5 Revocation Procedures: When a participant is determined to have violated the terms of the release agreement, s/he will be offered a hearing conducted by the DPPPS. If DPPPS revokes the inmate or the inmate signs a waiver of the hearing, s/he will be returned to the custody of SCDC. The inmate will automatically fail to earn twenty (20) days of good time for the month in which the revocation occurs. The inmate will be received at the Kirkland R&E Center or the Camille Graham R&E Center if female and reassigned to an SCDC institution by **CC**. **Earned work credits will be discontinued if a warrant for SFII-A violation is issued. The effective date of termination is the warrant issued date.**

66.6 Supervised Re-entry Program (SRP): To provide for a period of reentry supervision upon release from incarceration, eligible inmates will be released six months prior to their projected maxout date.

Eligibility Criteria: (Changes in **BLUE** amended by Change 1 dated April 18, 2018)

- Inmate is not serving an active sentence for a no-parole offense which does not allow for parole release.
- Inmate has been incarcerated for a minimum of two (2) years.
- Offense date must be on or after January 1, 2011.
- The period of re-entry supervision will be reduced by any term of probation following the inmate's sentence.
- *Inmate cannot have more than six (6) months probation.*
- Supervised re-entry is a mandatory release if all criteria is met.
- *No out-of-state detainers/wanted or Holds against the inmate.*

67. INMATE SOCIAL SECURITY CARD: The South Carolina Department of Corrections will make a reasonable effort to obtain a social security card for all inmates admitted without a card, who are being considered for employment in a Prison Industries, assigned to a Labor Crew/Work Program, or within a specific time of release. The purpose is to provide inmates with appropriate documentation to obtain employment while incarcerated.

67.1 Reception and Evaluation Center Records personnel will determine if an inmate has a social security number and card during processing. The social security number and the physical existence of the social security card will be entered into the automated record. The social security card will be filed in Section 4 of the inmate's institutional record.

67.2 When a social security card is received, it will be forwarded to the classification caseworker who will enter physical existence of the card in the inmate's automated record (SSNUM screen), have the inmate sign the card, and file the social security card in the inmate's institutional record. The social security card will be given to the inmate along with other documents and property when the inmate is released (parole, max-out, early release program).

68. INMATE PHOTOGRAPHS:

68.1 A new inmate photograph will be taken at least every five (5) years, or when there is a significant change in the inmate's appearance. At the inmate's annual review, the caseworker will ensure that a photograph is in the inmate's record and that it is less than five years old. If the photograph is more than five years old or the inmate's appearance has significantly changed, the caseworker will ensure that a new photograph is taken.

69. ESCAPES: Escape, attempted escape, or aiding/abetting escape while in the custody or confinement of an adult state, county, or city law enforcement institution, facility, or program.

69.1 Class of Escape: All escapes will be categorized into one (1) of the following classes:

Class I: Any escape, attempted escape, or aiding/abetting escape from a Level 2 or 3 institution, or from medium or maximum custody at a local detention center. Also includes escapes from a Level 1 institution, while assigned to a Level 1 institution, but not on institutional property, or minimum custody at a local detention center that involves any threat of violence, physical harm, or other aggravating circumstances, to include actual or constructive possession of tools or items which are intended to be used to facilitate an escape. Aggravating circumstances may also include any criminal behavior that occurs while the inmate is on escape status. Note: Should an inmate assigned to an outside detail, at any level institution, walk-off (with no aggravating circumstances), this should be classified as a Class II escape.

Class II: Any escape, attempted escape, or aiding/abetting escape from a Level 1 institution or minimum custody at a local detention center that does not involve any threat of violence, physical harm, or other aggravating circumstances. Note: Should an inmate assigned to an outside detail, at any level institution, walk-off (with no aggravating circumstances), this should be classified as a Class II escape. Inmates who receive escape convictions for fleeing from arrest, departure from lawful custody, or violation of a Home Incarceration Program will be classified as a Class II. If aggravating circumstances exist, the escape conviction will be classified as a Class I.

69.2 Institutional Assignment of Escapees: Upon capture, inmates will be assigned to an appropriate facility considering the circumstances surrounding the escape, bed space availability, and other pertinent assignment factors.

Class I: Escapees will be assigned to a Level 3 institution.

Class II: Inmates with escapes more than ten years old may be assigned to Level 1 institutions. If the inmate has a previous escape of any type, s/he will be assigned to a Level 3 institution. Note: Class II escape convictions may be assigned to a Level 2 or 3 institution and considered for placement in medium/minimum custody, as appropriate.

NOTE: Aggravating circumstances includes, but not limited to, any action which causes serious bodily injury, damage to physical property, and excessive use of resources and/or manpower.

69.3 Escape-Related Offenses: The following escape-related offenses will be categorized as Other (not Class I or Class II) and will NOT be counted as an escape:

- Absconctions of any type;
- Jumping bail;
- AWOL;
- Flight to avoid prosecution.

69.4 An inmate who commits a Class 1 escape from SCDC is to be placed in SD custody upon his/her return from the escape. This rule applies regardless of the date the escape occurred. (Example: Inmate escapes from SCDC in 1975, but is returned to SCDC in 2005; this inmate is to be placed in SD custody.)

69.5 An inmate who escapes from a county or municipal jail/detention center, and is subsequently admitted to SCDC, is to be placed in ME and Security Level 3 custody if the escape incident is classified as a Class I. If the escape involved aggravating circumstances, s/he may be assigned to SD custody. If Class I escapes are modified, the inmate's custody will be reviewed for appropriate assignment.

69.6 *Inmates with an escape history, either Class I or Class II, will not be assigned to an institutional job with a loading dock or in any maintenance shop that utilizes Class II or Class III tools if the escape is within the past 10 years.* (Changes in BLUE amended by Change 1 dated April 18, 2018)

69.7 If an inmate has a Class I escape on a previous commitment, but eventually completed the sentence and was released from SCDC and has returned to SCDC on a new commitment, s/he is not to be placed in SD custody solely for the previous Class I escape.

Escape Classification Matrix

	TYPE	ESCAPE CLASSIFICATION
1.	Active SCDC Warrant for Escape	Escape - Class I or II (whichever is appropriate)
2.	Active Non-SCDC Warrant for Escape	Escape - Class I or II
3.	Dropped SCDC Escape Warrant	Other
4.	Dropped Non-SCDC Escape Warrant	Other
5.	Dropped/ <i>Overtured Through Grievance</i> Escape Disciplinary	Other

6.	Escape Warrant on NCIC/FBI Rap Sheet with no Disposition	Escape - Class I or II (until disposition is received)
7.	Escape Warrant on NCIC/FBI Rap Sheet with Conviction Disposition	Escape - Class I or II (whichever is appropriate)
8.	Escape Warrant on NCIC/FBI Rap Sheet with Disposition of Dismissed/Nol Prossed/ <i>Overtured Through Grievance</i>	Other
<i>9.</i>	<i>Found Not Guilty</i>	<i>Other</i>

69.8 Institutional Escape Audit - In addition to the check of each inmate's escape history at the initial audit, the Classification Case Manager/Designee in level 1 institutions will conduct an institutional escape audit every 90 days.

70. INMATE HARDSHIP TRANSFER REQUESTS: Institutional classification staff will review all written requests from an inmate for transfer during the inmate's annual classification reviews. This review will be the only time an inmate can request a transfer. The inmate must meet the criteria and provide the appropriate documentation at the time of review. Each inmate will sign indicating whether he/she is requesting a hardship transfer at the annual review. Family members for whom the inmate is requesting a hardship transfer must be on the inmate's visiting list as provided by the Central Visitation Center. Inmates who request transfers will be screened for an appropriate institution in the geographical area and not for specific institutions. An inmate requesting a transfer based on a family hardship (immediate family members are defined as parent or parent substitute (family member who raised the inmate), grandparent, sibling, spouse, and child(ren) as verified by either the Offender Management System Inmate Relative Screen or the inmate's visiting list) should provide the following information:

- Doctor's statement on official stationery (for verification of a family member's illness);
- Documents from a community representative or official on official stationery (i.e., pastor, Department of Social Services);
- For verification of older family members age (65 or older), a copy of the driver's license or birth certificate must be provided.

(NOTE: ALL INMATES MUST PROVIDE ALL HARDSHIP DOCUMENTATION AT THE TIME OF HIS/HER ANNUAL REVIEW.)

70.1 Evaluation of Hardship Transfer: The following criteria will be reviewed by the institutional classification staff when evaluating the hardship transfer:

- **Institutional adjustment:** the transfer will not be granted if the inmate has any major disciplinary convictions in the past 12 months or more than one (1) disciplinary handled as a minor or administratively in the past 12 months.
- **Work history:** The transfer will not be granted if the inmate has had unsatisfactory job performance in the past 12 months.

- *The inmate's programmatic needs (Mental Health, Addictions Treatment, **Young Offender**, etc.) and the Institutional Mission of the requested institution.*
- *Time Served: The transfer will not be granted for inmates who have served less than twelve (12) months in the custody of SCDC.*
- *Separations/Cautions at the requested institution.*
- *Male inmates will only be considered for transfer to institutions that house their current security level. Because the female institutions house various security level inmates, their requests will be reviewed on a case-by-case basis.*

70.2 *The Caseworker will compile all appropriate information, identify the targeted geographical location, and indicate his/her recommendation for approval/disapproval on the SCDC Form 19-11, "Request to Staff." The caseworker will forward a copy of the 19-11, "Inmate Request to Staff," and the appropriate hardship documentation to **Central Classification** for final disposition. The Classification Caseworker will inform the inmate at initial, and annual, classification reviews of the hardship transfer process. The Caseworker will document the inmate's request for transfer on the Staff Memoranda and in the comments section of the custody/security review on the automated system.*

70.3 *Once the hardship transfer has been approved, the inmate will be expected to remain disciplinary free while awaiting his/her transfer and after arrival at his/her new location. If the inmate receives a disciplinary conviction for a major charge while awaiting or after the transfer, the hardship request would be rescinded and s/he will be subject to removal from that location. In addition, the inmate will be ineligible to request another hardship transfer for a period of three (3) years from the date of the disciplinary infraction.*

71. OVERTURNED DEATH PENALTY SENTENCES:

71.1 *If an inmate serving a death sentence has that sentence overturned, but will still be confined by SCDC due to other convictions, he/she will immediately be segregated from the Death Row population until such time that a decision is made regarding relocation.*

71.2 *The Deputy Director of Operations and the Division Director of Classification and Inmate Records will review the inmate's record and consult with the affected Wardens to determine an appropriate institutional assignment. The Inmate Records Office will be informed of the final decision so that appropriate adjustments can be made to the inmate's record, including any change to the inmate number.*

71.3 *Upon transfer from Death Row to another institution, the inmate will have a classification review conducted by the ICC. The ICC should consider the normal classification criteria as well as pending court action regarding the overturned sentence in making a custody assignment.*

72. CONSULAR NOTIFICATION:

72.1 *Whenever a foreign national (a person who is a citizen of another country, whether permanent resident in the United States, green card holder, visitor, or illegal alien) is arrested*

or detained in the United States, there are legal requirements to ensure that the foreign national's government can offer him/her appropriate consular assistance. Often times, the foreign national may already have been informed of his consular notification and access rights before he or she enters the South Carolina Department of Corrections. However, this is not always the case, and it is imperative for corrections officials to help make sure that consular notification and access rights are respected.

72.2 *In all cases, the foreign national must be told of the right of consular notification and access. In most cases, the foreign national then has the option to decide whether to have consular representatives notified of the arrest or detention. In other cases, however, the foreign national's consular officials must be notified of an arrest and/or detention regardless of the foreign national's wishes. Whenever a foreign national is taken into SCDC custody, the Classification Case Manager/Worker at the appropriate Reception and Evaluation Center should determine whether consular notification is at the option of the foreign national or whether it is mandatory. A list of all embassies and consulates in the United States, with their telephone and facsimile numbers, is included in United States Department of State publication titled, "Consular Notification and Access," which should be provided by the Division of Inmate Classification and Inmate Records to each Classification Case Manager. This publication also provides the notification statement in a variety of foreign languages.*

72.3 *Notification at the Foreign National's Option: In all cases, the Classification Case Manager/Worker must tell the foreign national of the right of consular notification and access. The foreign national then has the option to decide whether he/she wants consular representatives notified of the arrest or detention, unless the foreign national is from a "mandatory notification" country. The mandatory notification countries may be found in the publication "Consular Notification and Access." If the detained foreign national is a national of a country not on the mandatory notification list, the requirement is that the foreign national be informed without delay of the option to have his/her government's consular representatives notified of the detention. If the detainee requests notification, the Reception and Evaluation Classification Case Manager/Worker must ensure that notification is given to the nearest consulate or embassy of the detainee's country without delay.*

72.4 *Mandatory Notification: In some cases, "mandatory notification" must be made to the nearest consulate or embassy "without delay," "immediately," or within the time specified in a bilateral agreement between the United States and a foreign national's country, regardless of whether the foreign national requests such notification. Foreign nationals subject to mandatory notification requirements should otherwise be treated like foreign nationals not subject to the mandatory notification requirement. The Reception and Evaluation Classification Case Manager/Worker must inform the foreign national that notification has been made and advise **him/her** that he/she may also specifically request consular assistance from his or her consular officials.*

72.5 *Time, Means of Notification, and Record Keeping Requirements: The Department of State would normally expect notification to consular officials to have been made within 24 hours, and certainly within 72 hours. Phone and fax numbers are in the publication, "Consular Notification and Access," and the suggested fax sheet in that publication may be*

used for making the notification. After notification, the fax sheet and any other documentation should be filed in the inmate's institutional and central records.

72.6 Inmate's Contact/Correspondence and Visitation with Consular Officers: *Foreign consular officers must be given access to their nationals and permitted to communicate with them. Such officers have the right to visit their nationals, to converse and correspond with them, and to arrange for their legal representation. They must refrain from acting on behalf of a foreign national, however, if the national opposes their involvement. In addition, consular officers may not act as attorneys for their nationals. The rights of consular access and communication generally must be exercised subject to local laws and regulations. For example, consular officers may be required to visit during established visiting hours. Questions on legal requirements may be addressed to the Office of General Counsel.*

72.7 Death of a Foreign National: *If a foreign national inmate dies, the institutional Classification Case Manager/Worker must notify the Assistant Division Director of **Central** Classification, who will then notify the nearest consulate of that national's country. This will permit the foreign government to make an official record of the death for its own legal purposes. See the publication, "Consular Notification and Access," for additional information.*

73. INTERNATIONAL PRISONER TRANSFER PROGRAM (IPTP):

73.1 *The United States has entered into international treaties with many countries, which may permit a foreign national prisoner from one of the treaty countries to transfer to his/**her** home country to serve the remainder of his/her sentence. The State of South Carolina has enacted legislation that allows it to participate in the IPTP. The program is discretionary, meaning that not everyone who applies will qualify, nor will all be approved for transfer.*

73.2 *In all cases, the foreign national of a country, with which the United States has a treaty, must be informed of the right to request a transfer to his/**her** home country pursuant to the terms of the treaty. Whenever a foreign national is taken into SCDC custody, the Classification case manager/worker at the appropriate Reception and Evaluation Center will determine whether an IPTP request is an option for the affected inmate. A list of all the countries that entered into a treaty with the United States will be provided by the Division of Classification and Inmate records to each classification case manager/R&E staff. The inmate must sign the notification and acknowledgement form either requesting transfer or declining interest. The forms should be filed in the inmate's institutional record. After the inmate arrives at his/her assigned institution, classification staff will review the International Prisoner Notification and Acknowledgement Form to determine if further processing is needed. If the inmate has no interest in transferring to his/her home country, the original Prisoner Transfer Notification and Acknowledgement Form should be forwarded to **Central** Classification and a copy should be maintained in the inmate's institutional record, with the appropriate annotations made on the Staff Memoranda.*

73.3 Eligible Foreign National Inmates: *Inmates who are interested in applying for transfer to their home country to serve the remainder of their sentence must first complete the Prisoner*

Transfer Application Questionnaire. These forms will be made available to the Institutional case manager. The original Notification and Acknowledgement and the original Prison Transfer Application questionnaire should be forwarded to the Division of Classification and Inmate Records for further processing. A copy of these forms should be maintained in the inmate's institutional record and the Staff Memoranda should be annotated accordingly. If the inmate meets the criteria established for eligibility, his/her request, along with pertinent documents, will be submitted to the Director of SCDC for approval. If approved by the Director of SCDC, all documentation will be forwarded to the United States Department of Justice's International Prison Transfer Unit (DOJ/IPTU) Representative for further processing. The United States Department of Justice and the home country must then approve the request for transfer before a transfer can occur.

73.4 *Consent Verification: If the inmate is approved for transfer by the DOJ/IPTU, the Division of Classification and Inmate Records will coordinate with the Department of Justice/IPTU representative to set up a consent verification hearing and coordinate the transfer of the inmate into the custody of the Bureau of Prisons (BOP).*

73.5 *Inmate's correspondence and visitation with Consular Officers to assist in the IPTP process: Foreign Consular officers must be given access to their nationals and permitted to communicate with them to assist with the IPTP process;-*

74. Court Coordination: **Central Classification** Court Coordination Section will coordinate and monitor the scheduling and transportation of inmates to all court-ordered appearances requested by the State Grand Jury, County Law Enforcement, Office of the Attorney General, Circuit Solicitors, Department of Social Services, and any other agencies "requesting" transportation. **Central Classification** Court Coordination Section will be the central point of contact for all court-related transports and will verify the validity of all court orders and transport requests.

74.1 Court Transports:

74.1.1 Central Classification Court Coordination Section, upon receiving a request to transport an inmate to court, will verify all court orders, transport requests, and inmate locations. **Central Classification** will notify the institution to transport via the automated system message (RCVDOC). For court follow-up purposes, the message will include all information stated in the order/request, specifically the reason for transport. Once the institution is notified to transport an inmate to court, no changes will be made to the transport unless authorized by the **Central Classification** Court Coordination Section personnel.

74.1.2 Institutional Operations/Classification must ensure that CRT entries on all "to and from court" actions are made at the time of the transfer of the inmate to and from court.

74.1.3 When an inmate is turned over to another agency's custody for a court appearance, **prior to the inmate's scheduled release date, the institutional personnel will complete SCDC Form 19-17, "Temporary Custody Receipt for SCDC Inmate."**

74.1.4 The Case Manager/Operations Coordinator will contact the authority in receipt of the inmate every two (2) weeks for the first 90 days to verify the inmate's physical location. After 90 days, Central Office personnel will contact the authority in receipt of the inmate every two (2) weeks.

74.2 Post Conviction Relief (PCR) Hearings:

74.2.1 The PCR Coordinator in **Central Classification Court Coordination Section** will review the PCR Hearing docket and coordinate the inmate's transport to the respective court hearing.

74.2.2 Representatives from the Inmate Records Office who appear for court testimony will document pertinent facts regarding the hearing and forward that information to the Assistant Division Director- IRO

74.2.3 The Assistant Division Director in charge of the Inmate Records Office or designee will receive disposition from the Office of the Attorney General, obtain legal clarification and status of any appeals, and determine appropriate action in consultation with SCDC's Office of General Counsel.

74.3 Inmate Records Office Follow Up:

74.3.1 The Inmate Records Office Release Section personnel will investigate the dispositions on inmates who are within 30 days of release who have "open" court transport entries on the automated "received document" screen.

74.3.2 The Inmate Records Office Document Processing Section staff will make CRT entries when commitment orders and detainers are received (RCVDOC/DETAIN).

74.3.3 The Inmate Records Office Records Processing Section staff will make CRT entries of all new commitment orders (CONVICT) and provide updated face sheets/dates changes to Caseworkers.

74.3.4 The Records Analysts and Supervisors in the Inmate Records Office will make necessary contacts with Clerks of Court to investigate and obtain necessary documents when court action is known.

74.4 Institutional Follow-Up (Classification/Operations):

74.4.1 The Classification Records Managers or appropriate Caseworker will be responsible for reporting information and forwarding newly obtained court documents to the Inmate Records Office, Document Processing Section, immediately. An SCDC

Form S-32, "Document Transmittal/Request for Action," will be attached to the forwarded documents. Operations personnel will be responsible for ensuring that these documents are forwarded to the Classification Records Manager.

74.4.2 *The Classification Records Manager or appropriate caseworker will be responsible for completing the records checklist and immediately notifying the Inmate Records Office of inconsistencies between the automated record and documents in the institutional record and for forwarding all original court documents by interoffice mail.*

75. DMV ID CARDS: *The SCDC, SC Department of Motor Vehicles (DMV), and SC Probation, Parole and Pardon Services (PPP) will work together to provide DMV issued identification cards to eligible inmates who wish to possess one upon their release from SCDC for the purposes of facilitating reentry into the community.*

- *The Classification Caseworker/ CPS will provide the 447 SC DMV application, and assist the inmate in completing the form.*
- *447 SC DMV applications will be submitted to the Classification Central Office by the specified deadline.*
- *Eligible inmates must have the required identification data in the SCDC and SCDMV automated system in order to receive an ID card.*
- *DMV ID cards should be given to the inmate at the time of release.*

76. Reduction of Sentence for Substantial Assistance to the State: *In accordance with Section 17-25-65, South Carolina Code of Laws, inmates who substantially assist a Department of Corrections employee or volunteer who has been or is in danger of being seriously injured or killed may be eligible to receive a reduction of sentence. It will be the inmate's responsibility to notify the circuit solicitor in the county where his/her case arose. The final decision to grant or deny the sentence reduction is made by the chief judge or a circuit court judge currently assigned to that county and not by SCDC.*

SCDC Policy OP-21.09, "Inmate Records Plan,"
Issue date: November 16, 2017, NOT RESTRICTED

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "18. Please explain the current classification system utilized by the agency and provide copies of any relevant policies."

See also, SCDC Policy Op-21.04, "Inmate Classification Plan," Issue date: December 13, 2017, NOT RESTRICTED

SCDC POLICY

NUMBER: OP-21.09

TITLE: INMATE RECORDS PLAN

ISSUE DATE: November 16, 2017

RESPONSIBLE AUTHORITY: DIVISION OF CLASSIFICATION AND INMATE RECORDS

OPERATIONS MANUAL: OPERATIONS

SUPERSEDES: OP-21.09 (November 1, 2007); (January 1, 2004); Change 1 (March 29, 2004);Change 2(September 13, 2004)

RELEVANT SCDC FORMS/SUPPLIES: 9-3, 9-4A, 9-4B, 9-5, 18-11, 18-3, 18-16, 18-17, 18-43, 18-68, 19-11, 19-17, 27-42

ACA/CAC STANDARDS: 4-ACRS-6A-10, 4-ACRS-6A-11, 4-ACRS-6A-13, 4-ACRS-7D-06, 4-ACRS-7D-08, 4-ACRS-7D-09, 4-ACRS-7D-10, 4-ACRS-7D-11, 4-4095, 4-4096,4-4097, 4-4098, 4-4099, 4-4102, 4-4285, 4-4286, 4-4304, 4-4446, 4-4447

STATE/FEDERAL STATUTES: S.C. Code of Laws Titles 16, 17, 23, 24, 30, 63 (Chapter 19); 18 U.S.C. Ch. 44 § 921; 50 U.S.C. Appendix § 451-473

PURPOSE: To provide a general outline of the Agency's inmate records plan and to establish the general criteria for the information that will be maintained and filed in each inmate's record.

POLICY STATEMENT: The South Carolina Department of Corrections (**SCDC**) will activate, maintain, and review necessary records on all inmates incarcerated in **SCDC**.

[APPENDIX 1 - MAX-OUT DATE CALCULATION WORKSHEET](#)

1. INTRODUCTION: The Inmate Records Office in the Division of Classification and Inmate Records is responsible for the development, security, accountability, control, and management of inmate records. The Assistant Division Director for the Inmate Records Office serves as the official "Custodian of the Records" for legal and management purposes and will ensure that procedures for confidentiality and access are maintained. The Inmate Records Office is responsible for processing all court documents related to inmates' sentences, entering related data in the Offender Management System, and authorizing the timely release of inmates from **SCDC** in accordance with state statutes, regulations, and Agency policy.

2. ACTIVATING INMATE RECORDS:

2.1 The Inmate Records Office in the Division of Classification and Inmate Records is responsible for administering a uniform process for activating records on inmates admitted into SCDC.

2.2 The Reception and Evaluation (R&E) Inmate Records Section at Kirkland **R&E Center** has the primary duty to receive, process, and enter sentencing documents for all inmates received into SCDC.

2.3 Male inmates from those counties in the central part of the state may be received at Kirkland R&E Center, normally between the hours of 8:00 a.m. and 4:00 p.m., Monday through **Friday, excluding holidays**. Inmates may be received from those counties in the lower and upper parts of the state at Lieber and Perry Correctional Institutions, respectively, for immediate transfer to Kirkland R&E Center **Monday through Thursday, excluding holidays**. Female inmates from all counties will normally be received at **Camille Griffin Graham** R&E Center on **Thursdays and Fridays, excluding holidays**. The females will be processed **and housed at** Camille Griffin Graham R&E **Center**.

2.4 The R&E Center can accept an inmate into the custody of SCDC provided the inmate is received with a valid commitment order. The inmate's commitment order will be immediately forwarded to the R&E Records Section as soon as the inmate arrives at the R&E Center or one (1) of the intake locations. Whenever feasible, the county facility will forward the commitment order(s) directly to the R&E Records Section in Columbia prior to transporting the inmate.

2.5 The R&E Records Section will make an initial determination based upon the commitment documents received from the county that an inmate has a valid South Carolina sentence to be served within SCDC. Those documents received from Lieber and Perry Correctional Institutions will be thoroughly reviewed upon arrival at Kirkland R&E.

2.6 If it is determined that required documents have not been received or that they are invalid, the inmate will not be accepted within SCDC. Those documents received from Lieber and Perry will be rechecked by the Kirkland R&E Records Section when the inmate moves to the R&E Center.

2.7 If the commitment order is valid, the inmate will be processed by the R&E Center personnel for bedspace placement and physical accountability according to the R&E Center's internal procedures for security and housing.

2.8 The R&E Center will compile an on-line intake list on all incoming inmates received on a daily basis by entering the information onto the list throughout the day as the inmates are received. SCDC Form 18-17, "R&E Records Intake," will be completed for each new admission.

2.9 When the intake locations at Perry or Lieber Correctional Institutions receive inmates, the on-line intake list will be transmitted to the R&E Records Section and a name search and National Crime Information Center (NCIC) search will be completed to further document and identify the inmate. This information will provide additional identifiers, such as possible detainer notification requirements, arrests or convictions for other crimes, verification of previous commitment(s) in SCDC, and other intake data. The State Identification (SID) and Federal Bureau of Investigation (FBI) numbers will be entered immediately.

2.10 Upon compilation and review of the above data, the R&E Records Section will issue an SCDC number for the inmate. As these numbers are assigned, the on-line intake list is updated.

2.11 The R&E Records Section will create an inmate central record utilizing numbered file folders. The face sheet, sentencing documents, the newly generated NCIC/FBI rap sheet, and any other related documentation will be filed in the inmate's central record. An inmate institutional record will also be created using the same inmate number and placing all duplicate information in a file folder.

2.12 If the inmate has previously been incarcerated with SCDC, a request will be made to the Inmate Records Office, through the on-line intake list as numbers are assigned, to have the inmate's previous central and institutional record retrieved from inactive status.

2.12.1 The Inmate Records Office will send the reactivated central and institutional record and any other appropriate documentation to the R&E Center for those inmates whose records are in inactive filing status at the time the inmate is received (commonly known as recidivist records).

2.13 The R&E Records Section will:

- Analyze, interpret, and enter commitment orders and data into the automated system;

- Separate and organize paperwork from previous SCDC commitments into the correct section and sequence, verify that data from previous commitments is merged into one (1) file, and ensure that the record is properly numbered and labeled;
- Enter previous SCDC and FBI/SID numbers into the automated system.

2.14 The record will then be forwarded to the **Records Processing** Section for formal review. If any discrepancies are identified, appropriate action will be taken to correct the problem.

2.15 After an inmate's central record and corresponding on-line data have been verified and the record auditing process has been completed, the inmate's central record will be filed in the **Records Management** Section of the Inmate Records Office.

2.16 The institutional record will remain at the R&E Center until the inmate is transferred to an institution, at which time the record is also transferred to the receiving institution. The institutional record will be moved with the inmate upon each subsequent transfer within SCDC.

3. LEGAL AND MISSPELLED NAMES:

3.1 Admissions/Corrections: An inmate will be admitted to SCDC under the name exactly as spelled on the commitment order, and this name will be assumed to be his/her legal name, even if misspelled by the courts. An inmate's commitment name that has been misspelled by the courts will only be corrected by an amended court order. Any variations to the inmate's name obtained during the R&E interview or found on the NCIC rap sheet or on other court documents/law enforcement information forwarded to SCDC will be entered as "aliases." An inmate's name that is not entered as spelled on the commitment order will be corrected by the R&E Records Section or by the Inmate Records Office if not noted until a later date. An inmate who changes his/her legal name through the Family Court will be entered only into the Offender Management System as his/her legal name; however, his/her commitment name will not be changed.

3.2 Misspelled Names: Upon admission to an R&E Center, intake personnel will enter the inmate's name into the automated system exactly as spelled on the commitment order(s). If spelled differently on more than one (1) commitment order, the name selected from one (1) of the orders for entry will be the same or the closest to the inmate's signature on the orders. Any other spelling(s) on the other court orders will be entered as aliases.

3.2.1 The R&E Records Section supervisor/designee will immediately correct any names not entered exactly as spelled on the commitment order if noted during the intake process. Appropriate I.D., medical, and other functional areas in the institution will be notified immediately via CRT message of any corrections. Record labels, face sheets, etc., will be appropriately changed/corrected.

3.2.2 If an incorrectly entered name is noted during the audit of the inmate's record or at a later date during his/her incarceration, it will be brought to the attention of the Inmate **Records Processing** Supervisor for correction. The Section Supervisor will send a CRT message to **Operations staff** of the respective institution informing **them** of the corrected spelling. **Operations** will ensure that a new ID **card** is made, a new face sheet is run, and a label is made for the

Institutional Inmate Record, and will notify other appropriate functional areas of the institution (i.e., commissary/canteen, mailroom, chaplain's office, medical, etc.).

3.2.3 Under no circumstances will an inmate's commitment name be changed/modified based upon a complaint, birth certificate, affidavit, letter, etc., received from the inmate, a family member, or his/her attorney, unless the commitment name was entered incorrectly according to the court order at the time of admission.

3.2.4 If the inmate has a computer generated photograph in the record or an older picture where the inmate's name has been typed/hand printed on the photograph, the Case Manager or Records Manager must do a pen and ink correction. The same will be done for the inmate's central record.

3.3 Legal Name Changes: The **Records** Processing Section, Inmate Records Office, will receive and process all Family Court Orders reflecting a legal name change. If a Family Court Order reflecting a legal name change is received by an inmate, the inmate will provide the order to the Warden or designee, who will forward the order to the **Records** Processing Section, Inmate Records Office.

3.3.1 Upon verification of the authenticity of the Family Court Order, if not received directly from the Family Court Clerk's Office, the designated Inmate Records Office staff member will enter the inmate's new legal name into the automated system. The entry will be made in the "legal name" field of the "Alias Screen." The inmate's commitment name will not be changed in the automated system. Any previous legal names/spellings found on the Family Court Order will be listed as aliases on the automated system.

3.3.2 Since the commitment name is assumed to be the inmate's legal name upon admission to SCDC, no entry will be made on the Alias Screen under the "legal name" field. An entry is made in the legal name field only upon a legal name change by a Family Court.

3.3.3 *Updated face sheets, labels, etc., will be added to the central and institutional records to reflect both the committed name and the legal name.* In addition, the inmate's ID card will continue to reflect his/her commitment name, to include his/her legal name that will appear below the commitment name when a new ID card is issued. See SCDC Policy OP-21.06, "Inmate Identification Cards," for additional information.

3.3.4 SCDC employees will use the new name in all written correspondence. The inmate may be verbally addressed by the name of commitment.

4. INMATE NUMBER ISSUE: Each inmate committed to the jurisdiction of the South Carolina Department of Corrections will be assigned a number for identification.

4.1 The Assistant Division Director, **Kirkland R&E Manager**, will be responsible for the establishment of the inmate number code structure. The **Kirkland R&E Records Section** will assign numbers to inmates received for admission; maintain a catalog of numbers issued; distribute file folders for the manual records; and reactivate recidivist files for manual and automated records.

4.1.1 A new number will be assigned to an inmate at the time of his/her initial commitment to SCDC. Subsequent admissions will utilize the previous number issued. This will allow a single number for all commitments of the same individual.

4.1.2 Safekeeper "County" inmates or Safekeeper "Death Row" inmates admitted into the custody of SCDC under a Governor's Order or Commitment Order, respectively, will be assigned four (4) digit inmate numbers from the R&E Records Section.

4.1.3 The responsible institution (i.e., Lee or Camille Griffin Graham Correctional Institution (CGGCI) for County and Kirkland R&E or CGGCI for Death Row) will call the R&E Records Section upon receipt of the Governor's or Commitment Order to have the number assigned and activated. A copy of the Governor's or Commitment Order and all other paperwork received with the Order (warrant, etc.) will be FAXED **or SCANNED** to the R&E Records Section. The receiving institution will enter Safekeeper intake information on the on-line intake screen. Standard procedure will be followed, and a Safekeeper number will be assigned.

4.1.4 After hours admissions will be placed in the institution's adjusted count, and the inmate number will be assigned the next day, to include weekends and holidays.

4.2 When the South Carolina Department of Juvenile Justice (SCDJJ) receives a juvenile(s) sentenced in General Sessions Court, SCDJJ will FAX **or SCAN** the commitment order(s) and the SCDJJ generated face sheet to the R&E Center to the attention of the R&E Records Supervisor. As of July 1998, juveniles are no longer transferred to SCDC prior to age 17 in order to process their commitment order under a "straight time" or Youthful Offender Act sentence.

4.2.1 All documents will be FAXED **or SCANNED** within 24 hours of the juvenile's arrival at the SCDJJ. The R&E Records Section Supervisor will serve as the contact person for ensuring that all necessary documents are received and processed in a timely manner.

4.2.2 The inmate will be placed on the on-line intake list as a new intake, and an SCDC number will be assigned. The inmate's records will be processed as normal and a central and institutional record will be created along with the automated record. The R&E Records Section Supervisor keeps the Warden's Jacket until the juvenile physically arrives at ~~the~~ SCDC. The central record will be forwarded to the audit section for processing.

4.2.3 The inmate will remain in the custody of the SCDJJ until s/he reaches the age of 17, at which time s/he will be transferred to an R&E Center where s/he will be in-processed in the same manner as any other adult committed to SCDC. The inmate's central record will be returned to the R&E Records Section for processing. The institutional record is kept at the respective R&E Center until the inmate is transferred to his/her assigned institution. The central record, upon final completion, will be returned to Inmate Records Office along with the inmate's SCDJJ institutional record. It will be re-audited and re-filed in the Active Records Section of the Inmate Records Office.

4.3 When **SCDJJ** receives a juvenile sentenced in a Family Court, the juvenile will remain in the custody of the SCDJJ until s/he reaches the age of 17 if convicted for a violent offense listed in S.C. Statute 16-1-60 if the individual has not already been paroled or released from the custody of

SCDJJ. Upon reaching his/her 17th birthday, the juvenile will be transferred to the custody and authority of the South Carolina Department of Corrections, Division of Young Offender **Parole and Reentry** Services. The SCDJJ will send a Memorandum of Transport listing the juvenile's convictions with the juvenile. A juvenile **convicted for a non-violent offense** who has not been paroled or released from the custody of SCDJJ by his/her 19th birthday must be transferred to the custody and authority of SCDC, Division of Young Offender **Parole and Reentry** Services.

4.3.1 The juvenile will transfer to the Kirkland Reception and Evaluation Center where s/he will be in-processed. The inmate's central record will be sent to the **Records Processing** Section for a complete record audit and then filed. The institutional record is kept at the respective Reception and Evaluation Center until the inmate is transferred to his/her assigned institution.

4.3.2 The juvenile's records from the SCDJJ will be forwarded to SCDC at the time of transfer and become a part of his/her institutional record.

4.3.3 *Records of juveniles convicted in General Sessions/Magistrate Court, forwarded to SCDC from the SCDJJ, will be maintained in the Inmate Records Office with the inmate's central record. Records of juveniles convicted in Family Court will be maintained with the inmate's SCDC institutional record.*

5. COUNTY AND DEATH ROW SAFEKEEPER RECORDS INTAKE PROCEDURES:

5.1 General Information: A "county" Safekeeper (S/K) is an individual awaiting trial who has been deemed to be in a high profile/high risk status and who cannot be housed in a county facility. The individual is approved, through a Governor's Order, to be housed in SCDC until trial. Male S/Ks will be housed at Lee Correctional Institution, and female S/Ks will be housed at the Camille Griffin Graham R&E. A "death row" (D/R) Safekeeper is an inmate who is sentenced to death and housed in SCDC for the committing county until his/her execution. Male death row inmates will be housed at Kirkland R&E, and female death row inmates will be housed at Camille Griffin Graham Correctional Institution.

5.2 County Safekeepers:

5.2.1 In order to procure an Order from the Governor, the county must present the following information to the Director of the South Carolina Department of Corrections:

- a properly issued arrest warrant;
- an affidavit from the chief law enforcement officer of the county giving reasons why the individual should be held in SCDC;
- a certificate of service indicating that notice of the application of safekeeping filed by the county has been given to the individual's attorney;
- a signed notice by the detainee's attorney indicating that the attorney has been notified of the proposed action.

5.2.2 Once the SCDC Director has received all documentation specified above, the General Counsel/designee will examine it to ensure that it meets the requirements of the statute. If it does,

then the Division Director of Compliance, Standards and Inspections/designee will ascertain the circumstances which resulted in the county's perceived need for assistance and will review the request in the context of historical and current conditions at the county's detention facility.

5.2.3 After an evaluation of all available information by the SCDC Director, a recommendation will be forwarded to the Governor. If the Governor approves the placement, a Safekeeping Order will be issued.

5.2.4 The General Counsel's Office will inform the receiving facility of the Governor's Order and FAX **or SCAN** a copy of the Order to the receiving facility and to the Inmate Records Office.

5.2.5 The county requesting S/K status will be responsible for transporting the individual. When the individual arrives at the receiving institution, an entry will be made into the on-line intake list of all pertinent information (name, race, DOB, etc.). The R&E Records Section will then be contacted to assign the individual a S/K number. If at all possible, advance notice will be given to R&E Records Section of **an** S/K arrival. If the individual arrives after normal work hours or on a weekend/holiday, the **R&E Records Section Supervisor** will be contacted (via the Emergency Action Center [EAC]). The S/K will be placed in the "adjusted" count, and the S/K number will be assigned the next work day. A copy of the Governor's Order must be FAXED/**EMAILED**, or forwarded by the General Counsel's Office, to the **R&E Records Section** staff before **an** S/K number can be assigned. However, if after hours or on a weekend/holiday and the General Counsel's Office has instructed the receiving institution by telephone to receive the inmate, the institution will send a CRT message to the **R&E Records Section** indicating the individual's name/other data. The message will state that the General Counsel's office staff has directed that they receive the individual into S/K status and will identify the name of the staff member in the General's Counsel's **Office** that gave the direction, the date, and the time of call. The Office of General Counsel staff will send a CRT message the following workday repeating the previously given verbal instructions to the institution and **R&E Records Section**, or they will FAX/**EMAIL** a copy of the Governor's Order (if received in the A.M. on the following workday).

5.2.6 The receiving institution will create only an institutional file on the S/K. No Central record will be created for county safekeepers. However, an NCIC Criminal History Report (RAP Sheet) will be forwarded to the respective institution housing the inmate.

5.3 Death Row Safekeepers:

5.3.1 The county in which the inmate has been sentenced to death must coordinate directly with Kirkland R&E to bring male inmates and with the Camille Graham Correctional Institution to bring female inmates to SCDC.

5.3.2 Upon delivery of the Death Row inmate, his/her commitment order reflecting the death sentence must accompany him/her.

5.3.3 Kirkland R&E or Camille Griffin Graham Correctional Institution personnel will enter all pertinent information about the Death Row inmate into the on-line intake list. If the Death Row inmate arrives after hours, the institution will:

- Make a general review of the commitment order(s) to ensure that it/they are in order;
- Contact EAC who will then contact the Inmate Records Office on-call official and inform them of the same;
- Put the death row inmate in their "adjusted" count; and
- Fax/*email* all documents received to the Kirkland R&E Records Section and to the Inmate Records Office. The *Kirkland R&E Records Section* will ensure that the appropriate SCDC number is assigned and all commitment information is entered the same or next day.

5.3.4 After entry into the on-line intake list, the R&E Records Section will be contacted and informed that a Death Row inmate has arrived and has been entered into the on-line intake list. A copy of the commitment order will be FAXED/*EMAILED* to the R&E Records Section for verification. Any advance notice of an anticipated late arrival of a Death Row inmate would assist the R&E Records Section in making necessary arrangements to ensure that proper Records Office personnel are informed of the pending arrival and what SCDC Safekeeper number is to be assigned.

5.3.5 Once all of the aforementioned is completed, the R&E Records Section will assign the Death Row inmate a four (4) digit safekeeper number. All accompanying commitment information will be entered into the automated system.

5.3.6 The R&E Records Section will initiate the construction of the central record and Kirkland R&E or Camille Griffin Graham's R&E personnel will construct the institutional record. The central record will be forwarded to the Inmate Records Office, audited, and filed. An NCIC Criminal History Report (RAP Sheet) will be forwarded to the respective housing institution.

5.3.7 See SCDC Policy OP-21.04, "Inmate Classification Plan," for information about records review for Death Row inmates whose sentence is overturned.

6. AUDITING INMATE RECORDS:

6.1 General Information: Records of all inmates processed into *SCDC* through a Reception and Evaluation Center will have an extensive audit performed by the Inmate Records *Office, Records Processing Section. Inmates arriving to the R&E Centers will not be considered to have their records officially audited until they are audited by the Records Analysts in the Inmate Records Office (IRO). During the audit phase, no information can be given to the inmate or the public in reference to sentence and release dates. Disclaimers are listed on the internet site and our internal system.* The types of audits will be:

6.1.1 Reception and Evaluation Center Inmate Records Audits: Auditing data on inmates admitted or readmitted to SCDC through a Reception and Evaluation Center.

6.1.2 Special Audits: Auditing data to correct and/or update information on the automated system and to verify the accuracy of existing information (i.e., Supervised Furlough Audits, Sex Registry Audits, Sexually Violent Predator Audits, etc.).

6.2 Overall Review of an Inmate Central Record: The Records *Processing* Section will:

6.2.1 Inspect the manual record to verify that the folder is in good condition, is labeled properly, and filing is current and in the correct section and sequence.

6.2.2 Review all documents in an inmate's record to ensure that the inmate's name, SCDC number (FBI/SID numbers), and personal identification information are correct, and ensure that sentences the inmate is currently serving are not entered as active detainers.

6.2.3 *Ensure that* all alias names listed on the NCIC/FBI reports *are* entered. *Enter* the previous SCDC numbers and alias names listed on the commitment order, verify that personal identification complies with the SCDC face sheet, and ensure that all computer-generated informational reports have recent "run" dates.

6.2.4 Run a "Name Search" for additional information.

6.3 Commitment Papers/NCIC/FBI Reports: The *Records Processing* Section will:

6.3.1 Review each commitment order for offense dates, sentences, signatures, indictment and warrant numbers, and any special conditions indicated by the court.

6.3.2 Compare information in the CRT with committing documents. If entries (i.e., indictment numbers, warrant numbers, dates of offenses, court dates, judge's name) are found to be incorrect, adjustments will be made to remedy the problem. A check for consecutive sentencing structure will be completed.

6.4 Priors (Any Prior Offenses or Time Served): The *Records Processing* Section will:

- Check NCIC/FBI rap sheet for all commitments and convictions.
- Match all commitment orders and face sheets of prior incarceration(s).

6.5 Previous Numbers/Names: The *Records Processing* Section will:

- Check for previous numbers on the manual record.
- Check for previous numbers in the CRT.
- Check for previous numbers on the NCIC rap sheet.
- *Combine old and new inmate records if previous SCDC number(s) is/are identified.*

6.6 Escapes: The *Records Processing* Section will:

- Check the CRT for escape data. Check for current or previous convictions for escapes on the CONVICT and PRIORS screens. Search for ~~an~~ automated MIN reports.
- Read SIAs/MINs in inmate's manual record. Read newspaper articles for references to escapes.
- Read escape/disciplinary history and/or court reports.
- Determine if escape is Class I/II, or an escape-related (other) offense.

- Enter all escape charges and/or incidents under escape history regardless of disposition, including any escape noted on the NCIC/FBI rap sheet.

6.7 Disciplinary History: The *Records Processing* Section will:

- Research violent/assaultive behavior. Verify reports from disciplinary reports, *MINs*, and criminal conviction data. In the event of missing or incomplete information, contact the institution and request the necessary information.
- Confirm that all information regarding prior commitments and assaultive disciplinaries is accurate and complete.

6.8 Open-Ended Offenses: The *Records Processing* Section will:

- Check NCIC rap sheet for any arrest charges with no disposition on statutory violent offenses, Category 4 and 5 offenses, and sex offenses.
- Create an "open arrest notify" on the "detain" screen noting all category 4 & 5 open arrests.
- *Remove open arrests per documentation received stating the disposition of the arrest. Documentation received from the South Carolina Judicial Website will be acceptable to update open-ended offenses.*

6.9 Resident Stability Code: The *Records Processing* Section will:

- Check pertinent information in the manual inmate record with reference to whether the inmate is an in-state or out-of-state resident, and whether the inmate's arrest(s) was in-state or out-of-state. Examine NCIC/FBI rap sheets.
- Enter the resident stability code of unstable out of state, if applicable.

6.10 Audit Completion: The *Records Processing* Section will:

- Complete an SCDC Form 18-16, "Audit Checklist," detailing each aspect of auditing procedures reviewed.
- Enter audit completion on the CRT.
- Complete an Inmate Records Daily Activity Report when records are to be filed.

6.11 Due Process Hearings: If an inmate's record is reviewed after the official audit and it is determined that information was entered in error and the correction will cause the inmate's projected release date to extend into the future, the inmate will need be given a due process hearing.

6.11.1 The IRO's responsibility for the due process hearing is to notify the institution via email of the issue that will change, for the inmate's detriment, the initial determination of length of sentence or projected release dates of currently entered convictions. The explanation and any documents will be sent to the Case Manager/designee and the Institutional Classification Central Office staff. The institution will normally have two (2) weeks from the date of notice to conduct the actual hearing. If the inmate has less

than two (2) weeks to serve upon discovery, notification will be made to the institution to handle expeditiously. Classification Central Office will monitor these cases.

7. ACCESS TO INMATE RECORDS: Access to criminal history records of inmates and former inmates will be limited to individuals and public agencies who can demonstrate that access to such information is appropriate and/or will serve a criminal justice purpose. Confidentiality and protection of information pertaining to inmates will be required. Law enforcement, judicial, correctional authorities, and authorized cooperating agencies will be provided information without the consent of an individual inmate.

7.1 Classification of Information: Public Information will include the following:

- inmate photograph;
- full name with aliases;
- prominent marks and tattoos;
- SCDC identification number;
- sex;
- race;
- FBI/SID number;
- fingerprint classification;
- committing county;
- height;
- weight;
- complexion;
- build;
- hair color;
- eye color;
- offense;
- sentence (time);
- eligibility dates;
- sentence start date (including jail time);
- date admitted to SCDC;
- parole eligibility date;
- projected release date;
- *previous record;*
- sentence adjustments;
- Agency transfer history;
- disciplinary report;
- co-defendant(s) - with SCDC register number(s);
- detainer/wanted/hold;
- institutional assignment and admission date;
- current status; and
- Access to "Management Information Notes" (MINs) as long as no confidential information is listed in the MINS (See Section 7.3.4).

7.2 Confidential information is either personal information, non-conviction data, or clinical information.

7.2.1 Personal information will include:

- home address;
- nearest relative;
- *social security number;*
- *date of birth;*
- test scores;
- vocational rehabilitation summary;
- treatment information;
- Classification Committee information;
- basic social and family history;
- inmate statement of offense;
- trust fund information;
- religious preference;
- marital status;
- education;
- primary occupation;
- Victim/Witness information; and
- medical/psychological reports.

7.2.2 Non-conviction data will include information for which:

- the arresting authorities have elected not to refer for prosecution;
- a prosecutor has elected not to commence criminal proceedings;
- proceedings have been indefinitely postponed;
- arrest records without disposition if a year has lapsed and no conviction has resulted and no active prosecution is pending; and/or
- dismissals or acquittals.

7.2.3 Clinical information will include:

- psychological reports;
- medical reports;
- institutional mental health counseling reports;
- specialized residential treatment reports; and
- Pastoral Care Services reports.

7.3 Release of Public Information: In compliance with the South Carolina Freedom of Information Act, public information contained in inmate records will be reasonably available to all inquiring parties. The following will apply:

7.3.1 The Assistant Division Director of the Inmate Records Office or designee will have the primary responsibility for the release of any information from the inmate's central record that is classified as public information.

7.3.2 The Warden or designee may authorize the release of public information from institutional records. Each Warden will be responsible for ensuring that employees are trained to receive and to respond to inquiries regarding inmates assigned to that institution. Employees authorized to respond to inquiries will ensure that records are kept of telephone calls or correspondence received or referred to him/her. When necessary, the employee may refer callers or written correspondence to the appropriate authorities as follows:

- institutional matters will be forwarded to the appropriate Warden, or to the Division of Operations;
- medical issues will be forwarded to the Division of Medical and Health Services;
- allegations of criminal activity will be forwarded to Police Services;
- *issues related to inmate drug testing or inmate visitation will be referred to the Division of Visitation and Inmate Drug Testing;*
- inquiries about inmate records will be forwarded to the Inmate Records Office;
- legal inquiries will be forwarded to the Office of General Counsel;
- jail complaints and complaints involving designated facilities will be forwarded to the *Division* of Compliance, Standards, and Inspections;
- correspondence/inquiries determined to be better suited for processing through the inmate grievance system will be forwarded to the Inmate Grievance Branch. (When deemed necessary, the inmate will be directed in writing to utilize the grievance system as outlined in SCDC Policy GA-01.12, "Inmate Grievance System.")

7.3.3 All media requests for access to public information contained in inmate records will be referred to the *Division Director of Information Services*, or his/her designee.

7.3.4 The inmate documents that are disclosable as public information, but which also contain confidential information, may be given as excerpts from the document, or with non-disclosable items deleted from the documents. If the requesting party insists upon reviewing the entire document, refusal to comply will be made on the grounds that release of the information is not legally permissible.

7.3.5 The Division Director of Victim Services or designee will be responsible for notifying and providing information to victims/witnesses registered with SCDC. (See SCDC Policy GA-02.05, "Victim/Witness Notification," for more information.)

7.3.6 An inmate may have access to information (excluding clinical data) from his/her record provided that a written request is made to the Assistant Division Director of the Inmate Records Office. The request must be for a specific purpose and not merely for a general review. Examples of specific purposes are:

- litigation;

- to challenge the accuracy of information contained in the files; and/or
- to challenge the justification of the inclusion of particular material.

A fee may be incurred for the reproduction of documents.

7.3.7 All formal "Freedom of Information Act" requests will be forwarded to the General Counsel's Office for processing. *Access through FOIA to inmate records is limited to public information which is "not of a personal nature." Therefore, inmates cannot request personal information through FOIA. They must adhere to 7.3.6 of this policy.*

7.4 Release of Confidential Personal Information: Inmate record information designated as personal may be released to the following individuals or agencies:

7.4.1 South Carolina Department of Corrections (SCDC):

- Agency Director and staff;
- Division Directors;
- Assistant Division Directors;
- Branch Chiefs; and/or
- other SCDC personnel who have a legitimate need to know related to their SCDC responsibilities.

7.4.2 Criminal Justice Agencies, Law Enforcement Agencies, and Cooperating Public Assistance Agencies: These agencies will be provided inmate record information upon request. The individual releasing the information; e.g., Assistant Division Director of the Inmate Records Office/designee or Warden/designee, will be responsible for insuring that the information given to a representative of these agencies is for a duly authorized purpose. The SCDPPPS Parole Examiner will be provided access to both the automated and manual inmate records for the purpose of preparing reports for all eligible inmates.

7.4.3 Subpoenas for records *and issues related to the release of information* will be forwarded to the *Office of General Counsel for interpretation.*

7.4.4 Non-cooperating public agencies, private organizations, and private citizens may obtain confidential information from inmate records if the inmate gives written consent on SCDC Form 9-11, "Inmate/Resident Release of Information Consent," and the purpose is:

- to assist in legal research to aid in the rehabilitation of the inmate;
- to assist in the employment of the inmate/ex-inmate; and/or
- for information to be used in criminal justice related research.

7.5 Legal Counsel for Inmate: An inmate's attorney may obtain personal information regarding his/her client if the inmate signs a release, SCDC Form 9-5, "Release of Information to Attorney/Representative."

7.6 An inmate may have access to confidential information from the record (excluding clinical data) provided that a written request is made to the Assistant Division Director of the Inmate Records Office *or designee*. The request must be for a legitimate, specific purpose and not merely for general review.

7.7 Release of Confidential Medical and Clinical Information:

7.7.1 Medical and clinical information will be the responsibility of the Director for Health Services. Such information will be maintained in separate medical records.

7.7.2 Requests for medical and clinical information will be referred to the *Assistant Deputy Director of Health Services* or designee who may authorize release of such information.

7.8 Charges for Copies: When it is necessary to reproduce information, a standard charge of twenty five cents per page will be assessed for inmates, outside agencies, attorneys (other than those attorneys who represent SCDC), or private parties. See SCDC Policy HS-18.07, "Inmate Health Records," for information on copy costs for inmate medical records. The individual or office charged will be given a receipt from a receipt book maintained by the Assistant Division Director of the Inmate Records Office or designee. Monies received will be transmitted to the Division of Budget and Finance/Financial Accounting Branch together with an explanation of the charge. Requests for a copy (or copies) of NCIC rap sheets should be forwarded to the South Carolina Law Enforcement Division (SLED).

8. MANUAL AND AUTOMATED INMATE RECORDS:

8.1 SCDC will maintain two (2) manual records for each inmate that will contain all legal documents, disciplinary reports, and relevant documentation such as correspondence and progress reports. The automated record will track the inmate's history from his/her initial incarceration through release. Release, parole, and program eligibility dates will be calculated and projected through the automated system.

8.2 The R&E Records Section will be responsible for creating two (2) manual records (i.e., central and institutional) and one (1) automated record when the inmate is initially received into the custody of SCDC.

8.3 Documents in the manual records will be arranged within the multiple-sectioned folders according to the record index.

8.4 When the inmate is permanently assigned to an institution, the institutional record will accompany the inmate upon transfer from the R&E Center to an institution, and will be moved with the inmate to the next institution with each subsequent transfer. This procedure does not apply to inmates who are temporarily assigned to an institution for regional court or post conviction relief court transfers.

8.4.1 The inmate's institutional record will be maintained by the Classification Section at the institution to which the inmate is assigned and in a centralized/secure location.

8.4.2 Institutions will be responsible for forwarding appropriate original documents and correspondence to the Inmate Records Office for additions and corrections, and for retaining a copy in the institutional record, *as referenced in SCDC Policy OP-21.04, "Inmate Classification Plan."*

8.4.3 Under no circumstances will an employee take an institutional or central record home or to any other unauthorized location.

8.5 Procedures to replace a lost or misplaced institutional/*central* record:

8.5.1 If an institutional record is missing, the following steps must be taken:

- *Conduct a thorough search of records area to include sign-out sheets, all areas where staff has access to inmate records, and the **TRANCNT** screen for recent transfers.*
- *Complete an SCDC Form 19-29A, "Incident Report," and submit it to the Institutional Classification Central Office for review. Staff there will request a **copy** from the Inmate Records Office.*

8.5.2 If a central record is missing, the following steps must be taken:

- *Conduct a thorough search of active and inactive record areas to include **RECORDS** menu to see current status of record. If record is signed out to an Agency staff member, contact that person for a check of his/her area.*
- *If record is still unable to be located, complete an SCDC Form 19-29A, "Incident Report," and submit it to the Assistant Division Director of Inmate Records for review. A copy will be requested of the inmate's institutional record.*
- *Corrective action may be taken if it is determined that a staff member lost a record.*

8.6 Under no circumstances will an inmate handle an inmate record or any material contained within an inmate record unless s/he is assigned to the Inmate Records Office to handle inactive inmate records.

8.7 The central record will be maintained in the Inmate Records Office.

8.8 The inmate's central record will contain all original documents such as commitment orders and detainers.

8.9 The Inmate Records Office will be responsible for maintaining and updating the central record, and for forwarding copies of official documents to the appropriate institution to be filed in the inmate's institutional record.

8.10 Routine forms, documents, reports, etc., to be filed in the central records must clearly reflect the inmate's name and number and must be placed in numerical order by the sending institution prior to forwarding to Inmate Records Office.

8.11 Medical Record: A medical record will be created in hard copy and may be created in an automated format for each inmate by Health Services personnel. (Refer to SCDC Policy HS-18.07, "Inmate Health Records.")

8.12 Automated Record: The automated record will be created by the R&E Records Section during the inmate's initial processing and will be updated in the Offender Management System by appropriate institutional, divisional, and support personnel according to individual inmate programs in which the inmate is participating.

8.13 The Inmate Records Office will enter all data related to the sentence, offense, priors, pending charges, jail time credits, etc.

8.14 The Assistant Division Director of the Inmate Records Office will be responsible for ensuring that staff properly interpret court/commitment orders and properly enter data for sentence calculation into the Offender Management System. The SCDC Office of General Counsel will resolve legal interpretations.

8.15 When an inmate is released from the custody of SCDC, the institutional record will be forwarded to the Inmate Records Office where it will be merged with the central record for storage and subsequent microfilming/*digital imaging*.

CENTRAL RECORD INDEX

Section 1:

9. COURT COORDINATION:

9.1 Inmate Records Office Follow-up:

9.1.1 The Release Section personnel will investigate the dispositions on inmates who are within sixty (60) days of release who have "open" court transport entries on the automated "received document" screen.

9.1.2 The Document Processing Section staff will make CRT entries when commitment orders and detainers are received (RCVDOC/CONVICT/DETAIN) and provide updated face sheets/date changes to Caseworkers.

9.1.3 The Records Analysts and Supervisors in the Inmate Records Office will make necessary contacts with Clerks of Court to investigate and obtain necessary documents when court action is known.

9.2 Institutional Follow-up (Classification/Operations):

9.2.1 Classification Records Managers will be responsible for reporting information and forwarding newly obtained court documents to the Inmate Records Office, Document Processing Section, immediately. An SCDC Form S-32, "Document Transmittal/Request

for Action," will be attached to the forwarded documents. Operations personnel will be responsible for ensuring that these documents are forwarded to the Classification Records Manager.

9.2.2 The Classification Records Manager or appropriate Caseworker will be responsible for completing records checklist and immediately notifying the Inmate Records Office of inconsistencies between the automated record and documents in the institutional record, and forwarding all original court documents by interoffice mail.

10. RECORDS PROCESSING SECTION RESPONSIBILITIES:

10.1 The **Records** Processing Section will be responsible for entering all new commitments and probation revocations that are received after an inmate is admitted to SCDC. This section will also process jail time requests and modify data in the inmate record. The **Records** Processing Section will provide technical assistance to Caseworkers in the field; however, problems should be researched and discussed with Case Managers as appropriate prior to contacting the **Records** Processing Section. Contact should be made via CRT messaging system (to the route group "**Inmate Records Audit Section - RECAUDIT**") to the greatest degree possible.

10.2 Any legal documents sent from institutions to the **Records** Processing Section will be addressed to Inmate Records Office/**Records** Processing Section and not to individual staff members. True copies will not be sent to the **Records** Processing Section unless received directly from a Clerk of Court, Solicitor, or Attorney General. Copies will be made of any documents received from an inmate, inmate's family member, inmate's attorney, or other outside party. The copy will be forwarded to the **Records** Processing Section along with SCDC Form S-32, "Document Transmittal/Request for Action," indicating the source of the document(s) (i.e., inmate, inmate's attorney, etc.).

10.3 Incoming documents will be placed on the automated tracking system (RCVDOC) and given to the appropriate staff member for processing. The staff member will obtain any true copies needed, verify authenticity of documents, and make appropriate CRT entries. Documents received directly from the Attorney General's Office, Solicitors' Offices, SCDPPPS, Clerk of Court, Magistrate's Court, and higher will be considered authentic validated documents. The Inmate Records Office will validate all other sources for documents through appropriate channels.

10.4 A commitment order is a legal document issued **and signed** by a judge or magistrate formally committing the defendant to SCDC for a designated period of time (usually submitted by a County Clerk of Court). This document is the authority by which SCDC may legally confine the inmate, and all admitted inmates must be accompanied by such an order.

10.5 Commitment orders received by institutions will be immediately forwarded to the Inmate Records Office/Document Processing. Once a document is placed on RCVDOC, it will be given to the appropriate staff member to process.

10.6 A South Carolina Department of Probation, Parole, and Pardon Services (SCDPPPS) Form 9, "Probation Revocation Order," also formally commits an offender to SCDC. Form 9's are

initiated by the county SCDPPPS agent, signed by a judge, filed with the County Clerk of Court, and forwarded to SCDC for processing.

10.7 At a minimum, Commitment Orders and Form 9's must contain the following information *in order to be valid and complete*:

- jurisdiction in which the offense was committed;
- indictment and/or warrant number;
- name of person convicted of the crime;
- offense for which convicted;
- total sentence and incarcerative sentence;
- date of sentencing; and
- judge's signature.

10.7.1 *A commitment order will be considered invalid if the following occurs:*

- *no judge's signature;*
- *no sentence date;*
- *incomplete sentence date (ex.: September 25, or September 2015);*
- *no term of sentence specified (no notation for days, months, years).*

10.7.2 *Invalid orders will be entered on the detainer system for tracking purposes. The types of detainer will be "INVALID," and the issuing Agency/person will be "CLARIFICATION." An email will be sent to all parties involved (solicitor, inmate's attorney, Department of Probation, Parole, and Pardon Services - DPPPS) and notification will be given to the inmate for clarification. The order will not be entered on the CONVICT screen.*

10.7.3 *A commitment order will be considered incomplete if the following occurs:*

- *sentence date is incorrect;*
- *indictment/case # is missing;*
- *term of sentence is ambiguous;*
- *previous time served is missing (revocation orders);*
- *consecutive structure is incorrect;*
- *CDR code, statute, verbiage mismatch.*

10.7.4 *Incomplete orders will be entered on the CONVICT screen and an email sent to all parties involved (solicitor, inmate's attorney, DPPPS) and notification will be given to the inmate will be for clarification.*

10.8 Document Processing of Detainers: Detainers (wanted, hold, notify) will be placed against an inmate as a result of documents sent in by law enforcement or judicial agencies. The inmate will either have outstanding charges pending against him/her or will already be convicted and owe time to serve in another jurisdiction.

10.8.1 Wanted: A warrant received by SCDC and issued by a judge or magistrate. A letter from any competent authority (normally law enforcement) stating the warrant number, type of offense, name, and address may be sent in lieu of a warrant. It will be held against the inmate until s/he is taken to court by the wanting authority or until his/her release so that an agent of the wanting authority may take the inmate into custody.

10.8.2 Hold: Written order that the inmate has additional time to serve that is not part of the current commitment structure, normally in another jurisdiction, or a commitment order which states the inmate is to be placed in the appropriate county jail, to begin or complete service of a sentence that cannot be served in SCDC, until a bed is available at a SCDPPPS Restitution Center or Community Control Center.

10.8.3 Notify: Request by a law enforcement, judicial, or criminal justice authority to be notified upon an inmate's release. This does not necessarily affect program participation, classification, assignment, or date of release. The Release Section will make formal notification to the requesting authority.

10.8.4 All detainers will be entered or removed by Inmate Records Office staff only.

10.9 Deceased Inmates with Detainers:

10.9.1 An Inmate Records Office designee will be responsible for *updating the TRANCNT upon receipt of death certificates from the Division of Health Services for all deceased inmates (those with and without pending detainers).*

10.9.2 When the death certificate is received, the Inmate Records Office designee will be responsible for notifying the county that initiated the detainer, by mail, of the inmate's death and subsequent deletion of pending detainers. At this time, copies of the death certificate and warrants will be forwarded to the county officials. Prior to the deletion of the detainers, the inmate's date of death should be documented on the detainer screen.

10.9.3 The death certificate will then be filed in the inmate's record in Section I, along with the detainer paperwork and documentation of county notification. An additional copy of the death certificate will also be filed in Section IV.

10.10 Expungement of Document(s) from the Central and Institutional Records:

10.10.1 All Expungement Orders (Order for Destruction of Arrest Record) received will be date stamped and forwarded to the *Branch Chief of the Records Processing Section, or designee*, of the Inmate Records Office.

10.10.2 A cover letter, along with the original order received, will be forwarded to SLED for disposition. A copy of all documents sent to SLED will be kept until a disposition is received. No action will be taken if the order was rescinded or no disposition is received from SLED.

10.10.3 Once a written disposition is received from SLED, if the record has been expunged:

- NCIC rap sheets will be run (2 copies: 1 for the central record and 1 for the institutional record).
- All documents pertaining to the expunged arrest and/or conviction will be removed from the central record.
- A CRT message and a memo will be sent to the *Institution Classification Routing Group* instructing *them* to remove all documents, *indicating the expunged charge*, from the institutional record and to forward these documents to the *Branch Chief of the Records Processing Section, or designee*, with SCDC routing slip (SCDC S-32), *"Documents to be Expunged."* A copy of the CRT message will be forwarded to *Central Classification* and *selected* Inmate Records Office staff.

10.10.4 Once all relevant expungement documents have been received from the institutional record and combined with the documents removed from the central record, they will be disposed of in accordance with S.C. Statute 17-1-40.

11. JAIL TIME CREDIT/SENTENCE START DATE :

Jail Time Credit: Time served, usually at a county facility, prior to trial and sentencing. The sentence start date may be the same as the jail time credit date if the inmate was detained without interruption prior to sentencing.

Sentence Start Date: Date of sentencing less jail time credit. Effective date on commitment papers (or sentencing date if not specified) for each successive concurrent sentence. In cases of two (2) or more sentences and the sentences are consecutive, the sentence start date for the total sentence is the start date of the first sentence in the consecutive string.

11.1 Inmates Eligible for Jail Time Credit:

11.1.1 An inmate will be eligible to receive credit for time served prior to trial and sentencing if the offense for which s/he is convicted is the same as the offense for which s/he was jailed.

11.1.2 An inmate who is not an escapee will be eligible to receive credit for out-of-state jail time if s/he is apprehended and held solely for a crime committed in South Carolina.

11.1.3 Inmates sentenced under the Youthful Offender Act (YOA) will be eligible to receive jail time credit. The Inmate Records Office will enter jail time for an initial incarceration; however, credit awarded on the YOA parole revocations will be calculated by the *Division of Young Offender Parole and Reentry* Services.

11.2 Inmates Not Eligible for Jail Time Credit:

11.2.1 An inmate will not be eligible to receive jail time credit if s/he is on escape from the South Carolina Department of Corrections and is apprehended and confined out-of-state.

11.2.2 An inmate will not be eligible to receive in-state or out-of-state jail time credit if the offense for which s/he is convicted is different from the offense for which s/he was jailed.

11.2.3 An inmate (not an escapee) will not be eligible to receive out-of-state jail time credit if s/he is apprehended and held in another state for a crime committed in South Carolina and for a crime committed in the other state. Once the charges for the crime that occurred in the other state have been satisfied, s/he may be eligible to begin receiving out-of-state jail time credit toward his/her South Carolina charges.

11.3 Request for Jail Time Credit:

11.3.1 If authorized jail time credit has not been awarded to an inmate, the Institutional Classification Caseworker will complete the top portion of SCDC Form 18-11, "Request for Jail Time," make a copy of the form for the institutional record, and forward the white, pink, and goldenrod copy to the Inmate Records Office, **Records** Processing Section, ATTN.: Jail Credits. If the inmate claims s/he was incarcerated in more than one (1) facility prior to sentencing, a separate "Request for Jail Time" Form must be submitted for each facility.

11.3.2 Upon receipt of SCDC Form 18-11, "Request for Jail Time," the Records Analyst responsible for jail time credits will review the form to determine if the request should be forwarded to the appropriate county/city facility.

11.3.3 If it is determined that the inmate will not be given jail time credit, the white copy of the original request will be returned to the designated Caseworker, indicating that the inmate is not eligible for jail time credit requested, and an explanation will be provided to explain why jail time credit is not applicable.

11.3.4 If it is determined that the inmate could be eligible for jail time credit, the request will be forwarded to the appropriate county/city facility.

11.3.5 After the form has been completed by the appropriate county/city facility indicating the dates of the jail credit that should be awarded, the form will be returned to the **Records** Processing Section. Upon receipt of the form from the county/city, the Records Analyst will make appropriate modifications to the inmate record and forward the white copy of the form to the designated Caseworker indicating the revised sentence start date.

11.4 Computation of Time: The parole eligibility date and release (maxout) will be computed from the sentence start date.

12. TRUTH IN SENTENCING AND RELEASE CALCULATION: (Offenses committed on or after January 1, 1996)

12.1 No Parole Offenses Compared with Other Offenses:

MAXOUT	No Parole Offense	Other Offense Type
	*Must serve at least 85% of incarcerative sentence (without EWC/EEC/GT accrual).	365-day year
	*365-day year for calculations.	20 days GT earned for every month from sentence start date

	*3 days GT earned for every month served from sentence start but cannot apply to 85% service.	
	*Maximum annual EWC/EEC credit of 72 days.	
	*Must complete 2 years community supervision after maxout.	
PAROLE	Not eligible <i>unless sentenced to certain 85% non-parolable drug offenses on or after June 2, 2010 (based on the Omnibus Crime Reduction and Sentence Reform Act of 2010).</i>	1/4, 1/3 parole rules apply.
WORK RELEASE	Must serve at least 80% of incarcerative sentence (without EWC/EEC/GT accrual).	

12.2 Other Special Sentencing:

12.2.1 Murder: Persons convicted of murder with an offense date on or after January 1, 1996, will be sentenced to one (1) of the following *per statute 16-3-20*:

- Death;
- Life with no parole (meaning until the death of the inmate); or
- 30-year mandatory minimum term (flat sentence - not reducible by EWC/EEC/GT accrual).

12.2.2 "Most Serious" Offenses: Persons with one (1) or more prior convictions for a "most serious" offense can receive a life sentence with no parole eligibility.

12.2.3 "Serious" Offenses: Persons with two (2) or more prior convictions for a "serious" offense can receive a life sentence with no parole eligibility.

12.2.4 Adjudicated Juveniles: Juveniles with Family Court commitments transferred to SCDC from DJJ will be required to remain in custody up to their 21st birthday unless paroled earlier by the Juvenile Parole Board (the releasing authority).

12.3 Violent Offenses Defined by Statute 16-1-60:

12.3.1 Section 16-1-60 - Violent Crimes Defined: *For purposes of definition under South Carolina law, a violent crime includes the offenses of: murder (Section 16-3-10); attempted murder (Section 16-3-29); assault and battery by mob, first degree, resulting in death (Section 16-3-210(B)); criminal sexual conduct in the first and second degree (Sections 16-3-652 and 16-3-653); criminal sexual conduct with minors, first, second, and third degree (Section 16-3-655); assault with intent to commit criminal sexual conduct, first and second degree (Section 16-3-656); assault and battery with intent to kill (Section 16-3-620); assault and battery of a high and aggravated nature (Section 16-3-*

600(B)); kidnapping (Section 16-3-910); trafficking in persons (Section 16-3-930); voluntary manslaughter (Section 16-3-50); armed robbery (Section 16-11-330(A)); attempted armed robbery (Section 16-11-330(B)); carjacking (Section 16-3-1075); drug trafficking as defined in Section 44-53-370(E) or trafficking cocaine base as defined in Section 44-53-375(C)); manufacturing or trafficking methamphetamine as defined in Section 44-53-375; arson in the first degree (Section 16-11-110(A)); arson in the second degree (Section 16-11-110(B)); burglary in the first degree (Section 16-11-311); burglary in the second degree (Section 16-11-312(B)); engaging a child for a sexual performance (Section 16-3-810); homicide by child abuse (Section 16-3-85(A)(1)); aiding and abetting homicide by child abuse (Section 16-3-85(A)(2)); inflicting great bodily injury upon a child (Section 16-3-95(A)); allowing great bodily injury to be inflicted upon a child (Section 16-3-95(B)); criminal domestic violence of a high and aggravated nature (Section 16-25-65); abuse or neglect of a vulnerable adult resulting in death (Section 43-35-85(F)); abuse or neglect of a vulnerable adult resulting in great bodily injury (Section 43-35-85(E)); taking of a hostage by an inmate (Section 24-13-450); detonating a destructive device upon the capitol grounds resulting in death with malice (Section 10-11-325(B)(1)); spousal sexual battery (Section 16-3-615); producing, directing, or promoting sexual performance by a child (Section 16-3-820); sexual exploitation of a minor first degree (Section 16-15-395); sexual exploitation of a minor second degree (Section 16-15-405); promoting prostitution of a minor (Section 16-15-415); participating in prostitution of a minor (Section 16-15-425); aggravated voyeurism (Section 16-17-470(C)); detonating a destructive device resulting in death with malice (Section 16-23-720(A)(1)); detonating a destructive device resulting in death without malice (Section 16-23-720(A)(2)); boating under the influence resulting in death (Section 50-21-113(A)(2)); vessel operator's failure to render assistance resulting in death (Section 50-21-130(A)(3)); damaging an airport facility or removing equipment resulting in death (Section 55-1-30(3)); failure to stop when signaled by a law enforcement vehicle resulting in death (Section 56-5-750(C)(2)); interference with traffic-control devices, railroad signs, or signals resulting in death (Section 56-5-1030(B)(3)); hit and run resulting in death (Section 56-5-1210(A)(3)); felony driving under the influence or felony driving with an unlawful alcohol concentration resulting in death (Section 56-5-2945(A)(2)); putting destructive or injurious materials on a highway resulting in death (Section 57-7-20(D)); obstruction of a railroad resulting in death (Section 58-17-4090); accessory before the fact to commit any of the above offenses (Section 16-1-40); and attempt to commit any of the above offenses (Section 16-1-80). Only those offenses specifically enumerated in this section are considered violent offenses.

12.3.2 Offenses in the violent offense statute with the offense characteristics listed below are considered the principal of the crime, thus making them violent:

OFFENSE CHARACTERISTICS	EFFECTIVE DATE
Facilitation Of	6/3/86
Guilty But Mentally Ill	6/3/86

**Conspiracy to Traffic Drugs	6/3/86
*Conspiracy to Kidnap	6/3/86 - 1/11/95
***Assault with Intent to Commit	1/1/94
Accessory Before the Fact	6/3/86
Attempt to Commit	1/1/94
****Aiding and Abetting	6/7/95

12.4 Parole Eligibility Guidelines: Parole eligibility guidelines are established by S.C. Statute and are under the purview of the South Carolina Department of Probation, Parole, and Pardon Services. Generally, violent offenses occurring before January 1, 1996, carry a 1/3 parole eligibility with all other offenses carrying a 1/4 parole eligibility.

12.5 "Most Serious" Offenses: *Most serious offense* codes reflect the June 7, 1995, legislation. These offenses must be considered the principal of the crime carrying an offense characteristic of Facilitation of, Guilty but Mentally Ill, *or* Accessory to and Attempt to Commit.

12.6 "Serious Offenses": *Serious offenses* reflect the June 7, 1995, legislation. These offenses must be considered the principal of the crime, carrying an offense characteristic of Facilitation of, Guilty but Mentally Ill, Accessory Before the Fact, Accessory Before and After the Fact, or Attempt to Commit.

12.7 "No Parole" Offenses: *No Parole Offenses* reflect the June 7, 1995, legislation. These offenses must be considered the principal of the crime carrying an offense characteristic of Facilitation of, Guilty but Mentally Ill, Accessory Before and After the Fact, or Attempt to Commit.

12.8 Release Calculation:

12.8.1 Sentence Type: Each conviction has a sentence type that dictates the type of release.

*		Straight-time		sentence
*	Youthful	Offender	Act	sentence
*		Life		sentence
*		Shock		Incarceration
* Juvenile Adjudication.				

12.9 Conviction Status: Each inmate conviction falls under a specific conviction status.

12.9.1 Active Incarcerated: Inmate is incarcerated and accruing credit toward the service of the incarcerative term.

12.9.2 Active Probation: The inmate's incarcerative term is satisfied, and the inmate is under probation supervision for the conviction.

12.9.3 Active Parole: Inmate is serving the conviction under parole supervision and is accruing day-for-day credit toward his sentence.

12.9.4 Completed: The inmate has maxed out his/her sentence and is released from custody from the specific sentence noted.

12.9.5 Served: The inmate has satisfied the conviction's incarcerative term but remains incarcerated to serve other convictions.

12.10 Offense Date: Date crime was committed. This date is relevant to calculating release eligibility date based upon changes specified in state statute.

12.11 Sentence Start Date: Date that the inmate began accruing credits toward satisfying the sentence.

12.12 Sentence Structure: Dictates the order in which a series of conviction terms are to be served. Sentences are either concurrent or consecutive.

12.13 Statute Classification: Indicates the violent/non-violent status of the current active convictions at the time of commission of the crime. If the offense was classified as non-violent at the time of commission, but was subsequently re-classified as violent, the "Statute Classification" will reflect non-violent.

12.14 SCDC Classification: Indicates the violent/non-violent status of all convictions (active and completed). If the inmate has at least one violent conviction, SCDC classification will *always* indicate violent. *The violent conviction can be a completed conviction from a previous incarceration.*

12.15 Mandatory Service Requirement: Type of conviction sentence that may not be reduced by work, education, or good time credits.

12.16 Mandatory Parole Service Requirement: Sentence that must be served prior to becoming eligible for parole. May or may not be reduced by earned work credits or educational credits, depending upon the offense and the date sentenced.

12.17 Dead Time:

- No credit is earned during dead time.
- Dead time refers to a break in service time accrual, to include:
 - Time between escape date and escape return date;
 - Time between release on appeal bond and return from appeal bond;
 - Time between issuance of a parole violation warrant and date the warrant is served.

12.18 Jail Time: Time served (usually at a county or city jail) prior to trial and sentencing pursuant to S.C. Statute 24-13-40.

12.19 Statutory Good Time: Time awarded for each month served based on an inmate's good behavior pursuant to S.C. Statute 24-13-210.

12.20 Good Time Cycle Date:

- The monthly good time cycle begins on the inmate's sentence start date.
- The good time cycle date is the day of the month that the 20 days earned for the month is awarded or forfeited. (Three [3] days for "no parole" offenders.)

12.21 Forfeiture of Good Time:

- Failure to earn good time for the monthly accrual period due to a disciplinary conviction.
- Two (2) or more infractions in the same month will not result in any more than one (1) 20-day forfeiture or a three (3) day forfeiture if serving an 85% non-parolable sentence.
- Good time is forfeited on the next cycle date after disciplinary conviction.

12.22 Loss of Good Time:

- Conviction of a rules violation may result in the loss of all or part of previously earned good time.
- Good time loss for any reason on or after June 3, 1986, cannot be restored. Restoration was discontinued on 6/3/87. At no time should an inmate's balance of good time fall below zero (0).
- When serving a consecutive sentence, good time earned during the service of a sentence in the consecutive structure cannot be lost or forfeited once that sentence is completed and the inmate has begun service on the other sentence(s) in the consecutive structure.

12.23 Inmates NOT Eligible to Earn Good Time Credit:

- Serving life sentence
- Death Row
- Youthful offender
- Community supervision revocators
- Firearms provision
- Habitual offender when specifically sentenced
- Adjudicated juvenile

12.24 Extra Credits: Credits for blood donations and certain services performed. (There are no current statutory provisions for these credits.)

12.25 Escape: If the inmate escapes, his/her cycle date is held in abeyance and continues upon return to SCDC.

12.26 Parole: When paroled, the inmate's good time cycle date resets. If the inmate's parole is revoked, the new good time cycle date is the date the inmate returns to custody.

12.27 Service Time: Inmate earns one (1) day credit for each day in SCDC and one (1) credit for each day under the supervision of SCDPPPS. Good time computation begins from the sentence start date.

12.28 Incarcerative Service Time: Actual time spent in SCDC or pre-trial detention time (JAIL TIME).

12.29 Non-Incarcerative Service Time: "Street time" for which service credits are awarded.

12.20 Earned Work Credits/Earned Educational Credits:

- Inmates can earn up to a maximum of 15 days credit per month and 180 days credit per year.
- Maximum EWC/EEC credit accrual of six (6) days per month for "no parole" offenses.
- Maximum yearly credit accrual of 72 days per year for "no parole" offenses. (Credits cannot apply towards the reduction of the 85% service requirement pursuant to S.C. Statute 24-13-230.)

NOTE: EWC/EEC Coefficient:

12.30.1 Amount of credit earned per day.

12.30.2 Depending on the length of time to serve until max out, the inmate's release date may or may not change if s/he is promoted to a higher EWC level. The inmate may have excess good time because s/he only needs a portion of the 20 days earned for the month but the 30 days must be served first in order to earn the 20 days good time.

LEVEL	DAYS WORKED	DAILY CREDIT	CREDIT PER MONTH		CREDIT PER YEAR	
			30 DAYS	30.42 DAYS	360 DAYS	365 DAYS
2	7	.50	15.0000	15.0000	180.0000	180.0000
2	6	.4285714	12.8571	13.037142	154.2852	156.4459
2	5	.3571482	10.7142	10.864285	128.5704	130.37142
3	7	.333	10.0000	10.14	120.0000	121.68
3	5	.2380952	7.1428	7.2428571	85.7142	86.914285
5	7	.2000	6.0000	6.084	73.0000	73.008
5	5	.1428571	4.2857	4.3457142	51.4285	52.148568
7	7	.1428571	4.2857	4.3457141	51.4285	52.148568
7	5	.102040	3.0612	3.1040815	36.7346	37.248918

NOTE: Work Credits are applicable toward the initial parole eligibility and max-out dates on straight time convictions.

12.31 Full-Time Earned Education Credits:

Level 2 = One (1) EEC for Each Two (2) Days Enrollment
Level 3 = One (1) EEC for Each Three (3) Days Enrollment
Level 5 = One (1) EEC for Each Five (5) Days Enrollment
Level 7 = One (1) EEC for Each Seven (7) Days Enrollment.

12.32 Bonus Education Credits:

TRAINING HOURS:

PER WEEK	BONUS CREDITS	PER DAY	BONUS CREDITS/MONTH		CREDITS PER YEAR	
			30 DAYS	30.42 DAYS	360 DAYS	365 DAYS
B4	4-7	.0571	1.713	1.7369	20.556	20.8428
B5	8-11	.0857	2.571	2.6069	30.852	31.2828
B6	12-14	.1142	3.426	3.4739	41.112	41.6868
B7	15+	.1428	4.284	4.343	51.408	52.116

12.33 EWC/EEC Coefficient for 85% Non-parolable Sentence:

12.33.1 For offenses committed on or after January 1, 1996, classified by the statute as non-parolable, the following earning rates are stipulated by statute to the following levels of credit to be capped at six (6) credits a month and no more than 72 credits a year.

LEVEL-	DAYS WORKED-	CREDIT PER DAY	CREDIT PER MONTH	CREDIT PER YEAR
2	7	.1972386	6.000	72.000
2	6	.1972386	6.000	72.000
2	5	.1972386	6.000	72.000
3	7	.1972386	6.000	72.000
3	5	.1972386	6.000	72.000
5	7	.1972386	6.000	72.000
5	5	.1428571	4.3457142	52.148568
7	7	.1428571	4.3457141	52.148568
7	5	.1020408	3.1040815	37.248979

12.34 Maxout Date Calculation Worksheet:

12.34.1 The Maxout Date Calculation Worksheet is used to compute/verify release dates for most inmate sentences. The Worksheet is attached to this policy as [Appendix](#)

1. "Maxout Date Calculation Worksheet." Inmates serving 85% non-parolable sentences or other sentences requiring mandatory service time cannot be computed using this worksheet.

12.35 Instructions for Completing the Maxout Date Calculation Worksheet: The following instructions are specific steps concerning the verification of 360-365 projected date calculations.

LINE/STEPS	EXPLANATION
1.	Sentence Length.
2.	Sentence Length in Days: If 365 calculation, # of years (x) 365; months (x) 30.42 days; day (x) 1. If 360 calculation, # of years (x) 360; months (x) 30 days; day (x) 1.
3.	Sentence Start Date (from CONVICT screen).
4.	Good Time Cycle Date: The initial good time cycle date is the same date of the month as the sentence start date. The cycle date is also the date when good time is awarded or forfeited.
5.	Service Credit (calendar days): Calendar date difference from sentence start date to next cycle date. (Recommend use of "read" screen, specifically "datediff.")
6.	Gross Good Time Credit--Good time credit earned from sentence start date to next cycle date. (20 days per cycle for 360/365 (parolable) offenses. Three (3) days per cycle for 85% non-parolable.)
7.	Good Time Forfeited: Total good time forfeited as a result of a disciplinary conviction or escape. Inmates will not earn or "forfeit" 20 days or 3 days (if non-parolable) for any good time cycle in which a disciplinary conviction/escape occurred.
8.	Good Time Lost: Total good time lost as a result of disciplinary convictions. Inmates can lose previously earned good time credit as a result of a disciplinary conviction. All or part of previously earned good time credit may be lost. (Good time will never be taken to a negative balance.)
9.	Total Good Time Credit Earned as of next cycle: Subtract good time lost/forfeited from the total earned (Subtract line 7 and 8 from line 6). (Good time will never be taken to a negative balance.)
10.	Earned Work Credit:

	Total earned work credit earned from sentence start date to the next cycle date.
11.	<p>Earned Education Credits:</p> <p>Total earned educational credits earned from sentence start date to the next cycle date.</p>
12.	<p>Earned Extra Credits:</p> <p>Inmates with service periods prior to the institution of good time credits and EWC were allowed credits for blood donations and certain other services performed. Credits are listed on the "Date" and "Convict" screen.</p>
13.	<p>Total Credits:</p> <p>Total service credits (line 5), good time credit (line 9), earned work credit (line 10), earned educational credit (line 11), and earned extra credits (line 12).</p>
14.	<p>Next Cycle Date:</p> <p>Next cycle date from line 4.</p>
15.	<p>Remaining Time to Earn as of Next Cycle Date:</p> <p>Total remaining to earn as of next good time cycle date. Subtract line 13 (total credits) from line 2 (sentence length in days).</p> <p>NOTE: If line 15 is a negative number, change line 4 to previous cycle date and recomputed from line 4.</p>
16.	<p>Average Monthly Accrual Rate:</p> <p>Total credits earned per month. Service credit will be 30.42 for 365-day calculation, 30 for 360-day calculation.</p>
17.	<p>Good Time:</p> <p>Good time monthly accrual rate is 20 days for all eligible inmates. Inmates convicted of non-parolable 85% sentences receive 3 days good time per month.</p>
18.	<p>Earned Work Credit:</p> <p>Monthly EWC accrual rate on current EWC level, based on 30.42/30 service credit.</p>
19.	<p>Earned Education Level:</p> <p>Monthly EEC accrual rate on current EEC level, based on 30.42/30 service credit.</p>
20.	Total Monthly Accrual Rate:

	Total service credit (line 16), good time credit (line 17), earned work credit (line 18), and earned educational credit (line 19) earned per month on current levels.
21.	<p>Divide Line 15 by Line 20.</p> <p>Divide remaining time to satisfy sentence by total monthly accrual to determine the estimated number of cycles to complete sentence. Whole cycle months on line 21.</p>
22.	Fraction remainder (days) from line 21 to complete sentence.
23.	Next cycle date from line 14.
24.	Add estimated cycles (months), from line 21, needed to satisfy sentence to next cycle date.
25.	Estimated final (last) cycle date (Line 23 + Line 24, Month by Column = Line 25).
26.	Next cycle date from line 23.
27.	Estimated final cycle date from line 25.
28.	<p>Calendar Days Service Credit:</p> <p>Actual calendar days from next cycle date (line 26) to estimated final cycle to complete sentence (line 27). Use "datediff" screen.</p>
29.	<p>Good Time Credit:</p> <p>Projected good time earned from next cycle date to estimated final cycle. Use "datediff" screen.</p>
30.	<p>Earned Work Credit:</p> <p>Projected earned work credit. Use "datediff" screen.</p>
31.	<p>Earned Educational Credit:</p> <p>Projected education credit. Use "datediff" screen.</p>
32.	<p>Total Projected Credits:</p> <p>Sum of service credit projected good time/earned work credit and earned education credit (Sum of lines 28 - 31).</p>
33.	<p>Remainder of Line 15 minus Line 32.</p> <p>Note: If line 33 is greater than the amount that can be earned during the last monthly cycle, add 1 to line 21. Recompute starting at line 21.</p> <p>Total days remaining to satisfy sentence.</p>
34.	Daily accrual rate - 1 day service time.

35.	EWC Coefficient: Daily accrual rate of earned work credit.
36.	EEC Coefficient: Daily accrual rate of earned educational credit.
37.	Total daily accrual rate: Sum of daily service credit, EWC, and EEC earned on current level.
38.	Divide line 33 by line 37. Divide days remaining to satisfy by daily accrual rate to determine number of days that it will take the inmate to complete sentence at current daily accrual rate.
39.	Estimated final cycle date from line 27.
40.	Add days remaining to satisfy sentence (line 38).
41.	Sum total of remaining calendar days to serve and final cycle (Line 39 + Line 40 = Line 41).
42.	Projected maxout release date. Note: Line 42 is the lesser of line 41 or the next cycle date from line 39, i.e. Line 39 plus 1 month.

Note: If the inmate has any breaks in service, complete a Break in Service form (up to 2 breaks per form). The total from line 15 will then be transferred to line 2 of the Maxout Date Calculation Worksheet.

Note: Line 3, the sentence start date, will be the date the inmate was returned to SCDC Jurisdiction. The next cycle date will be determined from line 3.

13. SEX OFFENDER BACKGROUND:

13.1 The Sex Offender Registry was implemented when Chapter 3, Title 23, of the 1976 edition of the South Carolina Code of Laws was amended to add Article 7. The original law was enacted June 30, 1994, and became effective July 1, 1994.

13.2 The Sex Offender Registry provides law enforcement with information for investigating criminal offenses and tracking identified convicted sex offenders. The Registry makes demographic information available regarding the location and physical description of persons convicted of certain offenses. Information contained in the Registry is made available to every law enforcement agency in the State of South Carolina and in other states for criminal justice purposes.

13.3 The Registry is under the direction of the Chief of the State Law Enforcement Division (SLED). SCDC, the Department of Juvenile Justice, the Department of Probation, Parole,

and Pardon Services, The Department of Mental Health, and the County Sheriffs work with SLED to ensure the security of all Registry information.

14. SEX OFFENDER REGISTRY PROCEDURES:

14.1: Any person, regardless of age, residing in the State of South Carolina and/or who attends any school in this State, who has been convicted of, adjudicated delinquent for, pled guilty or nolo contendere to an offense described below, or who has been convicted, adjudicated delinquent, pled guilty or nolo contendere in any comparable court in the United States, or who has been convicted, adjudicated delinquent, or pled guilty or nolo contendere in the United States federal courts of a similar offense, or who has been convicted of, adjudicated delinquent for, or pled guilty or nolo contendere to an offense for which the person was required to register in the state where the conviction or plea occurred, shall be required to register.

14.2 Upon entering the Registry information, SLED will send SCDC a reply via NCIC acknowledging receipt of the Registry entry, will indicate the inmate's Sex Offender Registry Number (SRS), and will confirm that the appropriate county has been notified. This receipt will be kept on file in the Inmate Records Office.

14.3 If the inmate plans to live out of state, an administrative courtesy message will be sent by SLED to the Sheriff of the county of the state in which the inmate plans to reside (via NCIC). The message will contain commitment information and the address and phone number of the residence where the inmate plans to live.

14.4 Offenses Requiring Registry: An inmate will be required to register as a sex offender at the time of release if convicted of any of the following offenses:

- Criminal Sexual Conduct, First Degree - Section 16-3-652;
- Criminal Sexual Conduct, Second Degree - Section 16-3-653;
- Criminal Sexual Conduct, Third Degree - Section 16-3-654;
- Criminal Sexual Conduct with Minors, First Degree - Section 16-3-655(A);
- Criminal Sexual Conduct with Minors, Second Degree - Section 16-3-655(B) *(If evidence is presented at the criminal proceeding and the court makes a specific finding (in the Court's Order) on the record that the conviction obtained for this offense resulted from consensual sexual conduct or consensual sexual conduct as contained in Section 16-3-655(B)(2), provided the offender is 18 years of age or less, or consensual conduct between persons under 16 years of age, the convicted person is not an offender and is not required to register pursuant to the provisions of this article);*
- Criminal Sexual Conduct with Minors, Third Degree - Section 16-3-655(C);
- Kidnapping - Section 16-3-910;

NOTE: The offender will not be required to register if there is a specific finding by the Court not to register (must be stated on the Court Order). *Effective June 18, 1996, there was no requirement for an inmate who had been convicted of Kidnapping or Conspiracy to Kidnap pursuant to Section 23-3-430 or Indecent Exposure pursuant to Section 23-3-430(C)(14) to register unless ordered by a Judge. However, effective June*

12, 1998, Kidnapping or Conspiracy to Kidnap again became Registry Offenses unless otherwise court ordered not to register as provided for in statute;

- Engaging a Child for Sexual Performance - Section 16-3-810;
- Producing, Directing, or Promoting Sexual Performance by a Child - Section 16-3-820;
- Criminal Sexual Conduct: Assault with the Intent to Commit - Section 16-3-656;
- Incest - Section 16-15-20;
- Buggery - Section 16-15-120;
- Committing or Attempting Lewd Act Upon a Child Under Sixteen - Section 16-15-140;
- Voyeurism 16-17-470;
- Aggravated Voyeurism or Peeping - Section 16-17-470;
- Violations of Article 3, Chapter 15, of Title 16 felonies involving a minor:
 - Hiring, Employing, Using, or Permitting a Person Under 18 to do Anything Defined in Statutes as Obscene - Section 16-15-335;
 - Disseminating Obscene Material to Person Under Age Eighteen Prohibited - Section 16-15-345;
 - Disseminating Obscene Material to Minor Twelve Years of Age or Younger Prohibited - Section 16-15-355;
 - Disseminating Harmful Material to Minors and Exhibiting Harmful Performance to Minors - Section 16-15-385;
 - Unlawful to Employ Persons Under Eighteen to Appear in a State of Sexually Explicit Nudity - Section 16-15-387;
 - Sexual Exploitation of a Minor, First Degree - Section 16-15-395;
 - Sexual Exploitation of a Minor, Second Degree - Section 16-15-405;
 - Sexual Exploitation of a Minor, Third Degree - Section 16-15-410;
 - Promoting Prostitution of a Minor - Section 16-15-415;
 - Participating in Prostitution of a Minor - Section 16-15-425;
- *A person, regardless of age, who has been convicted, adjudicated delinquent, or pled guilty or nolo contendere in this State, or who has been convicted, adjudicated delinquent, or pled guilty or nolo contendere in a comparable Court in the United States, or who has been convicted, adjudicated delinquent, or pled guilty, or nolo contendere in the United States federal courts of indecent exposure or of a similar offense in other jurisdictions is required to register pursuant to the provisions of this article if the Court makes a specific finding on the record that based on the circumstances of the case the convicted person should register as a sex offender;*
- Failing to Register - Section 23-3-470 (Although this offense is not listed in the Sex Offender Registry statute, it is internally flagged as such to ensure appropriate pre-registration, upon release, for the Sex Offender Registry offense that precipitated the original Sex Offender Registry obligation.);
- *Trafficking in Persons - Section 16-3-930;*
- Sexual Battery of a Spouse - Section 16-3-615;
- Criminal Sexual Battery When Victim is Spouse - Section 16-3-658;
- Sexual Intercourse With a Patient or Trainee - Section 44-23-1150;
- *Criminal Solicitation of a Minor, as provided in Section 16-15-342, if the purpose or intent of the solicitation or attempted solicitation was to: a) persuade, induce, entice, or*

coerce the person solicited to engage or participate in sexual activity as defined in Section 16-15-375(5); or b) perform a sexual activity in the presence of the person solicited;

- Administering, distributing, dispensing, delivering, or aiding, abetting, attempting, or conspiracy to administer, distribute, dispense, or deliver a controlled substance or Gamma Hydroxy Butyrate (GHB) to an individual with the intent to commit a crime listed in Section 44-53-370 (f), except petit larceny or grand larceny;
- *Any other offense specified by Title I of the federal Adam Walsh Child Protection and Safety Act of 2006, the Sex Offender Registration and Notification Act (SORNA).*

14.5 Upon conviction, adjudication of delinquency, guilty plea, or plea of nolo contendere by a person of an offense not listed in 14.4, the presiding judge may order as a condition of sentencing that the person be included in the Sex Offender Registry if good cause is shown by the solicitor.

14.6 Attempts to Commit an Accessory Before the Fact of a Sex Registry Offense are considered Sex Offender Registry offenses. Also, Assault with Intent to Commit offenses in Section 16-3-652, 653, 654 and 655 (1st and 2nd degrees) are considered Sex Offender Registry Offenses.

14.7 Any orders dealing with a Rape conviction (which do not specify Criminal Sexual Conduct, any degree) must be forwarded to the Office of General Counsel for further interpretation to determine if the Registry requirement will apply.

14.8 Inmates required to register for the month will be listed on the "Tentative Release Screen," under the "MAXREL" menu. Designated staff will enter information into the Sex Offender Register Tool (SORT), and will have the inmate sign and date SCDC Form 18-13, "Notice of Sex Offender Registry." The original copy of the registry form, along with a current frontal photograph of the inmate will be forwarded to the Inmate Records Release Section *by the 10th of the month* prior to the month in which s/he is to be released. The Registry will be maintained by the Inmate Records Office as part of the inmate's permanent record.

14.9 Prior to the release of an inmate who is required to register as a sex offender, SCDC will notify (via NCIC) SLED and the Sheriff of the county where the offender intends to reside [Section 23-3-440(1) of S. C. Code of Laws] that s/he is being released. SCDC will provide to SLED the registry information regarding the offender prior to his/her release from imprisonment. An NCIC message will be sent by SLED to the Sheriff's Office of the appropriate state when any inmate indicates s/he plans to reside outside of South Carolina.

14.10 If the Inmate Refuses to Sign the "Notice of Sex Offender Registry": The witness will give the inmate the verbal and written notification of the requirement to register. If the inmate refuses to sign, two (2) witnesses will then sign the form and indicate that instructions were given but inmate refused to sign.

14.11 If the Inmate Refuses or is Unable to Provide an Address: The institution will indicate what is known about the inmate's plans for remaining or leaving the State of South Carolina

on the form. The institution will notify the inmate to register in the county where the crime was committed and immediately notify the Inmate Records Release Section for further instructions and authorization to release the inmate.

14.12 When Registry Documents are Received: When Registry documents are submitted to the Inmate Records Office, the Release Section staff will enter the data and transmit the information to SLED through the *Offender Watch System*. Normally, this will be completed within five (5) days prior to release. The inmate's release date will be entered. If the release is canceled or rescheduled, the Release Section staff will cancel the registration. Inquiries regarding previous registration and *registry* information will be accessed through the SLED automated tracking system by the Inmate Records Office.

14.13 Registration Prior to Release: Under no circumstances will a sex offender who is required to register be released from SCDC without proper registration forms and photos having been received by the Inmate Records Office from the releasing institution and official notifications having been made by Inmate Records Office prior to release. The only exception would be those S.C. inmates serving time in other states/jurisdictions whose S.C. time will be satisfied before satisfying the service time from the other state.

14.14 Monthly Drop List: In addition to notifying SLED and the Sheriff of the *county* where the inmate is to reside, on or about the 20th of the month, a copy of the "Monthly Drop List" will be posted on the "South Carolina State-Wide Offender Record Database" (SWORD) website. This list will identify all inmates who will be released the following month. The Monthly Drop List will also contain a separate list specifying those sex offenders required by law to register and the county in which they are to reside/register, etc.

15. SEXUALLY VIOLENT PREDATOR ACT: The Sexually Violent Predator Act was enacted June 5, 1998, and affects persons serving a sentence for any offense set forth in Section 44-48-30(2) as well as any person who is convicted of a sexually violent offense on or after the effective date of the Act. The Act states that a Sexually Violent Predator is a person who has been convicted of a sexually violent offense under Section 44-48-30 and suffers from a mental abnormality or personality disorder that makes a person likely to engage in acts of sexual violence if not confined in a secure facility for long-term control, care, and treatment. For purposes of those inmates incarcerated in SCDC, the Act specifies that:

15.1 SCDC will give written notice to the Sexual Predator Multi-Disciplinary Team (representatives from the SCDC, the South Carolina Department of Probation, Parole, and Pardon Services, the South Carolina Department of Mental Health, a retired judge appointed by the Chief Justice, and the Chief Attorney of Appellate Defense or his designee) and the Attorney General at least **270** days prior to the anticipated release of a person convicted of a sexually violent offense. This excludes persons who have returned to prison with either considerable jail time or other circumstances that affect their release, resulting in a release date less than **270** days from the admission date. Written notice in these cases must be given as soon as practical following readmission to SCDC.

15.2 The Sexual Predator Multi-Disciplinary Team (SPMDT) will review the records of each person referred and within 30 days assess whether or not the person satisfies the definition of a sexually violent predator. Appropriate reports will be forwarded to the Prosecutor's Review Committee.

15.3 The Prosecutor's Review Committee is appointed by the Attorney General. The Committee will review the reports received from the SPMDT and determine within 30 days whether or not probable cause exists to believe the person is a sexually violent predator. When it is determined that probable cause exists, a petition will be filed by the Attorney General with the Court in the jurisdiction where the offense was committed. The petition must state sufficient facts that would support a probable cause allegation.

15.4 If the Court determines that probable cause exists, the person must be taken into custody, if not already confined.

15.5 A probable cause hearing will be held within 72 hours after the person has been taken into custody. At the hearing, the Court will verify identity, receive evidence, hear arguments from the person and the Attorney General, and determine whether probable cause exists.

15.6 If the Court finds that there is probable cause to believe that the person is a sexually violent predator, the Court will direct that the person be transferred to an appropriate secure facility for an evaluation as to whether or not the person is a sexually violent predator.

15.7 Within 60 days after the completion of the probable cause hearing, the Court will conduct a trial. If determined beyond a reasonable doubt that the person is a sexually violent predator upon his release from SCDC, the person must be committed to the custody of the South Carolina Department of Mental Health for control, care, and treatment until such time as the person's mental abnormality or personality disorder has so changed. As authorized by statute, the Department of Mental Health has entered into an interagency agreement with SCDC in which the Edisto Unit at Broad River Correctional Institution has been identified to house these persons.

15.8 A committed person under this chapter will have an annual examination of his/her mental condition.

15.9 SCDC Procedures:

15.9.1 The commitment order will identify the inmate as a "sexual predator," either explicitly stated by the Judge, or implicitly classified as a sexual predator by the convicted offense.

15.9.2 Upon admission to SCDC, the Offender Management System will auto load the word "Pending" on the conviction screen for all inmates incarcerated with a sexually violent offense. The R&E Records Section will enter an indicator into SCDC's automated system, identifying the inmate as a sexual predator when the Judge so orders.

15.9.3 The Inmate Records Office will generate a listing of those inmates with a sexual predator offense indicator **270 days** prior to maxout by accessing the SexPred program. Youthful Offenders will be referred to the Inmate Records Office by the **Young Offender Parole and Reentry Services** Division or by the Sex Offender Treatment staff/classification case manager at Turbeville. Shock Program participants will be referred by either the **Young Offender Parole and Reentry Services** Division or Shock Program staff.

15.9.4 It will be the responsibility of the South Carolina Department of Probation, Parole, and Pardon Services, the Juvenile Parole Board, and the Young Offender **Parole and Reentry** Services Division to provide in writing to the Inmate Records Office the names of those inmates with a sexual predator indicator to be paroled or conditionally released. The parole and/or conditional release of straight timers will be granted effective **180** days after the date of the order granting parole and/or conditional release.

15.9.5 When the Inmate Records Office generates the listing **270** days prior to an inmate's release, a cover memo will be sent to the appropriate institution requesting the inmate's residence plans upon release be entered into the SEXPREP screen on the CRT.

15.9.6 Effective January 21, 2003, the SCDC General Counsel determined that offenders who have completed serving their sex predator offense prior to the passage of the Sexually Violent Predator Act (06/05/98), but have not been released from total confinement and are serving a non-sex predator offense, will be reviewed by the Multi-Disciplinary Team.

15.9.7 Effective January 31, 2000, offenders who are serving sex predator offenses and are eligible for Supervised Furlough (SF) consideration will be reviewed by the Multi-Disciplinary Team six (6) months prior to their SF eligibility dates.

15.9.8 After the SPMDT reviews the appropriate cases, a CRT entry will be made on the SEXPREP screen indicating the disposition. Additional entries will be made after the Prosecutor's Review Committee reviews the referrals, when the Court makes disposition, etc.

15.10 Offenses Requiring Sexually Violent Predator Indicator: An inmate's conviction screen will have a sexual predator indicator ("Pending") if convicted of any of the following offenses:

- Criminal Sexual Conduct, First Degree - Section 16-3-652;
- Criminal Sexual Conduct, Second Degree - Section 16-3-653;
- Criminal Sexual Conduct, Third Degree - Section 16-3-654;
- Criminal Sexual Conduct with Minors, First Degree - Section 16-3-655(A);
- Criminal Sexual Conduct with Minors, Second Degree - Section 16-3-655(B);

- *Criminal Sexual Conduct with Minors in the Third Degree, as provided in Section 16-3-655(C);*
- Assault with Intent to Commit Criminal Sexual Conduct - Section 16-3-656;
- Engaging a Child for Sexual Performance - Section 16-3-810;
- Producing, Directing, or Promoting Sexual Performance by a Child - Section 16-3-820;
- Incest - Section 16-15-20;
- Buggery - Section 16-15-120;
- Committing or Attempting Lewd Act Upon a Child Under Sixteen - Section 16-15-140;
- Violations of Article 3, Chapter 15, of Title 16 felonies involving a minor:
 - Permitting Minor to Engage in any Act Constituting Violation of this Article Prohibited - Section 16-15-335;
 - Disseminating Obscene Material to Person Under Age Eighteen Prohibited - Section 16-15-345;
 - Disseminating Obscene Material to Minor Twelve Years of Age or Younger Prohibited - Section 16-15-355;
 - Disseminating Harmful Material to Minors and Exhibiting Harmful Performance to Minors - Section 16-15-385;
 - Unlawful to Employ Persons Under Eighteen to Appear in a State of Sexually Explicit Nudity - Section 16-15-387;
 - Sexual Exploitation of a Minor, First Degree - Section 16-15-395;
 - Sexual Exploitation of a Minor, Second Degree - Section 16-15-405;
 - Sexual Exploitation of a Minor, Third Degree - Section 16-15-410;
 - Promoting Prostitution of a Minor - Section 16-15-415; and/or
 - Participating in Prostitution of a Minor - Section 16-15-425.
- Any offense for which the Judge makes a specific finding on the order that based on the circumstances of the case, the offender's offense will be considered a sexually violent offense.
- *Criminal solicitation of a minor, as provided in Section 16-15-342, if the purpose of intent of the solicitation or attempted solicitation was to: (a) persuade, induce, entice, or coerce solicited to engage or participate in sexual activity as defined in Section 16-15-375(5); or (b) perform a sexual activity in the presence of the person solicited.*
- All Attempts to Commit, Guilty but Mentally Ill and Accessory Before the Fact *of* any crimes enumerated above and Assault with Intent to Commit offenses in Sections 16-3-652, 653, 654, and 655 (1st and 2nd degrees) are considered sexual predator offenses pursuant to Section 44-48-30 of the Code of Laws of South Carolina.
- The crime of Rape may also fall into this statute pursuant to this Act.

16. STATE DEOXYRIBONUCLEIC ACID (DNA) IDENTIFICATION RECORD DATABASE ACT:

16.1 Background: The State DNA Identification Record Database Act (SC Statute 23-3-620) became effective July 1, 1995, and allows for DNA profiles to be developed for law enforcement and humanitarian purposes. Testing began on May 14, 1999.

16.1.1 Other landmark dates involving amendments to the DNA Law:

- **08/18/00 - The addition of all statutory violent offenses, except Drug Trafficking and Arson 1st or 2nd Degree, and several non-violent offenses as DNA offenses.**
- **08/31/01 - The addition of Burglary 2nd Degree (Non-Violent) as a DNA offense. The statute was amended to expand the list of DNA offenses to include any offender convicted or adjudicated delinquent of any offense classified as a felony, or any other offense that carries a maximum term of imprisonment of five years or more, or peeping or eavesdropping.**

16.2 The DNA database is administered under the direction of the State Law Enforcement Division (SLED). SCDC, the Department of Juvenile Justice, the Department of Probation, Parole and Pardon Services, and county Sheriffs work with SLED to ensure the security and implementation of the DNA database.

16.3 SCDC DNA Procedures:

16.3.1 Any person incarcerated in SCDC who has been convicted of or who has pled guilty or nolo contendere to any of the offenses identified in the DNA Statute, will be required to provide a blood sample for inclusion into the State DNA Database.

16.3.2 Upon conviction information being entered onto the "Convict" screen, SCDC medical personnel are advised, via the automated Medical Encounter screen, that the inmate requires a DNA sample to be taken.

16.3.3 Once taken, SCDC medical personnel label all vials of blood to ensure its accurate assimilation into the SLED DNA Database after it is transferred to SLED.

16.3.4 The DNA law also specifies a \$250.00 fee the inmate must pay in addition to submitting a blood sample. This agency will make all attempts to collect this fee from the inmate prior to his/her release. The processing fee assessed pursuant to this section must be remitted to the general fund of the State and credited to SLED to offset SLED expenses. SCDC Form 18-15, "DNA Notice & Payment Procedures," will be used to document notification to the inmate of the DNA test requirement and the procedures that will be used to collect the \$250.00 fee.

16.4 Offenses Requiring a DNA Blood Sample:

16.4.1 An inmate will be required to submit a blood sample for the DNA Database if he/she has been convicted or adjudicated delinquent and currently serving a felony offense or any other offense that carries a maximum term of imprisonment of five years or more or peeping or eavesdropping.

16.5 The Inmate Records Release Section will notify institutions, via the automated "MAXREL" system, specifically "Sex/DNA screen," which inmates still need a DNA blood sample drawn prior

to his/her release. For all other inmates not within 60 days of release, DNA status may be retrieved via the "DATES" or "PARREV" screens.

16.6 Inmates requiring "DNA blood draws" should immediately be reviewed by the Classification Caseworker to ensure automated information is correct and once established, forward immediately to Medical for the blood draw.

16.7 Under no circumstances is an inmate to be released prior to the blood sample being drawn and documented by the medical staff in the Medical Encounter screen, regardless of whether inmate is being released to max-out or parole.

16.8 While the inmate will continue to be reflected on the "MAXREL," "Tentative Release" screen, they will never appear on the "Authorized Release" screen until the Medical Encounter screen is completed by the medical staff.

16.9 For parole purposes, the "DATES" screen should be reviewed to ensure that blood has been drawn.

17. RELEASE PROCEDURES: Types of Release and Decision Authority: An inmate will be released from the custody of SCDC when s/he satisfies the conditions for release under one (1) of several methods as provided by statute. The Inmate Records Office's responsibility for processing releases differs by type of release. The following describes these responsibilities and releasing authorities for their execution.

17.1 Maxout (Expiration of Sentence): A mandatory, unconditional release administered by SCDC which occurs when the sum of service time and total credits equals or exceeds the incarcerative term on all convictions. The Inmate Records Office will identify inmates satisfying release conditions, audit the manual and automated records, and notify SCDC institutions (via the automated system) to release the inmate.

17.2 Maxout with Probation: A mandatory, conditional release administered by SCDC whereby an inmate is released to the supervision of SCDPPPS upon expiration of the incarcerative terms of all convictions, at least one (1) of which has an unserved probation requirement. The Inmate Records Office will identify inmates satisfying release conditions, audit the manual and automated records, and notify institutions, SCDPPPS, County Sheriffs, Clerks of Court, Solicitors, and other Criminal Justice personnel via the automated system. SCDPPPS may inquire via the internet website.

17.3 Maxout with Community Supervision: A mandatory conditional release administered by SCDC whereby an inmate is released to Community Supervision under SCDPPPS upon serving a mandatory minimum percentage of his/her sentence *with or without parole eligibility*. The Inmate Records Office will identify inmates, coordinate obtaining an address at which s/he will reside upon release, ensure that all time has been satisfactorily served, audit the manual and automated records, and notify institutions via *the* automated system to release inmate on a specified date. The inmate cannot be released without a Community Supervision Certificate from SCDPPPS Parole Examiner unless authorized by the *Release* Section of the Inmate Records Office.

17.4 Supervised Furlough IIA: An early release administered by SCDC in coordination with SCDPPPS. SCDPPPS administers the supervision of these inmates. The inmate may be released up to six (6) months prior to his/her maxout date. However, s/he must have been in SCDC at least six (6) months, must not have been convicted of a disciplinary within last six (6) months prior to early release eligibility date, and is eligible for SFIIA if s/he committed the crime or was convicted between June 14, 1983, and June 13, 1993, on his/her dominant offense for which s/he is currently serving. The inmate cannot be released from his/her facility/institution until the parole examiner provides the inmate with a Supervised Furlough Release Certificate.

17.5 Supervised Reentry: A mandatory early release administered by SCDC in coordination with SCDPPPS. SCDPPPS administers the supervision of these inmates. The inmate shall be released six (6) months prior to his/her maxout date provided that his/her offense date is on or after January 1, 2011, and that s/he has served at least two (2) years from the sentence start date, must be parole eligible, cannot have Community Supervision upon release, and cannot have more than six (6) months probation to serve upon release. The inmate cannot be released without a Supervised Reentry Certificate from the SCDPPPS Parole Examiner unless authorized by the Release Section of the Inmate Records Office.

17.6 Parole by SCDPPPS: A conditional release administered by SCDPPPS. When service time, EWC, and/or EEC meet or exceed the parole requirements on each conviction, the Parole Board has conducted the review, and an approval entry is entered on the Parole Review (PARREV) screen. Since it is **an** SCDPPPS authorized release, SCDPPPS will handle all release coordination, to include coordinating all releases to detaining authorities in which a hold, wanted, or notify has been placed. SCDC's responsibility will be limited to providing data processing reports. The inmate cannot be released from the facility/institution until the parole examiner provides the inmate with a Parole Certificate.

17.7 Provisional Parole: A conditional release approved and administered by SCDPPPS. Inmates can be released to this program 90 days prior to their parole eligibility date under the supervision of SCDPPPS. These inmates are selected to fill slots for a parole hearing session. Inmates switch to "parole" status on their actual parole eligibility date. The same conditions for release as parole applies. The inmate cannot be released from the facility/institution until the parole examiner provides the inmate with a Provisional Parole Certificate.

17.8 YOA Parole: The conditional release of an inmate sentenced under the Youthful Offender Act is administered by SCDC. Parole will be based on the inmate's participation in educational and treatment programs, progress, overall adjustment, and behavior. For additional information refer to SCDC Policy ***OP-22.39, "Young Offender Parole and Reentry Services (YOPRS)."*** **Institutions cannot release these inmates until their YOA Parole Certificates are received from the Division of Young Offender Parole and Reentry Services. The Division of Young Offender Parole and Reentry Services administers YOA supervision for these inmates.**

17.9 Release per Court Order: When court orders are received for mandatory release of an inmate, the Inmate Records Office will ensure that the following actions are taken:

17.9.1 Sentence Remanded/Vacated: A release which results from a sentence that is overturned in the State Supreme Court, an Appeals Court, or a General Sessions Court due to an inmate having filed a Post Conviction Relief (PCR) or other appeal. The inmate will be released to the county to await re-sentencing by the Court unless s/he has won an appeal to be released to the "streets" and there are no other sentence obligations. While an audit will be completed, the decision is based on the Court Order and appeals by the Attorney General's Office. The Inmate Records Office will be responsible for verifying the authenticity of the Court Order *through the Office of General Counsel*.

17.9.2 Post Conviction Relief: When the inmate claims the conviction is invalid due to certain constitutional violations. While the Inmate Records Office will do an audit, the decision is based on the Court Order and appeals by the Attorney General's Office. The Inmate Records Office will be responsible for verifying the authenticity of the Court Order *through the Office of General Counsel*.

17.9.3 Paid Fine/Discharge: The inmate has paid a fine requirement as stipulated on the commitment order at the time of sentencing for the conviction which considers the conviction's incarcerative term satisfied, and, if paid, the inmate is released from custody. While an audit will be completed, the decision is based on the Court Order. The Inmate Records Office will be responsible for verifying the authenticity of the Court Order.

17.9.4 Appeal Bond: The inmate is released on a bond and is pending an appeal of a conviction. If the appeal is denied, the inmate returns to SCDC custody. The decision to release an inmate on bond is based on the Court Order and must cover all indictments/warrants for which the inmate is serving time. The Inmate Records Office will be responsible for verifying the authenticity of the Court Order *through the Office of General Counsel*.

18. RELEASE AUDITS: Prior to the release of an inmate from SCDC, appropriate audits must be completed. These audits will consist of a manual audit of the inmate central record and the Automated Offender Management System by Records Analysts in the Inmate Records Office.

18.1 Inmate Records Manual Release Audit: A record manual audit consists of a Records Analyst comparing all information in the central record with the information entered in the automated system for accuracy. The following are steps for the audits detailing the screens and the documents to be compared:

18.1.1 Pull the selected record and verify the following on the CONVICT screen:

- indictment numbers;
- warrant number;
- County;
- sentencing Judge;
- offense (violent or non-violent);
- length of sentence;
- probationary sentence and suspended time (if applicable);

- date sentenced;
- sentence start date (jail time);
- consecutive or concurrent structure;
- any special instruction noted on the sentencing sheet by the Judge or Magistrate; (This is especially important on probation sentences) and
- mandatory service time and parole eligibility.

18.1.2 Use the DATES screen to verify the maxout date, parole date, good time, service time, EWC, and EEC. Parole eligibility is 1/3 of sentence for violent offenders and 1/4 of sentence for non-violent unless the offense is a "no parole" offense.

18.1.3 On sentences suspended with probation, parole is calculated on the TOTAL SENTENCE, not actual incarcerative time to serve.

18.1.4 Any corrections made to the CONVICT screen will be documented on the TEXT screen. If there are no corrections, the date of the audits and the records analyst's initials will be entered.

18.1.5 Information regarding changes to the CONVICT screen will also be entered on the RECAUD screen that can be accessed by any institution/division. The name of the auditor making changes and the date of change will be created on the screen.

18.2 Inmate Records Automated System Release Audit: An automated system release audit consists of a Records Analyst reviewing the following Offender Management System Screens to ensure that all relevant data correlates in order to justify the inmate's release from SCDC on the date calculated/projected.

VERIFICATION	SCREENS	ACTION REQUIRED
Transfer History	TRANCNT	Verify status and change reason, and look for new sentences, escapes, parole and probation revocations, SF/EPA violations, lock-up status due to investigations, and transfers to court.
Escapes - AWOL	CONVICT	If the inmate was convicted, ensure that the sentence(s) is entered as consecutive as mandated by the statute (unless otherwise ordered by the sentencing judge), and ensure that entry of dead time if the warrant was issued and the date the warrant was served are different.
Parole/Probation Revocations	CONVICT	Sentences should be activated if parole or probation is violated. Sentence could still be on probation/parole status while serving another incarcerative sentence. Assess status.
Lock-up	DISC	Disciplinary must be dropped or disposed of before inmate can be released. If a parole revocation, ensure entry of warrant issue date and warrant served date. Verify dead time.
SF Violators	DISC	Ensure entry on disciplinary screen. SF violation is an automatic forfeiture of 20 days good time.
EPA Violators	TRANCNT	EPA violation is retroactive dead time from the date assigned to EPA to date returned to custody. Ensure entry on TRANCNT screens.

Absent with Leave to Court	CONVICT	Look for new conviction entries. Inmate may have received a new sentence while out to court. Call Clerk of Court's Office to obtain new commitment orders if necessary.
Probation Revocation with New Sentence	CONVICT TRANCNT	Ensure conviction status of original sentence is marked "revoked" and new sentence is entered. Entry is made on CONVICT text.
Parole Revocation with New Sentence	CONVICT	Ensure conviction status of paroled sentence is reactivated and new sentence is entered and entry is made on CONVICT text. Ensure entry of warrant issue date and warrant served date. Verify dead time.
New Sentence without Parole Revocation	TRANCNT CONVICT	Ensure entry of warrant issue date, warrant served date. Check for dead time. Make sure new sentence is entered and entry is made on CONVICT text.
Detainers	DETAIN	Check for detainers. Make sure detainers are not for current sentence serving.
Dates	DATES PF5	Verify the inmate's total and current sentence serving. Current sentence start date, and projected maxout date. Verify current projected maxout date, current sentence start date and projected maxout date. Verify current projected maxout date. Note change reason on date change.
Conviction Summary	CONVICT	Verify convictions or sentence serving. Ensure parole revoked sentences have been activated on the CONVICT screen. Ensure sentence consecutive structure is correct.
If Sentence is Consecutive	CONVICT	Look at consecutive structure to ensure proper entry to ensure that dates are calculated correctly.

Should there be any questions regarding the information/data reviewed, the Records Analyst will further research the case, make appropriate calls, and discuss with supervisor(s) as necessary prior to approving the inmate for release from the SCDC.

19. RECORDS OFFICE RELEASE PROCEDURES:

19.1 Maxout, Supervised Furlough IIA (SFIIA), and Supervised Reentry: The central records of all inmates scheduled for release on Maxout, SFIIA, or Supervised Reentry are moved to the Release Section of the Inmate Records Office prior to scheduled projected maxout release date.

19.1.1 All release audits will be conducted during the month prior to the next month's scheduled releases from SCDC unless their admission and release date are in close proximity.

19.1.2 Releases for SCDC will be contingent upon satisfaction of the sentence through service time, good time credit, EWC/EEC credits, and extra credits, as noted in Section **12.24**.

19.2 Authorization to Release: The Inmate Records Office will authorize all releases to maxout, SFIIA, *and Supervised Reentry* through the Maxout/Pre-Release screening application on the MAXREL screen. All inmates that have been identified and scheduled for release in a given month can be reviewed for release by accessing the "Tentative Release List" push down. Authorization for these releases will only be obtained from the "Official REL Authorization" push down list. The Release Section will complete manual and automated audits in the Inmate Records Office prior to authorizing the release. Inmates with a sentence of six (6) months or more *who have private transportation* will be released on the first day of the month in which their sentences expire. If the first day of the month falls on a Saturday, Sunday, or a legal holiday, such prisoners may be released on the last weekday prior to the first of the month, which is not a holiday, Saturday, or Sunday. Inmates eligible for the Supervised Furlough IIA *and Supervised Reentry* Program may be released up to six (6) months prior to their maxout date. An inmate cannot be held beyond his/her actual full time maxout release date.

19.3 Release Per Court Order: Inmates will be released per Court Order as a result of a judicial order overturning, vacating, or remanding their current incarceration.

19.4 Sentence Remanded/Vacated: The inmate will be released to the County to await re-trial/re-sentencing by the court. While an audit will be completed, the decision to release him/her to the County is based on the authenticity of the Court Order and any appeals by the Attorney General's Office. Upon receipt of an order vacating/remanding/reversing a sentence(s), the Inmate Records Office will:

19.4.1 Verify the authenticity of the Order of Relief by contacting the Attorney General's Office, Clerk of Court, or the Solicitor of the sentencing county. These contacts will be made by the General Counsel's Office unless otherwise requested.

19.4.2 Ensure that the order covers all offenses for which the inmate is incarcerated. The inmate cannot be released if the order does not cover all offenses for which the incarcerated release date is not satisfied.

19.4.3 The General Counsel's Office will contact the Attorney General's Office to determine if the State will petition (appeal) for a rehearing in the case. The state, represented by the Attorney General's Office, has appeal rights on all sentences vacated, remanded, or reversed through Post Conviction Relief. The State has 30 days from the date the order is signed to motion for rehearing.

19.4.4 If an appeal has been filed, the inmate cannot be released until the South Carolina Supreme Court makes a decision.

19.4.5 If the State does not appeal, the inmate will be released to the County jail to await re-sentencing/re-trial.

19.5 Before releasing the inmate, the Inmate Records Office staff will:

19.5.1 Conduct the manual and automated release audit.

19.5.2 Check for pending disciplinarys, other detainers/holds, and victim/witness notifications. Contact the Division of Victim Services if the inmate has a victim/witness notification on file and document this contact. The inmate should not be released until the victim/witness has been notified.

19.5.3 Modify the conviction status on the (CONVICT) screen to indicate (RM) remanded.

19.5.4 Perform a "fast-run" for recalculation of release dates.

19.5.5 Document actions on the conviction text.

19.5.6 Print and file a new summary sheet.

19.5.7 Enter the authorization on the MAXREL screen.

19.5.8 Send a message via CRT and call the Operations Supervisor of the institution on Appeal Bond Releases and other unique release issues that cannot be addressed by the "MAXREL" system.

19.6 Post Conviction Relief:

19.6.1 Proper authenticity of court documents must be determined before an inmate is released. Upon receipt of a Court Order granting release, the Attorney General's Office, the Clerk of Court, or the Solicitor's office in the County granting relief must verify the order.

19.6.2 The General Counsel's Office will contact the Attorney General to determine if the State will petition for a rehearing in the case (i.e., appeal). The State, represented by the Office of the Attorney General, has appeal rights on all Post Conviction Relief orders granted by the courts. The Office of the Attorney General has 30 days from the date that the order is signed to submit a motion for a rehearing.

19.6.3 If the Office of the Attorney General files a petition for a rehearing, the inmate cannot be released until the appellate court makes a decision and the Inmate Records Office receives proper documentation.

19.6.4 If the State does not plan to appeal, the Inmate Records Release Section will ensure that the court documents properly match all convictions that the inmate is currently serving to ensure that there are no unsatisfied sentences not covered by the Court Order. Arrangements will be made to transfer the inmate to the County jail to await re-sentencing when information has been verified.

19.6.5 Before releasing the inmate, the Inmate Records Office staff will:

- Conduct the manual and automated release audit.
- Check for pending disciplinaries, other detainers/holds, and victim/witness notifications. Contact the Division of Victim Services if the inmate has a victim/witness notification and document this contact. The inmate should not be released until the victim/witness has been notified.
- Modify the conviction status on the CONVICT screen to indicate remanded (RM).
- Document actions on the conviction text.
- Authorize release, send a message to the institution via CRT, and coordinate the transfer to the County jail.

19.7 Appeal Bond: Release on Appeal Bond is not a straight release, but release to await a new trial. The Inmate Records Office will be responsible for:

19.7.1 Receiving the Court Order setting bond.

19.7.2 Contacting the Clerk of Court, Solicitor's Office, or Attorney General's Office to verify the authenticity of the Appeal Bond.

19.7.3 Ensuring that the bond covers all active offenses. The order must cover all offenses before the inmate can be released.

19.7.4 Conducting the manual and automated release audit.

19.7.5 The Inmate Records Office must have written proof of the order posting bond before the inmate can be released. The Clerk of Court can provide this information.

19.7.6 If the bond has been posted and received by the Inmate Records Office, the inmate can be released. If the Clerk of Court does not provide proof, the inmate must be released to the county authorities.

19.7.7 Before releasing the inmate, the Inmate Records Office staff will:

- Conduct the manual and automated release audit.
- Check for pending disciplinaries, other detainers/holds, and victim/witness notifications. Contact the Division of Victim/Witness Services if the inmate has a victim/witness notification on file. Document this contact. The inmate will not be released until the victim/witness has been notified.
- Modify conviction screen to indicate Release to Appeal Bond (AB).
- Document action on conviction text.
- Print and file a new face sheet.
- Send a release message to the institution via CRT and call authorized personnel at the institution to release the inmate.

19.8 Release Schedule: SCDC normal release hours are from 8:00 a.m. to 5:00 p.m. each day. Releases may occur prior to or after these hours due to bus schedules, mandatory Court Ordered

releases, etc. Maxout releases will occur on weekends and holidays. It is not likely that Court Ordered or SFIIA releases will occur on weekends or holidays, but may in unusual situations.

19.9 Release Messages: In unusual cases, (i.e., early release to detainers or immediate releases), release messages will be sent via CRT in conjunction with telephone calls and only after the Inmate Records Office has completed all audits and necessary transactions to ensure the proper release of the inmate. Such messages will be sent to all designated institutional personnel listed on each institution's "Operations Records Office Notification" message group that is maintained by the respective Warden.

19.10 Victim/Witness Notification: The Victim/Witness Bill of Rights, *Article 15, Section 16-3-1505 of the SC Code of Laws*, provides for the registering of Victims/Witnesses and for the purpose of this plan to be notified of an inmate's scheduled release from custody *in reasonable time*. A registered Victim/Witness or victim's family member is entitled by law to be informed when the inmate receives a temporary, provisional, or final release from custody. The Inmate Records Office will be responsible for ensuring that the Division of Victim Services has access to the automated list of all inmates scheduled for projected maxout release. All notifications to victims/witnesses will be made by the Division of Victim Services except those to be released to parole or provisional parole. These notifications will be made by SCDPPPS. The Young Offender *Parole and Reentry* Services Division will be responsible for notifying the Division of Victim Services about Youthful Offenders to be paroled/unconditionally released. *The Inmate Records Office* will be responsible for notifying the Division of Victim Services of all SFIIA and immediate releases before the inmate is released from SCDC.

19.11 Detainer (Wanted or Hold): The Release Section staff, Inmate Records Office, will coordinate inmate pickup between the wanting authority and the institution/facility where the inmate is located. If the inmate has not been picked up by 1:00 p.m. by the wanting authority, the institution must call the Release Section. The institution is not to call the wanting authority prior to or after 1:00 p.m. regarding an expected time of arrival. Call the Inmate Records Office! Any delays in notifying the Inmate Records Office may result in the wanting authority's delay or even refusal to pick up the inmate. The Inmate Records Office will contact the wanting authority and advise the institution of the expected time of arrival or any other plans. An inmate must be released by midnight on his/her maxout date to the wanting authority unless otherwise notified by Inmate Records Office that the detainer has been dropped. If directed to release an inmate having a detainer, the detainer will *not* be removed from the automated system by the Release Section and instructions *will be* communicated to the institution by telephone and CRT message.

19.12 Detainer (Notify): A notify requires that the requesting agency only be advised of an inmate's impending release. The Inmate Records Office will make this notification.

19.13 Pending Disciplinary: Inmates with pending disciplinary infractions who are maxing out their sentence must have the disciplinary resolved prior to the first of the month release. Those inmates serving sentences of less than 180 days must have their disciplinary resolved prior to their release date. However, those to be released on SFIIA may be held past their program placement release date. If it is the decision of the charging institution to not take the inmate before a disciplinary hearing, then the pending charge(s) must be dropped or cleared from the disciplinary

screen before releasing the inmate. Inmates with pending disciplinaries who are maxing out their sentence on a weekend/holiday should have all charges resolved prior to the weekend/holiday. If an inmate has been transferred to another institution, it is the responsibility of the gaining institution to coordinate resolution of the pending disciplinary. Inmates **CANNOT** be held beyond their scheduled release date without prior approval of the *Division of Operations/designee*.

20. INSTITUTIONAL RELEASE RESPONSIBILITIES:

20.1 Institutional Responsibilities Related to Maxout, Maxout with Probation, SFIIA, *Supervised Reentry*, and Court Ordered Releases:

20.1.1 Verify inmate release through the release authorization push down (MAXREL).

20.1.2 Conduct a Manual Record audit verifying that all Court Orders have been correctly entered in the automated system. The Classification Caseworker and/or designated persons should check for misfiled detainers, commitment orders, or other legal documents.

20.1.3 Follow the institution's release process to include completion of all clearance forms.

20.1.4 *Conduct an Automated Record data review. Check the release date for Victim/Witness, Sex Offender Register, or pending documents. Any discrepancies must be reported to the Release Section of the Inmate Records Office immediately. All pending disciplinaries on inmates maxing out should be dropped or cleared by the institution prior to release of the inmate. Inmates with a pending disciplinary to be released on SFIIA will be held past their SFIIA eligibility program placement date; however, they cannot be held past their max-out date.*

20.1.5 Knowledge of any unreported changes to the Inmate Records Office and/or documents in process will be reported to the Inmate Records Office immediately.

20.2 Institutional Responsibilities Related to Parole and Provisional Parole Releases:

20.2.1 The parole examiner will be responsible for conducting initial and final interviews beginning seven (7) months prior to release, unless a waiver is signed.

20.2.2 The inmate appears before the Parole Board. The Parole Board either disapproves or grants parole. If the inmate is disapproved, s/he will be eligible for consideration again in two (2) years if his/her current offenses are violent and again in one (1) year for non-violent offenses.

20.2.3 If approved, Classification/Operations and/or designated persons will ensure that the parole examiner provides the inmate with an original Parole Certificate bearing the date of parole prior to release. The certificate serves as authorization to release. All parole releases will be conducted with the parole examiner in the institution.

20.2.4 Follow the institution's release process to include completion of all clearance forms.

20.3 No Parole - Community Supervision:

20.3.1 Inmates who max out a "no parole" sentence are required to serve up to two (2) years of community supervision under SCDPPPS. At least **three (3) months** in advance of the scheduled release, the Inmate Records Office will verify that the conviction is for a "no parole" offense requiring community supervision. The Classification Caseworker will obtain a proposed residence address from the inmate, which will be provided to SCDPPPS via the SCDC automated SFREV screen. SCDPPPS will develop a community supervision plan.

20.3.2 Approximately one (1) week prior to the inmate's release to community supervision, SCDPPPS will obtain the inmate's signature indicating that s/he has been advised of the community supervision requirements. The Community Supervision Certificate will be given to the institution's Operations/Classification Section. At the time of release, one (1) copy of the certificate will be given to the inmate and one (1) copy will be placed in the institutional record. If the Community Supervision Certificate is not served on the inmate by his/her release date, the institution should contact the release section of the Inmate Records Office by 1:00 p.m. The release section will contact ~~the~~ SCDPPPS to facilitate the service of the certificate to the inmate. Upon response from SCDPPPS, the release section will contact the institution via CRT referencing the status of the service of the certificate as well as when to release the inmate. ***An inmate cannot be released prior to the date notated on the certificate.***

20.3.3 If the inmate refuses community supervision, the institution will notify the Inmate Records Release Section immediately. SCDC must effect the release as a maxout and not hold the inmate beyond the scheduled release date. SCDPPPS has the authority to issue a violation of community supervision and return the inmate to SCDC to serve one (1) additional year before being re-released to community supervision.

20.4 Institutional Responsibilities Related to YOA Releases:

20.4.1 Youthful Offenders released from SCDC ***to SCDPPPS*** must have an approved residence ***as determined by SCDPPPS***, before release can be authorized. Youthful Offenders who do not have an acceptable residence may be held past their scheduled release dates except those who must be conditionally released at the end of four (4) years or unconditionally released upon maxing out their total YOA sentence (6 years). If the inmate's residence is not approved, s/he will be given the opportunity to submit additional addresses to be approved by SCDPPPS.

20.4.2 ***Youthful Offenders released from SCDC to YOPRS Intensive Supervision must have an approved residence plan. The residence plan must be approved by the assigned Intensive Supervision Officer (ISO) before a release can be authorized. The listing of a YOA inmate on the MAXREL by YOPRS will indicate that s/he has an approved residence plan and will provide the required authorization for release. The releasing institution will not be provided with the approved residence prior to release. Those Youthful Offenders whose residence plan fails at the time of release may be held past their scheduled release dates except those who must be conditionally released at the end of four (4) years or unconditionally released upon maxing out their total YOA sentence (6 years). If the inmate's residence plan fails, the assigned Intensive Supervision Officer must assist the inmate in developing a new residence plan as soon as possible.***

20.4.3 A Youthful Offender will not be released conditionally from SCDC *to SCDPPPS* until a *Youthful Offender Conditional Release* Certificate is provided to the institution by SCDPPPS.

20.4.4 *Youthful Offenders will be released conditionally from SCDC to YOPRS Intensive Supervision as authorized by the MAXEL. YOPRS will provide a Conditional Release Certificate to the institution.*

20.5 Institutional Responsibilities for Inmate Release Clearance: The following steps will be taken as indicated when the inmate is cleared for release.

20.5.1 Gun Control Act of 1968 (SCDC Form 9-3): The *Operations Coordinator*/designee will ensure that the card is read by and given to the inmate, the inmate's signature is obtained on the receipt, and the receipt is filed in the inmate's institutional record.

20.5.2 Military Selective Service Act (SCDC Form 9-4): The *Operations Coordinator*/designee will ensure that the card is read and given to all male inmates 18 years of age or older who were born after January 1960. The inmate's signature is obtained on the receipt, and the receipt is filed in the inmate's institutional record.

20.5.3 Residence Plans: The *Operations Coordinator*/designee will inquire about the inmate's residence plans following release and note the address/location on SCDC Form 18-7, "Inmate Release Checklist."

20.5.4 Disciplinary: The *Operations Coordinator*/designee will ascertain if there is a pending disciplinary or arrest warrant for a rules violation or criminal offense committed while the inmate has been incarcerated. If confirmed, s/he will notify the Disciplinary Officer/Investigator of the pending release. Normally, it is the responsibility of the institution to transport the inmate to the county jail upon maxout whenever SCDC has filed a warrant(s) against an inmate.

20.5.5 The Operations Coordinator or security personnel releasing an inmate will ensure completion of inmate release clearance paperwork prior to the actual release of the inmate.

20.6 Inmate Release Checklist: SCDC Form 18-7, "Inmate Checklist," must be completed in its entirety. Each item must be initialed or signed indicating the responsible person.

20.7 Manual Record Audit: Caseworker will audit the manual record. A manual record audit consists of comparing information on the *Court* orders to information entered on the conviction (*CONVICT*) screen for accuracy. Ensure that all sentencing information in the manual record has been entered in the automated system. Pull the selected record and verify the following on the *CONVICT* screen:

- warrant/indictment numbers
- date sentenced/sentence start date
- offense/sentence length
- CDR Codes
- consecutive/concurrent sentence

- probationary sentence and suspended time
- mandatory service time
- jail time
- special instructions on court order
- for misfiled detainer, court orders, or other legal documents

20.8 Manual Record Audit Conducted By: Caseworker will sign and date SCDC **Form** 18-7, "Release Checklist," indicating that the audit has been completed. *Audits cannot be completed more than seven (7) days prior to the inmate's release date.*

20.9 Pending Wanted/Holds in CRT: Check for pending disciplinary/pending criminal charges on the **DISC** screen. If yes, indicate action taken.

20.10 Sex Registry Requirement: Check sex registry requirement on **CONVICT** screen or the **MAXREL** screen. If registry is required, has registry form been completed, signed by inmate, picture taken, and registry packet received by Inmate Records?

20.11 DNA Test Requirement: Check DNA registry requirement on the **DATE** or **PARREV** screens. Has DNA test been completed?

20.12 Inmates will sign and receive a copy of the below listed forms. (Forms should be explained to the inmate.)

- Gun Control Act of 1968 (SCDC **Form** 9-3)
- Military Selective Service (SCDC **Form** 9-4)
- Inmate Clearance Checklist (SCDC **Form** 19-26)

20.13 Bus Travel Voucher Requested: *Inmates who need a bus voucher will be released on the 2nd of the month. If the second of the month falls on a Friday, such prisoners will be released the next weekday after the second of the month, which is not a legal holiday. A release address and bus ticket indicator (whether a voucher is needed or not) must be entered by Operations/Classifications by the 10th of the month prior to release. Modifications may be made to the mode of transportation until the 20th of the month. After the 20th, approval will be given on a case-by-case basis to modify the mode of transportation.*

20.13.1 The bus ticket indicator on the ADDRESS screen will determine the date that is placed on the MAXREL to authorize release. If the bus ticket indicator is not entered, the inmate's name will not roll over to the Final Authorization list on the MAXREL.

20.13.2 If the mode of transportation is set for the bus voucher and family arrives at the institution on the 1st of the month to pick up the inmate, the institution is not authorized to release the inmate to the family member. The inmate must be released as scheduled.

20.13.3 Youthful Offenders being released to the supervision of SCDPPS may be given a bus ticket.

20.13.4 Youthful Offenders released to the supervision of YOPRS Intensive Supervision must be released as instructed by the assigned ISO. The ISO, or individual designated by the ISO (such as a family member), will provide transportation for the inmate. These inmates must not be given a bus ticket unless specifically requested by the ISO as an exception.

20.14 Official Release *Sticker* Completed: An official release *sticker will be placed on the back of the inmate's SCDC ID card and given to the inmate upon release. The official release sticker will be signed by the Warden/Duty Warden prior to affixing to the inmate's ID card.*

20.15 Temporary Custody Receipt Completed: The temporary custody receipt will be completed when the inmate is being placed into the custody of another law enforcement agency prior to release from SCDC.

20.16 Personal Belonging(s) Given to Inmate: All personal belongings in the institutional record (i.e., social security cards, credit cards, identifications) will be given to the inmate prior to release.

20.17 Inmate Home Address/Telephone: Record the address and telephone number of the home where the inmate will be living on SCDC Form 18-7, "Inmate Release Checklist."

20.18 Certificate Authorizing Release Received: A certificate is required on all max-out with Community Supervision, Supervised Furlough II-A, *Supervised Reentry*, parole, YOA parole *to SCDPPPS*, and juvenile parole releases. *Determine if a certificate has been received on these releases.* If a certificate is not needed, enter not applicable.

20.19 Two Signatures on *MAXREL*: Have two (2) signatures of Inmate Records' employees been entered on the *MAXREL screen* indicating that the manual and automated audit has been completed? *The two (2) signatures may be the same. Youthful Offender inmates released to YOPRS Intensive Supervision will have one (1) signature of a YOPRS employee entered on the MAXREL.*

20.20 Max-Out Date on *DATE* Screen: Check max-out date on *DATE* screen. Ensure that the date has not changed since audit screening began.

20.21 Inmate Name on Final Authorization for Release List (*MAXREL*): Inmate name must be on this list with the date and time of release from SCDC (Exception - Appeal Bonds *and Release to Parole*).

20.22 Automated Record Audit Conducted *By*: Signature indicates that all of the above listed screens have been checked. All necessary forms are complete, and a certificate authorizing release has been received (if applicable). Indicate date and time of audit. Audit should be conducted immediately prior to the inmate walking out of the institution.

20.22.1 The automated release audit will consist of:

- Check "date" screen
- Check "Detainer" screen
- Check "disciplinary" screen
- Check "convict" and "prior" screen
- Ensure Sex Registry submitted
- Ensure DNA blood sample drawn
- Check **MAXREL** screens
- Any discrepancies should be reported to Inmate Records.

Immediately prior to release:

- Check "date" screen
- Check Detainer and **MAXREL** to ensure authorization for release
- Check Final Authorization for Release List

20.22.2 Inmate Released from Institution: Indicate the name of the person, releasing, and the date and time the inmate was released from the institution.

20.23 Transportation:

20.23.1 The Operations Coordinator will ask the inmate his/her method of transportation. If a bus ticket is needed, the Operations Coordinator will ask the inmate for a destination. The Operations Coordinator will review the inmate's automated record to determine that the destination is legitimate. If the destination does not correspond with information in the automated record, the inmate may be required to provide justification for the requested destination. If no justification is provided, SCDC will provide an in-state bus ticket to the home/family of record, the county of conviction, or to any location where the inmate can provide proof of employment. Bus tickets may be purchased for travel to the requested destination, or as near to the destination as possible based on the bus routes. SCDC will establish certain locations in bordering states to which the inmate can receive a bus voucher based on the above noted verification process. Any additional necessary transportation will be the responsibility of the inmate. ***Youthful Offender inmates released to YOPRS Intensive Supervision must be released to the ISO, or ISO designee. These inmates must not be given a bus ticket unless specifically requested by the ISO as an exception.***

20.23.2 The Operations Coordinator will obtain an SCDC Form 27-42, "Bus Travel Voucher for Release/Paroled Offenders," for an inmate to be released or paroled from the inmate paymaster (include voucher number). The Operations Coordinator will complete the form and submit it to the transportation office for completion by the ticket manager/agent at the bus station. The Transportation Officer will forward the completed SCDC Form 27-42 to the responsible institutional employee.

20.23.3 The Operations Coordinator will verify the identity of the inmate, all release documents, and the Authorization to Release Screen to ensure that the inmate is authorized for release, prior to and at the time of release.

20.23.4 The Operations Coordinator will thoroughly search and pull from the record any identification cards, keys, social security card, and other personal property. Personal property and any official release identification to include the inmate's ID card with affixed release sticker and any release certificates, i.e., parole, community supervision, or supervised furlough II-A, will be given to the inmate at the time of release or given to the law enforcement official if being released to a detainer.

20.23.5 At the time of and just prior to the release of the inmate, the Operations Coordinator will make the appropriate automated entry into the CRT to release the inmate from the count and remove his/her name from the manual count list. ***Family members can bring in release clothing for the inmate; otherwise, the institution will supply clothing for the inmate. Inmates will not be released with the SCDC uniform.***

20.23.6 The Operations Coordinator will immediately forward the institutional record to the Inmate Records Office for retention at the expiration of sentence/maxout, supervised furlough, and/or parole.

20.23.7 If mail is received after the inmate is released, mail and packages will be forwarded/returned in accordance with SCDC Policy PS-10.08, "Inmate Correspondence Privileges."

20.23.8 Ensure that no Agency property leaves the facility.

20.23.9 Notify medical records regarding screening and community follow-up, when deemed necessary.

Evaluating the Effectiveness of Correctional Education (2013) – Report from Rand Corporation, sponsored by U.S. Department of Justice’s Bureau of Justice Assistance

Included in the Department of Corrections’ (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC’s March 27, 2019 letter to the Department of Corrections: “20. Please further explain why the agency wants the classification system to be more “behavioral” based, as opposed to only based on length of sentence including: (a) what would be needed to make it more “behavioral” based and (b) what are the pros and cons of making it more “behavioral” based.”

Foreword

Each year, thousands of incarcerated adults leave the nation's prisons and jails and return to their families and communities. While many successfully reintegrate into their communities, find jobs, and become productive members of society, many others will commit new crimes and end up being reincarcerated. Although a number of factors account for why some ex-prisoners succeed and some don't, we know that a lack of education and skills is one key reason. This is why correctional education programs—whether academically or vocationally focused—are a key service provided in correctional facilities across the nation. But do such correctional education programs actually work? We care about the answer both because we want ex-prisoners to successfully reenter communities and because we have a responsibility to use taxpayer dollars judiciously to support programs that are backed by evidence of their effectiveness—especially during difficult budgetary times like these. Across this Administration, we are committed to investing in evidence-based programming, investigating promising practices, and making science a priority.

Fortunately, the passage of the Second Chance Act of 2007 gave us a chance to comprehensively examine the effectiveness of correctional education because it includes a specific provision to improve education in U.S. prisons and jails. The Bureau of Justice Assistance, with guidance from the Office of Vocational and Adult Education, competitively awarded a project to the RAND Corporation in 2010. We asked RAND to comprehensively examine the current state of correctional education for incarcerated adults and juveniles and where the field is headed, which correctional education programs are effective, and how effective programs can be implemented across different settings. This valuable report—a new meta-analysis examining the effectiveness of correctional education programs—is a key part of that effort and can help us answer the question of whether the nation's investment in correctional education is indeed achieving its intended outcomes.

The results presented here are truly encouraging. Confirming the results of previous meta-analyses—while using more (and more recent) studies and an even more rigorous approach to selecting and evaluating them than in the past—RAND researchers show that correctional education reduces postrelease recidivism and does so cost-effectively. And the study also looks at another outcome key to successful reentry—postrelease employment—and finds that correctional education may increase such employment. The reason the findings for employment are merely suggestive is that only one of the 19 studies that evaluated post-employment outcomes used a highly rigorous methodology.

This need for more high-quality studies that would reinforce the findings is one of the key areas the study recommends for continuing attention. Just as important is the need to better

understand what makes some programs more effective than others—is it the program design, the type of instruction, the length of the program, or, more likely, some combination of these and other factors? Having such knowledge is key to telling us which programs should be developed and funded—which programs will provide the greatest return on taxpayer dollars. Other parts of the RAND project, including an assessment of best practices derived from examining current programs, will further illuminate what works, but new and ongoing studies should be designed in ways that help isolate the causal effects of particular program designs.

The results provided here give us confidence that correctional education programs are a sound investment in helping released prisoners get back on their feet—and stay on their feet—when they return to communities nationwide. We are pleased to have been able to work cooperatively across our two agencies with the RAND staff and to offer this important information.

Preface

The Second Chance Act of 2007 (Public Law 110-199) represented a historic piece of legislation designed to improve outcomes for and provide a comprehensive response to the increasing number of individuals who are released from prisons, jails, and juvenile residential facilities and returning to communities upon release. The Second Chance Act's grant programs are funded and administered by the Office of Justice Programs within the U.S. Department of Justice. In 2010, for the first time, funding was set aside for a comprehensive study of correctional education. The Office of Justice Programs' Bureau of Justice Assistance awarded the RAND Corporation a cooperative agreement to undertake a comprehensive examination of the current state of correctional education for incarcerated adults and juveniles and where it is headed, which correctional education programs are effective, and how effective programs can be implemented across different settings. One key task was to undertake a comprehensive review of the scientific literature and a meta-analysis to synthesize the findings from multiple studies as to the effectiveness of correctional education programs in helping to reduce recidivism and improve postrelease employment outcomes. In this report, we detail the meta-analytic approach and findings for academic programs and vocational training programs provided to incarcerated adults. In a subsequent report, we will present the findings for the overall project.

These results will be of interest to federal and state policymakers; administrators of state departments of corrections, public safety, and education; correctional as well as community college educators; career technical training providers; and other organizations that provide educational services and training to currently incarcerated or formerly incarcerated adults. These results will also be of interest to those in the U.S. Departments of Justice and Education who are committed to ensuring the availability and quality of correctional education programs for incarcerated adults.

The RAND Safety and Justice Program

The research reported here was conducted in the RAND Safety and Justice Program, which addresses all aspects of public safety and the criminal justice system, including violence, policing, corrections, courts and criminal law, substance abuse, occupational safety, and public integrity. Program research is supported by government agencies, foundations, and the private sector.

This program is part of RAND Justice, Infrastructure, and Environment, a division of the RAND Corporation dedicated to improving policy and decisionmaking in a wide range of

policy domains, including civil and criminal justice, infrastructure protection and homeland security, transportation and energy policy, and environmental and natural resource policy.

Questions or comments about this report should be sent to the project leaders, Lois M. Davis, Ph.D. (Lois_Davis@rand.org) and Robert Bozick, Ph.D. (Robert_Bozick@rand.org). For more information about the Safety and Justice Program, see <http://www.rand.org/safety-justice> or contact the director at sj@rand.org.

Summary

Introduction

It is challenging to prepare offenders with the needed vocational skills and education to be successful in reintegrating back into society. Offenders, on average, are less educated than the general population. For example, in 2004, approximately 36 percent of individuals in state prisons had attained less than a high school education compared with 19 percent of the general U.S. population age 16 and over. In addition to having lower levels of educational attainment, offenders often lack vocational skills and a steady history of employment, which is a significant challenge for individuals returning from prison to local communities. And the dynamics of prison entry and reentry make it hard for this population to accumulate meaningful, sustained employment experience. Finally, the stigma of having a felony conviction on one's record is a key barrier to postrelease employment.

On April 9, 2008, the Second Chance Act (Public Law 110-199) (SCA) was signed into law. This important piece of legislation was designed to improve outcomes for individuals who are incarcerated, most of whom will ultimately return to communities upon release. The SCA's grant programs are funded and administered by the Office of Justice Programs (OJP) within the U.S. Department of Justice (DOJ). In 2010, funding was set aside, for the first time under the SCA, to conduct a comprehensive study of correctional education. OJP's Bureau of Justice Assistance (BJA) awarded the RAND Corporation a cooperative agreement to comprehensively examine the current state of correctional education for incarcerated adults and juveniles and where it is headed, which correctional education programs are effective, and how effective programs can be implemented across different settings. One central task in that effort was to comprehensively review the scientific literature and conduct a meta-analysis to synthesize the findings from multiple studies about the effectiveness of correctional education programs in helping to reduce recidivism and improve employment outcomes for incarcerated adults within U.S. state prisons.

In this report, we present the findings from our meta-analysis, which will inform policy-makers, educators, and correctional education administrators interested in understanding the association between correctional education and reductions in recidivism and improvements in employment and other outcomes.

To prepare for the meta-analysis, we first conducted a comprehensive literature search for published and unpublished studies released between 1980 and 2011 that examined the relationship between correctional education participation and inmate outcomes. We focused exclusively on studies published in English of correctional education programs in the United States that included an academic and/or vocational curriculum with a structured instructional component. A scientific review panel abstracted data, and the quality of the research design

was rated using the Maryland Scientific Methods Scale and the U.S. Department of Education's What Works Clearinghouse rating scheme. Studies that met our eligibility criteria in terms of intervention type, research design, and outcomes and that rated a 2 or higher on the Maryland Scientific Methods Scale were included in the meta-analysis.

We used meta-analytic techniques to synthesize the effects of correctional education programs administered to adults across multiple studies. As with previous meta-analyses in this area, our focus was largely on recidivism, because it is the outcome most often used in the literature. However, we also examined whether participating in a correctional education program was associated with an increase in labor force participation and whether participating in a correctional education program with a computer-assisted instructional component was associated with gains in achievement test scores. In addition, we conducted a cost analysis comparing the direct costs of correctional education with those of re-incarceration to place our recidivism findings into a broader context.

Results

Relationship Between Correctional Education Programs and Recidivism

Our meta-analytic findings provide additional support for the premise that receiving correctional education while incarcerated reduces an individual's risk of recidivating after release. After examining the higher-quality research studies, we found that, on average, inmates who participated in correctional education programs had *43 percent lower odds of recidivating* than inmates who did not. These results were consistent even when we included the lower-quality studies in the analysis. This translates into a reduction in the risk of recidivating of 13 percentage points for those who participate in correctional education programs versus those who do not. This reduction is somewhat greater than what had been previously reported by Wilson, Gallagher, and MacKenzie (2000), which showed an average reduction in recidivism of about 11 percentage points. Using more recent studies and ones of higher quality, our findings complement the results published by Wilson, Gallagher, and MacKenzie (2000), Aos, Miller, and Drake (2006), and MacKenzie (2006) and provides further support to the assertion that correctional education participants have lower rates of recidivism than nonparticipants.

Given the high percentage of state prison inmates who have not completed high school, participation in high school/general education development (GED) programs was the most common approach to educating inmates in the studies we examined. Focusing only on studies that examined this kind of program relative to no correctional education, we found that inmates who participated in high school/GED programs had *30 percent lower odds* of recidivating than those who had not. In general, studies that included adult basic education (ABE), high school/GED, postsecondary education, and/or vocational training programs showed a reduction in recidivism. However, we could not disentangle the effects of these different types of educational programs, because inmates could have participated in multiple programs, and the amount of time that they spent in any given program was rarely reported.

Relationship Between Correctional Education Programs and Employment

When we look at the relationship between correctional education and postrelease employment, our meta-analyses found—using the full set of studies—that *the odds of obtaining employment postrelease among inmates who participated in correctional education (either academic or vocational*

programs) was 13 percent higher than the odds for those who had not participated. However, only one study fell into the higher-quality category. Thus, if policymakers want to base decisions on the higher-quality studies alone, then we are limited in our ability to detect a statistically significant difference between program participants and nonparticipants in postrelease employment. Still, our results suggest a positive association between correctional education and postrelease employment. Our findings align with those produced in the Wilson, Gallagher, and MacKenzie (2000) meta-analysis, which also found improved odds of employment among correctional education participants.

When examining the relationship between correctional education and postrelease employment, one might expect vocational training programs to be more adept than academic education programs at imparting labor market skills, awarding industry-recognized credentials, or connecting individuals with prospective employers. And, indeed, when we looked at the relationship between vocational training—versus academic correctional education programs—and postrelease employment, we found that *individuals who participated in vocational training programs had odds of obtaining postrelease employment that were 28 percent higher than individuals who had not participated*. In comparison, individuals who participated in academic programs (combining ABE, high school/GED, and postsecondary education programs) had only 8 percent higher odds of obtaining postrelease employment than those individuals who had not participated in academic programs. Although the results suggest that vocational training programs have a greater effect than academic programs on one's odds of obtaining postrelease employment, there was no statistically significant difference between the odds ratios for the two types of programs, because the number of vocational training studies was relatively small.

Relationship Between Computer-Assisted Instruction and Academic Performance

We also examined the relationship between computer-assisted instruction and academic performance. In this case, the outcomes of interest were standardized test scores in mathematics or reading. We reviewed four studies that compared the achievement test scores of inmates receiving computer-assisted instruction with the achievement test scores of inmates receiving face-to-face instruction. In two of the studies, students in both the treatment and comparison groups also received additional, traditional classroom instruction beyond the portion of their instructional time that was computer-assisted. *We estimated that the overall effect of computer-assisted instruction relative to traditional instruction is 0.04 grade levels in reading, or about 0.36 months of learning, and 0.33 grade levels in mathematics, which represents about 3 months of learning*. In other words, on average across the studies, students exposed to computer-assisted instruction relative to traditional instruction learned very slightly more in reading in the same amount of instructional time and substantially more in mathematics. However, there was no statistically significant difference in test scores between the different methods of instruction, and given that the confidence intervals included zero for both reading and mathematics, we could not rule out the possibility that the effects estimated were due to chance alone. Because computer-assisted instruction can be self-paced and supervised by a tutor or an instructor, it is potentially less costly to administer. It is worth noting that, since the publication of these four studies, the capability and utility of instructional technology has progressed substantially (U.S. Department of Education, 2010), which suggests that the effects of the newer technologies may potentially outstrip those found in the studies examined here.

Comparison of the Costs of Correctional Education Programs and Reincarceration Costs

State policymakers, corrections officials, and correctional education administrators are asking a key question: How cost-effective is correctional education? Our cost analysis suggests that correctional education programs are cost-effective. Focusing only on the *direct costs* of correctional education programs and of incarceration itself, and using a three-year reincarceration rate for a hypothetical pool of 100 inmates, we estimated that the three-year reincarceration costs for those who did not receive correctional education would be between \$2.94 million and \$3.25 million. In comparison, for those who did receive correctional education, the three-year reincarceration costs would be between \$2.07 million and \$2.28 million. This means that reincarceration costs are \$0.87 million to \$0.97 million *less* for those who receive correctional education. In comparison, our estimates indicate that the costs of providing education to inmates would range from \$140,000 to \$174,400 for the pool of 100 inmates. This translates into a per-inmate cost of correctional education ranging from \$1,400 to \$1,744, suggesting that providing correctional education is cost-effective compared with the cost of reincarceration. It is worth noting that this estimate takes into account only the direct costs to the system, but it does not consider such other costs as the financial and emotional costs to victims of crime or to the criminal justice system as a whole. Hence, it is a conservative estimate of the broader effect that correctional education can potentially yield.

To further help interpret the cost savings, we also calculated the *break-even point*—defined as the risk difference in the reincarceration rate required for the cost of correctional education to be equal to the cost of incarceration. For a correctional education program to be cost-effective, we estimated that a program would need to reduce the three-year reincarceration rate by between 1.9 and 2.6 percentage points to break even. In fact, as noted, our meta-analytic findings show that participation in correctional education programs is associated with a 13 percentage-point reduction in the risk of reincarceration three years after release from prison.

Conclusions and Recommendations

Our meta-analytic findings provide further support that receiving correctional education while incarcerated reduces an individual's risk of recidivating after release from prison. Our findings were stable even when we limited our analyses to those studies with more rigorous research designs. We found a notable effect across all levels of education, from adult basic education and GED programs to postsecondary and vocational education programs. Further, our cost analysis suggests that correctional education programs can be cost-effective. As noted by other researchers interested in estimating the effect of correctional education (e.g., MacKenzie, 2008; Gaes, 2008), we, too, found a number of methodological weaknesses in the current body of research that substantially limit one's ability to inform the direction of policy and the design of effective programs. Thus, a number of questions of interest to educators and policymakers remain that the current literature does not permit us to answer, such as understanding what is inside the "black box" in terms of what program elements, for example, are associated with effective programs.

In addition, much is changing in the field of correctional education. The 2008 recession affected correctional education (and other rehabilitative) programs in a number of states and led to some dramatic changes in the number of programs offered, the sizes of classes, the

modes of delivery, and the number of inmates who participate in these programs. A reduced funding environment will likely be true for many correctional education programs for the near future, and questions about the return on investment of these programs will likely continue to be a topic in state-level budget discussions.

Going forward, there is a need to undertake studies that “drill down” to get inside the black box and identify the characteristics of effective programs in terms of such variables as curriculum, dosage, and quality. To inform policy and funding decisions at the state and federal levels, policymakers need additional information and a better understanding of how these programs work (or do not work). In addition, we need to continue to build the evidence base in this area. We provide recommendations for doing so in four critical areas: (1) applying stronger research designs, (2) measuring program dosage, (3) identifying program characteristics, and (4) examining more proximal indicators of program efficacy.

One option is for state and federal policymakers and foundations to invest in well-designed evaluations of correctional education programs to inform such policy questions. Also, researchers and program evaluators need to strive to implement rigorous research designs to examine questions related to potential bias and program dosage and to measure both proximal and distal outcomes. Funding grants and guidelines can help further the field by requiring the use of more rigorous research designs. Such funding would also enable correctional educators to partner with researchers and evaluators to undertake rigorous and comprehensive evaluations of their programs. Last, a study registry of correctional education evaluations would help in further developing the evidence base in this field to inform policy and programmatic decisionmaking.

Findings from this study can be found on the project’s website: <http://www.rand.org/jie/projects/correctional-education.html>.

Acknowledgments

We are particularly grateful for the guidance and feedback provided throughout this project by our Bureau of Justice Assistance project officers, Gary Dennis, Senior Policy Advisor for Corrections, and Thurston Bryant, Policy Advisor. We are also grateful for the valuable input and feedback provided by Brenda Dann-Messier, Assistant Secretary for Vocational and Adult Education, and John Linton, Director, Office of Correctional Education, Office of Vocational and Adult Education, U.S. Department of Education. We also appreciate the support and insights provided by Stephen Steurer, Executive Director of the Correctional Education Association.

The overall direction of the project was guided in part by a steering committee that included John Dowdell (Director of the Gill Center for Business and Economic Education at Ashland University and Co-Editor of the *Journal of Correctional Education*), William Sondervan (Professor and Director of Criminal Justice, Investigative Forensics, and Legal Studies at the University of Maryland University College), Stephen Steurer (Executive Director of the Correctional Education Association), and Susan Turner (Professor of Criminology, Law, and Society, at the University of California–Irvine).

In addition, a number of individuals within and outside RAND contributed to various aspects of the project. The Scientific Review Team members helped guide the selection of intervention characteristics to be abstracted and served as independent reviewers in abstracting the study information that were inputs for the meta-analysis. They included Cathryn Chappell (Ashland University), John Dowdell (Ashland University), Joseph Gagnon (University of Florida), Paul Hirschfield (Rutgers University), Michael Holosko (University of Georgia), David Houchins (Georgia State University), Kristine Jolivet (Georgia State University), Larry Nackerud (University of Georgia), Ed Risler (University of Georgia), and Margaret Shippen (Auburn University).

Without the help of the following people, our study would have not been possible. Staff from the RAND library worked tirelessly to locate and procure all documents needed for our study: Tomiko Envela, Brooke Hyatt, and Sachi Yagyu. A team of doctoral students in the Pardee RAND Graduate School helped organize and review all the studies that were considered for inclusion into our meta-analyses: Nono Ayivi-Guedehoussou, Stephanie Chan, Megan Clifford, Lopamudra Das, Russell Lundberg, Shannon Maloney, Christopher McLaren, and Nicole Schmidt. Certain studies required additional review to ensure that the information was coded properly. This was undertaken by Ph.D.-level research staff at RAND: Ramya Chari, Sarah Greathouse, Lisa Sontag-Padilla, Vivian Towe, and Malcolm Williams. Susanne Hempel and Becky Kilburn advised the project on systematic review procedures. Sue Phillips provided website development support for the project, Aneesa Motala assisted with systematic review software support, and Roald Euler provided programming support. We also wish to

acknowledge the work of Paul Steinberg who served as the communications analyst on this report. Dionne Barnes-Proby provided project management and research assistance, and Judy Bearer provided administrative support. We also benefited from the editing and publications production support provided by James Torr, Patricia Bedrosian, and Jocelyn Lofstrom.

Last, we appreciate the insights provided by our technical reviewers, Juan Saavedra, an associate economist at RAND, and David Wilson, Chair of the Criminology, Law, and Society Department at George Mason University.

Introduction

On April 9, 2008, the Second Chance Act (Public Law 110-199) (SCA) was signed into law. This important piece of legislation was designed to improve outcomes for individuals who are incarcerated, most of whom will ultimately return to communities upon release. The Second Chance Act's grant programs are funded and administered by the Office of Justice Programs (OJP) within the U.S. Department of Justice (DOJ). In 2010, for the first time under the SCA, funding was set aside for a comprehensive study of correctional education. OJP's Bureau of Justice Assistance (BJA) awarded the RAND Corporation a cooperative agreement to comprehensively examine the current state of correctional education for incarcerated adults and juveniles and where it is headed, which correctional education programs are effective, and how effective programs can be implemented across different settings. One key task in that effort was to comprehensively review the scientific literature and conduct a meta-analysis to synthesize the findings from multiple studies about the effectiveness of correctional education programs in helping to reduce recidivism and improve employment outcomes.

In this report, we examine the evidence about the effectiveness of correctional education for incarcerated adults in the United States. By correctional education, we mean the following:

- adult basic education (ABE): basic skills instruction in arithmetic, reading, writing, and, if needed, English as a second language (ESL)
- adult secondary education (ASE): instruction to complete high school or prepare for a certificate of high school equivalency, such as the General Education Development (GED)
- vocational education or career and technical education (CTE): training in general employment skills and in skills for specific jobs or industries
- postsecondary education (PSE): college-level instruction that enables an individual to earn college credit that may be applied toward a two-year or four-year postsecondary degree.

Although some may consider life skills programs a part of correctional education, our project focuses specifically on the four types of academic and vocational training programs summarized above. We also limit our focus to correctional education programs provided in the institutional setting, as opposed to postrelease or community-based programs. Finally, our focus is on correctional education programs provided at the state level. These foci enable us to address the question of what is known about the effectiveness of correctional education—specifically, academic programs and vocational training programs—for incarcerated adults in U.S. state prisons.

Our analyses will be of special interest to correctional education administrators, corrections officials, and state policymakers who are interested in understanding the role that correctional education plays in the rehabilitation of and facilitation of incarcerated individuals' reentry back into society and who must carefully consider how they will allocate resources in a fiscally constrained environment. Our findings will inform them about whether there is an association between correctional education and recidivism, postrelease employment, and achievement test scores.

In the remainder of this chapter, we first provide an overview of the field of correctional education. Then, as context for our meta-analysis, we summarize previous meta-analyses that have been done on correctional education. We then summarize the study's objectives and scope, discuss the study's limitations, and describe a roadmap for the remaining chapters.

Background

The growth in the prison population for the past 40 years has been well-documented. In 2010, there were 1.6 million state and federal prisoners in the United States, with more than 700,000 incarcerated individuals leaving federal and state prisons each year (Guerino, Harrison, and Sabol, 2012). About half of state prison inmates in 2009 were serving time for violent offenses, and 19 percent, 18 percent, and 9 percent of state prison inmates were serving time for property, drug, and public-order offenses, respectively. An enduring problem facing the broader system of criminal justice is the high rate of recidivism in the United States: Within three years of release, four out of ten U.S. state prisoners will have committed new crimes or violated the terms of their release and be reincarcerated (Pew Center on the States, 2011). Devising programs and strategies to reduce recidivism requires understanding the unique challenges that individuals face upon release as well the current state of programs in place to mitigate such challenges. We describe both in turn as they pertain to correctional educational programs.

Barriers to Reentry for Incarcerated Prisoners and the Potential of Correctional Education Programs to Address Them

Visher and Lattimore's (2007) evaluation of the Serious and Violent Offender Reentry Initiative (SVORI) found that education, job training, and employment were among the commonly cited needs of incarcerated prisoners reintegrating back into society. But it is challenging to prepare individuals with the needed vocational skills and education to be successful in reintegrating. Ex-offenders, on average, are less educated than the general population (MacKenzie, 2008; Tolbert, 2012). Analysis of data from the Bureau of Justice Statistics' (BJS's) Survey of Inmates in State Correctional Facilities and the National Assessment of Adult Literacy (NAAL) showed that 36.6 percent of individuals in state prisons had attained less than a high school education in 2004 compared with 19 percent of the general U.S. population age 16 and over (Crayton and Neusteter, 2008). Because many inmates lack a high school diploma, the GED certificate is an important way for them to complete basic secondary education (Harlow, 2003). In 2004, 32 percent of state prisoners had earned a GED compared with 5 percent of the general population, whereas only 16.5 percent of state prisoners had a high school diploma compared with 26 percent of the general population (Crayton and Neusteter, 2008). With respect to postsecondary education, 51 percent of the general U.S. adult popu-

lation had at least some postsecondary education compared with only 14.4 percent of state prison inmates.

Literacy levels for the prison population also tend to be lower than that of the general U.S. population. The 2003 NAAL assessed the English literacy of a sample of 1,200 inmates (age 16 and over) in state and federal prisons and a sample of 18,000 adults (age 16 and over) living in U.S. households. Individuals were measured on three different literacy scales: prose, document, and quantitative.¹ On average, inmates had lower scores on all three scales than the general U.S. population (Greenberg, Dunleavy, and Kutner 2007). A higher percentage of the prison population had average scores that fell within the basic level² for all three measures of literacy compared with the household population. For example, 40 percent of the prison population was at the basic level for prose literacy compared with 29 percent of the household population; 39 percent of the prison population, for quantitative literacy compared with 33 percent of the household population; and 35 percent of the prison population, for document literacy compared with 22 percent of the household population. All these comparisons were statistically significant (Greenberg, Dunleavy, and Kutner, 2007).

In addition to lower levels of educational attainment, the lack of vocational skills and of a steady history of employment (Petersilia, 2003; Western, Kling, and Weiman, 2001) also represents a significant challenge for individuals returning to local communities (Travis, Solomon, and Waul, 2001). Incarceration affects employment and earnings in a number of ways. Using data from the Fragile Families and Child Wellbeing Study, an analysis of the effects of incarceration on the earnings and employment in a sample of poor fathers found that the employment rates of formerly incarcerated men were about 6 percentage points lower than those for a similar group of men who had not been incarcerated (Gellar, Garfinkel, and Western, 2006). Additionally, incarceration was also associated with a 14–26 percent decline in hourly wages. Given the high incarceration rates in the United States and the fact that many offenders cycle in and out of prison, Raphael (2007–08) noted that the dynamics of prison entry and reentry inhibited the accumulation of meaningful sustained employment experience in this population.

Further, the stigma of having a felony conviction on one's record is a key barrier to postrelease employment (Pager, 2003). Holzer, Raphael, and Stoll (2003) conducted a series of surveys of employers in four major U.S. cities and found that employers were much more averse to hiring ex-offenders than in hiring any other disadvantaged group. Willingness to hire ex-offenders was greater for jobs in construction or manufacturing than for those in the retail trade and service sectors; employers' reluctance was greatest for violent offenders than for non-violent drug offenders.

Pager (2003) conducted an audit survey of approximately 200 employers in Milwaukee and generated four groups of male job applicants who were very similar in educational and work experience credentials but differed by whether they were offenders or nonoffenders and by race. Pager found that black offenders received less than one-seventh the number of offers received by white nonoffenders with comparable skills and experience. Also, black non-

¹ *Prose literacy* measures the knowledge and skills needed to search, comprehend, and use information from continuous texts. *Document literacy* measures the knowledge and skills needed to search, comprehend, and use information from non-continuous texts. *Quantitative literacy* measures the knowledge and skills needed to identify and perform computations using numbers that are embedded in printed materials.

² Literacy levels include Below Basic, Basic, Intermediate, and Proficient.

offenders generated fewer than half as many offers as white nonoffenders—14 percent versus 34 percent, respectively. In terms of differences by racial group, 17 percent of white offenders received a job offer compared with only 5 percent of black offenders. Another barrier is that, in many states, employers can be held liable for the criminal actions of their employees (Raphael, 2007–08). Taken together, lower overall educational attainment, lower levels of literacy, and difficulty securing employment upon release underscores the importance of educational programming for this population.

Overview of U.S. Correctional Education

Most state correctional institutions (84 percent) offer some type of correctional education programming (Stephan, 2008, Appendix Table 18). Data from the BJS 2005 Census of State and Federal Correctional Facilities indicate that 66 percent of state correctional facilities offered literacy or 1st–4th grade education programs, 64 percent offered 5th–8th grade education programs, 76 percent offered secondary or GED, 50 percent offered vocational training, 33 percent offered special education, and 33 percent offered college courses (Stephan, 2008).

Although most state prison facilities offer some form of education, participation rates vary and, in fact, have declined somewhat over time. For example, between 1997 and 2004, participation rates in ABE, GED, postsecondary, and vocational training programs all showed a modest decline (Crayton and Neusteter, 2008). In 2004, 52 percent of state prison inmates reported having participated in a correctional education program since admission to a correctional facility (Harlow, 2003). Only 27 percent of state prison inmates reported having participated in vocational training programs; 19 percent reported having participated in secondary education programs (i.e., high school/GED); 2 percent in adult basic education; and 7 percent in adult postsecondary education programs (Crayton and Neusteter, 2008).

Reasons for the low participation rates may include lack of programs or lack of awareness of program opportunities, reduced funding for correctional education programs because of state budget constraints, or competing demands (e.g., when participation is discretionary, an individual might elect to participate in an employment program rather than an education program) (Crayton and Neusteter, 2008; Tolbert, 2012). In addition, states differ as to whether participation in correctional education programs for incarcerated adults is mandatory or voluntary. A survey of state correctional education programs in 2002 conducted by McGlone found that 22 of the 50 states had adopted legislation or implemented policy requiring mandatory education for prisoners. Of those requiring mandatory participation, ten states had achieving a GED as the requirement for program completion (McGlone, 2002).

The administration and delivery of correctional education also differs from state to state. For example, different entities—state departments of corrections, education, public safety, or labor—may be responsible for administering and financing correctional education programs for their prison systems. Some states have their own correctional school district, such as Texas, Florida, and Ohio. Some states may contract with community colleges to provide GED preparation, postsecondary education, or vocational training programs; other states may contract out only some of their programs. In addition, privately operated corrections firms also have responsibility for providing correctional education to adult prisoners. In 2011, approximately 8 percent of the U.S. state prison population was housed in privately operated facilities (Glaze and Parks, 2012).

Previous Meta-Analyses of Correctional Education

Understanding the role that correctional education plays in rehabilitation and reentry back into society is the key goal of our study and meta-analysis. As a backdrop to our study, we first synthesize findings from previous meta-analyses of correctional education programs in the United States. In keeping with our study goals, we discuss only meta-analyses that have an explicit focus on education programs administered primarily to adult offenders in correctional facilities. According to our review, there have been three major published meta-analyses that meet these criteria: Wilson, Gallagher, and MacKenzie (2000); MacKenzie (2006); and Aos, Miller, and Drake (2006).³ These studies differ in their parameters, methods, and conclusions. We review the findings from each of these meta-analyses in turn, focusing first on a landmark systematic review of correctional education programs conducted by Lipton, Martinson, and Wilks (1975) that set the stage for the current policy discourse and research direction in the field.⁴

Lipton, Martinson, and Wilks (1975)

In 1975, Douglas Lipton, Robert Martinson, and Judith Wilks published a systematic review of 231 studies of prisoner rehabilitation programs spanning the years 1945 to 1967—a review that provided the first major stocktaking of the potential efficacy of correctional education. Commissioned by the New York State Governor’s Special Committee on Criminal Offenders, this seminal review was developed in response to the lack of evidence about whether the array of programs and reform efforts in place at the time were successfully preparing prisoners for reintegration into their communities. For studies to be included in their review, Lipton and his colleagues required that studies use a treatment and comparison group design, with the treatment group composed of program participants and the comparison group composed of non-participants. To determine whether different types of programs were working, they tallied the findings from individual studies—those that favored the treatment group, those that favored the comparison group, and those with no discernible difference between the treatment and comparison group—and drew conclusions based on the frequency of statistically significant relationships.

Within their sample of 231 programs, Lipton and his team identified a subset of “skill-development programs,” which consisted of academic and/or vocational training. They summarized comparisons of program participants and nonparticipants in studies that used recidivism and employment as outcomes. Across eight studies that assessed recidivism, three showed significantly lower rates of recidivism among program participants, and one showed significantly higher rates of recidivism among program participants. The other four studies showed

³ The studies included in these meta-analyses are largely based on studies of correctional education programs in the United States. However, a handful of international studies are also included.

⁴ Since the publication of the landmark Lipton, Martinson, and Wilks study, there have been other systematic reviews of adult correctional education that do not apply meta-analytic methods (e.g., Gaes, 2008), and there have been meta-analyses of correctional education programs administered to juvenile offender populations (e.g., Lipsey, 2009). With the exception of the Lipton, Martinson, and Wilks study, which is important to acknowledge because of its seminal role in the field, we discuss only meta-analyses of adult correctional education programs, because their methods, findings, and conclusions are most relevant for providing context to our study. Additionally, readers should note that we are aware of two dissertations (Chappell, 2003; Wells, 2000) that have used meta-analytic techniques to assess the relationship between correctional education and recidivism. We do not review their analyses in depth here, but their findings, by and large, accord with those of Wilson, Gallagher, and MacKenzie (2000); MacKenzie (2006); and Aos, Miller, and Drake (2006).

no differences between the treatment and comparison groups. In two studies that examined employment as an outcome, offenders who participated in vocational training programs fared worse than nonparticipants after being released. Overall, their review found no conclusive evidence that correctional education was beneficial and found that, in some cases, it might even be harmful.

Lipton's systematic review is notable, in part, because it set the tone for future research and policy discourse in the field. In 1974, one year before the release of the study, Robert Martinson, the study's second author, published a preview of the findings in a commentary "What Works?—Questions and Answers About Prison Reform" in *The Public Interest*. In it, Martinson wrote: "it can safely be said that they [the studies included in their review] provide us with no clear evidence that education or skill development programs have been successful" (p. 27). Martinson's summation cast doubt on the utility of educational programming within the broader system of corrections and generated the provocative conclusion that "nothing works" in prisoner rehabilitation. Although the "nothing works" tagline was never used in the full empirical report, the tagline from Martinson's commentary became synonymous with the Lipton, Martinson, and Wilks review; as a result, federal- and state-sponsored initiatives to address the needs of prisoners were effectively put on the defensive and in some cases curtailed.

Wilson, Gallagher, and MacKenzie (2000)

The empirical documentation of the Lipton study, along with Martinson's critique, galvanized efforts to improve existing academic and vocational training programs and to develop new methods of educating prisoners. However, it was not until 25 years later, in 2000, that the efficacy of correctional education was revisited through a formal meta-analysis conducted by David Wilson, Catherine Gallagher, and Doris MacKenzie (2000) at the University of Maryland. Their meta-analysis included 33 studies of correctional education programs administered to adults published after 1975—a time period that broadly covered the time since the Lipton study was released.

The Wilson, Gallagher, and MacKenzie study attempted to improve on two limitations of Lipton's work: (1) The Lipton study did not address the magnitude of differences in outcomes between treatment and comparison groups, and (2) the Lipton study did not explicitly account for variation in the quality of the research designs across studies. With respect to the former limitation, Lipton's review simply summed up the number of studies that yielded statistically significant differences between the treatment and comparison groups and based the study's conclusions on the preponderance of effects in one direction or the other; this approach is sometimes referred to as a "vote counting" approach, in which each study gets a vote in the "significant" or the "not significant" column, and the votes are counted (Field, 2005). Unfortunately, this approach essentially obscures the magnitude of the effects across studies. In other words, a large difference favoring the treatment group "counts the same" as a small difference favoring the comparison group.

With respect to the latter limitation, Lipton's review discussed differences in methodological quality, highlighting (where appropriate) studies with carefully or poorly selected comparison groups. However, this variation in research design did not factor into how they tallied statistically significant program effects.

To address these limitations, Wilson and his team used formal meta-analytic techniques, which average findings of multiple studies into a single parameter of program or "treatment

group” efficacy.⁵ Additionally, they rated each study using a scale that they and their colleagues at the University of Maryland developed specifically for systematic reviews of correctional programs (Sherman et al., 1997). This scale, referred to as the Maryland Scientific Methods Scale (the Maryland SMS), classifies studies as either experimental or quasi-experimental. Following Shadish, Cook, and Campbell (2002), experimental studies are defined as those that randomly assign participants to treatment and control-group status, whereas quasi-experimental studies are those that employ both a treatment and comparison group, but in which group membership is not randomly assigned.

Among the quasi-experimental studies, the Maryland SMS further classifies them according to the quality of statistical controls they employ. Studies from most to least rigorous are classified as follows: Level 5 indicates a well-executed randomized controlled trial (or RCT); Level 4 indicates a quasi-experimental design with very similar treatment and comparison groups; Level 3 indicates a quasi-experimental design with somewhat dissimilar treatment and comparison groups, but reasonable controls for differences; Level 2 indicates a quasi-experimental design with somewhat dissimilar treatment and comparison groups and with limited and/or no controls for differences; and Level 1 indicates a study with no separate comparison group. Wilson and colleagues included only studies that received at least a Level 2 rating and then used the scale as a control variable to determine whether their findings were dependent on the research designs used by the studies’ authors.

Whereas the Lipton study documented mostly mixed results, the Wilson study found that correctional programs were beneficial, by and large. In their meta-analysis, they demonstrated that participation in academic programs—including ABE, GED, and postsecondary education programs—was associated with an average reduction in recidivism of about 11 percentage points. This finding was robust when controlling for ratings on the Maryland SMS. Academic program participation was also associated with a greater likelihood of employment, although they did not quantify the relationship in terms of a percentage increase/decrease in the same way they did for recidivism. Vocational training program participation did not yield a consistent relationship with recidivism but was associated with increased odds of employment. Wilson and his team’s findings, based on more recent programs and more rigorous methods of analysis, questioned the Martinson study’s claim that “nothing works.”⁶

MacKenzie (2006)

A few years later in 2006, Doris MacKenzie, a co-author of the Wilson study, updated their original meta-analysis. In this update, she included a handful of newer studies and limited her sample to only those studies published after 1980. Additionally, she limited her sample of studies to only those receiving a Level 3 or higher rating on the Maryland SMS, thereby eliminating studies from the predecessor meta-analysis with Wilson and Gallagher that had the weakest study designs. In her re-analysis, she again found that academic program participation appeared beneficial: The odds of not recidivating were 16 percent higher among academic program participants than nonparticipants. However, with the new sample parameters in place, she now found that vocational program participation was associated with a reduction in recidi-

⁵ Meta-analytic techniques were not yet developed at the time of the Lipton study.

⁶ Since the publication of the Lipton study, a number of criminologists and policymakers questioned the claim that “nothing works.” However, it was not until the Wilson, Gallagher, and MacKenzie study’s meta-analysis that a comprehensive evaluation of the literature was synthesized in a systematic way to directly challenge the conclusion of the Lipton study.

vism: The odds of recidivating were 24 percent lower among vocational program participants than nonparticipants. She did not update the analysis of employment.

Aos, Miller, and Drake (2006)

Also in 2006, Steve Aos, Marna Miller, and Elizabeth Drake of the Washington State Institute for Public Policy conducted a meta-analysis of 571 offender rehabilitation programs for adults and for juveniles, ranging from counseling to boot camps to education. They limited their sample to studies conducted from 1970 onward and, like MacKenzie's meta-analysis published the same year, they included only studies that received at least a Level 3 rating on the Maryland SMS. In analyzing 17 studies of academic education programs and four studies of vocational education programs administered to adults, they found results that largely agreed with MacKenzie's: On average, participants have lower rates of recidivism than their nonparticipant peers. Specifically, they found that academic program participation was associated with a 7 percent reduction in recidivism, and vocational program participation was associated with a 9 percent reduction in recidivism.

In sum, early reviews of correctional education programs administered to adults by Lipton, Martinson, and Wilks (1975) found inconclusive evidence to support their efficacy. The lack of consistent positive effects contributed to the popular belief that "nothing works" in prisoner rehabilitation; however, this conclusion may have been premature, given that appropriate analysis techniques had not been developed. More recent reviews using meta-analysis techniques question the conclusions of the earlier work, finding evidence of a relationship between correctional education program participation before release and lower odds of recidivating after release. However, the most recent meta-analyses (Aos, Miller, and Drake, 2006; MacKenzie, 2006) did not consider employment outcomes; thus, whether program participation is associated with postrelease success in the labor market remains unclear.

Study's Objective and Scope

As with the meta-analyses described above, our study aims to understand whether the body of relevant research to date supports the proposition that correctional education programs can help successfully prepare offenders for community reintegration upon release. Following the lead of Wilson and colleagues, MacKenzie, and Aos and colleagues, we use meta-analytic techniques to synthesize the effects of correctional education programs administered to adults across multiple studies. In doing so, our goal is to build on the contributions of their work, while extending them in a number of key ways, which we describe below.

First, our study examines multiple outcomes: recidivism, employment, and achievement test scores. As with previous syntheses, our focus is largely on recidivism, because it is the outcome most often used in the literature, and the ability to avoid recidivism is arguably an important marker of successful rehabilitation. However, we also examine whether participating in a correctional education program is associated with an increase in labor force participation and whether participating in a correctional education program with a computer-assisted instructional component is associated with gains in achievement test scores.

Acquiring steady employment postrelease has been shown to be an important factor in preventing recidivism among ex-offenders (Laub and Sampson, 2003; Uggen, 2000), and among the civilian population, improving the acquisition of academic skills and concepts is

vital in securing employment (Klerman and Karoly, 1994). In terms of life-course or developmental criminology, an emergent body of research has shown that desistance from deviant behavior in adulthood is largely contingent on the opportunity for individuals to acquire new roles and responsibilities in their immediate social nexus. This life-course approach contends that the acquisition of stable, gainful employment—a productive, socially normative role—redirects behavior and energy toward one's family and community and, consequently, away from crime (Laub and Sampson, 2003; Uggen, 2000). We examine employment outcomes, because many of the programs we reviewed were explicitly geared toward providing inmates with occupational skills that they could use to procure employment following release from prison. With respect to skill development, the most proximal measures of program efficacy are indicators of the inmates' learning that can be attributed directly to the courses taken while incarcerated. Thus, our assessment of three distinctive outcomes—recidivism, employment, and academic achievement—helps to elucidate potential mechanisms through which program participation may help improve the postrelease prospects of those formerly incarcerated.

Another way our study differs from the previous meta-analyses is in how we deal with the underlying studies. One major limitation of the extant research on correctional education is the dearth of studies that used experimental designs, making it difficult to establish a causal relationship between program participation and the outcome of interest. Studies that lack experimental designs are susceptible to selection bias, whereby inmates who elect to participate in educational programs may differ in unmeasured ways from inmates who elect not to participate in those programs. For instance, they may be more motivated, have a stronger internal locus of control, or be more proactive about planning for their postrelease futures. Therefore, differences detected between program participants and nonparticipants in meta-analyses with a large number of nonexperimental studies may reflect pretreatment attributes of the inmates who participated in the studies and not the true effects of the programs themselves. To deal with this potential bias, Wilson and colleagues controlled for each study's Maryland SMS rating in their meta-analysis, and the MacKenzie and Aos analyses reviewed only studies that earned at least a Level 3 rating on the Maryland SMS. In our analysis, we pay special attention to those studies receiving a higher (Level 4 or Level 5) rating. As a result, our study provides the most scientifically defensible evidence of program efficacy to date.

A defining feature of our review is that it is the most comprehensive and most recent to date, including a total of 58 studies of correctional educational programs in the United States (compared with 33 studies reviewed by Wilson and colleagues, 22 reviewed by MacKenzie, and 21 reviewed by Aos and colleagues). Our review also focuses specifically on academic and vocational training programs, whereas some of these other reviews also included life skills training/reentry programs and work placement programs. Before our review, the meta-analysis with the most current coverage was Aos, Miller, and Drake (2006), which included studies published through 2005, whereas our meta-analysis incorporates studies published through December 2011. Although this represents a difference of only a few years, it enables us to include 12 newer studies published between 2006 and 2011.

Finally, we used a rigorous review process with multiple quality control checks (described in detail in the next chapter) to ensure that the data extracted from each study are accurate and in accordance with the methods and approaches typically used in the field. Although details on the data extraction process used in previous meta-analyses are limited, it appears that most of this work was carried by the researchers themselves and/or a small team of graduate students. For our study, we assembled an independent scientific review team comprising

content experts external to RAND who have publication and/or funding track records in the field of correctional education research. Each study included in our meta-analysis was assessed independently by two members of the scientific review team, with each independent evaluation reviewed, edited, and finalized by both a graduate student and a project team member. Given the way we constructed the data extraction and review teams and the multiple stages of extraction and review, we feel that the data used to construct our meta-analysis are the most complete in terms of content and quality.

Study's Limitations

As with all studies, there are some study limitations the reader should keep in mind. The majority of the studies we reviewed focused on the outcome measures of recidivism and employment; a more limited set also examined the relationship between correctional education and academic performance. There are also more proximal outcomes of interest in correctional education, such as program completion, behavior while incarcerated, and progress on individual plans and goals. We were limited in our ability to examine these more proximal outcomes because of the limited number of studies examining these indicators.

The correctional education literature is varied, including studies published in academic journals and in other arenas—what often is referred to as the “grey literature.” As detailed in Chapter Two, a strength of our study is the literature review process in which we identified studies done on correctional education programs that were published in the peer-reviewed and grey literature by searching online databases, research institutions and colleges’ websites, and dissertation abstracts, and by reaching out to departments of corrections and research units. Although our search of the grey literature was extensive, it was not exhaustive, in that we were unable to contact every department of corrections, for example, to obtain copies of unpublished evaluation reports. Of the grey literature we were able to explore, much of it yielded descriptive studies, and our search did not yield studies with research designs of high enough quality to be included in our meta-analysis. That said, to the extent that we missed some high-quality reports from the grey literature through our search strategy, then this is a potential study limitation.

To provide practitioners with evidence on effective program design and implementation and refinement, we originally sought to identify specific aspects of correctional education programs that show signs of efficacy, such as the type of program (e.g., ABE, GED, postsecondary) or the method of delivery used (e.g., whole class instruction, one-on-one instruction). However, few studies provided sufficient information to allow for complete or consistent coding across program characteristics. Despite the need for this information in the field, our analyses are exploratory in nature and limited in what we are able to discern in terms of elements of effective programs.

Finally, our literature review covers the time period from January 1, 1980, through December 31, 2011. As with any systematic literature review and meta-analysis, one has to define a starting point and a cutoff date for inclusion. Our focus on the past three decades precludes a historic look at how correctional education programs may have evolved in the years immediately following the publication of the Lipton study. Additionally, we are aware of a few studies that were just recently published (after our cutoff date of December 31, 2011); these studies were not eligible for inclusion in our meta-analysis.

Organization of This Report

The remainder of this report is organized as follows. Chapter Two summarizes our study methodology. Chapter Three presents the meta-analytic results for the relationship between correctional education and recidivism and the results of a supplementary cost analysis. Chapter Four presents the meta-analytic results for exploring the relationship between correctional education and employment. In Chapter Five, we present the meta-analytic results for computer-assisted instruction and academic performance. In Chapter Six, we provide our overall summary of our meta-analytic findings and discuss policy implications and directions for future research.

This report contains eight appendixes. Appendixes A, B, and C are included as part of this report. Appendix A includes a list of the document identification parameters and sources. Appendix B includes a list of the scientific review team members. Appendix C includes the diagnostic tests for the meta-analyses.

Appendixes D, E, F, G, and H are standalone appendixes posted on the website along with this report. Appendix D includes the scientific review data abstraction protocol. Appendix E includes the list of studies included in the literature review. Appendixes F, G, and H include summaries of the studies included in the recidivism, employment, and computer-assisted instruction meta-analyses.

Study Methodology

Introduction

This chapter describes our literature search, screening, and review procedures; our approaches to rating the rigor of each study; and the meta-analytic model used to pool and to synthesize the results of these studies. As described in greater detail in this chapter, the meta-analytic results we present are from a comprehensive literature search for published and unpublished studies released between 1980 and 2011 that examined the relationship between correctional education participation and inmate outcomes. We decided to use 1980 as a starting point to ensure that we captured a large enough sample of studies to conduct a meta-analysis with sufficient statistical power; extending too far back in time risks relying on programs that are outmoded and/or less relevant to the current correctional environment. We focused exclusively on studies published in English of correctional education programs in the United States that included an academic and/or vocational curriculum with a structured instructional component.

Studies were subjected to two rounds of screening, each by two independent screeners, for appropriateness of interventions, outcomes, and research designs. Those that met the screening criteria were reviewed independently and in detail by two Ph.D.-level reviewers. The reviews were then reconciled first by a graduate student and then by a Ph.D.-level member of the research team. Outcome data about recidivism rates, employment, and test scores were abstracted and scaled to allow for synthesis across studies, and the meta-analyses were conducted using random-effects pooling.

As with previous meta-analyses that have examined the effects of correctional education described in the previous chapter (Wilson, Gallagher, and MacKenzie, 2000; MacKenzie, 2006; and Aos, Miller, and Drake, 2006), we evaluated the strength of the causal inferences warranted by each study and used these evidence ratings to test the sensitivity of our results to the rigor of the design of the studies. We rated the evidence from each study according to its ability to establish causal inference, using two separate but substantively similar evidence-rating scales—the Maryland Scientific Methods Scale (SMS) (Sherman et al., 1997), which is familiar to those in the criminal justice community, and the U.S. Department of Education’s What Works Clearinghouse (2011) rating scheme, which is familiar to those in the field of education. In the remainder of this chapter, we elaborate in greater detail on each step of our methodological approach.

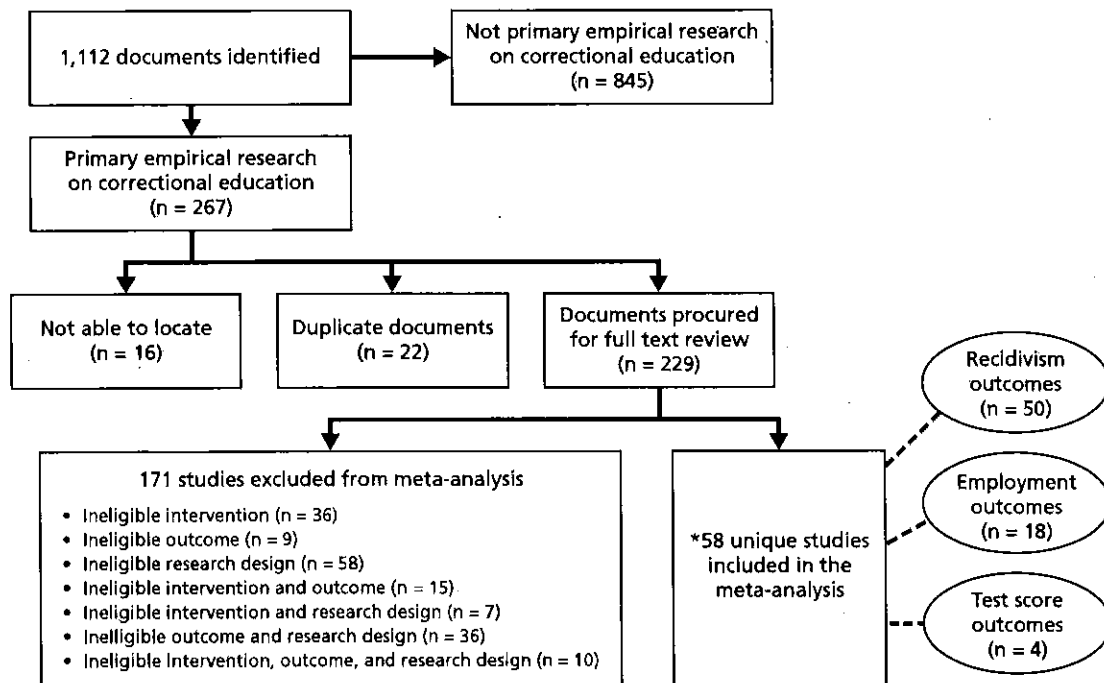

Comprehensive Literature Search

To identify studies for our meta-analysis, we conducted a comprehensive literature search. As part of this search, we first scanned the universe of potential published and unpublished documents to compile all available empirical research studies that examine the effect of correctional education programs on participant outcomes. We then reviewed the documents to determine if they met a set of eligibility criteria that would permit their use in a meta-analysis. A flow chart depicting the steps through which documents were acquired and assessed for eligibility in the meta-analysis is shown in Figure 2.1. We provide details on each of these steps below.

Document Identification

The literature search commenced with an attempt to identify and to locate all possible sources of empirical analyses of correctional education's relationship with inmate outcomes. We employed three methods to identify potential documents, carried out in the following order: a search of relevant research databases, an online repository search, and a bibliography scan. First, we developed a set of search terms (e.g., "correctional education," "prisoner education," "program evaluation") and entered them into search engines of eight research databases widely used by academic researchers. Next, we entered the same set of search terms into online search engines of 11 repositories of criminological research housed at various universities and research organizations. Last, we maintained a record of all major literature reviews and meta-analyses that emerged from the aforementioned database and online repository search. We then searched their bibliographies for potentially relevant citations. A complete list of the search

Figure 2.1
Eligibility Assessment of Potential Documents for Inclusion in the Meta-Analysis

RAND RR266-2.1

terms, research databases, online repositories, and major literature reviews/meta-analyses is included in Appendix A.¹ This document identification stage produced a list of 1,112 citations for documents that could potentially be eligible for inclusion in our meta-analysis.

Eligibility Assessment

Our expansive search strategy yielded a range of documents that were either not focused on correctional education or were not primary empirical studies (e.g., newspaper articles, opinion pieces, literature reviews, workbooks, implementation guides). To eliminate these documents, we trained a team of doctoral students in the Pardee RAND Graduate School (PRGS) on the goals of our review and on how to assess whether the document was a primary empirical study of a correctional education program.² To standardize our assessment process, we uploaded the bibliographic reference information for each document into *DistillerSR*, a web-based application designed to facilitate systematic literature reviews. Each reference was assessed independently by two doctoral students within *DistillerSR*, where they had the opportunity to review the document's title, source, and abstract. If they disagreed on whether the document was a primary empirical study related to correctional education, the reference was flagged and a project team member reconciled the discrepancy. If there was not enough information to make a firm assessment, the project team member erred on the side of caution and marked the reference as eligible for the next stage of review.

In this next stage, the list of primary empirical studies of correctional education and the list of references lacking sufficient information to determine if they were primary studies related to correctional education were delivered to RAND's research library staff to retrieve hard copies of the documents. The documents were then uploaded into *DistillerSR*. For this second round of review, two doctoral students independently evaluated the full text of the document. With access to the entire document in addition to the bibliographic reference information, they were able to confirm whether or not it was a primary empirical study of correctional education.

Of the original 1,112 documents identified, 845 were not primary empirical studies of correctional education and 267 were primary empirical studies of correctional education. Of the 267 primary empirical studies, we were unable to locate 16 documents, and an additional 22 documents were determined to be duplicates of other studies. This included either exact duplicates or studies by the same author(s) that were published in different venues but with the same findings and/or analytic samples. In the latter situation, we used the document with the most comprehensive information on the program and the study design. For each of the 229 nonduplicative studies that we were able to obtain, the doctoral students examined its content to determine if it met three criteria necessary for inclusion in our meta-analysis:

¹ In addition to our systematic approach to identifying potential documents, a number of researchers and practitioners directly provided us with documents for consideration (most of which had already been identified through our database search strategy). This cooperation was due to the high visibility of the project among members of the Correctional Education Association and the Association of State Correctional Administrators. All documents, regardless of how they were identified, were subjected to the same eligibility assessment procedures.

² We define a *primary empirical study* as one in which the authors were directly responsible for the research design, data analysis, and the reporting of the findings.

- The study needed to evaluate an *eligible intervention*.
- The study needed to measure success of the program using an *eligible outcome measure*.
- The study needed to employ an *eligible research design*.

For our study, we define an *eligible intervention* as an educational program administered in a jail or prison in the United States published (or released) between January 1, 1980, and December 31, 2011. We define an educational program as one that includes an academic and/or vocational curriculum taught by an instructor, designed to lead to the attainment of a degree, license, or certification. The program could be part of a larger set of services administered to inmates or it could be a stand-alone program. However, it needed to have an explicit academic or vocational curriculum in place with an instructional component. Therefore, prison work programs and job placement programs lacking a structured training component under the supervision of an instructor were deemed ineligible. Additionally, although the program may include postrelease services, it must be primarily administered while the inmate is held in a correctional setting. Programs administered to parolees were excluded. Instructional programs that did not explicitly address academic or vocational skills—for instance life skills, drug rehabilitation, and anger management programs—were also excluded.

The study needed to measure the effectiveness of the program using an *eligible outcome measure*, which for our meta-analysis include recidivism, employment, and achievement test scores. Initially we kept our parameters broad and considered a range of possible outcomes, such as disciplinary infractions while incarcerated, postrelease educational attainment, wages, and subjective evaluations of program effectiveness. However, a representative meta-analysis requires a moderate number of studies with outcomes measured in a comparable way. Few studies with these other outcomes met this requirement, and so we eventually excluded them from consideration.

For the purposes of our meta-analysis, we consider an *eligible research design* as one in which there is a treatment group composed of inmates who participated in and/or completed the correctional education program under consideration and a comparison group composed of inmates who did not. Comparison groups that deviated from this definition—such as comparison groups composed of nonincarcerated participants or comparison groups who received a different correctional education intervention from the one under consideration—were not eligible. In reporting the findings, the authors of the study needed to include sufficient statistical detail on both the treatment and the comparison groups to meet this eligibility criterion.³

As with the initial review of the bibliographic reference information, if the two doctoral students reviewing the full text of the document disagreed on whether the document met any of these three criteria, the document was flagged and a project team member reconciled the discrepancy. Of the 229 nonduplicative studies that we were able to obtain, 58 studies had an eligible intervention, an eligible outcome measure, and an eligible research design—and, thus, were eligible for inclusion into our meta-analysis. Of these 58 studies, 50 studies used recidivism as an outcome variable, 18 studies used employment as an outcome variable, and four studies used achievement test scores as an outcome variable. All four of the studies that used achievement test scores as the outcome variable evaluated the effects of computer-assisted instruction. Therefore, although our analyses of recidivism and employment outcomes look at

³ If they reported means for the treatment and comparison group, we required that they also provide sample sizes. If they reported a regression coefficient, we required that they also provide a standard error.

a broad range of correctional education programs, our analysis of achievement test scores is solely focused on programs with computer-assisted instruction. Hence, we refer to our analysis of test scores as our computer-assisted instruction meta-analysis. Bibliographic citations for all 229 nonduplicative, locatable primary empirical studies of correctional education and their status with respect to the three eligibility criteria are reported in Appendix E. Those 58 studies deemed eligible for meta-analysis were then subjected to a formal scientific review, described in detail in the next section.

Scientific Review

Independent Reviews by the Scientific Review Team

Once the studies had been screened for eligibility, those deemed eligible were reviewed in greater detail by two researchers who independently extracted information about the interventions, outcomes, and participants in each study. To undertake these detailed reviews, we appointed a scientific review team made up of ten faculty members from various academic departments across the country who possessed not only methodological expertise in quantitative social science research but also substantive expertise in correctional education, criminal justice, and/or social services for at-risk populations. A list of the scientific review members, their educational credentials, and their current positions is shown in Appendix B.

To guide extraction of the data from the individual studies, we designed a scientific review protocol. This protocol was developed with close attention to the review procedures used in the U.S. Department of Education's What Works Clearinghouse (2011), as well as the procedures used in the University of Maryland's "Preventing Crime" report (Sherman et al., 1997). The resulting protocol, which is displayed in Appendix D, included four worksheets. The first or *main worksheet* contains 44 questions, most of which are multiple choice. These questions focus largely on the characteristics of the program being evaluated, as well as on the study's setting, design, and publication venue. The scientific review team helped guide the selection of intervention characteristics so that our analysis would be as useful as possible to policymakers and practitioners. The *outcomes worksheet* asks for information about the outcome variables in the study. The *baseline characteristics* worksheet captures descriptive information about the study participants. Finally, the *reviewer log* asks about the reviewers' overall impressions of the strengths, weaknesses, and implications of the study.

The scientific review process commenced with two full days of training for the team members on how to use the scientific review protocol to record relevant data from the studies. Following the training, reviewers independently completed two practice protocols, and we provided the team with detailed feedback about response patterns and guidance to encourage standardized answers. To further encourage consistency among reviewers, we provided a written manual that further clarified the intent of each question in the protocol.

After two scientific review team members independently reviewed each eligible study, the main worksheets of the two independent reviews were merged into a single, reconciled review. A project team member then examined each review, referring back to the material in the original document to reconcile items on which the two independent reviewers provided substantively different responses. Another project team reconciled the outcomes and baseline characteristics worksheets, in all cases consulting each original study to ensure correct data extraction. As a final precautionary measure, the dataset of extracted, reconciled outcome and

baseline characteristics information was checked twice against the main text of the studies for data recording accuracy.⁴

Defining Treatment and Comparison Groups

As described above, our meta-analysis is founded on the aggregation of studies that include both a treatment group consisting of inmates who participated in and/or completed a correctional education program and a comparison group consisting of inmates who did not participate in and/or complete the correctional education program. Most studies compared outcomes between these two mutually exclusive groups to test the hypothesis that exposure to correctional education improved outcomes. In some cases, the study included more-refined groups based on treatment dosage and program completion. For example Cronin's study of GED programs in Missouri (2011) identified four groups of inmates: (1) inmates who came to prison without a GED and did not make any progress; (2) inmates who came to prison without a GED, made progress toward obtaining GED, but did not earn a GED; (3) inmates who earned their GED in prison, and (4) inmates who came to prison with a GED or more. In this instance, we constructed our treatment and comparison groups as conservatively as possible following an intent-to-treat approach. In an intent-to-treat approach, every subject who was assigned to the treatment group is analyzed on the outcome of interest as a member of the treatment group, regardless of whether they received the full dosage of the treatment through completion. In accord with this approach, we coded groups 2 and 3 in Cronin (2011) as the treatment group and group 1 as the comparison group. Thus, our analysis reflects all inmates without any exposure to a GED program (comparison group) to inmates who were exposed to any amount of correctional education while incarcerated, regardless of whether they completed the program (treatment group).

Rating the Quality of the Research Design

The quality of any meta-analysis depends on the quality of studies it includes (LeLorier et al., 1997; Slavin, 1984). One particular concern in social science research—and by extension, in social science meta-analysis—is that effects attributed to program participation in the original studies may actually be driven by the types of individuals who elect to participate in the program rather than by the causal effect of the program itself. This problem is typically referred to as selection bias. To minimize concerns about selection bias, some researchers advocate strict restrictions on the quality of studies included in the meta-analysis (Slavin, 1984), such as the exclusion of all studies that are not RCTs.

Often considered the gold standard in social science research, RCTs are desirable because the random assignment of research participants to treatment and control groups renders the two groups identical in expectation at the time of assignment (Shadish, Cook, and Campbell, 2002), allowing us to reasonably infer that any average differences in their outcomes were attributable to the intervention (Myers and Dynarski, 2003; Shadish, Cook, and Campbell, 2002). In practice, of course, treatment and comparison groups cannot be infinitely large,

⁴ In a number of cases, the data provided in the article were insufficient for direct use in a meta-analysis and needed to be recalculated or recalibrated so that they could be consistently input into the analysis as odds ratios. For example, some articles provided means without standard errors, or regression coefficients without the total number in the study. In these cases, we performed our own calculations. Hence, some of our reported estimates for each article differ somewhat from what was included in the original publication.

so there is the potential for treatment and comparison groups to differ as a result of random variation. In addition, RCTs sometimes suffer from attrition after the point of randomization, which can potentially introduce systematic differences between the two groups. Despite these limitations, RCTs offer a strong defense against selection bias, because the treatment assignment process is, by definition, independent of the characteristics of the participants.

Other rigorous comparison-group designs, such as regression discontinuity designs and instrumental variables analysis, attempt to minimize selection bias in nonrandomized studies by capitalizing on arguably random processes, but in doing so, they must satisfy a larger set of assumptions to nullify the threat of selection bias (Angrist and Pischke, 2009; Murnane and Willett, 2011; Schochet et al., 2010). Still other designs attempt to mitigate selection bias comparing the treatment group to a non-randomly assigned comparison group that is *observably* similar. Some studies achieve this through matching or weighting the comparison group so that it is similar to the treatment group on a number of possibly confounding characteristics. When the number of characteristics to be used in the weighting or matching is large, balance can sometimes be achieved by using these characteristics to estimate the probability of receiving the treatment and matching treated to comparison cases based on these fitted probabilities, or propensity scores (McCaffrey, Ridgeway, and Morral, 2004; Rosenbaum and Rubin, 1983; Rubin, 1997). Matching or weighting on observed characteristics helps ensure that the observed characteristics are not responsible for any apparent treatment effects, but it leaves open the possibility that unmeasured differences may be driving such effects. Moreover, because researchers rarely have comprehensive measures of all the group differences—such as motivation, perseverance, time orientation, or locus of control—that may drive selection into the groups and also be associated with outcomes, matching and weighting studies remain vulnerable to selection bias.

Similarly, studies that use covariate adjustment—that is, that statistically control for possible confounding characteristics through multivariate regression—are also vulnerable to biases from unobserved variables. In comparison to matching or weighting studies, those that use regression controls may also be more vulnerable to misspecification of the functional form of the relationship between variables—that is, to incorrectly assuming particular linear or curvilinear relationships (Ho et al., 2007). Although some studies have found that matching and weighting perform little better than covariate adjustment, given the same variables (Cook et al., 2009), there remains a preference in the field for balanced treatment and comparison groups over reliance on statistical controls to adjust for differences between dissimilar groups (What Works Clearinghouse, 2011).

Given the centrality of selection bias as a threat to causal inference in the literature on social and educational interventions, we rated the quality of evidence in each reviewed study based on how well the study's design mitigated this threat. Specifically, we sought to classify the rigor of the eligible studies using evidence ratings that focused on the warranted strength of the causal inference and could be well-understood by both the criminal justice and education communities.

As noted in Chapter One, we chose the Maryland Scientific Methods Scale, which was developed for the 1997 *Preventing Crime* report published by University of Maryland researchers (Farrington et al., 2002; Sherman et al., 1997). The Maryland SMS rates studies on a five-point scale, where Level 5 is the most rigorous, indicating a well-executed randomized controlled trial with low attrition; Level 4 is a quasi-experimental design with very similar treatment and comparison groups; Level 3 is a quasi-experimental design with somewhat dis-

similar treatment and comparison groups but reasonable controls for differences; Level 2 is a quasi-experimental design with substantial baseline differences between the treatment and comparison groups that may not be well controlled for; and Level 1 is a study with no separate comparison group that does not receive the treatment. As noted in Chapter One, the Wilson, Gallagher, and MacKenzie (2000) meta-analysis was restricted to studies rated Level 2 or higher on the Maryland SMS, and the later meta-analyses by MacKenzie (2006) and by Aos and colleagues (2006) included only studies rated Level 3 and higher.

For communicating results in a way that would be easily understood by the education community, we also used the U.S. Department of Education's What Works Clearinghouse rating scheme—herein referred to simply as the WWC rating scheme for ease of expression. The WWC rating scheme has only three categories: Meets Standards, Meets Standards with Reservations, and Does Not Meet Standards. A study that *Meets Standards* on the WWC rating must be a randomized, controlled trial with low levels of overall and differential attrition or it must use a well-executed regression discontinuity or single-case design. An RCT that exceeds the attrition threshold (described further below) is reviewed as a quasi-experimental design.⁵ A study *Meets Standards with Reservations* if it is a quasi-experimental design in which the treatment and comparison groups are observably very similar at the point of analysis. This means that all observed baseline characteristics for the treatment and comparison groups are within 0.25 of a standard deviation of each other and that there are statistical controls for any differences greater than 0.05 of a standard deviation. A study in which the treatment and comparison groups are not within 0.25 of a standard deviation of each other on all observed baseline characteristics and lack statistical controls for any differences greater than 0.05 of a standard deviation *Does Not Meet Standards*.

Operational Use of the Maryland SMS and WWC Rating Scheme

A useful feature of the Maryland SMS and WWC rating scheme is that their two highest evidence categories correspond very closely. Of the two, however, the WWC rating scheme is more specific than the Maryland SMS about precise cutoffs regarding baseline equivalence and attrition.

Baseline equivalence refers to the degree to which the treatment and comparison groups are similar at the beginning of the study in terms of characteristics known to influence the outcome. If a study uses random assignment to assign participants to the treatment and comparison groups, then baseline equivalence is assumed by both the Maryland SMS and WWC rating scheme. This is because random assignment ensures that self-selection is not driving membership in the treatment or comparison group at the point of assignment. The groups differ in expectation only by their assignment status, which is random by design. Of course, as noted above, differences may result simply by accident, especially when the groups are small. For this reason and because it improves the precision of the treatment effect estimate, researchers often adjust for any *observed* baseline differences even in the case of random assignment.

⁵ The WWC rating scheme maintains newer sets of standards for two other research designs that can warrant causal inference. These are regression discontinuity designs, in which assignment to the treatment or comparison group depends on falling immediately on either side of a numeric threshold, such as a test score cutoff (Schochet et al., 2010), and single-case designs, which lack an untreated comparison group but in which causality is established by repeatedly introducing and withdrawing the treatment from the participants in one of several patterns (Kratochwill et al., 2010). Although the former are increasingly popular in policy analyses (Angrist and Pischke, 2009), and the latter are popular in special education research, no eligible studies with either of these designs were uncovered in our comprehensive literature search.

However, neither the WWC rating scheme nor the Maryland SMS requires adjustment for baseline differences in cases of random assignment.

In studies that do not have random assignment, baseline equivalence is established by demonstrating that the treatment and comparison groups are observably similar on key variables that may be related to both treatment status and the outcome variable, since baseline differences between groups could bias the treatment effect estimates, as noted above. For example, if inmates who enroll in correctional education have lower baseline education levels than those who do not, then any differences in the two groups' outcomes could be due to their prior education levels (and associated aptitude or motivation levels) as much as to the effect of the treatment program. Both the Maryland SMS and WWC rating scheme are based largely on the strength of evidence about baseline equivalence, with randomized designs receiving the highest ratings.

Attrition rates refer to the percentage of participants whose outcomes are lost to the study for any number of reasons, such as inability to collect follow-up data on the inmate, transfer of the inmate to a different correctional facility, loss of follow-up data, and so forth. Importantly, attrition is not the same as noncompletion of a program or intervention among those whose outcomes are observed. Noncompleters who drop out of an intervention program are viewed simply as noncompliant treatment recipients, and they are defined as part of the treatment group within our intent-to-treat framework.

The WWC rating scheme is concerned with two types of attrition: overall attrition and differential attrition. Both may undermine the advantages of random assignment by introducing self-selection into the sample for which outcomes are observed. Overall attrition is simply the total share of baseline participants lost to the study; differential attrition is the percentage-point difference in the attrition rates of the treatment and comparison groups. Because the concerns about attrition pertain to disruption of random assignment advantages, we follow the WWC rating scheme in applying attrition calculations only to studies that begin with a randomized design. Randomized trials with low overall and differential attrition meet the highest standards on the WWC rating scheme, and we apply this standard to the Maryland SMS as well to meet its highest category. Studies that do not begin with a randomized design do not need to meet an attrition threshold, but they are also ineligible for the highest ratings on either the Maryland SMS or the WWC rating scheme. These studies need only establish strong evidence of baseline equivalence to meet the second-highest tiers of evidence on both scales.

To summarize, studies with high rates of attrition and/or that lack baseline equivalence may yield biased results. Because the WWC rating scheme offers clear guidelines to establish specific numeric thresholds for these validity threats, we apply those thresholds to both scales. Our operational definitions of each scale are presented in Table 2.1.

Because the Maryland SMS' and WWC rating scheme's evidence standards are quite similar, we operationalize the strongest evidence categories identically across the two scales. To receive the highest evidence rating on each scale, a study must meet the liberal standard for low overall and differential attrition to earn a *Meets Standards* rating on the WWC rating scheme and a Level 5 on the Maryland SMS.⁶ WWC has not published the precise formula for its attrition thresholds, so the formulae we used are extrapolated from the attrition macro in the

⁶ The WWC maintains both a liberal and a conservative threshold for attrition (see Appendix A in What Works Clearinghouse, 2011). Both thresholds are designed to keep attrition-related bias within 0.05 of a standard deviation of the outcome measure, but the liberal threshold is based on less pessimistic assumptions about selective attrition. We chose to apply the

Table 2.1
Operational Definitions of Evidence Rating Categories in the What Works Clearinghouse Rating Scheme and the Maryland Scientific Methods Scale

What Works Clearinghouse Rating Scheme	Maryland Scientific Methods Scale	Joint Operational Definition
Meets standards	5	Randomized controlled trial with attrition below the liberal WWC threshold
Meets standards with reservations	4	Quasi-experimental design (or high-attrition RCT) in which the treatment and comparison groups are matched (within about 1/20th of a standard deviation) at baseline on at least age, prior offenses, baseline educational level, and time to data collection
Does not meet standards	3	Treatment and comparison groups are matched on 1–2 variables other than gender, and/or there are statistical controls for at least some baseline differences between groups other than gender
	2	No random assignment for matching, and no statistical controls for baseline differences between treatment and comparison groups
	1	No separate comparison group

template provided to WWC reviewers, with confirmatory reference to the attrition threshold graphics in version 2.1 of the *WWC Procedures and Standards Handbook* (What Works Clearinghouse, 2011).⁷ The formulae we used are as follows:

Low attrition:

$$\text{Differential attrition rate} \leq 0.129 - (0.192 * \text{Overall attrition rate})$$

High attrition:

$$\text{Differential attrition rate} > 0.129 - (0.192 * \text{Overall attrition rate})$$

where 0.129 represents the y-intercept of the attrition threshold (i.e., the acceptable level of differential attrition, defined as 12.9 percentage points difference between the treatment and comparison groups), and –0.192 represents the slope, or the difference in the differential attrition level associated with a unit difference in the overall attrition rate.

In each formula, as noted, the *overall attrition rate* is the pooled sample of study participants included in the final analysis divided by the pooled sample at the point of randomization. The *differential attrition rate* is the absolute value of the attrition rate for the treatment group minus the corresponding rate for the comparison group. We also operationalize a Maryland SMS Level 4 study and a study that Meets WWC Standards with Reservations identically across the two scales. Studies at this level are quasi-experimental designs in which the

liberal threshold because there are so few RCTs in correctional education research. For example, of the four RCTs identified for the meta-analyses, three met the liberal threshold for attrition, but only one would have met the conservative threshold.

⁷ The graphic depicting the thresholds changed slightly from version 2.0 to version 2.1 of the *Procedures and Standards Handbook*, with no corresponding change in the text or definition of the thresholds, and inquiries to the WWC for the precise equation were unsuccessful. For increased precision, we ultimately used a formula extrapolated from the macros in the 2010 study review guide (the data-extraction tool provided to reviewers), although our ratings of the studies were not sensitive to small variations in the threshold formula.

treatment and comparison groups are observably very similar, primarily because of deliberate matching or weighting of the comparison group to the characteristics of the treatment group. The result should be that treatment and comparison group members differ by no more than 0.05 standard deviation units on three baseline dimensions that are known to be related to recidivism outcomes and that are relevant to an educational intervention: namely, *age*, *prior offenses*, and *baseline educational level*. (This also requires that standard deviations of the baseline characteristics be reported in the studies.) Moreover, we specify that the recidivism and employment studies must take into account the *length of time between release and data collection*, since inmates released for longer periods will have more time to recidivate and/or to find work. They can do this by observing everyone for a certain time period (e.g., one year postrelease) or through survival analysis methods that adjust for duration of release. Because correctional facilities are typically gender-segregated, gender is an unlikely source of selection bias in this context. Therefore, matching on or controlling for gender does not affect a study's evidence rating in our analysis.

It is important to note that in requiring baseline equivalence on only four variables, we depart slightly from the WWC guidelines, which require that *all* observed baseline characteristics—whether 1 or 50, for example—fall within 0.25 standard deviations of each other for the treatment and comparison group and that differences of more than 0.05 of a standard deviation be held constant statistically. The reason for this departure is that very few studies in our sample provided adequate information about the distribution of baseline characteristics for us to run these calculations, but a number of studies described matching procedures to ensure close balance of the treatment and comparison groups on particular variables. Also, we do not require matching on all observable variables, because this penalizes studies that report larger numbers of variables—with a large enough set of variables, we would expect some differences by chance alone, and this chance would be greater in smaller studies, even when the studies were otherwise equivalent. Instead, we set a consistent expectation of matching or achieving strong similarity on the three variables known to be strong predictors of postrelease outcomes and on the time period that the individuals were observed postrelease.

Studies below Level 4 on the Maryland SMS are classified as “Does Not Meet Standards” by the WWC rating scheme, because these categories do not require strong similarity between the treatment and comparison groups. We operationalize a Level 3 study on the Maryland SMS to be one that includes statistical controls for at least one of the aforementioned key baseline differences between groups and/or includes matching or weighting on one or two of these variables.

We classify Level 2 studies as those that include nonrandomly assigned treatment and comparison groups but do not include any statistical controls or adjustments for differences between groups. Finally, we classify Level 1 studies as those that lack a comparison group consisting of inmates who did not receive the treatment.⁸

Although we classify all studies included in our meta-analysis on both the WWC rating scheme and the Maryland SMS, we organize most of our analyses around the Maryland SMS because of its granularity in classifying studies—allowing us to make comparisons at more refined levels of study design rigor. As Wilson and colleagues (2000) did, we restrict our meta-analysis to studies rated a Level 2 or higher on the Maryland SMS, effectively limiting it to

⁸ Note that Level 1 would not include single-case design studies. Had we encountered such studies in our search and screening processes, they would have been rated separately according to the WWC standards for single-case designs.

studies that include a distinct comparison group that did not receive the treatment. However, we focus particularly on the Level 4 and Level 5 studies, which are the least vulnerable to selection bias. We consider the results from these higher-quality studies to be the most robust for use and application in the field. However, the inclusion of the lower-quality studies in some specifications ensures that we are also making use of the findings of a broad set of studies of a range of program types and models undertaken during the last 32 years.

Description of the Data

As shown in Figure 2.1, we determined that 58 studies were eligible for inclusion into our meta-analysis. For analytic purposes, however, our unit of analysis is the effect size (k) and not the individual study (n). An effect size is the statistic reported in the study that indicates the magnitude of the difference on the outcome of interest between a treatment group and a comparison group. Across the 58 studies, we were able to extract a total of 102 effect sizes. The number of effect sizes exceeds the number of studies, because a study could contain multiple treatment and comparison groups and thus multiple comparisons. For example, a study making a single comparison of recidivism rates between a treatment group receiving GED coursework and a comparison group receiving no GED coursework would contribute only one effect size to our meta-analysis. However, a study comparing the recidivism rates of two treatment groups—one receiving GED coursework and one receiving vocational certification training—with the recidivism rate of a comparison group receiving no form of correctional education would contribute two effect sizes to our meta-analysis.

Our recidivism analysis is based on 71 effect sizes from 50 studies, our employment analysis is based on 22 effect sizes from 18 studies, and our test score analysis is based on nine effect sizes from four studies. Table 2.2 shows the distribution of studies and effect sizes according to their rating on the Maryland SMS and the WWC rating scheme.⁹ The majority of studies are of recidivism and employment and the majority of effect sizes come from Level 2 and Level 3 studies on the Maryland SMS and Do Not Meet Standards according to the WWC rating scheme—suggesting that, on average, the field of correctional education research is limited in its ability to assess whether correctional programs yield a causal effect on recidivism and employment. Therefore, in our analysis, we focus in where possible on those studies that receive a Level 4 or Level 5 rating.

Analytic Approach

We conducted our meta-analysis using a random-effects approach. Random effects meta-analysis is appropriate when effect sizes are heterogeneous. This might occur when the individual studies are not sampled from the same population; this can be conceptualized as there being a “super-population” of all potential respondents, which contains an array of subpopulations, and each study randomly samples from one of these subpopulations. In addition, dif-

⁹ Note that in Table 2.2, the distribution of studies (n) across the Maryland SMS ratings for the recidivism analysis sums to 51 and not 50. This is because one study (Piehl, 1995) contributed two effect sizes that had different Maryland SMS ratings and therefore appears in two separate rows.

Table 2.2
Distribution of Studies and Effect Sizes, by Rating Categories in the What Works Clearinghouse Rating Scheme and the Maryland Scientific Methods Scale

What Works Clearinghouse Rating Scheme	Maryland Scientific Methods Scale	Recidivism Analysis		Employment Analysis		Test Score Analysis	
		n	k	n	k	n	k
Meets standards	5	2	2	0	0	2	4
Meets standards with reservations	4	5	7	1	1	1	3
	3	20	29	9	11	0	0
Does not meet standards	2	24	33	8	10	1	2
	1	na	na	na	na	na	na
Total sample		51	71	18	22	4	9

NOTES: n is the number of studies, k is the number of effect size estimates, and na is not applicable. Studies receiving a Level 1 on the MD Scale do not include any type of comparison group; therefore, there was no way to calculate an effect size estimate. They were excluded from our analysis by design. The n column in the Recidivism Analysis column does not sum to 50 because one study (Piehl, 1995) contributes two effect sizes at different rating levels.

ferences in treatment protocols or contexts might also introduce heterogeneity. For our meta-analysis, we consider the super-population to be all inmates in correctional facilities in the United States between 1980 and 2011, and the subpopulations might be minimum-security inmates in California in 1985; medium-security inmates in Connecticut in 2003, etc. Rather than assuming that each study has randomly sampled from the super-population, we consider that each study has sampled from one of the subpopulations. Hence, there is substantial heterogeneity in the effect size estimates across the different subpopulations.

Random-effects models are an appropriate technique for meta-analysis when there is substantial heterogeneity in effect size estimates across the different subpopulations, as is the case in our review of correctional education programs.¹⁰ We use a DerSimonian-Laird estimator to pool results across the multiple effect sizes. This estimator weights each study's effect size estimate by the precision (e.g., standard error), and the heterogeneity of effect sizes (e.g., gives greater weight to those studies that are closer to the mean), and then produces a pooled effect size and standard error. This pooled effect size in our meta-analysis provides an estimate of the relationship between participation in correctional education and our three outcomes across the population of eligible studies. Because of the nested nature of our data (e.g., multiple effect sizes within the same study), the assumption of independent observations is violated, which may result in artificially narrow standard errors. To assess this, as a sensitivity analysis we computed robust standard errors using robust hierarchical meta-analysis (Hedges, Tipton, and Johnson, 2010).¹¹

¹⁰ Random-effects models was also the estimation method used in three major meta-analyses published to date (Wilson, Gallagher, and MacKenzie, 2000; MacKenzie, 2006; and Aos, Miller, and Drake, 2006).

¹¹ We computed robust standard errors for meta-regression using the ROBUMETA command available in Stata (Hedberg, 2011). This was necessary only for our analysis of recidivism, as there was not sufficient nesting in the pool of eligible studies of employment or test scores to permit this computation. The results were not contingent on the method for estimating the standard errors; tests of significance reflect unadjusted standard errors.

One limitation of systematic reviews is that studies that fail to produce statistically significant results have a more difficult time getting published in journals—leading to publication bias or “the file drawer problem” (i.e., studies that find no program effects remain in file drawers and are not widely distributed). This publication bias may skew the findings in favor of successful programs. We attempted to limit the threat of publication bias by searching an array of sources in the literature to procure official program evaluation reports not published in journals, working papers, research briefs, theses, and dissertations.

To assess whether our results are contingent on the studies that we were able to procure, we perform two diagnostic tests. Our first diagnostic test assesses whether studies with positive results have a higher probability of publication—that is, whether we can find evidence of publication bias. Large studies, which have more power and smaller standard errors, will have a greater chance than small studies of obtaining a statistically significant result, if the population effect size is equal in those studies. If there is no publication bias, the average effect size estimate of the smaller studies in our pool of eligible studies should be the same as the average effect size estimate of the larger studies in our pool of eligible studies. If publication bias is having an effect, then small studies that do not obtain statistically significant results should have a lower chance of being published. This can be depicted visually in a “funnel plot” and formally tested using either a parametric test (Egger et al., 1997) or a non-parametric test (Begg, 1994).

A second diagnostic test we perform is a “leave-one-out” analysis. There is a risk that one large study with an extreme result may bias the results of the analysis. To ensure that this is not the case, we run “leave-one-out” analysis, in which the data are re-analyzed leaving out studies one at a time, until all studies have been excluded individually. We then ensure that the substantive conclusions are unchanged, regardless of which studies are included or excluded. The results from these diagnostic tests and their implications for interpreting the main analytical findings are shown and described in Appendix C. In short, there is some evidence of publication bias in the body of studies on recidivism, but this bias is small and unlikely to substantively change the results of our main findings.

The Relationship Between Correctional Education and Recidivism

Introduction

This chapter presents the results from our meta-analysis where recidivism is the outcome. We first describe how we defined and measured recidivism across the 50 eligible studies and then pool all 71 effect size estimates from the 50 studies together to provide an aggregate estimate of the relationship between participation in correctional education and recidivism. Next, we examine the relationship when restricting only to studies with the most rigorous research designs. We then use previously published national estimates of recidivism to help interpret the magnitude of this relationship. We also explore whether the relationship between correctional education and recidivism varies by the type of program and instructional delivery method used. We conclude with a straightforward cost analysis that compares the cost of correctional education to the cost of reincarceration.

Measuring Recidivism

Recidivism was measured in many ways across the 50 eligible studies along three dimensions: the *definition of recidivism* used by the researcher, the *time period* between release from prison and when recidivism is recorded for study participants, and the *statistical metric* used by the researcher to report the degree of recidivism experienced by the treatment and comparison group members. We describe each of these dimensions below in turn.

- *Definition of recidivism.* Recidivism is defined a number of ways, including reoffending, rearrest, reconviction, reincarceration, technical parole violation, and successful completion of parole. In our pool of 50 studies that had recidivism outcomes, the majority used reincarceration as the outcome measure ($n = 34$).
- *Time period.* Studies varied in the time period through which they followed the study participants after release from prison, which represents their time “at risk for recidivism.” Studies ranged from examining a cohort of former inmates in the community for six months since release from prison to following them for over ten years since release from prison. The most frequently used time periods in the 50 eligible studies were one year ($n = 13$) and three years ($n = 10$).
- *Statistical metric.* Forty-two of the studies reported the percentage in treatment and comparison group that recidivated and seven of the studies reported regression coefficients along with standard errors to express the magnitude of the difference in recidivism between the treatment and the comparison groups. One study (Piehl, 1995) contributed

effect sizes reported two different ways—one based on a percentage comparison between the treatment and comparison group and the other based on a regression coefficient.

When there were multiple outcomes and reporting methods used, we gave preference to reincarceration (as this represents the modal definition of recidivism), recidivism within one year of release or as close as possible to one year (as this represents the modal time period used by the authors of the studies), and regression coefficients (as this represents the best attempt by the authors of the studies to reduce potential sources of bias). When these were unavailable, we used whatever definition, time period, or statistical metric reported by the author so that we could be as inclusive as possible. As such, our recidivism measure comprises a range of slightly different measures, and thus should not be interpreted in terms of the individual measures that make it up.¹ Details on how each of the 50 studies defined and operationalized recidivism, as well as specific information on the individual programs being studied, the research design used in the study, the WWC's and the Maryland SMS' ratings of the study's research design, and the rates of recidivism recorded for the treatment and comparison group are shown in Appendix F.

We transformed all 71 effect size estimates from the 50 studies into 71 odds ratios.² Recall that the number of effect sizes exceeds the number of studies, because a study could contain multiple treatment and comparison groups and thus multiple comparisons. For our purposes, the odds ratio is calculated as the odds of recidivating among treatment group members divided by the odds of recidivating among comparison group members. Odds ratios greater than 1 indicate that the treatment group had a higher rate of recidivism, and odds ratios less than 1 indicate that the comparison group had a higher rate of recidivism. An odds ratio of 1 indicates that there is no difference between the treatment group and the comparison group.³ These 71 odds ratios form the data points on which the random-effects regression is estimated.

¹ Our aggregation of multiple types of recidivism and time periods is based on the assumption that the estimated effect of correctional education is not contingent on the measurement strategy or specification used by the researcher. We tested this assumption by sampling studies that reported the effects of correctional education on recidivism using different definitions and time periods. We found that the effect of correctional education did not differ across the definition of recidivism (e.g., reincarceration, rearrest, parole failure) or time period used (e.g., six months since release from prison, one year since release from prison, ten years since release from prison). This gives us confidence that the findings from our meta-analysis are robust and apply to a range of postrelease settings, circumstances, and outcomes.

² We use log odds ratios in producing our analysis, because they have a symmetrical distribution and an associated standard error. We convert these log odds ratios into odds ratios before presenting and interpreting the relationships, as the log odds ratio has no straightforward, intuitive interpretation.

³ For example, in Torre and Fine's (1997) study of female inmates who enrolled in a postsecondary education program in New York state, the authors found that 7.7 percent of the treatment group returned to prison within three years of release and that 29.9 percent of the comparison group returned to prison within three years of release. The odds associated with a 7.7 percentage are $0.077 / (1 - 0.077) = 0.083$; in other words, the odds of a treatment group member recidivating are 0.083 to 1. The odds associated with a 29.9 percentage are $0.299 / (1 - 0.299) = 0.43$; in other words, the odds of a comparison group member recidivating are 0.43 to 1. The associated odds ratio for this effect size estimate is 5.12 ($0.083 \div 0.43 = 0.19$) and indicates that the odds of recidivating among treatment group members is 0.19 times than the odds of recidivating among comparison group members. The actual odds ratio for Torre and Fine (1997) as shown in Figure 2.2 is 5.11; this is the reciprocal of the result we give, as we give the odds of recidivating, whereas that study presents the odds of not recidivating. The two analyses are equivalent.

Results: Estimates of the Relationship Between Correctional Education and Recidivism

The Overall Relationship Between Correctional Education and Recidivism

To assess the relationship between correctional education and recidivism, we first graphed the odds ratios for each of the 71 effect size estimates in Figure 3.1 using a forest plot. Each row in the plot corresponds to an effect size, labeled on the left with the corresponding first author of the study and the year of publication. Studies with multiple effect sizes are listed multiple times with a capital letter to differentiate among them. The black box represents the effect size estimate for the study, and the “whiskers” extend to the range of 95 percent confidence intervals.⁴ The size of the box is proportional to the weight that is assigned to that effect size. Weight is determined by sample size, and in the case of a random effects regression such as this, the weight is determined by the difference between the estimate of the effect in that study and the overall aggregated effect across studies. A very large study, such as Allen’s (2006) study of over 16,000 inmates participating in academic programs in 15 states, is highly weighted and is represented with a large box.

The box and whiskers for each effect size are plotted in relation to the dashed line down the center of the graph, which indicates an odds ratio of 1. Effect sizes to the right of this line indicate that the treatment group had a higher odds of recidivating, and effect sizes to the left of this line indicate that the comparison group had a higher odds of recidivating. If the whiskers for the corresponding box do not cross this dashed line, then the study yielded a significant difference between the treatment and comparison group for that particular effect size at the conventional level of $p < 0.05$. Conversely, if the whiskers for the corresponding box cross this dashed line, then there is no significant difference detected between the treatment and comparison group for that particular effect size at the conventional level of $p < 0.05$.

As can be seen by the patterning of boxes and whiskers in this figure, the majority of studies report that the odds of recidivism are lower in the treatment group, with one study (Gordon and Weldon, 2003) finding substantially lower odds of recidivism among treatment group members. A small number of studies find lower odds of recidivism in the comparison group, but these do not generally achieve statistical significance, as evidenced by the fact that the corresponding whisker crosses the solid black line. The very last row displays the overall odds ratio for all 50 studies with 71 effect size estimates pooled together. The position of this overall odds ratio is indicated across the rest of the studies by the diamond at the bottom of the graph. The overall odds ratio is 0.64 ($p < 0.05$, 95 percent confidence interval = 0.59 to 0.70), indicating that across 32 years of empirical studies on the effects of correctional education with analyses ranging in methodological quality and rigor, *on average, the odds of recidivating among inmates receiving correctional education are 64 percent of the odds of recidivating among inmates not receiving correctional education.*

The Relationship Between Correctional Education and Recidivism in Studies with High-Quality Research Designs

As described above, many studies have limitations in their research design that preclude them from ruling out selection bias as an explanation for the observed differences between the treat-

⁴ Note that the left whisker for Gordone (2003b) is an arrow. This is to signify that the confidence interval for this effect size extends beyond the scale of the figure.

Figure 3.1
Odds Ratios for Each of the 71 Effect Size Estimates

ment and comparison groups. Therefore, although we find across the full sample of studies that participation in correctional education is associated with a reduction in the odds of recidivism following release, we also examine whether this pattern is maintained when we restrict our sample to studies with the strongest and most scientifically defensible research designs. To this end, we recalculated the odds ratio for studies that fall at different levels of the Maryland SMS. We first show the odds ratio for those reaching a Level 5—the highest level of methodological rigor. We then recalculated the odds ratio for studies reaching both Level 4 and Level 5. From here, we stepwise recalculated the odds ratio to incrementally include each of the lower levels of the Maryland SMS. The odds ratios and their corresponding confidence intervals are shown in Table 3.1. The bottom row in Table 3.1 shows the odds and ratio and confidence interval for all studies meeting a Maryland SMS Level 2 and above, which includes all 50 studies and 71 effect size estimates and represents the overall aggregated odds ratio as originally reported in Figure 3.1.

We focus our attention on studies that receive a Level 4 or Level 5 rating on the Maryland SMS, as they are the most methodologically rigorous and provide the best estimate of the causal relationship between correctional education and recidivism. Level 5 consists of experimental studies that employ randomized control designs, and those in our systematic review that are eligible for the recidivism meta-analysis include two studies with two corresponding effect sizes. Both studies evaluate the Sandhills Vocational Delivery System Experiment in North Carolina (Lattimore, Witte, and Baker, 1988; 1990). The odds ratio for these two studies is 0.61 ($p < 0.05$, 95 percent confidence interval = 0.44 to 0.85), indicating that the odds of recidivating among treatment group members in these experimental studies are 61 percent of the odds of recidivating among comparison group members.

Although Level 5 on the Maryland SMS reflects the most stringent research design, the estimate is less informative, because it is based on only one program and, hence, is restricted in its broader applicability to the array of correctional education programs in operation. To incorporate a broader range of programs while maintaining a high degree of methodological rigor, we focus on Level 4 and Level 5 studies combined. Level 4 consists of quasi-experimental studies where the treatment and control group are reasonably matched on a number of key observable characteristics. Among those eligible for the recidivism meta-analysis, five studies receive a Level 4 rating: Harer's (1995) study of federal prison education programs (including Adult Basic Education, GED, postsecondary education including college courses and vocational training), Langenbach et al.'s (1990) study of televised postsecondary instruc-

Table 3.1
Estimates of the Effect of Correctional Education Participation on the Odds of Recidivating, by Levels of the Maryland Scientific Methods Scale

Maryland Scientific Methods Scale	Odds Ratio	95% Confidence Interval	n	k
Level 5	0.61*	0.44 to 0.85	2	2
Levels 4 and 5	0.57*	0.47 to 0.70	7	9
Levels 3, 4, and 5	0.68*	0.60 to 0.78	27	38
Levels 2, 3, 4, and 5 (total sample)	0.64*	0.59 to 0.70	50	71

* $p < 0.05$.

NOTE: n is the number of studies and k is the number of effect size estimates.

tion in Oklahoma state prisons, Nally et al.'s (2011) study of Indiana Department of Corrections' education programs (including Adult Basic Education, GED, postsecondary education including college courses and vocational training), Saylor and Gaes' (1996) study of the Post-Release Employment Project vocational training program administered in federal prisons, and Winterfield et al.'s (2009) study of prison postsecondary education in Indiana, Massachusetts, and New Mexico.

When we combine these five Level 4 studies with the two Level 5 studies, our aggregated odds ratio is 0.57 ($p < 0.05$, 95 percent confidence interval = 0.47 to 0.70), indicating that the odds of recidivating among treatment group members in the most-rigorous quasi-experimental studies are 43 percent lower than the odds of recidivating among comparison group members. That we obtain odds ratios that are of similar magnitude when restricting our analysis to the studies with the most rigorous research design suggests that the overall effect observed among our full sample of 50 studies is not driven by lower-level studies that are potentially subject to selection bias.

Despite the robustness of our findings across levels of the Maryland SMS, we cannot say definitively that the similarity of estimates among the lower-level and higher-level studies means that the programs in each group are equally effective. For example, it is possible that the estimates for the lower-level studies are inflated by selection bias and that the estimates for the higher-level studies generalize only to particular types of higher-quality programs. Yet a closer examination of these studies shows that programs in the higher-level and lower-level studies are similar on most attributes we recorded.⁵ This suggests that the programs are not drastically different in the two groups of studies and that the effect estimates in the lower-level studies are relatively unbiased.

Interpreting the Relationship Between Correctional Education and Recidivism

Because the odds of an outcome—in our case, recidivating—can be a less-intuitive metric to grasp, we applied two other metrics to aid in interpretation: the *risk difference* and the *number needed to treat*. The *risk difference* is the absolute reduction in recidivism rates between those who received correctional education and those who did not. The *number needed to treat* indicates the predicted number of inmates who need to receive correctional education to prevent one additional inmate from recidivating. These two metrics require an estimated rate of recidivism in the population upon which to calibrate their calculations.⁶ We used recidivism rates from two studies to translate our odds ratio into a risk difference and number needed to treat:

⁵ In analyses not shown, we find no statistically significant differences in program characteristics at the 5 percent level between higher-level and lower-level studies in terms of the type of instructor (college, certified, corrections officer, outside employee, volunteer), the type of instruction (whole class, small group, one-on-one), the academic or vocational emphasis of the program, and the presence of postrelease supports. In addition, we find that the studies are similarly likely to have missing data on these variables and on the jurisdiction of the facility (federal, state, local). However, the two statistically significant differences that we do find between higher-level and lower-level studies are in the share of programs in federal prisons (i.e., two programs, accounting for 44 percent of the effect estimates, in higher-level studies, versus none in the lower-level studies), and in the security level of the prisons. (In the higher-level studies, we find 44 percent of effects have missing security-level data, and none come from programs in maximum-security facilities. In the lower-level studies, we find 76 percent with missing security-level data and the remainder of programs in a roughly equal combination of minimum, medium, and maximum security facilities.) It therefore remains possible that the effects from the higher-level and lower-level studies reflect the effects of different kinds of programs or contexts.

⁶ To take an extreme example, if only 1 percent of inmates recidivated, and education programs prevented all recidivism, we would need to treat 100 inmates to expect to stop one inmate from recidivating. At the other extreme, if the recidivism

rearrest rates and reincarceration rates from Langan and Levin's (2002) study for the Bureau of Justice Statistics and reincarceration rates from a more recent study conducted by the Pew Charitable Trusts (Pew Center on the States, 2011). We base our calculations on our odds ratio for those studies meeting a Level 4 or Level 5 rating on the Maryland SMS, as these represent our best estimate of the causal effect of correctional education on recidivism using an array of programs. We present these additional interpretative metrics in Table 3.2.

Recidivism rates from the aforementioned published studies indicate that between 43.3 percent and 51.8 percent of former prisoners were reincarcerated within three years of release, and two-thirds were rearrested within three years of release. If we apply the recidivism rates estimated by Langan and Levin (2002) for the Bureau of Justice Statistics, we find that *correctional education would be expected to reduce three year rearrest and reincarceration rates by 13.2 and 13.8 percentage points, respectively*. According to these estimates, eight inmates would need to receive correctional education to prevent one additional inmate from being rearrested within three years of release, and seven inmates would need to receive correctional education to prevent one additional inmate from returning to prison within three years. The magnitude of these effects is similar when considering more recent national level recidivism estimates by the Pew Charitable Trusts (Pew Center on the States, 2011): Correctional education would be expected to reduce three-year reincarceration rates by 12.9 percentage points and eight inmates would need to receive correctional education to prevent one additional inmate from returning to prison within three years.

Role of Program Type and Instructional Delivery Method

Though the effect size estimates shown in Figure 3.1 favor the intervention in the majority of cases, resulting in a positive average effect across studies, it is important to note that the estimates are heterogeneous. That is, some are more positive than others, and a few are null or

Table 3.2
Risk Difference and Number Needed to Treat Based on Different Recidivism Base Rates

Recidivism Base Rate Source	Recidivism Base Rate Definition	Recidivism Base Rate	Estimated Recidivism Rate for Correctional Education Participants	Risk Difference	Number Needed to Treat
P. A. Langan and D. J. Levin, <i>Recidivism of Prisoners Released in 1994</i> , NCJ 193427, 2002	Rearrest within 3 years of release	67.5%	54.3%	13.2%	8
P. A. Langan and D. J. Levin, <i>Recidivism of Prisoners Released in 1994</i> , NCJ 193427, 2002	Reincarceration within 3 years of release	51.8%	38.0%	13.8%	7
Pew Center on the States, <i>State of Recidivism: The Revolving Door of American Prisons</i> , Washington, D.C.: Pew Charitable Trusts, 2011	Reincarceration within 3 years of release	43.3%	30.4%	12.9%	8

NOTE: Risk Difference and Number Needed to Treat estimates are based on the odds of recidivating among correctional education participants in seven studies that meet a Level 4 or Level 5 rating on the Maryland SMS.

rate were 100 percent, we would need to treat only one inmate to have the same expected reduction in recidivism. Therefore, even though the effects of the treatment are the same, the cost-effectiveness is dependent on the rate of recidivism.

negative. This heterogeneity may be driven by a variety of factors, including variation in the program features, their contexts, and/or how they are implemented. To help states and localities develop effective programs, it is important to use what we know about the programs to interpret the sources of this variation.

A core focus of policymakers and practitioners in the field of correctional education is developing programs that are designed and delivered in a manner that can yield the most benefit. To help inform decisions about program attributes, we sought to identify whether certain characteristics of programs were more or less associated with reductions in recidivism. When abstracting information on the individual programs into the review protocol (shown in Appendix D), the scientific review team members identified the type of program examined (e.g., GED preparation, vocational training) and the instructional delivery method used (e.g., whole class instruction, one-on-one class instruction).⁷ We use this information to recalculate our odds ratios for programs with these different characteristics. Because of the small number of studies that provided information on their programs, we based these analyses on all studies eligible for the recidivism analysis (i.e., those with at least a Level 2 rating on the Maryland SMS) to provide sufficient sample sizes for analysis. Because of the small sizes and potential bias (stemming, perhaps, from researchers who provide more information on program characteristics because they are likely more closely connected with the program), we urge readers to interpret these findings with caution.

Program Type

We calculate odds ratios for four types of correctional education programs: ABE programs, high school/GED programs, postsecondary education programs, and vocational education programs. The odds ratios are presented in Table 3.3. A limitation in interpreting these odds ratios is that studies differed in the precision in which they classified their programs. For example, some studies focused exclusively on a particular vocational program in which participants were exposed only to an occupationally focused curriculum with complementary job training

Table 3.3
Estimates of the Effect of Correctional Education Participation on the Odds of
Recidivating, by Program Type

Program Type	Odds Ratio	95% Confidence Interval	n	k
Adult basic education	0.67*	0.57 to 0.79	13	19
High school/GED	0.70*	0.64 to 0.77	22	28
Postsecondary education	0.49*	0.39 to 0.60	19	24
Vocational education	0.64*	0.58 to 0.72	34	42

* $p < 0.05$.

NOTE: n is the number of studies and k is the number of effect size estimates.

⁷ As shown in the review protocol in Appendix D, the scientific review team abstracted a range of details about the programs in each study. Ideally, we would like to report on all program characteristics collected to provide a more comprehensive understanding of what is most effective in correctional education. However, few studies provided sufficient information to allow for complete or consistent coding across these characteristics. We present only the analyses for program type and instructional delivery method if they had a minimum of four effect size estimates.

and counseling, whereas other studies focused on broader correctional education programs that included vocational courses taken alongside a set of academic courses. A study of the latter type would therefore be included in the vocational education category as well as in one of the other program categories. Consequently, the independent effects of the vocational and academic components would remain inseparable because the studies do not generally disaggregate the effects of each component or report on individual-level dosage and outcomes in a way that would allow our analysis to disaggregate the effects. Because of the overlap in curricular exposure and the lack of specificity in dosage, the odds ratios for the different program types *should not be compared directly with one another*. In other words, we cannot say with certainty that the programs grouped in each category are pure examples of a given program type (e.g., adult basic education or postsecondary education). Rather, they are programs that include at least some components of that program type.

The results in Table 3.3 suggest that participation in a correctional education program—regardless of the type of program—is associated with a reduction in recidivism. All four of the odds ratios for program type are less than 1 and are statistically significant at $p < 0.05$. Although different programs serve inmates with different needs and skill sets—e.g., postsecondary education programs are typically administered to the most academically advanced inmates and ABE programs are typically administered to inmates with low levels of academic attainment—the findings here suggest that correctional education may be an effective way to prevent recidivism for prisoners across the spectrum of ability and academic preparedness.

It is worth noting that the U.S. Department of Justice (Harlow, 2003) reports that approximately 68 percent of inmates in state prisons lack a high school diploma. Therefore, high school/GED programs would be the most relevant and common approach to educating the majority of prisoners. In our meta-analysis, we were able to identify 28 effect size estimates from 22 studies of high school/GED programs. The associated odds ratio for these programs is 0.70 ($p < 0.05$, 95 percent confidence interval = 0.64 to 0.77), indicating that the odds of recidivating among inmates participating in high school/GED programs are 70 percent of the odds of recidivating among similar inmates not participating in such programs.

Instructional Delivery Method

We next calculate odds ratios for seven instructional delivery approaches. The odds ratios corresponding to these methods are presented in Table 3.4. Similar to the analysis of program type, these methods are not mutually exclusive. For example, some programs use whole class instruction or one-on-one instruction and provide a postrelease component. Hence, the odds ratios should not be compared directly with one another, and thus *it is not appropriate to conclude that certain delivery methods are more or less effective than others*. Five of the delivery methods yield statistically significant odds ratios: programs that use whole class instruction, programs with courses taught by college instructors, programs with courses taught by correctional employees, programs with courses taught by instructors external to the correctional facility, and programs that have a postrelease component. The other two methods—one-on-one instruction and classes taught by certified teachers—do not appear to result in a significant reduction in recidivism among treatment group members. One-on-one instruction is likely administered to inmates with the greatest developmental needs, and so the lack of a difference between the comparison and treatment group can potentially be considered a sign of progress (assuming that the comparison group comprises largely inmates without develop-

Table 3.4
Estimates of the Effect of Correctional Education Participation on the Odds of
Recidivating, by Instructional Delivery Method

Instructional Delivery Method	Odds Ratio	95% Confidence Interval	n	k
Whole class instruction	0.71*	0.55 to 0.93	10	13
One-on-one instruction	0.98	0.80 to 1.21	5	8
Class taught by certified teacher	1.14	0.82 to 1.57	1	4
Class taught by college teacher	0.44*	0.33 to 0.59	11	12
Class taught by correctional employee	0.65*	0.50 to 0.85	9	14
Class taught by outside employee	0.54*	0.42 to 0.70	12	17
Program has postrelease services	0.43*	0.30 to 0.62	7	13

* $p < 0.05$.

NOTE: n is the number of studies and k is the number of effect size estimates.

mental needs). Although we do not find a statistically significant effect for programs that use certified teachers, this is based on a single study.⁸

A common thread among three of the five statistically significant instructional delivery methods—programs with courses taught by college instructors, programs with courses taught by instructors external to the correctional facility, and programs that have a postrelease component—is that they connect inmates both directly and indirectly with the outside community. College instructors and instructors external to the facility can potentially infuse the program with approaches, exercises, and standards being used in more traditional instructional settings. Additionally, these instructors provide inmates with direct, on-going contact with those in the outside community. Programs with a postrelease component provide continuity in support that can assist inmates as they continue on in education and/or enter the workforce in the months immediately after they are released. Although we are limited in our ability to classify programs and to establish causality, the findings here provide suggestive evidence that correctional education may be most effective in preventing recidivism when the program connects inmates with the community outside the correctional facility.

Comparison of the Costs of Correctional Education and Reincarceration Costs

To place our meta-analytic findings into context, we undertook a straightforward cost analysis using estimates of the costs of correctional education and of reincarceration.⁹ The cost analysis is done for a three-year window after release from prison.

⁸ As context, it is worth noting that within the field of education research, the evidence is mixed as to whether teacher certification matters for student achievement (Seftor and Mayer, 2003).

⁹ Although our meta-analysis incorporated a range of indicators to construct our measure of recidivism (e.g., reincarceration, rearrest, parole revocation rates), here we are able to base our cost analysis on estimates of cost for three-year reincarceration rates.

To determine the average cost of providing education to inmates, the average rate of reincarceration, and the average cost of reincarceration (see Table 3.5), we obtained the following three inputs. First, we required an estimate of the cost per year per inmate for correctional education. We used data from Bazos and Hausman (2004) who calculated the average cost of correctional education programs per inmate participant using information from The Three States Study, which assessed the relationship between correctional programs and recidivism in Maryland, Minnesota, and Ohio for approximately 3,170 inmates (Steurer, Smith, and Tracy, 2003). We also used data from the 2007 Corrections Compendium Survey Update on Inmate Education Programs (Hill, 2008). These two sources estimated that the average annual cost of correctional education programs per inmate participant was \$1,400 and \$1,744, respectively.

Second, the reincarceration rate affects the cost-effectiveness of the intervention: The higher the reincarceration rate, the greater the potential cost savings. We used the three-year reincarceration rate estimates presented in Table 3.2 for correctional education participants and nonparticipants. Specifically, we used the most conservative reincarceration rate estimates based on the Pew Charitable Trust's most recent national estimate of reincarceration based on 41 states: 43.3 percent for individuals who *did not* receive correctional education, and 30.4 percent for those who *did*—a risk difference of 12.9 percentage points as estimated from our meta-analysis (Pew Center on the States, 2011).

Third, we used data on the average annual cost per inmate of incarceration from the Bureau of Justice Statistics' (Kyckelhahn, 2012) analysis of state corrections' expenditures¹⁰ and the Vera Institute of Justice study on the price of prisons (Henrichon and Delaney, 2012), which collected cost data from 40 states using a survey; these two studies estimated the average annual cost per inmate to be \$28,323 and \$31,286, respectively. Assuming a mean incarceration length of stay of 2.4 years (Pastore and Maguire, 2002), we calculated the average incarceration costs as between \$67,975 and \$75,086, respectively, based on the two studies.

Table 3.5
Inputs into the Cost Analysis

Input	Lower-Bound Scenario	Upper-Bound Scenario
Cost of Providing Education to Inmates		
Average annual cost of education per inmate	\$1,400	\$1,744
Average Rate of Reincarceration		
Three-year reincarceration rate	Nonparticipants: 43.3% Participants: 30.4%	
Average Cost of Reincarceration		
Average annual cost of incarceration per inmate	\$28,323	\$31,286
Average incarceration cost per inmate assuming an average length of stay of 2.4 years	\$67,975	\$75,086

¹⁰ Expenditure data were extracted from the U.S. Census Bureau.

We applied these three inputs to a hypothetical pool of 100 inmates to calculate cost savings estimates (presented in Table 3.6). We estimated that 43.3 percent of individuals who did not receive correctional education would be reincarcerated within three years, leading to reincarceration costs of between \$2.94 million and \$3.25 million (Table 3.6).¹¹ If correctional education were offered to these inmates, our estimates suggest that the reincarceration rate might drop to 30.4 percent giving rise to incarceration costs of between \$2.07 million and \$2.28 million—a difference of \$0.87 million (using lower-bound estimates) or \$0.97 million (using upper-bound estimates). Thus, the costs of providing education to this group of 100 inmates would range from \$140,000 to \$174,000. This translates as a per inmate cost ranging from \$1,400 to \$1,744, suggesting that providing correctional education is cost-effective compared with the cost of reincarceration.

Another way to look at it is to calculate the break-even point—that is, the risk difference in reincarceration rate required for the cost of education to be equal to the cost of incarceration (as shown in the equation below).

$$\text{Risk difference required for cost effectiveness} = \frac{\text{cost of education}}{\text{cost of incarceration}}$$

For a correctional education program to be cost-effective (from a fiscal/correctional budgetary standpoint alone), it would need to reduce the three-year reincarceration rate by between 1.9 percentage points (using the lower-bound estimate of the cost of education and the upper-bound estimate of the cost of incarceration) and 2.6 percentage points (using the lower-bound estimate of the cost of incarceration and the upper-bound estimate of the cost of education). In fact, our meta-analytic findings indicate that participation in correctional education programs

Table 3.6
Cost Analysis Results

	Lower-Bound Estimate	Upper-Bound Estimate
Reincarceration costs for participants not participating in correctional education ^a	\$2.94 million	\$3.25 million
Reincarceration costs for those participating in correctional education ^b	\$2.07 million	\$2.28 million
Difference in costs between the two groups	\$0.87 million	\$0.97 million
Cost of providing correctional education to the 100 inmates	\$140,000	\$174,400
Cost of providing correctional education per inmate	\$1,400	\$1,744

^a Assumes that 43.3 percent of correctional education nonparticipants would be reincarcerated within three years.

^b Assumes that 30.4 percent of correctional education participants would be reincarcerated within three years.

¹¹ The correct numbers to use here are the marginal costs, not average costs, but marginal costs are not readily available. For educational programs, marginal costs are probably similar to average costs. For incarceration, marginal costs may be somewhat lower than average costs.

is associated with a 13 percentage point reduction in the risk of reincarceration three years following release.

A full analysis of the benefits and costs of correctional education was beyond the study's scope. Besides accounting for the direct costs to a prison system, such an analysis would also need to account for other costs, such as the financial and emotional costs to victims of crime and to the criminal justice system as a whole, which could be much more substantial than our estimates above. Also, because few studies have investigated the effect of education for more than three years, we assumed that the effect of correctional education programs after three years is equal to zero. However, these programs may have a "protective effect," diminishing the odds of reincarceration for some years after release.

For ease of calculation, we assumed that the effects of program participation were uniform across different types of crimes. However, a richer treatment of the issue would consider the possibility of heterogeneous effects across crimes and across individuals with different profiles. (It may be that education works better for people who have a lower-than-average tendency to recidivate to begin with.)

In addition, a full benefit and cost analysis would need to account for the dynamics of how people move in and out of prison over their lifetimes. Most studies look at the reduction in reincarceration rates over a short period of time (e.g., one-year). However, there is a lack of good data on lifetime reincarceration rates. Last, a full benefit and cost analysis would need to factor in the costs associated with crime-causing activity that does not result in incarceration. In the late 1970s, RAND conducted prisoner surveys in Texas, Michigan, and California. Using self-reported data, RAND found that the median number of crimes (excluding all drug crimes) reported by prisoners in the year before their incarceration was 15.¹² Data from more recent studies on self-reported criminal activity have yielded similar results (DiIulio and Piehl, 1991; Levitt, 1996). Our analyses did not take into account the number and types of crimes prevented by providing correctional education to prisoners.

Summary

When examining 71 effect size estimates from 50 studies of correctional education programs spanning 32 years of research with analyses ranging in methodological quality and rigor, the majority of studies we identified showed lower rates of recidivism among inmates receiving correctional education than among inmates who did not receive correctional education. To provide the best estimate of the causal relationship between correctional education and recidivism, we examined nine effect size estimates from seven studies that received a Level 4 or Level 5 rating on the Maryland SMS (i.e., the most rigorous research designs) and found that the odds of recidivating among treatment group members are 43 percent lower than the odds of recidivating among comparison group members. When applying these estimated odds to the most recently reported national rates of reincarceration (43.3 percent within three years of release), correctional education would reduce reincarceration rates by 12.9 percentage points on average, although effectiveness does appear to differ by program.

Our findings complement those detected in the most recent meta-analyses published by Wilson, Gallagher, and MacKenzie (2000); Aos, Miller, and Drake (2006); and MacKenzie

¹² That is, the median number of crimes committed that were not caught or prosecuted.

(2006)—all of which document that correctional education participants have lower rates of recidivism than nonparticipants. Unfortunately, all of these studies disaggregate their point estimates differently and do not use the same metric to report their findings. Hence, it is not possible to directly compare the size of the estimates across studies. However, that four independently conducted meta-analyses with different methods and criteria yield consistent results lends weight to the proposition that correctional education can reduce the likelihood that inmates will return to crime upon release.

To place our meta-analytic findings into context, we undertook a cost analysis using estimates from the literature of the direct costs of correctional education and of reincarceration. Focusing only on the direct costs of correctional education programs and of three-year reincarceration rates and using a hypothetical pool of 100 inmates, we estimated that the three-year reincarceration costs for those who did not receive correctional education would be between \$2.94 million and \$3.25 million. In comparison, for those who did receive correctional education, the three-year reincarceration costs are between \$2.07 million and \$2.28 million. This means that reincarceration costs are \$0.87 million to \$0.97 million less for those who receive correctional education. Given that the costs of providing education to this group of 100 inmates would range from \$140,000 to \$174,400, providing correctional education appears to be cost-effective when compared with the cost of reincarceration.

Another way to look at the cost-effectiveness of providing correctional education is to calculate the break-even point—defined as the risk difference in the reincarceration rate required for the cost of correctional education to be equal to the cost of incarceration. For a correctional education program to be cost-effective, we estimated that a program would need to reduce the three-year reincarceration rate by between 1.9 percentage points and 2.6 percentage points to break even. In fact, our meta-analytic findings indicate that participation in correctional education programs is associated with a 13 percentage-point reduction in the risk of reincarceration three years following release. Thus, correctional education programs appear to far exceed the break-even point in reducing the risk of reincarceration. Given that some programs appear more effective than others, the exact ratio of costs to benefits will naturally depend on the effectiveness of a particular program. Future investments in correctional education would ideally be designed in ways that allow for rigorous identification of effective programs' features.

The Relationship Between Correctional Education and Employment

Introduction

This chapter presents the results from our meta-analysis where employment is the outcome. We first describe how we defined and measured employment across the 18 eligible studies, and we then pool all the studies together to provide an aggregate estimate of the relationship between participation in correctional education and employment. Next, we explore whether the relationship between correctional education and employment differs by the type of program and the method used to measure employment.

Measuring Employment

Employment was measured a number of ways across the 18 eligible studies along three dimensions: the *definition of employment* used by the researcher, the *time period* between release from prison and when employment is recorded for study participants, and the *statistical metric* used by the researcher to report differences in employment between the treatment and comparison group members. We describe each of these dimensions below in turn.

- *Definition of employment.* Employment is defined a number of ways, including having ever worked part-time since release, having ever worked full-time since release, employed for a specified number of weeks since release, and employment status (i.e., employed or not employed) at a particular time point. In our pool of 18 eligible studies, the most common way employment was operationalized was through a variable indicating whether the former inmate had ever worked full- or part-time since release ($n = 9$).
- *Time period.* Studies differed in the time period through which they followed the study participants after release from prison. Studies ranged from examining a cohort of former inmates in the community for three months since release from prison to following them for 20 years since release from prison. The most frequently used time period in the 18 eligible studies was one year ($n = 7$).
- *Statistical metric.* Fifteen of the studies simply reported the percentage or a weighted mean of the treatment and comparison groups that were employed, and three of the studies reported regression coefficients along with standard errors to express the magnitude of the difference in employment between the treatment and the comparison groups.

When there were multiple outcomes and reporting methods used, we gave preference to employment within one year of release or as close as possible to one year (as this represents the modal time period used by the authors of the studies) and regression coefficients (as this represents the best attempt by the authors of the studies to reduce potential sources of bias). However, as with our approach in our analysis of recidivism, we used whatever definition, time period, or statistical metric reported by the author so that we could be as inclusive as possible. As such, our employment measure comprises of a wide range of slightly different measures and thus should not be interpreted as any of the individual measures that make it up. Details on how each of the 18 studies defined and operationalized employment, as well as specific information on the individual programs being studied, the research design used in the study, the WWC Scale and the Maryland SMS ratings of the study's research design, and the rates of employment recorded for the treatment and comparison group, are shown in Appendix G.

We transformed all 22 effect size estimates from the 18 studies into 22 odds ratios. Recall that the number of effect sizes exceeds the number of studies because a study could contain multiple treatment and comparison groups, and thus multiple comparisons. For our purposes, the odds ratio is calculated as the odds of obtaining employment among treatment group members divided by the odds of obtaining employment among comparison group members. Odds ratios greater than 1 indicate that the treatment group had a higher rate of employment, and odds ratios less than 1 indicate that the comparison group had a higher rate of employment. An odds ratio of 1 indicates that there is no difference between the treatment group and the comparison group.¹ These 22 odds ratios form the data points on which the random-effects regression is estimated.

Results: Estimates of the Relationship Between Correctional Education and Employment

To assess the relationship between correctional education and employment, we graphed the odds ratios for each of the 22 effect size estimates in Figure 4.1 using a forest plot. Similar to our analysis of recidivism, each row in the plot corresponds to an effect size, labeled on the left with the corresponding first author of the study and the year of publication. Studies with multiple effect size estimates are listed multiple times with a capital letter to differentiate among them. The black box represents the effect size for the study, and the "whiskers" extend to the range of 95 percent confidence intervals. The size of the box is proportional to the weight that is assigned to that effect size. The box and whiskers for each effect size are plotted in relation to the dashed line down the center of the graph, which indicates an odds ratio of 1. Effect sizes to the right of this line indicate that the treatment group had a higher odds of obtaining employment, and effect sizes to the left of this line indicate that the comparison group had a

¹ For example, in Lichtenberger's (2007) study of vocational education programs in Virginia correctional facilities, he determined that 71.5 percent of the treatment group found employment within 6.75 years of release and that 66.6 percent of the comparison group found employment within 6.75 years of release. The odds associated with a percentage of 71.5 are $0.715 / (1 - 0.715) = 2.51$; in other words, the odds of a treatment group member obtaining employment are 2.51 to 1. The odds for the comparison group are $0.666 / (1 - 0.666) = 1.99$; in other words, the odds of a comparison group member obtaining employment are 1.99 to 1. The associated odds ratio for this effect size is 1.26 ($2.51 \div 1.99 = 1.26$) and indicates that the odds of obtaining employment among treatment group members is 26 percent higher than the odds of obtaining employment among comparison group members.

Figure 4.1
Odds Ratios for Each of the 22 Effect Size Estimates

RAND RR266-4.1

higher odds of obtaining employment. If the whiskers for the corresponding box do *not* cross this dashed line, then the study detected a significant difference between the treatment and comparison group for that particular effect size at the conventional level of $p < 0.05$.

The patterning of boxes and whiskers in Figure 4.1 shows that most studies report that the odds of obtaining employment are higher among the treatment group than the comparison group, as evidenced by most of the boxes corresponding to each size falling to the right of the dashed line. A small number of studies find a higher odds of obtaining employment in the comparison group, with two finding significant differences (Sabol, 2007; Steurer, Smith, and Tracy, 2003). The very last row displays the overall odds ratio for all 18 studies with 22 effect size estimates pooled together. The position of this overall odds ratio is indicated across the rest of the studies by the diamond at the bottom of the graph. The overall odds ratio is 1.13 ($p < 0.05$, 95 percent confidence interval = 1.07 to 1.20), indicating that across 32 years of empirical studies on the effects of correctional education, on average, the odds of obtaining employment postrelease among inmates receiving correctional education are 13 percent higher

than the odds of obtaining employment postrelease among inmates not receiving correctional education.

As with our analysis of recidivism, it is possible that the findings for employment favorable to correctional education programs may be driven by selection bias, wherein motivated, work-oriented inmates are selected (either by their own choice or by correctional program administrators) to enroll in educational programs. Therefore, the observed differences in employment between the treatment and comparison groups may reflect underlying differences in the types of inmates that participate in correctional education and not the causal effect of the program itself. To provide a better estimate of the potential causal relationship between program participation and employment, we recalculated the odds ratio for studies that fall at different levels of the Maryland SMS scale. The odds ratios and their corresponding confidence intervals are shown in Table 4.1. Ideally we would restrict our analyses to studies receiving a Level 4 or Level 5 rating on the Maryland SMS (as was done in our analysis of recidivism). However, as shown in this table, no studies with employment outcomes received a Level 5 rating and only one study received a Level 4 rating.² Therefore, we cannot test whether the positive relationship between correctional education participation and employment holds among studies with the most scientifically defensible research designs. Although we do detect an employment advantage favoring inmates receiving education while incarcerated, we cannot rule out selection bias as a potential explanation for this observed effect.

Interpreting the Relationship Between Correctional Education and Employment

As with our analysis of recidivism, we apply two other metrics to aid in interpretation: the *risk difference* and the *number needed to treat*. The *risk difference* is the absolute improvement in employment rates between those who received correctional education and those who did not. The *number needed to treat* indicates the predicted number of inmates who need to receive correctional education to secure one additional inmate postrelease employment. These two metrics require an estimated rate of employment in the population upon which to calibrate their calculations. Unfortunately, there is no national estimate of postrelease employment for former inmates that can serve this purpose. In lieu of a national estimate, we use the percent-

Table 4.1
Estimates of the Effect of Correctional Education Participation on the Odds of Postrelease Employment, by Levels of the Maryland Scientific Methods Scale

Maryland Scientific Methods Scale	Odds Ratio	95% Confidence Interval	n	k
Level 5	na	na	na	na
Levels 4 and 5	1.48*	1.28 to 1.72	1	1
Levels 3, 4, and 5	1.04	0.99 to 1.09	10	12
Levels 2, 3, 4, and 5 (total sample)	1.13*	1.07 to 1.20	18	22

*p < 0.05.

NOTE: n is the number of studies, k is the number of effect size estimates, and na is not applicable.

² The only study with employment outcomes receiving a Level 4 rating on the Maryland SMS is Saylor and Gaes' (1996) evaluation of the Post-Release Employment Project, which includes industrial work, vocational instruction, and/or apprenticeship training in federal prisons. They found that the treatment group yielded higher rates of employment after release (71.7 percent) than the comparison group (63.1 percent).

age of male inmates supporting themselves via employment at 15 months postrelease, based on a study of approximately 1,700 adult male inmates conducted between 2004 and 2007 in 12 states (Lattimore et al., 2012). We base our calculations on our odds ratio for those studies meeting a Level 3, Level 4, or Level 5 rating on the Maryland SMS, as these represent the highest-quality studies available to us. In this aforementioned multistate study, 66.0 percent of adult male inmates were employed at 15 months of release. Applying our pooled odds ratio, we find that *correctional education would be expected to improve postrelease employment rates by 0.9 percentage points*. Using these estimates, the number needed to treat (NNT) indicates that 114 inmates would need to receive correctional education to procure postrelease employment for one additional inmate.

Role of Program Type and Method Used to Collect Employment Data

We conclude our analysis of employment by exploring whether the relationship we observe between correctional education and the odds of obtaining employment varies by program type and/or the method used to collect employment data. The scientific review team abstracted both of these variables during their assessment and coding of the studies, which followed the review protocol shown in Appendix D. We use this information to recalculate our odds ratios separately for vocational programs and nonvocational programs and separately for studies that relied on administrative data, surveys to parole officers, and surveys to inmates. We focus on these two dimensions, because they have substantive and methodological implications for interpreting our main findings as well as for planning for future research in the field. Additionally, the data on these two variables are complete for our full sample of studies. Ideally, we would examine a broader range of program characteristics, but the data collected across studies were too inconsistent or incomplete. With a small pool of studies to examine, we consider these analyses to be purely exploratory. We urge readers to interpret these findings with that caveat in mind.

Program Type

In theory, vocational education programs should be more adept than traditional academic education programs at imparting labor market skills, awarding industry-recognized credentials, and connecting inmates with prospective employers. Therefore, we examine whether the relationship between correctional education and employment is stronger for vocationally oriented programs than traditional academic programs. To explore whether this is the case, we calculate odds ratios for effect size estimates corresponding to vocational programs and academic programs (combining ABE, high school/GED, postsecondary education programs) separately.³ These odds ratios are presented in Table 4.2. Note that the summation of the number of studies in this table exceeds 18, because three studies contribute effect size comparisons for both vocational and academic comparisons. Although we might expect the relationship to be stronger for vocational programs, we find that both odds ratios for program type are greater than 1 and are statistically significant at $p < 0.05$. The odds ratio is higher for vocational programs than for academic programs, but they are not significantly different from one another—suggesting

³ In our analysis of recidivism outcomes, we calculated odds ratios for ABE, high school/GED, and postsecondary education programs separately. Because of small sample sizes and our substantive focus on vocational programs, we combined these three programs into a single measure of “academic programs” for ease of interpretation and comparison.

Table 4.2
Estimates of the Effect of Correctional Education Participation on the Odds of Obtaining Employment, by Program Type

Program Type	Odds Ratio	95% Confidence Interval	n	k
Vocational education	1.28*	1.08 to 1.52	9	9
Academic education	1.08*	1.01 to 1.15	12	13

* $p < 0.05$.

NOTE: n is the number of studies and k is the number of effect size estimates.

that both academic and vocationally focused programs may be equally effective at preparing inmates for the labor market following release.⁴

Method Used to Collect Employment Data

Last, we explored whether the relationship between correctional education participation differed depending on the method used by the researcher to collect employment data. Most studies used state administrative data sources ($n = 11$), which measured only formal employment (i.e., jobs that are “on-the-books,” such that the worker receives wages subject to tax withholding) within the state. Therefore, if the former inmates were self-employed, employed “under-the-table,” or working in a state other than the one in which they were incarcerated, they were classified as not employed. Given that individuals with a criminal record are typically viewed less favorably by prospective employers and instead rely on nontraditional avenues for securing employment (Pager, 2003), it is possible the reliance on administrative records may understate employment gains made by correctional education participants. These limitations were overcome in studies that relied on surveys to parole officers ($n = 5$) or surveys to former inmates ($n = 2$) that inquired about postrelease employment histories. However, unlike state administrative data sources (which are typically complete), surveys are often hampered by low response rates and/or nonrandom response rates. The odds ratios for studies employing these different data collection methods are shown in Table 4.3.

Table 4.3
Estimates of the Effect of Correctional Education Participation on the Odds of Obtaining Employment, by Method Used to Collect Employment Data

Data Collection Method	Odds Ratio	95% Confidence Interval	n	k
Administrative records	1.07*	1.01 to 1.13	11	12
Survey to parole officer	1.61*	1.18 to 2.19	5	7
Survey to former inmate	1.04	0.94 to 1.16	2	3

* $p < 0.05$.

NOTE: n is the number of studies and k is the number of effect size estimates.

⁴ A meta-regression shows that the ratio of the vocational odds ratio to the academic odds ratio is 1.09 (95 percent confidence intervals 0.98, 1.23; $p = 0.125$). Note that a meta-regression does not yield a direct ratio of the two corresponding odds ratios, which in the present case would be 1.19.

Studies that use administrative records and surveys to parole officers both find differences between treatment and comparison group members that are statistically significant at $p < 0.05$. However, the relationship between correctional education and employment is stronger in studies that use parole officer surveys than in studies that rely on administrative records: The odds ratio for parole officer surveys is larger than the odds ratio for administrative records (1.61 compared with 1.07), and their respective confidence intervals do not overlap. This suggests that in measuring only formal “on-the-books” employment, administrative records may potentially underestimate the effect of correctional education on labor force outcomes.

Summary

When examining 22 effect size estimates from 18 studies of correctional education programs spanning 32 years of research, the majority of studies we identified showed higher rates of employment among inmates receiving correctional education than among inmates who did not receive correctional education. On average, the odds of obtaining employment postrelease among inmates receiving correctional education are 13 percent higher than the odds of obtaining employment postrelease among inmates not receiving correctional education. No studies received a Level 5 rating and only one study receives a Level 4 rating. Therefore, we cannot rule out selection bias as a potential explanation for this observed relationship. Despite this limitation, our findings align with those produced in the meta-analysis by Wilson and colleagues (2000), which also found improved odds of employment among correctional education participants.

The Relationship Between Computer-Assisted Instruction and Academic Performance

Introduction

This chapter presents the results from a meta-analysis in which standardized test scores in mathematics or reading are the outcome variables of interest, and in which the treatment variable of interest is correctional education administered via computer-assisted instruction rather than traditional, face-to-face classroom instruction. As noted in Chapter Two, only four studies that use achievement test scores met our eligibility criteria for inclusion. However, a benefit is that all four of these studies examine programs that use computer-assisted instruction—thus, allowing us to examine more closely an instructional delivery method that is increasingly popular in correctional settings. We first provide a brief description of the computer-assisted interventions themselves. As these studies are of clearly defined educational interventions (in contrast to most of the studies used in the recidivism and employment analyses), we describe them in detail to provide context for the results. We then describe how we standardized test scores across the four eligible studies. Next, we pool effect size estimates from the four studies to provide aggregate estimates of the relationship between computer-assisted instruction and students' academic performance in reading and mathematics. We then examine descriptive differences by program features. We conclude the chapter with a brief summary of key findings.

Description of the Computer-Assisted Instructional Interventions

All four of the studies discussed in this chapter compared computer-assisted instructional interventions to traditional, face-to-face classroom instruction led by a teacher. In each of the studies, the computer-assisted instruction replaced the same amount of time of traditional classroom instruction. All four studies were conducted in adult correctional education settings. In two of the studies—Batchelder and Rachal (2000) and McKane and Greene (1996)—students in both the treatment and comparison groups received additional, traditional classroom instruction beyond the portion of their instructional time that was subject to the intervention.

Two of the studies—Diem and Fairweather (1980) and Meyer, Ory, and Hinckley (1983)—assessed the same intervention—namely, the PLATO instructional software package for mathematics, reading, and language, published by PLATO Learning. This software was described as consisting of drill-and-practice instruction in basic skills that included arithmetic, reading, and language usage. In both studies, PLATO replaced face-to-face instruction led by a classroom teacher and covering similar content areas; in the Diem and Fairweather (1980)

study, the traditional classroom instruction was said to include "lecture, rote recitation, and some team teaching" (p. 207). The software was described as mastery-based and was supplemented by nonelectronic materials. The PLATO classrooms were staffed by a teacher and an aide in the Meyer et al. (1983) study and by a classroom teacher in the Diem and Fairweather (1980) study. In the Meyer et al. (1983) study, the intervention lasted approximately 2.5 hours per day for three months, at an implied rate of five days per week. In the Diem and Fairweather study, the intervention lasted eight weeks, but intensity and frequency were not specified.

The study by Batchelder and Rachal (2000) used a "tutorial/drill and practice" (p. 125) software package called Advanced Instructional Management System (AIMS) that allowed students to choose their focal areas and to progress at their own pace. It also provided diagnostic feedback on their progress. The software reportedly emphasized arithmetic and writing conventions, presenting students with lessons, sample problems to solve or essays to correct, feedback on their work, and chances to demonstrate learning from their mistakes. It was used to supplant face-to-face instructional time in mathematics, English, history, and science for one hour per day, five days a week, during a four-week period. AIMS classrooms were staffed by a facility employee rather than by a classroom teacher, and inmate peers were on hand to assist with technical difficulties.

McKane and Greene (1996) assessed the AUTOSKILL Component Reading Subskills Program (Fiedorowicz and Trites, 1987), which was reportedly designed to teach cognitive subskills of reading, and particularly syllable and word recognition. It offered speeded drill and practice and supplanted an unspecified portion of the traditional, teacher-led literacy instruction that the students otherwise received. Both AUTOSKILL and traditional instruction classrooms were staffed by literacy instructors. Traditional instruction was reported to include a variety of literacy teaching methods, including the Laubach method, Steck-Vaughn tutoring, peer tutoring, and traditional classroom instruction.

Notably, three of the four studies used random-assignment designs. Consequently, Batchelder and Rachal (2000) and Diem and Fairweather (1980) earned 5s on the Maryland SMS, and McKane and Greene (1996) earned a 4 due to high attrition. The other study, Meyer, Ory, and Hinckley (1983), did not take steps to reduce selection bias and thus earned a 2 on the Maryland SMS.

Measuring Academic Performance

For the meta-analysis, we limited our examination of academic performance to the two content areas that were common to more than two studies—namely, mathematics and reading. These are policy-relevant measures, since they are building-block skills for other content areas, and they are the two subjects that states are required to measure annually in public schools under the federal No Child Left Behind Act of 2001. Beyond these content areas, one study also included a language test (Meyer et al., 1983) and another included measures of vocabulary and spelling (Diem and Fairweather, 1980), but to include an outcome variable in the meta-analysis, we required at least three studies to measure that variable.

Each study employed one of three commercially available standardized tests to measure academic performance. All were paper-and-pencil examinations, and all used separate pretests and posttests to measure changes in student performance over time. Information provided about the standardized tests is described below.

One study (Diem and Fairweather, 1980) used the *Adult Basic Learning Examination (ABLE), Level II*, which is designed to measure the performance of adult students performing on a fifth- to eighth-grade level. Our analysis focused on the subscale scores in reading and total arithmetic; the latter comprises computation and problem-solving subscales.

One of the studies (Batchelder and Rachal, 2000) used the Comprehensive Adult Student Assessment System (CASAS) mathematics and reading scales. This test is reportedly designed to measure performance from beginning levels through high school completion and was reportedly “validated through field testing based on 15 years of assessment data from more than 2 million adult learners” (Batchelder and Rachal, 2000, citing the Comprehensive Adult Student Assessment System, 1996).

The other two studies used the Test of Adult Basic Education (TABE) scales in reading (Meyer, Ory, and Hinckley, 1983) or mathematics and reading (McKane and Greene, 1996). Meyer, Ory and Hinckley (1983) used the TABE M (medium level) as a pretest and TABE D (difficult level) as a posttest. The former is reportedly designed to reliably measure performance at grades 3 through 10 and the latter, at grades 5 through 12. McKane and Greene (1996) did not specify the versions used, but both studies noted that the TABE is frequently used as a measure of academic performance in correctional settings.

Creating a Common Performance Scale

To synthesize the results of studies that use different measures of academic performance with different testing scales, it is necessary to put the results in common units across studies. Many studies and research syntheses have to create a common scale across disparate tests by converting scores to standard deviation units or z-scores, where a standard deviation is defined as the average deviation from the mean across test-takers on a given assessment.¹ In this case, however, all of the test scores are reported in grade equivalents or in forms that can be easily converted to grade equivalents, so we use these as our common metric, thereby avoiding the need to use standard deviation units for different tests (Baguley, 2009).² Grade-level equivalents have the additional benefit of being easily understood by policymakers and practitioners, because one unit is equal to a single, nine-month academic year of learning in a particular content area. This metric typically refers to a standard scholastic setting rather than a correctional education setting, in which students receive approximately one hour of instruction in each of six to seven content areas for five days per week. As such, one month of learning (as reported on the ABLE, for instance, in Diem, 1980) would represent one-ninth of a grade-level equivalent. According to a publicly available report from the CASAS (2012), four scale score points on both the reading and mathematics scales represent a one-grade level difference. Consequently, we defined a unit difference in CASAS score points as equal to one-quarter of a grade-level equivalent. For the two studies that used the TABE, results were already presented in terms of grade-level equivalents. Because we were able to transform ABLE and CASAS scores linearly into grade-

¹ More technically, a standard deviation is the square root of the squared deviation from the mean, divided by $n - 1$.

² Moreover, only two of the four studies (Batchelder and Rachal, 2000; and Meyer, Ory, and Hinckley, 1983) reported standard deviations of student performance. The other two reported only standard deviations of student performance changes, and deviations for an appropriate comparison population were not publicly available for the ABLE, in particular.

level equivalents, and because TABE scores were already reported in grade-level equivalents, we were able to report effects consistently across studies using this metric.³ Additional details about how each of the four studies defined and operationalized achievement, as well as specific information on the individual interventions, the research design used in the studies, the WWC and Maryland SMS ratings, and the test scores for the treatment and comparison groups, are shown in Appendix H.

Results: Effects of Computer-Assisted Correctional Education on Student Performance in Math and Reading

The four aforementioned studies include a total of nine effects. Three of the studies provide one math effect and one reading effect each, and one of the studies (McKane and Greene, 1996) contributes no math effect but does contribute separate reading effects for three distinct subgroups—students beginning at the third-grade reading level or lower, students beginning between the third- and sixth-grade levels, and students beginning above the sixth-grade level. In the studies that include both reading and mathematics estimates, there is complete overlap between the samples of reading and mathematics test-takers, meaning that the estimates for each content area are not independent within a given study. As a result, we present separate meta-analytic estimates for reading and mathematics rather than combining the estimates into a single academic achievement effect.

These effect estimates for reading are summarized in a forest plot shown in Figure 5.1, and the estimates for mathematics are also shown in Figure 5.2. In each plot, the horizontal axis represents the estimated effect of computer-assisted instruction relative to traditional instruction. As noted above, the effect estimates are denominated in grade-level equivalents, so that one unit corresponds to a single grade level of learning, or approximately the knowledge that would be gained in nine months of full-time classroom instruction, on average. For each study listed on the left of the figures, the black box represents the effect size estimate for a given study sample or subsample, and the size of the box is proportional to the size of the sample or subsample. The horizontal line for each study represents the 95 percent confidence interval around the effect.⁴ Each individual effect and its confidence interval are also listed in the right-hand column of the figure. The overall, meta-analytic effect across studies is estimated as in prior chapters with a random effects regression analysis, which weights each effect according to its sample size and the precision with which it is estimated.

³ The actual analysis uses scale-score units. In two of the studies, scale scores and standard deviations are provided for both the pretest and posttest scores. One of these studies (Batchelder and Rachal, 2000) provides an F-test on the posttest difference, from which we back out a standard error, so the meta-analysis includes only the posttest difference for that study. The other of these studies (Meyer, Ory, and Hinckley, 1983) provides p-value thresholds for the pre-post differences in each group; we back out the standard errors using the most conservative assumptions for these p-value thresholds. The other two studies (Diem and Fairweather, 1980; McKane and Greene, 1996) provide standard errors for the pre-post difference in scale scores of each group, and we use those standard errors in the analysis. In other words, the meta-analysis uses the pre-post differences in scale scores for each group (and associated standard errors) for all of the studies except Batchelder and Rachal (2000), where we instead include only the post-test difference and associated standard error.

⁴ Note that the right whiskers for McKane (1996a) and Batchelder (2000b) are arrows. This is to signify that the confidence intervals for these effect sizes extend beyond the scales of the figures.

Figure 5.1
Reading Effect Estimates

RAND RR266-5.1

Figure 5.2
Mathematics Effect Estimates

RAND RR266-5.2

As shown in the bottom row of Figure 5.1, we estimate that the overall effect of computer-assisted instruction relative to traditional instruction in reading is 0.04 grade levels, or about 0.36 months of learning. This is a small effect in substantive terms and is also not statistically distinguishable from zero, as evidenced by the 95 percent confidence interval, which ranges from -0.22 to 0.29. The fact that zero falls within the confidence interval means that we cannot reject the null hypothesis that computer-assisted instruction offers no benefit in reading beyond that of traditional instruction.

Turning to Figure 5.2, we estimate a substantively larger effect of computer-assisted instruction on achievement in mathematics. There, we find an effect estimate of 0.33 grade levels, which represents about three months of learning. Taken at face value, this is a substantial effect, particularly given that the dosages ranged from only one month of instruction (at one hour per day) in the case of Batchelder and Rachal (2000) to two months in the case of Diem and Fairweather (1980) and three months (2.5 hours per day) in the case of Meyer, Ory, and Hinckley (1983). Assuming that a standard deviation in the outcome is about 1.5 grade-level equivalents (based on estimates from Meyer, Ory, and Hinckley, 1983), this represents about a fifth of a standard deviation. To put the finding in context, this effect size estimate is roughly twice what many studies find to be the difference in effect between a high-performing and an under-performing teacher (e.g., Aaronson et al., 2007; Kane and Staiger, 2005; Rivkin et al., 2005; Rockoff, 2004).⁵ The estimate is based on only three studies. In light of the limited number of studies and the limited number of participants within each, the 95 percent confidence interval around the estimate ranges from -0.13 to 0.79 grade levels. As is true for reading, the fact that zero falls within the confidence interval means that the result is not statistically significant at the 5 percent level. We therefore fail to reject the null hypothesis that computer-assisted and traditional instruction have identical effects on student performance in mathematics.

Viewed from another perspective, however, the data also provide no evidence that computer-assisted instruction harms student performance. Because computer-assisted instruction can be self-paced and can be supervised by a person other than a licensed classroom teacher, it is potentially less costly to administer and could even allow correctional facilities to expand their instructional course offerings. For these reasons, the finding of no statistically significant difference between computer-assisted and face-to-face instruction suggests that, based on current evidence, computer-assisted instruction may be a reasonable alternative to traditional, face-to-face classroom instruction in correctional facilities. Moreover, the most recent of the four studies in our meta-analysis that addressed this question was published in 2000, and two were published in the early 1980s. The capability and utility of computer-assisted instructional technology has progressed substantially since these studies were published (U.S. Department of Education, 2010). It is possible that the effects of newer technologies could outstrip those found in the studies described here. Therefore, it will be important for such technologies to be carefully evaluated when they are deployed in correctional settings.

Role of Program Type

Practitioners may also wonder about the extent to which one type of computer-assisted instruction outperforms another. To address that question, we conclude our analysis of achievement by exploring whether the relationship we observe between computer-assisted instruction and learning in correctional facilities varies by program type. Table 5.1 presents details about the program type associated with each effect estimate.

Again, we lack enough studies to address this question formally, but examining Table 5.1 does yield some descriptive information about differences by intervention type. Two of the studies—Diem and Fairweather (1980) and Meyer, Ory, and Hinckley (1983)—used the PLATO drill-and-practice software relative to regular classroom instruction, whereas

⁵ Where the difference is one standard deviation of teacher effectiveness.

Table 5.1
Estimates of the Effect of Computer-Assisted Instruction on Student's Achievement Grade Level,
by Content Area and Program Type

Study	Content Area	Program Type	Effect Estimate	95% Confidence Interval
Batchelder (2000a)	Reading	AIMS	1	-0.82 to 2.82
McKane (1996a)	Reading—low baseline	AUTOSKILL	1.18	-0.81 to 3.17
McKane (1996b)	Reading—medium baseline	AUTOSKILL	-0.25	-1.29 to 0.79
McKane (1996c)	Reading—high baseline	AUTOSKILL	0.25	-1.12 to 1.62
Diem (1980a)	Reading	PLATO	0.01	-0.32 to 0.34
Meyer (1983a)	Reading	PLATO	0	-0.50 to 0.50
Batchelder (2000b)	Mathematics	AIMS	1.23	-0.57 to 3.02
Diem (1980b)	Mathematics	PLATO	0	(-0.48 to 0.49)
Meyer (1983b)	Mathematics	PLATO	1.04*	(0.09 to 0.91)

* $p < 0.05$.

NOTES: The Study column lists only the first author and year for each study. The full citation for each study can be found in Appendix H.

Batchelder and Rachal (2000) used a software package called AIMS that focused on basic arithmetic skills and writing conventions, and McKane and Greene (1996) used the AUTOSKILL syllable-and-word-recognition software. Turning first to the results from the two PLATO studies, we find that they are uniformly close to zero except for the mathematics effect in Meyer, Ory, and Hinckley (1983), where there is a significant and positive effect of half a grade level, or about 4.5 months. This is substantial, since the intervention lasted only three months.⁶ The largest effects we see are from the Batchelder and Rachal (2000) study, where we find 20 hours' worth of computer-assisted instruction with AIMS arithmetic and language practice software yielding effects of more than a single grade level in both math and reading. However, these effects have very large confidence intervals, rendering them statistically nonsignificant, and, unlike results from the other three studies, they are unadjusted for substantial baseline differences at pretesting because the correlation between pretest and posttest scores was not reported.

Finally, we turn to McKane and Greene (1996), whose results seemed to depend on the baseline reading ability of students. For students who began with lower than a third-grade reading level (effect "a") the syllable-and-word-recognition software was associated with gains of more than one full grade level, although the sample was small and the result was not statistically significant.⁷ For students with baseline reading levels between grades three and six (effect "b") or above grade six (effect "c"), the results were either negative or slightly positive and were nonsignificant in all cases. In sum, the data are slightly positive with regard to PLATO effects in mathematics and AIMS in both math and reading, and AUTOSKILL only for the lowest-

⁶ The intensity of 2.5 hours per day of instruction is comparable to what a student might receive in math and language arts alone in a traditional secondary school environment, which is the environment on which grade-level equivalents are based.

⁷ Note that the duration and frequency of the intervention were not reported.

skilled individuals. However, with so few studies of each intervention, our ability to generalize about any given intervention is quite limited.

Summary

Our meta-analyses of six reading effect estimates and three mathematics effect estimates from four studies suggest that the effect of computer-assisted instruction on incarcerated adults' reading and mathematics performance is not statistically different from that of traditional, face-to-face classroom instruction. The overall effect of computer-assisted instruction is estimated at only about 0.36 months of learning in reading but at a more substantial three months of learning in mathematics. Although the mathematics effect estimate is substantively meaningful, its confidence interval includes zero and, thus, we cannot rule out the possibility that it is due to chance alone. Moreover, as none of the prior meta-analyses on correctional education looked specifically at computer-assisted instruction and achievement, our findings cannot be directly compared with existing work in this area.

Conclusions

The goal of this report was to address the question of what we know about the effectiveness of correctional education—academic programs and vocational training programs—for incarcerated adults in U.S. state prisons. Specifically, we examined the evidence about the relationship between correctional education and recidivism and postrelease employment outcomes and the relationship between academic performance and computer-assisted instruction. These findings will inform policymakers, educators, and correctional education administrators interested in understanding the association between correctional education and reductions in recidivism and improvements in employment and other outcomes.

In this chapter, we summarize our overall findings, provide specific recommendations for strengthening the evidence base in this field, and discuss the policy implications and next steps.

Overall Summary of Findings

Our meta-analytic findings provide additional support to the premise that receiving correctional education while incarcerated reduces an individual's risk of recidivating after release. After examining the higher-quality studies,¹ we found that, on average, inmates who participated in correctional education programs had *43 percent lower odds of recidivating* than inmates who did not. These results were consistent even when we included the lower-quality studies in the analysis. This translates as a reduction in the risk of recidivating of 13 percentage points for those who participate in correctional education programs versus those who do not. This reduction in the risk of recidivating is somewhat greater than that reported by Wilson, Gallagher, and MacKenzie (2000), which showed an average reduction in recidivism of about 11 percentage points. Using more recent studies and ones of higher quality, our findings complement the results published by Wilson, Gallagher, and MacKenzie (2000), Aos, Miller, and Drake (2006), and MacKenzie (2006) and provides further support to the assertion that correctional education participants have lower rates of recidivism than nonparticipants.

Given the high percentage of state prison inmates who have not completed high school, participation in high school/GED programs was the most common approach to educating inmates in the studies we examined. We found that inmates who participated in high school/GED programs had a 30 percent lower odds of recidivating than those who had not. In gen-

¹ That is, RCTs or quasi-experimental designs where the treatment and control groups are matched at baseline on at least three characteristics other than gender.

eral, studies that included ABE, high school/GED, postsecondary, and/or vocational training programs showed a reduction in recidivism. However, it is not possible to disentangle the effects of these different types of educational programs, because of the overlap in curricular exposure and a lack of specificity about dosage. Thus, we cannot assert, for example, that high school/GED programs have a greater effect on reducing recidivism than postsecondary education programs.

When we look at the relationship between correctional education and postrelease employment, our meta-analyses found—using the full set of studies—that the odds of obtaining employment postrelease among inmates who participated in correctional education (either academic or vocational programs) was 13 percent higher than the odds for those who did not. However, only one study fell into the higher-quality category.² Thus, if one wants to base policy decisions on the higher-quality studies alone, then we are limited in our ability to detect a statistically significant difference between program participants and nonparticipants in postrelease employment. Still, our results suggest a positive association between correctional education and postrelease employment. This finding aligns with those produced in the Wilson, Gallagher, and MacKenzie (2000) meta-analysis, which also found improved odds of employment among correctional education participants.

When examining the relationship between correctional education and postrelease employment, one might expect vocational training programs to be more adept than academic education programs at imparting labor market skills, awarding industry-recognized credentials, or connecting individuals with prospective employers. And, indeed, when we looked at the relationship between vocational training—versus academic correctional education programs—and postrelease employment, we found that individuals who participated in vocational training programs had odds of obtaining postrelease employment that were 28 percent higher than individuals who had not participated in vocational training. In comparison, individuals who participated in academic programs (combining ABE, high school/GED, and postsecondary education programs) had only 8 percent higher odds of obtaining postrelease employment than individuals who had not participated in academic programs. Although the results suggest that vocational training programs have a greater effect than academic programs on one's odds of obtaining postrelease programs, there was no statistically significant difference between the odds ratios for the two types of programs.

We also examined the relationship between computer-assisted instruction and academic performance—something that was not examined in any of the previous meta-analyses. In this case, the outcomes of interest were standardized test scores in mathematics or reading. We reviewed four studies³ that compared the achievement test scores of inmates receiving computer-assisted instruction with the achievement test scores of inmates receiving face-to-face instruction. In two of the studies, students in both the treatment and comparison groups also received additional, traditional classroom instruction beyond the portion of their instructional time that was computer-assisted. We limited our examination of academic performance to the two content areas that were common to more than two studies—math and reading.

² This study by Saylor and Gaes (1996) examined industrial work, vocational instruction, and apprenticeship in federal prisons and found a 71.7 percent higher rate of employment among those who participated in these programs compared with 63.1 percent for those who had not.

³ Three of these four studies employed high-quality research designs as defined by the WWC rating scheme and the Maryland SMS.

We estimated that the overall effect of computer-assisted instruction relative to traditional instruction is 0.04 grade levels in reading, or about 0.36 months of learning, and 0.33 grade levels in mathematics, which represented about three months of learning. In other words, on average across the study samples, students exposed to computer-assisted instruction learned very slightly more in reading and substantially more in mathematics as compared to those exposed to traditional instruction for the same amount of instructional time. However, these differences were not statistically significant and thus may be due to chance alone.

Because computer-assisted instruction can be self-paced and can be supervised by a tutor or an instructor, it is potentially less costly to administer than traditional instruction. It is worth noting that since the publication of these four studies,⁴ the capability and utility of instructional technology has progressed (U.S. Department of Education, 2010), which suggests that the effects of the newer technologies may potentially outstrip those found in the studies examined here. The current positive (though not statistically significant) result, the potential cost-effectiveness of computer-assisted technology, and the fact that the technology is getting better suggest that its use in this context could be promising.

State policymakers, corrections officials, and correctional education administrators are asking a key question: How cost-effective is correctional education? In other words, although our findings clearly show that providing correctional education programs is more effective than not providing them, such programs have costs. Thus, to place our meta-analytic findings into context, we undertook a cost analysis using estimates from the literature of the direct costs of correctional education programs and of incarceration itself, and using a three-year reincarceration rate. Our estimates show that the direct costs of providing education to a hypothetical pool of 100 inmates would range from \$140,000 to \$174,400 with three-year reincarceration costs being between \$0.87 million to \$0.97 million *less* for those who receive correctional education than for those who do not. This translates as a per inmate cost ranging from \$1,400 to \$1,744, suggesting that providing correctional education is cost-effective compared with the cost of reincarceration. We also calculated the *break-even point*—defined as the risk difference in the reincarceration rate required for the cost of correctional education to be equal to the cost of incarceration. For a correctional education program to be cost-effective, we estimated that a program would need to reduce the three-year reincarceration rate by between 1.9 percentage points and 2.6 percentage points to break even. In fact, our meta-analytic findings show that participation in correctional education programs is associated with a 13 percentage point reduction in the risk of reincarceration three years following release from prison. Thus, correctional education programs appear to far exceed the break-even point in reducing the risk of reincarceration.

Our analysis focused only on the direct costs of correctional education programs to the prison system. A full analysis of the benefits and costs of correctional education besides accounting for the direct costs to a prison system would also need to account for other costs, such as the financial and emotional costs to victims of crime and to the criminal justice system as a whole, which could be much more substantial than our estimates above. The Washington State Institute for Public Policy's (WSIPP) undertook a cost-benefit analysis for its state comparing different types of adult rehabilitative programs, including education programs. Using a conservative set of assumptions, WSIPP found that vocational training and general education

⁴ Two of the studies were published in the early 1980s; the other two were published in 2000.

in prison produced some of the largest net economic benefits for adult programs (Aos, Miller, and Drake, 2006).

Last, in considering the above findings, it is important to keep in mind that the 2008 recession also had an effect on the field of correctional education. The recession affected correctional education (and other rehabilitative) programs in a number of states, leading to some dramatic changes in the number of programs offered, the sizes of classes, the modes of delivery, and the number of inmates who participate in these programs. For example, funding for correctional education was reduced by 30 percent as part of California's \$1.2 billion budget reduction for corrections in fiscal year 2009 (California Rehabilitation Oversight Board, 2010). As a result, approximately 712 teaching positions were eliminated, the number of vocational programs was reduced by nearly 50 percent, and the capacity of academic and vocational programs was reduced by 3,300 and 4,500 slots, respectively. To reduce the effect of these cuts on capacity and to maximize enrollment, the California Department of Corrections and Rehabilitation also developed five new education models with decreased program frequency, duration, and options while maximizing the number of inmates with access to the programs. For example, under the new education models students would meet for three hours per day once a week (which would allow for two sessions during the day) instead of meeting for 6.5 hours a day, five times a week under the old education model.

In Texas, the legislature reduced the budget for its state prison education system by approximately 27 percent, or \$17.8 million per year over the next biennium (Windham School District, 2011–2012). To address the reduction in funding, 271 full-time equivalents (FTEs) were eliminated, all staff received reductions in salary, and other cuts were implemented (e.g., to supplies, travel, and other operating budgets).

In Oklahoma, budget cuts affected both academic and vocational programs. For example, appropriations to CareerTech (which runs the state prison Skills Centers that provide vocational and technology training) declined by more than 15 percent between fiscal years 2009 and 2012 (Wertz, 2012). Five of the state's 15 prison Skills Centers were closed, resulting in the loss of vocational training capacity in welding, carpentry, masonry, plumbing, and electrical. Since 2008, the Oklahoma Department of Corrections lost one-third of its full-time education staff and a similar percentage of its Skills Center instructors.

Within the past year, there has been an uptick in funding for correctional education, with many state correctional education directors reporting either no further funding cuts or even some minor increases in funding—a situation that has enabled them to begin modestly rebuilding programs (personal communication, Correctional Education Association [CEA] Leadership Forum, 2012). That said, a reduced funding environment will likely be true for correctional education programs for the near future, and the return on investment of these programs will likely continue to be a topic in state-level budget discussions.

The Need to Improve the Research Evidence Base for Correctional Education

Using the most recent published studies in the field, we similarly find that the quality of the available research on correctional education is highly variable (Gaes, 2008; MacKenzie, 2008). Unlike authors of previous meta-analyses, we had more studies with which to assess the effectiveness of correctional education. However, although our meta-analyses, as did previous meta-analyses, accounted for the strength of the research designs of the various studies examined,

there are still a number of questions of interest to educators and policymakers that the current literature—with its variable research quality—does not permit us to address. For example, we would want to look “inside the black box” of correctional education programs to try to understand what program elements (e.g., types of curriculum, mode of instruction, dosage, type of instructors) are associated with effective programs with respect to reductions in recidivism and improvements in postrelease employment outcomes.

In addition, one would want to address such questions as:

1. What dosage is associated with effective programs and how does it vary for different types of students?
2. Who benefits most from different types of correctional education programs?
3. What types of correctional education programs are associated with the highest postrelease returns?
4. What factors moderate or mediate the effect of correctional education?
5. How effective are peer tutors compared with credentialed instructors?
6. What is the right balance between in-person instruction versus self-study or computer-based learning?
7. What principles from adult education and learning may be applicable to correctional education?

All these questions get at the need to improve the evidence base. Below we provide recommendations for improving the evidence base in four critical areas:

1. Apply stronger research designs.
2. Measure program dosage.
3. Identify program characteristics.
4. Examine more proximal indicators of program efficacy.

Applying Stronger Research Designs

As discussed in this report, establishing a causal relationship between correctional education participation and successful outcomes for inmates requires ruling out the possibility of selection bias. This form of bias occurs when inmates who elect to participate in educational programs differ in unmeasured ways from inmates who elect not to participate in educational programs. In other words, correctional education participants may be more motivated, have a stronger internal locus of control, be more proactive about planning for their postrelease futures, etc.—all of which could affect why participants do better, independent of the effect of the programs themselves. Thus, if such differences between the treatment and comparison group exist before participation, any observed postparticipation outcomes may not necessarily reflect the causal effect of the program. In other words, higher rates of employment and lower rates of recidivism among correctional education participants may reflect inmates’ skills and temperament and have nothing (or little) to do with exposure to education while incarcerated. Isolating the effects that can be directly attributable to the program itself is crucial in supporting the design of effective policies—an objective that is hampered by studies with research designs that are highly susceptible to selection bias.

In our meta-analysis, only seven of the 50 studies used to assess recidivism and one of the 18 studies used to assess employment were based on studies that received a Level 5 rating (a

well-executed RCT) or a Level 4 rating (a quasi-experimental design with very similar treatment and comparison groups) on the Maryland SMS. Most of the studies were based on lower-quality research designs (Level 3 and below on the Maryland SMS) that were susceptible to selection bias. Further, many studies did not report sufficient information about the sociodemographic characteristics and other characteristics of the treatment and comparison groups; reporting on such information would allow for meaningful differences between the two groups to be evaluated and the potential threat of selection bias to be quantified.

To minimize this potential for bias, future studies should ideally employ research designs that help to minimize it. The ideal design, of course, is an RCT, in which individuals are randomly assigned to the treatment group (e.g., those who receive vocational training) and to the control group (those who do not); however, RCTs may not always be practical or politically feasible with a criminal justice population.

When an RCT is not possible, two other alternatives might be feasible—a regression discontinuity (RD) design and a propensity score matching/weighting design. Both alternatives are intended to minimize selection bias, although an RD design does so more rigorously, because it addresses selection on *both* unobserved and observed attributes, whereas propensity scores address only the latter. The RD design, when executed properly, would merit a Level 5 on the Maryland SMS, in keeping with WWC standards for RDs (Schochet et al., 2010), whereas a propensity score matching or weighting study would merit a Level 4 rating at best.

Using an RD approach, assigning inmates to the treatment group would be based on a strict cut-point from a continuous measure that is judiciously applied to every inmate. For example, scores on the TABE may be used to select inmates to participate in a correctional education program, such that everyone directly above the cut-point is assigned to the program (i.e., to the treatment group) and everyone below the cut-point is assigned not to receive the program (the control group).

A key assumption of the RD design is that there is a linear relationship between the selection mechanism and the outcome, or that the relationship can be linearized. If this assumption holds and the design is properly implemented, then this design has very high internal validity. Because the assignment rule is fully understood and modeled, assignment is removed from the estimate of the treatment effect. To be implemented well, an RD design requires reasonably strong compliance with the assignment rule, although effects can be scaled for partial noncompliance through an instrumental variable analysis. It is noteworthy that none of the studies in our meta-analyses used an RD design.

Propensity score matching or weighting is possible when there is a range of information collected on program participants and nonparticipants—including sociodemographic information, prior criminal records, prior education and labor force experiences, cognitive functioning, and, if possible, other personality and behavioral traits. This information can be used to create a comparison group that is evenly balanced with the treatment group on the observed set of characteristics maintained in the data. In doing so, those in the comparison group have approximately the same “propensity” to have enrolled in correctional education as those in the treated group. This matching or weighting helps attenuate the threat of selection bias when making comparisons on the outcomes of interest, particularly when the set of characteristics used to balance the treatment and comparison groups is extensive and includes variables most likely to differentiate participants from nonparticipants.

Among the studies in our meta-analyses, only five used propensity score matching or weighting, although many more (virtually all the Level 4 and some of the Level 3 studies) used

a manual matching procedure in which treated inmates were matched to similar untreated inmates on key variables using administrative records. As long as the studies showed baseline equivalence between treatment and comparison groups on age, prior offenses, baseline educational level, and time between release and data collection, they were assigned a Level 4, regardless of the matching procedure used. However, the advantage of propensity score matching over a manual matching procedure is that it can help researchers obtain baseline equivalence over a much larger number of variables than one can typically achieve with a manual matching procedure (Rosenbaum and Rubin, 1983).

In addition, identifying the appropriate comparison groups is important (Gaes, 2008). Many of the studies reviewed in our meta-analyses used comparison groups of nonprogram participants but did not consider differences in terms of levels of education, certification, or training. As a result, the comparison group might be a mixture of inmates with varying levels of academic achievement.

Gaes (2008) recommended that a study registry be established to help sort out the different effect sizes found across studies. Given the vast array of programs currently administered, the dearth of basic information on their design and their effectiveness in a centralized system precludes the effective utilization of resources—particularly for states making strategic decisions on whether and how to recalibrate their programs to adjust to changes in funding and changes in the prisoner population. Such a registry would include details about each study including information about the program and intervention, about the evaluation design, characteristics of the treatment and comparison groups, and outcomes measures used. The research summaries provided in Appendixes F, G, and H of this report serve as a potential template for this type of information. The methodological and dissemination approach used by the U.S. Department of Education's What Works Clearinghouse could be adopted and adapted by the corrections' community to serve as a registry whereby programs are systematically cataloged and reviewed—improving accountability on the part of the programs and building a high-quality research base that can help better inform questions regarding what works best to effectively educate incarcerated individuals.

Measuring Program Dosage

Many practitioners have posed the question, What dosage level is associated with effective correctional education programs? For instance, does it matter that an individual participates in 20 hours of academic instruction or is 30 hours of academic instruction required for a given course? In other words, how much correctional education is needed to be effective? Such questions of dosage are especially salient now, when many correctional education programs have experienced significant budget cuts.

On average, the studies we reviewed lacked specific information about the dosage of the program, such as the overall program duration, the number and grade level of the courses in which inmates were enrolled, how many hours per day or week inmates were exposed to formal class instruction, and how many hours per day or week inmates worked on assignments outside the classroom. In many of the studies, particularly those that were secondary analyses of administrative data sets, respondents were categorized simply as correctional education participants and nonparticipants. This crude categorization undoubtedly masked variation in exposure to the program among participants. For example, some inmates may have been enrolled for a year; others may have been enrolled for a week and withdrawn.

Without being able to discern such differences, it is difficult to put the findings from individual studies in their proper contexts. Some studies may have produced null findings, not because the program was ineffective if implemented as designed but because the average dosage that the treatment group received was too small to make a difference. The lack of dosage information means that there is little to no empirical evidence that can help inform policymakers on how much correctional education is necessary to produce a change in the desired outcomes. In future studies, the proper recording of program dosage when collecting data and monitoring the progress of inmates through correctional programs will be critical to enable researchers to examine program dosage.

Identifying Program Characteristics

When we undertook our review of the literature, our charge from BJA was to identify promising or evidence-based programs that could be potentially replicated in other settings. We were limited in our ability to do so, because many of the studies did not provide sufficient detail on the characteristics of the program, such as the structure of the curriculum, the training and certifications of the teachers, the instructional methods used by the teachers, the student-teacher ratio in classrooms, and supplemental access to textbooks and technology.

To the extent possible, we culled this information from the studies that provided it and used it in an exploratory fashion in our meta-analyses. However, few studies consistently listed these details in their program descriptions; consequently, our findings from these few studies are suggestive at best. Thus, from a meta-analytic approach, we are unable to offer evidence-based prescriptions about what aspects of correctional education are most or least effective. The field would be well served if future research carefully documented the characteristics of the programs so that different models of program organization and instruction could be empirically validated.

Examining More-Proximal Indicators of Program Efficacy

The majority of studies used recidivism as an outcome measure. However, some would argue that recidivism is a *distal* measure that can be affected by many factors beyond correctional education. Further, studies differ in how recidivism is measured and in the length of time that recidivism is tracked.

Instead, many would argue that what is needed are more proximal measures that would better indicate how programs actually affect thinking and behavior, such as changes in motivation, literacy gains, development of concrete skills, or academic progress versus academic achievement.

The overwhelming number of studies we reviewed used recidivism as the major indicator, which is understandable given its importance as a marker of successful prisoner rehabilitation. However, despite its salience in criminological research, the emphasis on recidivism leaves much less known about the process through which correctional education helps shape how former inmates reintegrate into the community. Correctional education is believed to improve the skills and abilities of inmates (i.e., "human capital" in economics parlance), which, in turn, improves their chances of continuing education/training upon release and then finding gainful employment.

Only four studies in our review looked at skills and abilities (as measured by achievement test scores) and only 18 looked at employment. There were too few studies of additional education/training to include in a meta-analysis. Applying these more proximal indicators of

program efficacy will help to better elucidate the mechanisms that undergird the role of education in the rehabilitation process.

For example, collecting information on cognitive gains while inmates are enrolled in the program, additional education and training that inmates receive following their release, and more-detailed information about their postrelease employment (e.g., timing of employment, method of hiring, wages, occupation type, sector) would be important. Additionally, with respect to employment, our analysis and other research studies recognize that solely relying on administrative records, which record only formal “on-the-books” jobs, may underestimate the effect of correctional education. Studies that use supplemental ways of measuring labor market outcomes, such as surveys, are needed to better estimate the effect of correctional education on postrelease employment.

Policy Implications

Our study demonstrates that correctional education improves the chances that inmates who are released from prison will not return and may improve their chances of postrelease employment. Our findings are stable even when we limit our analyses to those studies with more rigorous research designs, and we find a notable effect across all levels of education, from adult basic education and GED programs to postsecondary and vocational education programs. This is important, because the academic needs of inmates are heterogeneous. Further, our cost analysis suggests that correctional education programs can be cost-effective. And as noted by Gacs (2008), correctional education is a form of intervention that can affect almost every offender compared with other types of rehabilitative services provided within prisons.

At the same time, it is important to keep in mind that much is changing in the field of correctional education. As noted above, the 2008 recession affected correctional education programs leading to major changes in the number of programs offered, the sizes of classes, the modes of delivery, and the number of inmates who participate in these programs. In addition, the implementation of the new GED exam in 2014 (GED Testing Service, undated)—which will entail a more rigorous test aligned with the Common Core State Standards (CCSS) and computer-based testing (CBT)—will be a new challenge for the field to adjust to and underscores the growing role of computer technology in correctional education.

Going forward, there is a need to undertake studies that get inside the black box to identify the characteristics of effective programs in terms of such elements as curriculum, instructional practices, quality, and dosage. To inform policy and funding decisions at the state and federal levels, policymakers need additional information and a better understanding about how these programs work (and what does not work). In addition to the need for more rigorously designed studies, we also need studies that drill down to examine different aspects of effective programs. For example, understanding how dosage may vary for different types of effective programs would be useful information for administrators and policymakers who are weighing various trade-offs in terms of program duration, frequency, and capacity.

One option is for state and federal policymakers and foundations to invest in well-designed evaluations of correctional education programs to inform such policy questions. Also, researchers and program evaluators need to strive to implement rigorous research designs to examine questions related to potential bias and program dosage. They should ideally strive to measure both proximal and distal outcomes, where the former refers to near-term outcomes, such as test

scores or behavior in prison, and the latter to longer-term outcomes, such as postrelease recidivism and employment. Funding grants and guidelines can help further the field by requiring the use of more rigorous research designs. Such funding also would enable correctional educators to partner with researchers and evaluators to undertake rigorous and comprehensive evaluations of their programs. In addition, a study registry of correctional education evaluations would further aid in the development of the evidence base in this field to help inform policy and programmatic decisionmaking. Knowing that these programs are cost-effective, if these programs were refined based on this important missing information, correctional education might have the potential to yield even greater returns on investment.

Document Identification Parameters and Sources

Search Terms

To identify documents for potential inclusion in our analysis, we conducted a search for the phrases “correctional education” and “prisoner education.” Additionally, we conducted a search using every potential combination of the following:

1. Academic Term AND Correctional Term
2. Vocational Term AND Correctional Term

Academic Terms

Education
Academic
School
Diploma
GED
Literacy
Math

Meta-Analysis Diagnostic Tests

Diagnostic Tests for Recidivism Analysis

If all studies used samples from the same population, we would expect the observed variation in effect sizes to be random, with most (approximately 95 percent) studies' confidence intervals including the pooled effect size of 0.64. The patterning of the boxes and whiskers in Figure 3.1 indicates that this is not the case—and instead suggests that there is substantial heterogeneity in effect sizes that is above the level that would be expected due to random variation. The degree of heterogeneity can be formally assessed through the I^2 statistic, which represents the percentage of variation across studies that is due to heterogeneity, rather than random variation. In this meta-analysis, the value of I^2 is 92 percent, indicating considerable amounts of heterogeneity.

The funnel plot, shown in Figure C.1, is used to look for evidence of publication bias. The funnel plot shows each estimate of the odds ratio of recidivating on the x-axis and its standard error on the y-axis. If there were no publication bias, we would expect the points to be approximately symmetrically distributed around the central line, with the spread of points increasing as the standard error increases. The funnel plot indeed shows some increasing spread with increasing standard errors, but at the larger values of the standard error, the points are no longer distributed symmetrically. This suggests evidence of publication bias, as we would expect smaller studies that found non-significant or negative results to be included in the plot in the lower right half, but these are missing from our search. That this portion of the chart is relatively empty suggests that these studies may exist but have not been published. The Egger regression test of non-symmetricality gives $p < 0.05$. This finding of publication bias suggests that our results may be biased upward (in other words, showing too large an impact on recidivism reduction). However, the publication bias is likely to be small, for three reasons: (1) The number of missing studies is small—the addition of two effect sizes would balance the funnel plot; (2) the missing studies are small and therefore unlikely to have a large effect on our pooled effect size; and (3) two effect sizes are extremely low—such outliers are likely to bias the results of the regression test. The alternative to the Egger regression test is the Begg non-parametric rank test, which is not affected by outliers. In that test, the p-value of 0.450 is non-significant, a finding consistent with no publication bias, though the exact p-value cannot be calculated in the presence of ties.

A second diagnostic test is a leave-one-out analysis. In this analysis, each effect size is sequentially removed from the dataset, and the meta-analysis is rerun. The effect is replaced, and the next effect is removed. This analysis determines the extent to which our results are reliant on one study, and whether our conclusions will be changed with the exclusion of a particular effect. Table C.1 shows the odds ratios and confidence intervals for 70 meta-analyses—with each effect size removed. The table shows that the results are highly stable, and not dependent on any particular study.

Diagnostic Tests for Employment Analysis

As with the recidivism analysis, the forest plot for the employment analysis (Figure 4.1) shows considerable variation and non-overlapping confidence intervals. The degree of heterogeneity is reflected in the I^2 statistic, which is 90 percent, only slightly lower than for recidivism, again indicating that there is a great deal of heterogeneity between the studies. The funnel plot (Figure C.2) shows that there is a possibility of publication bias, with small studies that have either no effect or a negative effect apparently missing from the dataset. The regression test of non-symmetry is statistically significant ($p < 0.05$), but the rank test is not ($p = 0.503$). However, as with the recidivism analysis, a small number of studies would balance the graph, and therefore we do not feel that this is likely to indicate substantive bias in our results.

The leave-one-out analysis, presented in Table C.2, shows that the pooled estimate and confidence intervals are not greatly changed by the inclusion or exclusion of any one study.

Diagnostic Tests for Computer-Assisted Instruction Analysis

The sample size for the computer-assisted instruction analysis was small, and hence the results of diagnostic tests will be less sensitive. Even pooling across math and reading analyses, the studies were found to be considerably less heterogeneous than studies in the recidivism and employment analyses. I^2 was equal to 0 percent, indicating that there was no greater heterogeneity than would have been expected by chance—and the p -value of the heterogeneity statistic reflected this ($p = 0.435$). The funnel plot in Figure C.3 shows the possibility of some publication bias, with a possible asymmetry in the lower left-hand side; however, the tests of asymmetry were not statistically significant, regardless of whether the regression test ($p = 0.196$) or rank test ($p = 0.180$) was used.

The leave-one-out analysis is presented in Table C.3. It shows that the pooled estimate across math and reading, which is 0.15 grade level equivalents but is not statistically significant (95% CI: -0.05 to 0.35), is not markedly altered by the exclusion of any one study. The confidence interval includes 0, indicating no statistically significant effect, in all cases.

After conducting a comprehensive literature search, the authors undertook a meta-analysis to examine the association between correctional education and reductions in recidivism, improvements in employment after release from prison, and learning in math and in reading. Their findings support the premise that receiving correctional education while incarcerated reduces an individual's risk of recidivating. They also found that those receiving correctional education had improved odds of obtaining employment after release. The authors also examined the benefits of computer-assisted learning and compared the costs of prison education programs with the costs of reincarceration.

The Effect of Prison Education Programs on Recidivism

John H. Esperian

A very special thanks to the following for their assistance in the preparation of this report:

Cindy Borden and Penny Richardson, Northstar Correctional Education Services*Edward Clapp, former student, and teacher at San Quentin*Dake Clarke, CSN student*CSN Professors Robert Fuhrel and Thymios Carabas*Crystal Kerr, Administrative Assistant, CSN prison programs*Ms Marion Martin, CSN Library Technician*Ms Kim Petersen, Nevada Department of Corrections*Dr Marguerite Re, CSN Professor*Dr. David Reed, Director of Educational Options, Western Regional Office (AZ)*Ms Maggie Slomka, CSN Library Technician*Dr. Alisse Waterston, former student, and professor at John Jay College of Criminal Justice*Ms Dorothy Wodraska, Director of Juvenile Transition, Maricopa County, (AZ)** and perhaps most importantly, The College of Southern Nevada, and the Nevada System of Higher Education Board of Regents for the sabbatical opportunity to do the research**

ABSTRACT

With constraints on budgets everywhere across America, many programs in U S prisons are being closely monitored to determine if costs can be cut and money saved in daily operations. A dramatic example occurred most recently at the College of Southern Nevada where, at a June graduation ceremony for inmates who earned a GED, or a high school diploma, from the Clark County School District, or an AA from C S N. More than 40 students received either a GED or a high school diploma, and only one student received an AA.

This study offers strong support for the argument that it is far more profitable for states to fund education classes for inmates , for two reasons: first, doing so reduces recidivism dramatically, and second because educating felons eliminates the costs associated with long term warehousing.

The study includes not only research into attitudes toward convicted felons, but also statistics which support the argument that it pays to educate. Included also are interviews with professional men and women directly involved in the education of the incarcerated.

Having worked in prison educational programs for ten years, three of them as director of prison education for the College of Southern Nevada, I decided to learn if educational programs fulfilled their goal, namely to educate, and thereby contribute directly to the reduction of crime and the consequences of recidivism, specifically, the attendant costs of locking criminals up. The opportunity to do this study presented itself through the good offices of the College of Southern Nevada and the Board of Regents of the Nevada System of Higher Education which, despite burgeoning system-wide fiscal difficulties, preserved and agreed to underwrite a number of sabbatical proposals for college professors. What follows is that study.

Overview

The last hundred years has seen a continuing debate about how to treat individuals held in American correctional facilities. Are they only to be punished, or is it possible through education and other means to change these people in a way that they can become law-abiding citizens who contribute to the welfare of society? At the very least, can the education of prisoners prevent their return to a life of crime and, eventually, to prison? A variety of thoughts have been expressed in the research on corrections in America. The following is one particularly worthy of consideration when attempting to understand the merit, purpose and success of corrections policy in the U. S.

The consideration extended to the seemingly undeserving person is not intended for his or her personal benefit, but expresses the moral integrity of the one who extends it. It enhances the dignity of human life, especially in situations where extending it appears to be hopelessly misspent.
(E.Bittner, qtd in Schwartz 172)

Early History of Corrections

The early history of corrections thinking, similar to today, reflects the ideas and values of the societies and governments which mandated it. Not surprisingly, historically early attitudes were characterized by retribution and punishment—

and the uglier the better. Consider the following sentence, in 1757, of Francois Damiens, convicted of unsuccessfully attempting to kill King Louis XV of France:

He is to be taken...in a cart, wearing nothing but a shift, holding a torch of burning wax...the flesh will be torn from his breasts, arms, thighs, and calves with red-hot pinchers, his right hand holding the knife with which he committed the said parricide, burnt with sulphur, and on those places where the flesh be torn away, poured molten lead, boiling oil, burning resin, wax and sulphur melted together and then his body drawn and quartered by four horses . . . (Clear and Cole 30)

Until the 19th century, throughout Europe and America, punishments were public occasions and street spectacles. However, with the rise of the penitentiary as a place where offenders could reflect on their misdeeds, repent, and prepare for life as law-abiding citizens, torture, as a public spectacle, disappeared. Accordingly, it was not until the beginning of the Middle Ages in Europe, during the 13th century that forms of legal sanctions familiar to 21st century society appeared.

Response to crime at that time was initially looked upon as a private affair and wrongs were avenged in accordance with the *lex talonis*, or law of retaliation. In England, by the year 1200 AD (CE), a system of *wergild*, or payment of money as compensation for a wrong was developed as a way of reducing the frequency of violent blood feuds. (Clear and Cole 31)

Prior to the 19th century, jails in Europe and England were used primarily for the detention of people awaiting trial. From the Middle Ages to the American Revolution, imprisonment, transportation (to Australia and the American colonies), corporal punishment, and execution dominated the correctional landscape. (Clear and Cole 44)

With the Enlightenment, however, changes began to be made in penal policy: A shift of focus occurred during the later part of the 18th century. Rather than stressing physical punishment of the offender, efforts began to be directed to the reformation of the offender. These changes were first proposed in Europe and later brought to fruition in America, which makes clear the reality that criminal justice in America has deep historical roots preceding the founding of this country.

History of Corrections in America

Corrections in America, during the colonial period, followed laws and practices

transferred from England and adapted to local conditions. As in England, banishment, corporal punishment, the pillory, and execution were the common penalties.

In 1682, however, with the arrival of William Penn, Pennsylvania adopted "The Great Law" which was based on humane Quaker principles and emphasized hard labor in a house of correction as punishment for most crimes. Death was reserved for premeditated murder. Quaker Code survived until 1718 when it was replaced by the Anglican Code which listed 13 capital offenses punishable by death. Fines, whipping, branding, mutilation, and lesser forms of corporal punishments were prescribed for other felonies including larceny. (Clear and Cole 49)

As the penitentiary evolved as a viable corrections institution, the punitive colonial penal system based on retribution was seen as incompatible with a society committed to the idea of human perfectibility. The penitentiary was conceived as a place where criminal offenders would be isolated from the bad influences of society and of one another—so that by reflecting on their misdeeds while engaged in productive labor, they could be reformed.

The post-Civil War period brought more change as reformers became disillusioned with the results of the penitentiary movement—in short, deterrence and reform had not been achieved. The reformatory movement, which took shape in the late 19th century emphasized education and training, and on the basis of their achievement and conduct, offenders moved toward release. Like their adult counterparts, juveniles incarcerated at the turn of the century were supposed to learn a trade that would assist them on the outside.

The next chapter in the shaping of American penology was a result of the progressive movement which evolved during the first two decades of the 20th century. Progressives placed their faith in state action to deal with the social problems of slums, vice and crime. They believed, also, that it was necessary to consider the life history of each offender and then devise a treatment program specific to that individual—in other words, treatment according to the needs of the offender, in contrast to punishment according to the severity of the crime. (Clear and Cole 61)

Current views reflect a pendulum swing back to a preference for retribution. Beginning in the late 1960s, the public became concerned about rising crime rates. Rethinking of corrections emphasized the need to move away from the goal of rehabilitation toward a greater concern for crime control. James Wilson summarized this more recent trend when he declared that society's efforts to understand and curb the rise in crime have been frustrated

by, "our optimistic and unrealistic assumptions about human nature." (qtd in Clear and Cole 68) He further finds it strange that society persists in the view that we can "find and alleviate the 'causes' of crime and that serious criminals can be rehabilitated."(68)

Not surprisingly, the costs, currently, both financial and human, of retributive crime control policies are being reexamined and rethought. Are the costs of incarceration and surveillance justified? Has crime been reduced? Are people more safe? These are questions that far too often elicit negative responses in the 21st century.

Finally, as a footnote to the retributive school of thought, following the 1976 Supreme Court decision in *Gregg vs Georgia*, 36 states rewrote their statutes so as to provide for the death penalty.

What is Recidivism?

Recidivism is a return to criminal behavior after release, and the effectiveness of corrections is usually measured by *rates of recidivism*. Recognized factors impact recidivism rates. Among them are: the socio economic status, effectiveness of post release supervision (for parolees), length of time incarcerated, severity and seriousness of crime committed, access to data which varies from state to state, and educational level of achievement of each individual . As follow-up is also an important factor, it is understood that as the time of follow-up periods increase, or become less frequent, rates of recidivism grow.

One conclusion that can be made regarding recidivists and their return to criminal behavior has been offered by Harriet Gagliano in her doctoral dissertation where she writes, the fact that 60% of prison inmates cannot read above the sixth grade level "provides some indication of one major reason for their criminal activity" (68).

Steven Klein of the U S Dept. of Education writes, "American prisoners have consistently tested at the lowest levels of educational achievement, and at the highest levels of illiteracy and educational disability of any segment in our society." (qtd in Burton 8). He and his colleagues conclude, "considering the vast numbers of inmates that do not possess the basic social and educational skills that they need to function in society, it should come as no surprise that many of those released from prison or jail will eventually return" (Burton 8).

Public Perceptions and Opinions

Public perceptions and opinions are, to say the least, strong—on both sides of the pro-con spectrum. A letter posted on the internet by a California prison

security officer reflects a view of prisons that is more common than some progressive penologists would care to admit. Here are a few lines from a two and one half page single spaced letter from the officer to anyone who is willing to listen.

The typical day in an inmate's life consists of being awoken(sic) at around 6:45am for chow. They walk to the dining hall where they are served coffee and/or juice and a FREE balanced breakfast that would cost my child \$2 at school. They sit and eat breakfast, and socialize with their brethren for about 15-20 minutes, and on the way out, receive their free bag lunch. Then, if they have a job, off they go (the average workday for an inmate is about six hours). If they aren't employed, they go back to their housing unit until the yard opens at about 8:30 or so. Once out to yard, they have a myriad of recreational choices in which to indulge. Some inmates play basketball or run the track. Others prefer handball or tennis. Less adventurous fellows may choose to throw around a Frisbee or participate in a game of horseshoes. Some simply lay their blanket out on the grass and sunbathe. There are softball tournaments to compete in for prizes, (sodas, ice cream, etc.) This scenario is repeated three times a day for a total of about 8.5 hours of daily recreational opportunity, seven days a week. Wouldn't that be nice?

The author is clearly hostile the notion of any kind of effort at rehabilitation effort and more favorable to the retributive approach to corrections. More significantly, he focuses on what are shortcomings and gaps in social welfare in the U S and compares these gaps to "free" food and medical care available in the prisons.

The writer fails to point out that life for prisoners is 24-7 behind locked cell doors and razor-wire topped fences, being told when and what to eat, and when to retire. And if inmates do have a job paying 10-25 cents an hour, the money will go either to victim restitution or to their "account" which can be used for purchase of sundry items from the prison "store". They will not see a nickel until the day they are released.

Interestingly, a straw poll of over 200 teaching faculty at the College of Southern Nevada has a somewhat different outcome. Following are the three questions asked and the teachers' responses. As the table demonstrates, there is wider acceptance among CSN faculty for education, and, interestingly, fairly wide support for the death penalty as well.

The Practice of “Warehousing”

Paul Butler writes that released felons are just as dangerous if not more so than before they were sentenced. Why? Because, he argues, prisoners do not get reformed, and it’s not because they can’t be rehabilitated, but rather because prison is a correctional facility in name only. A “long term storage locker,” he concludes, would be a more accurate description. (30)

Sunny Schwartz, a legal assistant prior to becoming a lawyer, and prisoner-education advocate, agrees. First, she says, many believe that prison should be a horrible experience. Many people, she believes, don’t think of prison as a deterrent, so much as just desserts. “They” hurt us; therefore “we” should hurt “them” (126).

For years, Schwartz goes on to say, politicians have won elections by promising to take away cable TV and weight rooms or anything seen to make prisons “cushy”. The prevailing wisdom, she says, is that prisoners deserve to be treated like animals. The consequences of making prison a nightmare, however, are worth considering: prisoners treated this way manifest an inability or unwillingness to take responsibility for committing their crimes, or to feel remorse, blaming others for their circumstances, in particular spending time growing angrier and angrier about being treated like an animal. (127) “They are,” Schwartz concludes, “usually full of rage” when they are released and less

prepared to function as citizens, the predictable product of what she terms "monster factories."

The current term for this corrections policy is "warehousing," and President Obama used it in a speech in 2007 at Howard University where he said that his administration would review drug sentences to see where "we could reduce the blind and counterproductive warehousing of nonviolent offenders" (Butler 182).

Schwartz sums up the cost-sensitive and controversial issue of educating felons thoughtfully and idealistically. What we need to do with prisoners is get them to hold a mirror up to their behavior and their lives, not get them to kneel on pebbles; the first step in holding up that mirror is getting the prisoners a basic education. (191)

This process she refers to as vital steps in the path to "restorative justice."

Recidivism Statistics

Statistics support the claim/hypothesis that educating prisoners contributes significantly to reducing recidivism. [General numbers provided by research suggest 50% to 70% re-incarceration within three years. ("Congressional Leaders" 1 ; Education Newsletter II 2)]

- a.) Three state recidivism studies made in 1997 by Steurer, Smith, and Tracy, conducted in Maryland, Minnesota, and Ohio involved 3600 men and women inmates released from prison at least three years. The study showed that male and female offenders who participated in education programs while in prison reduced re-incarceration by 29%. ("Recidivism Rates" 3,4)
- b.) A 2007 study of incarcerated mothers in Colorado found that recidivism rates of women who participated in vocational programs had a recidivism rate of 8.75%, those who completed their GED, 6.71%, and those who participated in neither a vocational or academic program, 26%. ("Recidivism Rates" 5)
- c.) Another study in 2002 surveyed research in Florida, Maryland, Massachusetts, New York, Ohio, Texas, Utah and Virginia. Results indicated that educational programs cut recidivism from 49% to 20%. ("Recidivism Rates" 6)
- d.) "National studies show," write Keys and Jackson, "that college classes cut recidivism by 30% or more. That would make a good investment for state taxpayers."

- e.) A West Virginia study (1999-2000) found dramatic outcomes. Records of 320 adult male inmates discharged in 1973 were followed. At the end of four years, there were 76 recidivists; 55 had not participated in an educational program, only 7 had completed a GED program, and four were college level participants. (Gordon and Weldon 202)
- f.) According to the National Correctional Association, in a 2009 report, inmates who earn an AA/AS are 70% less likely to recidivate than those who do not complete a program, a GED, 25% less likely to recidivate, and those who earn a vocational certificate, 14.6% less likely to recidivate. (*Education Newsletter 1 n.pag*)
- g.) A recent U S Department of Justice report says that "Prison-based education is the single most effective tool for lowering recidivism. According to the national Institute of Justice Report to the U S Congress, prison education is far more effective at reducing recidivism than boot camps, shock incarceration or vocational training." The report goes on to say that "Other studies sponsored by the Federal Bureau of Prisons find that...the more educational programs successfully completed for each six months confirmed, the lower the recidivism rates. The exact figures indicating these inverse recidivism rates for degree recipients were: Associates (13.7%), Baccalaureates (5.6%), Masters (0%). (*Education Newsletter II 3*)

Interviews with Individuals in Corrections Work

The following comments and observations are from individuals who have worked or who are working directly with prisoners and prison programs in the larger context of the college of Southern Nevada, The Clark County School District, or the Nevada Department of Corrections (NDOC). What seems to be a common denominator among all of those interviewed is not only an appreciation of the need to create a positive outreach for felons through state-sponsored intervention programs, but also a realistic understanding of the numerous, serious barriers to that effort as well.

According to Gretchen Williams, (College of Southern Nevada coordinator of prison education) and Granville Brown, (Manager Technical and Industrial Education Programs CSN Division of Workforce and Economic Development):

"The loss of Pell Grants for inmates in 1994 was a serious setback for prison education. And, due to the Nevada Dept. of Corrections budget reduction, not enough students remained in classes to justify continuation

of them. As a result only four classes would be likely to finish out the Spring 2010 semester."

"The approximate cost of warehousing an inmate in Nevada is \$20,000 a year."

"The Casa Grande facility in Las Vegas is a good example of how education promotes successful transitioning of prisoners to outside life, identification of job opportunities and is generally available to a limited number of inmates during the last 4-5 months of incarceration."

"Individual Incarceration Grants and Youth Individual Grants (NDOC funded) are currently available to inmates although present economic conditions make their continuation tenuous."

Howard Skolnik, Director, State of Nevada Department of Corrections, offers a variety of observations:

"The offender diversion program is an alternative to law breakers spending time behind bars—as long as no one has been killed or injured (for example, more than one DUI arrests)."

"Hawaii's successful HOPE (Hawaii Official Probation Enforcement) program is being duplicated here in Nevada as OPEN." (Official Probation Enforcement Nevada) (similar to a "scared straight" type of program for probationers rather than inmates).

"High school classes in prison are free to inmates; if the felon is under the age of 15, classes are required."

"The general population recidivism rate for released felons is approximately 70%. This figure is reduced to 6% for those who achieve a college education."

"The idea that corrections officers (aka 'guards')," he affirms, "resent classes offered to felons is a popular fiction—most officers understand the point of schooling in the prison and support it; of course there will be exceptions."

"Education of prisoners has an added benefit which people might not consider," Director Skolnik adds; "it makes management and control of prison populations much easier."

Robert Tarter, Clark County School District Principal at High Desert State Prison points out the following:

"Students at the High Desert Correctional Center secondary program can earn both a GED and a high school diploma."

"At any given time there can be as many as 320 students in the program. The continued movement of inmates is the main problem of course work completion."

"Students learn vocational skills as well as academic credentials. Classes are free to inmates and voluntary; however, students are encouraged to take classes."

"Correctional officers," he believes, "are generally supportive of ongoing educational programs of inmates, and state politicians (Nevada) support education because they seem to understand the dollar ratio of benefits that most often follow."

"In the education of felons, the chief problems, after cost, are physical and mental barriers. Our job is to address those barriers successfully", he concludes.

Rita Arden, CCSD Counselor at Florence McClure Correctional Center (women's prison):

"The state of Nevada mandates literacy," she points out, "but classes are still voluntary; we try to impress inmates that it will be very difficult to get a job without a high school diploma, or a GED."

"Yes, Casa Grande is a successful half-way house facility to transition pre-release felons back into society. Women actually have a small wing at the facility."

"Some educational problems occur," she says, "when inmates attending classes are interrupted to work on road crews, cleanup crews or at fire camp—usually non productive jobs in terms of education, but rather a small step in keeping costs down for the state or county."

"The general attitude toward the education of prisoners runs from extreme negativity (Why TVs? Why allowed out of their cells?) to acceptance; there is not a great deal of enthusiasm for the rehabilitation side of incarceration," she believes.

"Commitment to Change" classes, sponsored by NDOC, are designed to address life skills issues, drugs, poor relationships—too often men, husbands or partners of felons, don't share culpability for the wrong doing, and they should be," she argues.

"The two main concerns of inmates at McClure are how to survive while here, and how to get out."

"Youthful offenders grants, for inmates 35 and under, dried up this year, consequently only two classes were put up this Spring, 2010, semester."

"Records make it clear that a lot fewer former felons return to prison if they have earned at least a high school diploma while incarcerated."

Brian Williams, Warden, Southern Desert Correctional Center brings a philosophical dimension to the problem of recidivism. He says:

"The economy is the key to public, citizens and taxpayers, opinion regarding the education of prisoners. Society goes back and forth. When times are good programs are accepted, even supported by taxpayers; when the economy is down, however, people are not so sure."

"Educating felons definitely contributes to the reduction of recidivism, but many new and different laws today can keep former convicts—such as sex offenders—from getting hired at a good job. Many states also still withhold voting rights for former felons, so the transition to society is considerably difficult despite the acquired education."

"While college classes have been hit hard because of the downturn in the economy, high school classes and programs are pretty much still intact. Removal of Pell Grants for convicts was probably the correct move in 1994; it was easy to see the Pells as being given to law breakers—at the expense of those who never broke the law."

"Nevada had a more punitive correctional mind set 10 years ago when more inmates were from out of state and returned to their home states when released. During the next seven or so years, more felons came from Nevada and stayed in Nevada when released helping to shape the change in public opinion to favor rehabilitation and reentry, efforts which the Urban League has helped to promote and foster."

"There is no question in my mind that the greatest impediment to reducing recidivism, and crime in the first place, is parents. Single parent households account for over 70% of juvenile offender issues, and the most common problem related to these offenders is drug use and/or dealing of drugs. It all goes back to the household and parents."

An experienced corrections officer at High Desert State Prison who wished to remain anonymous had the following thoughts regarding the education of prisoners: "The turnaround rate (recidivists) is high, and the reason, primarily, is their not being able to find jobs. In this sense, education is a good idea because not working in a suitable job often results in hanging out with old friends and falling into the same bad habits." When asked if there is any resentment among correctional officers for education offered to inmates, he emphatically said there is not, and that education of prisoners has two main benefits. "First," he said, "it gives the inmates something to do other than sit in their cells, or watch television, and second, it reduces tensions, and anything that reduces tensions has got to be good for them and for us." When asked what can be done to reduce recidivism, he suggested that post release programs with reasonably close supervision should be in place for at least one year—mainly to reduce the number one cause of recidivism, violation of parole. (telephone interview, 12 April, 2010)

Patrick Quinn, currently an English professor at the College of Southern Nevada, has taught in the prisons of southern Nevada for 10 years, for both the college and the school district. It continues to be an experience he not only has enjoyed, but also one from which he has derived professional and personal

fulfillment. When asked why he thought prisoners take classes, secondary or college, he had this to say:

"The two primary reasons inmates take classes are to alleviate boredom and to acquire 'good time' which can be earned." He goes on to say that education efforts with prisoners is at best unpredictable as many prison students have few or little writing, reading or study skills at the secondary level. "We have the whole spectrum of ability at the extreme ends of the pole, highly skilled or not skilled, not too much in the middle."

"A critical element in prison education is, unfortunately, an absence of motivation strategies from prison class instructors."

"Highly successful programs in the prisons at both the secondary and college level, programs that generated more enthusiasm, are the vocational programs, like mechanical, small engine repair, and landscaping. This interest, in turn," he says, "generates more motivation and self-direction to develop more basic skills such as reading."

"Another motivating factor," Quinn points out, "is the directive from the Koran for Muslim faithful to learn mathematics"

"All inmates," he believes, "should have the opportunity to take classes, no matter what the offense. Cost is not an especially significant factor as the potential students are incarcerated and management in all of its forms provides the bulk of prison cost."

Finally, he concludes that, "Education is a humanizing process one which clearly would have and ameliorative effect on recidivism rates when one considers that education will only sharpen rationality and critical thinking."

Terry Pippin, Chair Public Safety and Human Services (Criminal Justice) Dept., C S N, also brings a wealth of experience to the job, having served as a police officer in the state of Washington. Here are some of his thoughts:

"With approximately 1500 full and part time students in the CJ program, it's clear that, like the public in general, a majority of students lean more toward the retributive side of criminal justice. However, the more

individuals understand what factors contribute to criminal behavior, the more likely they are to see the merits of job training and education in the prison setting.”

“A proven way to reduce recidivism and reign in rising costs is to develop and provide more programs, not only within prison walls, but in the process of post-release supervision for those under parole/probation (which varies from state to state, eg, Washington state did away with parole in 1985) status.”

“A truly difficult aspect of getting former felons on a non law-breaking track is education of the general public and fostering positive community involvement—a challenge which is enormous, particularly with, say, sex offenders.”

“The greatest obstacle to reducing recidivism is the lack of resources such as drug rehab programs, work release programs, not only cost-wise, but getting the citizenry to not oppose the concept, to change the “not in my backyard” syndrome.”

“To a certain extent, all inmates will do whatever they can to compile ‘good time’ (work and/or study that helps reduce length of sentence), but these programs remain voluntary.”

“Every day, when felons or former felons are being supervised, how one supervises can make a significant difference in his or her (felon’s) life. Most lawbreakers need positive structure, especially those in post-release trying to adapt to changes in the outside world that have taken place while they were incarcerated. Genuine and caring supervision is critical to all rehab programs if we are going to reduce recidivism.”

“You’re not going to help anyone who doesn’t want to be helped. Some people are just evil. Education and work programs are not designed for these types. Change in almost all others begins to occur around age 40—or when the felon makes it clear they have had enough of the criminal life style.”

“Another consequence of ‘warehousing’ that is often overlooked is the cost of caring for the family of the inmate in prison. To this end, bail structure in

all states should be revised in order to make it commensurate with the offenders' earnings."

"It's not about 'good' or 'bad'—it's about people making mistakes. Some learn from these mistakes and some do not. Treating people decently helps in the transition."

Conclusions

Undoubtedly, some individuals—murderers, rapists, child molesters—are either unwilling or unable to live and work as honest, hard working brokers within the framework of society. These dangerous anti-social cases need to be kept in confinement permanently for the safety of the community. As Jeffrey Rosen and Stephen Richards point out, however, in "Beyond Bars", more than 600,000 men and women are released from prison each year. The significance of these numbers is compounded by the fact that the U S represents 5% of the world's population and nearly 25% of the world's prison population. (Rosen 38) Common sense would suggest that it is in society's best interest to do whatever it can to prepare released felons to function successfully in the outside world.

Fortunately, the numbers of those beyond rehabilitation are comparatively small, and most criminals, there is reason to believe, can turn from crime and live a productive, law-abiding life. Unfortunately, there is no litmus test to determine which individuals have the potential to change or to recidivate. And that, it would seem, is the primary reason that the opportunity must be extended to all incarcerated felons. For, as the research suggests, an education is the cornerstone to a structured life of work and learning—for former felons especially. "In a country," writes Vivian Nixon, "where second chances and opportunity are professed values, democratic access to high-quality higher education must include access for people in prison. We cannot bar the most vulnerable people from the very thing that has the greatest potential to change their lives" (qtd in Brazzell et al 41).

An article on inmate participants baseball at San Quentin, by Scott Ostler, concludes that getting prisoners involved in meaningful activity pays valuable dividends. (Clapp)"Every inmate I talk to," he writes, "swears this (SQ) is the Shangri-La of state prisons." Along with the many sports opportunities and work programs, he goes on to say, San Quentin offers the system's only college-education program. The result? According to Ostler, the inmates all say San Quentin has fewer racial and gang problems than other prisons. This is due, in part, to the liberalism of San Francisco and Berkeley, "which manifests itself in

an army (300-plus) of outside volunteers who believe in rehabilitation and who man the various programs." Inmate Chris Rich says that "San Quentin is a life-changing situation for any inmate who recognizes the need to change. You get here and you see some hope."

Why do released inmates relapse? A recent article in the Las Vegas Review-Journal reporting on home invasions quoted police Lt. Clint Nichols who said he was not sure why someone who had just spent eight years in prison for robbery would be so quick to jump into old habits. "I think he probably thought, you kinda (sic) figure out what you're good at, you learn from your mistakes, and then practice it again." (5A) He said, concluding, that he could not comment on how effective the rehabilitation system in prison is.

Most compelling, however, is the premise that education, in the long run, saves the state money. According to Gerald G. Gaes of the College of Criminology and Criminal Justice at Florida State University comes the following assertion:

Education for current and former prisoners is a cost-effective solution to reducing reoffending and improving public safety. The effect of education on recidivism has been well demonstrated, and even small reductions in reoffending can have a significant impact when spread across large numbers of participants.

A final word on Gaes' "cost effective" solution is seen in a chilling alternative for Governor Schwarzenegger of California to early release of over 6000 inmates—as a means of saving money in a "cash-strapped state"(Furillo *Sacramento Bee* qtd in *Las Vegas Sun* 3). The infrastructure of prisons is not only mortar and stone; it includes staffing, utilities, kitchen, medical and sanitary resources, all of which add up. Clearly, the only viable answer to this problem in the long run is to reduce recidivism.

Reported recently in the *The Las Vegas Review-Journal* were the results of a Pew Center study which found that a decline (1.6%) in the number of prison inmates in Nevada, from 2008 to 2009, saved the state \$38 million and helped avoid \$1.2 billion in prison construction costs. (2B)

Cost is the overriding factor in any attempt to foster fiscal stability. Yet, almost ironically, spending for education is exactly what has to be promoted. Progressive thinking on this vital issue has to occur. A good example can be seen in (Nevada) Senate Bill 398—which, according to Senate Majority Leader Steven Horsford, could reduce the state's prison population and save millions

of dollars by creating a two year "intermediate sanction" pilot program for low-risk violators as well as people whose crimes are linked to alcohol or drugs. (Prison Pilot Program B6) this bill mandates life skills and rehabilitative programs to be offered to about 400 participants a year who would stay an average of six months. According to Horsford, the program could save the state more than \$34 million over the next five years. He adds that it costs the state about \$22,000 a year to incarcerate a prisoner.

This is clearly the right kind of thinking, especially at a time when government is making every effort to cut costs

Biographical Sketch

JOHN ESPERIAN is a professor of English at the College of Southern Nevada in Las Vegas, Nevada. He has taught in the prisons of southern Nevada for 10 years, and in the school year 2000-2001 was a Correctional Education Association, Region 7, finalist for Teacher of the Year. He was the Director of Correctional Education at the College of Southern Nevada from 1998 - 2001.

“Time-Task Line for Effective Classification Implementation”
from the National Institute of Corrections publication,
Objective Prison Classification: A Guide for Correctional Agencies

Included in the Department of Corrections’ (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC’s March 27, 2019 letter to the Department of Corrections: “22. Please explain the steps necessary for updating the classification system. In this explanation, please indicate any necessary approvals and the entity from whom the approval is needed. Also, please identify which step the agency is at in the update process.”

Exhibit 5. Time-Task Line for Effective Classification Implementation

Phase and Steps	Month of Project												Who Is Responsible
	1	2	3	4	5	6	7	8	9	10	11	12	
Phase I: Mobilization													Stakeholders
1. Identify classification issue(s)													Project leader
2. Designate a steering committee													Steering committee
3. Review current classification policies													Steering committee
Phase II: Assessment													
1. Conduct onsite assessment													Steering committee
2. Compile baseline data													Research/MIS
3. Prepare assessment report													Project leader
Phase III: Planning													
1. Learn about promising systems													Project leader
2. Design and pilot test the system													Steering committee
3. Develop action plan													Steering committee
Phase IV: Implementation													
1. Reengage stakeholders													Project leader
2. Train staff													Project leader, steering committee
3. Implement the system													Steering committee

of the risk factors, custody scale, and mandatory and discretionary override factors include the following:

- ◆ **Changes in the characteristics and behavior of the prisoner population.** Since 1990, the number of younger, more impulsive, more difficult to manage prisoners in the U.S. prison population has been increasing. Changes in the characteristics and behavior of the prison population are evident in the average age of prisoners at admission, the severity of their current offenses, the extensiveness of their criminal histories, and the length of their sentences. In response to the changing prison population, correctional administrators questioned whether the risk factors used to assess prisoners' demographic and criminal histories were

Types of Inmate Data

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "27. Please provide a list of the types of data SCDC maintains on each inmate (e.g., programs participated in, disciplinary action, etc.), and for each: (a) when the data is initially obtained/entered, (b) source of the data, and (c) on average, how often the data is updated after initial entry, if updated."

Question 27: Please provide a list of the types of data SCDC maintains on each inmate (e.g., programs participated in, disciplinary action, etc.), and for each: (a) when the data is initially obtained/entered, (b) source of the data, and (c) on average, how often the data is updated after initial entry, if updated.

Type of Data	When obtained/entered?	Source?	On average, updated how often?
Identifiers (Name, DOB, SSN, SID#, FBI#, Aliases, etc)	At intake	Sentencing Sheet, NCIC, Livescan, Intake Interview	Infrequently
Demographics (Race, Sex, Occupation, Religion, Education Level, Veteran Status, etc)	At intake	Sentencing Sheet, Intake Interview	Infrequently
Relatives	At intake	Intake Interview	Infrequently
Addresses	At intake	Sentencing Sheet, Intake Interview	Infrequently (verified and updated if necessary upon release to supervision)
Convictions (Offense, Incarcerative Sentence, Suspended Sentence, Jail Time Credit, Sex Registry, etc)	At intake and as received from courts	Sentencing Sheet	Infrequently (on status changes - sentence completion, parole, probation, revocation, remand, etc)
Priors	At intake	NCIC	Infrequently (as additional information is received)
Status (Incarcerated, Released, Parole, Probation, etc)	At intake and upon any status change	Sentencing Sheet, Parole Orders, Records Office Staff	Infrequently (upon any status change)
Classification (Custody / Security)	At intake	Convictions, Priors, Disciplinary History, Status Changes, etc	Yearly or more often as required by new convictions, priors, disciplinary convictions, or status changes
Time Served and Date Projections (Projected Maxout, Parole Eligibility, etc)	Computed by the automated system upon changes to any record that could affect the inmate's date projections	Convictions, Inmate Status, Earned Work Credit Job Assignment, Earned Education Credit Assignments, Disciplinary Convictions / Sanctions, Custody Classification	Varies by inmate
Movements / Movement Reasons (Administrative, Medical, Court, Release, Death, etc)	When inmates move in and out of correctional institutions	Operations Staff (entries made into the automated system in real time)	Varies by inmate
Bed Assignment	As inmates are assigned to new cells / beds	Operations Staff (entries made into the automated system in real time)	Varies by inmate
Assessments (Drug Dependency, Mental Health Screening, Prison Rape Elimination Act, Global Risk Assessment Device, etc)	At intake and as needed thereafter for all types except PREA, which is done at intake and upon every movement to a new facility	Inmate Interviews	Varies by inmate
Disciplinary Infractions	As charges are filed	Security, Institutional Staff	Varies by inmate
Disciplinary Hearings / Sanctions (Loss of Good Time Credits)	As hearings are scheduled and conducted	Disciplinary Hearing Officers	Varies by inmate
Disciplinary Restrictions (Canteen, Phone, etc)	As imposed	Disciplinary Hearing Officers	Varies by inmate
Earned Work Credit Job Assignments	Upon employment / termination	Classification Caseworkers	Varies by inmate
Earned Education Credit Assignments	At enrollment / completion or termination	Classification Caseworkers	Varies by inmate
Record Audits	As conducted	Records Analysts	At minimum 1 at intake and 2 immediately prior to release
Parole Reviews / Hearings	As conducted	PPP	Varies by inmate
Screenings (Labor Crew, Pre-Release, Supervised Re-Entry, etc)	As conducted	Classification Staff	Varies by inmate
Detainers	Upon receipt	Law Enforcement, Ice	Varies by inmate
Separation Requirements	As determined by operations and / or police services	Operations / Police Services	Varies by inmate
Security Threat Group / Gang Affiliation	At intake and as needed	Intake Staff, Inmate Interview, Institutional Operations, Police Services, Outside Law Enforcement	Varies by inmate

Question 27: Please provide a list of the types of data SCDC maintains on each inmate (e.g., programs participated in, disciplinary action, etc.), and for each: (a) when the data is initially obtained/entered, (b) source of the data, and (c) on average, how often the data is updated after initial entry, if updated.

Type of Data	When obtained/entered?	Source?	On average, updated how often?
Accomplices	At intake	Intake Interview	Varies by inmate
Incidents / Use of Force	As needed	Security	Varies by inmate
Staff Requests / Grievances	As filed	Inmates enter staff requests via kiosk, Grievance Forms	Varies by inmate
Medical / Mental health / Pharmacy	Upon service and / or medication delivery	Medical Providers And Staff	Varies by inmate
Education (Class enrollment, Degrees / Certificates Earned)	Upon enrollment, attainment of degrees / certificates	Teachers And Education Staff	Varies by inmate
Program Participation	Upon enrollment, program completion or termination	Classification Caseworkers	Varies by inmate
Restitution (DNA, Property Damage, Medical Copay, Victims Assistance, Court Ordered, etc)	At intake, when medical services rendered / prescriptions filled, upon conviction for destroying state property	Sentencing Sheet, Medical / Pharmacy, Disciplinary Sanctions	Varies by inmate

Overtime (FY2014 – FY2018)

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "30. Please indicate the total amount of correctional staff overtime, sick time, or vacation time, not utilized, for each of the last five years, overall and by institution."

See also, Annual and Sick Leave Forfeited spreadsheet

Timeline of an Inmate Day in RHU

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "32. Please provide a timeline of a day for inmates in a unit or facility that is on lockdown. Please provide the same for an inmate that is in lockup. Please include one timeline for males and another timeline for females, if the timelines are different."

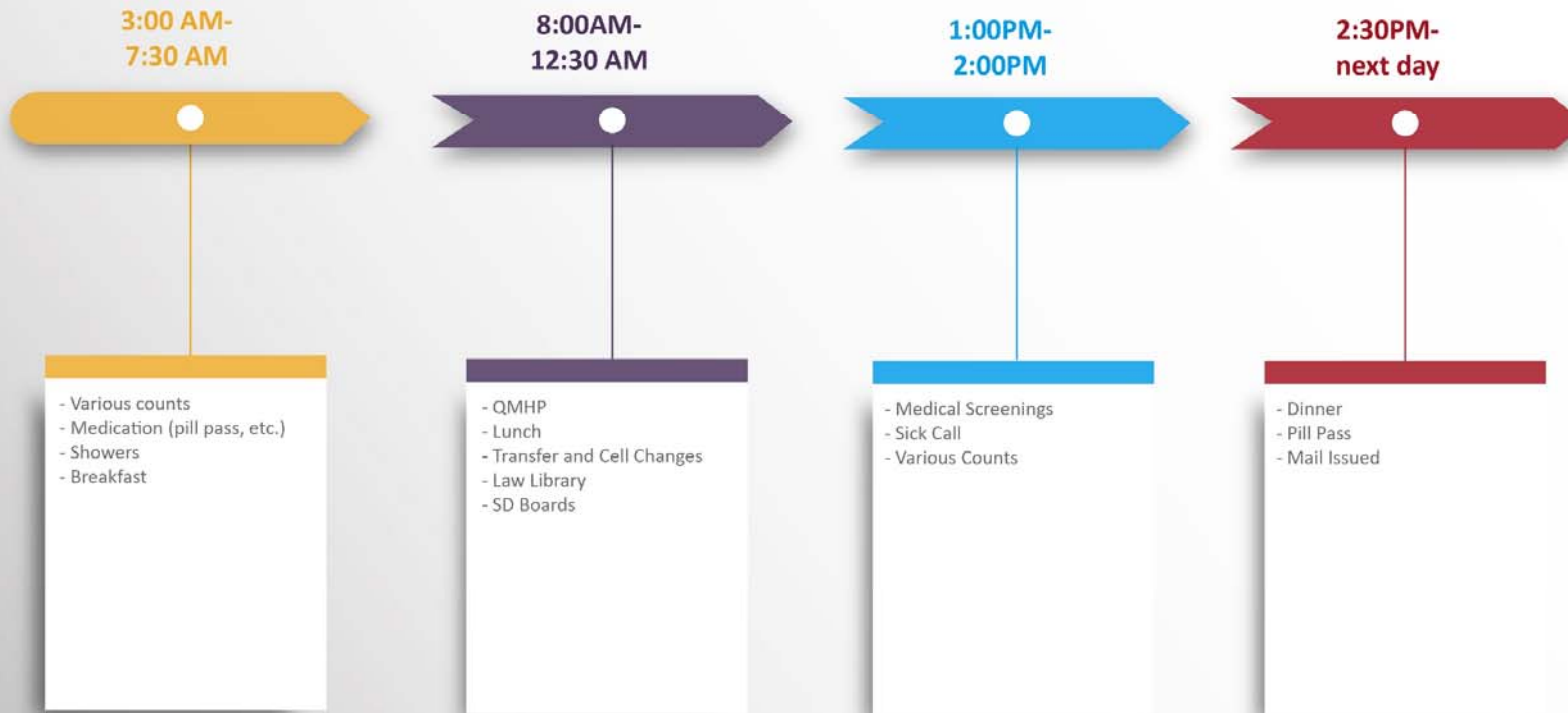

Timeline of an Inmate Day

Restrictive Housing Unit Inmates

This is a generalized time frame of the movement of an inmate daily at an institution.

In order to maintain the safety and security of the general population, the staff, and the Agency, the SCDC will house those inmates requiring more intense behavioral levels of supervision and monitoring in separated areas herein referred to as Restrictive Housing Units (RHU) apart from the general population.

Multiple Reports regarding Solitary Confinement

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "34. Are there any studies or evaluations, performed internally or externally, which include information on the impacts of a lock-down on inmates and/or operations? If so, please provide copies."

Aiming to Reduce Time-In-Cell: Correctional Administrators and Yale Law School's Liman Program Release New Report on Efforts to Reduce the Use of Isolation in State and Federal Prisons

New Information from Prison Officials Reflects the National Consensus
on the Need to Reduce Reliance on Restricted Housing

A new report, jointly authored by the Association of State Correctional Administrators (ASCA) and the Arthur Liman Program at Yale Law School, reflects a profound change in the national discussion about the use of what correctional officials call “restrictive housing” and what is popularly known as “solitary confinement.” Just published, *Aiming to Reduce Time-In-Cell* provides the only current, comprehensive data on the use of restricted housing, in which individuals are held in their cells for 22 hours or more each day, and for 15 continuous days or more at a time. The Report also documents efforts across the country to reduce the number of people in restricted housing and to reform the conditions in which isolated prisoners are held in order to improve safety for prisoners, staff, and communities at large.

The 2016 publication follows the 2015 ASCA-Liman Report, *Time-In-Cell*, which documented the use of restricted housing as of the fall of 2014. As ASCA explained then, “prolonged isolation of individuals in jails and prisons is a grave problem in the United States.” Today, a national consensus has emerged focused on limiting the use of restricted housing, and many new initiatives, as detailed in the report, reflect efforts to make changes at both the state and federal levels.

The 2016 Report is based on survey responses from 48 jurisdictions (the Federal Bureau of Prisons, 45 states, the District of Columbia, and the Virgin Islands)—that held about 96% of the nation’s prisoners convicted of a felony. That number excludes people held in most of the country’s jails (housing hundreds of thousands of people), in most of the country’s juvenile facilities, and in military and immigration facilities.

Tallying the responses, the new 2016 Report found that 67,442 prisoners were held, in the fall of 2015, in prison cells for 22 hours or more for 15 continuous days or more. The percentages of prisoners in restricted housing in federal and state prisons ranged from under 1%

to more than 28%. Across all the jurisdictions, the median percentage of the prison population held in restricted housing was 5.1%.

How long do prisoners remain in isolation? Forty-one jurisdictions provided information about the length of stay for a total of more than 54,000 people in restricted housing. Approximately 15,725 (29%) were in restricted housing for one to three months; at the other end of the spectrum, almost 6,000 people (11%) across 31 jurisdictions had been in restricted housing for three years or more.

The Report also chronicles efforts throughout the country and the world to reduce the use of restricted housing. In August of 2016, the American Correctional Association (ACA) approved new standards, calling for a variety of limits on the use of isolation, including a prohibition against placing prisoners in restricted housing on the basis of their gender identity alone. The standards also included provisions that pregnant women, prisoners under the age of 18, and prisoners with serious mental illness ought not be placed for extended periods of time in restricted housing. Further, in some jurisdictions, prison systems (sometimes prompted by legislation and litigation) have instituted rules to prevent vulnerable populations from being housed in restricted housing except under exceptional circumstances and for as short an amount of time as possible.

As the Report also details, several jurisdictions described making significant revisions to the criteria for entry, so as to limit the use of restricted housing, as well as undertaking more frequent reviews to identify individuals to return to general population, thereby reducing the number of people in restricted housing by significant percentages.

In short, while restricted housing once was seen as central to prisoner management, by 2016 many prison directors and organizations such as ASCA and the ACA have defined restricted housing as a practice to use only when absolutely necessary and for only as long as absolutely required. The goals of ASCA and the ACA are to formulate and to apply policies to improve the safety of institutions and communities by ensuring that the *separation* of individuals to promote safety and well-being need not be accompanied by *deprivation* of all opportunities for social contact, education, programming, and other activities.

As Leann K. Bertsch, President of ASCA, explained:

“What we are seeing is that prison systems are motivated to reduce the use of isolation in prisons and are actively putting into place policies designed to reduce the use of restrictive housing. Restricted housing places substantial stress on both the staff working in those settings as well as the prisoners housed in those units. Our highest priority is to operate institutions that are safe for staff and inmates and to keep communities to which prisoners will return safe.”

For more information, please contact George and Camille Camp, Co-Executive Directors of ASCA, at 301-791-2722, and Judith Resnik, Arthur Liman Professor of Law at Yale Law School, at 203-432-1447. November 2016

Association of State Correctional Administrators (ASCA)

ASCA is the association of persons directly responsible for the administration of correctional systems. ASCA includes the heads of state corrections agencies, the Federal Bureau of Prisons, the District of Columbia Department of Corrections, and some large county jail systems. Founded in the 1950s, ASCA gained its current organizational structure in the 1980s. ASCA is premised on the belief that each represented correctional jurisdiction is unique in its own obligations, structures, and resources and that similarities of purpose, responsibilities, and challenges among member jurisdictions unite them in a quest for public safety, secure and orderly facilities, and professionalism.

The Arthur Liman Public Interest Program, Yale Law School

The Arthur Liman Public Interest Program was endowed to honor one of Yale Law School's most accomplished graduates, Arthur Liman, who graduated in 1957 and who personified the ideal of commitment to the public interest. Throughout his distinguished career, he demonstrated how dedicated lawyers, in both private practice and public life, can serve the needs of people and causes that might otherwise go unrepresented. The Liman Program was created in 1997 to continue the commitments of Arthur Liman by supporting lawyers, in and outside the academy, who are dedicated to public service in the furtherance of justice.

Acknowledgements

This report is based on a survey co-authored by ASCA and by the Liman Program at Yale Law School. The research and report teams were led by George and Camille Camp of

ASCA and by Professor Judith Resnik, former Director Johanna Kalb and current Director Anna VanCleave of the Liman Program, former Senior Liman Fellow in Residence Sarah Baumgartel and current Senior Fellow Kristen Bell, all of Yale Law School. Olevia Boykin, Corey Guilmette, Tashiana Hudson, Diana Li, Joseph Meyers, Hava Mirell, and Jessi Purcell, current and former students at Yale Law School, conducted the research and drafted this report.

Thanks are due to all the jurisdictions that responded to the survey, and for their thoughtful comments and reviews received after drafts of the report were circulated in the winter of 2016 and in the summer of 2016. Yale Law School, the Liman Program, the Vital Projects Fund, and the Oscar M. Ruebhausen Fund at Yale Law School have generously supported this project. Special thanks are due to Skylar Albertson, Alison Gifford, and Bonnie Posick for expert editorial advice.

I. Learning about Isolation in Prison

This Report is the third in a series that examines what correctional officials in the United States call “restrictive housing” and what is known more generally as “solitary confinement.” Working together, the Association of State Correctional Administrators (ASCA) and the Arthur Liman Program at Yale Law School have sought to understand the formal rules governing aspects of the segregation of prisoners in the United States; the numbers of individuals confined; the conditions under which they live; and the limits on the use of isolation.

Below, we provide a brief overview of prior ASCA-Liman work in this area, a description of this study, and a review of initiatives during the last few years aimed at producing significant reforms to reduce the numbers of people in restricted housing and the degrees of their isolation.

A. *Collecting Data to Establish Baselines and Parameters: 2012-2015*

Prison systems across the United States separate some prisoners from general population and put them into special housing units, typically with more isolating conditions. The reasons for doing so include the imposition of punishment (“disciplinary segregation”), protection (“protective custody”), and incapacitation (often termed “administrative segregation”).

In *Administrative Segregation, Degrees of Isolation, and Incarceration: A National Overview of State and Federal Correctional Policies*, published in 2013, we asked directors of state and federal corrections systems to provide their policies on administrative segregation, defined as removing a prisoner from general population to spend 22 to 23 hours a day in a cell for 30 days or more.¹ Administrative segregation was the form of confinement that we believed was the most common basis for segregation.

What we learned, based on responses from 47 jurisdictions, was that correctional policies made getting *into* segregation relatively easy, and few systems focused on getting people *out*. The criteria for entry were broad. Many jurisdictions permitted moving a prisoner into segregation if that prisoner posed a threat to institutional safety or a danger to self, staff, or other inmates. Constraints on decision-making were minimal; the kind of notice provided and what constituted a “hearing” varied substantially.

In 2014, the Liman Program and ASCA took the next step by asking correctional administrators more than 130 questions—this time about the numbers of people in restricted housing and the conditions under which they lived.² The overall focus was on a subset of restricted housing—“administrative segregation,” while a few questions focused on all forms of restricted housing. Responses came from 46 jurisdictions (albeit not all jurisdictions answered all the questions). Published in 2015, the *Time-In-Cell* Report provided a unique multi-jurisdictional window into segregation.

A central question is about the numbers of individuals in segregation, regardless of the different names under which the practice goes. Before that Report, information on the number of prisoners held in restricted housing was a decade old or more; the figure often cited was 25,000.³ The 2015 ASCA-Liman Report provided new information. What we learned from the 34

jurisdictions answering this question and housing about 73% of the more than 1.5 million people incarcerated in U.S. prisons, was that they reported a total of more than 66,000 people held in restricted housing as of the fall of 2014. Given that number, ASCA and Liman estimated that some 80,000 to 100,000 people were, in 2014, in restricted housing (however termed) in U.S. prisons—or about one in every six or seven prisoners.⁴ Those figures, in turn, did not include jails, juvenile facilities, or immigration and military detention.

We also learned that prisoners in many jurisdictions across the country were required to spend 23 hours in their cells on weekdays and in many, 24 hours in their cells on weekends.⁵ Jurisdictions reported that cells, sometimes holding two people, ranged in size from 45 to 128 square feet.⁶

Opportunities for social contact, such as out-of-cell time for exercise, visits, and programs, were limited, ranging from three to seven hours a week in many jurisdictions.⁷ Phone calls and social visits could be as infrequent as once per month. A few jurisdictions provided more opportunities.⁸ In most jurisdictions, prisoners' access to social contact, programs, exercise, and items kept in their cells, could be cut back as sanctions for misbehavior.⁹

Moreover, administrative segregation generally had no fixed endpoint, and several systems did not keep track of the numbers of continuous days that people remained in isolation. In the 24 jurisdictions reporting on this question, a substantial number indicated that prisoners remained in segregation for more than three years. As to release and reentry, in 30 jurisdictions tracking the numbers in 2013, a total of 4,400 prisoners were released directly from the isolation of administrative segregation to the outside community.¹⁰

Running administrative segregation units posed many challenges for prison systems. These problems—coupled with a surge of concerns about the negative impact of isolation on individuals—have created incentives for change. Prison directors cited prisoner and staff well-being, pending lawsuits, and costs as reasons to revise their practices. Some also commented that change was important because it was “the right thing to do.”¹¹

When releasing *Time-In-Cell*, ASCA stated that “prolonged isolation of individuals in jails and prisons is a grave problem in the United States.”¹² As that press release also explained, “insistence on change comes not only from legislators across the political spectrum, judges, and a host of private sector voices, but also from the directors of correctional systems at both state and federal levels.”¹³

Time-In-Cell provided a window into the prevailing practices and a baseline from which to assess whether the many efforts to limit isolation would have an impact. That Report made plain that segregation practices had become entrenched during the past 40 years, that many correctional systems sought to make changes, and that unraveling the structures producing so much isolation would require intensive work.

When released in September 2015, the *Time-In-Cell* Report became front-page news, reflecting the broad concern about these problems and the need for reform.¹⁴ Much commentary followed, including several essays published by the Yale Law Journal Forum in January of 2016.

These comments analyzed the data in the Report, the need for reform, and the challenges entailed in making major changes.¹⁵

B. Looking for Changes: 2015-2016

In early October 2015, ASCA and Liman launched this follow-up study to gather national information on all forms of restricted housing, to learn what numbers of people were in that form of detention in the fall of 2015, and to see what changes were underway. The hope was twofold: that the numbers of people held in such settings were diminishing and that the conditions in restricted housing were improving by becoming less isolating.

This study relied again on asking the directors of prison systems to respond to questions. This time, a set of 15 questions focused on the people in any and all forms of what we termed restricted housing (or what is also termed “restrictive” housing). We queried 53 jurisdictions (all the states, the federal system, the District of Columbia, and the Virgin Islands), and 52 responded; the one jurisdiction not providing any information was the State of Maine. As detailed below, a few jurisdictions that did respond did not have answers to all the topics surveyed. For many questions, 48 jurisdictions had sufficiently detailed and consistent information on which to report,¹⁶ and for each topic, we specify the number of responding jurisdictions.

We sought to learn about numbers and demographics—including race, gender identity, age, and mental health status. As the data set forth below reflect, those ambitions were made complex by the variety of different facilities under the control of state-wide correctional departments, the many terms used to denote segregating prisoners, the range of data kept, and the limited amount of data available. The jurisdictions surveyed did not all keep comparable data about how many hours, over how many days, prisoners were in their cells.

To enable cross-jurisdictional comparisons, we imposed a definition by describing restricted housing as the separation of prisoners from general population and in detention for 22 hours per day or more, for 15 or more continuous days, in single-cells or in double-cells. This survey did not inquire into whether jurisdictions regularly audited their facilities to learn if the parameters were consistently met. For example, we did not ask about what methods were used to ensure that individual prisoners were out of their cells for the time stipulated in rules, nor did we learn how often or for how long lockdowns occurred during which no prisoners were permitted to leave cells.

Further, if a jurisdiction provided for prisoners to spend 14.5 hours a week out-of-cell, or had no count of whether prisoners were held 15 days or more, that jurisdiction could have described itself as having no one in restricted housing, even as the jurisdiction understood itself *to have* a restricted-housing population. Therefore, and as noted below, in a few instances we included information provided by jurisdictions that required minor modifications of our 22-hour/15-days-or-more definition.

A preview of some of this Report's findings is in order. As of the fall of 2015, 67,442 people were held in restricted housing across the 48 jurisdictions that reported their numbers.¹⁷ Relying on data on the United States and its territories from the Bureau of Justice Statistics, we looked at the total number of individuals confined in the 48 jurisdictions, and learned that these jurisdictions accounted for 96.4% of the total prison population in the United States.¹⁸

We then calculated the percentage of prisoners who were held in restricted housing across all of the jurisdictions which regularly kept data on the number of prisoners in restricted housing (22 hours a day/15 days or more). The focus was on state prisoners housed under state (not local) control. The percentages of prisoners held in different jurisdictions in restricted housing ranged from 0.5% (Hawaii, in-state only) to 28.3% (the Virgin Islands). The median was 5.1%.¹⁹

We also asked about the numbers of people held in segregation between 16 and 21 hours per day in their cells. Thirty-four jurisdictions responded about those populations. In 23 of those jurisdictions, we tallied a total of 16,455 additional prisoners in cells for 16 to 21 hours per day for 15 consecutive days or more.²⁰ In these 23 jurisdictions, the median so confined was 1.6% of their total populations.²¹ (Eleven of the responding 34 jurisdictions reported that they did not hold prisoners in-cell for 16-21 hours per day for 15 consecutive days or more.)

Some of the reporting jurisdictions did not include information on all of the facilities directly under their control, and very few included information from county and municipal level facilities at which prisoners or pretrial detainees were held.²² The dearth of information on county jails is important to underscore because counties were responsible, as of 2016, for 91% of the jails in the United States, and "11.4 million individuals pass through jail each year."²³ In short, through this survey, we have accounted for *at least* 67,442 individuals in restricted housing (22 hours a day/15 days or more) in the fall of 2015. When adding the 16,455 people confined 16 to 21 hours, a total of at least 83,897 prisoners were held in their cells for more than 16 hours a day for 15 days or more. Yet, given the data limitations, neither of these numbers includes all the people held in cell for either 16-hours or more or for 22-hours or more in all of the types of U.S. prison and jail facilities.

How long, in months and years, did prisoners spend in restricted housing? Forty-one jurisdictions—holding 54,382 prisoners—provided length-of-stay data. Of those prisoners, 15,725 people—or 29%—were in restricted housing from one month up to three months. Some 15,978 people—or 29%—were in restricted housing for three months up to one year. Another 13,041 prisoners—or 24%—were in restricted housing for a year or more. Of these, 2,976 people—5.5% of 54,382—had spent from three years to six years in restricted housing. Twenty-six jurisdictions reported holding some prisoners—a total of 2,933 people, or 5.4% of the 54,382—in restricted housing for six years or more.²⁴

The survey also asked whether correctional systems were making policy-level changes to reduce the use of restricted housing. Forty-five jurisdictions reported on their policies, and many described proposed or recently implemented revisions. Jurisdictions reported policies revising the criteria for being placed in isolation to limit its use, increasing the oversight of restricted housing, expanded efforts at programming and rehabilitative services in restricted housing,

developing exit paths (sometimes called “step-down” programs), and imposing caps on the length of time spent in restricted confinement.

In addition to summarizing changes in policies, we provide descriptions of efforts reported by a few jurisdictions seeking to make substantial reductions in the use of restricted housing. We did not inquire into either the details or metrics of implementation, nor did we conduct case studies to learn about the effects, in practice, of the new policies described.

C. The Context: Demands for Change

As this study was underway, concerns about restricted housing intensified. In July 2015, President Barack Obama announced that he had directed the Attorney General of the United States to conduct a review of the use of solitary confinement in the federal prison system.²⁵ The review resulted in a report, *U.S. Department of Justice Report and Recommendations Concerning the Use of Restrictive Housing*, published in January of 2016. That monograph provided an overview of what the Justice Department termed “restrictive housing” practices in the federal system and proposals for reform.²⁶ In the same month, in a *Washington Post* op-ed entitled *Why we must rethink solitary confinement* and which cited the ASCA-Liman *Time-In-Cell* Report, the President stated:

The Justice Department has completed its review, and I am adopting its recommendations to reform the federal prison system. These include banning solitary confinement for juveniles and as a response to low-level infractions, expanding treatment for the mentally ill and increasing the amount of time inmates in solitary can spend outside of their cells. These steps will affect some 10,000 federal prisoners held in solitary confinement—and hopefully serve as a model for state and local corrections systems. . . .²⁷

The Justice Department’s Report laid out several “Guiding Principles” and “Policy Recommendations.” The recommendations included ending “the practice of placing juveniles in restrictive housing.”²⁸ In addition, the Justice Department recommended against placing pregnant women in restricted housing, and proposed banning the practice of using the status of LGBTI and gender non-conforming individuals as the sole basis for placement in restricted housing. Further, the Justice Department recommended that, absent special circumstances, seriously mentally ill prisoners ought not to be placed in restricted housing.²⁹ The Justice Department also urged the Federal Bureau of Prisons (BOP) to eliminate the use of disciplinary segregation as a sanction for “low level” offenses and to reduce the time that prisoners spend in restricted housing for other offenses.³⁰

Further, the Justice Department recommended that prisoners be housed “in the least restrictive setting necessary” to ensure the safety of all; that placement be based on specific, “clearly articulate[d]” reasons; and that the placement of prisoners in restricted housing serve “a specific penological purpose.”³¹ The Justice Department further recommended that there be “a clear plan for returning the inmate to less restrictive conditions as promptly as possible;”³² that each individual’s placement in restricted housing be reviewed on a regular basis by a committee that includes medical and mental health professionals;³³ and that restricted housing policies

generally be regularly reviewed by a standing committee that consisted of “high-level correctional officials.”³⁴ The Justice Department called for the BOP to implement these policies, to add “opportunities for out-of-cell time” and programming,³⁵ and to increase transparency in the use of restricted housing.³⁶

In March of 2016, the President issued a Presidential Memorandum, “Limiting the Use of Restrictive Housing by the Federal Government;” he directed executive departments and agencies to implement the Justice Department’s recommendations.³⁷ President Obama wrote that in light of “the urgency and importance of this issue, it is critical that DOJ accelerate efforts to reduce the number of Federal inmates and detainees held in restrictive housing and that Federal correctional and detention systems be models for facilities across the United States.”³⁸

These national efforts came in the context of work in many other venues, ranging from professional associations of correctional and health professionals to state and federal legislatures and courts, both in the United States and abroad. In 2014, the American Correctional Association (ACA), an umbrella organization comprised of correctional facilities’ leaders from across the country, created a Restrictive Housing Ad Hoc Standards Committee to revise its model standards.³⁹ The co-chairs, Gary Mohr (the Director of the Ohio Department of Rehabilitation and Correction) and Rick Raemisch (Executive Director of the Colorado Department of Corrections) wrote in 2015 of the need for an overall reduction in the use of restricted housing; as they explained, “lengthy periods of 23 hours per day in confinement multiplies a problem”—rather than solving it.⁴⁰

The ACA’s Ad Hoc Committee released a draft report in the winter of 2016 and proposed precluding the use of restricted housing on the basis of gender identity alone,⁴¹ for pregnant women,⁴² and for juveniles under 18.⁴³ Further, the ACA Committee proposed heightened oversight and review of decisions to place and to keep individuals in restricted housing,⁴⁴ ending the placement of individuals with serious mental illnesses in restricted housing unless they presented a “clear and present danger” to staff or other prisoners that was not associated with their mental illness,⁴⁵ and avoiding direct release of prisoners into the community.⁴⁶ In January of 2016, the ACA held a hearing to discuss its proposed guidelines for the use of restricted housing.⁴⁷

In August of 2016, the ACA approved recommendations from a revised report of its Ad Hoc Committee.⁴⁸ The ACA’s new standards called for an end to the practice of placing prisoners in restricted housing on the basis of their gender identity alone.⁴⁹ The standards also included provisions that pregnant women,⁵⁰ prisoners under the age of 18,⁵¹ and prisoners with serious mental illness not be placed in “extended restricted housing.”⁵²

In addition, the ACA’s revised standards set forth provisions for increased oversight of decisions to place prisoners in restricted housing⁵³ and more frequent opportunities for review.⁵⁴ The new standards also called for more frequent mental and physical health evaluations and treatment for all prisoners in restricted housing,⁵⁵ and specialized training for staff working with prisoners in restricted housing.⁵⁶

In terms of the physical conditions, the ACA 2016 standards stated that restricted housing should include “living conditions that approximate those of the general inmate population” with “all exceptions . . . clearly documented.”⁵⁷ The 2016 Restrictive Housing Standards stated that facilities should make efforts to move prisoners out of restricted housing through step-down programs and measures to ensure that restricted housing prisoners not be released directly to the community.⁵⁸

The ACA initiative built on ASCA-based reform proposals to make changes in restricted housing. In 2013, ASCA adopted guidelines on Restrictive Status Housing Policy that aimed to constrain the use of isolating settings.⁵⁹ In 2014, ASCA identified administrative segregation as one of the “top five critical issues” reported by correctional agencies,⁶⁰ and, as discussed above, ASCA and the Liman Program have been working for several years on a series of collaborative research projects on this issue. In addition, as of the fall of 2016, ASCA was revising its guidelines on restricted housing.

Other voices within corrections and beyond have also insisted on the need for change. Some of the focus has been on limiting the placement of any person in restricted housing, while other activities have centered on subpopulations with special needs.

In terms of the use of restricted housing in general, in the summer of 2015, a group of “correctional directors and administrators with first-hand experience supervising solitary confinement units in prisons across the United States” joined together to file an *amicus* brief in the United States Supreme Court.⁶¹ They described the “debilitating” effects of solitary confinement and argued that the Constitution requires individualized classification before a person could be placed in such confinement.⁶² Their views about the effects of isolation were echoed by a group of psychiatrists and psychologists, also calling for the Supreme Court to step in; these medical professionals highlighted the “scientific research” establishing the many harms imposed by prolonged solitary confinement.⁶³

Health professionals, social scientists, and organizations concerned with prisoner well-being have likewise detailed the harms of isolating confinement and have argued that the practice lacks utility.⁶⁴ In addition, empirical work has found that solitary confinement has not been effective in reducing violence and promoting safety.⁶⁵ Reports on specific prison systems also documented how disabling isolation was for prisoners and for staff, and how it has not ensured the safety of the communities to which individuals return.⁶⁶ Certain forms of restrictive housing have drawn particular attention; for example, in the fall of 2016, The Marshall Project and National Public Radio published a joint investigative report documenting incidents of violence and murder between “double-celled” prisoners in restrictive housing.⁶⁷

This growing body of literature and case law has shifted the understanding of restricted housing and produced many calls for it to end. One example comes from a report based on a colloquium that was convened by the John Jay College of Criminal Justice in October of 2015 to discuss ending the over-use of isolation.⁶⁸ The colloquium’s purpose was to gather corrections agency heads and advocates together “to determine if consensus might be achievable about ways to reform the use of social isolation by coming to common agreement rather than resorting to litigation.”⁶⁹ The result, *Solitary Confinement: Ending the Over-Use of Extreme Isolation in*

Prison and Jail, included a series of recommendations calling for alternatives to segregation such that segregation should be used only as a last resort; humane conditions in segregation, such as permission for family contact and programming; due process for admission into segregation and periodic review for those already in segregation; and limited use of segregation of vulnerable populations, such as juveniles, the elderly, and people with mental illnesses.⁷⁰

State legislatures, municipal authorities, and courts have continued to consider, and sometimes to impose, curbs on restricted housing. In October of 2016, New Jersey enacted a statute (awaiting the governor's signature as of this writing) limiting the use of "isolated confinement" to no more than 15 consecutive days, and no more than 20 days during any 60-day period.⁷¹ The law defined "isolated confinement" as "confinement of an inmate . . . in a cell or similarly confined holding or living space, alone or with other inmates, for approximately 20 hours or more per day, with severely restricted activity, movement, and social interaction."⁷² The law also prohibited, with a few exceptions, isolated confinement for prisoners who are members of a vulnerable population, including pregnant women, those 21 or younger, those 65 or older, those perceived to be lesbian, gay, bisexual, transgender or intersex, and those with a mental illness, a developmental disability, a serious medical condition, or an auditory or visual impairment.⁷³

As of the fall of 2016, other bills pending in Illinois,⁷⁴ Massachusetts,⁷⁵ and Rhode Island⁷⁶ aimed to limit the use of restricted housing for all prisoners. Settlements approved in 2015-2016 in class actions in California,⁷⁷ Indiana,⁷⁸ and New York⁷⁹ imposed substantial limits on the use of restricted housing in each of these states.

Other reform efforts have focused specifically on populations with special needs. A decade ago, the Bureau of Justice Statistics estimated that 56% of people in state prisons had some form of mental illness.⁸⁰ Given the research documenting how placing people with preexisting mental illness in isolating housing can increase the risk of psychiatric deterioration, violence, self-injury, and suicide,⁸¹ the American Psychiatric Association has advised against segregating individuals with mental illness,⁸² as has the American Public Health Association,⁸³ and the National Commission on Correctional Health Care.⁸⁴ Legislation has also called for screening individuals and imposing limits on isolation for individuals with mental illness.⁸⁵

Reflecting these concerns, the resolutions of some lawsuits have provided that individuals with cognitive or mental impairment should not be placed in restricted housing, or only briefly if exigent circumstances exist.⁸⁶ Correctional officials have also altered their rules and programs. For example, in 2015, after a report released by Disability Rights Oregon (DRO) detailed harmful conditions at its "Behavioral Health Unit," the Oregon Department of Corrections announced an agreement with DRO restricting the use of solitary for the mentally ill.⁸⁷ In Pennsylvania, after the settlement in another lawsuit also brought by a disability rights group,⁸⁸ the Secretary of the Department of Corrections created new education programs for staff as part of a system-wide initiative on mental illness.⁸⁹

Another area of particular attention is the use of isolation for juveniles. Limits have been put in place by legislation, court orders, local ordinances, and correctional policies.⁹⁰ For example, legislation restricting the placement of juveniles in isolation was enacted in 2016 in

Colorado,⁹¹ and a bill has likewise been enacted in California.⁹² In the spring of 2016, the Board of Supervisors of Los Angeles directed that county officials end placement of youth in isolated housing, except in very rare circumstances.⁹³

In 2015, proposed legislation was before the Congress to curtail isolation for the few juveniles in the federal system.⁹⁴ Further, in response to an investigation by the Department of Justice, Ohio adopted a policy to end the placement of youth in solitary confinement.⁹⁵ The U.S. Attorney for the Southern District of New York intervened in a lawsuit, begun by detainees in 2012, against New York City; the case challenged the City's treatment of youth at Rikers Island. In 2015, New York City's mayor announced a plan that would end the use of solitary confinement for people 21 and younger.⁹⁶

In addition to the focus on subpopulations, proposals at the federal level sought to improve information about the use of restrictive housing and to impose oversight across the various populations in restricted housing. In the fall of 2016, the National Institute of Justice (NIJ) published a volume on solitary confinement and awarded \$1.4 million to the Vera Institute of Justice to study the use of restricted housing and step-down programs in prisons and jails and to "assess the impact" of working in restricted housing facilities on "mental, emotional, and physical well-being."⁹⁷ The grant provided for a study to conduct a national survey of state prison systems, akin to the ASCA-Liman Reports, that would also include a sampling of jails. Further, NIJ provided Vera with funds to review state administrative data on restricted housing placement and to do interviews with and surveys of prison administrators and corrections officers.⁹⁸ The Bureau of Justice Assistance also announced a grant of \$2.2 million to fund the Vera Institute's Safe Alternatives to Segregation Initiative, which as of the fall of 2016, assisted several jurisdictions seeking to reduce their use of restricted housing and to create alternatives to solitary confinement.⁹⁹

In the fall of 2016, major legislation was put forth in Congress to limit solitary confinement. Senator Dick Durbin, joined by Senators Chris Coons, Cory Booker, Patrick Leahy, and Al Franken, introduced the "Solitary Confinement Reform Act," a bill that would "reform the use of solitary confinement and other forms of restrictive housing" in Bureau of Prisons facilities.¹⁰⁰ The legislation seeks to mandate that placement in solitary confinement be limited to "the briefest term and the least restrictive conditions practicable," including at least four hours out-of-cell every day unless a prisoner "poses a substantial and immediate threat."¹⁰¹ The bill would also prohibit the placement in solitary confinement of juveniles,¹⁰² pregnant women,¹⁰³ prisoners with serious mental illness,¹⁰⁴ and prisoners with intellectual or physical disabilities,¹⁰⁵ unless the prisoner "poses a substantial and immediate threat" and "all other options to de-escalate" have been exhausted."¹⁰⁶ The proposed legislation would also prohibit the placement of "lesbian, gay, bisexual, transgender, intersex, or gender nonconforming" prisoners in solitary confinement based solely on their sexual or gender identity.¹⁰⁷

Further, the bill would limit placement in administrative segregation to a maximum of 15 consecutive days, and 20 total days in a 60-day period, unless necessary to contain a "substantial and immediate threat."¹⁰⁸ The legislation would also mandate that correctional facilities allow prisoners in restricted housing to participate in programming "as consistent with those available in general population as practicable."¹⁰⁹ In addition, the 2016 Solitary Confinement Reform Act

proposed to ensure that “time served” during the investigation of an alleged offense be “credited” for disciplinary segregation and that “concurrent sentences” be imposed where more than one disciplinary violation arises from a single episode.¹¹⁰ The bill also proposed “timely, thorough, and continuous” reviews of confinement, which would include “private, face-to-face interviews with a multidisciplinary staff committee,” to determine if the conditions comply with the provisions and if continued confinement is necessary.¹¹¹

The proposed Solitary Confinement Reform Act also would create a “Civil Rights Ombudsman” within the Bureau of Prisons.¹¹² The Ombudsman position, to be filled by the Attorney General of the United States, would have unrestricted access to the federal prison facilities and contract facilities.¹¹³ The Ombudsman would meet regularly with the Director of the Bureau of Prisons to address civil rights concerns and to raise issues regarding solitary confinement policies and practices.¹¹⁴ The bill would also require that prisons offer multiple internal mechanisms for prisoners to report violations of this legislation and any other civil rights violations.¹¹⁵ Specifically, prisons would be required to offer at least two procedures for reporting violations to an entity outside of the facility and at least two procedures for confidentially reporting violations to the Ombudsman.¹¹⁶ Each year, under the bill, the Ombudsman would be required to submit reports to both houses of Congress on its findings, the problems relating to civil rights violations, violations of the bill’s provisions, and recommendations for change.¹¹⁷ The Federal Bureau of Prisons, in turn, would be required to keep extensive data on solitary confinement, including its costs and the number of assaults in the general population and in the isolated population.¹¹⁸ The legislation also proposed the creation of a national resource center that would coordinate activities among state, local, and federal prison systems to centralize research and data related to reducing the population of prisoners in solitary confinement.¹¹⁹

In short, what commentators have termed a “national consensus” in the United States to end the “over-use of extreme isolation in prisons”¹²⁰ has emerged. That consensus comports with recent developments in legal systems other than the United States and in international law that also aim to limit the use of isolation. In December 2015, the United Nations General Assembly unanimously adopted the United Nations Standard Minimum Rules for the Treatment of Prisoners, commonly known as the “Nelson Mandela Rules.”¹²¹ The Rules defined solitary confinement as being held for 22 hours or more a day for longer than 15 days without “meaningful human contact,”¹²² and stated that “[s]olitary confinement shall be used only in exceptional cases as a last resort, for as short a time as possible and subject to independent review, and only pursuant to the authorization by a competent authority,” and “shall not be imposed by virtue of a prisoner’s sentence.”¹²³ In addition, the rules provided that “solitary confinement should be prohibited in the case of prisoners with mental or physical disabilities when their conditions would be exacerbated by such measures.”¹²⁴ Further, the rules stipulated that “indefinite” and “prolonged solitary confinement”¹²⁵ should not be used, and that women and children should not be held in solitary confinement.¹²⁶

Solitary confinement has also been the subject of several decisions by the European Court of Human Rights (ECtHR), which has analysed degrees of isolation and the duration in specific instances.¹²⁷ The ECtHR has considered whether such treatment violates Article 3 of the Convention for the Protection of Human Rights and Fundamental Freedoms, which prohibits

subjecting any person to “torture or to inhuman or degrading treatment or punishment,” or violates Article 8’s protection of family and private life.¹²⁸ In 2014, the Court found that although “a prisoner’s segregation from the prison community does not in itself amount to inhuman treatment . . . substantive reasons must be given when a protracted period of solitary confinement is further extended.”¹²⁹ In Norway in 2016, a lower court judge held that, under European and Norwegian law, a person convicted of killing dozens of people could not be placed in “social isolation” that cut off his contact with all others, aside from staff.¹³⁰

During the past few years, several research initiatives have documented the use of restricted housing around the world. In 2008, for example, Sharon Shalev published *A Sourcebook on Solitary Confinement*, which examined the health effects of solitary confinement. She also discussed professional, ethical and human rights guidelines and codes of practice relating to the use of solitary confinement.¹³¹ In 2011, Juan E. Méndez, the United Nations Special Rapporteur on Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, issued a report and called for general principles to minimize the use of solitary confinement and to abolish the practice under certain circumstances.¹³² The Special Rapporteur emphasized that “[t]he practice should be used only in very exceptional circumstances, as a last resort, for as short a time as possible.” In 2015, the Prison Reform Trust, based in the U.K., published *Deep Custody: Segregation Units and Close Supervision Centres in England and Wales*,¹³³ which detailed the use of isolation there.

In 2016, U.N. Special Rapporteur Méndez, working with other institutions, published a report, *Seeing into Solitary: Review of the Laws and Policies of Certain Nations around the World with Regard to Solitary Confinement of Detainees*, written in collaboration with other organizations.¹³⁴ The report included results from surveys and a comparative analysis of solitary confinement practices in 34 jurisdictions; information came from Argentina, Austria, Brazil, China, the Czech Republic, England and Wales (“England”), Ethiopia, Finland, France, Germany, Guatemala, Hungary, Japan, Kenya, Kyrgyzstan, Mexico, New Zealand, Norway, Poland, Russia, South Africa, Turkey, Uganda, the United States of America, Uruguay, and Venezuela, as well as eight states within the United States: California, Colorado, Florida, Illinois, Maine, New York, Pennsylvania, and Texas.

Seeing into Solitary found that “the practice of solitary confinement appears to be an established fixture of the prison systems in all the countries examined, with few signs that it will disappear from those systems any time soon.”¹³⁵ The report identified a significant gap in many jurisdictions between “the law and the practice of solitary confinement,” in that solitary confinement was imposed more often than the law authorized.¹³⁶ The reasons for placement in solitary confinement were found to be varied, and included both disciplinary and non-disciplinary reasons. The report noted that safeguards, access to legal counsel, and mandatory medical examinations that were available in many disciplinary segregation units were often lacking in non-disciplinary segregation units.¹³⁷ The report also noted that “some countries which have made the most consequential improvements on solitary confinement regimes, such as England and the United States, also tend to authorize some of the longest periods of solitary confinement for inmates.”¹³⁸

Seeing into Solitary also detailed efforts of some jurisdictions to improve conditions in solitary confinement, of other jurisdictions to establish appeals processes to challenge decisions to impose solitary confinement, and of many jurisdictions to prohibit or limit the use of solitary confinement for juveniles, women (mostly pregnant women), and mentally ill or disabled people.¹³⁹ The most common limitation that the report identified was on the length of time that a person may be placed in solitary confinement. Many jurisdictions permitted 30 days or less, although the limit was at times extended or ignored.¹⁴⁰ Further, “some countries, including highly developed nations with what may be viewed as enlightened approaches to certain aspects of solitary confinement, allow such confinement, whether for disciplinary or non-disciplinary purposes, and in theory or practice, to be extended either for extremely long periods, including years in some cases, or indefinitely.”¹⁴¹

In sum, demands for change can be found around the world. Commitments to reform and efforts to limit or abolish the use of isolating confinement come from stakeholders and actors in and out of government. Documentation of the harms of isolation, coupled with its costs and the dearth of evidence suggesting that it enhances security, has prompted prison directors, legislatures, executive branch officials, and advocacy groups to try to limit reliance on restricted housing. Instead of being cast as the solution to a problem, restricted housing has come to be understood by many as a problem in need of a solution.¹⁴²

II. The 2015 Survey’s Design and Purposes

Three additional introductory comments are in order. First, we sketch the research methodology used in the questionnaire, which is reproduced in Appendix A. Second, we discuss the challenges of defining and of gathering data on restricted housing. Third, we explain the relationship of this study to the report, *Time-In-Cell*, published by ASCA and Liman in 2015.

A. Goals and Methods

ASCA and the Liman Program jointly developed a survey that was sent to the directors of state and federal correctional systems in the United States to learn about the use of restricted housing as of the fall of 2015. The goal was to understand as much as possible about the numbers of people separated from general prison populations and held for 22 hours or more, for 15 continuous days or more, in single or double cells.

To do so, the survey’s 15 questions requested information on all forms of restricted housing within each of the jurisdictions. To understand the information provided, we sought to learn about the types of facilities—prisons, jails, juvenile or other specially organized institutions—a jurisdiction had, as well as for which facilities the jurisdiction could provide information on restricted housing. We also asked about the number of people in restricted housing; demographic information, including gender, race, and age; whether prisoners with serious mental illness were held in restricted housing; how long individuals were confined in restricted housing; and whether reforms were underway.

As in prior reports by ASCA and the Liman Program, the survey was distributed through ASCA to the 50 states, the Federal Bureau of Prisons, the District of Columbia and, in the summer of 2016, the Virgin Islands which requested that it also be included and then promptly provided information that was integrated thereafter.¹⁴³ We received responses from 52 jurisdictions (as noted, Maine did not respond). For a few questions, we compiled information from all the responses; more of the data come from the 48 jurisdictions providing detailed responses. Of these, not every jurisdiction responded to all questions.

Previews of this report were provided twice at ASCA meetings. After receiving initial responses in the fall of 2015, we presented an overview in January of 2016 at the ASCA mid-year meeting. We then followed up in the spring of 2016 to clarify responses as needed. At the summer 2016 ASCA meeting, a draft report was circulated and discussed. Thereafter, many jurisdictions offered comments, prompting additional revisions. Unless otherwise noted, all data provided come from the answers given by each jurisdiction, reporting about itself.

B. Research Challenges: Various Definitions of Restricted Housing and the Overlaps and Differences between the 2015 and 2016 ASCA-Liman Reports

As the introduction explained, several caveats are in order about the goals, the data gathered, and the limits of this Report. The first concerns the focus of this work on “restricted housing” or “restrictive housing.” As noted, the primary rationales relied upon by correction systems for using restricted housing are the perceived needs to protect, to discipline, or to prevent future harm. In addition to terms such as protective custody, disciplinary segregation, and administrative segregation, different systems use an array of other terms, such as “special housing units (SHU),” “security housing units (SHU),” and “special management units (SMU).”

In an effort to develop nationwide data that focused on all forms of restricted housing, the 2015 survey defined “restricted housing” as:

separating prisoners from the general population and holding them in their cells for 22 hours per day or more, for 15 or more continuous days. The definition includes prisoners held in both single or double cells, if held for 22 hours per day or more in a cell, for 15 or more continuous days.¹⁴⁴

Yet some jurisdictions indicated that the information they routinely collected did not easily fall within the parameters that we provided. Seven jurisdictions reported being unable to identify whether prisoners were in restricted conditions for more or less than the 15-day benchmark.¹⁴⁵ Other jurisdictions did not have clear information about the 22-hour measure; they described some forms of restricted housing that reduced the number of hours within cells to below 22 for at least one day of a week, or they had other questions about the definition.¹⁴⁶ We did as much follow-up as time would permit to enable this Report to be completed, we included as much of the information provided to us as we could, and we noted when information could include variations related to the specific questions asked.

Second, when gathering data on restricted housing and administrative segregation in 2014-2015 for the *Time-In-Cell* Report, we asked jurisdictions to tell us about the number of individuals in all forms of restricted housing, but did not provide a specific and separate definition in that question, except to indicate that it included disciplinary segregation, protective custody, and administrative segregation.¹⁴⁷ Further, the *Time-In-Cell* Report focused most of the 130 questions on the practices governing administrative segregation, and we instructed:

For the purposes of this questionnaire, the term “administrative segregation” refers to separating prisoners from the general population, typically in cells (either alone or with cellmates), and holding them in their cells for most of the hours of the day for 30 days or more. Common terms for this type of confinement include administrative detention, intensive management, and restrictive housing. Please note that administrative segregation does not include punitive/disciplinary segregation or protective custody.¹⁴⁸

In contrast, the 2015 survey focused specifically on restricted housing of all kinds. We asked about the numbers of prisoners held for at least 22 hours a day in their cells, and used those responses for our overall tallies.

When responding to the general question on restricted housing in the 2015 *Time-In-Cell* Report, 34 jurisdictions reported that, as of the fall of 2014, 66,000 people were held in restricted housing. Because those jurisdictions housed 73% of the country’s prison population, ASCA and Liman estimated that 80,000 to 100,000 people were housed in isolation in the fall of 2014.

In short, the 2014 and 2015 surveys differed on a few dimensions. While in 2014, we did not specify the number of hours held in-cell beyond saying “most hours of the day,” we did learn that in many jurisdictions individuals in restricted housing were held for 22-24 hours per day in-cell. In contrast, this 2015 survey gave the 22-hour benchmark. Further, in 2014, we asked about prisoners held in-cell for 30 days or more; in this 2015 survey, we asked about people held in-cell for 15 days or more. This 15-day marker was selected because it is used in many jurisdictions¹⁴⁹ as well as internationally as identifying what is considered to be prolonged or extended solitary confinement.¹⁵⁰ Moreover, because we learned in the *Time-In-Cell* Report that all of the jurisdictions reporting on administrative segregation held prisoners in cells for 19 hours or more and that 89% of the prisoners were in-cell 22 hours or more on weekdays and on weekends,¹⁵¹ we used 22 hours as the marker for restricted housing and additionally sought more information on individuals placed in restricted housing for time intervals short of 22 hours.

III. Types of Facilities and of Cells in the 2015 Survey

A. Types of Facilities for which State-Wide Data Were Available

As discussed above, based on information provided in prior surveys, we knew that not all state-level correctional systems had information regarding the number of people held in restricted housing in every type of confinement facility within their state. Further, most state level agencies did not have authority over all of the detention facilities within their jurisdiction.

For example, while state governments most commonly operate prisons, separate local government agencies typically operate jails.¹⁵²

Therefore, we asked jurisdictions to explain what they *did* know: we asked which types of facilities were included within their state-level correctional systems and if they had data regarding individuals held in restricted housing in each of the types of facilities under their control.¹⁵³ Some states had significant numbers of prisoners in county jails. Data about such prisoners has generally only been included if that jurisdiction had information about those held in the fall of 2015 in restricted housing and if that state's policies on restricted housing governed the local facilities.

In the survey, we asked if each jurisdiction's correctional system included prisons, jails, juvenile facilities, mental health facilities, privately-contracted facilities, special facilities for death sentenced prisoners, or any other types of facilities. Of the 52 jurisdictions responding, all ran prison systems except the District of Columbia, which administers its own jail system and relies on federal and privately-contracted facilities to house its prison population.¹⁵⁴ In total, 12 of the 52 responding jurisdictions reported that their correctional systems included jails, while 40 jurisdictions' correctional systems did not include jails.¹⁵⁵ As we learned from the responses, the relationship of jails to state prison systems is varied; some systems used jails in the sense of contracting to house prisoners in jails but did not have direct authority over them. Our focus was on rules imposed at the state-wide level.

In Table 1, we summarize the information from the 52 jurisdictions responding by type of facility.

Table 1 – Types of Facilities Within State and Federal Corrections Systems (*n* = 52)

Facilities	Jurisdictions	Jurisdictions Collecting Restricted Housing Data
Prisons	51	49
Jails	12	7 ¹⁵⁶
Juvenile Facilities	4	3
Mental Health Facilities	7	4
Privately-Contracted Facilities	21	15
Special Housing for Death-Sentenced Prisoners	2	2

As Table 1 indicates, we also asked jurisdictions if they had information on restricted housing for each category of facility that they identified as within their control in their systems.¹⁵⁷ Of the 51 jurisdictions with prisons in their correctional system, 49 reported on individuals in restricted housing in the prisons that they run directly, as distinguished from those run by private providers. Of the 12 jurisdictions whose systems included jails (nine states, the Virgin Islands, the Federal Bureau of Prisons, and the District of Columbia), seven had data on the use of restricted housing in their jails.¹⁵⁸

The information provided on privately-contracted facilities was also limited. Nonetheless, we did identify 2,425 prisoners held in 15 jurisdictions in restricted housing in private facilities. Specifically, 21 reported that they have privately-contracted facilities in their correctional

system, and 15 provided information on restricted housing within those facilities. As of the fall of 2015, those 21 jurisdictions housed 942,248 prisoners in their total custodial population across all types of facilities, and 96,487—or about 10%—were housed in privately-contracted facilities. The 15 jurisdictions reporting on the use of restricted housing in privately-contracted facilities housed 85,701 prisoners, and 2.8% of that number—2,425 individuals—were reported to be in restricted housing.

The information provided on juveniles held in custody was minimal. Four responding jurisdictions indicated that their correctional systems included juvenile facilities.¹⁵⁹ Of these four jurisdictions, three provided data on the use of restricted housing in these juvenile facilities.

We also asked about other specialized facilities for subsets of prisoners. Some jurisdictions indicated that they had distinct facilities, while others referenced special units within facilities. Seven jurisdictions responded that they had separate institutions for the mentally ill.¹⁶⁰ Six jurisdictions reported that their data included facilities that they denoted as “Other” because they did not fall into the named categories we provided.¹⁶¹

In short, most of the information on restricted housing provided in this Report is about its use *in prisons*. Further, the “total” numbers provided in this Report do not include *all* the people who were, in the fall of 2015, held in restricted housing. For example, the numbers discussed in the demographic section on age cohorts in restricted housing were based almost entirely on information about adult prisons. As discussed, we have almost no information on juvenile facilities around the country.¹⁶² Also, we know that millions of people are incarcerated in jails, that some jails have restricted housing, and that more than 90% of the jails are run at the county level. Yet, this Report has very little information on the number of individuals held in restricted housing within jails.

B. The Use of Single and of Double Cells

As noted, the survey’s definition of restricted housing included individuals held for 22 hours or more, for 15 days or more, in single and double cells. The inclusion of double-celling mirrors the views of the Department of Justice, which noted in its 2016 Report that “[n]ot all segregation is truly ‘solitary,’ Many prison systems, including the [Federal Bureau of Prisons], often house two segregated inmates together in the same cell, a practice known as ‘double-celling.’”¹⁶³

For this survey, we asked jurisdictions, “How many prisoners, if any, (including both male and female, of every age)” in restricted housing “are housed in double cells?”¹⁶⁴ Among the 47 jurisdictions that responded to this question, 26 housed prisoners in double cells. Twenty-one of the 26 jurisdictions provided the number of prisoners confined in double cells, which totaled 17,460 prisoners. Five jurisdictions reported that they housed prisoners in double cells but were not able to provide a number.

IV. The Numbers and Percentages of Prisoners in Restricted Housing: The Data from the 2015 Survey

A. *Counting and Comparing General and Restricted Populations*

The survey asked jurisdictions to report on the number of men and women held in any form of restricted housing as of October 1, 2015. As noted, 48 jurisdictions described a total of 67,442 prisoners in restricted housing.¹⁶⁵ These 48 jurisdictions housed 96.4% of the total prison population in the United States and its territories,¹⁶⁶ as calculated by using data provided in a 2014 report by the Bureau of Statistics (BJS), which regularly provides the numbers of prisoners by jurisdiction.¹⁶⁷

We also sought to gather baseline general population data directly from each jurisdiction, so as to understand what percent of prisoners *within* a jurisdiction were held in restricted housing. The 2015 survey asked each jurisdiction for its total custodial population, including prisoners in restricted housing and in the general population. In addition, we asked about the numbers of prisoners housed in different types of facilities, as detailed above.

First, we asked for the total number of prisoners housed in each jurisdiction. On this question, 52 jurisdictions provided information; the total custodial population reported by was 1,452,691 prisoners.¹⁶⁸ Forty-eight jurisdictions provided information on restricted housing populations; the total custodial population for the 48 jurisdictions for which we have restricted housing data was 1,437,276. This total accounts for prisoners held in-state (as compared to being sent to another jurisdiction); our operative assumption was that most states house almost all of their prisoners in-state. We know of exceptions, of which Hawaii is a prominent example.¹⁶⁹ For Hawaii, we used the in-state population when calculating the percentage of people held in restricted housing.

Second, we asked for the total number of prisoners housed in facilities for which the jurisdiction also had information on restricted housing. When we totaled the numbers from those answers, the custodial population *in facilities for which restricted housing data was reported*—at 1,387,161 prisoners—was slightly lower than the answers by these jurisdictions to the question of total custodial population—specifically, by 65,530 fewer individuals. That lower number reflects that some jurisdictions reported that they did not track data on individuals in restricted housing in *all* of their facilities.¹⁷⁰

More details are in order to explain both the Table and Chart with asterisks and two double entries. In the 41 jurisdictions in which the total population numbers were the same for both inquiries, we used that number as the baseline to calculate the percentage of prisoners in restricted housing. In the seven jurisdictions that had some facilities for which they could not provide restricted housing information (i.e. jurisdictions for which the total population in facilities with restricted housing data was less than the total custodial population), we used the total population in facilities with restricted housing data to calculate the percentage of prisoners in restricted housing. In Table 2, below, we use an asterisk to note those jurisdictions.

Directors at the two jurisdictions that were (before the Virgin Islands reported its data) at the highest end—Louisiana and Utah—reached out to us after we had circulated a draft report in

the summer of 2016 to describe how calculations about their states could be different. Louisiana staff suggested that we should include state prisoners held in local jails—some 18,000—in the denominator and that we could extrapolate the number held in parish jails in restricted housing from a special audit conducted in August of 2016 that identified 314 people held in such confinement. Using those numbers, Louisiana would have had 8.2% of its prison population in restricted housing. Further, as discussed in more detail in Part VII, Utah reported making significant changes in how it authorized the use of restricted housing. As of August of 2016, the number of people in restricted housing in Utah was reported to have dropped from 912 (14% of the state prison population) to 380 (6% of the state prison population). The focus of our data was on the fall of 2015, but because these jurisdictions reached out specially to provide extra information, we included an added layer of data for Louisiana and Utah in Table 2 and Chart 1.

We provide a summary of the findings in Table 2 and Chart 1 below. The percentage of prisoners in restricted housing ranged from 0.5% (Hawaii, in-state only) to 28.3% (Virgin Islands). The Virgin Islands was also the jurisdiction reporting the smallest absolute number of prisoners in the total custodial population (491 prisoners). Across all the jurisdictions, the median percentage of the population held in restricted housing was 5.1%.

Chart 1 – Percentages of Men and Women in Custodial Population in Restricted Housing by Jurisdiction (15 Consecutive Days or Longer, 22 Hours or More per Day) (*n* = 48)¹⁷⁵

B. The Numbers and Percentages of Prisoners In-Cell for 16 to 21 Hours

As noted, our general definition of restricted housing was focused on people held in-cell for 22 hours or more per day for 15 continuous days or more. Given ongoing efforts to lower the number of hours in cells, we asked jurisdictions to provide information on prisoners who were held in their cells for less than 22 hours a day but nonetheless for most of each day. For example, California reported that it used forms of segregation that permit prisoners 10 hours per week out-of-cell, and distributed those 10 hours throughout the week such that on some days in a week, prisoners were allowed more than three hours out-of-cell. As a consequence, prisoners in these forms of segregation would not be included in California's restricted housing numbers.

Therefore, in addition to the 22 hours or more question, we inquired about two subsets: individuals in-cell for 20 to 21 hours per day and those in-cell for 16 to 19 hours per day. Thirty-four jurisdictions with a total custodial population (in facilities for which they tracked restricted housing data) of 788,871 prisoners responded to the questions about prisoners in cells in these different time periods. Eleven of the 34 jurisdictions answered that, in addition to the prisoners held in restricted housing for 22 or more hours, they held no prisoners in cell for 16-21 hours.

Of those responding, 23 jurisdictions reported an additional 11,827 prisoners held in-cell for 20 to 21 hours per day and 4,628 prisoners were held in-cell for 16 to 19 hours per day. In this subset of 23 jurisdictions, a total of 16,455 prisoners were held in-cell for 16 to 21 hours per day. Within these 23 jurisdictions, the percentage of prisoners held in-cell for 16 to 21 hours ranged from 0.03% (New Jersey) to 6.2% (California). In these 23 jurisdictions holding prisoners for 16 to 21 hours, a median of 1.6% of the total custodial population was held in-cell for 16 to 21 hours, as well as prisoners held in-cell for 22 hours or more.

In short, in addition to the 67,442 prisoners held in-cell 22 hours or more across the 48 responding jurisdictions represented in Table 2 and Chart 1, another 16,455 prisoners in 23 of those 48 jurisdictions were held in conditions that were also restricted, but not as limiting as the 22 hours reflected in Table 2 and Chart 1. When these two numbers are combined, a total of at least 83,897 prisoners were held in-cell for more than 16 hours per day, for 15 days or more.

Table 3 – Numbers and Percentages of Men and Women in Custodial Population In-Cell for 16 or More Hours per Day and for 15 Consecutive Days or Longer by Jurisdiction (*n* = 34)¹⁷⁶

Chart 2 – Percentage of Men and Women in Custodial Population In-Cell for 16 or More Hours per Day and for 15 Consecutive Days or Longer by Jurisdiction (n = 34)

V. The Duration of Time Individuals Spent in Restricted Housing

We asked whether jurisdictions regularly gather, collect, or report information on each prisoner's length of stay in restricted housing. Fifty of the 53 jurisdictions we queried responded to this question.¹⁷⁹ Thirty-three jurisdictions stated that they did regularly gather information on length of stay.¹⁸⁰ The following 17 jurisdictions stated that they do not regularly track information on length of stay: Alabama, Alaska, Arkansas, Delaware, Florida, Illinois, Louisiana, Michigan, Missouri, Nebraska, Nevada, Oklahoma, Oregon, Pennsylvania, Rhode Island, West Virginia, and Wisconsin.¹⁸¹

A. Length of Stay

We also asked jurisdictions how many prisoners, as of October 1, 2015, had been in restricted housing for the following intervals: 15 days to one month; one month to three months; three months to six months; six months to one year; one year to three years; three years to six years; and over six years. Forty-one of the 53 jurisdictions we queried provided sufficiently detailed data on which to report.¹⁸² The data are summarized in Table 4,¹⁸³ and endnotes indicate jurisdictions that reported length-of-stay data for some, but not all prisoners in restricted housing.

The 41 responding jurisdictions provided length-of-stay data for 54,382 prisoners in restricted housing. We therefore identified length-of-time spent in restricted housing for 81% of the total restricted housing population described in this report.

According to the 41 responding jurisdictions, 18% of prisoners were in restricted housing for 15 days up to 30 days. Twenty-nine percent of the 54,382 prisoners—15,725 people—were in restricted housing for one month up to three months. Another 29% of the 54,382 prisoners—15,978 people—were in restricted housing for three months up to one year. Twenty-four percent of the 54,382 prisoners—13,041 people—were in restricted housing for one year or more.

Almost 6,000 people, comprising 11% of the population on which we have duration data for the length of time spent in restricted housing, were held in restricted housing three years or more, and about half of these were held in restricted housing for six years or more. Specifically, 32 jurisdictions reported housing 2,976 people for three years up to six years; this population constitutes 5.5% of the restricted housing population on which we have length-of-time data. Twenty-six jurisdictions reported holding 2,933 prisoners for six years or more, which is 5.4% of the population for which we had this kind of data. Chart 3 details this distribution.

Chart 3 – Prisoners in Restricted Housing by Length of Time and by Percent of the 54,382 Prisoners for Which Length-of-Stay Data Were Provided (*n* = 41)

B. Length of Time by Classification of the Type of Restricted Custody

For each time period, we asked jurisdictions about prisoners held in protective custody, disciplinary custody, administrative segregation or any other classification that met our definition of restricted housing—prisoners separated from the general population and held in-cell for 22 hours per day or more, for 15 or more continuous days. If jurisdictions included prisoners under some “other” restricted housing classification, we asked for information about this classification; jurisdictions reported classifications such as death row, medical classifications, and intensive management units.¹⁹⁶

Thirty-seven jurisdictions were able to provide data on prisoners’ length of stay by classification.¹⁹⁷ These jurisdictions reported type-of-custody data for 50,036 prisoners in restricted housing and thus comprised roughly 74% of the 67,442 population that were reported to be in restricted housing as of the fall of 2015.

The majority of this subset of 50,036 prisoners were held in disciplinary or administrative segregation. Of the 50,036 prisoners reported by type of classification that put them into restricted housing 2,527 (5%) were classified as being held in protective custody; 14,809 (30%) were classified as being held in disciplinary custody; 23,997 (48%) were classified as being held in administrative segregation; and 8,681 (17%) were segregated for some other reason.

Prisoners who were held in disciplinary custody stayed there for shorter intervals than did prisoners held under other classifications. Of the prisoners in restricted housing for 15 days up to one month, 53% were in disciplinary custody. Of prisoners held for one month up to three months, 40% were classified as placed into restrictive housing for discipline.

Prisoners who were held for longer periods of time in restricted housing, particularly longer than six months, were more likely to be held in administrative segregation or “other” forms of restricted housing. Of prisoners who were in restricted housing for six months or longer in the jurisdictions providing data, 82%, or 14,847 prisoners, were housed in administrative segregation or some “other” form of restricted housing. Prisoners in disciplinary and protective custody accounted for 18% of those who spent longer than six months in restricted housing, whereas prisoners in administrative segregation accounted for 54% of those who spent longer than six months, and prisoners in “other” forms of restricted housing accounted for 28%. Chart 4 provides the details.

Chart 4 – Prisoners in Restricted Housing by Length of Time and by Classification of the Type of Restrictive Custody (*n* = 37)

VI. The Demographics of Restricted Housing

The survey asked jurisdictions to provide demographic data for their total custodial and restricted housing populations. Forty-three responding jurisdictions provided some information about gender, race, ethnicity, and age. A smaller number of jurisdictions provided information on people identified as transgender, as pregnant women, and as individuals labeled with mental health issues.

A. Gender

Forty-three jurisdictions provided sufficiently detailed data on men and 40 did so about women. Across the 40 jurisdictions that provided data on both genders, a higher number of men than women prisoners were confined in restricted housing.

The percentage held in restricted housing ranged from 29.3% of the male custodial population (95 out of 324 male prisoners) in the Virgin Islands and 14.7% of the male custodial population (2,583 out of 17,577 prisoners) in Louisiana¹⁹⁸ to approximately 0.6% of the male custodial population (22 out of 3,989) held in-state in Hawaii.¹⁹⁹ Across the 43 jurisdictions providing data, the median percentage of male prisoners in restricted housing was 5.3%. Jurisdiction-by-jurisdiction information is provided in Chart 5 and Table 5, below.

Chart 5 – Percentage of Male Custodial Population in Restricted Housing ($n=43$)²⁰⁰

Table 5 – Number and Percentage of Male Custodial Population in Restricted Housing (n=43)²⁰¹

	Total Custodial Population	Restricted Housing Population	Percentage in Restricted Housing

BOP	177,451	8,827	5.0%
<i>Across Jurisdictions</i>	1,180,821	59,049	5.0%

As the table and chart above reflect, a total of 59,048 men were reported confined in restrictive housing in the fall of 2015. As we detail below, smaller numbers and percentages of women prisoners were placed in restrictive housing. Specifically, across the 40 jurisdictions providing data for female prisoners that reported some numbers other than zero,²⁰² the jurisdiction reporting the highest percentage of female prisoners in restricted housing was Louisiana, where approximately 11.3% of its female custodial population (106 out of 938 prisoners) was in restricted housing.²⁰³ The jurisdiction reporting the lowest percentage was Washington, where approximately 0.1% of the female custodial population (1 out of 1,136 prisoners) was in restricted housing. The total number of women reported in the data were 83,749, of whom 1,458 were in restrictive housing. The median percentage of female prisoners in restricted housing across these 40 jurisdictions was 1.6%. Jurisdiction-by-jurisdiction information is reported in Chart 6 and Table 6 below.

B. Race and Ethnicity

The survey asked for race and ethnicity data for both the total custodial and the restricted housing populations of men and women. Jurisdictions were asked to provide information in five categories: White, Black, Hispanic, Asian, and Other.²⁰⁵

Among the 43 jurisdictions reporting on men, Black prisoners comprised 45% of the restricted housing population, as compared to comprising 40% of the total of all of the male custodial population in those jurisdictions. In 31 of the 43 reporting jurisdictions, the male restricted housing population contained a greater percentage of Black prisoners than did the total male custodial population in each of those jurisdictions.

Hispanic prisoners comprised 21% of the restricted housing population, as compared to 20% of all of the total custodial population. In 22 of 43 reporting jurisdictions, the male restricted housing population contained a greater percentage of Hispanic prisoners than did the total male custodial population in each of those jurisdictions.²⁰⁶ In 36 of the 43 jurisdictions, the male restricted housing population contained a smaller percentage of White prisoners than in the total male custodial population. As detailed below, jurisdictions reported a small percentage of Asian prisoners in their general prison population and a smaller percentage in their population in restricted housing. The “Other” category (which could include members of Indian Tribes, American Samoans, and other groups) was small and comparable in size in the general and in the restricted housing populations.

Chart 7 displays and compares these percentages; Table 7 lists by jurisdictions the number of male prisoners in the general population and in restrictive housing by race/ethnicity. Table 8 compares the percent of all male prisoners to those by race and ethnicity in restrictive housing.

As noted, 40 jurisdictions responded on gender, and that group also provided information about race for their female custodial populations. Among these 40 responding jurisdictions, Black prisoners constituted 24% of the total female custodial population and 41% of the female restricted housing population. In 33 of the 40 reporting jurisdictions, the female restricted housing population contained a greater percentage of Black prisoners than were in each of the jurisdictions reporting on the total female custodial population.

In 16 of 40 reporting jurisdictions, the female restricted housing population contained a greater percentage of Hispanic prisoners than the total female custodial population.²⁰⁷ In 34 of the 40 jurisdictions, the female restricted housing population contained a smaller percentage of White prisoners than the total female custodial population. Again, the percentages of Asian and of prisoners termed “Other” were small and roughly comparable in both general and restricted housing populations. Chart 8 and Tables 9 and 10 provide the details.

Chart 8 – Demographic Percentage Composition of Total Female Custodial Population and Female Restricted Housing Population (*n* = 40)

C. Age Cohorts

The survey asked jurisdictions to provide age data for their male and female total custodial and restricted housing populations. We asked about individuals in three cohorts: under 18 years old, between 18 and 49 years old, and 50 years and older. We sought to understand the distribution of age cohorts within restricted housing populations and to compare the age of individuals in restricted housing to the age of those in the general population.

Across the 43 responding jurisdictions, males under 18 years old made up approximately 0.1% of both the total custodial and the restricted housing populations. Among reporting jurisdictions, males between the ages of 18 and 49 comprised 79.6% of the total custodial population and 89.1% of the restricted housing population. Males 50 and older comprised 20.3% of the total custodial population and 10.7% of the restricted housing population.

In the 43 responding jurisdictions, approximately 5.9% (78 of 1,326) of male prisoners under 18 years old were in restricted housing. Approximately 5.6% (52,636 of 939,886) of male prisoners 18-49 were in restricted housing, while 2.6% (6,335 of 239,609) of male prisoners 50 and older were in restricted housing. We provide the jurisdiction-by-jurisdiction information in Chart 9 and Tables 11 and 12.

As noted above, we sought to understand the percentage of each age cohort in the restricted housing population and to compare the numbers by age cohort in the general population and in the restricted population. Among the 40 jurisdictions providing data for female prisoners in restricted housing, none reported any female prisoners under the age of 18 in restricted housing. These jurisdictions reported that female prisoners between the ages of 18 and 49 comprised 84.4% of the total custodial population and 92.2% of the restricted housing population. Jurisdictions reported that women 50 years and older comprised 15.4% of their total custodial populations, and 7.8% of the restricted housing population. Across the 40 responding jurisdictions, 1.9% (1,345 of 70,710) of female prisoners 18-49 were held in restricted housing; 0.9% (113 of 12,895) of female prisoners 50 and older were held in restricted housing. Chart 10 and Tables 13 and 14 provide the details.

D. Vulnerable Populations: Mentally Ill, Pregnant, and Transgender Prisoners

Concerns have been raised about especially vulnerable individuals. The information that we obtained about juveniles (described as individuals under 18 years of age) is discussed above, in the context of age cohorts. Here, we turn to other vulnerable populations, specifically the mentally ill, pregnant women, and transgender individuals.²⁰⁸

1. Prisoners with Serious Mental Health Issues (according to each jurisdiction's own definition)

The view that the “seriously mentally ill” (SMI) ought not to be in restricted housing is widely shared and longstanding. In 1995, a federal judge concluded that placing seriously mentally ill prisoners into what he termed “solitary confinement” violated their Eighth Amendment rights.²⁰⁹

In the last few years, legislation in some jurisdictions, class action settlements, and policies in the federal prison system²¹⁰ and in some states have prohibited or limited correctional facilities’ authority to put seriously mentally ill individuals in restricted housing.²¹¹ As discussed above, the American Correctional Association (ACA) approved new standards on restricted housing,²¹² including recommendations that prisoners with serious mental illness not be placed in “Extended Restrictive Housing.”²¹³ The 2016 ACA Standards also called for all prisoners to be evaluated by a mental health provider within seven days of their placement in restricted housing.²¹⁴ Further, the ACA standards stated that prisoners with diagnosed behavioral health disorder in restricted housing for 22 hours a day or more be assessed by a mental health provider “at least every 30 days,” and prisoners without such a diagnosis be assessed every 90 days.²¹⁵ In addition, the ACA standards call for all prisoners in restricted housing to be visited by mental health staff weekly and by health care personnel daily.²¹⁶ The Department of Justice has similarly altered its standards to make it clear that seriously mentally ill individuals should generally not be placed in restricted housing.²¹⁷

Yet how jurisdictions defined what constituted “serious mental illness” varied widely. The 2015 survey made plain that correctional agencies do not have a uniform definition of either “mental illness” or “serious mental illness.” We did not impose a definition when surveying but instead invited each jurisdiction to provide its own definition of a “serious mental health issue” and to provide data on the numbers of people with such mental health issues in restricted housing.

Forty jurisdictions provided definitions. Five other jurisdictions provided data on the use of restricted housing for prisoners with mental health issues without providing a corresponding definition of “serious mental health issue.”²¹⁸ Seven of the 40 jurisdictions that provided a definition did not provide data on prisoners with mental health issues.²¹⁹

Some jurisdictions’ definitions had a narrower range than others. A sense of the variation is apparent from a few examples. The District of Columbia limited its definition to Axis I diagnoses under the Diagnostic and Statistical Manual of Mental Disorders (DSM-4).²²⁰ Iowa included “chronic and persistent mental illnesses in the following categories: § Schizophrenia

§ Recurrent Major Depressive Disorders § Bipolar Disorders § Other Chronic and Recurrent Psychosis § Dementia and other Organic Disorders.” Mississippi defined “serious mental illness” as “a diagnosable disorder of thought, mood, perception, orientation, or memory that significantly impairs a person’s judgment, behavior, capacity to recognize reality, and/or ability to meet the ordinary demands of life currently or at any time during the past year.” Vermont’s definition included a “disorder of thought, mood, perception, orientation, or memory as diagnosed by a qualified mental health professional, which substantially impairs judgment, behavior, capacity to recognize reality, or ability to meet the ordinary demands of life and which substantially impairs the ability to function within the correctional setting or any developmental disability, traumatic brain injury or other organic brain disorder, or various forms of dementia or other neurological disorders, as diagnosed by a qualified mental health professional, which substantially impairs the ability to function in the correctional setting.” In Appendix C, we provide additional details of the various definitions for “serious mental health issue” or “serious mental illness” that were provided by the responding jurisdictions.

Seeking to understand the placement of mentally ill people in restricted housing, we asked jurisdictions to provide the number of people in the total population with mental illness, as well as the number of prisoners with mental illness in restricted housing, by race and gender. Jurisdictions varied in their ability to provide data in this detail. Thirty-four jurisdictions²²¹ provided data about male prisoners with mental illness. These jurisdictions reported a total of 54,025 male prisoners with serious mental health issues in their general prison populations, and a total of 5,146 male prisoners with serious mental health issues held in restricted housing. The 32 jurisdictions responding on women prisoners reported a total of 9,573 female prisoners with serious mental health issues, and a total of 297 female prisoners with serious mental health issues in restricted housing. We provide the jurisdiction-by-jurisdiction information in Tables 15 and 16 below.

Given the variation in definitions, we did not create a chart comparing percentages of mentally ill prisoners in restricted housing; any variation may reflect broader or narrower definitions of “serious mental health issue.” Rather, we report on the total number of men and of women (with information on race and ethnicity where available) whom jurisdictions identified as of the fall of 2015 as having such mental health issues and whether these individuals were housed in general population or in restricted housing.

We also sought to learn about the intersection of race, ethnicity, gender, and mental health. Thirty-three jurisdictions provided information about male prisoners, and 30 jurisdictions provided information about women prisoners.²²² The jurisdiction-by-jurisdiction information is detailed in Tables 17 and 18 below.

2. *Pregnant Prisoners*

We asked specifically about pregnant women in general prison populations and in restricted housing. Of the 33 jurisdictions that had sufficiently detailed and consistent information on which to report,²²³ 10 said that, as of the fall of 2015, no pregnant prisoners were in their total custodial population.²²⁴ The remaining 23 jurisdictions, listed below in Table 19, reported that within their general populations as of the fall of 2015, they counted a total of 396 pregnant women prisoners. Nineteen jurisdictions reported that they had no pregnant prisoners in restricted housing. The remaining four jurisdictions—Delaware, Florida, Kentucky and North Carolina—reported holding a total of five pregnant prisoners in restricted housing.

Table 19 – Pregnant Prisoners in Restricted Housing (*n* = 23)

	Women in Total Custodial Population	Pregnant Women in Total Custodial Population	Pregnant Women in Restricted Housing
Alabama	1,487	9	0
Arizona	3,972	27	0
Colorado	1,512	18	0
Connecticut	1,063	23	0

Texas	12,785	88	0
Utah	537	5	0
Virginia	2,353	3	0
Wyoming	251	3	0

3. *Transgender Prisoners*

We asked about transgender prisoners in the general population and in restricted housing. Of the 33 jurisdictions providing data on transgender prisoners,²²⁵ 10 reported having no transgender prisoners in their total custodial population. The remaining 23 jurisdictions reported a total of 754 transgender prisoners in their prison systems. Of these, eight jurisdictions reported that no transgender prisoners were in restricted housing. In the 15 jurisdictions that had transgender prisoners in their restricted housing population, we tallied a total of 55 transgender prisoners in restricted housing.²²⁶ In sum, of the 754 transgender prisoners reported by 33 jurisdictions, 55 (7.3%) were reported to be housed in restricted housing.

VII. **Planned or Proposed Policy Changes in Restricted Housing: 2013-2016**

In ASCA-Liman's prior 2015 *Time-In-Cell* Report, 40 jurisdictions reported that they had reviewed their policies and practices of administrative segregation within the prior three years, that is, between 2011 and 2014. Many discussed efforts to make changes, including by reducing isolation, using less restrictive means of confinement, improving mental health services, and adding staff training.²²⁷

For this 2016 Report, we asked jurisdictions to report policies implemented or plans to revise policies on restricted housing, and we focused on the time period between 2013 and the fall of 2015. Thereafter, at the request of some correctional administrators, ASCA-Liman circulated a follow-up questionnaire in March of 2016 to inquire about any more recent changes. Some jurisdictions provided additional information, including after the August meeting, and thus this discussion includes materials received through the early fall of 2016.

We specifically inquired about changes in policies regarding restricted housing related to the "criteria for entry to restricted housing," "criteria for release to restricted housing," "oversight in restricted housing," "mandated time out-of-cell for restricted housing prisoners," "programming in restricted housing," "opportunities for social contact in restricted housing," "physical environment of restricted housing," "programming for mentally ill prisoners who have been in restricted housing," "policies or training related to staffing of restricted housing," and "other." We also asked jurisdictions to send the underlying policies related to placement in restricted housing. We did not ask questions about the reasons for changes, but as reflected in answers, some revisions to policies have come in the wake of litigation and legislative mandates.

Jurisdictions' responses to these policy questions included varying levels of detail. Further, we did not provide or ask for measures of implementation, such as whether revised entry criteria had resulted in a decline in the number of entrants or whether increased out-of-cell time opportunities were used in practice. Thus, we know how correctional systems *described* their efforts, but we do not have independent metrics of the impact of changes made.

Of the 53 jurisdictions surveyed, 45 provided responses to these questions.²²⁸ Twelve of these 45 jurisdictions provided copies of policies or court-based settlement agreements as well.²²⁹ A few jurisdictions responded with reports of reduced populations in restricted housing or with other kinds of information. Several jurisdictions that reported policy changes later

provided additional information.

Most of the responding corrections departments reported making or considering policy changes. Areas of revision included narrowing the criteria for entry; creating different forms of restricted housing; developing alternative housing options that removed individuals from the general population, but without such restrictive conditions; increasing oversight over the process of deciding who is to be placed in restricted housing; and creating pathways for release or limits on the time to be spent in restricted housing. Several jurisdictions reported that, for those people remaining in segregation, they sought to diminish the degrees of isolation by increasing out-of-cell time; improving access to programs, education, work, and exercise; and creating opportunities for social interaction with people in and outside of prison. In terms of the process for making changes, some jurisdictions reported that they had consulted with outside institutions—from prisoner and disability advocacy groups to organizations such as the Vera Institute of Justice—in their planning efforts.²³⁰

Below, we first provide an overview of what correctional systems reported they were trying to do to reduce their use of long-term isolation. We then describe changes underway in the federal system at the direction of the U.S. Department of Justice and in five states, all of which were putting into place new policies focused on reducing the use of restricted housing. We detail the proposals in the DOJ report on restricted housing that the March 2016 Presidential order indicated should be implemented within 180 days.²³¹ Thereafter, we provide information from five states—Colorado, North Dakota, Ohio, South Carolina, and Utah—that indicated that they were making substantial changes in restricted housing policies and procedures.

A. Reducing Placement in Restricted Housing: Narrowing Criteria for Entry and Creating Alternatives

Many jurisdictions reported changing the criteria for placement in restricted housing. For example, Colorado stated that it no longer allowed “female or youthful offenders” to be placed into “Restricted Housing – Maximum Security Status.”²³² Texas reported that members of what it called the “Texas Mafia” were “no longer placed in restrictive housing based solely on their affiliation.” California reported many changes in restricted housing policies, including no longer placing prisoners in restricted housing “solely based” on gang membership.²³³ Pennsylvania reported that it had “eliminated self-injurious behaviors, self-mutilation, other forms of self-injury, and behaviors associated with these sentinel events from the list of rule violations that could lead to segregation or other types of informal sanctions.”²³⁴ A few of these states have also been involved with litigation regarding restricted housing prisoners, and some of the changes interact with provisions of settlement agreements.

Other jurisdictions described taking steps to alter criteria for placement in restricted housing. North Dakota said that it was in the “process of [a] policy review related to using restrictive housing as a last resort.” South Dakota stated that it was revising the criteria for placement in restricted housing “to be based on more clearly defined violent/dangerous behaviors.” Utah, as detailed below in Part VII, changed both the criteria for placement and created an individualized review process for each prisoner in restricted housing.

Along with narrowing criteria for entry to restricted housing, some jurisdictions explained that they were seeking ways to divert prisoners from restricted housing, while also removing prisoners from the general population. Ohio, for example, reported that it planned to expand what it termed “Limited Privilege Housing,” described as “a non-restrictive housing alternative” for some individuals who would otherwise have been placed in restrictive housing. Oregon stated that it was revising policies to allow “low level” misbehavior to be addressed through some alternative to restricted housing. New York (another jurisdiction in which major litigation related to these issues was resolved in 2016) stated that it was planning “[a]lternative programming units,” including drug and alcohol treatment programs and step-down programs, “to reduce the number of inmates being held in restrictive housing.” Pennsylvania related that it had recently developed several diversionary treatment units. Texas reported expanding its “Mental Health Therapeutic Diversion Program” to 420 beds.

B. Focusing on Release: Time Caps, Step-Down Programs, and Increased Oversight of Retention Decisions

Many jurisdictions reported having implemented or planning to change criteria and procedures for release from restricted housing or to the oversight of decisions to continue to house individuals in restricted housing. Reported efforts included placing limits on the amount of time in segregation, implementing structured programs to transition prisoners back to the general population (“step-down” or “step-up” programs), and increasing oversight or reviews of prisoners who were placed in segregation.

A few jurisdictions reported imposing a limit on the total time prisoners could spend in at least some forms of restricted housing. For example, Colorado described a 12-month limit on placement in Maximum Security restricted housing, which could be extended if “approved by the director of Prisons as well as the deputy executive director, and . . . based upon documented exigent circumstances.” South Dakota stated that it has made changes to “Disciplinary Segregation to reduce maximum duration in disciplinary segregation.”²³⁵ Ohio reported that it had adopted a policy under which prisoners in “long-term restrictive housing (Level 5 or 4B)” were to be presumptively released after a set period of time unless they were found to “have committed an offense so dangerous it exempts them from this policy.” Under Ohio’s plan, prisoners in the most restrictive housing environment were presumptively downgraded to a lower level of restriction after 90 days, after which they were presumptively released to a lower restriction level after 15 months.

Several jurisdictions referenced implementing step-down or similar programs that create a series of stages to facilitate the transition of individuals from restricted housing back to the general population.²³⁶ For example, South Carolina (discussed in greater detail below) reported that it had implemented a minimum year-long step-down program for prisoners requiring “intensive management,” and a minimum six-month-long step-down program for prisoners who commit less serious infractions. The Virginia Department of Corrections described its efforts at implementing “Steps to Achieve Reintegration” (STAR), a program for prisoners who refused to leave segregated housing “because of their fear of living with others”²³⁷ so as to equip prisoners with “skills to safely enter [general] population housing.”²³⁸ Utah (also detailed below) created a

tiered program aimed at moving people from restricted housing to general population within a year or less.

Several jurisdictions reported adding reviews of decisions to keep individuals in restricted housing. For example, New Jersey described the formation of a committee to conduct “a formal review of each inmate” housed in a management control unit (MCU) every three months “to determine whether an inmate’s release from MCU is appropriate.”²³⁹ Oregon stated that it was implementing a “90-day review process” to ensure prisoners do not remain segregated longer than necessary.

A few jurisdictions described adding new administrative positions at various levels to oversee their restricted housing programs and units. New York said that it had “added an Assistant Commissioner position for oversight.”²⁴⁰ South Dakota reported that it added the position of “Restrictive Housing Manager” in order “to oversee the development and maintenance of the level program and to ensure institutional compliance with new policy changes regarding restrictive housing.” Pennsylvania reported “many systemic changes to the ways mental health services are provided to state inmates housed in various types of restricted housing units,” including reorganizing the central office responsible for mental health care and augmenting oversight to enhance “the delivery of mental health services.” Utah added a new committee, the Placement/Advancement Review Board, to consider each prisoner in restricted housing on a regular basis.

Another form of oversight can come from improving data collection. A few jurisdictions described changing their information tracking systems. For example, Illinois explained that its Department of Corrections regulations were revised to require creation of a new file for each person in restricted housing to track “all relevant documentation pertaining to the administrative detention placement.”²⁴¹

Jurisdictions have also sought to prevent the release of individuals from segregation directly to the community. *Time-In-Cell* described 30 jurisdictions that, as of 2013, reported that 4,400 people had been released to their communities without any transition from isolation.²⁴² A few jurisdictions responding to the 2015 survey described taking steps to prohibit or discourage the direct release of individuals from restricted housing to the outside world. Connecticut stated that it prohibited release of prisoners to the community directly from administrative segregation. Similarly, Colorado policy required the Department to “make every attempt to ensure offenders will not release directly to the community from Restrictive Housing Maximum Security Status” and to do so by considering transition in the 180 days preceding release to the community.

C. Mandated Time Out-of-Cell

Another strategy described by several jurisdictions was mandating a certain number of hours per day or week that prisoners in segregation would spend outside of their cells. Several jurisdictions reported reforming policies to increase time out-of-cell for prisoners removed from the general population.²⁴³

For example, Ohio stated that it had a pilot program to provide “10 hours out-of-cell time for structured activity and 10 hours out-of-cell time for unstructured activity for severely mentally ill prisoners who must be held in restrictive housing for safety reasons.” Pennsylvania stated that prisoners in particular segregated units were scheduled for a minimum of 20 hours of out-of-cell activity per week. California noted that certain segregated prisoners were granted either 15 or 20 hours out-of-cell per week. Utah related increasing mandated time out-of-cell per week.

D. Conditions: The Physical Environment and Programming

In addition to criteria for entry to and release from restricted housing, jurisdictions reported revisiting conditions *within* restricted housing. Oregon, for example, reported that it created a “blue room” in its Intensive Management Unit in one prison, where images of nature were projected onto the walls. South Dakota described several changes, including building “outdoor recreation enclosures,” installing windows to provide additional natural light to prisoners, and installing televisions outside of cells, so that segregated prisoners could watch “news/weather channel” during “the daytime hours.”

Other jurisdictions described efforts to increase programming opportunities for prisoners in restricted housing, sometimes in groups. New Jersey stated that it planned to build modules for programming in administrative segregation units. Missouri described its new “reintegration unit” for people in restricted housing, which had additional programming. Texas reported on programs allowing administratively segregated prisoners to “participate in group recreation and group treatment.”

Several jurisdictions mentioned using “security desks” or “security chairs,” which physically restrain prisoners to enable them to sit together in small groups and share in programs or activities. For example, South Dakota described its step-down program as incorporating “out-of-cell group programming.” Some jurisdictions, including South Dakota, related installing security desks to permit small group activities. Washington reported that security chairs installed in its Intensive Management Unit classrooms enabled “up to eight offenders at a time [to] interact with other offenders and staff facilitators while participating in programming.” Nebraska planned to install such chairs to allow some segregated prisoners to have congregate programming.

E. Staffing: Policies and Training

As the *Time-In-Cell* Report detailed, the staffing of restricted housing units poses challenges for both institutions and individual correctional officers.²⁴⁴ In the 2015 survey, we returned to these issues to learn about policy changes focused on staff, and several jurisdictions described focusing on these issues. For example, New Jersey reported that it had established a special training module for restricted housing staff. Pennsylvania stated that it had added training for employees who work with seriously mentally ill prisoners and for employees who staff restricted housing units. Utah said that it had completed a new policy to direct particular training for officers working in restricted housing facilities. The District of Columbia reported that it did not permit officers with less than 18 months of experience to work in these special units.

Wisconsin stated that it rotated staff out of restricted housing units every 14 weeks and that restricted housing staff received special training in subjects including suicide prevention and professional communication.

F. Jurisdictions Seeking Substantial Reductions in Restricted Housing Use

We asked all jurisdictions to provide additional information on efforts to reform restricted housing. Below, we provide brief descriptions of changes, drawn from reports provided by the Department of Justice (DOJ) and from five states—Colorado, North Dakota, Ohio, South Carolina, and Utah—all of which describe themselves as seeking to achieve major shifts in the use of restricted housing.

1. The Federal Prison System: Changes Recommended in the 2016 Department of Justice Restricted Housing Report

As noted at the outset, the Justice Department issued a report in January of 2016 that included numerous specific recommendations for changes in how the federal government handles restricted housing.²⁴⁵ That month, the President discussed the findings of the report and the harms of “solitary confinement,” and called for the practice to be “limited, applied with constraints and used only as a measure of last resort.”²⁴⁶ In March of 2016, the President issued a Presidential Memorandum, “Limiting the Use of Restrictive Housing by the Federal Government,”²⁴⁷ that directed prompt implementation of the DOJ’s recommendations by the Justice Department, which was required to rewrite many of its policies. Below we summarize some of the major changes recommended by the DOJ report.²⁴⁸

The DOJ organized its mandates under certain “Guiding Principles” followed by “Policy Recommendations.”²⁴⁹ Central changes included limiting the placement of juveniles, pregnant women, and seriously mentally ill individuals in restricted housing, absent exigent circumstances, and banning the use of restricted housing for lesbian, gay, bisexual, transgender, intersex, and gender nonconforming individuals, where such placement is based solely on sexual or gender identity. The Justice Department also mandated the use of the least restrictive alternative, revised the in-prison infractions that could result in placement in restricted housing, and lowered the numbers of days individuals could spend in restricted housing. Thus, the DOJ called for the BOP to end the practice of placing juveniles (defined as “those adjudicated as juveniles, and those under age 18 who were convicted and sentenced as adults”) in restricted housing, except as a “temporary response to a behavioral issue that poses a serious and immediate risk to any individual.”²⁵⁰

A change with a wider application was the goal that all prisoners be housed “in the least restrictive setting necessary” to ensure their safety and that of others.²⁵¹ The DOJ stated that correctional systems “should always be able to clearly articulate the specific reason(s)” for placement in restricted housing, that these reasons should be supported by “objective evidence,” and that prisoners should remain in restricted housing “no longer than necessary to address the specific reason(s) for placement.”²⁵² The DOJ also called for initial and ongoing reviews of any placement in restricted housing and recommended that, for every prisoner, correctional staff develop “a clear plan for returning the inmate to less restrictive conditions as promptly as possible.”²⁵³ Further, to divert individuals placed in protective custody, the DOJ recommended

that the Bureau of Prisons expand its use of “Reintegration Housing Units,” which allow certain prisoners to be removed from the general population but continue to live in conditions less restrictive than solitary confinement.²⁵⁴

The DOJ recommended that prisoners not be sent to restricted housing as sanctions for certain kinds of misbehaviors, organized in the federal system by “levels.” Thus, a low level offense would no longer result in a sanction of disciplinary segregation, and a moderate level offense would not result in a sanction of disciplinary segregation for a first violation or more than 15 days of segregation for a subsequent violation. Previously, moderate offenses could have resulted in 90 days for the first violation or 180 days for a subsequent violation.²⁵⁵

The DOJ also called for significant reductions to the time prisoners could be held in restricted housing for disciplinary infractions. For example, the DOJ urged that the maximum time a prisoner be placed in disciplinary segregation for the most serious category of offense be reduced from 365 days for a first offense and 545 days for a subsequent offense to 60 days for a first offense and 90 days for a subsequent offense.²⁵⁶

The DOJ also urged that, whenever possible, the BOP seek “to avoid releasing inmates directly from restrictive housing back to the community.”²⁵⁷ To implement this goal, the DOJ recommended revising policies to discourage placing prisoners in restricted housing near the end of their prison terms and to consider releasing prisoners from segregation beginning 180 days before the end of their sentences, if that movement could be done safely.²⁵⁸

Like some other jurisdictions, the DOJ recommended changes that would increase total time out-of-cell for individuals in restricted housing. According to the DOJ’s recommendations, wardens should be directed to “develop individualized plans for maximizing out-of-cell time for restrictive housing inmates.”²⁵⁹ The DOJ also reported that the BOP was revising its rules governing the use of “secure programming chairs” and “intends to purchase 610 of these chairs” to allow “in-person educational and mental health programming in a less restrictive manner than currently used.”²⁶⁰

For mentally ill prisoners, the DOJ recommended additional investment to hire mental health staff and expand diversion programs. Under these recommendations, the BOP would create “108 additional psychology positions,” which would allow the BOP to “dedicate at least one staff psychologist to each” restricted housing unit.²⁶¹ The DOJ also recommended expanded use of “secure mental health units” to divert seriously mentally ill prisoners from solitary confinement into “less restrictive housing.”²⁶² To this end, the DOJ recommended that the BOP “expand its network of residential mental health treatment programs” with the goal of “building sufficient capacity to divert inmates with [serious mental illness] from all forms of restrictive housing . . . whenever it is clinically appropriate and feasible to do so.”²⁶³

The DOJ recommended some measures to increase oversight of the use of restricted housing, including initial and ongoing reviews of a prisoner’s placement in restricted housing by “a multi-disciplinary staff committee” which would include institutional leadership and medical and mental health professionals.²⁶⁴ The DOJ also recommended that the BOP publish monthly system-wide restricted housing data on its external website (to allow the public to track the

number of prisoners in federal restricted housing) and upgrade its data-collection software.²⁶⁵ (As noted in the introductory materials, in the fall of 2016, several senators introduced a Solitary Confinement Reform Act which, if enacted, would have requirements additional to those outlined above.

2. Colorado

According to an article by Rick Raemisch, Director of the Colorado Department of Corrections (CDOC) and Kellie Wasko, Deputy Director of the CDOC, efforts to reduce the use of profound isolation were initiated in Colorado by Tom Clements, who served as the Executive Director of the CDOC from 2011 until 2013. Director Clements was murdered by a person who was released into the community directly from a CDOC restricted housing unit. In 2011, about 1,500 people (7% of the state's prison population) were in restricted housing. Under Director Clements, the population was reduced to 700 people.²⁶⁶ At that time, 49% of those released went directly to the outside community.

When Rick Raemisch, who had previously served as the Director of Corrections in Wisconsin, assumed the leadership of Colorado's correction system in 2013, he sought to continue to limit the use of isolation. Raemisch and Wasko reported that, as of the spring of 2016, policy changes had produced a 67% reduction in CDOC's restricted housing population. As the data in Section IV indicated, in the fall of 2015, Colorado recorded 217 people, or 1.2% of its population, in restricted housing.

CDOC reported that it used what it termed a "progressive Management (Step down) Process," to provide prisoners with social contact within a highly structured and controlled close custody environment.²⁶⁷ New units—the Close Custody Management Control Unit (MCU) and Close Custody Transition Unit (CCTU)—were "designed specifically to assist offenders with pro-social stabilization and cognitive intervention programming" before these individuals could enter the general population.²⁶⁸ The CDOC system required that prisoners in these two units have Behavior Modification Plans, designed, implemented, and monitored by a multidisciplinary team.²⁶⁹

CDOC stated that individuals assigned to the MCU were allowed out of their cells for a minimum of four hours per day, seven days per week and that prisoners could be in groups along with several other prisoners when out-of-cell.²⁷⁰ MCU prisoners could participate in recreational, social, and programming activities, including a minimum of three hours of indoor or outdoor recreation each week. Every 30 days, CDOC reviewed the mental health and management plans for such individuals.²⁷¹ According to Raemisch and Wasko, CCTU prisoners were permitted outside their cells six hours per day, seven days per week, in a group of 16 or fewer prisoners.²⁷² CCTU prisoners were required to participate in the program "Thinking for a Change," described as aiming to increase awareness of and alter criminal thought processes, promote positive peer interactions, and improve problem-solving skills.²⁷³

Raemisch and Wasko described the most restrictive offender management status—Maximum Security Status (MSS)—as reserved for prisoners who had "demonstrated through their behavior that they pose a significant risk to the safety of staff and other offenders."²⁷⁴ The length of time spent in the Maximum Security unit was reported not to exceed 12 months.²⁷⁵

Those prisoners were permitted one hour a day, five days a week out of their cells and monthly out-of-cell “meaningful contact” visits with case managers and mental health clinicians.²⁷⁶

Further, CDOC described installing restraint tables (which, as noted, some jurisdictions describe as “security chairs”) to facilitate group programming in the Maximum Security Units.²⁷⁷ After three months of good behavior, CDOC stated that Maximum Security prisoners could earn a television in their cell.²⁷⁸ In the fall of 2015, CDOC reported three women in restricted housing. In its spring 2016 report, CDOC stated that it has adopted policies prohibiting the placement of female or youthful offenders into Maximum Security Restrictive Housing status.²⁷⁹

The question of the treatment of the mentally ill has drawn attention from the state legislature as well as from CDOC, which helped to shape legislation reducing isolation for mentally ill offenders. In June 2014, Governor John Hickenlooper signed Senate Bill 14-064,²⁸⁰ which prohibits the placement of seriously mentally ill prisoners (SMI) in “long-term isolated confinement except when exigent circumstances are present.”²⁸¹ Before this legislation was enacted, CDOC reported that in 2014 all prisoners with SMI had been evaluated and “moved out of administrative segregation to either a Residential Treatment Program or a general population setting.”²⁸² SMI prisoners in the residential treatment units were, according to Colorado, permitted to leave their cells for 10 hours of structured therapeutic interventions and 10 hours of non-structured recreational programming each week.²⁸³ Again, CDOC said it relied on restraint tables, which accommodate up to four prisoners, for group interactions with therapists and clinicians.²⁸⁴

CDOC described using screenings of prisoners upon entry to prison in order to identify individuals with serious mental illness.²⁸⁵ Further, if prisoners violated prison rules, assessing committees were charged with determining whether mental illness contributed to the person’s committing a violation; if so, the person was to be assigned to a Residential Treatment Program that entailed significant restrictions on time out-of-cell but was not the same kind of management control unit to which non-mentally ill violators were assigned.

Like other departments, CDOC reported that some individuals who had been in profound isolation had difficulty leaving it.²⁸⁶ CDOC described its Divisions of Clinical Services and Prison Operations staff as developing programs to encourage individuals to leave their cells; initiatives including having dogs in treatment groups, constructing de-escalation rooms with soothing music, and art therapy classes.²⁸⁷

CDOC characterized these policy changes as successful, reporting that the two facilities with Residential Treatment Programs have experienced significant declines in forced cell entries and in prisoner-on-staff assaults.²⁸⁸ CDOC explained that its senior executives provided weekly messages to the entire department to describe ongoing reforms, explain their rationale, and invite feedback. Further, Raemisch and Wasko described giving management teams at the facility level the autonomy to determine what methods to use to engage staff in and gain their commitment to change.²⁸⁹ CDOC also reported that there were no suicides in restricted housing in 2015.²⁹⁰ The average length of time spent in restricted housing by CDOC prisoners was approximately 7.5 months.²⁹¹

3. North Dakota

Reports of reforms in the North Dakota Department of Correction and Rehabilitation (ND-DOCR) come from its director, Leann Bertsch, whose essay, *The History of Restricted Housing at the ND-DOCR*, details the evolution of using segregation from the era of “dark cells” where no light could reach prisoners to modern-day segregation.²⁹² She described the expanding use of segregation despite the absence of any “apparent correlation between institutional violence, escapes, weapons, or riots that would account for” that increase.²⁹³ Thus, North Dakota has identified segregation as a *problem* to be solved and outlined how the Department aimed to reduce dramatically its reliance on isolation.²⁹⁴ In a March 2016 discussion of “strategic planning” to reduce segregation, the Department listed what segregation “can’t do,” (improve institutional behavior, reduce violence or recidivism) and what segregation had been “proven to do” (increase violence, aggression, self-harm, psychosis, and other physical and mental health harms in men who have spent time there).²⁹⁵

Thus, the aim was to use the least “restrictive housing level,”²⁹⁶ and the new “goal of segregation” was “to separate, assess, and equip people to function at a reduced risk to themselves, the institution, and others.”²⁹⁷ ND-DOCR’s strategy was to “divert people from segregation and strictly limit the types of behaviors that can result in segregation.”²⁹⁸

At the front end, ND-DOCR reported that it had limited the behaviors that could result in placement²⁹⁹ and had encouraged alternative interventions, such as increasing monitoring in general population or restricting prisoners within their general population cells, so as to use segregation as a last resort.³⁰⁰

The ND-DOCR also implemented reforms to reduce the population in their restricted housing units. Leadership identified over 30 people in the Administrative Segregation Unit who no longer required restricted housing, and moved them into a new Administrative Transition Unit (ATU) to prepare them for the transition to general population.³⁰¹ People housed in the new ATU were permitted more opportunities for social interaction and special programming to help them prepare for the return to general population.³⁰² The Special Assistance Unit (SAU), the housing unit for people with mental illness, also expanded opportunities for socialization by allowing its residents to engage in group treatment and to spend days visiting the general population floor.³⁰³ The SAU also created a new transition floor, with supportive services, to help improve reentry outcomes for this population.³⁰⁴

In addition, through a psychological assessment process, the ND-DOCR identified the “most acutely impulsive and dangerous people” in their restricted housing units.³⁰⁵ These people were assigned behavior management plans to help them develop the skills and behaviors needed to transition out of restricted housing. For those remaining in restricted housing, these plans “have increased the amount of interaction, out-of-cell time, enrichment, and reinforcement” All new admissions to Administrative Segregation are assessed immediately by a multi-disciplinary team and provided with a personalized behavior management plan that indicates what progress is necessary to begin the transition out of restricted housing.³⁰⁶

Like Colorado, North Dakota indicated that it sought to engage correctional officers in all stages of program development, which included surveying staff to identify perceived problems,

educating correctional officers about the psychological and physical harms of solitary confinement, and stressing rehabilitation as a means of achieving security within facilities.³⁰⁷

Since implementing these reforms, North Dakota's DOCR reported that it has reduced its segregated population from 82 prisoners in April 2015 to 27 in April 2016.³⁰⁸ Director Bertsch highlighted staff support³⁰⁹ and prisoner reports of more positive exchanges with staff.³¹⁰ North Dakota also reported a reduction in the use of force³¹¹ and no increase in incidents of violence since shifting its approach.³¹²

4. Ohio

In the fall of 2015, ODRC described a “[m]ajor overhaul of the entire system as part of a comprehensive reform.” In a May 2016 Executive Briefing by staff to Director Gary Mohr, the ODRC outlined reforms at three facilities—the Grafton Correctional Institution (GCI), the Belmont Correctional Institution, and the Ohio State Penitentiary.³¹³ Those efforts were part of making “a substantive change to our entire disciplinary process and the types/kinds of sanctions we use to address inmate misbehavior.”³¹⁴

According to the Department, the GCI has converted half of its Special Management Unit (SMU) cells into Limited Privilege Unit (LPU) cells, for use by prisoners who are deemed not to pose “a significant threat to the safety and security of the facility.”³¹⁵ These prisoners are given “more out-of-cell time, access to telephones and email, as well as additional recreational time activities.”³¹⁶ Most significantly, prisoners on LPU were offered the opportunity to gain early release from restricted housing by participating in pro-social structured and unstructured activities.³¹⁷ The Department reported that these activities included programming on problem-solving, community service, recovery, anger management, and mental and physical wellness. The Department enabled LPU prisoners to attend these programs in general population classrooms and to leave the unit for mental health and medical appointments.³¹⁸

Ohio reported that, at its Belmont Correctional Institution (BeCI), it launched a pilot program on “alternative disciplinary sanctions” adapted from the HOPE Model (Hawaii Opportunity Probation with Enforcement).³¹⁹ The premise of the model, which Ohio adapted to fit the corrections environment, is that violations should result in sanctions that are prompt, proportionate to the severity of the offense, and take into consideration the individual behavioral history of the prisoner.³²⁰

In addition to adopting the HOPE Model, BeCI introduced other reforms intended to reduce the population in restricted housing, including new pro-social programming, congregate activities, and targeted case planning.³²¹ BeCI also introduced new programming to address the specific needs of prisoners with mental illness, including group psychotherapy, medication education, and programs promoting adjustment.³²²

BeCI also introduced alternative sanctions to reduce reliance on restricted housing, such as imposing bunk restrictions, commissary restrictions, and personal electronics restrictions.³²³ Like North Dakota, Ohio's BeCI has reassessed its response to certain offenses that previously would have led to placement in restricted housing.³²⁴ Instead of placing “Rule 39” violators in restricted housing—that is, prisoners who use or possess drugs and alcohol—BeCI has created

special “Rule 39 Unit” dormitories.³²⁵ No individual is placed in restricted housing until a third positive drug test.³²⁶ Ohio also explained that, while at first it put all prisoners who tested positive for substance use in the same unit, concerns emerged that placing casual users with addicts encouraged drug use. As a result, BeCI redesigned the unit to create two different tracks: a disciplinary track for more addicted users, and a programming track for casual users.³²⁷

The Department described efforts at Ohio State Penitentiary (OSP) to alter criteria for releasing prisoners from restricted housing. OSP houses the system’s most dangerous prisoners, and as of April 1, 2016, there were 335 prisoners in this facility housed in extended restricted housing.³²⁸ Ohio reported that in the fall of 2015, it instituted a new policy, under which each prisoner’s security level is presumptively reduced within a set time period, with the exception of prisoners who committed “very serious” offenses such as “murdering another inmate” or “taking a staff member hostage.”³²⁹ Absent such circumstances, however, Ohio reported that each prisoner is given an individually-tailored Behavior Management Plan (BMP) that specifies the maximum time that the prisoner will spend in each restricted housing status.³³⁰ Each status brings increased privileges and prisoners can accelerate their progress through the levels by demonstrating pro-social behaviors and participating in programs.³³¹

For those prisoners who were ineligible for presumptive reduction, the Department reported that OSP had “developed a separate management strategy based on good conduct, increased quality of life, and social interaction.”³³² For these prisoners, Ohio reported increasing out-of-cell time by 30 minutes, five days a week; increasing telephone access from 30 minutes a month to two hours per month; and increasing the number of permitted visits from two to three per month.³³³ In addition, OSP reported that it offered prisoners the ability to have a tablet in-cell and to email and download games through a kiosk in the unit; the ability to purchase a keyboard for in-cell and congregate programming; and the opportunity to participate in a monthly incentive program to earn more privileges.³³⁴ Ohio reported that these prisoners are evaluated annually for release, with consideration given to recent behavior and programmatic involvement.³³⁵

Ohio also reported efforts to update its data collection system to monitor its prisoners’ placements. As of May 2016, Ohio was seeking weekly updates from its facilities on prisoners in restricted housing.³³⁶ Ohio reported that it had reduced the use of restricted housing and that violence had likewise fallen. Belmont Correctional Institution described a 90% reduction in the use of restricted housing since 2010, coupled with a 25% reduction in the violence rate since 2014.³³⁷ Ohio’s leadership reported that “there is cause to believe that these reforms have made [their] prison[s] safer.”³³⁸

5. *South Carolina*

South Carolina provided policies on entry into, activities in, and oversight of restricted housing.³³⁹ To reduce the use of restricted housing, South Carolina’s Department of Corrections (SCDC) adopted a Step-Down Program (SDP) “to create a pathway for offenders to ‘step down’ from the Restricted Housing Unit (RHU) to general population in a manner that maintains public, staff, and offender safety, while also reducing their criminogenic risk factors.”³⁴⁰

Director Bryan Stirling provided materials tracking the number of prisoners in Restricted Housing from 2012 to March of 2016. The total “lockup” numbers in 2012 were 1,691 (including 1,251 individuals described as non-mentally ill and 420 people termed “mentally ill”). In March of 2016, the total number was 755, of which 266 were “mentally ill.”³⁴¹

SCDC launched its Step-Down initiative at McCormick Correctional Institution in June 2015 and, by March of 2016, reported that the program had expanded to 17 of the state prison system’s 26 facilities.³⁴² SCDC explained that prisoners accepted into the Step-Down program are divided into two categories: Intensive Management (IM) and Restrictive Management (RM). IM prisoners were those with “the potential for extreme and deadly violence that have been a threat to the physical safety of other inmates or staff at one time.”³⁴³ RM prisoners, by contrast, were individuals who were “continually” placed in restricted housing due to “poor adjustment in general population” but who “do not pose a deadly threat to staff or inmates.”³⁴⁴

SCDC reported that prisoners in the IM program had to complete a minimum yearlong, three-phase program before rejoining the general population.³⁴⁵ The program’s timeframe could be extended if the individual had “disciplinary infractions or poor adjustment.”³⁴⁶ Like most step-down programs, prisoners received incremental privileges as they progressed. In the most restrictive Phase I, prisoners were granted certain privileges, referred to as “Phase I incentives,” which include out-of-cell time each day from 8:00 a.m. until 4:00 p.m.; lunch in the cafeteria (breakfast and dinner were provided in-cell); and recreation time in the gym twice a week.³⁴⁷

Phase I was designed to span at least three months, during which time prisoners were required to participate in programming.³⁴⁸ To advance to Phase II, prisoners could not be involved in assaultive behavior during the time they were in Phase I.³⁴⁹ In Phase II, incentives included out-of-cell time from 8:00 a.m. to 6:00 p.m.; lunch and dinner in the cafeteria; and the ability to have one visit per month even if on visitation restriction.³⁵⁰ To advance from Phase II, prisoners were required to meet all Phase I requirements, complete an additional 90 days of programming, demonstrate “openness to constructive feedback” and “[d]emonstrate management and control of impulsive behavior.”³⁵¹ Prisoners who successfully completed Phase II could move to Phase III. In Phase III, incentives included out-of-cell time from 5:30 a.m. to 8 p.m.; job assignments outside of their dorm; all meals in the cafeteria; and two visits per month, if on visitation restriction.³⁵² After six months in Phase III, prisoners were to be considered for placement in general population.³⁵³

As South Carolina staff also explained, the Phase I incentives were automatic when a prisoner entered the program; if a prisoner misbehaved repeatedly, that prisoner would be required to repeat the first phase or be returned to restricted housing, and thereafter, be able to start the step-down program again.

SCDC explained that the RM program was similar to the IM program, but ran for six months rather than a year.³⁵⁴ RM prisoners had more incentives earlier, more recreation time each week, more visitation opportunities, and more out-of-cell opportunities.³⁵⁵ For example, in Phase I, incentives in the RM program included schooling for prisoners who did not have their high school diploma, three visits per month, and job assignments.³⁵⁶

SCDC's Step-Down Program also included educational programming. If accepted to the SDP, prisoners were to be screened for completion of a GED or high school diploma. Prisoners who had not obtained either were enrolled in education courses beginning in Phase III (IM) or Phase II (RM).³⁵⁷ If prisoners had not completed educational requirements by the end of the SDP, they continued their education upon return to general population.³⁵⁸

SCDC described its Step-Down Program as including a wide array of classes, such as art and music, philosophy, creative writing, foreign languages, and some other life-skills programs, as well as anger management, managing anxiety and depression, and budgeting for individuals and families.³⁵⁹ Upon graduation from the Step-Down Program, prisoners had restrictions on canteen, telephone, and visitation privileges lifted.³⁶⁰ Further, prisoners were given the option of transferring to other programs within SCDC or remaining to become a facilitator for incoming prisoners in the Step-Down Program.³⁶¹

In terms of program administration, decisions on prisoner movement through the steps were made by the SDP Review Team, which consisted of a Warden or his/her designee, the SDP unit manager, the SDP caseworker, and a mental health counselor.³⁶² SCDC reported that for prisoners who did not advance, the team informed them of what was required to do so.³⁶³

Further, if any prisoner was found to have committed a serious, major disciplinary infraction or refused to participate in any part of the program, that prisoner could be returned to the previous phase, as decided by the SDP Review Team. Consideration was given to time spent in restricted housing, the reason the prisoner was originally placed in restricted housing, the prisoner's mental health status, his/her risk level, his/her willingness to participate in the program, and the safety and security of staff and other prisoners.³⁶⁴

Issues of mental illness have been a part of the concerns of the SCDC, which on January 12, 2015, entered into a settlement with Protection and Advocacy for People with Disabilities, Inc., and agreed to improve conditions for mentally ill prisoners incarcerated at the SCDC.³⁶⁵ In 2015, the Department agreed to seek \$8.6 million in funding for three years to increase the number of mental health personnel and to improve facilities. Some planned facility improvements included adding a recreation yard to the Behavioral Management Unit, cordoning off a Crisis Intervention Unit for prisoners arriving with or developing a condition that warrants an immediate response, and adding cameras in cells for monitoring/surveillance.³⁶⁶ The Department was also developing a program for screening and evaluating prisoners to identify those in need of mental health care, as well as a training curriculum that included crisis-intervention training for staff.³⁶⁷

The Step-Down Program operated in the context of the SCDC policies governing restricted housing. For example, prisoners classified as "Level 1" Substantiated Security Risk (SSR), who were permitted to exercise outside of cells five days a week, one hour per day,³⁶⁸ were to be "restrained according to their status; and "strip-searched prior to being removed from their cell and at the conclusion of exercise," for most levels.³⁶⁹ SCDC policy also encourages an "in-cell exercise program"—providing directions on forms of exercise inside cells and to be distributed to prisoners in any form of restricted housing.

6. Utah

Utah revised its rationale for restricted housing in 2016, according to the Director of the Division of Institutional Operations, Jerry Pope, who was charged by Executive Director Rollin Cook to oversee changes but, prior to the adoption of its 2016 policy, Director Pope described, restricted housing was a way to warehouse people whom the prison viewed as problems. In contrast, Utah has changed that approach to limit the reasons for placement in restricted housing and to develop a program for those placed in restricted housing to move back to the general population as soon as possible. As Director Pope explained, this new approach was “the right thing to do,” especially because most people in restricted housing would eventually be released back into the community.³⁷⁰

The 2016 policy, promulgated in January,³⁷¹ was finalized after consultation with the American Civil Liberties Union of Utah (ACLU), the Disability Law Center of Utah, and Utah Prisoners Advocate Network.³⁷² The 2016 policy statement explained that its purpose was to provide the “procedure, rationale and guidelines for the management and operation of Restricted Housing,” which was that “when circumstances make it necessary to place an inmate in Restricted Housing that a structured, progressive program be available that creates an opportunity for an inmate to progress out of Restricted Housing to general population within 12 months.”³⁷³

The policy’s “Vision Statement” described a commitment to “becoming industry leaders in restricted housing management” that fostered “positive change.”³⁷⁴ The “Mission Statement” explained that the “team will provide inmates with opportunities for education, mental health, programming, recreation, religious services, and visiting in a safe, secure, and cost-effective environment,” that encouraged “transition to less restrictive housing through a structured and progressive program.”³⁷⁵ Director Pope reported that staff posted the Mission Statement and Vision Statement on placards in each unit in order to raise and maintain awareness about changes to restricted housing.³⁷⁶

Central to the new policy was an individualized review of decisions to move people in and out of restricted housing. This review also narrowed the criteria for placement in restricted housing. To do so, the 2016 policy created an “Objective Review Panel” to conduct an initial review of each individual placed in restricted housing.³⁷⁷ Thereafter, a multi-disciplinary team (the Placement/Advancement Review Board) was to have a weekly review of each person placed in restricted housing to determine whether he or she met—and continued to meet—specified criteria for restricted housing.³⁷⁸

The Placement/Advancement Review Board was initially planned to include several correctional officials, including the Division Director, the Director of Inmate Placement Programs, wardens, deputy wardens, and captains from the Central Utah Correctional Facility and Utah State Prison, as well as a “qualified health professional,” a representative of the ACLU, and a representative of the Utah Disability Law Center.³⁷⁹ Thereafter, the staff determined that confidentiality concerns precluded the outside organizations from having relevant information, and decided instead to conduct an “annual policy review” with those organizations.³⁸⁰

The criteria for placement were revised to provide that the bases for placement in restricted housing included, but were not limited to, “Security Threat Group activity,” “riot,” “serious safety concerns,” and “involvement in a serious threat to life, property, staff or to the orderly operation of a unit or facility.”³⁸¹ The policy provided that if the Placement/Advancement Review Board deemed that an individual was inappropriately housed in restricted housing, the individual “shall be referred to his/her respective Offender Management Review for reassessment and proper housing.”³⁸²

Further, under the 2016 policy, individuals placed in restricted housing were to have a mental health assessment within 72 hours, and receive a review by the Placement/Advancement Review Board within 10 days.³⁸³ Further, if a prisoner was found to have a serious mental illness, that person “shall be moved to a mental health treatment unit.”³⁸⁴

As Director Pope reported to us, Utah’s first step was to complete an evaluation of every prisoner in restricted housing. After that review, the Department concluded that many individuals should be moved out or, for those with serious mental health needs, transferred to a mental health unit. As of the fall of 2016, implementation was underway to provide for what has come to be known as “ten and ten” in the mental health unit—10 hours of time out-of-cell for mental health treatment and an additional 10 hours out-of-cell per week for other activities.

In addition to reviewing why a person was initially placed in restricted housing, Utah’s 2016 policy provided means, through its “Step-Up Tier Program,” for people to leave restricted housing. As its title reflected, the policy was designed to return people to general population within one year; it also allowed for an earlier return if an individual successfully completed the steps earlier.³⁸⁵

Under this policy, a prisoner in restricted housing was to begin at Tier 1, with a “minimum of 5 hours out-of-cell each week,” as well as “in-cell programming, in-cell education, volunteer work, . . . [and] individual mental health counseling.”³⁸⁶ Further, prisoners “on Tier 1 with little or no contact with other individuals” were to be “monitored daily by medical staff and at least once a week by mental health staff.”³⁸⁷

After 45 days, a prisoner so confined could, after a review, be advanced to Tier 2, where he or she would become eligible for two-cell recreation at 5-10 hours per week, as well as work opportunities, “group education,” and “group programming.”³⁸⁸ After another review at 120 days, a prisoner could advance to Tier 3, in which “quad cell recreation” is permitted out-of-cell for 10 to 14 hours per week.³⁸⁹ Security desks were installed for education and group therapy, and recreation center enclosures were also added to allow more time out-of-cell.³⁹⁰ The policy permitted visiting and phone privileges based on a reward system, and provided that all visits be conducted through a barrier.³⁹¹ After another 150 days, another review could make a prisoner eligible for a return to the general population.³⁹²

The 2016 policy also included a provision that prioritized staff working in Restricted Housing units for “Crisis Intervention Training.”³⁹³ Utah reported that all custody staff received two hours of in-service training on restricted housing.³⁹⁴ In addition, Utah revised its data collection system to track information on restricted housing. Those changes were underway as of

this writing. The state's Research and Planning Bureau was identifying metrics based on the guiding principles of the new restricted housing policy in order to generate quarterly reports that would help determine the effectiveness of the restricted housing program and provide bases for modifying the program as well.³⁹⁵

Utah further explained that, had it answered the 2015 survey with data from the summer of 2016, its numbers would have been different. Rather than 14% of its population in restricted housing, 6% were in-cell for 22 hours or more (380 out of 6,112, of whom seven (1.6%) were women). Further, 268 people were in-cell for 20-21 hours, resulting in a total of 648 or 10.6% of the population confined in those settings.³⁹⁶ In addition, Utah had detailed information on the demographics of the populations.³⁹⁷ In short, as a result of these substantive policy changes, the number of prisoners in restricted housing dropped from 912 in the fall of 2015 to 380 in August, 2016, with another 268 prisoners in-cell for 20-21 hours.

VIII. Reflecting on Efforts to Reduce Time-In-Cell

In the course of conducting this research and writing this Report, correctional administrators repeatedly contacted us to discuss their efforts to reduce the numbers of persons confined in restricted housing. In addition, many Directors stressed the efforts to shift from the 22 or more hours in-cell model to forms of restrictions that provided more time out-of-cell. Indeed, as this Report was circulated in draft, system administrators sought us out to explain how the numbers detailed were out of date, for they had succeeded in reducing restricted housing prison populations from the levels described here.

These efforts reflect the profound shift that has occurred in the last few years, since ASCA and Liman began this series of research projects. While once restricted housing was seen as central to prison management, by 2016 many prison directors and organizations such as the ACA and ASCA had defined restricted housing as a practice to use as little as possible for as short a duration as possible. Moreover, the large numbers of people in restricted housing are enduring conditions that are harmful not only to them, but also to staff and the communities to which prisoners will return. Indeed, some prison administrators are “abolitionists,” in the sense that they would—if they could—end solitary confinement and find methods to ensure that no person remain for more than 15 days in 22-in-cell hours continuously.

Yet, as the data in this Report reflect, unraveling the practices of isolation requires sustained work. This Report identified 67,442 prisoners in restricted housing and that number, as noted at the outset, excludes most jails in the United States. Some 5,909 prisoners in 32 jurisdictions have been kept in-cell for 22 hours a day or more for three years or more. Yet the Nelson Mandela Rules—formulated with input from U.S. correctional officials—call more than 15 days a form of prolonged isolation that should be understood as degrading and inhumane treatment.

Moreover, a question emerges about why 22 hours or more should be definitional of isolation. The question is whether a move to 21 (rather than 22) hours in-cell responds to alleviate the harms of isolation. Equally important is the length of time a person is subjected to isolating conditions, and how to assess the number of hours in-cell within the context of the

length of time confined in that manner. How many hours in continual confinement in a cell for how many days should be seen as impermissible? Moreover, prisoners may be held in their cells for days (if not 15 consecutive days) for 22 hours or more. Further, in many systems, the small amount of time out-of-cell that is permitted is spent in enclosed cubicles, sometimes without any natural light.

In short, neither a shift to 21 hours nor time out-of-cell in very tight spaces responds to the goals—expressed by ASCA, the ACA, among many others—of changing the conditions of confinement in significant ways. Thus, at its core, the issue is whether—as the proposed 2016 Senate solitary confinement reform legislation reflects—the isolation denoted by solitary confinement should be ended. Doing so would reflect that the *separation* of individuals to promote safety and well-being need not be accompanied by *deprivation* of all opportunities for social contact, education, programming, and other activities.

We return as we began—to the larger context. From the inception of this joint work by ASCA and Liman, we have always understood that isolation ought not itself be understood “in isolation.” Restricted housing practices are on a continuum with the placement of prisons in rural settings, far from the homes of many of the prisoners and imposing difficulties in having both able staff and volunteers, as well as regular visits by family members.

As the nation revisits its decades of over-incarceration, it must address restricted housing in the context of prison policies and criminal justice practices in general. This Report makes plain that correctional leaders in many jurisdictions are reconsidering their own systems, and joining with prisoners, their families, advocates, and members of all branches of government, the academy, and many others—who are seeking to achieve lasting changes in the use of incarceration itself.

¹¹ The ASCA-Liman Report relied on answers from those who run prisons. In the fall of 2015, the Bureau of Justice Statistics (BJS) released a survey drawn from another source—prisoners. See Allen J. Beck, *Use of Restrictive Housing in U.S. Prisons and Jails, 2011-12*, BUREAU OF JUSTICE STATISTICS (Oct. 2015), <http://www.bjs.gov/content/pub/pdf/urhuspj1112.pdf> [hereinafter Beck, *Use of Restrictive Housing*]. Based on responses during 2011-2012 from 91,177 prisoners in 233 state and federal prisons and in 357 jails, BJS found that almost 20% of those prisoners and detainees had been held in restricted housing within the prior year. The individuals more likely to have been placed in restricted housing were younger, lesbian, gay, bisexual, or mentally ill, and without a high school diploma. The BJS study found that expansive use of restricted housing correlated with institutional disorder, such as gang activity and fighting, rather than with calmer environments. *Id.* at 1.

¹⁶ The four jurisdictions whose reports were limited in many areas were Arkansas, Nevada, Rhode Island, and West Virginia. Additional details are provided *infra* note 165.

¹⁷ Unless otherwise indicated, data about jurisdictions came from jurisdictions' responses to the initial ASCA-Liman survey and follow-up questions. The initial report was circulated in the fall of 2015. States responded and provided follow-up information through the summer of 2016. All data reflects the prison population as of October 1, 2015 unless otherwise noted.

¹⁸ See *infra* Section IV.A.

¹⁹ *Id.*

²⁰ See *infra* Section IV.B.

²¹ *Id.*

²² A few jurisdictions did provide information on jail facilities. For example, the information from the District of Columbia exclusively concerns the municipal facility that it operated. As noted, Louisiana asked for inclusion of parish jail population numbers on some measures. *See infra* Section IV.A.

²³ Sallie Clark, *Five Voices on Reforming the Front End of Justice: Where the Buck—\$93 Billion a Year—Stops*, MARSHALL PROJECT (July 18, 2016), https://www.themarshallproject.org/2016/07/17/five-voices-on-reforming-the-front-end-of-justice?utm_medium=email&utm_campaign=newsletter&utm_source=opening-statement&utm_term=newsletter-20160717-542#.LaAES0RVz. Clark wrote in her capacity as President of the National Association of Counties.

Jails also have restricted housing; the 2015 report by the Bureau of Justice Statistics, relying on surveys from more than 90,000 prisoners in 233 state and federal prisons and 357 jails, found that almost 20% of the respondents described being held in restricted housing within the year before the survey. *See Beck, Use of Restrictive Housing, supra* note 11, at 1.

⁵¹ *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0034; *id.*, ACA Restrictive Housing Standards 2016, 4-ALDF-RH-025.

⁵² *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0031; *id.*, ACA Restrictive Housing Standards 2016, 4-ALDF-RH-028. Extended Restrictive Housing was defined as “[h]ousing that separates the offender from contact with general population while restricting an offender/inmate to his/her cell for at least 22 hours per day and for more than 30 days for the safe and secure operation of the facility.” *Id.* at 3. Serious Mental Illness was defined as “Psychotic Disorders, Bipolar Disorders, and Major Depressive Disorder; any diagnosed mental disorder (excluding substance use disorders) currently associated with serious impairment in psychological, cognitive, or behavioral functioning that substantially interferes with the person’s ability to meet the ordinary demands of living and requires an individualized treatment plan by a qualified mental health professional(s)” *Id.* Additional discussion of the 2016 ACA Restrictive Housing Standards related to mental illness is provided below. See *infra* note 55.

⁵³ Removal from general population “will be approved, denied, or modified within 24 hours by an appropriate and higher authority who is not involved in the initial placement.” *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0002; *Id.*, ACA Restrictive Housing Standards 2016, 4-ALDF-RH-002.

⁵⁴ “The purpose for placement of inmates in Restrictive Housing is reviewed by a supervisor every seven days for the first 60 days and at least every 30 days thereafter.” *Id.*, ACA Restrictive Housing Standards 2016, 4-ALDF-RH-004.

⁵⁵ The amended standards now recommend that prisoners be evaluated by a mental health care professional at least every 30 days, considerably increasing the frequency of mental health assessments from the previous policy, which only provided for an evaluation once every three months. *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0010. The amended standards also called for all prisoners in restricted housing to be visited by mental health staff weekly and by health care personnel daily. *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0012; *Id.* ACA Restrictive Housing Standards 2016, 4-ALDF-RH-0029.

⁵⁶ *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0013.

⁵⁷ *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0004. Further, Standard 4-RH-0006 detailed that cells should measure at least 80 square feet. Additionally, Standard 4-RH-0005 states that restrictive housing units should provide outdoor exercise areas. *Id.*

⁵⁸ The new standards recommend that prisoners be offered step-down programs, including opportunities for increasing out-of-cell time, group interaction, and programming opportunities in order “to facilitate the reintegration of the inmate into general population or the community.” *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0032. The ACA also now recommends that detention facilities “attempt to ensure offenders are not released directly into the community from Restrictive Housing” and take precautions

when direct release is imminent, including developing an individualized “release plan” and notifying local law enforcement. *Id.*, ACA Restrictive Housing Standards 2016, 4-RH-0030.

⁶⁴ See, e.g., Cyrus Ahalt & Brie Williams, *Reforming Solitary-Confinement Policy—Heeding a Presidential Call to Action*, 374 NEW ENG. J. MED. 1704 (2016). A recent review of two meta-analyses of various studies challenged the view that isolation has been demonstrated to be especially harmful. Robert D. Morgan, Paul Gendreau, Paula Smith, Andrew L. Gray, Ryan M. Labrecque, Nana MacLean, Stephanie A. Van Horn, Angelea D. Bolanos, Ashley B. Batastini & Jeremy Mills, *Quantitative Syntheses of the Effects of Administrative Segregation on Inmates’ Well-Being*, 22 PSYCHOLOGY, PUBLIC POLICY, AND LAW, 439 (2016), <http://dx.doi.org/10.1037/law0000089>. That paper argued that its review of several studies of administrative segregation (defined as 23 hours or more in a cell but without a duration specified) did not produce solid evidence of that population suffering “lasting emotional damage.” Rather, the analysis argued that the population was as harmed as were prisoners held in “routine incarceration.” *Id.* The paper argued that a lack of data on prisoners in general and on individuals’ mental and physical health before incarceration, as well as questions about how to measure over-reporting and under-reporting of injuries, hampered the ability to identify particular harms (if imposed) by restricted housing. *Id.*

⁶⁵ Andrea D. Lyon & Mark D. Cunningham, “Reason Not the Need”: Does the Lack of Compelling State Interest in Maintaining a Separate Death Row Make It Unlawful?, 33 AM. J. CRIM. L. 1, 4-5 (2005); see also Mark D. Cunningham, Thomas J. Reidy & Jon R. Sorensen, *Wasted Resources and Gratuitous Suffering: The Failure of a Security Rationale for Death Row*, 22 PSYCHOL. PUB. POL’Y & L. 185 (2016); Marah Stith McLeod, *Does the Death Penalty Require Death Row? The Harm of Legislative Silence*, 77 OHIO STATE L.J. 525 (2016). See also Celina Aldape, Ryan Cooper, Katie Haas, April Hu, Jessica Hunter, Johanna Kalb, Shelle Shimizu & Judith Resnik, *Rethinking “Death Row”: Variations in the Housing of Individuals Sentenced to Death*, YALE LAW SCHOOL ARTHUR LIMAN PUBLIC INTEREST PROGRAM (July 2016). That report discussed the experiences in three jurisdictions where individuals

sentenced to death row were not housed in isolation but placed either in a separated but shared area with others who had capital sentences or with other prisoners.

⁷¹ S.B. 51, 217th Leg. Sess. (N.J. 2016), "An Act concerning restrictions on isolated confinement in correctional facilities and supplementing Title 30 of the Revised Statutes," § (4) (a) (9). The limit on isolated confinement to no more than 15 consecutive days, and to no more than 20 days during any 60-day period, does not apply during a facility-wide lock down. *Id.*

⁷² *Id.* at § 3.

⁷³ *Id.* at §§ 3, 4b.

⁷⁴ H.B. 5417, 99th G.A. (Ill. 2016). The proposed bill would limit solitary confinement to no more than five consecutive days and five total days during a 150-day period. The bill was introduced on February 9, 2016 and, as of October 2016, remained pending.

⁷⁵ S. 1255, 189th Gen. Ct. (Mass. 2015). The bill was introduced on April 15, 2015 and accompanied a study order in the Senate on June 23, 2016, when it was replaced by S.2362, which remained pending as of October 2016.

⁷⁶ H.B. 7481, Jan. 2016 Leg. Sess. (R.I. 2016). The bill would limit solitary confinement to no more than 15 consecutive days, with no more than 20 days within a 60-day period. The bill was introduced on February 5, 2016 and remained pending as of October 2016.

⁷⁷ Order Granting Final Approval of Class Action Settlement Agreement, *Ashker v. Governor of California*, No. C09-05796 CW (N.D. Cal. Jan. 26, 2016), ECF No. 488. <http://www.clearinghouse.net/chDocs/public/PC-CA-0054-9001.pdf>. The settlement imposed limits on the amount of time that prisoners may be confined in the Security Housing Unit at Pelican Bay State Prison, one of the state's maximum security prisons; provided for review of prisoners then in security housing units on the basis of gang affiliation within 12 months of the settlement agreement; and set forth

a presumption that all prisoners detained in Security Housing Units for more than 10 years would be moved into the general population. *See also* Ian Lovett, *California Agrees To Overhaul Use of Solitary Confinement*, N.Y. TIMES (Sept. 1, 2015), <http://www.nytimes.com/2015/09/02/us/solitary-confinement-california-prisons.html>.

⁷⁸ Indiana Prot. & Advocacy Servs. Comm'n v. Comm'r, Indiana Dep't of Correction, No. 1:08-CV-01317-RLYJMS, (S.D. Ind. Mar. 24, 2016), ECF No. 508; Stipulation To Enter into Private Settlement Agreement Following Notice to the Class and Fairness Hearing, Indiana Prot. & Advocacy Servs. Comm'n v. Comm'r, Indiana Dep't of Correction, No. 1:08-CV-01317-RLYJMS (S.D. Ind. Jan. 27, 2016), ECF No. 496. The agreement prohibited, with some exceptions, the placement of mentally ill prisoners in restricted housing and provided standards for the minimum adequate treatment of those prisoners, including provision of recreation, showers, additional out-of-cell time, and therapeutic programming.

⁷⁹ Opinion and Order, *Peoples v. Anthony Annucci*, No. 11-cv-2694 SAS (S.D.N.Y. Mar. 31, 2016), ECF No. 329. The court wrote, "Solitary confinement is a drastic and punitive designation, one that should be used only as a last resort and for the shortest possible time to serve the penal purposes for which it is designed." The Settlement Agreement included reforms to limit the frequency and duration of solitary confinement, including a detailed modification of the Department's guidelines for restricted housing sentencing aimed at limiting the length of restricted housing sentences, alternatives to restricted housing programs designed to address causes of disciplinary issues, and increased opportunities for prisoners to earn sentence reductions and lesser restricted housing sanctions.

The settlement also provided greater protections for vulnerable populations such as prisoners with special needs, juvenile prisoners, and prisoners in need of substance abuse treatment, while continuing a "presumption against restricted housing for pregnant inmates." The settlement also mandated improvements to the conditions of confinement in restricted housing, including the abolishment of the "loaf," a food product previously served to those in solitary; increased movement privileges based on good behavior; increased phone privileges; improved library services; access to correspondence courses and radio programing; and increased access to mental health consultations and treatment.

¹⁴² See Leann K. Bertsch, *The History of Restricted Housing at the ND-DOCR* (Mar. 15, 2016) (unpublished manuscript).

¹⁴³ In the original distribution of the survey, the only territory included was the District of Columbia. When we presented a draft of the report at the 2016 ASCA summer meeting, the Virgin Islands requested to participate. We then sent questionnaires to Guam and Puerto Rico, which are the other territories that are members of ASCA; these jurisdictions did not respond.

¹⁴⁴ See Appendix A, ASCA-Liman Survey of Extended Restricted Housing (Fall 2015).

¹⁴⁵ For example, seven jurisdictions (Alabama, Arizona, Idaho, Kentucky, Massachusetts, Montana, and Vermont) told us that, while they tracked whether prisoners were held in a cell for 22 hours per day or more, they did not track the numbers of days for which a person was held under those conditions. Vermont indicated that the changes to its database system made it difficult to retrieve this data but that moving forward, it will be able to determine the length of days in-cell that average 22 hours per day.

In five of these seven (Alabama, Idaho, Kentucky, Montana, and Vermont), we included responses with the caveat that numbers from these jurisdictions may include prisoners who were in-cell for 22 or more hours a day but for less than 15 days. Responses from Arizona and Massachusetts to questions about prisoners' length of stay enabled us to derive the number of individuals falling within the 22-hour/15-day definition.

¹⁴⁶ For example, California reported that most of its segregated environments permitted prisoners at least 10 hours per week out-of-cell and distributed those 10 hours throughout the week such that several days a week, prisoners were allowed more than three hours out-of-cell at a time. Therefore, on some days, these prisoners were in-cell for less than 22 hours. California did not include prisoners in these units when tallying the number in the category of 22 hours or more for 15 or more consecutive days. After exchanges

with that state's correctional staff, we have identified and grouped prisoners in categories that are detailed in Table 3. *See also infra* note 177.

A few other states also raised questions about the definition while responding. Iowa indicated that it could not confirm that all of the prisoners included in its reported total number of prisoners in restricted housing were in cells for 22 hours or more. Washington also said it could not confirm that the definition it used matched the one that we provided. With these caveats, we included information as reported from these states.

¹⁴⁷ *Time-In-Cell*, *supra* note 2, at 14.

¹⁴⁸ *Id.* at 11.

¹⁴⁹ At least one jurisdiction reported that it defined restricted housing as 22 hours or more in-cell for 30 days or more, rather than 15 days or more. Colorado stated:

“Although the submission of the survey applies the LIMAN-ASCA definition of ERH of 15 or more continuous days, Colorado’s definition of Extended Restricted Housing matches that of ASCA-PBMS: Extended Restrictive Housing—Placement in housing that separates the offender from contact with general population while restricting an offender/inmate to his/her cell for 22 hours per day and for 30 days or longer for the safe and secure operation of the facility. Colorado does not consider 15 days being the window for extended restrictive housing. All offenders under policy and direction from executive staff are required to be removed from disciplinary segregation or removal from population by the 30th day, regardless of the reason for placement in the restrictive housing environment. The only exceptions are those offenders that are placed in our Restrictive Housing Maximum Security Status (formerly known as Administrative segregation).”

ASCA-Liman Survey: Colorado Follow-up Response, March 2016 at 8.

¹⁵⁰ The United Nations Standard Minimum Rules for the Treatment of Prisoners which are, as noted, known as the “Nelson Mandela Rules,” defined “prolonged solitary confinement” as the placement of “prisoners for 22 hours or more a day without meaningful human contact” for “a time period in excess of 15 consecutive days.” Nelson Mandela Rules, *supra* note 121.

¹⁵¹ *Time-In-Cell*, *supra* note 2, at 38.

¹⁵² Typically, prisons house sentenced prisoners, serving one year or more for a felony conviction, while jails house pretrial detainees or people sentenced pursuant to misdemeanor convictions. However, variation exists. For example, Louisiana reported that “nearly 18,000 state prisoners” were held in “local jails in Louisiana” (and that the state did “not have access to specific numbers” of those prisoners held in restricted housing.) Conversely, some states such as Rhode Island operate unified systems, which include both jails and prisons. The numbers that California Department of Corrections and Rehabilitation provided were for prisons only. California’s Realignment policy has expanded the number of people held in county jails rather than in state prisons.

¹⁵³ We asked: Please indicate the facilities for which you have data on the use of Extended Restricted Housing (check all that apply). We did not define “types of facilities” but provided the list included in Table 1 and a category of “Other” where responders could specify any other type of facility.

¹⁵⁴ According to the website of the Department of Corrections for the District of the Columbia, the majority of male inmates housed in the D.C. jail “are awaiting adjudication of cases or are sentenced for misdemeanor offenses.” *Correctional Facilities*, D.C. DEPARTMENT OF CORRECTIONS, <http://doc.dc.gov/page/correctional-facilities>. Individuals convicted in D.C. and serving longer sentences are housed at the Correctional Treatment Facility, a private facility operated by the Corrections Corporation of America that is an annex to the jail, while sentenced felons are transferred to the Federal Bureau of Prisons. *Id.*

¹⁵⁵ Those 12 jurisdictions were Connecticut, Delaware, the District of Columbia, Hawaii, Idaho, Kansas, Louisiana, Mississippi, Rhode Island, Vermont, the Virgin Islands, and the Federal Bureau of Prisons. Vermont indicated that it operates a combination of prisons for sentenced prisoners and jails for detainees, in which offenders are housed jointly.

¹⁵⁶ As discussed, Louisiana data were not included in this number; in August of 2016 that jurisdiction obtained information on the number of prisoners in restrictive housing in local jails, but in response to the survey as noted in the fall of 2015, Louisiana replied that it did not collect such information routinely.

¹⁵⁷ We did not define control.

¹⁵⁸ Those seven jurisdictions that had restrictive housing data on the jails in their correctional system were Connecticut, Delaware, District of Columbia, Hawaii, Idaho, Vermont, and the Virgin Islands. Vermont reported that information on restricted housing prior to 2016 was limited, but that it was making changes and would be better able to provide more detailed information about restricted housing in the future. In the meantime, Vermont reported that it was maintaining and aggregating manual reports.

In the follow-up exchanges in the summer of 2016, Louisiana reported that it housed some 18,000 prisoners in state jails and that it had done a special audit in the summer of 2016, and identified 314 people in restricted housing as of that date. Louisiana also indicated that it did not control conditions in jails but that if its prisoners were in need of restricted housing conditions, those prisoners would be returned to the state prisons.

¹⁵⁹ These jurisdictions were Arizona, Kansas, North Carolina, and the Federal Bureau of Prisons. The Federal Bureau of Prisons reported that juveniles are housed in a special facility that is a “community contract facility,” which is not a prison. According to the Federal Bureau of Prisons website, 58 juveniles are housed in this facility. *Generate Inmate Population reports*, FEDERAL BUREAU OF PRISONS, https://www.bop.gov/about/statistics/population_statistics.jsp. The Federal Bureau of Prisons did not provide information on the use of restricted housing in its juvenile facilities. The other three jurisdictions with juvenile facilities did.

Section VI of this Report discusses in greater detail the number of individuals under the age of 18 reported to be held in restricted housing. The number of juveniles held in restricted housing reported by Arizona, Kansas, and North Carolina in that section reflect the total number in both juvenile and adult correctional facilities, while other jurisdictions’ reported totals do not include juvenile facilities.

¹⁶⁰ Those seven jurisdictions reporting separate facilities for the mentally ill were Arizona, California, Colorado, Kansas, Texas, Wisconsin, and the Virgin Islands. Both Montana and the Federal Bureau of Prisons have special units within facilities for mentally ill and for death-sentenced prisoners. The majority of federal death-sentenced prisoners are housed at Terre Haute USP, a high security penitentiary. *Find an*

Inmate, FEDERAL BUREAU OF PRISONS, <https://www.bop.gov/inmateloc>. Arizona and Oklahoma also reported specialized facilities for death-sentenced prisoners.

¹⁶¹ Examples of “other” types of facilities that jurisdictions reported include county correctional facilities, jail contracting facilities, medical facilities, and transitional work programs.

¹⁶² For information on juvenile facilities, see Sarah Hockenberry, *Juveniles in Residential Placement, 2013*, JUVENILE JUSTICE STATISTICS NATIONAL REPORT SERIES (May 2016), <http://www.ojjdp.gov/pubs/249507.pdf>. For information on the use of restricted housing in juvenile facilities, see *Growing Up Locked Down: Youth in Solitary Confinement in Jails and Prisons Across the United States*, HUMAN RIGHTS WATCH & ACLU (2012), https://www.aclu.org/sites/default/files/field_document/us1012webwcover.pdf.

¹⁶³ See DOJ RESTRICTIVE HOUSING 2016 REPORT, *supra* note 26, at 3. That report “define[d] ‘restrictive housing’ as any type of detention that involves three basic elements: removal from the general inmate population, whether voluntary or involuntary; placement in a locked room or cell, whether alone or with another inmate; and inability to leave the room or cell for the vast majority of the day, typically 22 hours or more.” *Id.*

¹⁶⁴ Due to the way we phrased the survey question, we did not obtain information about how many of these prisoners had bunkmates and how many were alone in a double cell. Nor did we gather information on the sizes and conditions of the double cells in any given jurisdiction as compared with the sizes and conditions of single cells. For articles on the practice of double-celling, see *supra* note 67.

¹⁶⁵ Arkansas, Rhode Island, and West Virginia did not provide information about the number of prisoners in restricted housing. Nevada provided information that was facility-specific; that information is not included in this section because the answers to sub-numbers for each facility did not match the total for that facility.

As noted earlier, Rhode Island gave us the following clarification about its data: “Currently the structure of our data systems does not allow for us to extract data on the Restrictive Housing population in an aggregate manner. In some cases, this data is tracked manually which allows us to determine the status of individual inmates, but makes it impossible to aggregate data on all inmates in this status. Therefore we are unable to provide data on our restrictive housing population at this time. RIDOC is working to rectify this problem but it requires significant IT programming changes which will take some time to complete.”

¹⁶⁶ According to the Bureau of Justice Statistics (BJS), the five jurisdictions not included in our data for this section accounted for 42,908 prisoners, or 2.7% of the total custodial population in the United States in 2014. E. Ann Carson, *Prisoners in 2014*, BUREAU OF JUSTICE STATISTICS 3 Tbl.2 (Sept. 2015), <http://www.bjs.gov/content/pub/pdf/p14.pdf>. Specifically, Arkansas housed 17,874 prisoners; Rhode Island housed 3,359 prisoners; West Virginia had 6,896 prisoners; Nevada housed 12,537 prisoners; and Maine housed 2,242 prisoners. *Id.* Additionally, the four territories not included in our data for this section accounted for 13,468 prisoners. *Id.* at 32 app. tbl.7. Specifically, American Samoa housed 212 prisoners; Guam housed 754 prisoners; the Commonwealth of the Northern Mariana Islands housed 175 prisoners; and Puerto Rico housed 12, 327 prisoners. *Id.*

¹⁶⁷ *Id.* at 3 tbl.2. The most recent available BJS data, as of October 2016, were gathered in 2014; our survey asked about total custodial and restricted housing populations as of the fall of 2015.

¹⁶⁸ The total custodial population of the 52 responding jurisdictions rises to 1,470,687 if we include the nearly 18,000 state prisoners that Louisiana, as noted, asked that we count, although they were held in jails. We have separately noted this request and incorporated it in several parts with the caveat that Louisiana did not regularly track information on the use of restricted housing in the parish jails over which it had no direct control.

¹⁶⁹ Hawaii reported a total of 4,200 prisoners in-state, and an additional 1,388 prisoners out-of-state. The out-of-state prisoners were not included in this report, as Hawaii did not provide information on restricted housing for its out-of-state prison population.

¹⁷⁰ *See supra* note 165.

¹⁷¹ Alabama indicated that it was unable to provide restricted housing data for privately-contracted facilities, which accounted for 735 prisoners. Thus, Alabama reported a total custodial population of 25,284 prisoners, but a total of 24,549 prisoners in facilities for which the state could provide data in response to the survey. California reported a total custodial population of 128,164 prisoners, but a total of 117,171 prisoners for which it could provide data. Delaware stated that it was unable to provide restricted housing data for “detentioners,” which it defined as individuals detained while awaiting sentencing; Delaware reported a total custodial population of 5,824 prisoners, but a total of 4,342 prisoners for which it could provide data.

Louisiana indicated in the fall of 2015 that it was unable to provide restricted housing data for prisoners housed in local jails, which accounted for almost 18,000 prisoners. Thus, Louisiana reported a total custodial population of 36,511 prisoners, and a total of 18,515 prisoners for which it could provide data. As noted above, in the late summer of 2016, Louisiana conducted an audit and identified 314 prisoners in those local jails that were in restricted housing, and asked that we assume the same number of people were held in restricted housing in the fall of 2015 and include that number in the percentage calculation. Utah likewise reached out to us in the late summer of 2016. Utah provided updated information for the summer of 2016 because it had revised its policies to change the way placements in restricted housing were made and to review those so confined. We describe these changes in Part VII; we also have added a second bar in Chart 1 for Louisiana to reflect different denominators and for Utah to reflect the decline in numbers. *See also infra* note 178.

Wisconsin indicated that it was unable to provide restricted housing data for prisoners in mental health facilities or minimum-security correctional centers. Thus, Wisconsin reported a total custodial population of 22,965 prisoners and a total of 20,535 prisoners for which it could provide data. The Federal Bureau of Prisons stated that the total custodial population included prisoners housed in “community corrections” facilities, such as halfway houses and home confinement. Excluding these facilities, BOP reported a total custodial population of 205,508 prisoners, but a total of 189,181 prisoners for which restricted housing data would be relevant.

Arkansas, Rhode Island, West Virginia, and Nevada are not included in Table 2 and Chart 1. *See* note 165, *supra*. For instance, as noted there, Rhode Island gave us the following clarification about its data: “Currently the structure of our data systems does not allow for us to extract data on the Restrictive Housing population in an aggregate manner. In some cases, this data is tracked manually which allows us to determine the status of individual inmates, but makes it impossible to aggregate data on all inmates in this status. Therefore we are unable to provide data on our restrictive housing population at this time. RIDOC is working to rectify this problem but it requires significant IT programming changes which will take some time to complete.”

In addition, some jurisdictions provided answers to a few questions that did not match up completely with others, and hence there are minor variations between this section and discussions of other questions in the survey. In two states, the number provided for the total restricted housing population and the numbers provided regarding demographic composition differed slightly. Alaska reported 352 prisoners in restricted housing when asked for the total restricted housing population, but in response to later questions about the demographic composition and length of time spent by prisoners in restricted housing, Alaska provided numbers that totaled to 355 prisoners. Kentucky reported 487 prisoners in restricted housing when asked for the total restricted housing population; in response to demographic questions, Kentucky provided numbers that totaled more than 100 less—382 prisoners. Montana also presented a difference in the total numbers and the demographic composition, but indicated that seven prisoners were housed in “off-site” detention, for which the jurisdiction was unable to provide demographic data. We included the data as reported for each segment, and we flagged these limitations throughout.

¹⁷² In September of 2016, the California Department of Corrections and Rehabilitation (CDCR) corrected this number from 1,079 to 1,104 prisoners in restricted housing as of September 30, 2015. CDCR also reported that as of August of 2016, the number had decreased to 427 prisoners. In addition to these 1,104 prisoners who were held in-cell for 22 or more hours for 15 consecutive days or more, California held 7,225 prisoners in other types of segregated housing. These prisoners are counted in Table 3 in response to our question for the numbers of prisoners held between 16-19 and 20-21 hours.

¹⁷³ Colorado reported using “restricted housing” to describe prisoners housed under two conditions, which were formerly known as punitive segregation and administrative segregation; prisoners in both conditions are included in its restricted housing number. Colorado reported that more than 50 of the prisoners in its total number of prisoners in restricted housing referred to those in punitive segregation, which meant that such individuals were held for a maximum of 15 to 30 days.

¹⁷⁴ As noted, Utah provided updated information reflecting policy changes that went into effect in 2016. Thus, it gave new data on its total custodial population and on its new rules aimed at lowering the number of prisoners held in-cell for 22 hours or more.

¹⁷⁵ As noted for Table 2, in the summer of 2016, Louisiana requested that the numbers and percent be recalculated because the denominator should include prisoners held in local jails – which were not directly under the control of the state level department. Earlier, Louisiana had noted that about 18,000 people were in held in local jails and also noted that the state did not have information on the numbers in those jails held in restricted housing. Thus, we have retained the original data from the fall and have as well, at the request of the jurisdiction, also revised the equation through adding a second bar to include the nearly 18,000 people held in the summer of August 2016 in jails, as well as the 314 prisoners that the state identified as in restricted housing through a special audit of those jails in August 2016.

Utah likewise reached out to us and provided updated information for the summer of 2016 because it had revised its policies to change the way placements in restricted housing were made and to review those so confined. We describe these changes in Part VII; also added is a second bar for Utah to reflect how the numbers decreased.

¹⁷⁶ Alabama, Arizona, Arkansas, Delaware, Florida, Georgia, Illinois, Kentucky, Minnesota, Nevada, Ohio, Rhode Island, South Carolina, Tennessee, Vermont, West Virginia, Wisconsin, and the Federal Bureau of Prisons participated in the survey, but are not included in Table 2 and Chart 2 because they did not provide information about the number of prisoners in-cell for 16-19 or for 20-21 hours. As noted

earlier in footnote 165, Rhode Island gave us the following clarification about their data: “Currently the structure of our data systems does not allow for us to extract data on the Restrictive Housing population in an aggregate manner. In some cases, this data is tracked manually which allows us to determine the status of individual inmates, but makes it impossible to aggregate data on all inmates in this status. Therefore we are unable to provide data on our restrictive housing population at this time. RIDOC is working to rectify this problem but it requires significant IT programming changes which will take some time to complete.”

Iowa is included because it reported numbers for those in-cell from 20-21 hours; Iowa later indicated that it was unable to confirm that the numbers it provided for restricted housing were limited to prisoners who had been in-cell for more than 22 hours per day.

¹⁷⁷ California informed us that it had a total of 8,329 prisoners in its eight forms of segregated housing. These eight forms include the Administrative Segregation Unit, “Condemned” Housing, Enhanced Outpatient Program ASU Hub, Long-Term Restricted Housing, Non-Disciplinary Segregation Unit, Psychiatric Services Unit, Security Housing Unit, Security Housing Unit at Pelican Bay State Prison, and Short-Term Restricted Housing. Of these, the 1,104 prisoners in the Security Housing Unit at Pelican Bay State Prison meet our definition of restricted housing. The 597 prisoners categorized as “condemned” are housed in two forms of housing, Grade A and Grade B. The history of Pelican Bay State Prison is detailed in Keramet Reiter, *23/7: PELICAN BAY PRISON AND THE RISE OF LONG-TERM SOLITARY CONFINEMENT* (2016)

Using definitions of housing categories provided by the California Department of Corrections and Rehabilitation (CDCR), prisoners in Grade A housing would fall under the 16-19 hours category. In Grade B housing, some prisoners would fall under the 16-19 hours category while others would fall under the 20-21 hours category. Because CDCR did not provide a breakdown of how many of the 597 condemned prisoners were in each grade, we included all 597 prisoners in the 16-19 hours per day category. We included the 6,628 prisoners in the remaining six forms of housing in the 20-21 hours category. In some of these forms of housing, prisoners are held in-cell for 22 or more hours a day at least some days of the week. For example, in the Administrative Segregation Unit, Non-Disciplinary Segregation Unit, and Security Housing Unit (not in Pelican Bay), CDCR reported: “Inmates . . . are offered a minimum of 10 hours of outside exercise per week. The 10 hours of outside exercise are distributed throughout the week such that at least three days a week, inmates are allowed more than three hours out-of-cell at a time.” Thus, during the remaining days of the week, the prisoners in these housing units may be in-cell for 22 or more hours a day.

¹⁷⁸ As noted, we reflected how Utah’s numbers would have looked, were data reported as of the summer of 2016, in Table 2 and in Chart 1. Here and elsewhere in this Report, we note the efforts Utah has undertaken to make changes. Utah informed us that as of the summer of 2016, it had 380 people in-cell for 22 hours or more, 268 in-cell for 20-21 hours, and 648 people in-cell for 16-24 hours, for a total of 10.6% (of the 6,112 prisoners in its total custodial population at the time) in restricted housing.

¹⁷⁹ Maine, Georgia, and New Hampshire did not respond to the question of whether they regularly gather information on length-of-stay in restricted housing.

¹⁸⁰ In responding to whether it regularly tracked the amount of time that prisoners spend in restricted housing, the Federal Bureau of Prisons stated that it keeps monthly reports, and that “[t]here is a publication that tracks aggregate reports at the individual facility level. They can compile this type of data

and did for the data in this report, but this is not something they regularly do." ASCA-Liman Survey: Federal Bureau of Prisons Follow-up Response, May 2016 at 9.

¹⁸¹ Oregon and Wisconsin indicated that they planned to begin regularly tracking the amount of time that prisoners spend in restricted housing. Further, as noted earlier, Rhode Island asked we provide the clarification that: "Currently the structure of our data systems does not allow for us to extract data on the Restrictive Housing population in an aggregate manner. In some cases, this data is tracked manually which allows us to determine the status of individual inmates, but makes it impossible to aggregate data on all inmates in this status. Therefore, we are unable to provide data on our restrictive housing population at this time. RIDOC is working to rectify this problem but it requires significant IT programming changes which will take some time to complete."

¹⁸² New Mexico and Nevada provided numbers of people who spent various periods of time in restricted housing, but we did not report these numbers due to inconsistencies in the information provided. Ten states did not provide numbers on the amount of time that prisoners spent in restricted housing: Alabama, Arkansas, Georgia, Illinois, Maine, Michigan, Missouri, New Hampshire, Rhode Island, and West Virginia.

¹⁸³ Of the 17 jurisdictions that did not regularly track length-of-stay data, the following nine jurisdictions did provide length-of-stay data based on a specific review in Fall, 2015: Alaska, Florida, Delaware, Louisiana, Nebraska, Oklahoma, Oregon, Pennsylvania, and Wisconsin. All 34 jurisdictions that did regularly track length-of-stay data, provided length-of-stay data for Fall, 2015, but one of those jurisdictions (New Mexico) is not reported here due to different kinds of information inconsistencies.

¹⁸⁴ The total number of prisoners (355) that Alaska reported to be in restricted housing was greater than the number of prisoners (352) for which Alaska provided length-of-stay data.

¹⁸⁵ The numbers reported here for California included only prisoners housed in Security Housing Units in Pelican Bay State Prison and did not include prisoners housed in other types of segregation. *See supra* note 177. Further, the total number of prisoners (1,104) that California reported to be in the Security Housing Unit in Pelican Bay was greater than the number of prisoners (1,073) for which California reported length-of-stay data. *See supra* note 172.

¹⁸⁶ The total number of prisoners (128) that Connecticut reported to be in restricted housing was greater than the total number of prisoners (121) for which Connecticut reported length-of-stay data. The difference was likely due to the fact that Connecticut reported length-of-stay data for male prisoners in restricted housing and not for female prisoners in restricted housing.

¹⁸⁷ The total number of prisoners (404) that Idaho reported to be in restricted housing was larger than the total number of prisoners (275) for which Idaho provided length-of-stay data.

¹⁸⁸ As noted, Louisiana reported that it had begun keeping length-of-stay information in May 2012, and thus information was not available for prisoners held in restricted housing for more than three years. Further, the total number of prisoners (2,689) that Louisiana reported to be in restricted housing was larger than the total number of prisoners (2,185) for which Louisiana provided length-of-stay data.

¹⁸⁹ The total number of prisoners (235) that Massachusetts reported to be in restricted housing was greater than the total number of prisoners (220) for which Massachusetts provided length-of-stay data.

¹⁹⁰ The total number of prisoners (622) that Minnesota reported to be in restricted housing was larger than the total number of prisoners (567) for which Minnesota provided length-of-stay data. Minnesota provided length-of-stay information for only those prisoners held in disciplinary segregation and reported that length-of-stay data for administrative segregation was not available electronically.

¹⁹¹ The total number of prisoners (134) that Montana reported to be in restricted housing was greater than the total number of prisoners (90) for which Montana provided length-of-stay data. Montana reported that it could not provide information on prisoners held in “off-site” facilities.

¹⁹² New York provided the number of people who were in restricted housing for zero days up to 30 days (rather than 15 up to 30 days), and the number of people who were in restricted housing for three years or more (rather than distinct categories for three up to six years, and for six years or more). Further, the numbers provided by New York for length of stay excluded 368 prisoners, whom the state reported were kept in separate “Keep Lock” units for which it reported that it could not retrieve length-of-stay data.

¹⁹³ The total number of prisoners (1,374) that Ohio reported to be in restricted housing was greater than the total number of prisoners (1,140) for which Ohio had length-of-stay data. Ohio added explanations about its reported numbers, including that it had excluded data from the Offender Tracking System used by the state due to its concern about accuracy. Ohio also reported that it did not house prisoners in protective custody in restricted housing and that it did not have “disciplinary custody.” Instead Ohio provided data from its Local Control Units for the disciplinary custody section; those units were “a form of extended restricted housing which may be used for disciplinary or pre-transfer detention to a higher security level when the inmate’s continued presence in general population is likely to disrupt orderly operations.” See ASCA-Liman Survey: Ohio Follow-up Response, November 4, 2015 at 4.

¹⁹⁴ The total number of prisoners (1,768) that Tennessee reported to be in restricted housing was greater than the total number of prisoners for which Tennessee reported it had length-of-stay data (1,774).

¹⁹⁵ The total number of prisoners (106) that Vermont reported to be in restricted housing was greater than the total number of prisoners (22) for which Vermont reported it had length-of-stay data.

¹⁹⁶ “Other” was a category that jurisdictions noted and had varied responses to what it referenced. In several jurisdictions, “Other” referred to maximum security units or death row. In Florida, “Other” referred to Close Management I, Close Management II, Maximum Management, and Death Row. In Louisiana, “Other” referred to Death Row and Medical Segregation. In Montana, “Other” referenced Maximum Security. In Nebraska, “Other” was noted for prisoners sentenced to death. In Oklahoma, “Other” referred to death-sentenced prisoners. In Washington, “Other” referred to “max custody” prisoners.

In addition, “Other” was used for special housing units, specific administrative segregation units, or special handling units for safety and security concerns. For the Federal Bureau of Prisons, “Other” referred to Florence ADMAX and SMU Units. In Indiana, “Other” referred to Department Wide Administrative Segregation. In Oregon, “Other” referred to the Intensive Management Unit, the Behavioral Housing Unit, and the Special Housing Unit. In Texas, “Other” referred to a Special Housing Unit at the women’s prison that combined administrative segregation, the behavioral management unit, and an intensive management unit. In the District of Columbia, “Other” referred to High Profile, Total Separation, Special Handling, and Risk of Abusiveness. In New Jersey, “Other” referred to MCU and Rule 30 prisoners. Rule 30 prisoners are prisoners from county jails transferred to State Correctional Facilities due to medical or security reasons. In Pennsylvania, “Other” referred to an Intensive

Management Unit, a maximum-custody program unit that housed prisoners who have demonstrated behaviors that present serious management concerns. In New York, “Other” referred to pending protective custody, pending disciplinary hearing, special watches (contraband and/or mental health), and pending investigation. In Virginia, “Other” referred to intensive management and special management. In Wisconsin, “Other” referred to Temporary Lock-up and controlled separation. In Wyoming, “Other” referred to the Reintegration Program.

¹⁹⁷ The 37 jurisdictions that provided length of stay data by type of custody were: Alaska, California, Colorado, Connecticut, District of Columbia, Florida, Hawaii, Idaho, Indiana, Iowa, Kansas, Louisiana, Maryland, Massachusetts, Minnesota, Mississippi, Montana, Nebraska, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Vermont, Virginia, Washington, Wisconsin, Wyoming, Federal Bureau of Prisons, and the Virgin Islands.

¹⁹⁸ The percentage of men held in restricted housing in Louisiana was calculated from the data that Louisiana provided in the fall of 2015. The information provided subsequently by Louisiana in the summer of 2016 did not include data delineating populations by gender.

¹⁹⁹ The total custodial population (male and female) of 4,727 provided by Hawaii described in this section did not match the total custodial population of 4,200 provided by Hawaii for other sections of this report.

²⁰⁰ For Chart 5 and Table 5, the “Total” category was calculated by adding the numbers for the total population in restricted housing in all of the responding jurisdictions and dividing that by the numbers for the total custodial population added together from all of the responding jurisdictions. Thus, this number is the percentage of the total prisoners in all 43 responding jurisdictions who were in restricted housing.

²⁰¹ The data provided in Table 5 require explanation. Some jurisdictions provided numbers for the total custodial population in response to the questions on demographic information that were not consistent with numbers provided in other segments. Other jurisdictions included individuals relying on a somewhat different definition of restricted housing.

Specifically, the total custodial population (male and female) of 17,749 provided by New Jersey in response to the questions on demographic information did not match the total custodial population provided by New Jersey for other sections of this report. The same was true for Hawaii. *See supra* note 199. Additionally, both Arizona and Massachusetts reported that they could not provide race and ethnicity data based on the restricted housing definition of the survey, which asked about prisoners in cells for 22 hours or more a day for more than 15 continuous days. The data these two jurisdictions provided on race and ethnicity included individuals housed in-cell for 22 hours or more per day, some of whom may have been held in restricted housing for less than 15 days. In terms of age, California did not provide data about prisoners under the age of 18 in their numbers for the total custodial population and in the restricted housing population.

²⁰² We discuss only jurisdictions that reported at least one woman in restricted housing. Thus, for example, California was not listed because it reported it had no women in-cell for 22 hours or more for 15 consecutive days or more. California reported that it held 186 women in-cell for 20-21 hours.

²⁰³ The data about the number of women in restricted housing in Louisiana comes from data that Louisiana provided in the fall of 2015, which included gender delineations. Once again, these data are

from materials focused on prisons provided by Louisiana, as the data given in the summer of 2016 about state prisoners housed in jails did not delineate the numbers by gender.

²⁰⁴ As noted for the purposes of Chart and Table 6, we included only jurisdictions that reported a non-zero number of women in restricted housing.

²⁰⁵ The survey did not define the “Other” category, but jurisdictions were asked to specify what they included, and often listed in the “Other” category were Alaskan Native, Hawaiian, Native American, Pacific Islander, as well as a description of “Unknown.”

²⁰⁶ Alabama was not included for the Hispanic category for men because it did not use Hispanic as a category for tracking individuals.

²⁰⁷ Alabama was not included for the Hispanic category for women because it did not use Hispanic as a category for tracking individuals.

²⁰⁸ This list is not an exhaustive list of the vulnerable populations in prison. For example, there are also elderly prisoners, prisoners with mental or physical disabilities, prisoners with serious medical conditions, and prisoners with auditory or visual impairments.

²⁰⁹ See *Madrid v. Gomez*, 889 F. Supp. 1146, 1265 (N.D. Cal. 1995) (“[P]lacing [certain mentally ill prisoners] in the SHU [or solitary] is the mental equivalent of putting an asthmatic in a place with little air to breathe. The risk is high enough, and the consequences severe enough, that we have no hesitancy in finding that the risk is plainly unreasonable.”) (internal quotations omitted). More recently, Justice Kennedy discussed the literature on solitary confinement causing mental illness. See *Davis v. Ayala*, 135 S. Ct. 2187, 2208-2210 (2015) (Kennedy, J., concurring).

²¹⁶ *Id.*, ACA Restrictive Housing Standards 2016, 4-ALDF-RH-0029

²¹⁷ DOJ RESTRICTIVE HOUSING 2016 REPORT, *supra* note 26, at 99-101.

²¹⁸ The five jurisdictions that provided data about prisoners with “serious mental illness” but did not include a definition of “serious mental illness” were Idaho, New Mexico, North Carolina, the Virgin Islands, and Washington.

²¹⁹ Georgia, Hawaii, Montana, New Hampshire, Rhode Island, West Virginia, and the Federal Bureau of Prisons were the seven jurisdictions that provided a definition of “serious mental health issue” but did not provide data on mentally ill prisoners. Illinois and Massachusetts each provided a total number of prisoners with serious mental health issues, but did not provide data on prisoners with serious mental health issues by race. Rhode Island provided the total number of male and female prisoners with serious mental health issues, but did not provide numbers of prisoners with serious mental health issues by race or provide data on the number of prisoners with serious mental health issues in restricted housing. As noted earlier, Rhode Island asked us to note: “Currently the structure of our data systems does not allow for us to extract data on the Restrictive Housing population in an aggregate manner. In some cases, this data is tracked manually which allows us to determine the status of individual inmates, but makes it impossible to aggregate data on all inmates in this status. Therefore, we are unable to provide data on our restrictive housing population at this time. RIDOC is working to rectify this problem but it requires significant IT programming changes which will take some time to complete.”

²²⁰ The American Psychiatric Association updated the Diagnostic and Statistical Manual (DSM) in 2013 and published DSM-5 to replace DSM-4. Some of the language in the DSM-4 was changed, and some terms were no longer used in DSM-5.

As noted, our survey did not specify a definition of serious mental illness. In response to our question asking for each jurisdiction’s own definition of a “serious mental health issue,” some jurisdictions referenced DSM-4 and others DSM-5. Specifically, the District of Columbia, Pennsylvania, and South Dakota referred to DSM-4, and Kentucky, Maryland, Massachusetts, and Nebraska referred to DSM-5. A few jurisdictions (Colorado, Illinois, Montana, New York, Ohio, Tennessee, and Utah) mentioned “DSM” but did not specify an edition. The remaining jurisdictions that reported definitions did not refer directly to the DSM.

²²¹ Jurisdictions were excluded from Table 15 (Male Prisoners with a Serious Mental Health Issue) and Table 16 (Female Prisoners with a Serious Mental Health Issue) if those jurisdictions provided no data about prisoners with “serious mental illness” either in their total custodial population, in restricted housing, or both. The two jurisdictions that provided no data about prisoners with “serious mental illness” in their total custodial population were Hawaii and New Hampshire. The four jurisdictions that provided no data about prisoners with “serious mental illness” in restricted housing were Arizona, California, Indiana, and Rhode Island. California informed us that it did not do so because it did not segregate such persons in “Restricted Housing.” The nine jurisdictions that provided no data about prisoners with “serious mental illness” in both their total custodial population and their restricted housing population were Alaska, Arkansas, Delaware, Georgia, Michigan, Montana, Nevada, and West Virginia, and the Federal Bureau of Prisons. As noted earlier, Rhode Island asked us to note: “Currently the structure of our data systems does not allow for us to extract data on the Restrictive Housing population in an aggregate manner. In some cases, this data is tracked manually which allows us to determine the status of individual inmates, but makes it impossible to aggregate data on all inmates in this status. Therefore, we are unable to provide data on our restrictive housing population at this time. RIDOC is working to rectify this problem but it requires significant IT programming changes which will take some time to complete.” Vermont noted that changes in its database system prevented it from being able to report on this measure. As of the summer of 2016, Vermont had resumed data collection and aimed to be able to answer questions such as this in the future.

In several other instances, number mismatches resulted in exclusion from tables. For example, Vermont was excluded from Tables 15 and 16 because of number mismatches concerning its total

custodial population. The District of Columbia was excluded from Table 16 (Female Prisoners with a Serious Mental Health Issue) because it did not provide data regarding female prisoners with serious mental illness. Illinois was excluded from Table 15 (Male Prisoners with a Serious Mental Health Issue) and Table 16 (Female Prisoners with a Serious Mental Health Issue) because the state did not provide data on the total custodial population in the demographics section of the report. Kentucky was excluded from Table 16 (Female Prisoners with a Serious Mental Health Issue) because they reported more women with “serious mental illness” in restricted housing than total women in restricted housing. Kentucky reported 34 women with serious mental illness in restricted housing and 20 women with serious mental illness in its total restricted housing population.

²²² The jurisdictions excluded from Table 17 (Male Prisoners with a Serious Mental Health Issue by Race and Ethnicity) and Table 18 (Female Prisoners with a Serious Mental Health Issue by Race and Ethnicity) were those that did not provide data about prisoners with “serious mental illness” intersecting with race/ethnicity. That group of 19 included Alaska, Arkansas, Delaware, Georgia, Hawaii, Illinois, Massachusetts, Michigan, Montana, New Hampshire, Nevada, Rhode Island, Tennessee, Texas, Vermont, Virginia, Washington, West Virginia, and the Federal Bureau of Prisons.

Indiana was excluded from Table 18 (Female Prisoners with a Serious Mental Health Issue by Race and Ethnicity) because the number of prisoners with mental illness by race that it reported did not match the total number of prisoners with mental illness that the state provided. Indiana reported that it detained two prisoners with serious mental illness and had data by race, but gave a total number of zero. Kansas and Kentucky were excluded from Table 18 because these two jurisdictions reported more women with “serious mental illness” in restricted housing than total women in restricted housing. Kansas reported 16 women with serious mental illness in restricted housing and eight women with serious mental illness in its total restricted housing population. Kentucky reported 34 women with serious mental illness in restricted housing and 20 women with serious mental illness in its total restricted housing population.

Vermont indicated that due to its database changes, it was unable to provide demographic information in response to the survey. However, with the new database system, Vermont reported that it would be able to provide information on gender, medical and mental health status, race, and ethnicity, as well as on self-harming behaviors in the future.

²²³ Seven jurisdictions provided some data about pregnant prisoners but were not included because the data was not sufficiently detailed to report. Specifically, Illinois, Montana, New Mexico, and Vermont provided mismatched numbers concerning the number of women in their total custodial population. Massachusetts did not provide the number of pregnant prisoners in its total custodial population. Minnesota provided an average number of pregnant prisoners, but did not provide the exact number of pregnant prisoners in its total custodial population. Wisconsin reported that it housed five pregnant prisoners in its total custodial population, but it did not provide the number of pregnant prisoners held in restricted housing.

²²⁴ The ten jurisdictions that reported no pregnant prisoners in their total custodial population were the District of Columbia, Indiana, Iowa, Louisiana, Mississippi, New Hampshire, North Dakota, Tennessee, Washington, and the Virgin Islands.

²²⁵ Illinois reported 10 transgender prisoners in restricted housing but reported that they do not track the number of transgender prisoners in their total custodial population. Massachusetts reported one

transgender prisoner in restricted housing but did not report the number of transgender prisoners in its total custodial population.

²²⁶ The jurisdictions that reported transgender prisoners in restricted housing were: Arizona (5 prisoners), Colorado (1 prisoner), the District of Columbia (1 prisoner), Florida (1 prisoner), Kentucky (1 prisoner), Louisiana (2 prisoners), Maryland (1 prisoner), New Hampshire (1 prisoner), New Jersey (1 prisoner), New York (10 prisoners), Ohio (2 prisoners), Oregon (3 prisoners), Pennsylvania (5 prisoners), Texas (19 prisoners), and Washington (2 prisoners).

²²⁷ *Time-In-Cell*, *supra* note 2, at 55-56.

²²⁸ The jurisdictions that did not reply to this set of questions were Arkansas, Louisiana, Maine, Massachusetts, Michigan, New Hampshire, the Virgin Islands, and West Virginia.

²²⁹ Alaska, Illinois, Indiana, Kentucky, Montana, North Dakota, Washington, Wisconsin, Ohio, D.C., and Virginia provided some policies governing the use of restricted housing. New York directed us to a recently approved settlement agreement.

²³⁰ For example, Oregon reported that in “March 2015, we were selected as one of five correctional systems across the country to participate in the Vera Institute’s Safe Alternatives to Segregation Initiative. As part of the grant, we are receiving up to two years of technical assistance focused on analyzing our use of segregated housing and developing recommendations for its safe reduction, as well as initial assistance with implementation of those recommendations.” Washington stated that it had consulted a national expert on solitary confinement. In its update in the summer of 2016, Louisiana’s Director also indicated the state had been working with The Pew Charitable Trusts on issues related to incarceration.

²³³ *See also* Settlement Agreement, *Ashker v. Governor of California*, No: 4:09-cv-05796-CW (N.D. Cal. Sept. 1, 2015) at *4.

²³⁴ These changes were also related to litigation involving a challenge to the use of isolation for the seriously mentally ill. *See Disability Rights Network of Pennsylvania v. Wetzel*, Civil Case No. 1:13-CV-00635 (M.D. Pa. Jan. 5, 2015).

²³⁵ This limit on duration appeared to apply to disciplinary segregation, but not to other forms of restricted housing.

²³⁶ Alaska, Arizona, Connecticut, Illinois, New Jersey, North Carolina, Oklahoma, South Carolina, Virginia, and Washington, among others, reported implementing or modifying a form of step-down program for return from segregation to the general prison population.

²³⁷ Virginia Department of Corrections, Local Operating Procedure 830.A, effective December 1, 2013.

²³⁸ *Id.* Virginia stated that the program had included 485 individuals since it began in 2013, and that it had an 85% success rate, measured in people returned to the general population.

²⁹⁹ Leann K. Bertsch, *Humanity in North Dakota: Learning from Norway to Make Better Neighbors, Not Better Prisoners*, presented at the conference, International and Interdisciplinary Perspectives on Prolonged Solitary Confinement, University of Pittsburgh School of Law (Apr. 16, 2016) (unpublished manuscript) [hereinafter Bertsch, *Humanity in North Dakota*]. According to Director Bertsch and reflected in the policies provided, North Dakota revised the list of behaviors that permitted placement in administrative segregation to “Level III infractions,” which included (1) homicide; (2) escape from a maximum- or medium-custody facility; (3) taking hostages; (4) “assault or battery on staff which causes significant bodily injury or exposure to a biological contaminate, to include aggravated assault or predatory behavior resulting in sexual assault;” (4) “assault or battery on an inmate which causes significant intentional bodily injury or exposure to a biological contaminate, to include aggravated sexual assault or predatory behavior resulting in sexual assault;” (5) arson; (6) “inciting or participation in riots, work strikes, or disturbances;” and (7) “trafficking/smuggling contraband” into a maximum- or medium-security facility. See ASCA-Liman Survey: North Dakota Response with Statement of Policy,

Segregation Placement Strategic Planning at 1-2 (March 8, 2016). In addition, those policies also noted a few other offenses, including possession of guns or knives, and of behaviors that could put someone into segregation but only if evidence existed of the need to do so and the reasons for doing so. Discussed were “24 hour placements,” and efforts to understand tiered options. *Id.*

³⁹⁷ *Id.* Utah reported that of the 380 people kept in-cell 22 or more hours per day, 373 were men and seven were women. Utah also reported 683 people in units labeled as restricted housing but not necessarily in-cell 22 hours or more. Of these 683 people, 611 were men between the ages of 18 and 49, 65 were men over the age of 50, and seven were women between the ages of 18 and 49. Of the men in units labeled as restricted housing but not necessarily in-cell 22 hours or more, 47% were White, 34% were Hispanic, 7% were Black, 4% were Asian, and 8% were Other. The total male custodial population was 64% White, 20% Hispanic, 7% Black, 3% Asian, and 6% Other. Of the women in units labeled as restricted housing but not necessarily in-cell 22 hours or more, 57% were White, 43% were Hispanic, and zero were Black, Asian, or Other. The total female custodial population was 75% White, 13% Hispanic, 2% Black, 3% Asian, and 7% Other. Utah also reported that there were 367 men in its custodial population who had a “serious mental health issue” and that 71 of them were in restricted housing units. There were 57 women in Utah’s custodial population who had a “serious mental health issue” and none of them were in a restricted housing unit.

Appendix A: ASCA-Liman Restricted Housing Survey – Fall 2015

This survey aims to provide a national picture of the number of people in all forms of extended restricted housing, the length of their stay, and information on jurisdictions' policies in terms of changes underway or recently completed.

For purposes of this survey, “Extended Restricted Housing” is defined as separating prisoners from the general population and holding them in their cells for 22 hours per day or more, for 15 or more continuous days. The definition includes prisoners held in both single- or double-cells, if held for 22 hours per day or more in a cell, for 15 or more continuous days.

This survey requests information regarding all prisoners in your jurisdiction's correctional facilities, including both sentenced prisoners and pre-trial detainees. The goal is to have information on all of the facilities for which you have data on extended restricted housing, including facilities operated by private entities on behalf of the State, if that information is available. Therefore, in the first questions, we ask you to identify all the facilities in your jurisdiction—and then to identify all the facilities for which you have accessible data on the use of extended restricted housing.

Please answer all the questions with information about your jurisdiction that is current as of on or about **October 1, 2015**.

Please complete and return this survey by October 19, 2015.

1) Please indicate the jurisdiction for which you are filling out the survey:

2) Does your correctional system include the following facilities (check all that apply)?

Prisons Jails Juvenile facilities
Mental health facilities Privately-contracted facilities
Separate facilities for death-sentenced prisoners Other (please specify) ____

3) Please provide the total custodial population for all facilities in your system as identified in Question 2 (for example, if you indicated in Question 2 that your system includes prisons, jails, juvenile facilities, and mental health facilities, you would provide the total custodial population for those four types of facilities).

4) Please indicate the facilities for which you have data on the use of Extended Restricted Housing (check all that apply).

Prisons Jails Juvenile facilities
Mental health facilities Privately-contracted facilities
Separate facilities for death-sentenced prisoners Other (please specify) ____

Below are a series of questions about Extended Restricted Housing for the facilities that you identified in Question 4. We understand that you may not be able to answer all questions for all types that you identified in Question 4. (For example, you may have data on demographics or mental health for people in extended restricted housing in prisons but not in jails.) Please provide the information that you do have. After each question, you will be asked to indicate which types of facilities are included in your responses to that question.

- 5) Please provide the total custodial population (including men and women) in each type of facility identified in Question 4. (For example, if you indicated in Question 4 that you have data on the use of Extended Restricted Housing in prisons, jails, and juvenile facilities, you would provide the custodial population in these three types of facilities.)**

Prisons _____ Jails _____ Juvenile facilities _____

Mental health facilities _____ Privately-contracted facilities _____

Separate facilities for death-sentenced prisoners _____ Other (please specify) _____

- 6) Please provide the total custodial population (including men and women) in Extended Restricted Housing for all facilities identified in Question 4 (For example, if you indicated in Question 4 that you have data on the use of Extended Restricted Housing in prisons, jails, and juvenile facilities, you would provide the total custodial population in Extended Restricted Housing for each of these three types of facilities.)**

Prisons _____ Jails _____ Juvenile facilities _____

Mental health facilities _____ Privately-contracted facilities _____

Separate facilities for death-sentenced prisoners _____ Other (please specify) _____

7) Demographic Information

Part I of the table requests information on the total custodial population for all facilities that you identified in Question 4.

Part II of the table requests information regarding the number of prisoners in Extended Restricted Housing in those facilities.

	White	Black	Hispanic	Asian	Other	Total	Specify the groups included in "Other"
I. Total Prisoners							
Male (under 18 years old)							
Male (18-49 years old)							
Male (50 years or older)							
Female (under 18 years old)							
Female (18-49 years old)							
Female (50 years or older)							
Total							
II. Prisoners in Extended Restricted Housing							
Male (under 18 years old)							
Male (18-49 years old)							
Male (50 years or older)							
Female (under 18 years old)							
Female (18-49 years old)							
Female (50 years or older)							
Total							

8) How many prisoners, if any, (including both male and female, of every age) in Extended Restricted Housing are housed in double cells?

9) Mental Health Status

	White	Black	Hispanic	Asian	Other	Total	Specify the groups included in "Other"
I. Total Prisoners Identified as Having a Serious Mental Health Issue							
Male							
Female							
II. Prisoners in Extended Restricted Housing Identified as Having a Serious Mental Health Issue							
Male							
Female							

10) How many transgender prisoners or pregnant prisoners are in Extended Restricted Housing?

	Pregnant	Identified as Transgender
I. Total Prisoners		
II. Prisoners in Extended Restricted Housing		

11) Please provide the total number of prisoners, if any, who as of October 1, 2015 are not in Extended Restricted Housing as defined in this survey, but who have been segregated from the general population and held in cell (either in single- or double-cells) for the following periods:

	Number of Male and Female Prisoners
16-19 hours per day	
20-21 hours per day	

12) Do you regularly gather, collect, or report information on each prisoner's length of stay in Extended Restricted Housing?

13) Types of Extended Restricted Housing— Please provide the number of prisoners held in each type of Extended Restricted Housing for the specified period. Include both male and female prisoners.

Continuous/ Consecutive Days	Protective Custody	Disciplinary Custody	Administrative Segregation	Other Form of Restricted Housing	Total
15 days up to 1 month					
1 month up to 3 months					
3 months up to 6 months					
6 months up to 1 year					
1 year up to 3 years					
3 years up to 6 years					
6 year or more					

If the data includes prisoners in the “Other” form of Extended Restricted Housing category, please specify the type of Extended Restricted Housing _____.

14) Changes to Restricted Housing

From January 1, 2013 through October 1, 2015, has your jurisdiction changed any of its policies regarding Restricted Housing?

If so, please select the appropriate category. Please explain the change in policy and, if possible, email a copy of the relevant policies

Criteria for entry to Extended Restricted Housing ____

Oversight in Extended Restricted Housing ____

Criteria for release from Restricted Housing ____

Mandated time out of cell for Restricted Housing prisoners ____

Programming in Restricted Housing ____

Opportunities for social contact in Restricted Housing ____

Policies or training related to staffing of Restricted Housing ____

Physical environment of Restricted Housing ____

Programming for mentally ill prisoners who have been in Restricted Housing ____

Other ____

Please explain _____

15) Proposed Changes to Restricted Housing

Is your jurisdiction planning any changes to its policies regarding Restricted Housing?

If so, please select the appropriate category and explain the contemplated change in policy.

Criteria for entry to Restricted Housing ____

Oversight in Extended Restricted Housing ____
 Criteria for release from Restricted Housing ____
 Mandated time out of cell for Restricted Housing Prisoners ____
 Programming in Restricted Housing ____
 Opportunities for social contact in Restricted Housing ____
 Policies or training related to staffing of Restricted Housing ____
 Physical environment of Restricted Housing ____
 Programming for mentally ill prisoners who have been in Restricted Housing ____
 Other ____

Please explain _____

**16) We may have follow-up questions to clarify the information reported in this survey.
 Please provide the name, contact information, and title for the person to whom such
 questions should be directed.**

Appendix C: Jurisdictions' Definitions of Serious Mental Illness

	Definition
Alabama	“Mental Disorder. A mental disorder is a syndrome characterized by clinically significant disturbance in an individual’s cognition, emotion regulation, or behavior that reflects a dysfunction in the psychological, biological, or developmental processes underlying mental functioning. Mental disorders are usually associated with significant distress or disability in social, occupational, or other important activities. An expectable or culturally approved response to a common stressor or loss, such as the death of a loved one, is not a mental disorder. Socially deviant behavior (e.g., political, religious, or sexual) and conflicts that are primarily between the individual and society are not mental disorders unless the deviance or conflict results from a dysfunction in the individual.”
Arizona	“[T]hose inmates who possess a qualifying mental health diagnosis and a severe functional impairment directly relating to their mental illness.” It also includes those inmates who were deemed SMI in the community, but who do not necessarily meet the criteria in our system. SMI inmates are not housed in detention; they are grouped together in Restrictive Status Housing using a step program for out of cell time and privileges.”
Colorado	“The current diagnosis of any of the following DSM diagnoses accompanied by the P-code qualifier of M, denoting the presence of a major mental disorder: schizophrenia, schizoaffective disorder, delusional disorder, schizophreniform disorder, brief psychotic disorder, substance-induced psychotic disorder (excluding intoxication and withdrawal), unspecified schizophrenia spectrum and other psychotic disorder (previously psychotic disorder not otherwise specified), major depressive disorders, and bipolar disorders. Offenders, regardless of diagnosis, indicating a high level of mental health needs based upon high symptom severity and/or high resource demands, which demonstrate significant impairment in their ability to function within the correctional environment.” Colorado does NOT allow offenders with Serious Mental Illness to remain in Restricted Housing over 30 days.
Connecticut	“Inmates that are assessed by Mental health staff as having a mental health score of level 4 or 5. MH5 Assessment: Crisis level mental disorder (acute conditions, temporary classification). Requires 24 hour nursing care. MH4 Assessment: Mental Health disorder severe enough to require specialized housing or ongoing intensive mental health treatment; usually on psychotropic medications.”

District of Columbia	“People with DSM 4 Axis I disorders.”
Florida	“For the purpose of responding to these questions, the following definitions are provided: S-3 inmates are those that show impairment in adaptive functioning due to a diagnosed mental disorder. The S-4, S-5, and S-6 grades indicate severe impairment in adaptive functioning that is associated with a diagnosed mental disorder and require inpatient mental health treatment in a transitional care unit (TCU), a crisis stabilization unit (CSU), or the Correctional Mental Health Treatment Facility (CMHTF). Admission to a CMHTF requires judicial commitment.”
Georgia	“Offenders who have been diagnosed with a serious mental illness by a mental health professional and have a mental health level 3 or 4 classification profile.”
Hawaii	“A diagnosable mental disorder characterized by alternation in thinking, mood, or impaired behavior associated with distress and/or impaired functioning: primarily inclusive of schizophrenia, severe depression and bipolar disorder, and severe panic disorder, obsessive compulsive disorder, and post-traumatic stress disorder.”
Illinois	“A person shall be considered to be ‘Seriously Mentally Ill’ (‘SMI’) if he or she, as a result of a mental disorder as defined in the current edition of the Diagnostic and Statistical Manual of Mental Disorders (‘DSM’) of the American Psychiatric Association, exhibits impaired emotional, cognitive, or behavioral functioning that interferes seriously with his or her ability to function adequately except with supportive treatment or services. These individuals also must either currently have, or have had within the past year, a diagnosed mental disorder, or must currently exhibit significant signs and symptoms of a mental disorder. A diagnosis of alcoholism or drug addiction, developmental disorders, or any form of sexual disorder shall not, by itself, render an individual seriously mentally ill. The combination of either a diagnosis or significant signs and symptoms of a mental disorder and an impaired level of functioning, as outlined above, is necessary for one to be considered Seriously Mentally Ill.”
Iowa	“Serious mental illness is defined as chronic and persistent mental illnesses in the following categories: § Schizophrenia § Recurrent Major Depressive Disorders § Bipolar Disorders § Other Chronic and Recurrent Psychosis § Dementia and other Organic Disorders”
Kansas	“Mental Health Levels 3-7 and anyone under behavioral healthcare with medication”

Kentucky	<p>“Serious Mental Illness means a current diagnosis by a Department of Corrections psychological or psychiatric provider or a recent significant history of any of the following DSM-V (or most current revision thereof) diagnoses: Schizophrenia, Delusional Disorder, Schizophreniform Disorder, Schizoaffective Disorder, Brief Psychotic Disorder, Substance-Induced Psychotic Disorder (excluding intoxication and withdrawal), psychotic disorder Not Otherwise Specified, Bipolar I and Bipolar II disorders or a current diagnosis by a Department of Corrections psychological or psychiatric provider of a serious personality disorder that includes breaks with reality and results in significant functional impairment, or a current diagnosis by a Department of Corrections psychological or psychiatric providers of either an intellectual disability, a neurodevelopmental disability, or an amnesic or neurocognitive disorder that results in significant functional impairment. Per CPP 13.13”</p>
Maryland	<p>“In our manual, we use SMI to mirror the meaning defined in COMAR10.21.17.02 and in accordance with the most recent edition of the Diagnostic and Statistical Manual. These diagnoses include psychotic disorders, major mood disorders, and specifically identified personality disorders. These disorders would be: Schizophrenic disorder; Major Affective disorder; Other psychotic disorder; Borderline schizotypal personality disorder with the exclusion of an abnormality that is manifested only to be repeat criminal or otherwise antisocial conduct.”</p>
Massachusetts	<p>“The designation of SMI indicates the presence of nine mental illness from DSM 5 which are serious psychotic or mood disorders. In addition, serious character pathology which results in depressive or psychotic episodes, intellectual disabilities or other disorders that result in significant functional impairment may be designated as SMI.”</p>
Minnesota	<p>“The adult: (i) has a diagnosis of schizophrenia, bipolar disorder, major depression, schizoaffective disorder, or borderline personality disorder; (ii) indicates a significant impairment in functioning; and (iii) has a written opinion from a mental health professional, in the last three years, stating that the adult is reasonably likely to have future episodes requiring inpatient or residential treatment, of a frequency described in clause (1) or (2), unless ongoing case management or community support services are provided”</p>
Mississippi	<p>“Serious mental illness is a diagnosable disorder of thought, mood, perception, orientation, or memory that significantly impairs a person’s judgment, behavior, capacity to recognize reality, and/or ability to meet the ordinary demands of life currently or at any time during the past year.”</p>

Missouri	“Serious mental health offenders included all of our MH scores of 3, 4, and 5 which are defined below. MH5: Offenders requiring frequent mental health contacts, psychotropic medications and a structured living unit in a correctional institution. MH4: Offenders requiring intensive or long-term inpatient or residential psychiatric treatment at a social rehabilitation unit or special needs unit OR requires frequent psychological contacts and psychotropic medications to be maintained in a general population setting. MH3: Offender requires regular psychological services and/or psychotropic medication (or psychiatric monitoring).”
Montana	“ <u>Serious Mental Illness</u> —a clinical disorder of thought, mood or anxiety included under Axis I of the DSM, <i>e.g.</i> , schizophrenia, major depression, bi-polar disorder, PTSD, or panic disorder, and inmates who were previously diagnosed with such mental illness, unless there is certification in the record that the diagnosis has been changed or altered as a result of a subsequent mental health evaluation by a licensed mental health professional. It does not include personality disorders, <i>i.e.</i> , borderline, antisocial, or paranoid personality disorders.”
Nebraska	“ <u>Serious Mental Health Needs</u> —defines patients with basic psychotic disorders or mood disorders, those who self-injure, the aggressive mentally ill, those with post-traumatic stress disorders, and suicidal inmates. The disturbance causes clinically significant distress or impairment in social, occupational, or other important areas of functioning. <u>Mental Illness (MI)</u> —defined as it is referenced by the DSM-5. A syndrome characterized by clinically significant disturbance in an individual's cognition, emotional regulation or behavior that reflects a dysfunction in the psychological, biological, or developmental process underlying mental functioning. Mental illness is usually associated with significant distress or a disability in social, occupational, or other important activities.”
New Hampshire	“Defined by policy #6.31. This policy can be found on the NH-DOC website: http://www.nh.gov/nhd/doc/policies/documents/6-31.pdf ”
New Jersey	“NJDOC defines it as any inmate having a mental health problem which impairs the functioning of the inmate to the extent which the MH clinical team determines that treatment warrants admission to a mental health unit. The below mentioned numbers represent the total number of inmates in the mental health units for both males and females. It incorporates those on the SU, RTU and TCU units.”
New York [recheck]	“New York Correction Law states: An inmate has a serious mental illness when he or she has been determined by a mental health clinician

	<p>to meet at least one of the following criteria: (i) he or she has a current diagnosis of, or is diagnosed at the initial or any subsequent assessment conducted during the inmate's segregated confinement with, one or more of the following types of Axis I diagnoses, as described in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders, and such diagnoses shall be made based upon all relevant clinical factors, including but not limited to symptoms related to such diagnoses: (A) schizophrenia (all sub-types), (B) delusional disorder, (C) schizophreniform disorder, (D) schizoaffective disorder, (E) brief psychotic disorder, (F) substance-induced psychotic disorder (excluding intoxication and withdrawal), (G) psychotic disorder not otherwise specified, (H) major depressive disorders, or (I) bipolar disorder I and II; (ii) he or she is actively suicidal or has engaged in a recent, serious suicide attempt; (iii) he or she has been diagnosed with a mental condition that is frequently characterized by -s with reality, or perceptions of reality, that lead the individual to experience significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; (iv) he or she has been diagnosed with an organic brain syndrome that results in a significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; (v) he or she has been diagnosed with a severe personality disorder that is manifested by frequent episodes of psychosis or depression, and results in a significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; or (vi) he or she has been determined by a mental health clinician to have otherwise substantially deteriorated mentally or emotionally while confined in segregated confinement and is experiencing significant functional impairment indicating a diagnosis of serious mental illness and involving acts of self-harm or other behavior that have a serious adverse effect on life or on mental or physical health.”</p>
North Dakota	<p>“Our psychiatrist determined the below diagnoses for the definition of ‘Serious Mental Health Issue.’</p> <p>Any psychotic disorder to include references to the below:</p> <ul style="list-style-type: none"> • Schizophrenia • Schizoaffective • Schizophreniform • Brief Psychotic • Any reference to thought disorder • Any Bipolar Disorder • Major Depressive Disorder, Severe (with or without psychotic features)

	<ul style="list-style-type: none"> • Borderline Personality Disorder”
Ohio	<p>“Adults with a serious mental illness are persons who are age eighteen (18) and over, who currently or at any time during the past year, have a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within the most current Diagnostic and Statistical Manual of Mental Disorders and that has resulted in functional impairment which substantially interferes with or limits one or more major life activities. These disorders have episodic, recurrent, or persistent features; however, they vary in terms of severity and disabling effects.”</p>
Oklahoma	<p>“Offenders diagnosed as having mental illness, who require medication and who cycle in and out of stable functioning and Offenders with serious cognitive impairment due to developmental disorders, traumatic brain injury or medical illness and offenders who because of their mental illness require 24X7 monitoring and special housing.”</p>
Oregon	<p>“We included inmates who are coded as MH2 or MH3 in our system. The definitions can be found here: http://www.oregon.gov/doc/OPS/HESVC/docs/policies_procedures/Section_G/PG04%20Basic%20Mental%20Health%20Services%202014.pdf”</p>
Pennsylvania	<p>“Inmates determined by the Psychiatric Review Team (PRT) to have a current diagnosis or a recent significant history of any of the DSM-IV-TR diagnoses: a. Schizophrenia (all types) b. Delusional Disorder c. Schizophreniform Disorder d. Schizoaffective Disorder e. Brief Psychotic Disorder f. Substance-Induced Psychotic Disorder (excluding intoxication and withdrawal) g. Psychotic Disorder Not Otherwise Specified h. Major Depressive Disorders i. Bipolar I and II”</p>
Rhode Island	<p>“Per our Director of Behavioral Health: A serious mental illness is defined as a mental disorder that causes “substantial functional impairment (i.e., substantially interfered with or limited one or more major life activities). Such disorders as Schizophrenia, Paranoid and other psychotic disorders, Bipolar disorders (hypomanic, manic, depressive, and mixed), Major Depressive disorders (single episode or recurrent), Schizoaffective disorders (bipolar or depressive), Borderline Personality disorder and Schizotypal Personality disorder.”</p>
South Carolina	<p>“For this section we included inmates with any SCDC mental health classification indicating mental illness which ranges from stable (mentally ill but not requiring treatment) to hospitalization. Inmates with a SCDC mental health classification of substance abuse or intellectual disabilities/delays were not included in this group.”</p>

South Dakota	<p>“The criteria for participation in the comprehensive assistance with recovery and empowerment (CARE) program are used to identify severely mentally ill inmates. 46:20:31:01. Eligibility criteria. To be eligible for CARE services the client must be 18 years of age or older and must meet the following SMI criteria: (1) The client must meet at least one of the following: (a) The client has undergone psychiatric treatment more intensive than outpatient care and more than once in a lifetime, such as, emergency services, alternative residential living, or inpatient psychiatric hospitalization; (b) The client has experienced a single episode of psychiatric hospitalization with an Axis I or Axis II diagnosis per the DSM-IV pursuant to subdivision 46:20:18:01(13); (c) The client has been treated with psychotropic medication for at least one year; or (d) The client has frequent crisis contact with a community mental health center, or another mental health provider, for more than six months as a result of a mental illness; and (2) The client must meet at least three of the following criteria: (a) The client is unemployed or has markedly limited job skills or poor work history; (b) The client exhibits inappropriate social behavior which results in concern by the community or requests for mental health or legal intervention; (c) The client is unable to obtain public services without assistance; (d) The client requires public financial assistance for out-of-hospital maintenance or has difficulty budgeting public financial assistance or requires ongoing training in budgeting skills or needs a payee; (e) The client lacks social support systems in a natural environment, such as close friends and family, or the client lives alone or is isolated; or (f) The client is unable to perform basic daily living skills without assistance.”</p>
Tennessee	<p>“According to Tennessee Department of Correction policy: Serious Mental Illness is a substantial disorder of thought or mood that significantly impairs judgment, behavior, capacity to recognize reality or cope with the ordinary demands of life within the correctional environment and is manifested by substantial impairment or disability. Serious mental illness requires a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within the most current Diagnostic and Statistical Manual (DSM) or their International Classification of Disease (ICD) equivalent (and subsequent revisions) in accordance with an individualized treatment plan.”</p>
Texas	<p>“Serious Mental Health Issue includes offenders receiving inpatient mental health services.”</p>
Utah	<p>“If the offender had a DSM Axis I or II mental health diagnosis.”</p>
Vermont	<p>“Seriously Functionally Impaired Designation per 28 V.S.A. Subsection</p>

	906(1): (A) A disorder of thought, mood, perception, orientation, or memory as diagnosed by a qualified mental health professional, which substantially impairs judgment, behavior, capacity to recognize reality, or ability to meet the ordinary demands of life and which substantially impairs the ability to function within the correctional setting. (B) A developmental disability, traumatic brain injury or other organic brain disorder, or various forms of dementia or other neurological disorders, as diagnosed by a qualified mental health professional, which substantially impairs the ability to function in the correctional setting.”
Virginia	“VADOC uses mental health codes that indicate level of functioning and not diagnoses—26% of VADOC’s total offender population maintain a mental health code.”
Washington	“All offenders who meet the criteria for the Active Treatment Group AND who have had one Mental Health or Psychiatry encounter coded with a Serious Mental Illness (SMI) diagnosis code in the 6 months prior to the report end date.”
West Virginia	“WVDOC uses NCCHC definition of SMI which states that those individuals that have basic psychotic or mood disorders (manic, depressive, self-injurious, PTSD, suicidal), would be classified as having Serious Mental Illness.”
Wisconsin	<p>“Our definition of ‘Serious Mental Health Issue’ includes the following:</p> <p>MH-2A - Inmates with serious mental illness based on Axis I conditions</p> <p>A. Inmates with a current diagnosis of, or are in remission from, the following conditions:</p> <ul style="list-style-type: none"> • Schizophrenia (all sub types) • Delusional disorder • Schizophreniform disorder • Schizoaffective disorder • Psychosis NOS • Major depressive disorders • Bipolar disorder 1 & 2 <p>B. Inmates with current or recent symptoms of the following conditions:</p> <ul style="list-style-type: none"> • Brief psychotic disorder • Substance induced psychotic disorder <p>C. Inmates with head injury or other neurologic impairments that result in behavioral or emotional control.</p> <p>D. Inmates with chronic and persistent mood or anxiety disorders or other conditions that lead to significant functional disability.</p> <p>MH-2B - Inmates with serious mental illness based on Axis II</p>

	<p>conditions</p> <p>A. Inmates with a primary personality disorder that is severe, accompanied by significant functional impairment, and subject to periodic decompensation (i.e. psychosis, depression, or suicidality).</p> <p>Note: Those who qualify for both MH-2A and MH-2B are coded MH-2A.”</p>
Wyoming	<p>“Schizophrenia (all sub types) • Delusional disorder • Schizophreniform disorder • Schizoaffective disorder • Psychosis NOS • Major depressive disorders • Bipolar disorder 1 & 2”</p>
Federal Bureau of Prisons	<p>“Inmates with current or recent symptoms of the following conditions:</p> <ul style="list-style-type: none"> • Brief psychotic disorder • Substance induced psychotic disorder”
Virgin Islands	<p>“Severe mental illness is characterized by one or more of the following:</p> <ul style="list-style-type: none"> • cognitive impairment, • a break with reality, including hallucinations and/or delusions. <p>These symptoms may be acute or chronic in their presentation, cause functional impairment, and could pose a threat to the patients safety in the general population in a correctional setting.”</p>

Association of State Correctional Administrators (ASCA)

ASCA is the most exclusive correctional association in the world. ASCA members are the leaders of each U.S. state corrections agency, Los Angeles County, the District of Columbia, New York City, Philadelphia, the Federal Bureau of Prisons, U.S. Military Correctional Services (Army, Navy, Air Force, Marines), and United States territories, possessions, and commonwealths. ASCA members lead over 400,000 correctional professionals and supervise approximately eight million prisoners, probationers, and parolees. ASCA's goal is to increase public safety by utilizing correctional best practices, accountability, and providing opportunities for people to change.

The Arthur Liman Center for Public Interest Law, Yale Law School

The Liman Center was endowed to honor Arthur Liman, who graduated from Yale Law School in 1957. Throughout his distinguished career, he demonstrated how dedicated lawyers, in both private practice and public life, can respond to the needs of individuals and of causes that might otherwise go unrepresented. The Liman Center, which began as the Liman Program in 1997, continues the commitments of Arthur Liman by supporting work, in and outside of the academy, dedicated to public service in the furtherance of justice.

Acknowledgements

This report is based on a survey co-authored by ASCA and the Liman Center at Yale Law School. The research and report teams were led at ASCA by Leann Bertsch, Kevin Kempf, Bob Lampert, Gary Mohr, Rick Raemisch, A.T. Wall, and Wayne Choinski, and at Yale by Judith Resnik, Anna VanCleave, Kristen Bell, and Alexandra Harrington. Yale Law students Greg Conyers, Catherine McCarthy, Jenny Tumas, and Annie Wang played major roles in the research, analysis, and drafting of this Report. Yale Law students Faith Barksdale, Stephanie Garlock, and Daniel Phillips reviewed and edited the final drafts. We also

received helpful suggestions from the Vera Institute of Justice.

Thanks are due to all the jurisdictions that responded to the survey and provided comments and reviews thereafter. This research has been supported by Yale Law School, the Liman Center, the Vital Projects Fund, and the Oscar M. Ruebhausen Fund at Yale Law School. This monograph was also made possible in part by a grant from Carnegie Corporation of New York to Judith Resnik, who is a 2018–2020 Andrew Carnegie Fellow. The Vital Projects Fund, the Ruebhausen Fund, and Carnegie Foundation are not responsible for the research and views expressed here. Special thanks are due to Bonnie Posick of Yale Law School's staff for expert editorial advice and to Elizabeth Keane, Program Coordinator of the Liman Center.

Executive Summary

Reforming Restrictive Housing: The 2018 ASCA-Liman Nationwide Survey of Time-in-Cell

This Report is the fourth in a series of research projects co-authored by the Association of State Correctional Administrators (ASCA) and the Arthur Liman Center at Yale Law School. These monographs provide nationwide data on “restrictive housing,” defined in this Report as separating prisoners from the general population and holding them in their cells for an average of 22 hours or more per day for 15 continuous days or more. This practice is often termed “solitary confinement.” *Reforming Restrictive Housing* documents the changes underway as prison administrators aim to limit the use of segregation and find alternatives to the isolation of restrictive housing.

In 2013, the first report of the series, *Administrative Segregation, Degrees of Isolation, and Incarceration*, analyzed the restrictive housing policies of 47 jurisdictions. The 2013 Report found that the criteria for placement in isolation were broad. Getting into segregation was relatively easy, but few policies addressed release. In contrast, in 2018, directors around the country reported narrowing the bases for placement in restrictive housing, increasing oversight, and limiting time spent in isolation. In some places, behaviors that once put people into restrictive housing—from “horse play” to possession of small amounts of marijuana—no longer do. And for those people in restrictive housing, efforts are reportedly underway in some jurisdictions to create more out-of-cell time and more group-based activities.

Since 2013, ASCA and the Liman Center have conducted national surveys of the number of people in restrictive housing. The 2015 report, *Time-in-Cell*, estimated that 80,000 to 100,000 prisoners were in segregation across the country. The 2016 report, *Aiming to Reduce Time-in-Cell*, identified almost 68,000 people held in isolation.

For the 2017–2018 data collection, ASCA-Liman sent surveys to the 50 states, the Federal Bureau of Prisons (FBOP), the District of Columbia, and four jail systems in large metropolitan areas. The 43 prison systems that provided data on prisoners in restrictive housing held 80.6% of the U.S. prison population. They reported that 49,197 individuals—4.5% of the people in their custody—were in restrictive housing. Across all the reporting jurisdictions, the median percentage of the population held in restrictive housing was 4.2%; the average was 4.6%. The percentage of prisoners in restrictive housing ranged from 0.05% to 19%. Extrapolating from these numbers to the systems not reporting, we estimate that some 61,000 individuals were in isolation in prisons in the fall of 2017.

Thirty jurisdictions reported when they began to track how long people had been in restrictive housing. Some jurisdictions began tracking this information as recently as 2017. Within the responding jurisdictions, most people were held in segregation for a year or less. Twenty-five

jurisdictions counted more than 3,500 individuals who were held for more than three years. Almost 2,000 of those individuals had been there for more than six years.

The 2017–2018 survey also gathered information about gender, race and ethnicity, and age. Men were much more likely than women to be in solitary confinement. Black prisoners comprised a greater percentage of the restrictive housing population than they did the total custodial population. The reverse was true for White prisoners. Likewise, in the jurisdictions reporting on ethnicity, Hispanic male prisoners represented a greater percentage of the restrictive housing population than they did the total custodial population. Prisoners between the ages of 18 and 36 were more likely to be segregated than were older individuals.

Reforming Restrictive Housing also documents the many and varying definitions of “serious mental illness.” Using each jurisdiction’s own definition, we learned that more than 4,000 people with serious mental illness are in restrictive housing.

Other subpopulations counted were pregnant prisoners and transgender individuals. Responses indicated a total of 613 pregnant prisoners, none of whom were in restrictive housing. Prison systems reported incarcerating roughly 2,500 transgender individuals, of whom about 150 were reported to be in segregation.

In addition to the prison systems responding, the jail systems in Los Angeles County and Philadelphia provided restrictive housing data. In these two systems, the restrictive housing population ranged from 3.6% to 6.2 % of the total jail population. Both jurisdictions described revising their restrictive housing policies, including by limiting its use for people with serious mental illness. One of the jail systems explained that, given the turnover in some jail populations, the administrators faced challenges in avoiding direct release from restrictive housing into the community.

The 2018 Report tracks the impact of the 2016 American Correctional Association’s (ACA) Restrictive Housing Performance Based Standards. Thirty-six prison systems reported reviewing their policies since the release of the ACA Standards. More than half had implemented one or more reforms to align with the ACA. Those Standards reflect the national consensus to limit the use of restrictive housing for pregnant women, juveniles, and seriously mentally ill individuals, as well as not to use a person’s gender identity as the sole basis for segregation.

In this Report and the related 2018 ASCA-Liman monograph, *Efforts in Four Jurisdictions to Make Changes*, the directors of the prison systems in Colorado, Idaho, Ohio, and North Dakota detail how they were limiting and, in Colorado, abolishing holding people in cells 22 hours or more for 15 days or more. These individual accounts reflect the broader trend of policy changes.

This Report puts the data collected from the 2017–2018 survey in the context of national and international actions regulating the use of restrictive housing. Correctional systems around the country are engaging in targeted efforts to reform their practices of isolating prisoners. Examples

of such efforts are contained in the Vera Institute of Justice's 2018 monograph, *Rethinking Restrictive Housing*.

In other instances, reforms have come from state legislatures. Some statutes now place limits on the length of time individuals can be held in segregation, require reviews of placement decisions, and ban the use of isolation for juveniles and other subpopulations. Litigation has also resulted in decisions that highlight the harms of restrictive housing and, in some cases, prohibit its use. Parallel efforts and mandates can be found outside the United States—from implementation of the Nelson Mandela Rules to litigation and reform through policy changes.

The ASCA-Liman surveys provide a longitudinal database to enable evidence-based analysis of the practice of holding people in isolation. This Report compares the responses of the 40 prison systems that answered the ASCA-Liman surveys in both 2015 and 2017. In those 40 systems, we learned about 56,000 people in restrictive housing in 2015. The number of prisoners reported to be in restrictive housing decreased by almost 9,500 to 47,000 people in 2017. The percentage of individuals in isolation decreased from 5.0% to 4.4%.

The changes are not uniform. In more than two dozen states, the numbers of people in restrictive housing decreased. In 11 states, the numbers went up. What accounts for the changing numbers is unclear. Variables include new policies and practices, litigation, legislation, fluctuations in the overall prison population, and staffing patterns. For example, in 20 of the 29 jurisdictions in which restrictive housing numbers declined, so too did the total prison population. In two of the 11 jurisdictions that had an increase in restrictive housing numbers, the total prison population increased as well.

The amount of time spent in restrictive housing is of increasing concern. Not all correctional systems track length of confinement. Nineteen jurisdictions reported that they began tracking in 2013 or thereafter. In 31 jurisdictions responding to questions about length of time in both 2015 and 2017, the number of individuals in restrictive housing for three months or less increased. The number of people in isolation for longer than three months decreased. The decreases were greatest for time periods longer than six months.

Correctional administrations' efforts to reduce the numbers of people in restrictive housing are part of a larger picture in which legislatures, courts, and other institutions are seeking to limit holding people in cells 22 hours or more for 15 days or more. These endeavors reflect the national and international consensus that restrictive housing imposes grave harms on individuals confined, on staff, and on the communities to which prisoners return. Once solitary confinement was seen as a solution to a problem. Now prison officials around the United States are finding ways to solve the problem of restrictive housing.

I. Understanding Restrictive Housing Over Time and Across Jurisdictions

The ASCA-Liman Research Agenda

ASCA and the Liman Center at Yale Law School have worked together on a variety of projects and seminars related to the interactions among prisoners, correctional departments, communities, and courts. Research studies have included 50-state surveys of correctional departments' policies on visiting incarcerated people¹ and on restrictive housing, and we have joined together to convene workshops and make presentations at conferences.²

This report is the fourth in a series of ASCA-Liman research projects focused on “restrictive housing” (known in the general literature as “solitary confinement”), defined in this report as placing individuals in cells for an average of 22 hours or more per day for 15 continuous days or more. Our goals have been to gather information and to build a database so that discussions of these practices are informed by accurate information on the use of restrictive housing that permits evidence-based analyses of policies and practices.

Over the course of the past several years, ASCA and the Liman Center have asked each of the correctional departments in the fifty states, the Federal Bureau of Prisons, and a few jail systems to answer survey questions about their populations and to provide policies so as to paint a composite picture at particular intervals and to have the ability to do longitudinal assessments. Through surveys every two years, we can learn about changes in the rules governing restrictive housing and the impact of changes on the people who live and who work in prisons and on the communities to which prisoners return.

Our first report of the series, *Administrative Segregation, Degrees of Isolation, and Incarceration: A National Overview of State and Federal Correctional Policies*,³ in 2013 was based on responses from 47 jurisdictions. By analyzing the policies, we learned that criteria for entry were generally broad, permitting confinement based on nonspecific concerns about “threats to security.” Staff had broad discretion to determine both the placement and the duration of confinement.⁴ Getting in was easy, but few of the policies detailed how individuals were to be released from isolation, once segregated.⁵

In 2014, the ASCA-Liman survey asked departments of corrections more than 130 questions about the numbers of people in restrictive housing and the conditions in which they lived. Our 2015 *Time-In-Cell* Report provided an overview of the data collected.⁶ Answers came from 34 jurisdictions, housing 73% of the prison population, where more than 66,000 individuals were held in various types of restrictive housing.⁷ We thus estimated that approximately 80,000 to 100,000 prisoners were in isolation in prison systems across the country.⁸ The U.S. Department of Justice relied on the ASCA-Liman research when formulating its rules for federal facilities,⁹ and many news outlets, including the *Wall Street Journal*,¹⁰ the *New York Times*,¹¹ and *USA Today*,¹² discussed the findings.

The 2016 Report, *Aiming to Reduce Time-in-Cell*,¹³ sought updated numbers and information on the demographics and duration of confinement among prisoners in restrictive housing. We learned that, as of the fall of 2015, 67,442 people were held in restrictive housing in 48 jurisdictions, which housed about 96% of the United States prison population.¹⁴ Data on duration of confinement came from a subset of 41 jurisdictions, housing 54,382 people in segregation.¹⁵ Of the people for whom we had duration data, 9,638 or 18% were held in restrictive housing for 15 to 30 days; 15,725 or 29% for one to three months; 15,978 or 29% for three months to one year; 7,132 or 13% for one to three years; and 5,909 or 11% were in isolation for three years or more.¹⁶ As the 2016 Report's title reflects, several corrections department were changing policies governing the criteria for placement in restrictive housing, oversight, programs for prisoners, and pathways to release.¹⁷ The 2016 Report was also widely distributed and discussed.¹⁸

The 2017–2018 Survey's Design and Distribution

For the 2017–2018 data collection, a subcommittee of ASCA members and Liman Center staff worked together to refine the survey questions. Again, we sought to gather information about the numbers and demographics of people held in restrictive housing, the length of time people spent in restrictive housing, and whether, how, and why policies governing restrictive housing were changing. While the questions generally followed their prior format, we had learned that some inquiries were insufficiently clear, and we identified new topics about which to ask.

For example, because our focus is on the people held in isolation for almost the entire day, the definition of restrictive housing for the 2016 survey needed to be improved. Instead of defining restrictive housing as “separating prisoners from the general population and holding them in their cells for 22 hours per day or more for 15 or more continuous days,”¹⁹ we shifted from the “22 hours per day” formulation to “an average of 22 hours.”²⁰ In addition, because the American Correctional Association (ACA) adopted new Standards on restrictive housing in August of 2016,²¹ we also sought to learn about whether jurisdictions relied on the ACA Standards in formulating their own policies.

As in the past, ASCA-Liman used a Qualtrics online platform to distribute the survey to the corrections departments in all 50 states, the District of Columbia, and the Federal Bureau of Prisons. In addition, because of the large numbers of individuals detained in jails, we sent surveys to the four large metropolitan jail systems that are ASCA members.²² Asking 76 questions, we sought data as of the fall of 2017 from each jurisdiction.²³

Responses to at least some of the questions came in the fall of 2017 from 46 of the 52 prison jurisdictions²⁴ and from two of the four major metropolitan area jails;²⁵ materials related to the two jails are discussed separately. Thereafter, we emailed each jurisdiction a customized follow-up survey, seeking clarifications of specific responses. Forty-three jurisdictions responded with information on the total number of people in restrictive housing. According to statistics on prison populations from the Bureau of Justice Statistics (BJS), those jurisdictions housed about 80 percent of the total prison population.²⁶ Thirty-four jurisdictions completed follow-up surveys. We

then followed up again via email and telephone calls with jurisdictions from which clarifications were needed.

Research Challenges and Caveats

As in past reports, the analyses are based on self-reports from each jurisdiction, describing its population, its policies, and their impact. We did not do site visits or obtain information from other data sources.²⁷ By way of conclusion, we put the data collected here in context through an overview of some of the recent research, legislation, and court decisions that are part of national and international work on restrictive housing.

We remind readers that sketching a national picture is made complex because of variations across jurisdictions in definitions, the kinds of restrictive housing, and methods of keeping information. In an effort to standardize answers across jurisdictions, we provided definitions of restrictive housing, age cohorts, and the like. However, in light of the various definitions used for identifying individuals with “serious mental illness,” we asked each jurisdiction to provide its own definition, listed in Appendix C. Further, in many instances we have information from a subset of jurisdictions, in that some respondents reported that they either did not keep or could not provide responses to all the inquiries.

Another important reminder is that, while we have gathered more national data than are otherwise available, we cannot account for all the persons held in restrictive housing. Our materials come primarily from prison system administrators, and most prison systems do not include jails, which are often run at the local level, or juvenile facilities. We know that as of midyear 2016, about 740,700 people were confined in county and city jails in the United States; some of these detainees were held in isolation.²⁸ As noted, we did send surveys to four major metropolitan jail systems that are ASCA members. We received information from two, which enabled us to provide a snapshot of restrictive housing in the jails in Los Angeles and in Philadelphia. We also did not gather data on restrictive housing in immigration and military facilities. Moreover, some jurisdictions gave information on less than all of their prison population as of the fall of 2017, and, in some jurisdictions, large numbers of state prisoners are sent to local jails, to private facilities, or to other venues about which information on restrictive housing was not available.

II. The Data from the 2017–2018 ASCA-Liman Survey

The Numbers and Percentages of Prisoners in Restrictive Housing: Counting and Comparing General and Restrictive Populations

The survey asked jurisdictions to report, as of the fall of 2017, both on their total prison populations and on the number of prisoners held in restrictive housing. The definition provided of restrictive housing was “separating prisoners from the general population and holding them in their cells for an average of 22 or more hours per day for 15 or more continuous days.”²⁹

Of the 46 responding jurisdictions, 43 provided data on both the total custodial population and the numbers of prisoners in restrictive housing.³⁰ These 43 jurisdictions reported housing a total of 1,087,671 prisoners, of whom 49,197 were in restrictive housing—or 4.5% of the prisoners confined across this set.³¹

According to the Bureau of Justice Statistics, as of December 31, 2016, the total state and federal prison population in the United States was 1,506,757.³² Using that baseline, the 43 responding jurisdictions housed 80.6% of the total prison population in the United States.

By assuming that the same percentage of prisoners are placed in restrictive housing in the jurisdictions for which we lack data as those for which we do have data and that the distribution of prisoners across states was the same in December 2016 and fall 2017, we estimate that approximately 61,000 prisoners were in restrictive housing across the United States in the fall of 2017.³³

One clarification is in order. This Report uses “total custodial population” to refer to the number of people under each system’s direct control and for whom the jurisdiction provided 2017 restrictive housing data. The 2016 BJS overview used a broader definition that reflected the total number of people under the legal authority of a prison system. In this report, 43 jurisdictions told us about 1,087,671 prisoners in their total custodial populations, which is less than the BJS December 2016 aggregate of those systems. When using the total custodial population as counted by the 43 jurisdictions, this report describes not 80.6% of the U.S. prison population, but rather data on 72.2%.

We provide jurisdiction-specific data on the numbers of prisoners in restrictive housing in Figure 1, Figure 2, and Table 1, below. The numbers are taken from responses to two survey questions about the restrictive housing population and the total custodial population: “How many people are in restrictive housing in those facilities?” and “Please provide the total custodial population under your direct control.” The survey asked about both “short-term restrictive housing,” (15–29 days) and “extended restrictive housing” (30 or more days). Figure 1, Figure 2, and Table 1 include the sum of both of these forms of restrictive housing. In responses to other questions, some jurisdictions provided numbers that did not add up to the same totals reflected in the answers that are the basis for Figure 1. We note such variations in endnotes to the relevant tables and figures.

The percentage of prisoners in restrictive housing—calculated as the number in restrictive housing divided by the total custodial population reported by each respective jurisdiction—ranged

from 0.05% to 19.0%.³⁴ Across all the reporting jurisdictions, the median percentage of the population held in restrictive housing was 4.2%; the average was 4.6%. To make readily accessible the numbers on restrictive housing, we provide one figure ordered alphabetically and another ordered by the percentage of prisoners in restrictive housing.

Figure 1 Percentages of Prisoners in Restrictive Housing by Jurisdiction
(n = 43)

* A caveat is in order for Figure 1, Figure 2, and Table 1. Responding jurisdictions were not consistent in using our definition of short-term restrictive housing, 15–29 days, as contrasted with the definition of 1–29 days. Jurisdictions were asked about both “short-term” and “extended” restrictive housing. Some jurisdictions understood the definition of “short-term” to refer to 15–29 days, while others understood the definition to refer to 1–29 days. The majority of jurisdictions were able to clarify their answer after their initial survey response and, if they utilized the 1–29 day definition, provide the restrictive housing population number consistent with the definition of 15–29 days. We note with an asterisk those jurisdictions that were unable to clarify which definition they used, as well as Idaho, which used the definition of 1–29 days.³⁵

** Louisiana counted 14,291 men in its custody in prisons and 20,122 prisoners in local jails. Thus, as of fall 2017, 34,413 individuals were serving prison sentences, and 58.5% of these prisoners were in jails rather than in prisons. Louisiana reported that 2,709 (19%) of the men in its prisons were in restrictive housing. Louisiana did not provide restrictive housing data for its female prison population. Louisiana staff identified 784 “restrictive housing beds” in the jails. The number of beds that were occupied was not reported. If one assumed that all the restrictive housing beds for state-sentenced prisoners in the jails were full and combined the jail and prison population, the percentage of people in restrictive housing would go down from 19% to 10.2%. Shaded bars in the figures mark the different possibilities.

* See notes to Figure 1

Length of Time in Restrictive Housing

The survey asked jurisdictions about how many prisoners were held in-cell for different lengths of time. The intervals ran from 15–30 days to six years or more. Answers came from 36 jurisdictions that, in total, held 41,061 prisoners in restrictive housing.

More than a fifth (9,345 or 22.8%) of those prisoners were in restrictive housing for 15 days to one month. Almost 32% (12,968 people or 31.6%) were in restrictive housing for one to three months. About a quarter (11,055 or 26.9%) were in restrictive housing for three months to a year. Almost 10% (3,972 or 9.7%) were held for one to three years. The responses identified 3,721 people (9.1% of 41,061 people) were held for more than three years. Of that number, 1,950 were reported to have been in restrictive housing for more than six years.

The survey also asked whether jurisdictions “regularly gather, collect, or report information on each prisoner’s length of stay in restrictive housing.” Forty-five jurisdictions answered this question,³⁸ and 37 reported collecting data individually, in aggregate, or grouped by reason for placement or by another measure.³⁹ Eight jurisdictions reported that they do not regularly track information on length of stay,⁴⁰ yet some of this subgroup supplied numbers for the fall of 2017.⁴¹

Thus, the data on length of stay come both from jurisdictions that reported tracking length of stay regularly and from a few that did not. In addition, some jurisdictions have begun to keep such data in more recent years, and hence their numbers may reflect the time period for which they have gathered the data, rather than the actual length of time that individuals were held in restrictive housing.⁴² The length-of-time intervals are reported in Figure 3 below and by jurisdiction in Table 2. Table 3 details responses from thirty jurisdictions providing information on when they began to collect length-of-time data, which may or may not include retrospective information.

The Demographics of Restrictive Housing

As in prior reports, we sought to learn about the people placed in restrictive housing in terms of their sex/gender, race, and age, and whether they were identified as having serious mental illness. Below, we provide a composite picture drawn from the jurisdictions that responded about the populations under their direct control. Once again, we note when jurisdictions provided data that varied from the questions posed.

Sex/Gender

Thirty-four jurisdictions provided data on men in restrictive housing and 32 of those systems did so for women. As shown in Figure 4 below, 4.6% of the total male custodial population was in restrictive housing, and 1.2% of the total female custodial population was in restrictive housing in these jurisdictions.

Figure 4 Percent of Total Population in Restrictive Housing by Gender
(Male: n = 34; Female: n = 32)

Figure 5, Figure 6, and Table 4 provide jurisdiction-by-jurisdiction information about the number of men in restrictive housing. Across the 34 jurisdictions providing data about the numbers of men, a total of 37,690 men were reported in restrictive housing. The median percentage of male prisoners in restrictive housing was 4.2%. The percentage held in restrictive housing ranged from 19% of the male custodial population (2,709 out of 14,291 male prisoners) to under 0.1% (10 out of 16,624 male prisoners).⁴⁵ To make the information readily accessible, Figure 5 and Figure 6 provide the same information, arranged alphabetically and then in decreasing order of the percentage of the male custodial population in restrictive housing.

Figure 5 Percentage of Male Prisoners in Restrictive Housing by Jurisdiction* (n = 34)

Figure 6 Percentage of Male Prisoners in Restrictive Housing by Percentage * (n = 34)

* As discussed in the notes to Figure 1, the bar for Louisiana represents two different calculations for Louisiana's percentage of male prisoners in restrictive housing.

Among the 32 jurisdictions that provided data about the number of women in restrictive housing, a total of 790 women were reported in isolation. The median percentage of female prisoners in restrictive housing in responding jurisdictions was 1.1%. The percentage held in restrictive housing ranged from 4.6% of the female custodial population (59 out of 1,280 female prisoners) to 0% of the female custodial population.⁴⁷ Jurisdiction-by-jurisdiction information is provided in Figure 7 and Figure 8, arranged by jurisdiction and by percentages, and in Table 5.

Race and Ethnicity

The survey asked about race and ethnicity data by sex/gender for the total custodial and the restrictive housing populations. Thirty-three jurisdictions responded to questions about the racial and ethnic composition of male prisoners in restrictive housing, and 32 jurisdictions responded to questions about race and ethnicity among female prisoners in restrictive housing. Figure 9 and Figure 10 describe the number of prisoners by sex/gender in each racial group in the total custodial population and in restrictive housing.

We asked jurisdictions about the categories of White, Black (African-American), Hispanic or Latino, Asian, Native American or Alaskan Native, Native Hawaiian or Pacific Islander, and Other. Table 6 details the number of jurisdictions that used each category. Endnotes explain the differences when jurisdictions varied their categories.⁴⁹ As detailed, some jurisdictions relied on self-reports, and others categorized individuals based on correctional records or on appearance.⁵⁰

Table 6 Number of Jurisdictions Reporting on Racial or Ethnic Groups
(n = 33)

Category	Number of Jurisdictions
White	33
Black (African-American)	33
Hispanic or Latino	32
Asian	30
Native American or Alaskan Native	29
Native Hawaiian or Pacific Islander	16
Other	25

Figure 9 Racial and Ethnic Composition of Male Prisoners in Total Custodial Population and in Restrictive Housing Population (n = 33)

Figure 10 Racial and Ethnic Composition of Female Prisoners in Total Custodial Population and in Restrictive Housing Population (n = 32)

Among the 33 jurisdictions reporting on race and ethnicity among male prisoners in the total custodial population and in restrictive housing, Black men comprised 46.1% of the male restrictive housing population, as compared to 42.5% of the total male custodial population in those jurisdictions. In 24 of the 33 jurisdictions reporting on the racial composition of male prisoners in the total custodial population and in restrictive housing, the male restrictive housing population had a greater percentage of Black prisoners than did the total male custodial population in each of those jurisdictions. In 9 of the 33 jurisdictions, the male restrictive housing population had a lower percentage of Black prisoners than did the total male custodial population in each of those jurisdictions. Across all jurisdictions, the difference between the percentage of the male restrictive housing population that was Black and the percentage of the total male custodial population that was Black ranged from +14.5 percentage points to -9.4 percentage points. Figure 11 maps those spreads in the 31 jurisdictions where 25 or more people were reported in restrictive housing.

One of the 33 reporting jurisdictions did not use “Hispanic” as a racial category.⁵¹ Among the remaining 32, Hispanic male prisoners comprised 18.7% of the male restrictive housing population, as compared to 17.2% of the total male custodial population. In 17 of the 32 reporting jurisdictions, the male restrictive housing population had a greater percentage of Hispanic prisoners than did the total male custodial population in each of those jurisdictions. In 14 of the 32 jurisdictions, the male restrictive housing population had a lower percentage of Hispanic prisoners than did the total male custodial population in each of those jurisdictions. In one jurisdiction, the percentage was the same.

Across all jurisdictions, the difference between the percentage of the male restrictive housing population that was Hispanic and the percentage of the total male custodial population that was Hispanic ranged from +15.8 percentage points to -3.8 percentage points. Figure 12 maps those spreads in the 30 jurisdictions where 25 or more people were reported in restrictive housing.

Figure 11 Differences in Restrictive Housing and Total Male Custodial Population for Black Male Prisoners (n = 31)*

*The jurisdictions included in this graph reported more than 25 people in restrictive housing.

Figure 12 Differences in Restrictive Housing and Total Male Custodial Population for Hispanic Male Prisoners (n = 30)*

*The jurisdictions included in this graph reported more than 25 people in restrictive housing.

In 29 of the 33 reporting jurisdictions, the male restrictive housing population contained a smaller percentage of White prisoners than the total male custodial population. As detailed below, jurisdictions reported a small percentage of Asian, Native American or Alaskan Native, and Native Hawaiian or Pacific Islander prisoners in their general prison populations and a similarly small percentage in their populations in restrictive housing.⁵² Those categorized as “Other” appeared to be comparable in percentages in the general and in the restrictive housing populations. Given the small numbers of individuals, we do not provide details.

Table 7 lists by jurisdiction and by race/ethnicity the number of male prisoners in the general population and in restrictive housing. Table 8 compares the percentages by race and ethnicity of all male prisoners and of those in restrictive housing.

Thirty-two jurisdictions provided data about race and ethnicity among women in restrictive housing. As with the male restrictive housing population, the percentage of Black female prisoners among all female prisoners in restrictive housing (39.8%) was higher than the percentage of Black female prisoners among all female prisoners in the total custodial population (22.8%). In 19 of the 32 reporting jurisdictions, the female restrictive housing population contained a greater percentage of Black prisoners in restrictive housing than were in the total female custodial population. In 13 of the 32 jurisdictions, the female restrictive housing population had a lower percentage of Black prisoners than did the total female custodial population.

One of the 32 reporting jurisdictions did not use “Hispanic” as a racial category.⁵⁴ Among the remaining 31, Hispanic prisoners comprised 11.6% of the female restrictive housing population, as compared to 14.3% of the total female custodial population. In 14 of the 31 reporting jurisdictions, the female restrictive housing population contained a greater percentage of Hispanic prisoners than the total female custodial population. In 17 jurisdictions, the female restrictive housing population had a lower percentage of Hispanic prisoners than did the total female custodial population.

In 24 of the 32 reporting jurisdictions, the female restrictive housing population contained a smaller percentage of White prisoners than the total female custodial population. The percentages of other ethnicities were small and roughly comparable in both general and restrictive housing populations. Figure 10 provides an overview of these numbers, and Table 9 and Table 10 provide information by jurisdiction. Because in many jurisdictions the total number of women in restrictive housing is under 25, we do not display pictorially the relative differences across jurisdictions.

Age

The question of the placement of juveniles, variously defined as from under 18 to under 24, has come to the fore in a variety of contexts. For example, the ACA has called for the prohibition of confinement of persons under the age of 18.⁵⁶ The elderly incarcerated are yet another locus of concern.

To understand the age distribution in restrictive housing, we asked jurisdictions to provide information about the age of prisoners in cohorts ranging from under 18 to over 50. We sought to understand the distribution of age cohorts within restrictive housing populations as well as in the total custodial population. Thirty-four jurisdictions responded with the numbers of male prisoners in the respective age cohorts, and 32 jurisdictions provided the numbers of female prisoners.

The 34 responding jurisdictions housed a total of 842,941 male prisoners in their total custodial populations, delineated by age cohorts as follows: 105,827 male prisoners were between the ages of 18 to 25; 269,179 male prisoners were between the ages of 26 to 35; 306,980 male prisoners were between the ages of 36 to 50; and 158,298 male prisoners were over the age of 50. Four jurisdictions reported holding a total of 18 individuals (16 boys and two girls) under the age of 18 in restrictive housing.⁵⁷

Within these 34 jurisdictions, 6.4% (6,734) of male prisoners between the ages of 18 to 25 in the total custodial population were in restrictive housing; 5.6% (14,957) of male prisoners between the ages of 26 to 35 were in restrictive housing, 4.0% (12,339) of male prisoners between the ages of 36 to 50 were in restrictive housing, and 2.3% (3,605) of male prisoners over the age of 50 were in restrictive housing.

The 32 jurisdictions that provided information about the age distribution of women in restrictive housing housed a total of 66,189 female prisoners in their total custodial populations in the following age cohorts: 8,024 female prisoners between the ages of 18 to 25; 24,960 female prisoners between the ages of 26 to 35; 24,146 female prisoners between the ages of 36 to 50; and 8,880 female prisoners over the age of 50.

Of those, 2.2% (173) of women between the ages of 18 to 25 in the total custodial population were in restrictive housing, 1.4% (352) of women between the ages of 26 to 35 were in restrictive housing, 0.9% (215) of women between the ages of 36 to 50 were in restrictive housing, and 0.9% (77) of women over the age of 50 were in restrictive housing.

We provide the aggregate information in Figure 13 and Figure 14. We provide jurisdiction-by-jurisdiction data in Table 11, Table 12, Table 13, and Table 14.

Subpopulations

The rules governing the placement of individuals in restrictive housing reflect concerns about its harms to individuals. Certain subpopulations may face additional challenges, as evidenced by regulations focused on limiting the placement of these groups in restrictive housing. In this section, we provide an overview of data on incarcerated people identified as mentally ill as well as on the use of restrictive housing for pregnant women and transgender individuals.

Prisoners with Mental Health Issues

Reports identify a large number of incarcerated people who have mental health issues, with a recent estimate as high as one-third of the prison population.⁶⁰ Even as debate exists as to what level of distress should create buffers to placement in restrictive housing, a consensus has emerged that individuals identified as having serious mental illness should not be placed into restrictive housing.

Illustrative of these concerns are the 2016 ACA Restrictive Housing Performance Based Standards, which called for regular “behavioral health assessments” for individuals placed in restrictive housing. Standard 4-RH-0010 provides that corrections departments should have written policies to ensure that “a mental health practitioner/provider” evaluates and files written reports on prisoners “placed in restrictive housing within 7 days of placement.”⁶¹ If an individual is held “beyond 30 days, a behavioral health assessment by a mental health practitioner/provider” is to be completed “at least every 30 days” for individuals diagnosed with a “behavioral health disorder and more frequently if clinically indicated.” If an assessment concludes that a person has no “behavioral health disorder,” reassessments are to occur “every 90 days and more frequently if clinically indicated.” Those evaluations are to take place in “a confidential area.”⁶²

Further, the ACA Standards detail that, “at a minimum,” the mental health provider is to inquire into whether a person has a present “suicide ideation” or a “history of suicidal behavior,” is on “prescribed psychotropic medication,” has a current “mental health complaint,” is being treated for “mental health problems,” has “a history of inpatient and outpatient psychiatric treatment,” or has a history of “treatment for substance abuse.” The mental health provider must also observe an individual’s “general appearance and behavior” and look for “evidence of abuse and/or trauma” or “current symptoms of psychosis, depression, anxiety, and/or aggression.”⁶³ The provider is then to conclude whether a referral to mental health care is necessary and whether “emergency treatment” is needed.⁶⁴

The ACA Standards also provide that once a person is placed in restrictive housing, both written policies and practices should require that prisoners are “personally observed by a correctional officer twice per hour, but no more than 40 minutes apart, on an irregular schedule.”⁶⁵ Individuals who are “violent or mentally disordered or who demonstrate unusual or bizarre behavior or self-harm” are to be observed more often.⁶⁶ Prisoners who are “suicidal” are to be under continuous observation, all of which is to be logged.⁶⁷ The need for observation is a decision for a “qualified mental health professional.”⁶⁸ Unless “medical attention is needed more frequently,” each person in restrictive housing is to be visited daily by health care personnel in an

announced and recorded visit⁶⁹ and weekly by a “mental health staff” member, unless more frequent visits are called for by health personnel.⁷⁰

The ACA Standards also state that “the agency will not place a person with serious mental illness in Extended Restrictive Housing,” defined as “housing that separates the offender from contact with the general population while restricting an offender/inmate to his/her cell for at least 22 hours per day and for more than 30 days for the safe and secure operation of the facility.”⁷¹ The ACA defines serious mental illness as “Psychotic Disorders, Bipolar Disorders, and Major Depressive Disorder; any diagnosed mental disorder (excluding substance use disorders) currently associated with serious impairment in psychological, cognitive, or behavioral functioning that substantially interferes with the person’s ability to meet the ordinary demands of living and requires an individualized treatment plan by a qualified mental health professional(s).”⁷²

To gather information about the use of restrictive housing for persons identified as facing mental health challenges, the 2017–2018 ASCA-Liman survey asked each jurisdiction about people whom it deemed to have “serious mental illness” (SMI), including the total number as well as the gender and race of the seriously mentally ill population both in the total custodial population and in restrictive housing.⁷³ Thirty-three jurisdictions provided data on both the total custodial population with SMI and the population with SMI in restrictive housing for male prisoners, and 31 for female prisoners.⁷⁴

An additional word of explanation is needed about this aspect of the questionnaire. After surveying jurisdictions in 2015 and again in 2017, we learned that the definitions of serious mental illness vary substantially, as do the policies governing placement of individuals with mental health issues—classified as “serious” or otherwise—in restrictive housing. In addition to correctional department rules, some legislatures provide statutory direction and, in some jurisdictions, litigation has resulted in specified definitions and constraints.⁷⁵

For example, some jurisdictions provide a sentence or two explaining their definition of serious mental illness, such as, “chronic mental health treatment or inpatient mental health treatment.”⁷⁶ Other jurisdictions have more detailed descriptions, such as any “mental health condition that current medical science affirms is caused by a biological disorder of the brain and that substantially limits the life activities of the person with the serious mental illness. Serious mental illness includes but is not limited to (i) schizophrenia, (ii) schizoaffective disorder, (iii) delusional disorder, (iv) bipolar affective disorder, (v) major depression, and (vi) obsessive compulsive disorder.”⁷⁷ Yet others have several paragraphs or pages of descriptions.⁷⁸

Given this variation in scope and detail, a person could be classified as seriously mentally ill in one jurisdiction but not in another. We therefore have neither aggregated nor scaled the data but rather provide, in Table 15 and Table 16, the numbers of persons in the general population with serious mental illness and the numbers placed in restrictive housing, as provided by each jurisdiction’s own account. We provide the definitions used in 43 jurisdictions in Appendix C.

We also sought to learn about the intersection of race, ethnicity, gender, and mental illness. Thirty-one jurisdictions provided information by race and ethnicity about male prisoners with serious mental illness, and 28 jurisdictions provided information by race and ethnicity about female prisoners with serious mental illness. Table 17 and Table 18 provide the information, jurisdiction-by-jurisdiction.

Pregnant Women

Restrictive housing has sometimes been used as a placement for prisoners identified as “different” on various metrics, including being pregnant. In 2016, the ACA Standards provided that “female inmates determined to be pregnant”⁸¹ should not be housed in extended restrictive housing.

We sought to learn how many pregnant prisoners were in the custodial population as a whole and how many were placed in restrictive housing. In the 41 jurisdictions that had sufficiently detailed and consistent information to describe, three reported that, as of the fall of 2017, they housed no pregnant prisoners in their total custodial populations.⁸² The other 38 jurisdictions reported that they counted a total of 613 pregnant women prisoners.⁸³ None of the 41 jurisdictions reported that, as of the fall of 2017, any pregnant prisoners were held in restrictive housing.

Transgender Prisoners

As with pregnancy, “protection” has been a basis for putting other persons with specific needs in restrictive housing. Concerns about the misuse of restrictive housing as a placement for transgender individuals prompted the ACA to promulgate a Standard that prisoners not be “placed in Restrictive Housing on the basis of Gender Identity alone.”⁸⁴ Therefore, the ASCA-Liman survey sought to learn about transgender prisoners in the total custodial population and in restrictive housing.

Of the 43 jurisdictions responding about transgender prisoners in the total custodial population,⁸⁵ four indicated that they either did not track or could not report the number of transgender prisoners in their total custodial populations.⁸⁶ One jurisdiction reported having no transgender prisoners in its total custodial population.⁸⁷ The remaining 38 jurisdictions reported a total of 2,444 transgender prisoners in their total custodial populations. When jurisdictions described different methods to identify transgender prisoners, those differences are documented in endnotes.⁸⁸

Five of these 43 jurisdictions indicated that they either did not track or could not report the number of transgender prisoners in their restrictive housing populations.⁸⁹ Of the remaining 38 jurisdictions, 17 reported that no transgender prisoners were in restrictive housing.⁹⁰ The other 21 jurisdictions identified a total of 157 transgender prisoners in restrictive housing. Within those 21 systems, nine states each counted one to three transgender prisoners in segregation, another nine states reported six to ten, and three states identified 19–24 people in this category.⁹¹

A Snapshot of Two Jails

According to the Bureau of Justice Statistics (BJS), as of 2016, the 2,850 jail systems in the United States held an average daily population of 731,300 people.⁹² According to an earlier BJS report based on survey responses from people confined in jails in 2011–2012, on an average day, some 2.7% of these individuals were held in administrative segregation or solitary confinement.⁹³

BJS has identified six jurisdictions (Alaska, Connecticut, Delaware, Hawaii, Rhode Island, and Vermont) as “integrated systems,” in which correctional departments are in charge of prisons and jails.⁹⁴ Of the 46 state jurisdictions responding to the survey, four—Delaware, Hawaii, Maryland, and Rhode Island—indicated that they had included jail populations in their counts of total custodial populations.⁹⁵ Alaska and Connecticut, also responding, did not discuss jails as under their “direct control” and did not count people in jails in their responses. Given that these integrated jurisdictions are predominately prison systems and we have some but not comprehensive data delineating the characteristics of their jail populations, this section focuses on the information from the two jail systems that separately responded to our survey.

Demographics

We sent surveys to the four major metropolitan jails that are ASCA members, and we received responses from Los Angeles and Philadelphia.⁹⁶ Los Angeles reported that, as of March 2018, it had 17,278 people in its jails, or about 2.4% of the national jail population. As of September 2017, Philadelphia held 6,695 people, or about 0.9% of the national jail population. Thus, these two systems accounted for about 3.3% of the people in jails across the country. Each system also provided demographic information (detailed in Tables 19 and 20) about the sex/gender, race, ethnicity, and age of those in their jails.

The 2017–2018 ASCA-Liman survey defined short-term restrictive housing as “separating prisoners from the general population and holding them in their cells for an average of 22 or more hours per day,” for 15–29 continuous days. The survey defined long-term restrictive housing as “separating prisoners from the general population and holding them in their cells for an average of 22 or more hours per day,” for longer than 29 days. Both jurisdictions relied on the definition of 15–29 days in confinement for short-term restrictive housing.

Los Angeles reported that 619 people (3.6%) out of its total custodial population of 17,278 were in restrictive housing, and it provided delineations of those populations by age and gender. Philadelphia reported that 416 detainees (6.2%) out of its total custodial population of 6,695 were in restrictive housing, but did not provide demographic information on these individuals.⁹⁷ Neither jurisdiction provided information on how long individuals stayed in restrictive housing.⁹⁸ Table 20 details the gender and the age of both the custodial population and, for Los Angeles,⁹⁹ the restrictive housing population.

Mental Illness in Jails

The survey also asked the jails for information about certain subpopulations. As in the survey of prison systems, we asked each jurisdiction for its own definition of serious mental illness. Los Angeles, referencing the outcome of a lawsuit in its definition,¹⁰⁰ stated that

“Serious mental illness” includes psychotic disorders, major mood disorders (including major depression and bipolar disorders), and any other conditions (excluding personality disorders, substance abuse and dependence disorders, dementia, and developmental disability) that is associated with serious or recurrent significant self-harm, suicidal ideation, imminent danger to others, current grave disability, or that prevents access to available programs. Although personality disorders alone generally do not qualify as serious mental illness, personality disorders associated with serious or recurrent significant self-harm do qualify as serious mental illness.

Los Angeles reported that, of its 17,278-person jail population, 4,000 people—23.2%—had serious mental illness, and that no one was in restrictive housing whom it identified as having serious mental illness and who “also displayed signs of suicidal ideations, was gravely disabled,” was in danger of “recurrent self-harm, or had an active psychosis.”

Philadelphia defined serious mental illness as “having a diagnosis from one of the following categories: Bipolar, Schizophrenia, Psychosis, Depression, Borderline Personality.” Philadelphia reported that it housed 1,136 people—17.0%—with serious mental illness in its custodial population. The jail system also reported that of the 6,096 men who were in jail, 939—15.4%—were classified as seriously mentally ill, and that of the 599 women who were in jail, 197—32.9%—were classified as seriously mentally ill. Philadelphia did not report the number of individuals in restrictive housing with a serious mental illness.

Pregnant and Transgender People

Los Angeles reported “approximately” 60 transgender individuals in its total custodial population, and that fewer than five transgender individuals were in short-term restrictive housing (15–29 days), and fewer than five people were in long-term restrictive housing (longer than 29 days). Philadelphia reported that it does not track transgender individuals “in a manner that is easily reportable.”

Los Angeles reported 12 pregnant individuals, none of whom were in restrictive housing. Philadelphia explained that, in terms of pregnant people, that “data could not be sorted to respond to this question.”¹⁰¹

Revising Policies

Although Philadelphia indicated that it had not made any changes to its policies regarding restrictive housing since January 1, 2016, it explained that it had reviewed its policies after the ACA released its 2016 Performance Based Standards and had relied on them. Philadelphia

reported implementing the ACA prohibition on extended restrictive housing (more than 29 continuous days) for individuals under the age of 18. Philadelphia said that it had substantially implemented, with exceptions, ACA prohibitions on the use of extended restrictive housing for those diagnosed as seriously mentally ill. Philadelphia stated that it also aimed not to release individuals from restrictive housing directly into the community. Philadelphia responded that, before the 2016 ACA revisions, its policy had been not to use extended restrictive housing for females determined to be pregnant.

Los Angeles detailed several changes in its policies. Los Angeles stated that it had shifted its entry criteria from those based on general information about prisoners (“intel based”) to those based on prisoners’ “behavior.” In terms of process, placement required approval from a “Restrictive Housing Panel” and pre-entry mental health screening prior to moving an individual into restrictive housing. Within five days of initial placements, Los Angeles stated that it required individualized needs assessments.¹⁰²

Los Angeles reported increasing the total time out-of-cell by three hours per week. Los Angeles stated that its programs included activities focused on self-help, religion, education, and anger-management. Los Angeles said it had added “self-directed educational programs for volunteers,” and access to more “entertainment” or literary materials to “those who show positive behavior.”

Los Angeles reported it had developed a “STEP program” for release from restrictive housing in which an individual who had demonstrated positive behavior would participate for two to four months in “several graduated programming groups in increasing size.” Although Los Angeles did not change its policy to mandate that detainees be told the criteria for their release, it indicated that the pamphlets it gave detainees included this information.

Los Angeles stated that it had reviewed its policies since the ACA released its 2016 Performance Based Standards, and that it uses these Standards “as a guide.” Los Angeles reported implementing the ACA Standard prohibiting the use of extended restrictive housing (more than 29 continuous days) for females determined to be pregnant. Los Angeles said that it had not implemented the ACA Standard about direct release from restrictive housing into the community. Los Angeles stated that it “found this standard to be extremely difficult to implement in a jail setting due to the unknown and often short stays of jail inmates.” Los Angeles indicated that, by providing “an increase in out-of-cell time,” it had substantially implemented, with exceptions, the policy prohibiting the placement of those diagnosed as seriously mentally ill in extended restrictive housing. Los Angeles noted that it provided 32 hours of mental health training for staff and two-year staff rotations for those working in restrictive housing units.

Both jails were asked, “In an ideal situation (i.e. if you had the necessary resources, and if you could do so consistent with institutional safety), what number of hours out-of-cell do you believe is desirable for prisoners?” Los Angeles responded that it believed six to eight hours out-of-cell per day is desirable. Philadelphia responded, “General population inmates generally get 9–11 hours each day out of their cells.”

III. Revising Policies on Restrictive Housing

ASCA-Liman surveys have sought to learn about changes in the restrictive housing policies of corrections departments. As reflected below, dozens of departments have expressed concerns about restrictive housing and reported policy revisions, some of which aim to reduce and, in some instances, to eliminate holding people in cells an average of 22 hours or more per day for 15 days or more.

In the 2014 Report, *Time-in-Cell*, we noted that the majority of the jurisdictions surveyed had convened or planned to convene a task force to review their use of isolation.¹⁰³ Two years later, jurisdictions reported more efforts underway, as reflected in the title of the 2016 Report, *Aiming to Reduce Time-in-Cell*. Jurisdictions described narrowing criteria for placement in restrictive housing and increasing oversight; creating step-down and release procedures; and increasing time out-of-cell and opportunities for activities inside restrictive housing.¹⁰⁴

In the 2017–2018 ASCA-Liman survey, we again asked about reforms. Our questions focused on entry, oversight, programs, and release, as well as on the impact of the 2016 ACA Performance Based Standards. The survey also queried jurisdictions about what they would like to do, if resources were available, in terms of time out-of-cell. Forty-four jurisdictions responded to at least some of the questions about changes in policies.¹⁰⁵ Several jurisdictions provided their regulations and additional materials.¹⁰⁶ Some jurisdictions also noted that they were influenced by guidance from the U.S. Department of Justice, the National Institute of Corrections, the National Commission on Correctional Health Care, and the Vera Institute of Justice. Below, we synthesize the answers to detail the changes reported,

Entry and Oversight

In 2014, we learned that the criteria for placing prisoners in isolation were broad, as was the discretion afforded correctional staff to place individuals in administrative segregation. Few policies focused on pathways out of isolation.¹⁰⁷ For the 2017–2018 survey, we sought to learn about whether and how criteria for placement in restrictive housing had changed since 2016. Thirty-nine jurisdictions responded to at least one of the questions discussed below, and 23 reported making revisions to placement processes.¹⁰⁸

We asked whether jurisdictions had removed “behaviors . . . from the list of infractions qualifying prisoners for restrictive housing placement” or had otherwise narrowed the criteria for entry.¹⁰⁹ Sixteen jurisdictions reported that they had done so.¹¹⁰ Examples included eliminating some behaviors from categories prompting isolation. One jurisdiction had deleted “horse play, possession of small amounts of marijuana, etc.” from infractions leading to restrictive housing.¹¹¹ As another explained, it has shifted its rules so that acts which “qualify an inmate for RH are those that are considered violent or compromise security in a significant manner.”¹¹² A third jurisdiction noted that non-violent behavior was less likely to result in being sent to restrictive housing,¹¹³ and another stated it no longer used restrictive housing when prisoners misbehaved in ways that did not “pose a direct threat.”¹¹⁴ Similarly, one jurisdiction reported that it had “discontinued the use

of solitary confinement as a punishment for disciplinary infractions” altogether.¹¹⁵ In contrast, one jurisdiction reported that, because of increased prison violence, it had changed criteria to increase the length of stay in what it called “long-term RHU.”¹¹⁶ Another jurisdiction had “added three more behaviors, when ‘chronic’ or severe”: fighting, possession of “gang-related material,” and “disobeying staff directive/insolence to staff.”¹¹⁷

We also inquired about decision-making by asking about the authority and the steps taken in the decision-making process. Sixteen jurisdictions reported that they had created policies requiring senior-level approval of restrictive housing decisions.¹¹⁸ Twenty jurisdictions reported that the outcomes of mental health screenings affected their decisions to put individuals into restrictive housing.¹¹⁹ Fourteen jurisdictions reported that they conducted mental health screenings prior to placement in restrictive housing.¹²⁰ Four jurisdictions stated that they performed mental health screenings upon placement in restrictive housing.¹²¹ Jurisdictions also mentioned screenings before placement for issues such as medical status,¹²² disability, and PREA (Prison Rape Elimination Act) requirements.¹²³

Twenty-one jurisdictions reported having put in place policies requiring consideration of less restrictive alternatives prior to placement in restrictive housing.¹²⁴ Examples were use of a “Restricted Privileges dorm”¹²⁵ and mental health special housing.¹²⁶ One jurisdiction had a set of alternatives: “confinement” in general population cells “for a specified period,” “‘blue room’ placement,” meetings with a counselor, and placement in a “protective custody housing unit.”¹²⁷ Another jurisdiction considered, for drug trafficking and related offenses, placement in a special “Drug Suppression Unit” within its general population.¹²⁸

Twenty-eight jurisdictions also reported changes in how they monitored placements in restrictive housing.¹²⁹ Changes included the frequency of reviews¹³⁰ (from weekly, to every 30 days, to every 90 days, to annually, to as needed); the individuals or groups undertaking reviews;¹³¹ and a new grievance procedure for prisoners in restrictive housing.¹³² Twenty-two jurisdictions reported increased monitoring of the mental health of prisoners in restrictive housing¹³³ through regular rounds or visits from mental health care professionals (from daily to weekly¹³⁴) and placement reviews every 30 days.¹³⁵

Time Out-of-Cell, Sociability, and Programming

We asked a number of questions about whether time out-of-cell had increased and what types of out-of-cell activities or unstructured time were organized. Forty jurisdictions responded to at least one of these questions. Twenty reported that they had implemented policies to increase time out-of-cell for prisoners, and many others described changing how that time was structured.¹³⁶

Twenty jurisdictions reported adding more structured time out-of-cell,¹³⁷ such as programs or therapy, and six described permitting meals in social settings.¹³⁸ Eleven jurisdictions noted increasing “unstructured (recreational)” time out-of-cell,¹³⁹ and ten referenced more outdoor recreation opportunities.¹⁴⁰ Eleven jurisdictions stated that some classes were available.¹⁴¹

Thirteen reported adding an out-of-cell GED or diploma program for prisoners in restrictive housing.¹⁴²

A focus for many jurisdictions was sociability and group programming. Nine jurisdictions reported that they had increased times for visitors.¹⁴³ Ten jurisdictions said that they had increased phone time for prisoners.¹⁴⁴ Twenty-four jurisdictions stated that they had added out-of-cell group programming or classes,¹⁴⁵ such as “career readiness,”¹⁴⁶ correspondence courses,¹⁴⁷ horticulture,¹⁴⁸ and classes on “thinking errors” and “criminal attitudes.”¹⁴⁹ Sixteen jurisdictions noted more group recreation opportunities.¹⁵⁰

Twenty-two jurisdictions reported that they had added “in-cell learning opportunities.”¹⁵¹ Among these 22 jurisdictions, new in-cell educational opportunities included distance learning at both the GED and post-secondary levels,¹⁵² as well as vocational certification testing.¹⁵³ Materials available for in-cell use included videos,¹⁵⁴ tablets or smartboards,¹⁵⁵ and paper packets.¹⁵⁶

Staff Training

Twenty-nine jurisdictions (out of 35 responding to the question) reported adding some form of mental health training for staff.¹⁵⁷ Several jurisdictions described receiving guidance on this issue from groups such as the Department of Justice, the National Institute of Corrections, other government agencies, and the National Commission on Correctional Health Care.¹⁵⁸

Education programs for staff included topics such as the functioning of a restrictive housing unit,¹⁵⁹ basic general training on mental health,¹⁶⁰ understanding risks of suicide,¹⁶¹ crisis intervention,¹⁶² and what is called “motivational interviewing”—a style of clinical counseling.¹⁶³ One jurisdiction reported that its “Behavioral Intervention Unit staff” received “training on the risks of mental health deterioration for those who are exposed to prolonged stays in isolation and the importance of reducing isolation by having an increase in out-of-cell activities, structured activities, and staff interaction.”¹⁶⁴ Another reported that “staff working with offenders under age 18 receive specialized training on youth brain development.”¹⁶⁵ One jurisdiction noted that it helped pay for training if mental health personnel sought “additional training on their own.”¹⁶⁶ Fourteen jurisdictions said that they had implemented staff rotation policies,¹⁶⁷ with intervals ranging from 56 days¹⁶⁸ to five years.¹⁶⁹

Release

The survey also sought to learn about how individuals exit restrictive housing. Thirty-seven jurisdictions responded to at least one of these questions.

Twenty jurisdictions reported that they had implemented policies “mandating that prisoners be told the criteria for their release in advance.”¹⁷⁰ Twenty-one jurisdictions reported making changes to their policies on who decides whether a prisoner exits restrictive housing so that “the decision to release or transition an individual from restrictive housing” was “now made by a committee, rather than by an individual.”¹⁷¹

Over half of the jurisdictions surveyed reported that they had added step-down¹⁷² or transitional programs to the release process.¹⁷³ Some of these programs involved progressive levels or phases with increasingly less-restrictive conditions;¹⁷⁴ and some entailed separate housing units.¹⁷⁵ For example, one jurisdiction reported that its step-down plan, which ranged “from 30 to 360 days” included “increasing privileges, amenities, and movement,” was “individually tailored to the offender’s needs and may include education, cognitive skills, and/or mental health programming.”¹⁷⁶ Another jurisdiction reported:

Generally, behavior intervention unit residents who served more than 30 days disciplinary segregation or who have been on administrative segregation status will have a period of time residing in a transition unit. The transition unit is a step down program to help prepare people who have been living in the behavior intervention unit for general population. A person may be eligible for transition based on their placing behavior, assessment of risk, and participation and progress in the behavior modification wing. Individuals residing in the transition unit have access to general population activities and the opportunity to attend a regular treatment group and receive support from the unit staff. Individuals residing on the transition unit are reviewed weekly for general population housing options by the placement and review team. Opportunities for structured enrichment activities, development and implementation of success plans and increased support from facility staff exist while being housed in the transition unit.¹⁷⁷

Twenty-eight jurisdictions responded with information about step-down programs they had implemented or were developing.¹⁷⁸

The survey asked jurisdictions whether, since January of 2016, they had put into place “maximum durations on restrictive housing” and to specify what they were. Thirteen jurisdictions reported establishing some kind of limit on length of stay in restrictive housing, based on factors such as subpopulation, category of restrictive housing, or type of infraction.¹⁷⁹ For example, one jurisdiction described establishing a maximum duration for “locked housing.”¹⁸⁰ Another stated it had implemented a 30-day maximum length of stay for prisoners with serious mental illness.¹⁸¹ Other jurisdictions said they had implemented maximums for disciplinary restrictive housing ranging from 60 days to 10 years.¹⁸² Some jurisdictions reported implementing maximum durations for the phases of restrictive housing.¹⁸³ A few other jurisdictions reported a limit for a given offense but did not preclude consecutive sanction.¹⁸⁴ Some jurisdictions required administrative review of continued placement in restrictive housing. The frequency of reviews varied from a few months to almost a year.¹⁸⁵

Implementing the 2016 ACA Restrictive Housing Performance Based Standards

The ACA, an accrediting body for “correctional facilities, detention centers and community correctional programs” as well as “probation and parole agencies, health care programs and electronic monitoring programs,”¹⁸⁶ assesses compliance with its Performance Based Standards

by reviewing accredited systems every three years.¹⁸⁷ In 2016, the ACA adopted new Standards on restrictive housing.¹⁸⁸ The 2017–2018 ASCA-Liman survey asked whether jurisdictions had reviewed their internal restrictive housing policies since the ACA revisions and, if so, whether jurisdictions relied on the ACA Standards when developing policies.¹⁸⁹ We also focused on four ACA Standards related to release to the community, mental health, juveniles, and pregnancy, and asked whether jurisdictions had implemented each policy; “substantially implemented this policy with exceptions;” already had the policy in place prior to the 2016 ACA revisions; or had not implemented the policy.

Thirty-six jurisdictions reported that they had reviewed their restrictive housing policies since the release of the 2016 ACA Standards.¹⁹⁰ Twenty-five jurisdictions reported that they relied on the ACA Standards when making jurisdiction-specific policies;¹⁹¹ nine jurisdictions reported that they considered the Standards, relied on them in part, or used them as a resource in making policies.¹⁹² Eight jurisdictions reported that they did not consult or rely on the ACA Standards.¹⁹³

Under the 2016 ACA Standard 4-RH-0030, a jurisdiction’s “written policy, procedure and practice require that the agency will attempt to ensure offenders are not released directly into the community from Restrictive Housing.”¹⁹⁴ Forty-one jurisdictions responded to the survey question about this Standard. Twenty-six of the 41 jurisdictions reported that they had implemented this policy,¹⁹⁵ and five jurisdictions reported that they had “substantially implemented this policy, with exceptions.”¹⁹⁶ Some of the jurisdictions reporting that they had partially implemented this Standard explained that release directly to the community could not always be avoided.¹⁹⁷

With regard to mental health, the 2016 ACA Standards defined “serious mental illness” as:

Psychotic Disorders, Bipolar Disorders, and Major Depressive Disorder; any diagnosed mental disorder (excluding substance use disorders) currently associated with serious impairment in psychological, cognitive, or behavioral functioning that substantially interferes with the person’s ability to meet the ordinary demands of living and requires an individualized treatment plan by a qualified mental health professional(s).¹⁹⁸

ACA Standard 4-RH-0031 states that a jurisdiction’s correctional “agency will not place a person with serious mental illness in Extended Restrictive Housing.”¹⁹⁹ Twenty-one jurisdictions told us that they had implemented this Standard.²⁰⁰ Four jurisdictions reported that they had “substantially implemented this policy, with exceptions.”²⁰¹ We should note that it is not clear if jurisdictions used the ACA definition of serious mental illness or their own definitions which varied widely. *See Appendix C.*²⁰²

As for age, the 2016 ACA Standard 4-RH-0034 states that confining individuals “under the age of 18 years of age in Extended Restrictive Housing is prohibited.”²⁰³ Of the 40 jurisdictions responding, 22 reported that they had implemented the Standard,²⁰⁴ and two jurisdictions reported that they had “substantially implemented this policy, with exceptions.”²⁰⁵

With regard to pregnancy, ACA Standard 4-RH-0033 states that prisoners “determined to be pregnant will not be housed in Extended Restrictive Housing.”²⁰⁶ Twenty-five of the 41 jurisdictions that responded to this question said that they had implemented it.²⁰⁷ Four jurisdictions reported that they had “substantially implemented this policy, with exceptions.”²⁰⁸

Evaluating the Effects of Policy Changes

The survey asked whether jurisdictions had studied the effects of reforms in terms of incidents of violence, prisoner self-harm, prisoner and staff morale, the numbers of persons (or subsets of persons) placed in restrictive housing, the length of time spent confined, successes of prisoners on release to the general population and in returning to communities, and the costs of restrictive housing.

The 14 jurisdictions responding to this question reported that they had or were undertaking studies.²⁰⁹ Nine jurisdictions reported a focus on incidents of violence in prison.²¹⁰ Six had studied the effects on prisoner self-harm,²¹¹ three on prisoner morale,²¹² five on staff morale,²¹³ six on prisoner success upon return to the community,²¹⁴ six on prisoner success with coping with life in prison,²¹⁵ seven on duration of time in restrictive housing,²¹⁶ and two on administrative costs.²¹⁷ Four jurisdictions reported studying the numbers or subsets of people placed in restrictive housing.²¹⁸

Conducting research on the many variables affecting restrictive housing is complex and requires significant funding. One jurisdiction described working with the Vera Institute of Justice to collect data.²¹⁹ Another jurisdiction stated that it had “completed a study on the impacts of restrictive housing. The study permitted grant funding for empirical research on long-term effects of Restrictive Housing on both inmates and staff.”²²⁰ One prison system reported receiving a Bureau of Justice grant to study “interventions in restrictive housing settings” such as group programming and an “individualized Success Plan” for each inmate that “details how he plans to apply skills in high risk future situations.”²²¹ Another jurisdiction directed us to published research based on its collection of data about restrictive housing. The 2018 study suggested that “a more therapeutic restrictive status housing program has the potential to improve the future behavior of program graduates,” but cautioned that more research was needed.²²² Another prison system stated that it had “revised its data collection system to track information on restricted housing,” such as “the effectiveness of the restricted housing program,” in order to “provide bases for modifying the program.”²²³

Aspiring for More Time Out-of-Cell

The survey also sought information on the number of hours out-of-cell that jurisdictions believed was desirable for prisoners in an “ideal situation”—i.e., with sufficient resources and no problems regarding institutional safety.²²⁴ Thirty-eight prison jurisdictions provided answers to this question,²²⁵ and 31 specified a desirable number of hours out-of-cell.²²⁶

Some jurisdictions specified a certain number of hours per day or per week.²²⁷ The responses that were given in hours per day ranged from three hours²²⁸ to 15–16 hours per day²²⁹

out-of-cell. The responses given in hours per week ranged from 7.5 hours²³⁰ to 56 hours per week out-of-cell.²³¹ A few jurisdictions noted that different times out-of-cell would depend on prisoners' custody level.²³² For example, one jurisdiction replied that for the general population a minimum of 12 hours daily would be desirable, while for those in disciplinary segregation two hours daily would be desirable.²³³

Ten jurisdictions described the kinds of activities that would, in an ideal situation, be reasons for having time out-of-cell.²³⁴ For example, one jurisdiction explained that all prisoners:

should have a productive work or program assignment that occupies 6.5 to 10 hours per day. Assigned offenders have an additional 2–4 hours of free/recreation time per day plus movement for meals and medications. The majority of offenders are in their cells from about 10 pm to 6 amWe aim to maximize out-of-cell time, but there must be productive activities. We have learned that too much unstructured out-of-cell time leads to increased disruptive behavior.²³⁵

Another jurisdiction explained that an hour or two of daily out-of-cell time “during the sunlight hours would be good.”²³⁶ The jurisdiction elaborated: “Preferably, prisoners should get one hour in the morning and one hour in the afternoon of sunlight. This practice would allow the inmate enough time in direct sunlight to allow the human body to manufacture Vitamin D.”²³⁷ One jurisdiction prefaced its answer with the comment that, “ultimately, no confinement would be the goal, however, realistically that will not happen.”²³⁸

Six jurisdictions stated that they could not provide a concrete number of ideal hours out-of-cell because it would depend on a variety of factors.²³⁹ One of those jurisdictions explained:

Regrettably, this question is too overbroad and vague to answer specifically as it varies depending on the type and kind of inmate being managed and, in addition to dozens of other variables, their historic, recent, and immediate behavior. It also can vary based on individual preference by the inmate. There are many inmates who do not want out of cell time, so the term desirable is subjective to the inmate themselves. In addition, the meaning, content, and quality of the out of cell time is also a considerable variable that makes it impossible to make a single statement about the amount of out of cell time which is desirable for prisoners. Finally, it is a topic that is more rooted in a sociological and philosophical discussion, especially because it is phrased as a hypothetical.²⁴⁰

IV. Working to Limit Restrictive Housing: Four Jurisdictions Making Changes

We move from an overview of policy changes across the jurisdictions responding to the survey to reports from four jurisdictions—Colorado, Idaho, North Dakota, and Ohio—in which correctional leaders describe efforts to make profound changes in the use of restrictive housing. Below, we provide what correctional leaders wrote about the ways in which they have revised policies, the challenges they have faced, and the impact of their efforts.

Colorado Reforms: What Do You Mean “Culture”?

**Rick Raemisch,
Executive Director, Colorado Department of Corrections**

During the fall of 2017, Colorado became the first, and thus far, the only state in the United States to limit the use of Restrictive Housing to 15 days maximum, and this use is only for the most serious violations. Extended Restrictive Housing, the former Administrative Segregation, has been abolished. Following the United Nations Mandela Rules, this change means that a person in the Colorado prison system who was involved in a serious violation will be in Restrictive Housing for 22 hours per day, 7 days per week for a maximum of 15 days. Violations are not to be “stacked.” In other words, no one will be placed in Restrictive Housing for 15 days, removed, then immediately placed back in.

This change comes on top of others. Through the Department’s policy and then by statute, Colorado had already ended Restrictive Housing for seriously mentally ill prisoners. In fact, Colorado developed the policy that, if a person is involved in a disciplinary incident, and it is determined by a team consisting of correctional officers and clinicians that mental illness was the cause of the incident, the offender is taken out of the disciplinary process and given treatment. In addition, Colorado policies prohibit placing pregnant females and juveniles in Restrictive Housing under any circumstances.

When we initially started our reforms we adopted the philosophy “just open the door.” We control it. Open it. Of course many discussions, debates, committee work, and staff input were completed in order to develop the proper procedures and programs to allow us to open the door. As I have explained elsewhere, when we went in the direction of abolishing extended restrictive housing, there was no map, and there was no road. Dedicated staff were challenged to complete the reforms, and they not only accepted the challenge but excelled at it.

When the decision was made to finally go to the 15 day maximum Restrictive Housing, we adopted a new philosophy: “You can restrain, but you don’t have to isolate.” We were unable to find proper restraint tables, and we have never used cages, nor would we. Once again, staff answered the challenges, and we built our own furniture to fit our needs. Formerly dangerous, restrictive housing prisoners are now out of their cells for a minimum of four hours per day, at restraint tables with up to four other inmates, for programing and other activities.

We have all heard the adage: “You can lead a horse to water, but can’t make them drink.” I don’t believe that. I believe that: “If you throw the horse in the pond they are going to get some water just trying to get the hell out of the pond.” The point is to give them programming regardless of whether they want it or not. Although this practice is new, it appears to be working. The goal of course is first to get them at the table, then give programming, and work towards safely removing the restraints. The goal is to have the programming be successful to the point where they can be back in general population.

We have been asked numerous times how we were able to accomplish this. How were you able to change the culture? When we have responded, we have heard: “That won’t work here, the culture is too embedded in the way we are doing business now.” Culture was never an issue with us. Of course our staff was used to using segregation on a regular if not overused basis. It’s not a question of culture. It’s a question of leadership. There is debate as to whether or not Henry Ford actually made this famous quote, but he is credited with saying: “If I had asked my customers what they wanted, they’d have said a faster horse.”

The point obviously is that sometimes the vision needs to come directly from the leader. I gave the Colorado Department of Corrections the vision of where the Department would go. My approach was not “should we or would we?” Rather, it was: “This is what we are going to do.” I put together an executive team that believed in my vision. My other philosophy is that if you have someone who wants to try something different, and it makes sense, give it a try. I’ve stated many times that if what we do doesn’t work, we can always go back to the way things were before.

I consider my Executive Team and the other corrections leaders here as jet fighter pilots. I give them the target and then allow them to figure out how to get there. Not all of our staff believed in our reforms. Some retired, some transferred, but the results of our reforms have changed a good number of those who did not think it would work. At our two mental health prisons, where restrictive housing is completely banned, assaults, self-harm, and suicides have decreased dramatically. Staff enjoy work more because prisoners are acting in a more positive manner. It is quiet and safer. Safer facilities mean safer communities when they are released.

In the past, we had a waiting list for people with mental illness to be transferred to our facility for the seriously mentally ill. Today we have over fifty vacant beds. Our other facility for those with mental health issues has over 45 empty beds. It is too early to tell if the reason for this is because we have stopped manufacturing or multiplying mental illness by the overuse of segregation, but before our reforms there were none.

The bottom line: We have one vacant super max, and one re-purposed super max. We are back on track with our mission of public safety.

Idaho: Efforts to Reform Restrictive Housing

Henry Atencio

Director, Idaho Department of Correction

Keith Yordy

Warden, Idaho State Correctional Institution,

Idaho Department of Correction

Idaho Department of Correction [IDOC] made a decision to reform restrictive housing because it was the right thing to do for public and for community safety. Given that ninety-eight percent of prisoners in IDOC will return to the community, it is inconsistent with IDOC's mission to keep a prisoner in long-term restrictive housing, which results in no access to programming or educational opportunities, until they are released back into the community. Moreover, reforming restrictive housing has many benefits. It encourages safe and humane practices for the prison population. Reform permits compliance with international and national law, as the United Nations has declared that being confined in a cell 23 hours a day for more than 15 days is considered torture. Prison-based reform reduces IDOC's exposure to litigation regarding restrictive housing.

IDOC's reform process began in 2016 and was guided by nationwide standards addressing restrictive housing, which included principles of the U.S. Department of Justice and the thirteen guiding principles provided by the Association for State Correctional Administrators (ASCA).¹ Early on in the process, IDOC made the decision to include staff from multiple disciplines and at various leadership levels in the command structure. IDOC formed a command staff group comprised of agency and division leadership and reached out to external entities, who agreed to provide feedback and guidance to the agency during the reform process. The external partners included staff from the State Appellate Public Defenders' Office, the Office of the Federal Defenders of Idaho, and the Idaho Chapter of the American Civil Liberties Union. They have been an integral part of the process, as they have provided feedback on policy revisions, suggested language to use, and identified areas where the policy was unclear.

IDOC's path to reform also entailed having individual members of the department attend trainings and go on site visits to other states. Wardens, joined by correctional and mental health staff, visited Arizona and Washington Departments of Correction to see firsthand how reforms were implemented and to have discussions with those jurisdictions' staff about challenges and innovative ideas. In addition, several IDOC agency and facility leaders participated in training at the National Institute of Corrections (NIC) on restrictive housing reform. Idaho was selected as a pilot for an on-site NIC restrictive housing training that took place in August of 2017. Attendance at the training by wardens from facilities that housed men and women and that had long-term restrictive housing was crucial, as they both gained insight and learned about the importance and implementation of the restrictive housing guidelines of the U.S. Department of Justice.

¹ The ASCA principles are available here: <https://www.asca.net/pdffdocs/9.pdf>.

As a result of this process, Idaho wardens began reviewing all prisoners who had been in long-term restrictive housing to reevaluate them with the goal that placement in restrictive housing should be reserved only for individuals who posed an imminent threat to the security of the institution. Doing so entailed taking a comprehensive approach to restrictive housing reform. The agency decided that two key policies, addressing restrictive housing and the disciplinary process, had to be updated. As a consequence, a revamped disciplinary policy added an alternative sanction process and changed the Disciplinary Offense Report (DOR) codes, and the restrictive housing policy was split into three separate policies—a short-term restrictive housing policy, a long-term restrictive housing policy, and a protective custody policy. The new policies² reflect and implement a shift in the purposes and in the practices, and the result has been that fewer people are placed in restrictive housing.

A few specifics are in order. The short-term restrictive housing policy begins with a statement of purpose reflecting IDOC's mission statement on restrictive housing reform: "Restrictive housing protects staff and inmates by segregating those who are the most violent or present the greatest danger to the safe operations of the facilities." The policy provides that time spent in short-term restrictive housing is capped at fifteen days. Past that point, prisoners must be afforded, at a minimum, three hours of out-of-cell time a day and provided with personal property as they would have in general population. The policy also requires prisoners who have a language barrier, physical/sight/hearing impairment, or medical or mental health issues to have accommodations when placed in restrictive housing or an alternative placement, as needed.

Further, IDOC has limited the behaviors that can result in short-term restrictive housing placement to those that pose an imminent risk to safety. This change in the criteria for entry has reduced the number of short-term restrictive housing beds at some facilities, and, at others, the people put into such beds. In addition, some facilities have implemented "calm down" areas for prisoners to de-escalate, while others have implemented diversionary tiers for those in possession of drugs or alcohol or who have tested positive on urinalysis tests.

The long-term restrictive housing policy (addressing individuals in such housing for fifteen days or more) also begins with a statement of purpose, again stemming from IDOC's mission statement. "Restrictive housing is a structured program that protects staff and inmates by segregating those who are the most violent or present the greatest danger to the safe operations of the facilities." The policy requires that all prisoners placed into long-term restrictive housing programs are in Idaho's "Step Up Program," which consists of five stages designed to provide behavioral expectations to prisoners, teach them to identify concepts and skills to assist in behavior change, and assess their behavior to determine if placement in long-term restrictive housing is necessary. The policy requires that prisoners identified as having a serious mental illness be exempted from long-term restrictive housing placement and instead be placed in an alternative setting, which is usually a mental health unit. Further, the policy adds an administrative review

² Idaho's policies can be found at www.idoc.idaho.gov.

committee for all long-term restrictive housing placements. That committee is at the prisons' division leadership level and includes both of the deputy chiefs of prisons and the chief psychologist, who is a non-voting member.

As of the writing of this report in the spring of 2018, the new disciplinary policy is in effect; the short-term and long-term restrictive housing and the protective custody policies are in the final drafting stage. The command staff is doing a policy review, and the goal is to have training in place during the summer of 2018 to complete a rollout of the reforms. And even before the full implementation, IDOC has seen the impact in the reduction in the numbers of people in long-term restrictive housing and new methods of responding to problems. One example comes from Idaho Maximum Security Institution (IMSI), a facility whose operating capacity was 412 inmates prior to restrictive housing reform and which had included 320 single-occupancy restrictive housing cells. IMSI has expanded its capacity to house 564 prisoners and as of the end of June, IMSI has 134 prisoners in long-term restrictive housing and 24 in short-term restrictive housing. The facility has revised its practices to have more prisoners in close-custody general population.

At Pocatello Women's Correctional Center (PWCC), the facility operating capacity was 313 prisoners prior to restrictive housing reform, with a total of 20 single-occupancy restrictive housing cells. The current operating capacity has increased to 333. Today, one prisoner under the sentence of death is in what is termed long-term restrictive housing status, but, in practice, she is out of her cell three or more hours per day. At the South Idaho Correctional Institution (SICI), 17 short-term restrictive housing beds were taken off line, which enabled the placement of 34 minimum custody general population prisoners to be housed there. As of the end of June 2018, the population in restricted housing had declined from 294 long-term restrictive housing prisoners to 134 people held in long-term restrictive housing.

Reflections on North Dakota's Sustained Solitary Confinement Reform

Leann Bertsch

Director, North Dakota Department of Corrections and Rehabilitation

Since late 2015, the North Dakota Department of Corrections and Rehabilitation (ND DOCR) has maintained an approximately 60–70% reduction in the population of its Administrative Segregation Unit (renamed the Behavioral Intervention Unit or BIU) at the North Dakota State Penitentiary (NDSP). The number of people residing in BIU as of April 5, 2018 was 24. The daily count within this unit has remained under 40 people over more than two years, down from over 100 people in 2015. The average length of stay in BIU has fluctuated between 30 and 60 days, although there are a few people who reside in the unit much longer based on the severity of violence, their expression of continued risk for violence, or their own preference for the BIU setting.

This population reduction has been sustained by continuing to adhere to a multi-faceted screening and assessment process. In fact, NDSP was able to convert one of the tiers within BIU to a preferred housing tier, which is home to 20 of the most consistently pro-social residents within the facility. Another 20-cell unit was converted to the Administrative Transition Unit, where people live when they are in the process of moving from BIU to a general population setting. ND DOCR continues to focus on those who commit any of 10 of the most serious in-custody offenses that may make a person eligible for BIU placement, with some exceptions for fighting and other harmful behaviors when they become severe or chronic. ND DOCR also continues to avoid placing people diagnosed with serious mental illnesses in BIU when possible and divert them to the Special Assistance Unit for more individualized services when it is determined that it is not safe to keep them in general population.

The sustained decrease in the number of people in the BIU setting has allowed for staff to make much better use of their time and to have a greater impact. Corrections officers engage each resident in friendly conversation, change-oriented discussion, or practice of a cognitive or behavioral skill at least twice per day. The unit Sergeant is also tasked with planning one pro-social, structured recreational activity each weekend to increase positive engagement with staff and out-of-cell socialization. Unit staff also provides reinforcement in the form of tangible property items, extra recreation time, extra showers, and the like, based on the person's participation in therapeutic and social activities, as well as the parameters of individualized behavior plans. Currently, BIU residents can access up to two hours and 40 minutes of recreation per day when they engage in skill practices and therapeutic groups, in addition to time spent in groups, individual sessions, and specially-planned enrichment activities.

Behavioral health staff also provides at least one structured leisure activity each week, such as an art project, mindfulness practice, or a movie. Three times per week they facilitate a group that focuses on applying skills to reduce or eliminate the use of violence, manage trauma reactions,

and cope with segregation. Each resident completes an individualized Success Plan, detailing how he plans to apply skills in high-risk future situations, prior to or soon after moving to the Administrative Transition Unit. Once the person has moved to the Administrative Segregation Unit, he has the opportunity to continue to participate in group two times per week to work on skills application as the amount of time spent in general population settings increases. These group curricula and the Success Plan served as the foundation to inform a curriculum developed by Dr. Paula Smith for a Bureau of Justice Assistance Encouraging Innovation Grant related to applying interventions in restrictive housing settings, which ND DOCR will continue to implement as a data collection site related to that grant project.

Over the past two and a half years, ND DOCR has sustained a substantial reduction in the use of the Special Operations Response Team within the BIU (no use of the team at all in this unit since October 2017), along with a reduction in overall uses of force. The prevalence of negative behaviors by residents of the unit has also dramatically decreased. ND DOCR believes the focus on reinforcement of positive change, building friendly relationships between staff and residents, and allowing residents access to pro-social coping skills (music, television, puzzle books, etc.) are collectively responsible for these changes. Perhaps our most exciting outcome to date is the fact that, of the 149 residents placed on BIU program status from October of 2015 to February of 2018, only 26 have returned to BIU program status. That is a 17% “recidivism” rate into the BIU program. ND DOCR is working to collect more precise data regarding these outcomes, but we are very encouraged by these initial results.

These changes, while overwhelmingly positive, have not been without challenges. NDSP did see a significant increase in physical fights between residents in mid-2016 to mid-2017. This increase occurred at the same time that our overall prison population was the highest it has ever been and we have some suspicions that this may be correlated more strongly with the population increase than the changes in the use of restrictive housing. As the population has slowly stabilized and begun to decrease, the prevalence of fighting has decreased as well. While most staff members have been supportive of the changes, there has been a perception that the overall safety of the facility has been compromised. Factually, there has been no increase in assaults on staff, assaults on residents by peers, or the overall level of violence perpetrated within the institution. There has also been a perception that residents are not “held accountable” for rule violations. In reality, residents continue to receive significant sanctions—the only difference is those sanctions are much less likely to include lengthy placements in restrictive housing, especially for non-violent offenses.

In order to address the problem of institutional violence more thoroughly, ND DOCR is excited to begin assessing people entering prison using the Risk of Administrative Segregation Tool (Labrecque & Smith, 2017) in order to identify those at highest risk for displaying institutional violence resulting in placement in restrictive housing. A copy of the tool is below.

BEHAVIORAL INTERVENTION UNIT REPORT CARD

Those identified as high risk will then be offered a 10-session group intervention program focused on establishing a pro-social adjustment to prison and managing high-risk situations for violence in an effective, non-violent manner. This program will begin in April 2018. Dr. Paula Smith and Dr. Ryan Labrecque will evaluate the effectiveness of this intervention in preventing future violence as compared to a no-treatment control group. Another future direction is to develop a peer support specialist certification program for prison residents, with the goal of providing additional support to those at risk for placement or placed in BIU.

One way to provide an overview of the outcomes, as of the spring of 2018, is by the chart below.

Type of Seg.	Investigative	Disciplinary	BIU Program	Total Unit
Avg. # of days	5.55	7.63	18.97	32.14

Type of Seg.	Investigative	Disciplinary	BIU Program	Total Unit
Total # Stays Over 14 Days	30	38	60	128

Restrictive Housing: The Challenge of Reforming the Fabric of an Agency

**Gary Mohr,
Director, Ohio Department of Rehabilitation and Correction**

Restrictive housing reform represents one of the most extensive reforms in the history of corrections in the United States. The use of restrictive housing to respond to prisoner misbehavior has been the foundation of correctional management philosophy for over a century. The practice is embedded in the philosophy and logic of nearly all agency staff and is interwoven into the fabric of any correctional agency's culture.

The use of restrictive housing remains an essential part of managing safe and secure prisons. Changing the way a correctional organization uses restrictive housing requires a delicate balancing act of improving conditions of confinement for prisoners who are more conducive to rehabilitative ends, while simultaneously ensuring we protect our staff and prisoners from individuals whose behavior indicates they are poised to harm others. Further, for most of my 44 years in this work, restrictive housing has been used as the default penalty for all types of rule violations, whether violent or not. Changing practices associated with the use of restrictive housing is a delicate operation because our staff, those who work in the trenches of our prisons, firmly believe the use of restrictive housing as a default disciplinary sanction is tied directly to their safety. Reforming the system to use restrictive housing only when there is a threat to safety and security, rather than as punishment, often becomes viewed as an attempt to jeopardize safety.

Today, that cultural belief has been reinforced by the horrific incidents in prisons throughout our country from North and South Carolina, to Pennsylvania, Arizona and many other jurisdictions including Ohio. In 2018, an Ohio Correctional Officer was stabbed 32 times by two prisoners who were in extended restrictive housing; miraculously, he survived. This event not only magnified the challenge of continuing to reform restrictive housing, but also changed my life, as it was a vivid reminder of how precious life is and how we as leaders carry the heavy responsibility for the welfare of so many. As we continue the much-needed reform regarding the practice of placing prisoners in confined settings, an area where there is still much work to be done, the realities and images of individuals who have experienced serious, life-changing incidents cannot be ignored. The impact on their lives, as well as on the lives of their loved ones and fellow staff members, must be of paramount concern.

Ohio can clearly report success in reducing prisoners in restrictive housing as evidenced by data comparing the use of restrictive housing between 2013 to 2017. In fact, there has been a 45% reduction in the number of prisoners in restrictive housing during that time period. While this reduction is meaningful and significant, it is also a reminder of the need for restrictive housing now and in the future. The reality is that there are people in prison who pose a serious and direct threat to others, and we have a duty to protect others from these prisoners. As agency leaders, we count on our staff in all correctional systems to carry out post orders and follow our directives 24

hours a day, 7 days a week. Those dedicated public servants must acknowledge and trust their leaders, even though they will not always agree, or the overall agency goals will not be achieved. Leaders cannot merely issue edicts directing a course of action when those directives are contrary to the will of the workforce if they expect the vision of the policy to be realized. In matters that challenge the foundational beliefs and values of the staff, change must occur over time through consistent reinforcement of the philosophy underlying the policy direction.

Operational Challenges to Restrictive Housing Reform: The Ohio Department of Rehabilitation and Corrections (DRC) began restrictive housing reform in late 2013 by conducting wide-ranging discussions on how and why correctional supervisors/executives use restrictive housing. In 2014 and 2015, the DRC examined all policies and procedures, even hiring external consultants to provide insight into current practices, assess areas for improvement, and recommend a pathway for reform. In 2015, it became apparent restrictive housing reform was intrinsically linked to discipline reform. As such, the DRC needed to re-examine the entire way prisoner rule violations were addressed. Below, I outline our reforms.

Reform Initiative A: Prison Disciplinary Reform (Swift, Certain, and Fair): In late 2015 and early 2016, the DRC began to change the philosophy associated with the offender disciplinary system to encourage sanctions that adhere to swift, certain, and fair (SCF) principles of discipline. Most importantly, this change included using alternative sanctions to reduce the use of restrictive housing. Implementation required, and continues to require, ongoing changes to organizational culture.

Challenge 1: Operationalizing the changes in sanctioning practices remains an on-going challenge by trying to achieve consistency, fairness, and immediacy of application across all prisons.

Reform Initiative B: Alternatives to Restrictive Housing—Limited Privilege Housing: The DRC has the option in Ohio's Administrative Regulations to use limited privilege housing. Limited privilege housing is a condition of confinement that significantly limits a prisoner's privileges, so it can be used to respond to low-to-moderate severity rule violations. Limited privilege housing is not restrictive housing. It is, however, a meaningful sanction that adheres to swift, certain, and fair principles of sanctioning. It also removes prisoners from the housing area where they committed their offense. In late 2015 and lasting until today, the DRC greatly expanded the use of limited privilege housing and encouraged staff to not use restrictive housing as the default placement for prisoners who have misbehaved unless they posed a danger to the prison or to others.

Challenge 2: Proper utilization of the limited privilege housing sanction has been a challenge. DRC continues to experience under-utilization and over-utilization of the sanction as an alternative to restrictive housing, and there is inconsistency in the security practices between areas.

Challenge 3: One of the greatest cultural challenges was passive resistance by staff who, in frustration over being asked not to use “segregation” for many offenses, assumed an “all or nothing” stance towards security. Simply put, if they could not place a prisoner in segregation (restrictive housing), then they just had to let prisoners do “whatever they wanted” and could take no meaningful action. Others felt a limited privilege housing unit could have a “relaxed” security posture when in reality limited privilege housing units can be just as secure as a restrictive housing unit if the type/kind of prisoner needs such levels of supervision. The critical difference is the out of cell time and access to programming and services which require all staff to change the way they work.

Challenge 4: A cultural myth developed that restrictive housing reform’s goal was to reduce the use of restrictive housing regardless of the prisoner’s behavior. DRC leadership was compelled to constantly remind staff that restrictive housing reform never meant prisons could not use restrictive housing to address violence or seriously disruptive behavior. This myth was persistent and remains even when policies were released providing staff the option of stronger and lengthier disciplinary sanctions. The written words contained in the policy, as well as emails sent to all staff, were overshadowed by this mythology that is still persistent five years into reform.

Reform Initiative C: Widespread Training/Communication on Restrictive Housing: Throughout 2016 and carrying into 2018, the DRC has revised dozens of policies, lesson plans, and in-service training on restrictive housing Reform and its related components within the DRC.

Challenge 5: Communication of the “why” behind restrictive housing Reform remains our prevailing challenge. A significant number of staff still report they do not understand the reasons for reform despite training, memos, policies, and emails that have tried to explain all aspects of the reform effort. More importantly, many of them do not understand the permanence of these changes and are “waiting to go back to the way it was.” Finally, it cannot be ignored that there are some staff who simply believe prisoners should be severely restricted while in prison and especially when they commit any rule violations. It is reasonable to say that when an organization operates for nearly a century in one manner, it will take a very long time to change the fundamental beliefs of the staff who operate that organization. These individuals who, regrettably, exist at all levels in our agency continue to passively, or sometimes actively, resist restrictive housing reform, likely in the hope the reform will fail and the DRC will have to return to the status quo which existed in 2013.

Challenge 6: The volume and pace of change is a significant, on-going challenge for staff at all levels. Change for any organization is difficult, but the root nature of

this change coupled with the fact the change requires a shift in personal, organizational, and leadership philosophy makes it incredibly challenging.

Challenge 7: Staff perceptions exist by some at all levels (line, supervisor, and executive staff) that are less than supportive of/favorable to restrictive housing reform efforts thus far. There is a strong feeling these policies are making people less safe and reform values prisoners over staff safety. The serious incident of the stabbing of our correctional officer mentioned earlier has kept this belief alive.

Challenge 8: There is substantial message dilution in training and communication. As information is passed down from each level of leadership and supervision, the message gets changed and altered, greatly affected by the cultural resistance outlined in previous challenges. As such, the DRC must continually improve the content and delivery of the restrictive housing Reform “communication plan.”

Reform Initiative D: Serious Misconduct Panels and External Oversight of Extended Restrictive Housing: Prior to reform, local wardens possessed the authority independently to place prisoners into restrictive housing for six months, and in some cases, for a year or more. There was no centralized oversight for these two review processes. Wardens applied this power based on their individual perspective about misbehavior rather than an organizational view. In response, the DRC established the “serious misconduct panel” (SMP) as the only process by which offenders can be referred to “extended restrictive housing” and implemented centralized oversight of all placements and releases. The SMP referral is still made by a warden but is approved by a regional director and the panel is comprised of two exempt employees from a prison other than the one where the offense occurred.

Challenge 9: There have been concerns expressed that the use of the SMP implies a mistrust of the professional judgment of local teams who know the prisoners best. The delicate balancing act of ensuring consistency across all prisons while respecting local decision makers becomes interpreted as a form of heavy-handed oversight. In addition, prison leaders believe the new policies curtailed their ability to control violence and disruption at their prisons.

Challenge 10: The procedural aspects of the SMP are cumbersome and time consuming. The ongoing challenge is to streamline the SMP process without hindering the objectivity, due process, or thoroughness of the review.

Reform Initiative E: Conditions of Confinement and Programming for Extended Restrictive Housing: The DRC examined the conditions of confinement for offenders in extended restrictive housing and implemented additional programming, meaningful activities, and out-of-cell time. This process includes enhanced release preparation programs as best exemplified by the Ohio State Penitentiary [OSP] reversion program. This program introduces pro-social elements such as

employer engagement, family activities/events, and meals in group settings, including meals with the warden, into our highest security setting.

Challenge 11: The physical plant and infrastructure of all DRC facilities were not designed to provide a lot of out-of-cell time for prisoners in restrictive housing. The facilities were designed according to the philosophy of corrections in the United States at the time. The last prisons constructed were designed in the mid-1990s, almost a quarter of a century ago. The only way to offset some of these design issues is with significant staffing resources, which are very costly and difficult to appropriate in challenging budgetary environments.

Challenge 12: Self-imposed isolation, even when out-of-cell opportunities are granted, remains a considerable challenge. Prisoners choose these environments in a significant number of circumstances.

Challenge 13: It is a continuing challenge to ensure conditions of confinement differ between restrictive housing, limited privilege housing, and general population in a meaningful way that sufficiently deters prisoners from engaging in misbehavior. The more you give prisoners in restrictive housing/extended restrictive housing/limited privilege housing, the less appealing rule compliant behavior becomes for prisoners in general population. Over-compensating to assist restrictive housing/extended restrictive housing prisoners can exacerbate the problems associated with Challenge 12 and, as has been proven by some cases in Ohio, actively encourage prisoner misbehavior to achieve a placement into extended restrictive housing.

Reform Initiative F: Limiting Extended Restrictive Housing for Seriously Mentally Ill Prisoners and Enhanced Monitoring: The DRC recognizes the potential effects of restrictive housing on the seriously mentally ill. However, seriously mentally ill prisoners, like others, can commit very serious acts of violence and disruption unrelated to their mental illness. Furthermore, even if the violence is related to their mental illness, the threat to the safety of others cannot be ignored. Therefore, the DRC has implemented practices to closely monitor the utilization of extended restrictive housing for prisoners with serious mental illness, and placement in extended restrictive housing for a person with serious mental illness must be approved at the departmental level. We also use and have expanded high security Residential Treatment Units [RTUs] as an assessment/diversion opportunity to avoid placement in extended restrictive housing for some people with serious mental illness.

Challenge 14: The single greatest challenge in this effort is to develop and implement a “space between” restrictive housing and general population for dangerous, disruptive, and violent seriously mentally ill prisoners. Efforts to operate a “secure adjustment unit” for violent, seriously mentally ill offenders were

unsuccessful. We have added a significant number of Residential Treatment Unit [RTU] beds for the seriously mentally ill. There remain prisoners who are seriously mentally ill and violent/disruptive, but do not meet the standard of our mental health staff for an RTU level of care.

Challenge 15: DRC has expanded the number of high security RTUs, but there remains a substantial need for more beds and staff.

Challenge 16: Although philosophically we understand the need to treat seriously mentally ill prisoners differently, if one lessens the sanctions on prisoners solely because they are seriously mentally ill, other prisoners may perceive a tremendous injustice. This can cause disruption in housing units where both seriously mentally ill and non-caseload prisoners are held. In addition, as we attempt to grant more out-of-cell time and increased staff engagement for seriously mentally ill prisoners even after they have committed serious acts of violence against staff, we experience a growing cultural resistance to reform. Staff who are victimized, sometimes repeatedly, by these prisoners perceive these acts as being unfair and proof there is lack of care for staff and for the impact that violence by prisoners has on them. Thus the challenge continues.

Reform Initiative G: Tracking and Data Collection: The DOTS system, our tracking system, in present form, cannot effectively track people placed in restrictive housing or limited privilege housing. Since 2013, the DRC has continually developed new methods for measuring restrictive housing, primarily by using snapshots. Currently, Operations and IT staff are developing a restrictive housing/limited privilege housing Disciplinary Tracking System integrated into the DOTS system that, once completed, will provide a comprehensive system for examining disciplinary sanctions and their utilization, as well as profiles and real-time data on prisoners in restrictive housing/limited privilege housing. It will track the work flows associated with major job processes which may affect length of stay in restrictive housing/limited privilege housing including, but not limited to:

- 1) Hearing Officer and RIB Decisions
- 2) SMP referrals, extended restrictive housing placements, and extended restrictive housing reviews
- 3) Investigations regarding prison administrative functions such as misbehavior, protective control, separations, and staff nexus
- 4) Security Classification Reviews and Increases/Decreases
- 5) Prisoner Movement and Transfers

Challenge 17: While waiting for these changes, it is not acceptable to forgo efforts to track restrictive housing. Reporting mechanisms have changed somewhat over time and to get accurate data is a cumbersome process that is very labor-intensive.

Conclusion: On December 27, 2010, when I met with Governor Kasich and decided to accept this journey to oversee the Ohio Department of Rehabilitation and Correction, he asked me to do two things. First, we could not afford another Lucasville, the riot that lasted 11 days and resulted in 10 deaths. Secondly, “Go reform the most unreformed part of government.” While we have made some very progressive changes in creating reintegration environments, expanded programming including treatment of the addicted both in and outside our prison walls, expanded residential treatment beds for the mentally ill, employment partnerships with employers with experiences both inside the prisons and out in the communities, and engagement with community faith partners, the challenge of reforming restrictive housing is at the core of that challenge. Restrictive housing reform remains a challenge to us in Ohio and many other jurisdictions around our great country.

V. Calls for Reform and for Abolition: Restrictive Housing in 2018

In this section, we put the data collected through the 2017–2018 ASCA-Liman survey in the context of actions, in and outside of prison systems, focused on regulating the use of restrictive housing. As reflected in the analyses thus far, efforts by prison officials to reform isolating conditions have intensified.

Below we provide a sample of initiatives, legislation, litigation, and public discussion in the United States and abroad. From these many vectors, we can see that a consensus has emerged about the harms to individuals held in deeply isolating conditions; to staff working in restrictive housing;²⁴¹ and to community safety.²⁴² The reiterated theme is that 22 hours or more of confinement in a small cell for days on end is unwise, unjust, and inefficient. As a result, rules of correctional systems, statutes, litigation, and research—shaped by prison and health professionals, prisoners, their families, and their communities—have produced a nationwide commitment to limit and, in some instances, to abolish, the practices that fall under the rubric of restrictive housing.

Correctional Systems Making Changes

In addition to changes chronicled in responses to our survey, targeted efforts are underway in several other jurisdictions. Support for some of these efforts comes from the National Institute of Corrections and the U.S. Department of Justice, Bureau of Justice Assistance. Many reforms have garnered media attention.

As described in its 2018 monograph, *Rethinking Restrictive Housing: Lessons from Five U.S. Jails and Prisons Systems*, the Vera Institute of Justice worked on site with the state prison systems of Nebraska, Oregon, and North Carolina, and with two local jails in New York City and Middlesex County, New Jersey, all of which were “committed to change.”²⁴³

Vera’s 2018 study echoes many of the findings from ASCA-Liman analyses of the policies governing administrative segregation.²⁴⁴ In the 2013 monograph, we described the broad discretion afforded correctional officials in placing individuals in restrictive housing,²⁴⁵ and in 2014 and 2016, we provided a database of the impact, in terms of the widespread use of restrictive housing.²⁴⁶ As Vera’s 2018 report recounted, when Vera began working in the five jurisdictions, it found that restrictive housing conditions were typically “stark, isolated environments with little sensory stimulation or social interaction.”²⁴⁷ Vera detailed the heavy reliance on disciplinary segregation, often imposed for non-violent offenses, such as “disobeying an order,”²⁴⁸ using “profane language,” or “disruption.”²⁴⁹ Individuals placed in administrative segregation were not given “predetermined” release dates or frequently considered for release.²⁵⁰

Vera also raised concerns that some jurisdictions lacked methods to appropriately identify individuals with mental health needs. In those that did, “high levels of placement in restrictive housing” were common.²⁵¹ As in the ASCA-Liman 2014 *Time-in-Cell* report, Vera identified thousands of individuals with mental health needs who were placed in restrictive housing.²⁵² Further, akin to the findings in this Report,²⁵³ Vera concluded that people of color were “placed in

restrictive housing at higher rates than white people were.”²⁵⁴ Vera also determined that people of color were “underrepresented in more treatment-oriented forms of restrictive housing and in less-stringent alternatives.”²⁵⁵ In addition, Vera found, as does this report, that young people were “more likely than older people to be placed in restrictive housing.”²⁵⁶ And, as ASCA-Liman had found in its 2014 survey,²⁵⁷ thousands of people in the jurisdictions Vera studied were sent directly from restrictive housing to the community.²⁵⁸

Vera’s recommendations likewise reflect the goals of many correctional departments, courts, legislatures, and prisoners—to reduce “the flow of people into various types of restrictive housing,” to “shorten the length of time people spend in restrictive housing,” and to improve conditions of restrictive housing.²⁵⁹ Vera recommended using restrictive housing only “as a last resort; as a response to the most serious and threatening behavior; for the shortest time possible; and with the least restrictive conditions possible.”²⁶⁰

Examples of what might improve conditions by providing more stimulation were stark reminders of the isolation that was the ordinary state of conditions. Thus, digital music players and “blue rooms” in which prisoners could see nature videos were illustrations of what could be added.²⁶¹ Vera proposed that prisons and jails “minimize social isolation and provide access to programming and mental health treatment” and aim to maximize “out-of-cell time,” reduce “sensory deprivation and isolation,” and increase “access to medical, mental health, and program staff.”²⁶² As for specific subpopulations, “Vera recommended that its partner corrections agencies prohibit the placement of youth (younger than 18), pregnant women, and people who have serious mental illness, developmental disabilities, or neurodegenerative diseases in any form of restrictive housing that limits meaningful access to social interaction, exercise, environmental stimulation, and therapeutic programming.”²⁶³ According to the report, as of 2018, the five correctional sites with which Vera worked were implementing many of these recommendations.²⁶⁴

Several media reports in 2017 and 2018 highlighted reforms of restrictive housing. For example, in July of 2018, the news program *60 Minutes* aired an episode with Oprah Winfrey on the conditions in solitary confinement in California’s Pelican Bay Prison.²⁶⁵ Winfrey interviewed men currently in segregation, former prisoners who had been held in isolation, and prison officials who explained how the use of restrictive housing had been changed. The broadcast described how, after a 2015 legal settlement, California ended indefinite isolation and stopped using gang affiliation as a basis for sending people to segregation. The program reported 80% fewer prisoners in the state’s restrictive housing units than had been there a few years ago.

Changes in North Dakota and in Colorado have also been covered in the national media. *Morning Edition*, a weekday news program on National Public Radio (NPR), devoted a segment in July of 2018 to North Dakota’s restrictive housing reforms.²⁶⁶ The piece featured interviews with Director Leann Bertsch and with correctional staff members. Prison administrators described implementing group therapeutic sessions for people in segregation and changing how officers interact with prisoners. For example, officers reported writing up positive prisoner behavior, not

just citing negative conduct. Prison staff described the improvements they saw, as a result of these changes, in how prisoners behaved and in prisoner-staff rapport. The same month as the NPR broadcast, Dashka Slater, a reporter for the magazine *Mother Jones*, wrote about the state's reforms.²⁶⁷ The article described how North Dakota's changes were inspired by a visit Director Bertsch and her staff made to a Norway prison. At that facility, prisoners were allowed relative freedom of movement, the use of solitary confinement was rare, and violent behavior was uncommon. North Dakota prison administrators related how, after the visit, they set out to reform their system, including by limiting time spent in restrictive housing. In October of 2017, the *New York Times* published an op-ed by Director Rick Raemisch on the decision in Colorado to end long-term solitary confinement.²⁶⁸ He wrote about his conviction that "long-term isolation manufactures and aggravates mental illness." He explained that, because the vast majority of prisoners "eventually leave prison," ending long-term isolation was "simply the right thing to do—for the inmates and for their communities."

Other state reforms have been featured in local media. In May of 2018, Oregon news station KTVZ covered the correctional system's work with Vera to reduce the use of restrictive housing.²⁶⁹ The broadcast cited Vera's *Rethinking Restrictive Housing*, which found that Oregon's Department of Corrections had reduced the percentage of people in restrictive housing from 8.8% to 7.7% over the course of a year. The segment quoted Department of Corrections Director Colette Peters: "We are committed to both reducing the number of men and women in special housing and the length of time spent in these units in a safe manner for staff and other adults in custody." In September of 2017, Keri Blakinger of the *Houston Chronicle* reported on the Texas prison system's elimination of solitary confinement as punishment.²⁷⁰ Blakinger stated that the change would affect the roughly 75 people in isolation for disciplinary reasons, but would not affect those in administrative segregation for reasons like gang affiliation or security threats. The article framed the state's reform in the context of a national trend to reduce the use of solitary confinement.

Understanding the Harms of Isolation

Researchers have sought to identify the impact of living in isolation for long periods of time, and many professionals have concluded that doing so is harmful to physical health, well-being, and mental health. Further, young individuals, older adults, and those with physical and mental disabilities or challenges experience these harms acutely.²⁷¹

Age—being young or old—is a factor that exacerbates the dislocations of isolating conditions. In 2017, when supporting federal legislation to restrict the use of solitary confinement of juveniles, the American Psychological Association explained that isolation had "especially devastating consequences to youth whose developmental immaturity leaves them more vulnerable to adverse reactions to prolonged isolation." These "effects may be exacerbated for children with disabilities or histories of trauma or abuse."²⁷² Older adults face other challenges, given that when subjected to "a lack of physical exercise, and loneliness," they have an "elevated risk for the earlier onset of dementia, physical deconditioning resulting in a heightened subsequent risk of falls, Vitamin D deficiency, and cardiovascular disease."²⁷³

For individuals with physical disabilities, isolation can have a “devastating impact,” as detailed in a 2017 report from the American Civil Liberties Union, *Caged In: Solitary Confinement’s Devastating Harm on Prisoners with Physical Disabilities*.²⁷⁴ As that report explained, no national data were available on the numbers of persons with disabilities in restrictive housing; state studies had found that ten to twenty percent of the general prison population had forms of impairment, including to sight, mobility, and hearing.²⁷⁵

To learn about the impact of isolating conditions, *Caged In* researchers interviewed prisoners and staff and reviewed grievances filed by individuals with disabilities in 10 state systems.²⁷⁶ As the report recounts, restrictive housing generally provided no accommodations for people unable to hear or see or in need of wheelchairs and other devices to enable them to manage basic daily tasks.²⁷⁷ Many people went without hearing aids, Braille materials, sign language interpreters, and physical therapy.²⁷⁸

To respond, the report proposed that correctional officials: 1) “End all placements of prisoners with physical disabilities into solitary confinement where their disabilities will be worsened by such placements;” 2) “Prohibit all placements of individuals with physical disabilities into solitary confinement due to a lack of accessible cells;” 3) “Provide all accommodations, including assistive devices and auxiliary aids, to prisoners with physical disabilities who are held in solitary confinement, unless substantial and immediate security threat is documented,” in which case, “alternative arrangements must be made and documented;” 4) “Establish data procedures to improve tracking and monitoring of prisoners with physical disabilities in prisons and jails, including the number of people with disabilities and those in solitary confinement, or other forms of restrictive housing, and the reasons for their placement.”²⁷⁹ As that report also noted, litigation under the Americans with Disabilities Act (ADA) and section 504 of the Rehabilitation Act²⁸⁰ has been brought to respond to some of the problems.²⁸¹

Depriving individuals of virtually all normal sociability has long been understood as disabling. For individuals whose mental well-being is already impaired, restrictive housing has come to be seen as adding injury to insult. Illustrative is the 2012 statement, adopted by the American Psychiatric Association, that “prolonged segregation of adult inmates with serious mental illness, with rare exceptions, should be avoided due to the potential for harm to such inmates.”²⁸² In 2014, the Committee on Causes and Consequences of High Rates of Incarceration, an ad hoc committee of the National Research Council, concluded that isolation in prisons “can create or exacerbate serious psychological change in some inmates and make it difficult for them to return to the general population of a prison or to the community outside prison Long-term segregation is not an appropriate setting for seriously mentally ill inmates.”²⁸³

In 2016, the National Commission on Correctional Health Care (NCCHC) issued a “position statement,” to “assist health care professionals in addressing the use of solitary confinement in the facilities” in which they worked.²⁸⁴ Defining solitary confinement as housing with “minimal to rare meaningful contact with other individuals,” NCCHC promulgated

“principles,” including that what it termed “prolonged (greater than 15 consecutive days) solitary confinement” was cruel, inhumane, and degrading treatment, and harmful to an individual’s health,²⁸⁵ and that correctional health professionals ought not to “condone or participate” in its use.²⁸⁶ NCCHC also called for solitary confinement not to “exceed 15 days,”²⁸⁷ and that health care professionals not “be involved in determining whether adults or juveniles are physically or psychologically able to be placed in isolation.”²⁸⁸ Further, the organization called for those placed in solitary confinement to have “as much human contact as possible with people from outside the facility and with custodial, educational, religious, and medical staff.”²⁸⁹

As reflected in these statements, health care experts (some of whom have participated in litigation challenging restrictive housing) have concluded that solitary confinement is harmful to individuals. Those views have been predicated on clinical judgments and academic research, some of which has been summarized in overview essays that take different views about how to synthesize the research. One synthesis, published in 2016, concluded that prisoners in isolation suffered no greater psychological deterioration over time as compared to general population prisoners and, in fact, showed some improvement.²⁹⁰ A 2017 overview disagreed, in part because the 2016 meta-analysis was not a complete account of the existing research²⁹¹ and included some studies that had serious flaws.²⁹² The 2017 essay noted that one of the prominent sources for the no-comparative-harm point of view had not controlled for the prior experience of prisoners in segregation before being placed in the less severe form of restrictive housing, and that prisoners moved in and out of different levels of isolation.²⁹³ In contrast, other research has documented a set of stress-related reactions, sleep disturbances, anxiety, panic, rage, anger, and aggression associated with profoundly isolating conditions.²⁹⁴

Another researcher termed this impact a “SHU Post-Release Syndrome,” entailing a sense of “disorientation following release, anxiety in unfamiliar places, a tendency to retreat into small spaces and limit social interactions, hyper-vigilance and heightened suspicion of others, and difficulty expressing feelings or trusting others.”²⁹⁵ Further, he and other researchers have investigated the physiological impact of solitary confinement, and focused on adrenaline and cortisol levels, neuron pathways, and brain waves.²⁹⁶ In other studies, researchers have concluded that isolation created a greater risk of self-harm among prisoners²⁹⁷ and that, during and after release, individuals were significantly more likely to show signs of post-traumatic stress disorder (PTSD) than those not held in isolating conditions.²⁹⁸

The Minnesota Department of Corrections and Minnesota Department of Public Safety sought to understand the effects of restrictive housing on recidivism.²⁹⁹ The study’s authors selected a sample of 6,500 cases from all adult prisoners released in 2014 in Minnesota.³⁰⁰ The report examined “three different forms of recidivism: supervision revocations (also known as technical violations), new arrests, and new felony convictions within three years of release.”³⁰¹ The researchers concluded that time spent in restrictive housing “increased the risk of supervision violations,” which are infractions that break the rules set for supervised release but do not necessarily break the law; however, time in isolation “did not significantly affect the risk of rearrest

or reconviction.”³⁰² The study also found that “being released to the outside world directly from” restrictive housing “did not have a large or significant impact” on recidivism. The authors wrote that future research “should disentangle the relationship” among restrictive housing, mental health, and recidivism, and should “examine the factors that increase, as well as decrease,” the risk of placement in segregation.³⁰³

Legislative Regulations

Many legislatures have proposed and, in a few jurisdictions, enacted statutes to regulate and limit the use of restrictive housing. The bills are directed at the process of entry and oversight to make long-term stays less likely,³⁰⁴ at lessening isolation by mandating activities akin to those available to the general population for persons held for 60 days or more in restrictive housing, and at improving data collection and reporting on the use of restrictive housing.³⁰⁵ As of the summer of 2018, statutes on restrictive housing were enacted in Massachusetts,³⁰⁶ voted out of the legislature for signature by the governor in New York,³⁰⁷ and introduced in several jurisdictions across the U.S. — from Hawaii³⁰⁸ to Nebraska,³⁰⁹ New Jersey,³¹⁰ Virginia,³¹¹ and the United States Senate.³¹²

An example of a comprehensive reform comes from Massachusetts, which in April of 2018 put a packet of restrictive housing reforms into place for state and county correctional facilities.³¹³ After becoming effective at the end of 2018, the legislation will eliminate the use of restrictive housing to protect individuals beyond 72 hours, “unless the commissioner, the sheriff or a designee of the commissioner or sheriff certifies in writing: (i) the reason why the prisoner may not be safely held in the general population; (ii) that there is no available placement in a unit comparable to general population; (iii) that efforts are being undertaken to find appropriate housing and the status of the efforts; and (iv) the anticipated time frame for resolution.”³¹⁴ Once appropriate housing is located for a prisoner in need of protection, that housing must afford the prisoner “approximately the same conditions, privileges, amenities and opportunities as in general population.”³¹⁵

The Massachusetts legislation will also change the decision-making process for placing people in restrictive housing. The statute will require “placement reviews” by a “multidisciplinary” team³¹⁶ and will establish a restrictive housing oversight committee,³¹⁷ to which reports are to be made monthly on the number of prisoners in restrictive housing in each state and county correctional facility.³¹⁸ For those held 60 days or more, the correctional department is to provide “access to vocational, educational, and rehabilitative programming, to the maximum extent possible consistent with the safety and security of the unit.”³¹⁹

In addition, Massachusetts’s 2018 law will bar using a person’s gender identity or sexual orientation as a ground for placing a person in restrictive housing.³²⁰ The legislation will also ban restrictive housing for pregnant prisoners.³²¹ The statute will impose limits on placement of people found to have “a serious mental illness,” as discussed below.

As of the spring of 2018, legislation to eliminate or to limit restrictive housing for subpopulations had been enacted in California, Colorado, Washington, D.C., and Tennessee, and proposed in several other jurisdictions, including Connecticut, Hawaii, Nebraska, New Jersey, New York, and Virginia.³²² One focus is on juveniles, where “room confinement” is the term used to describe isolating young people.³²³ For example, beginning in 2016, California prohibited placing juveniles in room confinement “for the purposes of punishment, coercion, convenience, or retaliation by staff”³²⁴ and required that before using room confinement, “other less restrictive options have been attempted and exhausted, unless attempting those options poses a threat to the safety or security of any minor, ward, or staff.”³²⁵ Room confinement is presumptively to be less than four hours, with renewed authorization from a facility supervisor required every four hours.³²⁶

Colorado’s 2016 statute provides that “a youth may not be held in seclusion under any circumstances for more than eight total hours in two consecutive calendar days without a written court order.”³²⁷ In 2017, Washington, D.C. enacted legislation requiring that room confinement for juveniles “be used for the briefest period of time possible and not for a time to exceed 6 hours,”³²⁸ and prohibiting “room confinement on a juvenile for the purposes of discipline, punishment, administrative convenience, retaliation, or staffing shortages.”³²⁹ The Tennessee Juvenile Justice Reform Act of 2018 includes a provision prohibiting seclusion of children in detention.³³⁰ A bill in Nebraska proposes a limit of three hours of room confinement “in the case of a juvenile who poses a substantial and immediate risk of physical harm to others” and 30 minutes “in the case of a juvenile who poses a serious and immediate risk of physical harm to himself or herself.”³³¹ The bill would also prohibit room confinement as punishment.³³² Proposed legislation in Connecticut would limit the use of solitary confinement for children in pre-trial detention.³³³

Other statutes focus on the use of restrictive housing for individuals with mental health issues. Statutes enacted or proposed generally provide for prohibitions, coupled with clauses permitting brief stays under exigent circumstances. For example, in 2017, Colorado prohibited the placement of “a person with a behavioral or serious mental health disorder in long-term isolated confinement except when exigent circumstances are present.”³³⁴ In Massachusetts, a “prisoner shall not be held in restrictive housing if the prisoner has a serious mental illness or a finding has been made . . . that restrictive housing is clinically contraindicated,”³³⁵ and within 72 hours after such a placement, the custodian certifies that the prisoner cannot “be safely held in the general population,” that no space is available in a “secure treatment unit,” that efforts are underway to identify alternative, “appropriate housing,” and that a “time frame” to do so is laid out.

Litigation and Consent Decrees

Challenges to correctional systems as well as to decisions in individual cases continue to bring the harms of restrictive housing to the attention of judges. The case law is voluminous; the discussion here offers a few highlights of rulings since 2016. We begin with institutional cases focused on subpopulations of individuals with mental health issues, juveniles, and persons confined to restrictive housing solely because of their capital sentences.

A major ruling came from the District Court for the Middle District of Alabama,³³⁶ which had certified a class of “all persons with a serious mental illness who are now, or will in the future be, subject to defendant’s mental health care policies and practices” within the Alabama Department of Corrections facilities.³³⁷ At the time of the litigation, the Alabama system included 19,500 prisoners, of whom 3,400 were receiving “some type of mental-health treatment.”³³⁸ After a seven-week trial, the federal district court in 2017 found that “inadequacies in the mental-health care system start . . . with intake screening” in which “likely thousands” of prisoners with mental illness are missed.³³⁹ The court concluded that even when mental health issues were identified, “prisoners receive significantly inadequate care,” including for those who had discussed committing suicide.³⁴⁰ The court held that the care provided to mentally ill persons violated the constitutional obligation not to be deliberately indifferent to the “serious medical needs of prisoners.”³⁴¹ Included as Eighth Amendment violations were the placement of “seriously mentally ill prisoners in segregation without extenuating circumstances and for prolonged periods of time; placing prisoners with serious mental-health needs in segregation without adequate consideration of the impact of segregation on mental health; and providing inadequate treatment and monitoring in segregation.”³⁴² Since its ruling, the court has accepted proposed remedies, including a process to identify prisoners with serious mental illness so that they are not placed in segregation, absent extenuating circumstances.³⁴³

The South Carolina Department of Corrections recently agreed to a settlement in a class action lawsuit by incarcerated individuals with serious mental illness.³⁴⁴ The plaintiffs had claimed that the department’s failure “to provide reasonably adequate medical treatment” to prisoners with serious mental illness violated the state constitutional prohibition against cruel and unusual punishment.³⁴⁵ The suit alleged that mentally ill prisoners were often punished by being placed for long periods of time in administrative segregation, which, the complaint stated, exacerbated mental illness.³⁴⁶ The complaint asserted that the prison system did not “have adequate treatment space or staff to adequately monitor or evaluate” mentally ill individuals in segregation.³⁴⁷ A state trial court judge held that South Carolina’s treatment of seriously mentally ill prisoners violated the state constitution.³⁴⁸ One of the court’s findings was that the “inappropriate and extended reliance on segregation to manage inmates with serious mental illness, particularly those in crisis, exposes them to a substantial risk of serious harm,” which “contributed to the deaths” of multiple people in segregation.³⁴⁹ After the state and the plaintiffs reached an agreement, the state’s appeal was dismissed.³⁵⁰ The settlement addressed the six areas of serious deficiencies that the trial court’s ruling had outlined, including ending “inappropriate segregation of offenders in mental health crisis.”³⁵¹

South Carolina reported a number of changes to its restrictive housing regime since agreeing to these reforms. As South Carolina explained, the settlement contemplated “a multi-year compliance process with phased-in implementation,” that will be assessed by “an Implementation Panel of two experts who conduct periodic site visits and review reports and records.” The prison

system described hiring a deputy director to oversee compliance with the settlement. The plan included the following measures:

(1) the development of a comprehensive mental health treatment program that prohibits the inappropriate segregation of inmates in mental health crisis; (2) access for segregated inmates to group and individual therapy to include more out of cell time for segregated mentally ill inmates; (3) timely sessions for segregated inmates with qualified mental health practitioners; (4) improvement in the cleanliness and temperature of segregation cells; (5) implementation of a formal quality management program under which segregation practices and conditions are reviewed; and (6) development of a training program for officers concerning appropriate methods of managing mentally ill inmates.

South Carolina also reported creating a “Quality Improvement and Risk Management Division within the Office of Legal and Compliance to monitor and report compliance with the settlement requirements.” The correctional system further described implementing a “Behavioral Management Unit policy” in August 2016, “with the purpose of providing inmates whose mental health needs likely contribute to their segregation status with programming, treatment, and structure as an alternative to long term placement in restrictive housing.”³⁵² Despite stating that it was “making steady progress” to comply with the agreement, South Carolina explained that it was “hampered by staffing deficits,” which it was addressing with “retention teams to mentor new officers and work with officers considering leaving the agency.”

In New York City, a settlement of a class action involving isolation of pre-trial detainees resulted in awards to individuals confined there.³⁵³ The plaintiffs, former detainees at Rikers Island, had alleged that the New York City Department of Corrections violated the U.S. Constitution by holding pretrial detainees in solitary confinement or punitive segregation for no legitimate purpose and without providing due process.³⁵⁴ The city agreed to pay a total of \$5 million to 470 individuals placed in solitary confinement between 2012 and 2015.³⁵⁵ Each member of the class was to receive a minimum of \$175 per day spent in solitary confinement or punitive segregation. Individuals diagnosed as having a serious mental illness or who were under the age of 18 at the time of confinement were to receive \$200 per day spent in confinement.³⁵⁶

In August 2018, a federal district court judge approved a \$240,000 settlement for four teenagers held in solitary confinement in Washington state.³⁵⁷ The youths had been held in adult detention facilities while awaiting trial. In October 2017, they filed a class action lawsuit alleging that King County’s practice of holding them in long-term solitary confinement violated the Eighth and Fourteenth Amendments of the United States Constitution and Article 1, section 14 of the Washington Constitution, which provides that “cruel punishment” shall not be inflicted.³⁵⁸ Under the terms of the settlement, King County agreed that, in addition to compensating the four individuals, it would institute a ban on solitary confinement of juveniles in all of its detention facilities. The settlement provided for exceptions “when based on the juvenile’s behavior,” when “necessary to prevent imminent and significant physical harm” to the juvenile or others, and when

“less restrictive alternatives were unsuccessful.”³⁵⁹ The settlement further stipulated that solitary confinement for all juvenile detainees “may not be used for disciplinary or punishment purposes.”³⁶⁰ In addition, the county consented to having mental health or medical staff assess any juvenile within eight hours of placement, and to notify a parent or legal guardian when a juvenile is held in isolation for longer than eight consecutive hours.³⁶¹

Many courts have determined that isolation of juveniles is unlawful. For example, in Tennessee in 2017, a federal district court held that a class of incarcerated youth were “likely to succeed on their claims that juveniles being detained in solitary confinement or isolation for punitive or disciplinary purposes constitutes . . . inhumane treatment”³⁶² and issued a preliminary injunction barring all solitary confinement for juveniles as punishment or discipline.³⁶³ In another case, citing the “broad consensus among the scientific and professional community that juveniles are psychologically more vulnerable than adults,”³⁶⁴ the federal district court for the Northern District of New York concluded that the plaintiffs were substantially likely to succeed on their claim that punitive solitary confinement of youth violated the Eighth Amendment.³⁶⁵ In 2017, the Juvenile Law Center and the ACLU of Wisconsin filed a lawsuit challenging state officials’ use of solitary confinement, shackling, and pepper spray in two youth detention facilities³⁶⁶ and won a ruling barring the use of those forms of restraint for youths.³⁶⁷ In January of 2018, the Wisconsin legislature enacted legislation to close, by 2021, the two juvenile detention facilities at issue in the lawsuit.³⁶⁸ The case ended with a settlement to eliminate punitive juvenile solitary confinement within the coming year.³⁶⁹

Another set of cases focus on the practice of placing individuals in restrictive housing solely because they have capital sentences. That practice has repeatedly drawn the attention of U.S. Supreme Court justices. In 2015, in *Davis v. Ayala*, Justice Anthony Kennedy wrote a concurrence to underscore that “years on end of near-total isolation” impose “a terrible price.”³⁷⁰ Further, he noted that judges putting a person in long-term solitary confinement ought to reflect on the harm to mental health entailed.³⁷¹ In 2017, Justice Breyer responded to his colleagues’ denial of a petition for a stay of execution in Texas by questioning the constitutionality of extended solitary confinement for death row prisoners: “If extended solitary confinement alone raises serious constitutional questions, then 20 years of solitary confinement, all the while under threat of execution, must raise similar questions, and to a rare degree, and with particular intensity.”³⁷²

In the lower courts, several lawsuits have challenged the use of a capital sentence to place people into restrictive housing. Lawsuits filed in Arizona³⁷³ and in California³⁷⁴ sparked changes in the use of automatic solitary confinement for death-row prisoners. Other cases challenging automatic use of restrictive housing for individuals sentenced to death are pending in Florida,³⁷⁵ Louisiana,³⁷⁶ and Pennsylvania.³⁷⁷ In another case involving two individuals whose capital sentences were vacated and who remained in solitary confinement for years thereafter, the Court of Appeals for the Third Circuit held that “inmates on death row whose death sentences have been vacated have a due process right to avoid continued placement in solitary confinement on death row, absent . . . meaningful protections” that the decision outlined.³⁷⁸

We should note that not all departments of corrections place individuals with capital sentences in restrictive housing. As detailed in *Rethinking Death Row: Variations in the Housing of Individuals Sentenced to Death*,³⁷⁹ most states give discretion to prison systems to decide how to house prisoners.³⁸⁰ This 2016 report provided accounts from correctional leaders in North Carolina, Missouri, and Colorado who had housed capital-sentenced prisoners in settings offering them meaningful opportunities to interact with others.³⁸¹ Researchers on “mainstreaming” death-sentenced prisoners in Missouri concluded more than two decades ago that, while integration of these prisoners entailed some challenges, “integration was a viable, effective approach.”³⁸² Moreover, a 2016 study found no evidence that integrating such prisoners was a source of more violence in prisons.³⁸³

Other cases, filed by individuals, have resulted in decisions about the harms of placement in restrictive housing for years, and in some instances, for decades. In one Pennsylvania case, a prisoner who had served 36 years in solitary confinement challenged the constitutionality of his continued confinement and won an injunction to release him to general population.³⁸⁴ The federal district court for the Middle District of Pennsylvania found that the “the extraordinary duration” of the prisoner’s confinement, combined with “the harsh consequences of involuntary isolation” amount to a “deprivation of a constitutional proportion;”³⁸⁵ “retention in the RHU will protract his extant injuries and expose him to an imminent and probable risk of even greater psychological damage.”³⁸⁶

Restrictive Housing as a Global Concern

The close attention to restrictive housing practices in the United States is part of a worldwide trend of concern about this practice,³⁸⁷ which was addressed in the United Nations Standard Minimum Rules for the Treatment of Prisoners, commonly known as the “Nelson Mandela Rules.”³⁸⁸ The Rules define solitary confinement as being held for 22 hours or more a day for longer than 15 days without “meaningful human contact.”³⁸⁹ The rules state that “solitary confinement shall be used only in exceptional cases as a last resort, for as short a time as possible and subject to independent review, and only pursuant to the authorization by a competent authority,” and “shall not be imposed by virtue of a prisoner’s sentence.”³⁹⁰ In addition, the Rules provide that “solitary confinement should be prohibited in the case of prisoners with mental or physical disabilities when their conditions would be exacerbated by such measures.”³⁹¹ Further, “indefinite” and “prolonged solitary confinement” should not be used,³⁹² and women and children should not be held in solitary confinement.³⁹³

Litigation in various national courts, transnational commissions, and non-governmental organizations continues to document and in some instances circumscribe the harms of isolating confinement. In Canada, trial courts in Ontario and in British Columbia in 2017 found aspects of administrative segregation unlawful.³⁹⁴ The Ontario decision concluded that the lack of independent review of a decision to place a prisoner in restrictive housing violated the Charter of Rights and Freedoms because of failures “to provide the procedural safeguards required by the principles of fundamental justice.”³⁹⁵ The court found that putting people into “administrative

segregation amounts to a significant deprivation of liberty”³⁹⁶ and that “placing an inmate in administrative segregation imposes a psychological stress, quite capable of producing serious permanent observable negative health effects.”³⁹⁷ The court did not, however, find that prolonged administrative segregation for more than 15 days constitutes “cruel and unusual treatment or punishment,” as prohibited under Section 12 of the Charter of Rights and Freedoms.³⁹⁸ The court also did not conclude that segregation of young adults and the mentally ill violated that prohibition.³⁹⁹ As of this writing, the decision has been stayed pending appeal.⁴⁰⁰

In British Columbia, after hearing from dozens of witnesses including experts on administrative segregation and prisoners in administrative segregation,⁴⁰¹ a trial court declared that Canadian statutes and regulations providing for segregation violated Section 7 of the Charter’s “right to life, liberty, and security of the person.” The court based its finding on the fact that the relevant laws authorized “prolonged, indefinite administrative segregation,” that internal review depended on the institutional head (warden), and that prisoners were deprived of “right to counsel at segregation hearings and reviews.”⁴⁰² The court found that use of segregation also violated the Charter’s Section 15 right to “equal protection and equal benefit of the law.”⁴⁰³ The court reached this determination based on the laws’ authorization of “administrative segregation for the mentally ill and/or disabled” and “a procedure that resulted in discrimination against Aboriginal inmates.”⁴⁰⁴ The court concluded that “administrative segregation . . . is a form of solitary confinement that places all Canadian federal inmates subject to it at significant risk of serious psychological harm, including mental pain and suffering, and increased incidence of self-harm and suicide.” The court stated that the “risks of these harms are intensified in the case of mentally ill inmates, but that all prisoners “subject to segregation are subject to the risk of harm to some degree.”⁴⁰⁵ The court held, however, that “not every application of the impugned legislation will” “amount to cruel and unusual punishment.”⁴⁰⁶ The court also found that the segregation laws were not “arbitrary.”⁴⁰⁷ As of this writing, the judgment was stayed pending appeal.⁴⁰⁸

In Europe, supranational and non-governmental organizations have called for reforms of restrictive housing practices. The Council of Europe’s European Committee on Crime Problems issued a report in May 2018 analyzing the need to update the European Prison Rules⁴⁰⁹ so as to increase regulation of solitary confinement. Doing so would entail bringing the European Prison Rules in line with the standards of the Council of Europe’s Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT) and with the Nelson Mandela Rules.⁴¹⁰ That report called for a new rule on solitary confinement in accordance with the 2011 CPT standards to address administrative segregation as a form of solitary confinement.⁴¹¹ Those rules set forth principles of proportionality, lawfulness, accountability, necessity, and non-discrimination in the use of solitary confinement, and called for the “material conditions” of such confinement to include “access to natural light,” sufficient artificial light for reading, communication mechanisms, and showers as often as prisoners in the “normal regime.”⁴¹²

In 2017, the CPT published a report on detention conditions in Germany.⁴¹³ One of the areas of concern was the use of prolonged solitary confinement and solitary confinement for

juveniles. The CPT recommended that prisoners be held for no more, and preferably fewer, than 14 days in disciplinary solitary confinement.⁴¹⁴ In addition, the CPT endorsed the Nelson Mandela Rules' prohibition on solitary confinement for juveniles.⁴¹⁵ The CPT also observed significant differences among institutions: in some prisons, disciplinary solitary confinement was imposed only rarely and usually for a short period of time, while in others, it was imposed much more frequently and in many cases for up to four weeks.⁴¹⁶

In February 2018, the Irish Penal Reform Trust (IPRT) published a study on the use of solitary confinement and restricted regimes.⁴¹⁷ The report defined "solitary confinement" as 22 or more hours of confinement a day in a cell, and "restricted regimes" as 19 hours a day or more in cell.⁴¹⁸ The report found that while the number of prisoners in solitary confinement decreased from July 2013 to October 2017, the overall number of prisoners in restricted regimes had increased, with 428 individuals in restricted regimes, most subject to 21 hours in cell, in October 2017.⁴¹⁹ The report made many recommendations including "full compliance with the Mandela Rules" and that provisions be made to "set the minimum out-of-cell time at 8 hours per day." The report also recommended that separation "not be permitted for reasons of punishment, but only for reasons of safety in emergency situations, and for the shortest possible period of time"; that "adults with mental health difficulties or mental or physical disabilities" not be put into solitary confinement; and that a parallel "absolute prohibition" be in place for "children."⁴²⁰ Further, the report called for the Irish Prison Service to "regularly collect and publish data relating to the length of time prisoners spend on restricted regimes in all prisons."⁴²¹

VI. Comparing the Numbers of People in Restrictive Housing in 2015–2016 and in 2017–2018

As we noted, we have data from 43 jurisdictions, housing collectively about 80.6% of the U.S. prison population and reporting 49,197 people in restrictive housing. We therefore estimated that, if the proportion of those held in restrictive housing in jurisdictions that did not provide information mirrored that of those that did, 61,000 people were in restrictive housing in the fall of 2017.

In this concluding section, we put together materials from the 2015–2016 and the 2017–2018 ASCA-Liman surveys by analyzing some of the data provided by the 40 jurisdictions that responded with information on restrictive housing populations in *both* surveys.⁴²² That comparison permits insights into if and how the use of restrictive housing changed during the interval between the two surveys. As detailed below, the numbers of prisoners in restrictive housing decreased in some jurisdictions and increased in others.⁴²³

As displayed in Table 21, across these 40 jurisdictions, the aggregate number of prisoners reported to be in restrictive housing decreased by 9,444 prisoners, from 56,337 in 2015 to 46,893 in 2017. In 29 of these 40 jurisdictions, the number of prisoners reported in restrictive housing decreased from 2015 to 2017.⁴²⁴ The five jurisdictions with the largest decreases in numbers of prisoners in restrictive housing population accounted for about three-quarters of the aggregate reduction across jurisdictions.⁴²⁵ In 11 jurisdictions, the number of prisoners reported in restrictive housing increased from 2015 to 2017.⁴²⁶

Across these 40 jurisdictions, the percentage of prisoners in restrictive housing decreased from 5.0% in 2015 to 4.4% in 2017. In 28 jurisdictions, the percentage of prisoners reported to be in restrictive housing decreased from 2015 to 2017.⁴²⁷ The largest reduction in the percentage of prisoners in restrictive housing in a single jurisdiction was from 14.0% in 2015 to 4.7% in 2017.⁴²⁸ In 12 jurisdictions, the percentage of prisoners reported to be in restrictive housing increased during this time period.⁴²⁹ The largest increase in the percentage of prisoners in restrictive housing in a single jurisdiction grew from 14.5% in 2015 to 19.0% in 2017.⁴³⁰ Figure 15 and Figure 16 detail the percentage of prisoners in restrictive housing by jurisdiction in two ways: Figure 15 displays the percentages in both years, and Figure 16 provides change in percentages.

What accounts for the changing numbers is unclear. Variables include new policies and practices on restrictive housing, changes in facilities and budgets, litigation, statutes, and the overall numbers of people in prison systems as prisoners and staff. For example, in the 40 jurisdictions analyzed here, the total custodial population for which we also have data on restrictive housing decreased by 69,499 people from 1,124,695 incarcerated persons in 2015 to 1,055,196 in 2017.⁴³¹ In 20 of the 29 jurisdictions in which restrictive housing numbers declined, so too did the total prison population.⁴³² In two of the 11 jurisdictions that had an increase in restrictive housing, the total prison population increased as well.⁴³³

Those two variables—total prison population and restrictive housing population—do not always match up or move in the same direction. In the Federal Bureau of Prisons, for example, the total prison population decreased to a larger extent than did the restrictive housing population. In 2015, 4.7% of the federal prison population was reported to be in restrictive housing. In 2017, 5.2% of the federal prison population was reported to be in restrictive housing. Thus while the total number of federal prisoners in restrictive housing decreased, the percentage of federal prisoners in restrictive housing increased.

Table 21 Jurisdiction-by-Jurisdiction Comparisons of Restrictive Housing Populations in 2015–2016 and in 2017–2018 (n = 40)

	2015 Total Custodial Population for Facilities Reporting Restrictive Housing Data	2015 Population in Restrictive Housing	2015 Percentage in Restrictive Housing	2017 Total Custodial Population for Facilities Reporting Restrictive Housing Data	2017 Population in Restrictive Housing	2017 Percentage in Restrictive Housing

Totals	1,124,695	56,337	5.0%	1,055,196	46,893	4.4%

* In 2015, the number used for total custodial population was the number of prisoners for which the jurisdiction had restrictive housing data. For the current survey, we used the total custodial population for which the jurisdiction had restrictive housing data and that was under the direct control of the jurisdiction. In 2015, some jurisdictions had restrictive housing data for facilities that were not under their direct control and included those prisoners in their 2015 survey response. Those jurisdictions are marked with an asterisk. Differences between the 2015 and 2017 total custodial population for these jurisdictions may therefore result from changes in the calculation of the total custodial population rather than changes in the jurisdictions' numbers of prisoners.

Figure 15 Jurisdiction-by-Jurisdiction Comparisons of Percentages of Prisoners in Restrictive Housing Populations in 2015–2016 and in 2017–2018 (n = 40)

Figure 16 Jurisdiction-by-Jurisdiction Comparisons of the Changes in Percentage of Prisoners in Restrictive Housing Populations in 2015–2016 and in 2017–2018 (n = 40)

Another window into changes over time comes from the numbers on length of time in restrictive housing provided by the 31 jurisdictions responding to those questions in both surveys.⁴³⁴ Table 22 and Table 23 show that, overall, the numbers of individuals in restrictive housing across most time periods decreased from 2015 to 2017. The number of individuals in restrictive housing for 15 days to one month increased by 6.5%; one to three months increased by 0.8%; three to six months decreased by 13.2%; six months to one year decreased by 30.0%; one to three years decreased by 40.4%; three to six years decreased by 33.1%; and six or more years decreased by 25.9%.

As shown in Table 22, the number of prisoners in restrictive housing for six months or less decreased in about as many jurisdictions as it increased. The number of prisoners in restrictive housing for time periods longer than six months decreased in more jurisdictions than it increased.

The number of individuals in restrictive housing who were being held from 15 days to one month decreased in 15 jurisdictions, stayed the same in one jurisdiction, and increased in 15 jurisdictions. The number of individuals in restrictive housing from one month to three months decreased in 14 jurisdictions, and increased in 17 jurisdictions. The number of individuals in restrictive housing from three months to six months decreased in 17 jurisdictions, stayed the same in one jurisdiction, and increased in 13 jurisdictions.

The number of individuals in restrictive housing from six months to one year decreased in 23 jurisdictions, stayed the same in one jurisdiction, and increased in seven jurisdictions. The number of individuals in restrictive housing from one year to three years decreased in 23 jurisdictions, stayed the same in one jurisdiction, and increased in seven jurisdictions. The number of individuals in restrictive housing from three years to six years decreased in 20 jurisdictions, stayed the same in four jurisdictions, and increased in seven jurisdictions. The number of individuals in restrictive housing over six years decreased in 18 jurisdictions, stayed the same in eight jurisdictions, and increased in five jurisdictions.

* Shaded cells contain values from the 2015–2016 survey. Unshaded cells contain values from the 2017–2018 survey.

We also calculated the distribution across time intervals—i.e., what percentage of individuals in restrictive housing were held for each time interval—for the populations in these 31 jurisdictions, as Table 23 reflects. The percentage of prisoners in restrictive housing for less than six months increased in more jurisdictions than it decreased, while the percentage of prisoners in restrictive housing for more than six months decreased in more jurisdictions than it increased.

The percentage of individuals in restrictive housing who were being held from 15 days to one month decreased in 12 jurisdictions, and increased in 19 jurisdictions. The percentage of individuals in restrictive housing from one month to three months decreased in nine jurisdictions and increased in 22 jurisdictions. The percentage of individuals in restrictive housing from three months to six months decreased in 12 jurisdictions, stayed the same in three jurisdictions, and increased in 16 jurisdictions.

The percentage of individuals in restrictive housing from six months to one year decreased in 20 jurisdictions, stayed the same in two jurisdictions, and increased in nine jurisdictions. The percentage of individuals in restrictive housing from one year to three years decreased in 20 jurisdictions, stayed the same in five jurisdictions, and increased in six jurisdictions. The percentage of individuals in restrictive housing from three years to six years decreased in 16 jurisdictions, stayed the same in nine jurisdictions, and increased in six jurisdictions. The percentage of individuals in restrictive housing over six years decreased in 14 jurisdictions, stayed the same in 14 jurisdictions, and increased in three jurisdictions.

Table 23 Comparing the Distributions of Prisoners in Restrictive Housing by Length of Time in 2015–2016 and in 2017–2018* (n=31)

	15 Days up to One Month		One up to Three Months		Three up to Six Months		Six up to Twelve Months		One up to Three Years		Three up to Six Years		Six Years Plus	
Alaska	35%	28%	21%	30%	14%	20%	17%	10%	12%	12%	1%	0%	0%	0%

* Shaded cells contain values from the 2015–2016 survey. Unshaded cells contain values from the 2017–2018 survey.

To conclude, Figure 17 provides a summary of the comparison of the lengths of time that individuals spent in restrictive housing. This graph is one way to capture that the many efforts to limit the use and duration of restrictive housing are having effects on people's lives.

¹⁹ ASCA-LIMAN AIMING TO REDUCE TIME-IN-CELL 2016, *supra* note 13, at 16.

²⁰ The 2017–2018 survey asked about “separating prisoners from the general population and holding them in their cells for an average of 22 or more hours per day for 15 or more continuous days.” Under this definition, for example, a person in cell for 24 hours per day for four days, 21 hours per day for three days, 23 hours a day for five days, and 21-and-a-half hours a day for 8 days would be included as held in restrictive housing. The 2016 survey did not include “average” in its definition, and thus a jurisdiction may or may not have included such persons in their count of restrictive housing.

²¹ AMERICAN CORRECTIONAL ASSOCIATION RESTRICTIVE HOUSING PERFORMANCE BASED STANDARDS AUGUST 2016, *available at* <https://www.asca.net/pdfdocs/8.pdf> [hereinafter ACA 2016 RESTRICTIVE HOUSING STANDARDS].

²² The jails were the District of Columbia, Los Angeles County, New York City, and Philadelphia.

²³ Most jurisdictions provided initial data as of September 2017. Other jurisdictions responded using different initial dates. Minnesota Department of Corrections provided data as of July 2017. Colorado Department of Corrections, Pennsylvania Department of Corrections, and Texas Department of Corrections provided data as of August 2017. Georgia Department of Corrections, Indiana Department of Corrections, Mississippi Department of Corrections, New Hampshire Department of Corrections, New York Department of Corrections, North Carolina Department of Corrections, Rhode Island Department of Corrections, and Utah Department of Corrections provided data as of October 2017. New Mexico Department of Corrections provided data as of November 2017. Idaho Department of Corrections, Illinois Department of Corrections, and Michigan Department of Corrections provided data as of December 2017. Alaska Department of Corrections provided data as of February 2018. Los Angeles County Jail provided data as of March 2018.

²⁴ The jurisdictions that did not provide any responses were California, Florida, Maine, Vermont, Virginia, and the District of Columbia.

²⁵ The responding jails were Los Angeles County and Philadelphia.

²⁶ The data we gathered focused on the fall of 2017. National data on the baseline prison population comes from 2016 and became available in 2018, with revisions in April 2018. *See* E. Ann Carson, *Prisoners in 2016*, BUREAU OF JUSTICE STATISTICS 4, Tbl.2 (Jan. 2018), <https://www.bjs.gov/content/pub/pdf/p16.pdf> [hereinafter BJS *Prisoners in 2016*].

²⁷ Other organizations have done site visits or worked with jurisdictions to evaluate their policies. *See e.g.*, LEON DIGARD, ELENA VANKO & SARA SULLIVAN, RETHINKING RESTRICTIVE HOUSING: LESSONS FROM FIVE U.S. JAILS AND PRISON SYSTEMS, VERA INSTITUTE OF JUSTICE (May 2018), *available at* <https://www.vera.org/rethinking-restrictive-housing> [hereinafter VERA RETHINKING RESTRICTIVE HOUSING 2018]. *See also* Vera Institute of Justice, Reducing Segregation, <https://www.vera.org/projects/reducing-segregation>.

²⁸ Zhen Zeng, *Jail Inmates in 2016*, BUREAU OF JUSTICE STATISTICS 1 (Feb. 2018), <https://www.bjs.gov/content/pub/pdf/ji16.pdf> [hereinafter BJS *Jail Inmates in 2016*].

²⁹ The full survey is set forth in Appendix A. A few jurisdictions, noted in Table 1, responded that their information was based on a definition different from that of the survey.

³⁰ Of the 46 jurisdictions that responded, three states (Minnesota, New Hampshire, and West Virginia) did not provide data on the number of prisoners in restrictive housing.

³¹ This total custodial population comes from requests for information about prisoners held under the direct control of the jurisdictions. The survey defined direct control as “your jurisdiction hires and supervises staff (even if some are through subcontracts, such as health care services) and provides the governing rules and policies.”

A few jurisdictions raised questions about the definition of direct control. Three jurisdictions commented either about the definition or that their answers included individuals held by the jurisdiction but in facilities whose personnel were not hired by the jurisdiction. For example, Ohio noted that it did “not differentiate” its “custodial population” based on whether or not it hired the staff, as the prisoners were “under our direct control whether or not they are in a private prison, or whether or not the staff are state employees.” Rather, Ohio was “responsible for” all prisoners incarcerated in Ohio, and it reported data on all of them, whether in private facilities or not. Similarly, Idaho replied that its restrictive housing numbers included prisoners at “private prisons and contract facilities,” which was to say its “whole population,” not only those under its “direct control.”

Almost all jurisdictions reported that some prisoners are housed not under their control—in local jails or out of state under the Interstate Compact Agreement—but states that have a substantial number (more than 10%) not housed under their direct control are listed in the endnotes to Table 1. The 43 responding jurisdictions reported a total of 111,094 (10%) of prisoners sentenced by their jurisdictions but not under the direct control of each state’s correctional system.

³² BJS *Prisoners in 2016*, *supra* note 26, at 4, Tbl.2.

³³ We calculate this estimate by dividing the number of people in restrictive housing based on the survey responses (49,197) by the percentage of the U.S. prison population that the responding jurisdictions represented according to the BJS data (80.6%). However, as noted above, this may be an undercount because some jurisdictions provided restrictive housing data for fewer people than their entire custodial population. That is, the population over which the systems had direct control and for which they had restrictive housing data, which is the total custodial population we used, may not have represented the entire custodial population. To mitigate this issue, another estimation method could be

used. The second method would apply the overall percentage of people in restrictive housing (4.5%) to the number of people in prisons, according to BJS statistics, in the jurisdictions that did not respond to the survey, and then add that figure to the number of individuals in restrictive housing in the responding jurisdictions. This method results in a total of almost 62,400 people in restrictive housing across the country. The different methods of estimation result in numbers that are relatively similar.

³⁴ The jurisdiction at the lowest part of that range was Colorado, and the jurisdiction at the highest was Louisiana. Louisiana reported taking “numerous steps over the last year to address the use of restrictive housing.” Louisiana reported that these “efforts have led to a decrease in the number of restrictive housing beds by 1,168.”

Louisiana joined with the Vera Institute of Justice in the Safe Alternatives to Segregation initiative. Louisiana reported that doing so entailed evaluating what was driving placements and the amounts of time spent in isolation. The state then wrote new restrictive housing regulations, which were “being piloted at a couple of institutions with positive results.” Louisiana described the most significant changes as “using terminology consistent with the Department of Justice,” and using “a disciplinary matrix that specifies definitive sanctions” including the time that will be spent in segregation and the violations that will lead to isolation. Louisiana stated that these reforms “will lead to” fewer prisoners “being placed in RH and for shorter durations.”

Louisiana also described implementing “a pilot at Elayn Hunt Correctional Center totally eliminating the use of restrictive housing.” Louisiana explained that the facility was “allowing all offenders greater than two hours out of cell time per day. The time spent out of cell is a combination of recreational, educational, and treatment driven.” In addition Louisiana reported that on February 11, 2018, it closed “Camp J,” which “previously served as a disciplinary camp located at Louisiana State Penitentiary.” This closure eliminated “416 RH beds. The facility that once housed the inmates with the most significant disciplinary history is being evaluated to be re-purposed into an assisted living / medical housing area.” Louisiana also stated that it had put into place “a pilot at Louisiana State Penitentiary allowing inmates on Death Row to be out of cell for greater than 2 hours per day (70 beds).” This program “allows all offenders the opportunity to be out of their cells for at least 4 hours per day. They are allowed congregate for recreational activities and are afforded treatment programs such as Thinking for a Change.”

³⁵ For some jurisdictions unable to clarify which definition they used, when constructing Figure 1, Figure 2, and Table 1, we used their responses to the question about length of time in restrictive housing, which provided again the 15–29 day definition. These jurisdictions were Arizona, Kansas, Maryland, Michigan, Montana, and Utah. Maryland’s figure came from an aggregate number provided in response to the question about length of time in restrictive housing. Maryland was unable to provide numbers by periods of time, so we used only the aggregate number. The jurisdictions that are marked with an asterisk did not provide responses to the question about length of time in restrictive housing.

³⁶ The column “Total Custodial Population” presents jurisdictions’ answers to the question about the total custodial population under the jurisdiction’s direct control. In addition, below we note variations coming from responses from specific jurisdictions.

Alabama reported that it housed an additional 5,258 prisoners in local jails and “Community Corrections” facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Alaska’s data were as of February 2018 rather than the fall of 2017.

Arizona reported that it housed an additional 8,740 prisoners in facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Arkansas reported that it housed an additional 2,245 prisoners in facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Delaware's reported total custodial population of 4,333 came from its answer to the questions about the number of people in its total custodial population by age and by race. In answer to the general question about its total custodial population, Delaware counted 5,556 people, which included non-sentenced individuals. Because Delaware did not report restrictive housing data for non-sentenced individuals, we used the 4,333 number, which excluded that population. Because Delaware is a unified system with direct control over its jail system, the total custodial population included jail data for sentenced individuals.

The Federal Bureau of Prisons reported that it housed an additional 18,941 prisoners in private facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Georgia's figure was taken from a question regarding the gender and age of the total custodial population. Georgia reported that it housed an additional 7,862 prisoners in private facilities and 4,550 in local jails over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

As of the fall of 2017, Hawaii reported placing 1,617 inmates at Saguaro Detention Center, a private prison in Arizona, over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing. Further, Hawaii noted that it collected data on restrictive housing totals for only part of its restrictive housing population: "We collect data for Admin Segregation and not disciplinary segregation or protective custody housing." Hawaii is a unified system with direct control over its jail system; the totals therefore included jail data.

Idaho's figure was taken from an answer to a question regarding the gender and age of the total custodial population.

Kentucky reported that it housed an additional 11,556 prisoners in county jails over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Louisiana reported housing an additional 20,122 prisoners in county jails over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing. Louisiana noted that it was unable to provide restrictive housing data for female inmates due to a "2016 flood that impacted our women's facility," resulting in the women being "displaced to multiple locations."

Montana reported housing an additional 922 prisoners in facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Nebraska's figure was taken from a question regarding the gender and age of the total custodial population.

New Jersey reported housing an additional 2,660 prisoners in facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

Ohio's total custodial population figure was from Sept. 21, 2017, and its restrictive housing data was from Sept. 14, 2017.

Rhode Island is a unified system with direct control over its jail system; the totals therefore included jail data.

Tennessee reported housing an additional 8,277 prisoners in county jails over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing. Tennessee's count of its total custodial population and its restrictive housing population included people in private prisons.

Utah reported housing an additional 1,346 "county jail inmates," four prisoners at Utah State Hospital, an additional five prisoners in "Hospital," and one prisoner in "Youth Corrections," as individuals in facilities over which it did not have direct control. These prisoners are not included in the data on total custodial population or the population in restrictive housing.

Washington noted it defined "short term" as 47 days or less. This definition did not affect the reports on the total restrictive housing population. Washington also reported that "up to 75 female offenders may be housed in county jail" over which it does not have direct control. These prisoners were not included in the data on the total custodial population or the data on restrictive housing.

Wyoming reported that it housed an additional 244 prisoners in facilities over which it did not have direct control; these prisoners were not included in the data on total custodial population or the population in restrictive housing.

³⁷ The column "Population in Restrictive Housing" presents jurisdictions' answers to a question about the total number of people in short-term and extended (more than 29 days) restrictive housing, with the exceptions noted at Figure 1. Additional notes for specific states follow.

Alaska's data were as of February 2018 rather than fall 2017. Alaska noted that "reported data was compiled from 12 facilities with somewhat different recording systems in place. While we do have a common electronic database, not all of the requested information was inputted or available. Unfortunately, some facilities were not able to provide numbers in all areas," which resulted in different sums for different questions. The number of prisoners reported to be in RH varied from 256 for the length-of stay question to 287 for the short-term and long-term restrictive housing question to 378 for the gender and age question.

Delaware is a unified system with direct control over its jail system; the totals here therefore include jail data.

Iowa noted that "restrictive housing for us means that an offender is held in their cell for at least 23 hours." This is higher than the standard definition of 22 or more hours. Kentucky similarly reported that all prisoners in restrictive housing were "housed in for 23 hours per day."

Montana's figure was taken from the question on length of stay.

Nevada's figure was taken from a question regarding the gender and age of the restrictive housing population.

New Mexico's figure was taken from a comment related to the question on length of time in restrictive housing. New Mexico noted that "we don't define short-term and long-term. The longest you can be in disciplinary RHU is 30 days. We have a long-term RHU program that is a step down program. That is a one year program but time can be enhanced for assaulting staff or returning to the program as a habitual. We do have inmates in RHU for periods of time less than 30 days."

³⁸ Of the 46 responding jurisdictions, Indiana did not respond to this question.

³⁹ Six jurisdictions did not provide data on length of time in restrictive housing for this report despite stating that they regularly collect it. These jurisdictions were Arkansas, Connecticut, Nevada, New Hampshire, New Mexico, and West Virginia.

⁴⁰ The jurisdictions that reported not regularly collecting data on length of time in restrictive housing were Arizona, Georgia, Idaho, Louisiana, Michigan, Minnesota, Ohio, and Wisconsin. Arizona explained, “Data regarding length of stay in restrictive housing is managed through our Adult Information Management System (AIMS). Data is utilized as needed to develop reports on an individual basis.”

⁴¹ The five jurisdictions that reported not regularly collecting data on length of time in restrictive housing but that provided data on length of time for this report were Arizona, Louisiana, Michigan, Ohio, and Wisconsin.

⁴² For example, a prisoner held for three years could be counted as having been in restrictive housing for only one year if the jurisdiction has kept data for one year and did not include information on years before data collection began. Of the 30 jurisdictions responding, 18 reported starting to collect data in 2014 or later, including four jurisdictions in 2017 and four in 2016.

⁴³ Some jurisdictions responding to the question about length of time in restrictive housing filled in a number for certain time periods and left other time periods blank. Some jurisdictions filled in zeros rather than leaving blanks. For this table, we filled in zeros for all time periods left blank as long as the jurisdiction had filled in numbers for some time periods.

When counting the numbers of prisoners in restrictive housing for various lengths of time, the following caveats apply. Alaska reported 378 people in restrictive housing and 256 people in restrictive housing by length of time. When responding to the question about length of stay, Alaska noted, “The numbers are the best estimate as the tracking is informal and not broken down in these quantities. Each facility maintains a separate roster for holding hearings. The required review and hearing for prisoners is: initial review is 24 hours from placement in segregation. The prisoner can be released at that time, the second review is 36 hours, and then every 30 days. Generally though a prisoner can be reviewed and released at any time the unit management team determines the prisoner can be released from segregation.” Hawaii reported 13 people in restrictive housing and 32 people in restrictive housing by length of time. Further, Hawaii noted that it collected data on restrictive housing totals for only part of its restrictive housing population: “We collect data for Admin Segregation and not disciplinary segregation or protective custody housing.” Illinois reported 921 people in restrictive housing and 1,098 people in restrictive housing by length of time. Kentucky reported 408 people in restrictive housing and 861 people in restrictive housing by length of time. Louisiana reported 2,709 people in restrictive housing and 2,719 people in restrictive housing by length of time. Massachusetts reported 443 people in restrictive housing and 312 people in restrictive housing by length of time. Missouri reported 2,990 people in restrictive housing and 2,510 people in restrictive housing by length of time. Nebraska reported 328 people in restrictive housing and 332 people in restrictive housing by length of time. North Dakota reported eight people in restrictive housing and nine people in restrictive housing by length of time. Oregon reported 938 people in restrictive housing and 638 people in restrictive housing by length of time.

Michigan noted that its length of stay data “reflects the number of days a prisoner spent in his/her current cell and does not account for the number of days in restrictive housing prior to placement in their current cell.”

Washington reported, “Short term duration for us is 47 days. The numbers provided for the survey in regards to short term were 47 days or less.”

⁴⁴ The numbers for Illinois were calculated by subtracting the numbers of people in protective custody by length of time from the total numbers of people reported to be in restrictive housing by length of time. Illinois reported that prisoners identified as being in protective custody “are job assignments such as barber, clerk, maintenance, etc., and are not in RH.” The number of prisoners reported to be in protective custody was 601.

⁴⁵ The high end of the range was Louisiana. The low end of the range was Colorado.

⁴⁶ When counting the number of men in the total custodial population, the following caveats apply. Kansas reported 9,886 prisoners in the total custodial population and 9,896 prisoners by gender. Kentucky reported 12,000 prisoners in the total custodial population and 23,566 prisoners by gender. This discrepancy is accounted for by Kentucky's inclusion of its 11,566 person jail population in the calculations by gender. Louisiana reported 14,291 prisoners in the total custodial population and 34,987 prisoners by gender. This discrepancy is partially accounted for by Louisiana's inclusion of its 20,122 person jail population in the calculations by gender. Nevada reported 13,718 prisoners in the total custodial population and 13,714 prisoners by gender.

Connecticut reported 328 prisoners in the restrictive housing population and 406 prisoners in the restrictive housing population by gender. Connecticut's reported overall number of people in restrictive housing came from data as of September 2017 while the reported number of people in restrictive housing by gender came from data as of April 2018. Illinois reported 921 prisoners in the restrictive housing population and 1,560 prisoners in the restrictive housing population by gender. This discrepancy may be a result of counting people in isolation from one to 14 days. Indiana reported 1,741 prisoners in the restrictive housing population and 1,971 prisoners in the restrictive housing population by gender. This discrepancy may be a result of counting people in isolation from one to 14 days. Kentucky reported 408 prisoners in the restrictive housing population and 1,015 prisoners in the restrictive housing population by gender. Maryland reported 1,417 prisoners in the restrictive housing population and 1,567 prisoners in the restrictive housing population by gender. Nebraska reported 328 prisoners in the restrictive housing population and 397 prisoners in the restrictive housing population by gender. New Jersey reported 1,011 prisoners in the restrictive housing population and 1,173 prisoners in the restrictive housing population by gender. New Mexico reported 550 prisoners in the restrictive housing population and 294 prisoners in the restrictive housing population by gender. North Dakota reported eight prisoners in the restrictive housing population and nine prisoners in the restrictive housing population by gender. Oregon reported 938 prisoners in the restrictive housing population and 1,031 prisoners in the restrictive housing population by gender. The 938 number came from a population snapshot as of September 2017. The 1,031 number came from a population snapshot in December 2017 after a follow-up. Tennessee reported 1,181 prisoners in the restrictive housing population and 555 prisoners in the restrictive housing population by gender. The 1,181 number came from data as of October 2017. The 555 number came from data as of January 2018. Tennessee did not provide data for the restrictive housing population by gender for the 1,181 number. Texas reported 4,272 prisoners in the restrictive housing population and 4,269 prisoners in the restrictive housing population by gender. Utah reported 296 prisoners in the restrictive housing population and 282 prisoners in the restrictive housing population by gender. Washington reported 387 prisoners in the restrictive housing population and 409 prisoners in the restrictive housing population by gender. Wyoming reported 81 prisoners in the restrictive housing population and 85 prisoners in the restrictive housing population by gender.

Oregon explained that restrictive housing data based on length of stay and by type of restrictive housing was to be provided quarterly from a reporting tool that it was building with the help of the Vera Institute, while other data were a one-day snapshot.

In response to a later inquiry, Missouri wrote: "Missouri doesn't define segregation the same as the survey defines restrictive housing. When the initial survey was submitted, each facility had to review their offenders assigned to segregation to determine if they met the definition of restrictive housing for the survey. This was a cumbersome task. There is no way to go back now and provide the demographics of the offenders identified in the original survey."

⁴⁷ The high end of the range (4.6% of the female custodial population, or 59 out of 1,280 female prisoners) was in Nevada; Colorado, Delaware, North Dakota, and Rhode Island housed no women in restrictive housing.

⁴⁸ When counting the number of women in the total custodial population, the same caveats as listed in note 47, *supra*, about data on men apply. In addition, as mentioned earlier, Louisiana noted in a follow-up email that it was unable to provide restrictive housing data for female prisoners.

⁴⁹ Most jurisdictions were able to report data in each of these categories, but some jurisdictions used different race and ethnicity categories that did not match the categories that we provided. For example, Connecticut and Illinois did not use the racial category Native Hawaiian/Pacific Islander, and Kentucky uses the category Asian/Pacific Islander, instead of Native Hawaiian/Pacific Islander and Asian as separate categories. Where these varying definitions created challenges in understanding the data reported, we followed up with the jurisdictions and have reported definitional differences in the relevant sections of the report.

⁵⁰ We reported based on correctional systems' methods for categorizing prisoners into racial and ethnic groups. Twenty-four correctional systems identified race and ethnicity based on prisoners' self-identification. Seventeen jurisdictions identified race and ethnicity based on a combination of self-report, court documentation, and police documentation. Alabama explained that "race is certified to us on a sentencing transcript, which comes from the circuit clerk's office of the sentencing county." Arizona stated that identification was "based on self-reporting and/or court documents." Arkansas reported using "the Inmate's Judgment & Commitment Order." Delaware reported that race and ethnicity was "imported/received as part of individual's electronic file received from Court" and that it could "be manually updated." The Federal Bureau of Prisons stated, "this information comes to the BOP from the Pre-Sentence Investigation report," and that it "is believed to be self-report in most instances." Kansas reported that race and ethnicity is "self selected," and that while "Hispanic ethnicity is recorded in addition to self selected race, for purposes of this survey those identifying as Hispanic ethnicity have been separated from their self selected race." Los Angeles responded it relied on "self identification and law enforcement records." Louisiana related using "LA State Police criminal records and birth certificate." Minnesota reported using "self reports and/or from court/arrest documents." Mississippi reported it relied on "court documents and/or NCIC [National Crime Information Center]." Missouri stated it utilized "the race captured in their criminal history." Montana responded that it followed "the NCIC standards for race reporting." Nevada stated that the information was "mostly, self reported or available from the pre-sentence investigation report." New Jersey said it used "an inmate's pre-sentencing information which provides nationality and race information in conjunction with self reporting during the classification process upon an inmate's transfer to the department." Oregon stated it relied on information from "LEDS [Law Enforcement Data System] or self report." Tennessee reported, "as offenders enter the diagnostic centers, we use the Judgment Orders from the courts, NCIC data, government issued identification, and self reporting." Utah stated, "staff are obtaining the information from our Bureau of Criminal Identification (BCI)."

Three jurisdictions reported specific policies on Hispanic ethnicity. Colorado stated, "ethnicity information is forwarded from Colorado Judicial and sent to us electronically along with mittimus information," and that "DOC determines which prisoners are included in the Hispanic demographic during the Intake process." New York related:

An inmate's self-reported race and ethnicity are both examined to determine into which racial/ethnic category he or she should be placed. An inmate is first categorized as white, black, other (this category includes Asian, Native American, and Other) or unknown based on self-reported race. Then, the inmate's ethnicity is determined; if the inmate's self-reported ethnicity is Hispanic, he or she is included in the "Hispanic" category. Next, the inmate's place of birth is examined; if he or she is born in a Spanish-speaking country or Puerto Rico, he or she is included in the "Hispanic" category, regardless of the inmate's self-reported ethnicity. Finally, the inmate's mother's place of birth and father's place of birth are examined; if either parent was born in a Spanish-speaking country or Puerto Rico, he or she is included in the "Hispanic" category, regardless of the inmate's self-reported ethnicity. So, an inmate's Hispanic ethnicity (as determined by inmate self-report, place of birth, or parental place of birth) is the overriding factor in determining race/ethnicity on the ETHNIC2 variable. The one exception to this is if the inmate's self-reported race is Asian; if so, he or she is included in the "Other" category, and not in the "Hispanic" category.

Washington responded that it used "offender self report," and that "race is self-identified separately from Hispanic origin. Ethnicity is self-identified separately from Race or Hispanic origin and relates to subpopulations such as specific Asian country of familial origin or Tribal affiliation."

Iowa did not clarify how identifications were made, stating, “by race or ethnicity.” Texas made identifications based on physical appearance: “Race is determined by physical appearance, not ethnicity or offender preference.” New Hampshire and West Virginia and did not provide answers.

⁵¹ Alabama reported that “Other” included people “other than Black, White, and Indian. Hispanics are grouped as Caucasian, and Asians are Grouped in ‘Other.’”

⁵² Iowa reported that “Native Hawaiian or Pacific Islander” prisoners were counted under “Asian.”

⁵³ When counting the number of men in the total custodial population, the following caveats apply. Kansas reported 9,886 prisoners in the total custodial population and 9,896 prisoners by race. Kentucky reported 12,000 prisoners in the total custodial population and 23,604 prisoners by race. This discrepancy is partially accounted for by Kentucky’s inclusion of its 11,566 person jail population in the calculations by race. Louisiana reported 14,291 prisoners in the total custodial population and 34,987 prisoners by race. This discrepancy is partially accounted for by Louisiana’s inclusion of its 20,122 person jail population in the calculations by race. Nevada reported 13,718 prisoners in the total custodial population and 13,714 prisoners by race. New Mexico reported 7,047 prisoners in the total custodial population and 7,037 prisoners by race. Washington reported 17,046 prisoners in the total custodial population and 17,076 prisoners by race. Wisconsin reported 22,589 prisoners in the total custodial population and 22,579 prisoners by race.

In addition, Alabama reported 21,592 prisoners in the total custodial population and the same number by race. However, Alabama reported 20,282 men in the total custodial population, and 20,268 men by race. Alabama reported 1,310 women in the total custodial population, and 1,324 women by race.

Connecticut reported 328 prisoners in the restrictive housing population and 74 prisoners in the restrictive housing population by race. Illinois reported 921 prisoners in the restrictive housing population and 1,560 prisoners in the restrictive housing population by race. This discrepancy may be a result of counting people in isolation from one to 14 days. Indiana reported 1,741 prisoners in the restrictive housing population and 1,971 prisoners in the restrictive housing population by race. This discrepancy may be a result of counting people in isolation from one to 14 days. Kentucky reported 408 prisoners in the restrictive housing population and 1,015 prisoners in the restrictive housing population by race. Maryland reported 1,417 prisoners in the restrictive housing population and 1,544 prisoners in the restrictive housing population by race. Nebraska reported 328 prisoners in the restrictive housing population and 397 prisoners in the restrictive housing population by race. New Jersey reported 1,011 prisoners in the restrictive housing population and 1,173 prisoners in the restrictive housing population by race. New Mexico reported 550 prisoners in the restrictive housing population and 294 prisoners in the restrictive housing population by race. North Dakota reported eight prisoners in the restrictive housing population and nine prisoners in the restrictive housing population by race. Oregon reported 938 prisoners in the restrictive housing population and 1,031 prisoners in the restrictive housing population by race. The 938 number came from a population snapshot as of September 2017. The 1,031 number came from a population snapshot in December 2017 after a follow-up. Tennessee reported 1,181 prisoners in the restrictive housing population and 555 prisoners in the restrictive housing population by race. The 1,181 number came from data as of October 2017. The 555 number came from data as of January 2018. Tennessee did not provide data for the restrictive housing population by race for the 1,181 number. Texas reported 4,272 prisoners in the restrictive housing population and 4,269 prisoners in the restrictive housing population by race. Utah reported 296 prisoners in the restrictive housing population and 282 prisoners in the restrictive housing population by race. Washington reported 387 prisoners in the restrictive housing population and 409 prisoners in the restrictive housing population by race.

As mentioned earlier, Oregon explained that restricted housing data based on length of stay and by type of restrictive housing was to be provided quarterly from a reporting tool that it was building with the help of the Vera Institute, while other data were a one-day snapshot.

Throughout this report, Iowa's definition of Asian includes Native Hawaiian/Pacific Islander.

⁵⁴ As previously mentioned, Alabama reported that "Other" included people "other than Black, White, and Indian. Hispanics are grouped as Caucasian, and Asians are Grouped in 'Other'."

⁵⁵ When counting the number of women in the total custodial population, the same caveats as listed in note 54, *supra*, with regards to men apply. In addition, as mentioned, Louisiana noted in a follow-up email that it was unable to provide restrictive housing data for female prisoners.

⁵⁶ ACA Standard 4-RH-0034, ACA 2016 RESTRICTIVE HOUSING STANDARD, *supra* note 21, at 39.

⁵⁷ Alaska, Louisiana, Maryland, and North Carolina were the jurisdictions reporting juveniles in restrictive housing.

⁵⁸ Some jurisdictions responding to the questions about prisoners' ages filled in a number for certain age ranges and left other age ranges blank. Some jurisdictions filled in zeros rather than leaving blanks. For the tables relating to age, we filled in zeros for all age ranges left blank as long as the jurisdiction had filled in numbers for some age ranges.

When counting the number of men in the total custodial population, the following caveats apply. Kansas reported 9,886 prisoners in the total custodial population and 9,896 prisoners by age. Kentucky reported 12,000 prisoners in the total custodial population and 23,566 prisoners by age. This discrepancy is accounted for by Kentucky's inclusion of its 11,566 person jail population in the calculations by age. Louisiana reported 14,291 prisoners in the total custodial population and 34,987 prisoners by age. This discrepancy is partially accounted for by Louisiana's inclusion of its 20,122 person jail population in the calculations by age. Nevada reported 13,718 prisoners in the total custodial population and 13,714 prisoners by age. New York reported 50,764 prisoners in the total custodial population and 50,767 prisoners by age.

Connecticut reported 328 prisoners in the restrictive housing population and 406 prisoners in the restrictive housing population by age. Connecticut's reported overall number of people in restrictive housing came from data as of September 2017 while the reported number of people in restrictive housing by age came from data as of April 2018. Illinois reported 921 prisoners in the restrictive housing population and 1,560 prisoners in the restrictive housing population by age. This discrepancy may be a result of counting people in isolation from one to 14 days. Indiana reported 1,741 prisoners in the restrictive housing population and 1,971 prisoners in the restrictive housing population by age. This discrepancy may be a result of counting people in isolation from one to 14 days. Kentucky reported 408 prisoners in the restrictive housing population and 1,015 prisoners in the restrictive housing population by age. Maryland reported 1,417 prisoners in the restrictive housing population and 1,557 prisoners in the restrictive housing population by age. Nebraska reported 328 prisoners in the restrictive housing population and 397 prisoners in the restrictive housing population by age. New Jersey reported 1,011 prisoners in the restrictive housing population and 1,173 prisoners in the restrictive housing population by age. New Mexico reported 550 prisoners in the restrictive housing population and 294 prisoners in the restrictive housing population by age. North Dakota reported eight prisoners in the restrictive housing population and nine prisoners in the restrictive housing population by age. Oregon reported 938 prisoners in the restrictive housing population and 1,031 prisoners in the restrictive housing population by age. The 938 number came from a population snapshot as of September 2017. The 1,031 number came from a population snapshot in December 2017 after a follow-up. Tennessee reported 1,181 prisoners in the restrictive housing population and 555 prisoners in the restrictive housing population by age. The 1,181 number came from data as of October 2017. The 555 number came from data as of January 2018. Tennessee did not provide data for the restrictive housing population by age for the 1,181 number. Texas reported 4,272 prisoners in the restrictive housing population and 4,269 prisoners in the restrictive housing population by age. Utah reported 296 prisoners in the restrictive housing population and 282 prisoners in the restrictive housing population by age. Washington reported 387 prisoners in the restrictive housing population and 409 prisoners in the restrictive housing population by age. Wyoming reported 81 prisoners in the restrictive housing population and 85 prisoners in the restrictive housing population by age.

In addition, Wisconsin reported 713 prisoners in the restrictive housing population and the same number by age. However, Wisconsin reported 661 men in the restrictive housing population and 632 men by age. Wisconsin reported 52 women in the restrictive housing population and 81 women by age.

As previously mentioned, Oregon explained that restrictive housing data based on length of stay and by type of restrictive housing was to be provided quarterly from a reporting tool that it was building with the help of the Vera Institute, while other data were a one-day snapshot.

Washington originally reported 2,844 men ages 50+ and 182 women ages 50+. These were the same numbers as were reported for men ages 36–50 and women ages 36–50. Washington later explained that the numbers were inadvertently repeated and that the correct totals excluded the repeated numbers. We included 2,844 under the column for men ages 36–50 and 182 under the column for women ages 36–50. However, these numbers may include men and women ages 36–50 and older than 50.

⁵⁹ When counting the number of women in the total custodial population, the same caveats as listed in note 59, *supra*, with regards to men apply. As mentioned earlier, Louisiana noted in a follow-up email that it was unable to provide restrictive housing data for female prisoners.

⁶⁰ According to a 2017 report by the Bureau of Justice Statistics, 37% of prisoners were told in the past by a mental health professional that they had a “mental disorder,” and 14% of state and federal prisoners “reported experiences that met the threshold for serious psychological distress” within 30 days prior to a survey in 2011 and 2012. Jennifer Bronson & Marcus Berzofsky, Indicators of Mental Health Problems Reported by Prisoners and Jail Inmates, 2011–12, NCJ 250612 1 (June 2017), *available at* <https://www.bjs.gov/content/pub/pdf/imhprpji1112.pdf>.

⁷³ Some jurisdictions answered the question, “Please provide data on how many prisoners are classified as seriously mentally ill in your jurisdiction’s general population.” The question was later clarified to read: “Please provide data on how many prisoners are classified as seriously mentally ill in your total custodial population.” Total custodial population means all individuals housed in general population, restrictive housing, or any other units within the correctional department. General population is sometimes used interchangeably with total custodial population, but

refers to a subset of the total custodial population, usually those who are not in restrictive or other specialized housing units. Where there was ambiguity in which definition of general population a jurisdiction was using, we followed up to clarify.

⁷⁴ The Federal Bureau of Prisons reported that it does not track numbers on prisoners with serious mental illness. South Carolina explained that it did not have data to provide on seriously mentally ill prisoners because it had recently implemented a special tracking system:

The South Carolina Department of Correction (SCDC) implemented a special indicator the latter part of 2017, to easily identify prisoners who are seriously mentally ill. Due to how recently this indicator was added to our system, there has not been sufficient time to review the entire mental health caseload to determine which prisoners should be identified as seriously mentally ill. Any numbers reported would not be an accurate representation/reflection of our Seriously Mentally Ill population.

⁷⁵ See Appendix C: Definitions of “Serious Mental Illness” in 43 Jurisdictions.

⁷⁶ Mississippi Definition of Serious Mental Illness, Appendix C.

⁷⁷ Nebraska Definition of Serious Mental Illness, Appendix C.

⁷⁸ See, e.g., New York Definition of Serious Mental Illness (“New York State DOCCS Definition of Serious Mental Illness (Section 137 Correction Law) (e) An inmate has a serious mental illness when he or she has been determined by a mental health clinician to meet at least one of the following criteria: (i) he or she has a current diagnosis of, or is diagnosed at the initial or any subsequent assessment conducted during the inmate’s segregated confinement with, one or more of the following types of Axis I diagnoses, as described in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders, and such diagnoses shall be made based upon all relevant clinical factors, including but not limited to symptoms related to such diagnoses: (A) schizophrenia (all sub-types), (B) delusional disorder, (C) schizophreniform disorder, (D) schizoaffective disorder, (E) brief psychotic disorder, (F) substance-induced psychotic disorder (excluding intoxication and withdrawal), (G) psychotic disorder not otherwise specified, (H) major depressive disorders, or (I) bipolar disorder I and II; (ii) he or she is actively suicidal or has engaged in a recent, serious suicide attempt; (iii) he or she has been diagnosed with a mental condition that is frequently characterized by breaks with reality, or perceptions of reality, that lead the individual to experience significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; (iv) he or she has been diagnosed with an organic brain syndrome that results in a significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; (v) he or she has been diagnosed with a severe personality disorder that is manifested by frequent episodes of psychosis or depression, and results in a significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; or (vi) he or she has been determined by a mental health clinician to have otherwise substantially deteriorated mentally or emotionally while confined in segregated confinement and is experiencing significant functional impairment indicating a diagnosis of serious mental illness and involving acts of self-harm or other behavior that have a serious adverse effect on life or on mental or physical health.”).

⁷⁹ Tennessee reported 505 prisoners with serious mental illness in its total custodial population. This number is not included in Tables 15, 16, 17 or 18 because it is not known how many of the 505 prisoners are female and how many are male.

⁸⁰ Texas stated that it did “not define ‘serious mental illness.’” Its numbers in Table 15 and Table 16 reflect prisoners who were “on an inpatient mental health caseload.”

⁸¹ ACA Standard 4-RH-0033, ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 38.

⁸² These jurisdictions were Arkansas, Montana, and North Dakota.

⁸³ The other 38 jurisdictions were Alabama, Alaska, Arizona, Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming.

⁸⁴ ACA Standard 4-RH-0035, ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 40. The National Standards under the Prison Rape Elimination Act (PREA) also call for careful attention to the needs and safety of transgender individuals, defined as “a person whose gender identity (i.e., internal sense of feeling male or female) is different from the person’s assigned sex at birth.” NATIONAL STANDARDS TO PREVENT, DETECT, AND RESPOND TO PRISON RAPE UNDER THE PRISON RAPE ELIMINATION ACT (PREA) 28 C.F.R. § 115.5 (2012); *see generally* 28 C.F.R. §§ 115.15, 115.31, 115.41, 115.42, 115.86.

⁸⁵ Those jurisdictions were Alabama, Alaska, Arizona, Arkansas, Colorado, Connecticut, Delaware, the Federal Bureau of Prisons, Idaho, Illinois, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming.

⁸⁶ These jurisdictions were Hawaii (responding “N/A”), Indiana (“not tracked”), Rhode Island (“RIDOC does not maintain these statistics electronically—only on a case by case basis and maintained in the inmates medical record”), and Utah (“We do not track transgender inmates”).

⁸⁷ That jurisdiction was North Dakota.

⁸⁸ Four jurisdictions did not provide information beyond the definition they used for transgender: Kansas, Minnesota, Nebraska, and Utah. Twenty-one jurisdictions reported that prisoners self-report whether they are transgender: Alaska, Arizona, Colorado, Delaware (may self-identify at intake), the Federal Bureau of Prisons, Iowa, Louisiana, Maryland, Missouri, Montana (may self-identify at intake), New York, North Carolina (may self-identify at intake or upon transfer to another facility), North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Texas (may self-identify at any point), Washington (may self-identify at any point), and Wisconsin (may self-identify at any point during incarceration). An additional nine jurisdictions indicated that transgender prisoners were identified through a combination of self-reporting and diagnosis: Connecticut, Illinois, Kentucky, Massachusetts, Michigan, Nevada, New Jersey, New Mexico, and Wyoming.

⁸⁹ These jurisdictions were the Federal Bureau of Prisons, Hawaii, Indiana, Rhode Island, and Utah.

⁹⁰ These 17 jurisdictions were Alabama, Colorado, Connecticut, Delaware, Iowa, Kansas, Massachusetts, Minnesota, Mississippi, Montana, Nebraska, New Mexico, North Carolina, North Dakota, South Carolina, Tennessee, and Wyoming.

⁹¹ Maryland and South Dakota each reported one transgender prisoner in restrictive housing. Alaska, Louisiana, Nevada, New Jersey, and Oklahoma each reported two transgender prisoners in restrictive housing. Arkansas and Idaho each reported three transgender prisoners in restrictive housing. Kentucky and Michigan each reported six transgender prisoners in restrictive housing. New York reported seven transgender prisoners in restrictive housing. Ohio reported eight transgender prisoners in restrictive housing. Pennsylvania and Washington each reported nine transgender prisoners in restrictive housing. Arizona, Oregon, and Wisconsin each reported ten transgender prisoners

in restrictive housing. Illinois reported 19 transgender prisoners in restrictive housing. Missouri reported 21 transgender prisoners in restrictive housing. Texas reported 24 transgender prisoners in restrictive housing.

⁹² BJS *Jail Inmates in 2016*, *supra* note 28, at Tbls. 1, 4.

⁹³ See Allen J. Beck, *Use of Restrictive Housing in U.S. Prisons and Jails, 2011–12*, BUREAU OF JUSTICE STATISTICS (Oct. 2015), <http://www.bjs.gov/content/pub/pdf/urhuspj1112.pdf>.

⁹⁴ BJS *Prisoners in 2016*, *supra* note 26, at 4, Tbl.2. Maryland, which reported on the survey that it has control over jails, was not included in the BJS description. Vermont did not respond to the survey.

⁹⁵ These populations are included in the total custodial populations of Table 1.

⁹⁶ We did not receive responses from the District of Columbia and New York City.

⁹⁷ Philadelphia’s total custodial population numbers included privately contracted facilities.

⁹⁸ Philadelphia noted: “Each of the Philadelphia Department of Prisons facilities that have inmates in restrictive housing has a Deputy Warden for Administration that oversees all RHU inmates. The Deputy Warden reviews each inmate in segregated housing weekly (for those in segregation under 30 days) or monthly (for those in segregated housing more than 30 days). The Warden also reviews the case files for those inmates using the same schedule. Because we are a local (jail) jurisdiction, our length of stay overall is much lower than the state facilities, and, as such, our length of stay in segregated housing is much lower, also.”

⁹⁹ Los Angeles’s numbers on people by age in restrictive housing population totaled 511, while its total restrictive housing population count in response to another question was 619.

¹⁰⁰ Los Angeles cited *United States v. County of Los Angeles and Los Angeles County Sheriff Jim McDonnell*, CV 15-5903 (C.D. Cal. 2015), Settlement Agreement, available at <https://www.justice.gov/crt/file/761256/download>.

¹⁰¹ In its initial response, Philadelphia had reported two pregnant individuals in its total custodial population, with both reported to be housed in short-term restrictive housing.

¹⁰² When asked to explain other changes, Los Angeles noted a “major overhaul” of its “classification policies.”

¹⁰³ ASCA-LIMAN ADMINISTRATIVE SEGREGATION 2014, *supra* note 6, at 54–57.

¹⁰⁴ ASCA-LIMAN AIMING TO REDUCE TIME-IN-CELL 2016, *supra* note 13, at 55–60.

¹⁰⁵ The jurisdictions responding to questions on policies were: Alabama, Alaska, Arizona, Arkansas, Colorado, Connecticut, Delaware, FBOP, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming. The Federal Bureau of Prisons did so by linking to its revised policies.

¹⁰⁶ The jurisdictions providing supplemental information were Alabama, Colorado, FBOP, Idaho, Massachusetts, New York, North Dakota, Ohio, Oklahoma, Pennsylvania, South Carolina, and Utah.

¹⁰⁷ ASCA-LIMAN ADMINISTRATIVE SEGREGATION NATIONAL OVERVIEW 2013, *supra* note 3, at 4–5.

¹⁰⁸ Thirty-eight jurisdictions responded to this question. The jurisdictions that changed their criteria were: Alabama, Alaska, Arkansas, Colorado, Hawaii, Idaho, Illinois, Kentucky, Maryland, Massachusetts, Minnesota, Missouri,

Montana, Nebraska, Nevada, New Mexico, North Carolina, North Dakota, Ohio, Oregon, South Carolina, South Dakota, Utah, and Washington.

¹⁰⁹ Thirty-two jurisdictions answered this question.

¹¹⁰ The jurisdictions that reported removing some behaviors from the list of infractions prompting placement in restrictive housing were Arkansas, Delaware, Idaho, Illinois, Maryland, Massachusetts, Minnesota, Nebraska, Nevada, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Texas, and Washington.

¹¹¹ That jurisdiction was Washington.

¹¹² That jurisdiction was North Carolina.

¹¹³ That jurisdiction was Maryland.

¹¹⁴ That jurisdiction was Arkansas.

¹¹⁵ That jurisdiction was Texas.

¹¹⁶ New Mexico reported that it had, “due to an increase in prison violence, . . . added enhancements to stays in long-term” restrictive housing “if the incident was a repeat violation (habitual offender type charge), was a violent assault on staff and/or was gang-related.”

¹¹⁷ That jurisdiction was North Dakota.

¹¹⁸ The jurisdictions that had created such a policy were Alaska, Colorado, Hawaii, Maryland, Massachusetts, Minnesota, Mississippi, Montana, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, Utah, and Washington.

¹¹⁹ Those jurisdictions were Alabama, Alaska, Arizona, Arkansas, Colorado, Hawaii, Illinois, Maryland, Massachusetts, Minnesota, Mississippi, Montana, Nebraska, Nevada, North Carolina, North Dakota, Ohio, South Carolina, Utah, and Wisconsin.

¹²⁰ Those jurisdictions were Alabama, Alaska, Arizona, Colorado, Maryland, Massachusetts, Minnesota, Mississippi, Nevada, North Carolina, North Dakota, Ohio, Utah, and Wisconsin. Arizona explained that a “screening upon arrival occurs for inmates arriving into detention status. Prior to placement if feasible.”

¹²¹ Nebraska reported that it had added screening “by medical and mental health within 24 hours of placement” in restrictive housing, effective July 1, 2016. South Carolina reported that it had added mental health screenings for prisoners “classified as mentally ill . . . within 72 hours of initial placement” in restrictive housing and “within 30 days” of placement for other prisoners. Illinois and Montana also reported that they had added screenings after placement in restrictive housing.

¹²² Those jurisdictions were Hawaii, Maryland, Ohio, and Washington.

¹²³ Alaska reported this form of screening.

¹²⁴ The jurisdictions that had created policies requiring consideration of less-restrictive alternatives were Alabama, Alaska, Arizona, Colorado, Delaware, Illinois, Kentucky, Maryland, Massachusetts, Mississippi, Montana, Nebraska, Nevada, New Mexico, North Carolina, North Dakota, Ohio, Oregon, Utah, Washington, and Wisconsin. Other alternatives included, in Massachusetts, placement in a unit “which is not a locked-in unit but has less privileges” or, in Ohio, “Limited Privilege Housing, which requires congregate activity, out-of-cell dining, access to programming, and at least 2.5 hours of out-of-cell time daily.” Ohio explained that this had “become the new default placement for

low to moderate misbehavior.” Arizona described converting restrictive-housing beds to “close custody”—specifically, “152 beds from restrictive housing,” “192 restrictive-housing sex offender beds,” “192 restrictive housing PC beds,” “72 CB7 restrictive-housing beds, and “42 Central Unit restrictive-housing beds.”

Michigan had not created such a policy at the time of the survey but reported that there were “plans in process to implement an alternative to restrictive housing by utilizing ‘Start Units’.”

¹²⁵ That jurisdiction was Alabama.

¹²⁶ That jurisdiction was Oregon.

¹²⁷ That jurisdiction was Alaska.

¹²⁸ That jurisdiction was New Mexico.

¹²⁹ The 28 jurisdictions that reported making changes were Alabama, Alaska, Arizona, Arkansas, Colorado, Delaware, Hawaii, Illinois, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, South Carolina, Texas, Utah, and Washington.

¹³⁰ Iowa, Minnesota, North Dakota, and Ohio reported requiring weekly reviews. Iowa reported that restrictive housing status was reviewed weekly “by the Long Term Restrictive Housing Committee.” Minnesota reported that prisoners in restrictive housing were “now reviewed weekly.” North Dakota reported that it administered reviews “once a week by the chief of security, Director of Treatment and Deputy Warden—Programs. If on restrictive housing for a year, the resident is reviewed by the DOCR Director. All severely mentally ill cases are staffed with the warden on a weekly basis. If placement is contraindicated, the resident’s case is reviewed and staffed with the Clinical Director.” Ohio reported that “every 7 days a member of the unit classification committee reviews the status of the inmate and has the power to initiate release procedures.”

Alaska, Arkansas, Delaware, Hawaii, Kentucky, Montana, and New York reported requiring monthly reviews. Alaska reported that it conducted initial reviews at 24 hours and 72 hours, with subsequent reviews “every 30 days as needed,” and also noted that “our facilities are reviewing prisoners sooner than the 30 day hearing standard. If the prisoner is believed not to be a threat he/she will be returned to general population.” Arkansas reported that it conducted initial reviews every seven days for the first 60 days and every 30 days thereafter; at every other 30-day review, “the inmate will be personally interviewed by the Classification Committee or authorized staff,” and the warden must approve continued placement in restrictive housing for any inmate confined for more than one year. Arkansas specified that mental health review occurred within seven days of placement in restrictive housing and at least every 30 days afterward for prisoners with behavioral health diagnoses, at least every 90 days afterward for prisoners without diagnoses, and “more frequently if clinically indicated.” Delaware reported every-seven-day reviews for the first 60 days, and “at least every 30 days thereafter,” with review by the warden for inmates in restrictive housing for 90 days or more. Hawaii reported initial placement reviews within 24 hours, personal interviews with the warden or designee within 72 hours, and review every 30 days thereafter. Kentucky reported that the restrictive housing status of a prisoner was reviewed “at least every 30 days but often more frequently.” Montana reported that “monthly reviews are now done by the unit management teams.” New York explained that “inmates housed in restricted housing for other than disciplinary reasons (protection, administrative segregation, etc.) have their status reviewed by a facility three-member committee (consisting of a representative of the facility executive staff, a security supervisor, and a member of the guidance and counseling staff) every 7 days for the first 2 months, and then every 30 days thereafter. Prior to 7/18/2017, reviews were conducted every 60 days.”

Arizona, Illinois, Nebraska, New Mexico, and Oregon reported requiring reviews over longer time periods. Arizona reported reviewing placement “at 180 days of initial placement followed by annual review.” Illinois reported

that prisoners could “request a review for reduction in their disciplinary segregation terms every 90 days,” and that the Deputy Director or Director must review placement in restrictive housing “every 180 days after the initial review if the segregation term is more than one year.” Nebraska reported that “Wardens review and approve the immediate placement,” and the “central office MDRT reviews all” restrictive housing cases “every 90 days.” New Mexico reported reviewing restrictive housing status “annually or as needed.” Oregon reported that restrictive housing status of a prisoner was reviewed “at least every 90 days” for certain types of restrictive housing, and that the policy was under review.

¹³¹ Jurisdictions were asked whether they had made changes to the “decision-making authority to continue individuals in restrictive housing” and whether they had implemented “centralized monitoring.” Thirteen of 26 jurisdictions reported that they had implemented “centralized monitoring” (Alaska, Colorado, Delaware, Illinois, Kentucky, Maryland, Massachusetts, Minnesota, Nebraska, New Jersey, New Mexico, Ohio, and South Carolina), and 16 of 28 jurisdictions reported changes in decision-making authority (Alaska, Delaware, Hawaii, Illinois, Iowa, Kentucky, Minnesota, Montana, Nebraska, New Jersey, New Mexico, North Carolina, North Dakota, Ohio, Oregon, and South Carolina).

¹³² The jurisdictions that reported new grievance policies were Hawaii, Maryland, Montana, Nebraska, Nevada, New Jersey, and New Mexico.

¹³³ Twenty-six jurisdictions responded to this question. The 22 jurisdictions that reported increased monitoring of the mental health of prisoners in restrictive housing were Alabama, Alaska, Arizona, Colorado, Georgia, Hawaii, Idaho, Illinois, Indiana, Kentucky, Massachusetts, Missouri, Montana, Nebraska, Nevada, North Dakota, Ohio, Pennsylvania, Rhode Island, South Carolina, Utah, and Washington.

¹³⁴ Three jurisdictions reported requiring daily mental health rounds. Alaska reported, “all prisoners in segregation are contacted by mental health on a daily basis and monitored for indications of issues.” Montana reported that “daily rounds are done on each block by our mental health staff.” Washington reported:

Per policy, offenders in restrictive housing receive a visit from a health care provider at a minimum of daily. Mental Health staff will conduct rounds in restricted housing at least once a week. An offender can request to be seen by mental health and will be seen in person within 48 hours If there is concern for a person when . . . rounds are conducted, the person will have a face-to-face evaluation. If the evaluation determines the restrictive housing environment is detrimental to their mental health, an alternative setting will be recommended with greater access to mental health services.

Eight jurisdictions reported rounds once or more per week. Alabama reported that “Mental Health staff tour” the restrictive housing unit “4 times per week.” Arizona reported, “weekly rounds occur to assess for decompensation”; “If mental health needs are identified, the inmate is placed on a caseload and seen routinely Alternative placements are considered to determine if placement into a mental health program is required.” Georgia reported that prisoners in restrictive housing are “monitored weekly and per request.” Idaho reported that “clinicians walk the units weekly and immediately make notification to administration if someone is found to be decompensating.” Illinois reported that “DR 504 changes require mental health to make visits to segregation not less than 1 time/week.” Massachusetts reported requiring “rounds by a consistent qualified mental health professional twice weekly who monitors for any changes in mental status and/or behavior that would suggest additional assessment for signs and symptoms of mental illness”; “if status changes,” a “full mental health assessment is completed and determination of treatment needs of that evaluation.” Ohio reported, any prisoner “in Restrictive Housing is seen by Mental Health every week and has a review conducted every 30 days.” South Carolina reported, “one year ago SCDC went from Monthly rounds to Weekly rounds.”

¹³⁵ Massachusetts reported that people with serious mental illness in restrictive housing “for more than 30 days are reviewed monthly by a high level central office multi-disciplinary team.” Ohio reported a similar policy of “review conducted every 30 days.” Pennsylvania described implementing clinical “contacts by psychology for all RHU/DTU [Restricted Housing Units / Diversionary Treatment Units] . . . for three consecutive days after admission . . . to focus on suicidality” and had also made available “on the RHU/DTU 24 hours per day” “Certified Peer Specialists” who “shall be informed of new receptions so they can check in with them.”

¹³⁶ The jurisdictions that reported increasing restrictive-housing prisoners’ time out-of-cell were Alaska, Arizona, Arkansas, Colorado, Delaware, Georgia, Idaho, Illinois, Maryland, Massachusetts, Minnesota, Montana, Nebraska, New Jersey, New York, North Carolina, Oregon, Texas, Utah, and Washington.

¹³⁷ The jurisdictions reporting adding more structured time out-of-cell were Alaska, Colorado, Delaware, Georgia, Idaho, Illinois, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, Nebraska, Nevada, New Jersey, North Carolina, North Dakota, Ohio, Rhode Island, Utah, and Washington. Two jurisdictions indicated that they were in the process of increasing their structured out-of-cell time. Montana explained that it was “still in the production phase right now and will be completed in the next year.” Oregon reported it was “working to increase structured out-of-cell time in certain types of RH.” Examples of initiatives to increase out-of-cell time included a “peer group led by community mental health peers” in Nebraska, and twice-a-month game nights or movie nights in North Dakota.

¹³⁸ The jurisdictions that reported that they had enabled restrictive-housing prisoners to eat meals in social settings were Arizona (for Step 2 and Step 3 prisoners), Delaware, Kentucky, Maryland, Minnesota, and South Dakota.

¹³⁹ The jurisdictions that reported adding more “unstructured (recreational)” time out-of-cell were Alaska, Arizona (“Step 3 inmates are permitted out of cell leisure time”), Delaware, Georgia, Illinois, Massachusetts, Minnesota, Montana, North Dakota, Oregon, and Texas.

¹⁴⁰ Those jurisdictions were Alaska, Arizona, Georgia, Kentucky, Maryland, Montana, Nevada, New York, North Dakota, and Texas.

¹⁴¹ The jurisdictions that reported adding classes were Alaska, Arizona, Delaware, Georgia, Kentucky, Maryland, Montana, Nebraska, New Mexico, North Dakota, and Oregon.

¹⁴² The jurisdictions that reported adding a GED or diploma program were Alabama, Arizona, Colorado, Georgia, Idaho, Kentucky, Maryland, Massachusetts, North Carolina, North Dakota, Oregon, Utah, and Washington. These 13 jurisdictions did not include Alaska, Minnesota, New Jersey, or Ohio, all of which reported having a GED or diploma program prior to the 2016 ACA revisions. Montana stated such a program was “under review and production.”

¹⁴³ The jurisdictions that reported increased visitation hours were Colorado, Iowa, Minnesota, Nevada, New York, North Carolina, North Dakota, Ohio, and Washington. Montana reported it was reviewing its visiting policy.

¹⁴⁴ The jurisdictions that reported increased phone time were Colorado, Delaware, Iowa, Maryland, Minnesota, Nevada, New York, North Carolina, North Dakota, and South Dakota. Montana reported it was reviewing its visiting policy.

¹⁴⁵ The jurisdictions that reported increased out-of-cell group programming and/or classes were Alabama, Alaska, Arizona, Arkansas, Colorado, Delaware, Georgia, Illinois, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, Nebraska, New Jersey, New Mexico, North Carolina, North Dakota, Ohio, Oregon, Utah, Washington, and Wisconsin. Among these jurisdictions, the topics of such group classes included anger management in Alaska, Arkansas, Delaware, and North Carolina; life skills in North Carolina and Utah; group educational programming in Colorado, Missouri, New Jersey, North Carolina, and Ohio; substance use recovery in North Carolina and Ohio; and other mental health or therapeutic programming in Alaska, Delaware, Illinois, Iowa, Kentucky, Maryland, Minnesota,

Missouri, Nebraska, New Jersey, New Mexico, North Carolina, North Dakota, and Ohio. Examples of other mental health or therapeutic programming included “behavior modification” and “self-reflection” in Delaware; “Thinking for change” in Iowa and North Dakota, which reported using a modified program; and “EAGLE (Emotions, Attitude, Growth, Learning, and Excelling)” in Missouri. Maryland reported its programming was a “recent implementation,” and noted that it was “in the process of developing further programming opportunities with case management, psychology and social work.”

¹⁴⁶ That jurisdiction was North Carolina.

¹⁴⁷ That jurisdiction was Missouri.

¹⁴⁸ That jurisdiction was North Carolina.

¹⁴⁹ That jurisdiction was Alaska.

¹⁵⁰ The jurisdictions that reported adding more group recreation opportunities were Alaska, Arizona, Colorado, Delaware, Georgia, Iowa, Kentucky, Maryland, Missouri, Montana, New Jersey, North Carolina, North Dakota, Ohio, Utah, and Washington.

¹⁵¹ The jurisdictions that reported increased in-cell learning opportunities were Alabama, Alaska, Arizona, Arkansas, Colorado, Georgia, Idaho, Iowa, Kentucky, Maryland, Massachusetts, Montana, Nebraska, New York, North Carolina, North Dakota, Ohio, Pennsylvania, Texas, Utah, Washington, and Wisconsin. Twenty-two of 36 jurisdictions also reported increased access to resources such as reading materials, videos, and music for prisoners in restrictive housing. Those 22 jurisdictions were Alabama, Alaska, Colorado, Delaware, Georgia, Idaho, Iowa, Kentucky, Maryland, Minnesota, Missouri, Montana, Nebraska, Nevada, New York, North Carolina, North Dakota, Rhode Island, South Carolina, South Dakota, Utah, and Washington. Eight of these 22 jurisdictions reported distributing to prisoners personal devices such as tablets, televisions, MP3 players, or radios. Those eight jurisdictions were Alaska, Delaware, Montana, Nebraska, New York, Rhode Island, South Carolina, and South Dakota. Alaska, Colorado, Georgia, Maryland, and Nevada described allowing access to “literary materials,” and Georgia, North Carolina, and Washington reported allowing access to a common television. Maryland and Nevada specifically reported adding access to legal materials. Montana reported that it was “in the process of implementing a tablet system with in cell learning opportunities.”

¹⁵² Those jurisdictions were Alaska; Colorado, which provided for post-secondary education; Georgia, which provided for GED education; and New York, which noted that cell study was available at the prisoners’ own expense.

¹⁵³ That jurisdiction was Texas.

¹⁵⁴ Arizona reported having “CCTV in-cell self-help study programs.” Maryland reported having “video opportunities.” Ohio reported allowing “use of television” in some cases. Texas reported that prisoners in restrictive housing had the ability to “watch videos.”

¹⁵⁵ Idaho reported that prisoners “in restrictive housing can access kiosk with JP5 device.” Ohio reported allowing “the JPlayer.” Wisconsin reported that “portable smartboards were purchased in addition to computers for improved access to education for <20-year-old at risk special needs inmates in restrictive housing.”

¹⁵⁶ North Carolina reported that prisoners “receive in-cell learning opportunities by use of interactive journals published by the Change Companies.” Ohio reported providing “paper based programs.”

¹⁵⁷ The jurisdictions that had added some form of mental health training for staff were Alabama, Alaska, Arizona, Arkansas, Colorado, Connecticut, Delaware, Illinois, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Jersey, North Carolina, North Dakota, Ohio, Rhode Island, South

Carolina, Tennessee, Texas, Utah, Washington, and Wisconsin. Montana reported that its mental health training for staff was still being reviewed. Idaho's draft revised policies, to be implemented in summer 2018, established additional mental health training for restrictive housing staff.

¹⁵⁸ Alabama reported training with the Department of Justice, the National Institute of Corrections, and the National Commission on Correctional Health Care. Arizona explained that it had "contracted with NIC concluding training for 40 key staff that work in restrictive housing in Mental Health First Aid." Delaware stated: "DOC has sent staff to ACA and NIC sponsored trainings on behavioral health and mental health first aid. DOC offers educational assistance to employees who wish to pursue additional studies in a chosen relevant field. DOC has partnered with other state agencies in Delaware to provide training on behavioral health issues."

¹⁵⁹ Thirty-one jurisdictions responded to this question. The jurisdictions that reported having opportunities for staff education related to restrictive housing were Arkansas, Connecticut, Delaware, Illinois, Iowa, Kentucky, Maryland, Mississippi, North Carolina, North Dakota, Ohio, and Wisconsin. Two jurisdictions, Montana and Nebraska, reported that they were reviewing their policies.

¹⁶⁰ Arizona reported having "specialized 24-hour mental health training with classes starting in October 2017," and contracting with NIC for "training for 40 key staff that work in restrictive housing in Mental Health First Aid." Connecticut reported "Mental Health Training is organized by Correctional Managed Health Care." Delaware reported that "mental health first aid" was "a part of Correctional Employee Initial Training class and offered to existing correctional staff on a voluntary basis." Delaware also explained that it "sent staff to ACA and NIC sponsored trainings on behavioral health and mental health first aid." Illinois stated that "IDOC was mandated to train ALL staff in NAMI training per Rasha agreement." Maryland reported that "Mental Health First Aid" training was provided to staff. Massachusetts related that "MADOC staff receive centralized annual in-service training on Recognizing the Signs and Symptoms of Mental Illness and Suicide Prevention and Intervention. At the site level, Mental Health Directors provide specific mental health training tailored to the needs of the facility and its population." Missouri stated that it provided "annual mental health training to staff," and "has been expanding the use of Crisis Intervention Training for staff, especially those staff assigned to segregation." North Carolina reported that staff "are required to have training in Motivational Interviewing and Crisis Intervention," and that "TDU staff have completed the ACA Behavioral Health Certification training." Rhode Island stated that mental health training "is part of normal in-service training but is not specific to" restrictive housing. South Carolina reported that all "security staff receive Mental Health training. Tennessee reported that staff receive "Correctional Behavioral Health Training." Texas explained that the "Pre-Service Training Academy . . . includes 32 hours of mental health/crisis intervention training," and that additional "mental health/crisis intervention training has been incorporated into annual in-service training." In addition, Texas reported that each unit "provides turnout training regarding suicide prevention and mental health/crisis intervention on a regular and frequent basis." Utah stated that the "UDC certified staff received basic annual training on mental health." Washington reported that a "large portion of restricted housing staff have received 'Working with Offenders with Mental Health' training, Individual Behavioral Management Plan (IBMP) training, and in some cases Motivational Interviewing."

¹⁶¹ Those jurisdictions were Colorado, Kansas, Maryland, Massachusetts, Minnesota, South Carolina, and Texas. Colorado, Massachusetts, and Minnesota reported providing these programs annually for all staff. Texas stated that each "unit provides turnout training regarding suicide prevention . . . on a regular and frequent basis."

¹⁶² Those jurisdictions were Maryland, Minnesota, Missouri, Nevada, North Carolina, North Dakota, Ohio, South Carolina, and Texas.

¹⁶³ Those jurisdictions were Arizona, North Carolina, and Washington.

¹⁶⁴ That jurisdiction was North Dakota.

¹⁶⁵ That jurisdiction was Minnesota.

¹⁶⁶ That jurisdiction was Alabama.

¹⁶⁷ Thirty-one jurisdictions responded to this question. The 14 jurisdictions that reported a staff rotation policy were Alaska, Arizona, Arkansas, Connecticut, Idaho, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, Montana, North Dakota, South Carolina, and Wisconsin. Alaska explained, “generally staff are rotated out after a year in the segregation unit.” Arizona reported that “ADC rotates staff as a statewide measure every five years or by request.” Arkansas reported having a staff rotation policy related to staffing of restrictive housing. Connecticut stated that “Correctional Officer post rotations occur every 56 or 112 days depending on the facility and shift.” Idaho noted that job postings for restrictive housing were “exempt from seniority bidding and staff must apply to work in these units.” Kentucky stated that staff rotations were “considered annually and by request.” Maryland explained that staff rotations varied “from facility to facility.” Massachusetts reported that “security staff are rotated annually” in restrictive housing units and “specialized units.” Minnesota stated that “officers in restrictive housing units are rotated out of the assignment for a minimum of 3 months after 2 years.” Missouri explained that “uniformed custody staff are not rotated,” but that “case management staff are rotated at a minimum of every two years.” Montana stated it provided staff rotations “once every 2 to 3 years if staffing allows.” North Dakota explained it tried “not to allow” staff “to work past 18 months in the Behavioral Health Unit.” South Carolina reported that staff rotate “every 18 months” and “may request to remain in RHU longer with 24 months being the maximum.” Wisconsin stated that staff rotations varied “depending on the institution.”

¹⁶⁸ That jurisdiction was Connecticut.

¹⁶⁹ That jurisdiction was Arizona.

¹⁷⁰ Thirty-eight jurisdictions responded to this question. The 20 jurisdictions that required this advance information be given to prisoners were Alabama, Alaska, Arkansas, Colorado, Georgia, Kentucky, Maryland, Mississippi, Montana, Nebraska, Nevada, New Mexico, New York, North Carolina, North Dakota, Ohio, Pennsylvania, Utah, Washington, and Wisconsin.

Kentucky, Maryland, Montana, Nevada, and Utah stated that they made their restrictive housing handbook or disciplinary manual accessible to prisoners. Mississippi required prisoners to “familiarize themselves with the offender handbook and acknowledge participation and understanding of the rules and regulations of the program by signing a written contract.” Alaska, Colorado, Maryland, New York, North Dakota, Ohio, and Washington provided information about the criteria directly to prisoners through an orientation or meeting. North Dakota noted that the “behavioral plan” is not shared with the “resident” “if doing so would jeopardize the safety of the resident, staff, other residents, or the public.”

¹⁷¹ Thirty-five jurisdictions answered this question. The 21 jurisdictions that reported that they have already implemented this change were Alaska, Arizona, Arkansas, Colorado, Delaware, Georgia, Hawaii, Kentucky, Maryland, Massachusetts, Montana, Nebraska, New Mexico, New York, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, Texas, and Utah. In addition to these 21 jurisdictions, Mississippi reported that its process involved a “committee recommendation” but that the “offender services director” made the “final decision.” North Carolina reported that it was developing a policy, “targeted for implementation November, 2017,” that would “move classification decisions to a committee process.”

¹⁷² The 2016 ACA Standards offer the definition of a step-down program as “a program that includes a system of review and establishes criteria to prepare an inmate for transition to general population or the community.” ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 4.

¹⁷³ Twenty-seven jurisdictions reported having added step-down or transition programs. Those jurisdictions were Alabama, Alaska, Arizona, Arkansas, Colorado, Delaware, Georgia, Illinois, Iowa, Kentucky, Maryland, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Oklahoma, Pennsylvania, South Carolina, Utah, and Washington.

Three jurisdictions—Idaho, Massachusetts, and Oregon—noted they were developing step-down programs. Idaho reported it was “in the draft phase of a mandatory step up program.” Massachusetts reported it piloted “a step-down unit in our largest medium security prison in November, 2017” in the form of “a 90-day program targeting the criminogenic needs that originally created the pathway” to restrictive housing. “It is a dorm style housing unit so no one is locked in cells at all, just restricted privileges with a clear pathway back to general population.” Oregon reported that a step-down program was “in development.”

¹⁷⁴ For example, Alaska reported using “progressive reduction of restrictions . . . awarded after periods of demonstrated good behavior and programming.” Colorado stated that its “close custody units/designations” allowed for “increasing privileges/incentives as offenders progress.” Maryland explained that its restrictive housing policy had “a level-system built in that provides for the increase of both programs and privileges to make for a smooth transition into general population.” Minnesota reported that its step-down plan included increasing privileges, amenities, and movement.” Montana stated that “step downs occur as inmates progress through a 6 level system where their privileges increase.” New Mexico described a progressive four-step program. Oklahoma reported a pilot step-down program, which consisted of “four phases that are progressively less restrictive.” Pennsylvania stated it had created a “step down unit and portal program, which used “a progressive four-tiered phase system based on the inmate’s adjustment and attainment of goals/objectives.” Utah reported that prisoners in restrictive housing must “progress through three phases” of restrictive housing.

¹⁷⁵ Colorado reported having a “Management Control Unit High Risk, Management Control Unit, and Close Custody Transition Unit (CCTU).” Nebraska stated it “established several mission specific housing units,” which included “protective management, active senior unit, veterans unit, and the challenge program,” as alternatives to or “transition out of” restrictive housing. Nevada reported adding a Behavior Modification Unit. North Carolina reported having two different units, the “Therapeutic Diversion Unit” and the “Rehabilitative Diversion Unit.” North Dakota stated it had a “transition unit . . . to help prepare people who have been living in the behavior intervention unit for general population.” Ohio described a “hybrid sanctioning system” with a “Limited Privilege Housing” step-down. Oklahoma explained its “Step-Down Program” was a separate housing unit. Pennsylvania stated its PORTAL program was housed in a separate unit. Washington reported that one of its facilities added a “transition pod,” which allowed two prisoners “assigned to Maximum custody to be on the tier with each other without restraints on for several hours a day,” and to be “around custody staff on the tier without restraints as well.”

¹⁷⁶ That jurisdiction was Minnesota.

¹⁷⁷ That jurisdiction was North Dakota.

¹⁷⁸ Alabama reported that step-down programs were “in use at 2 facilities. The inmates must be in medium custody and have shown a pattern of improved behavior to be considered for return to population.”

Alaska stated its facilities had “a step-down program for Maximum Custody prisoners which allows progressive reduction of restrictions that are awarded after periods of demonstrated good behavior and programming.”

Arizona explained that there were five step-down segments: upon entry in restrictive housing, prisoners are “evaluated and placed into a step reduction system based on behavior and/or reason for placement. Inmates begin the process at Browning, (our most restrictive and secure) and reduce to our Special Management Unit (SMU). SMU is considered an intermediary placement with increased programming and interaction opportunity. From SMU, inmates transition to Central Unit where they are offered more group program/recreational opportunity.”

Arkansas reported it had created a step-down program.

Colorado related that all prisoners in extended restrictive housing were “eligible for progression and placement in the step-down/transition program based upon their actions/behaviors. The close custody units/designations allow for increasing privileges/incentives as offenders progress The cognitive programming provided within CCTU normally takes 12 weeks to complete.”

Delaware related that its policy required a step-down program, but it had “not yet been implemented into practice.” Georgia reported it had “Tier II step down units for offenders on phase 3+, who have been in restrictive housing for 270+ days.”

Idaho reported a “step-up program” in which prisoners in “long-term restrictive housing are automatically enrolled.” Idaho provided its policy on the step-up program, which stated: “During the first 30-day review, the chairperson must provide written goals required to move from step one to step two. Inmates will continue to receive goals in writing for each successive step as they progress, until completion of the step-up program The designated deputy chief of prisons must develop a tracking process with the assistance of the research and analysis group at headquarters to measure effectiveness of the step-up program”

Iowa reported that “small modifications” “connected to recreation time, out of cell time and property modifications” had occurred in its step-down program.

Kentucky reported step-down programs at three institutions (two male, one female): “Each program lasts 6-12 months. Inmates are eligible based on treatment team and classification referral.”

Maryland explained that its restrictive housing policy had “a level-system built in that provides for the increase of both programs and privileges to make for a smooth transition into general population. Within the review process alternative programs and incentives are considered, such as drug counseling or cognitive aimed at reducing violence. Within the MaxII Structured Housing there are phases and incentives geared to transition the inmate to a less restrictive environment. Once sanction is completed, individual moves to structured, less restrictive housing and has opportunity to progress with out of cell activities in small group settings. As behavior dictates, he continues to progress (or regress) with available programming.”

Massachusetts stated it was piloting “a step down unit in our largest medium security prison in November, 2017. It is a 90 day program targeting the criminogenic needs that originally created the pathway to RH. It is a dorm style housing unit so no one is locked in cells at all, just restricted privileges with a clear pathway back to general population.”

As noted above, Minnesota related that prisoners “who have a history of staff or offender assault, or who have served more than 90 days in disciplinary segregation are evaluated for a step-down plan to general population.”

Mississippi reported having a “High Risk Incentive Tier” that provided the opportunity for prisoners to “receive services and privileges as part of a program to encourage and promote good institutional behavior.”

Missouri reported that it had not changed its policy but that several of its facilities had “created step-down or transition programs.”

Montana stated that “step downs occur as inmates progress through a 6 level system where their privileges increase. Treatment programs are also coordinated through their case managers in association with the levels.”

Nebraska explained it had “established several mission specific housing units which are alternatives to RH or act as a transition out of RH.”

Nevada described a “Behavior Modification Unit” “intended to transition an inmate from a segregation unit to one that is similar to general population. Placement in BMU provides the inmate with a period of adjustment to interact with staff and other inmates and work towards the development of proper social skills. Inmates who are still serving disciplinary sanctions and are within 30 days of the projected release date to the community are transferred to a BMU, depending on the inmates propensity for misconduct.”

New Jersey reported: “Inmates placed in administrative segregation as a result of a sanction may be assigned to a SDU by a centralized committee for transition to GP or the community. The placement phases are Reception/Initial, Congregate and Extended Congregate. Therapeutic activity and services are available. A SDU committee will review and advance the inmate through each phase.”

New Mexico described a four step program: “Step 1 Evaluation 30 days. Step 2 Self Accountability 90 days but if enhancements needed up to 240 days. Step 3 is Cultural Competency which is 120 days but up to 360 days with enhancements. Step 4 is reintegration with 120 days but up to 300 days with enhancements. For females step 1 is 15 days. Step 2 is 30 days. Step 3 is 45 days and Step 4 is 90 days. No enhancements with the females.”

New York stated that, effective October 2016, “SHU Step-down to the Community Programs” were “established at Green Haven Correctional Facility (“Green Haven”) and Wende Correctional Facility (“Wende”) to provide re-entry programming to inmates who have been in a SHU cell for 60 days or more serving a SHU or keep lock sanction and who have a minimum of 45 days and a maximum of 60 days to release The program goal is to assist participants with the development of a comprehensive release plan, incorporating social skills practice, relapse prevention, family reintegration and employment readiness. Behavior modification and relapse prevention will be addressed by modalities such as identifying high-risk behaviors, emotional regulation exercises, social skills practice, discussing how to deal with fear and the feelings of others, and how to ask and respond to questions.”

North Carolina related it had two step-down programs available: “the Therapeutic Diversion Units for those with a higher mental health acuity, and the Rehabilitative Diversion Unit. The inmates eligible for the RDU are close custody males over 21 years old, who have received a sanction of RH for Control Purposes for assaultive or violent infractions. This program takes a minimum of 13 months to complete, and incorporates three phases. In each phase, the step-down includes less restrictions and increased out-of-cell time and privileges, such as more options in canteen, increase in phone calls, movement throughout the facility and program opportunities such as high school equivalency. The first inmates to participate began 2/22/16. The TDUs are intended to enhance the care and custody for individuals diagnosed with mental illness, decrease incidents involving violence and/or self-harm, decrease the need for placement in a restrictive housing setting and improve the quality of life for this population. The TDU assists individuals with mental illness in developing effective emotional regulation and self-management skills, understanding their symptom presentation and patterns, and helps prepare for re-entry into a less restrictive environment within the prison and ultimately successful transition to the community.”

North Dakota’s description of its step-down program is reported in the text above.

Ohio reported it had a “transition from Extended Restrictive Housing to General Population for 6 years.” Ohio explained: “We have concluded that short-term Restrictive Housing does not need a mandatory step down, but we do have a hybrid sanctioning system where an inmate can be first placed in short-term Restrictive Housing and then stepped down into Limited Privilege Housing.”

Oklahoma provided a detailed program of its piloted step-down program at Oklahoma State Penitentiary. The policy, adopted in September 2017, stated that the “purpose of Step-Down Programs are to provide inmates transferred to maximum security a safe and secure way to earn their return to lower security. Upon arrival, inmates will be evaluated to determine appropriate housing needs and assessed to identify their level of social functioning and motivation to change Step-Down Programs will be comprised of components that are designed to address criminal

thinking and encourage pro-social behaviors. Programs will consist of four phases that are progressively less restrictive with Phase I being the most restrictive and Phase IV the least restrictive”

Pennsylvania also provided a detailed overview of its step-down unit and PORTAL program. That summary stated, that the “Department established a Positive Outcome Restructuring Through Assessments and Learning (PORTAL) program designed specifically to provide therapeutic programming, education, and socialization opportunities for individuals confined to a Level 5 (L-5) setting for extended periods. The goal of the program is to provide the skills necessary to gain recommendation for placement into a step down unit and return to general population After facility recommendation and approval by the Executive staff, the inmate will transfer to an approved institution to complete re-integration into general population. The program will use a progressive four-tiered phase system based on the inmate’s adjustment and attainment of goals/objectives noted in his/her Individual Treatment Plan (ITP).”

South Carolina reported “The Step-Down Program is an incentive-based offender management program which creates a pathway for offenders to transition from Restrictive Housing. The Intensive Management Program is a one year program. And Restrictive Management Step-Down is a six month program for inmates in Security Detention, Disciplinary Detention or Short Term Detention.”

Utah explained that prisoners in restrictive housing “must progress through the three phases of RH to reach completion. Each phase is 45 days and each phase has a corresponding program. The inmate must also remain discipline free to successfully complete the RH phases.”

Washington stated that a “transition pod” had been “developed and implemented at the Monroe Correctional Complex (MCC) Intensive Management Unit (IMU). The transition pod allows for two offenders assigned to Maximum custody to be on the tier with each other without restraints on for several hours a day. The offenders are around custody staff on the tier without restraints as well.”

¹⁷⁹ Those jurisdictions were Arkansas, Colorado, Illinois, Iowa, Massachusetts, Minnesota, Montana, North Carolina, Ohio, South Carolina, South Dakota, Utah, and Wisconsin.

¹⁸⁰ That jurisdiction was Montana.

¹⁸¹ That jurisdiction was North Carolina, which reported that “mentally ill inmates have a 30 day maximum as determined by the multidisciplinary team. This time can be extended if it is determined that the inmate poses a safety or security risk and RH is not considered detrimental to their health.”

¹⁸² Those jurisdictions were Iowa, which reported “60 days DD maximum prior to moving through the programming”; Massachusetts, which reported “the maximum for our disciplinary unit is ten years. Short term, non-disciplinary segregation does not have a duration attached to it”; Minnesota, which reported a maximum of “90 days for disciplinary segregation”; and South Carolina, which reported that “Disciplinary Detention is a maximum of 60 days.”

¹⁸³ Montana reported a total length of stay of 1.7 years in restrictive housing across all stages. Utah reported a 45-day maximum for each of its three restrictive-housing stages. South Dakota reported shortening the maximum duration for two of its restrictive-housing stages, from 90 and 120 days to 60 and 90 days, respectively. South Dakota stated, “on March 7, 2017, changes were made in the duration for two levels in the administrative restrictive housing Level System. Level 2 was changed from 90 to 60 days and Level 4 was changed from 120 to 90 days. This change reduced the overall duration for the program to 360 days instead of 420 for those completing the program on a timely basis.”

¹⁸⁴ Those jurisdictions were Colorado, Illinois, Kentucky, and Ohio. Colorado reported that the “maximum durations for specific infractions/behavior” were “either up to 6 months or up to 12 months.” Illinois reported that maximum “penalties per charge” had been “reduced,” resulting in a reduction of “the total, maximum amount of restrictive

housing time for all offenses by 107 months (8.9 years),” although there was “no maximum duration” to a prisoner’s placement in restrictive housing if the prisoner received “continuous sanctions for separate incidents that would run consecutively.” Kentucky reported that its “disciplinary penalty structure has been altered to reduce the amount of days to be issued per offense.” Ohio reported a prisoner could “only be given a maximum of 29 days” in restrictive housing “for an individual offense,” which was “the extent of authority any local official” had “to place an inmate into” restrictive housing. “In rare cases, an inmate can be housed” in restrictive housing “longer than 29 days for an investigation or pending classification action, but these must be reviewed by a higher authority.”

¹⁸⁵ Those jurisdictions were Wisconsin, which reported maximum durations on restrictive housing of up to “120 days without review” and “up to 360 days with review”; and South Carolina, which reported that “Security Detention” prisoners were “reviewed every 90 days to determine eligibility for removal from RHU.”

¹⁸⁶ *Seeking Accreditation*, AMERICAN CORRECTIONAL ASSOCIATION, available at http://www.aca.org/ACA_Prod_IMIS/ACA_Member/Standards_and_Accreditation/Seeking_Accreditation_Home.aspx.

¹⁸⁷ AMERICAN CORRECTIONAL ASSOCIATION, MANUAL OF ACCREDITATION POLICY & PROCEDURE 6, 9–10 (Mar. 15, 2017), available at http://www.aca.org/ACA_Prod_IMIS/docs/standards%20and%20accreditation/ALM-1-3_15_17-Final.pdf.

¹⁸⁸ ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21.

¹⁸⁹ *Id.* at 4. The ASCA-Liman Survey asked: “Has your jurisdiction reviewed its policies since then on restrictive housing?” “Does your jurisdiction rely on these standards to make policies?” We also asked about whether jurisdictions had implemented the ACA Standards regarding juveniles, pregnant women, and individuals diagnosed with serious mental illness and regarding the release of prisoners from restrictive housing directly into the community. We further sought to learn whether any other policies had been “revised in light of the 2016 ACA restrictive housing standards.”

¹⁹⁰ Forty-three jurisdictions responded to this question. The 36 jurisdictions that reported that they reviewed their policies since the release of the ACA Standards were Alabama, Arkansas, Colorado, Connecticut, Delaware, Georgia, Illinois, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming. Both Illinois and Nevada responded that they had not revised their policies since 2016. However, Illinois elaborated that in April 2017 it had worked “to institute changes to the Corrections’ Administrative Codes, changing policies as related to discipline and restrictive housing.” Similarly, Nevada reported that the “Nevada Legislature mandated that the NDOC evaluate its restrictive housing policies. The NDOC’s leadership has also voluntarily instituted regulations and practices that are intended to improve the wellbeing of inmates and reduce the length of stay in prison.” Nebraska reported that it would be reviewing its policies again by July 1, 2018.

Of the 43 jurisdictions that responded, Arizona, Indiana, Missouri, and Utah reported that they were undergoing review of their restrictive housing policies in the fall of 2017, when the survey was underway. Missouri reported that it had not revised its policies since 2016 but that “this survey and revised 2016 ACA standards have provided guidance and are assisting the Missouri Department of Corrections in improving our automation, as well as policy changes related to restrictive housing. The department has established a team for this purpose and it is our intent that this team will be able to develop a policy that will put us better in compliance with the 2016 ACA standards.” Utah likewise reported that it had not revised its policies since 2016 but that its “Division of Prison Operations” was working with the Vera Institute of Justice “to look at alternatives to segregation,” and was “using NIC guidelines and reviewing ACA guidelines for comparison to NIC, and adjusting policy as necessary.” In addition, Colorado noted it had piloted “the standards prior to implementation” and had since “codified all standards in policy.”

¹⁹¹ Those jurisdictions were Alabama, Arkansas, Colorado, Connecticut, Delaware, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Montana, Nebraska, Nevada, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Tennessee, and Wyoming.

¹⁹² Those jurisdictions were Illinois, Louisiana, Missouri, New Jersey, Rhode Island, Texas, Utah, Washington, and Wisconsin.

¹⁹³ Those jurisdictions were Alaska, Arizona, Georgia, Hawaii, Idaho, Kansas, Mississippi, and South Carolina. Of these eight, Georgia responded that it intended to rely on the ACA Standards in the future.

¹⁹⁴ ACA Standard 4-RH-0030, ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 35.

¹⁹⁵ Twenty jurisdictions of the 42 reported that they implemented the policy after the ACA Standards were issued. Those jurisdictions were Arkansas, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Maryland, Massachusetts, Minnesota, Nebraska, Nevada, New Jersey, New Mexico, New York, North Dakota, Ohio, South Dakota, Utah, and Wisconsin. Six jurisdictions reported that not releasing prisoners directly to the community from restrictive housing had been their policy prior to the ACA revisions. Those jurisdictions were Colorado, Georgia, Kentucky, Mississippi, Rhode Island, and Texas.

¹⁹⁶ Those jurisdictions were Kansas, North Carolina, Oregon, Pennsylvania, and Washington. Alabama, Alaska, Arizona, Louisiana, Missouri, Montana, Oklahoma, South Carolina, Tennessee, and Wyoming reported that they had not implemented this Standard. Hawaii responded, “N/A.”

¹⁹⁷ North Carolina reported that it had established two step-down units: a Rehabilitative Diversion Unit (RDU) and Therapeutic Diversion Units (TDUs). The RDU was for “close custody males over 21 years old who have received a sanction” of restrictive housing “for Control Purposes for assaultive or violent infractions. This program takes a minimum of 13 months to complete and incorporates three phases. In each phase, the step-down includes less restrictions and increased out-of-cell time and privileges, such as more options in canteen, increase in phone calls, movement throughout the facility and program opportunities such as high school equivalency.” The TDUs were “intended to enhance the care and custody for individuals diagnosed with mental illness, decrease incidents involving violence and/or self-harm, decrease the need for placement in a restrictive housing setting and improve the quality of life for this population. The TDU assists individuals with mental illness in developing effective emotional regulation and self-management skills, understanding their symptom presentation and patterns, and helps prepare for re-entry into a less restrictive environment within the prison and ultimately successful transition to the community.”

Oregon reported that it did its best to avoid directly releasing people from restrictive housing into the community but that “there are situations in which the safety of the individual or others would be compromised if he/she were removed from” restrictive housing “prior to release.” Pennsylvania explained that this “policy was in place as part of” its January 2015 “Disability Rights Network settlement” with the Department of Corrections. Washington stated that it did its best to ensure prisoners transition back to general population before they are released to the community, but that there were “times and situations” where direct release to the community could not be avoided, such as when people in restrictive housing had six months or less remaining time in their sentences. In such cases, it focused “on ensuring all services that are available can be provided upon release, housing vouchers, medication, access to treatment, etc.” Kansas reported that it had “addressed” this Standard “through practices” but had not made a corresponding “policy change.”

Sixteen jurisdictions reported that they had not implemented this Standard. Those jurisdictions were Alaska, Arizona, Idaho, Louisiana, Minnesota, Missouri, Nebraska, New Mexico, Oklahoma, Rhode Island, South Carolina, South Dakota, Tennessee, Washington, Wisconsin, and Wyoming.

¹⁹⁸ ACA Standard 4-RH-0033, ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 9.

¹⁹⁹ ACA Standard 4-RH-0031, *id.* at 36.

²⁰⁰ Forty-one jurisdictions responded to this question. Twelve jurisdictions reported that they had implemented the Standard after the ACA Standards were issued. Those jurisdictions were Alabama, Arkansas, Connecticut, Delaware, Indiana, Iowa, Kentucky, Massachusetts, Montana, Nevada, North Dakota, and Utah. Nine jurisdictions indicated that it was their policy before the ACA Standards. Those jurisdictions were Colorado, Georgia, Kansas, Maryland, Mississippi, New Jersey, New York, Oregon, and Texas. Colorado explained that before “the 2016 ACA revisions all offenders with serious mental illness were removed from administrative segregation and placed in a Residential Treatment Program in January 2014. There have been no exceptions.” Alabama reported that it had “substantially implemented this policy, with exceptions” but explained that “inmates diagnosed with serious mental illness have been removed from RH and are housed in a RTU. Additional MH staff are being hired.”

²⁰¹ Those jurisdictions were Illinois, North Carolina, Ohio, and Pennsylvania. Illinois reported involving mental health resources. It described notifying a mental health professional when placement in disciplinary restrictive housing was possible for a mentally ill prisoner. The mental health professional “reviews if the offender’s mental health condition may have been a factor in the incident, or if placement in restrictive housing may be detrimental to the mental health. They may also make a recommendation as to the maximum amount of restrictive housing an offender may serve.” North Carolina reported using extended restrictive housing as a safety measure when no alternative was available. North Carolina reported that it considered placement in a less-restrictive therapeutic diversion unit (TDU). It also reported taking into account whether confinement will have a “detrimental impact” on individuals with mental illness and that a “multidisciplinary team” reviewed placements of this population in restrictive housing every 30 days “to determine if continuation of RH is indicated based on safety and security factors.” Ohio reported that it had “dramatically reduced” the use of extended restrictive housing for prisoners with serious mental illness. Pennsylvania stated that this “policy was in place as part of the Disability Rights Network settlement” with the Department of Corrections.

²⁰² The data described in Section II of this report (discussing placement of those with serious mental illness in restrictive housing) relied on each jurisdiction’s own definition of serious mental illness.

²⁰³ ACA Standard 4-RH-00004, ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 9.

²⁰⁴ Eleven of these 22 jurisdictions implemented the policy after the ACA Standards were issued. Those jurisdictions were Arkansas, Colorado, Delaware, Indiana, New Jersey, New Mexico, North Carolina, Ohio, Pennsylvania, Washington, and Wisconsin. North Carolina explained that “Restrictive Housing was totally eliminated from this population effective June 2016,” and that it had “a Youthful Offender Program” where prisoners under age 18 were “placed on Modified Housing when serious incidents occur.” Washington explained that “WDOC has jurisdiction over individuals sentenced as adults. Those under age 18 sentenced as adults are managed by a different agency and will not come to our facilities until sometime after age 18. It is rare to have an individual come to a DOC facility while they are under age 18 for more than a short amount of time.” Another 11 jurisdictions stated that this was their policy before 2016. Those jurisdictions were Connecticut, Georgia, Kansas, Mississippi, Montana, Nevada, New York, Oregon, South Dakota, Tennessee, and Texas.

²⁰⁵ Those jurisdictions were Minnesota and Oklahoma. Fifteen jurisdictions responded that they had not implemented this Standard. Those jurisdictions were Alabama, Alaska, Idaho, Illinois, Iowa, Kentucky, Louisiana, Massachusetts, Missouri, Nebraska, North Dakota, Rhode Island, South Carolina, Utah, and Wyoming. Idaho explained that its draft revised policies, to be implemented in the summer of 2018, would prevent placement of individuals under 18 years old in restrictive housing.

Oklahoma reported that, “consistent with PREA standards, specific facilities and housing units within these facilities have been designated for inmates under 18 years of age.” Minnesota reported a seven-day maximum duration

for juveniles in disciplinary restrictive housing, except “for offenders who continue to assault staff,” and explained that “offenders under 18 housed in adult facilities participate in incentive programs to deter disruptive behavior.”

²⁰⁶ ACA 2016 RESTRICTIVE HOUSING STANDARDS, *supra* note 21, at 3. The survey results regarding the placement of pregnant prisoners in restrictive housing are discussed in Section II of this Report.

²⁰⁷ Seventeen jurisdictions said they had implemented the policy after the ACA Standards were issued. Those jurisdictions were Alabama, Arkansas, Delaware, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Nevada, New Mexico, North Carolina, Ohio, Oregon, Pennsylvania, Tennessee, and Wyoming. Eight jurisdictions reported that this was their policy before 2016. Those jurisdictions were Colorado (“CDOC does not have Extended Restrictive Housing for female offenders and does not have restrictive housing for any female offenders.”), Connecticut, Georgia, Idaho, Mississippi, New York, Oklahoma, and Texas.

²⁰⁸ Those jurisdictions were Illinois, New Jersey, South Dakota, and Washington. Among these four jurisdictions that had “substantially implemented this policy, with exceptions,” South Dakota reported that it complied with this Standard in practice and was currently revising its written policy accordingly. Illinois responded that “medical conditions of offenders shall be considered at the time of the committing offense.” Two jurisdictions explained that, in “rare” or “extreme” cases, placement of a pregnant prisoner in restrictive housing was necessary for safety reasons: New Jersey reported that it “prohibits” the placement of pregnant prisoners in administrative segregation but that “in extreme cases an inmate who is pregnant, is postpartum, recently had a miscarriage, or recently had a terminated pregnancy may be placed in MCU [the Management Control Unit] for repeated infractions.” At the time of the survey, New Jersey reported that no pregnant women were in its MCU. Washington reported that in “very rare situations, a woman who is pregnant, is postpartum, recently had a miscarriage, or recently had a terminated pregnancy may be placed in restrictive housing as a temporary response to behavior that poses a serious and immediate risk of physical harm.” Washington reported that procedural safeguards were involved when a pregnant or recently-pregnant woman was placed in restrictive housing: “this decision must be approved by the agency’s senior official overseeing women’s programs and services, in consultation with senior officials in health services, and must be reviewed every 24 hours.”

Twelve jurisdictions indicated that they had not implemented this Standard. Those jurisdictions were Alaska, Arizona, Kansas, Louisiana, Missouri, Montana, Nebraska, North Dakota, Rhode Island, South Carolina, Utah, and Wisconsin.

We also asked jurisdictions to describe any other changes to their restrictive-housing policies in light of the revised ACA Standards. Nine of 20 jurisdictions that responded to the question indicated that they had or were in the process of doing so. Those jurisdictions were Arkansas, Colorado, Maryland, Montana, Ohio, Oregon, Pennsylvania, Utah, and Wisconsin. Three jurisdictions of the nine reported additional broad policy changes. Arkansas had “made changes to our Protective Custody, Disciplinary Court Review, Punitive-Segregation Policies as well as our Inmate Disciplinary Manual.” Colorado had updated 16 department policies: 100-19 Communication with Offenders, 100-40 Prison Rape Elimination Procedure, 300-01 Offender Visiting Program, 500-02 Library Services, 550-11 Offender Release, 600-01 Offender Classification, 600-09 Management of Close Custody Offenders, 700-03 Mental Health Scope of Service, 700-29 Mental Health Interventions, 750-01 Legal Access, 850-10 Emergency Notification, 850-12 Telephone Regulations for Offenders, 850-07 Offender Reception and Orientation 1, 000-01 Recreation and Hobby Work 1, 350-02 Victim Notification Program 1, and 550-02 Food Service Menu Planning and Service. Ohio had “updated over 30 policies, including medical, mental health, classification, special management, recreation, education, business, Reentry, Health and Safety, Unit Management, Security, and a myriad of other policies.” Montana reported structural changes to its restrictive-housing system: “Our special management policy has been changed and our classification policy has been changed as we used to have Administrative segregation for long term and then Max custody for our extended stay in segregation. Now all are under the Maximum custody following a 6-level system.”

²⁰⁹ Fourteen jurisdictions responded to this question. The jurisdictions that reported new or changed data collection practices were Arizona, Delaware, Hawaii, Kentucky, Massachusetts, Minnesota, Nebraska, New Jersey, New Mexico, North Dakota, Ohio, Oregon, South Carolina, and Washington.

²¹⁰ Those jurisdictions were Arkansas, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Nebraska, New Mexico, and Washington.

²¹¹ Those jurisdictions were Arizona, Iowa, Kentucky, Maryland, Massachusetts, and Washington.

²¹² Those jurisdictions were Arkansas, Iowa, and Washington.

²¹³ Those jurisdictions were Arizona, Arkansas, Iowa, Massachusetts, and Washington.

²¹⁴ Those jurisdictions were Iowa, Kentucky, Massachusetts, Nebraska, Nevada, and Washington.

²¹⁵ Those jurisdictions were Arizona, Arkansas, Iowa, Kentucky, Nebraska, and Washington.

²¹⁶ Those jurisdictions were Delaware, Iowa, Kentucky, Nebraska, Nevada, Washington, and Wisconsin.

²¹⁷ Those jurisdictions were Iowa and Wisconsin.

²¹⁸ Those jurisdictions were Alabama, Delaware, Nebraska, and Washington. Of these four, Nebraska referenced a “new data system effective November 2017” that was “tracking a number of metrics” but that had not yet yielded “reportable data.” Washington reported that it “has started to evaluate the effectiveness of congregate classroom programming within restricted housing.” Delaware explained that, pursuant to a settlement agreement, it would for the next five years conduct monthly audits of the “number of inmates” in restrictive housing and of “demographics and out of cell data (structured and unstructured), disciplinary info, and mental health status for that population.”

²¹⁹ That jurisdiction was Oregon.

²²⁰ That jurisdiction was Arizona.

²²¹ That jurisdiction was North Dakota.

²²² The jurisdiction was Arizona, which referred to Travis J. Meyers, Arynn Infante & Kevin Wright, *Addressing Serious Violent Misconduct in Prison: Examining an Alternative Form of Restrictive Housing*, __ INT’L J. OFFENDER THERAPY & COMP. CRIMINOLOGY 1, 1 (2018). The article described its focus as “the future behavioral and mental health outcomes associated with completing an alternative approach to restrictive housing in the Arizona Department of Corrections.” *Id.*

Other efforts to study the impact of changes were reported to be underway in Nebraska (reporting that it had redesigned its “housing data system” to be able to track individuals and what happened to them); Nevada (a study of “length of stay in prison due to a reduction in credits forfeited”); and Washington (indicating that it had “started to evaluate the effectiveness of congregate classroom programming within restricted housing”).

²²³ That jurisdiction was Utah.

²²⁴ The question was open-ended: “In an ideal situation (i.e., if you had the necessary resources, and if you could do so consistent with institutional safety), what number of hours out-of-cell do you believe is desirable for prisoners?” The question did not direct jurisdictions to respond in hours per day or hours per week; nor did it ask about the ways in which time out-of-cell should be spent. Answers therefore varied, with some jurisdictions measuring time in hours per day and others in hours per week, and with some jurisdictions providing information on the way in which they believed prisoners should spend time out-of-cell.

²²⁵ The jurisdictions that responded to this question were Alabama, Alaska, Arizona, Arkansas, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Minnesota, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, Utah, Wisconsin, and Wyoming.

²²⁶ The jurisdictions that specified a certain number of hours were Alabama, Alaska, Arizona, Arkansas, Delaware, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Minnesota, Missouri, Montana, New Mexico, New York, North Carolina, North Dakota, Oklahoma, Oregon, Pennsylvania, Rhode Island, Tennessee, Texas, Utah, Wisconsin, and Wyoming.

²²⁷ Some of the jurisdictions that provided a certain number of hours did not specify whether this was measured as hours per day or hours per week, and the measurement could not be determined from the answer. The jurisdictions for which the measurement was unclear were Alaska, Iowa, Kansas, Louisiana, Massachusetts, Montana, New Mexico, Texas, and Wyoming.

²²⁸ That jurisdiction was Pennsylvania, which responded that, at a minimum, three hours per day would be desirable.

²²⁹ Those jurisdictions were North Carolina and Idaho. North Carolina responded 15–16 hours per day would be desirable. Idaho responded 16 hours per day would be desirable.

²³⁰ That jurisdiction, Arizona, specified a three-step system: “Step 1 = 7.5 hours, Step 2 = 8.5 hours, and Step 3 = 9.5 hours per week. Inmates classified as SMI minimally offered 20 hours in out of cell time per week.”

²³¹ That jurisdiction was Illinois.

²³² Those jurisdictions were Alabama, Arizona, and Maryland.

²³³ That jurisdiction was Maryland, which stated: “General Population—minimum of 12 hours daily; Disciplinary Segregation—2 hours daily; Administrative Segregation—minimum of 3 hours daily; Maximum Security General Population—minimum of 8 hours daily.”

²³⁴ Those jurisdictions were Alabama, Colorado, Delaware, Minnesota, Nebraska, Nevada, New Jersey, New York, North Carolina, and North Dakota.

²³⁵ That jurisdiction was Minnesota.

²³⁶ That jurisdiction was Nevada.

²³⁷ That jurisdiction was Nevada.

²³⁸ This response came from New York, which further explained: “The most desirable program would consist of 2 hours AM programming, 2 hours PM programming and an additional 2 hours exercise, with an incentive-based option to earn more and/or congregate recreation. This has worked well for us in our current SHU Alternative and Mental Health programs.”

²³⁹ Those jurisdictions were Colorado, Connecticut, Nebraska, New Jersey, Ohio, and South Dakota.

²⁴⁰ That jurisdiction was Ohio. In response to this question, South Dakota stated that “the amount of out of cell time considered ideal varies by custody levels, housing type and arrangement, work and programming, and other out of cell activities so it is not possible for us to respond to this question.”

²⁴¹ For example, the Vera Institute of Justice, with the “support of the National Institute of Justice, and in collaboration with the University of North Carolina School of Social Work and Oregon Health and Science University” has

undertaken a multi-year study in prisons in Oregon, North Carolina, and Missouri to “assess the impact of working in restrictive housing on correctional officers’ mental, emotional, and physical wellbeing.” See <https://www.vera.org/projects/restrictive-housing-impact-officer-wellbeing/overview>.

Vera also has a “Safe Alternatives to Segregation Initiative,” and has worked on ways to reduce the use of segregation at “16 jurisdictions in total.” See <https://www.safealternativestosegregation.org/>. As of the spring of 2018, Vera had projects in Louisiana, Minnesota, Nevada, Utah, and Virginia. Vera reported reductions in populations in restrictive housing in several sites, including over 85% in New York City; about 50% in Middlesex County, NJ; 27% in North Carolina; and 11% in Nebraska. See <https://www.vera.org/rethinking-restrictive-housing#where-are-they-now>.

²⁴² Thirty jurisdictions reported tracking in 2013 the numbers of individuals released directly to the community. Among those jurisdictions reporting, 4,400 people were released from administrative segregation to their communities. ASCA-LIMAN ADMINISTRATIVE SEGREGATION 2014, *supra* note 6, at 29. See also Christie Thompson, *From Solitary to the Street: What Happens when Prisoners Go from Complete Isolation to Complete Freedom in a Day?*, THE MARSHALL PROJECT, June 11, 2015, available at <https://www.themarshallproject.org/2015/06/11/from-solitary-to-the-street>.

²⁴³ VERA RETHINKING RESTRICTIVE HOUSING 2018, *supra* note 27, at 10. Reports on the Findings and Recommendations specific to each site are available at <https://www.vera.org/publications/safe-alternatives-segregation-initiative-findings-recommendations>. Vera is currently working with additional states including Louisiana, Minnesota, Nevada, Utah, and Virginia.

²⁴⁴ ASCA-LIMAN ADMINISTRATIVE SEGREGATION NATIONAL OVERVIEW 2013, *supra* note 3.

²⁴⁵ *Id.* at 4–5, 11.

²⁴⁹ *Id.* at 17.

²⁵⁰ *Id.* at 18–19.

²⁵¹ *Id.* at 21.

²⁵² See ASCA-LIMAN AIMING TO REDUCE TIME-IN-CELL 2016, *supra* note 13, at 49. Among 34 jurisdictions providing data in 2016, 5,146 male prisoners with serious mental health issues were held in restrictive housing, and among 32 jurisdictions providing data on female prisoners in 2016, 297 female prisoners with serious mental health issues were held in restrictive housing. See also Section II, Subpopulations, Prisoners with Mental Health Issues.

²⁵³ See Section II, The Demographics of Restrictive Housing, Race and Ethnicity. As noted there, among the 34 reporting jurisdictions, Black male prisoners comprised 45.7% of the restrictive housing populations and 42.3% of the total male custodial population. In 29 of the 34 jurisdictions, the male restrictive housing population contained a smaller percentage of White prisoners than in the total male custodial population. Among the 29 jurisdictions reporting numbers on women, Black female prisoners comprised 38.6% of the restrictive housing population and 22.6% of the total custodial population. In 21 of the 29 jurisdictions, the female restrictive housing population contained a smaller percentage of White prisoners than the total female custodial population.

²⁹⁵ Terry Kupers, *The SHU-Post Release Syndrome: A Preliminary Report*, 17 CORRECTIONAL MENTAL HEALTH REPORT 81 (2016), available at https://www.civicrosearchinstitute.com/online/article_abstract.php?pid=14&iid=1172&aid=7652. See generally TERRY ALLEN KUPERS, SOLITARY: THE INSIDE STORY OF SUPERMAX ISOLATION AND HOW WE CAN ABOLISH IT (2017). These findings parallel those of a 2018 report, Human Rights in Trauma Mental Health Lab, Stanford University, *Mental Health Consequences Following Release from Long-Term Solitary Confinement in California*, available at https://handacenter.stanford.edu/sites/default/files/publications/mental_health_consequences_following_release_from_long-term_solitary_confinement_in_california.pdf [hereinafter *Mental Health Consequences in California*]. This study concerned the mental health consequences of long-term solitary confinement, and was conducted by Stanford University’s Human Rights in Trauma Mental Health Laboratory, working at the behest of the Center for Constitutional Rights, which represented a class of California prisoners held in isolation. See *Ashker v. The Governor of California*, 09-CV-05796-CW (N.D. Cal. 2009). After interviewing individuals, the Lab concluded that the men “experienced severe psychological disturbances with lasting detrimental consequences,” with the most common responses to isolation being “emotional numbing and desensitization,” which continued “to be problematic for prisoners following the transition to the general population.” *Mental Health Consequences in California* at 2.

²⁹⁶ Research in animals has raised concerns that isolation results in brain wave and behavioral changes. See Huda Akil, Panel on Solitary Confinement: Legal, Clinical, and Neurobiological Perspectives, American Association for the Advancement of Science 2014 Annual Meeting, Feb. 14, 2014, <https://thinkprogress.org/solitary-confinement-may-dramatically-alter-brain-shape-in-just-days-neuroscientist-says-ae939f8e7685/>. ³⁰² *Id.*

³⁰³ *Id.* at 23. Minnesota reported that the Justice Research and Statistics Association (JRSA) awarded the study its Excellence in Research/Policy Award in 2018.

³⁰⁴ *See* 2017 Hawaii Senate Bill No. 2859, Hawaii Twenty-Ninth Legislature – Regular Session of 2018 [hereinafter Hawaii Senate Bill 2859]. Section 1(b)(2) of the bill would require that “on every third day, or sooner, following initial placement in administrative segregation, the facility program committee shall hold a hearing to determine if continued placement in administrative segregation is warranted.” Section § 1(c)(2) would require that “on every tenth day, or sooner, of disciplinary segregation, an adjustment committee shall hold a hearing and any recommendations to extend the disciplinary segregation shall be approved by the institutions division administrator, medical director, and staff psychiatrist.” *See also* 2018 New Jersey Assembly Bill No. 314, New Jersey Two Hundred Eighteenth Legislature – First Annual Session [hereinafter New Jersey Assembly Bill 314]. Section 4a(4) of the bill would require that, with exceptions for lockdown, “an inmate shall only be held in isolated confinement pursuant to initial procedures and reviews which provide timely, fair and meaningful opportunities for the inmate to contest the confinement. These procedures shall include the right to an initial hearing within 72 hours of placement and a review every 15 days thereafter, in the absence of exceptional circumstances, unavoidable delays, or reasonable postponements; the right to appear at the hearing; the right to be represented at the hearing; an independent hearing officer; and a written statement of reasons for the decision made at the hearing.” *See also* 2018 Virginia House Bill No. 795, Virginia 2018 Regular Session [hereinafter Virginia House Bill 795]. Section 53.1-39.1(F) of the bill would provide that “the Department shall create an administrative process by which an inmate may contest his isolated confinement within 72 hours of being placed in isolated confinement. The process shall include a hearing before an independent hearing officer. The inmate shall have the right to appear at the hearing, present evidence, and be represented by counsel.”

³⁰⁵ *See, e.g.*, 2017 Nebraska Legislative Bill No. 560, Nebraska One Hundred Fifth Legislature – First Regular Session [hereinafter Nebraska Legislative Bill 560]. Section Four of the bill would provide that:

The director shall issue an annual report on or before September 15 to the Governor and the Clerk of the Legislature For all inmates who were held in restrictive housing during the prior year, the report shall contain the race, gender, age, and length of time each inmate has continuously been held in restrictive housing. The report shall also contain: (a) The number of inmates held in restrictive housing; (b) The reason or reasons each inmate was held in restrictive housing; (c) The number of inmates held in restrictive housing who have been diagnosed with a mental illness or behavioral disorder and the type of mental illness or behavioral disorder by inmate; (d) The number of inmates who were released from restrictive housing directly to parole or into the general public and the reason for such release; (e) The number of inmates who were released from restrictive housing based upon an order of a district judge under subsection (2) of section 83-173.03; (f) The number of inmates who were placed in restrictive housing for his or her own safety and the underlying circumstances for each placement; (g) To the extent reasonably ascertainable, comparable statistics for the nation and each of the states that border Nebraska pertaining to subdivisions (4)(a) through (f) of this section; and (h) The mean and median length of time for all inmates held in restrictive housing.

See also New Jersey Assembly Bill 314, *supra* note 304. Section 7(e) would

Requir[e] posting on the official website of the Department of Corrections of quarterly reports on the use of isolated confinement, by age, sex, gender identity, ethnicity, incidence of mental illness, and type of confinement status, at each facility, including a county correctional facility; these reports shall include the population on the last day of each quarter and a non-duplicative cumulative count of people exposed to isolated confinement for each fiscal year. These inmate reports also shall include the incidence of emergency confinement, self-harm, suicide, and assault in any isolated confinement unit, as well as explanations for each instance of facility-wide lockdown.

See also 2017 New York Senate Bill No. 4784, New York Two Hundred Fortieth Legislative Session [hereinafter New York Senate Bill 4784]. Section 4(n) would require that:

The department shall make publicly available monthly reports of the number of people as of the first day of each month, and semi-annual and annual cumulative reports of the total number of people, who are (i) in segregated confinement; and (ii) in residential rehabilitation units; along with a breakdown of the number of people (iii) in segregated confinement and (iv) in residential rehabilitation units by (A) age; (B) race; (C) gender; (D) mental health level; (E) health status; (F) drug addiction status; (G) pregnancy status; (H) lesbian, gay, bisexual, transgender, or intersex status; and (I) total continuous length of stay, and total length of stay in the past sixty days, in segregated confinement or a residential rehabilitation unit.

The New York legislature passed the bill, which is awaiting signature by the governor. *See also* Virginia House Bill 795, *supra* note 304. Section 53.1-39.1 (H) would require that:

The Department shall report to the Governor and the General Assembly on or before June 30 and December 31 of each year the following information: 1. The total prison population; 2. The number of inmates who have been placed in isolated confinement and the age, sex, gender identity, and ethnicity of such inmates; 3. The number of inmates who are a member of a vulnerable population who have been placed in isolated confinement and the category of vulnerable population of such inmates; 4. The average length and median length of isolated confinement for (i) inmates placed in isolated confinement and (ii) inmates who are a member of a vulnerable population who have been placed in isolated confinement, calculated for each category of vulnerable population; 5. The number of inmates who have been placed in isolated confinement who have attempted to harm themselves or others; and 6. The number of inmates who have been placed in isolated confinement who have been released from the correctional facility while placed in isolated confinement.

³⁰⁶ CRIMES AND OFFENSES, 2018 Mass. Legis. Serv. Ch. 69 (S.B. 2371) [hereinafter CRIMES AND OFFENSES].

³⁰⁷ New York Senate Bill 4784, *supra* note 305, § 4(h) would prohibit holding any person “in segregated confinement for longer than necessary and never more than fifteen consecutive days nor twenty total days within any sixty day period. At these limits, persons must be released from segregated confinement or diverted to a separate secure residential rehabilitation unit.” Section 4(j)(iv) provides “No person may be held in segregated confinement for protective custody.”

³⁰⁸ Hawaii Senate Bill 2859, *supra* note 304. One facet of the proposal would limit the “the maximum length of time” a prisoner could be held in administrative segregation to no more than 14 days in any 30 day period. *Id.* at § 1(b)(1). Another provision would limit placement in disciplinary segregation to no more than 60 days in 180. *Id.* at § 1(c)(1). Both provisions would require oversight with hearings, for administrative segregation on every third day, and for disciplinary segregation, on every tenth day. *Id.* at § 1(b)(2), § 1(c)(2). Extensions of time for disciplinary segregation would require approval by “the institutions division administrator, medical director, and staff psychiatrist.” *Id.* at § 1(c)(1).

³⁰⁹ Nebraska Legislative Bill 560, *supra* note 305, § 4(3) provides that “no person shall be placed in solitary confinement,” which is defined as confinement to cell for an average of 22 or more hours per day. Section 3(1) limits the use of restrictive housing, defined as confinement that provides limited contact with other offenders, strictly controlled movement while out-of-cell, and out-of-cell time less than 24 hours per week, such that “no inmate shall be held in restrictive housing unless done in the least restrictive manner consistent with maintaining order in the facility and pursuant to rules and regulations adopted and promulgated by the department pursuant to the Administrative Procedure Act.” Section 2(2) would provide for a review process by the district court for any prisoner placed in restrictive housing for 90 days. The bill is set to be reintroduced in 2019.

³¹⁰ New Jersey Assembly Bill 314, *supra* note 304, places limitations on the use of “isolated confinement,” defined as “confinement of an inmate in a correctional facility, pursuant to disciplinary, administrative, protective, investigative, medical, or other classification, in a cell or similarly confined holding or living space, alone or with other inmates, for approximately 20 hours or more per day with severely restricted activity, movement, and social interaction.” Section 4.a(1) provides that “an inmate shall not be placed in isolated confinement unless there is reasonable cause to believe that the inmate would create a substantial risk of immediate serious harm to himself or another, as evidenced by recent threats or conduct, and a less restrictive intervention would be insufficient to reduce this risk.” Section 4.a (2) prohibits placing a prisoner “in isolated confinement for non-disciplinary reasons,” with exceptions for facility-wide lockdowns, emergency confinement, medical isolation, and protective custody.

³¹¹ Virginia House Bill 795, *supra* note 304, § 53.1-39.1(A) defines isolated confinement as “confinement of an inmate to his cell for more than 20 hours per day” and § 53.1-39.1(B) provides that “an inmate who is not a member of a vulnerable population shall not be placed in isolated confinement for longer than 15 consecutive days or in excess of 20 days in any 60-day period.” Section 53.1-39.1(F) requires the Department of Corrections to “create an administrative process by which an inmate may contest his isolated confinement within 72 hours of being placed in confinement,” and Section 53.1-39.1(D) requires a “comprehensive medical and mental health evaluation conducted by a medical professional within 12 hours of confinement.”

³¹² 2017 U.S. Congress S. 2724, 115th CONGRESS, 2nd Session.

³¹³ CRIMES AND OFFENSES, *supra* note 306, at § 93f.

³¹⁴ *Id.* at § 39A(b).

³¹⁵ *Id.* at § 39A(b).

³¹⁶ *Id.* at § 39B: “(a) All prisoners confined to restrictive housing shall receive placement reviews at the following intervals, and may receive them more frequently, if a prisoner: (i) is being confined to restrictive housing pursuant to subsection (a) of section 39A, every 72 hours; (ii) is being confined to restrictive housing pursuant to subsection (b) of section 39A, every 72 hours; (iii) is awaiting adjudication of an alleged disciplinary breach, every 15 days; (iv) has been committed to disciplinary restrictive housing, not later than 6 months and every 90 days thereafter; and (v) is being held for any other reason, every 90 days.”

³¹⁷ The committee is to include “the secretary of the executive office of public safety and security or a designee, who shall serve as chair; the commissioner of the department of correction or a designee; the commissioner of mental health or a designee; and 9 members to be appointed by the governor, 1 of whom shall be a correctional administrator with expertise in prison discipline or prison programming, 1 of whom shall be a member of a correctional officers union, 1 of whom shall have significant and demonstrated experience in criminal justice or corrections policy research; 1 of whom shall be the president of Massachusetts Sheriffs Association, Inc. or a designee, 1 of whom shall be a former judge designated by the chief justice of the supreme judicial court, 1 of whom shall be the executive director of Disability Law Center, Inc. or a designee, 1 of whom shall be the executive director of Prisoners’ Legal Services or a designee, 1 of whom shall be the executive director of the Massachusetts Association for Mental Health, Inc. or a designee and 1 of whom shall be a licensed social worker designated by the Massachusetts chapter of the National Association of Social Workers, Inc.” *Id.* at § 39G.

³¹⁸ *Id.* at § 39D: “(a) The commissioner shall publish monthly and provide directly to the restrictive housing oversight committee the number of prisoners held in each restrictive housing unit within each state and county correctional facility. (b) The commissioner shall publish a report quarterly and provide directly to the restrictive housing oversight committee, as to each restrictive housing unit within each state correctional facility, and annually, as to each restrictive housing unit within each county correctional facility: (i) the number of prisoners as to whom a finding of serious mental illness has been made and the number of such prisoners held for more than 30 days; (ii) the number of prisoners

who have committed suicide or committed non-lethal acts of self-harm; (iii) the number of prisoners according to the reason for their restrictive housing; (iv) as to prisoners in disciplinary restrictive housing, a listing of prisoners with names redacted, including an anonymized identification number that shall be consistent across reports, age, race, gender and ethnicity, whether the prisoner has an open mental health case, the date of the prisoner's commitment to discipline, the length of the prisoner's term and a summary of the reason for the prisoner's commitment; (v) the number of placement reviews conducted pursuant to clause (iv) and (v) of subsection (a) of section 39B and the number of prisoners released from restrictive housing as a result of such placement reviews; (vi) the length of original assignment to and total time served in disciplinary restrictive housing for each prisoner released from disciplinary restrictive housing as a result of a placement review; (vii) the count of prisoners released to the community directly or within 30 days of release from restrictive housing; (viii) the known disabilities of every prisoner who was placed in restrictive housing during the previous 3 months; (ix) the number of mental health professionals who work directly with prisoners in restrictive housing; (x) the number of transfers to outside hospitals directly from restrictive housing; and (xi) such additional information as the commissioner may determine. (c) The committee shall gather information regarding the use of restrictive housing in correctional institutions to determine the impact of restrictive housing on inmates, rates of violence, recidivism, incarceration costs and self-harm within correctional institutions."

³¹⁹ *Id.* at § 39E.

³²⁰ *Id.* at § 39A(c): "The fact that a prisoner is lesbian, gay, bisexual, transgender, queer or intersex or has a gender identity or expression or sexual orientation uncommon in general population shall not be grounds for placement in restrictive housing."

³²¹ *Id.* at § 39A(d): "A pregnant inmate shall not be placed in restrictive housing."

³²² Hawaii Senate Bill 2859, *supra* note 304, at § 1(d) would prohibit placement of a member of a "vulnerable population" in restrictive housing unless all other less restrictive means of intervention have been attempted and only after a mental and physical exam. New Jersey Assembly Bill 314, *supra* note 304, § 3 would limit placement of members of "vulnerable population" in restrictive housing. New York Senate Bill 4784, *supra* note 305, § 4(g) would prohibit placement in restrictive housing of person in a "special population." The New York legislature passed the bill, which is awaiting signature by the governor. Virginia House Bill 795, *supra* note 304, § 53.1-39.1 (B) would prohibit, with some exceptions, placement of a member of a "vulnerable population" in restrictive housing.

³²³ See e.g., Cal Welf. & Inst. Code § 208.3 (West), which states: "Room confinement means the placement of a minor or ward in a locked sleeping room or cell with minimal or no contact with persons other than correctional facility staff and attorneys. Room confinement does not include confinement of a minor or ward in a single-person room or cell for brief periods of locked room confinement necessary for required institutional operations."; Neb. Rev. Stat. § 83-4,125, which states: "Room confinement means the involuntary restriction of a juvenile to a cell, room, or other area, alone, including a juvenile's own room, except during normal sleeping hours."

³²⁴ Cal. Welf. & Inst. Code § 208.3(b)(2).

³²⁵ *Id.* at § 208.3(b)(1).

³²⁶ *Id.* at § 208.3(c), (d).

³²⁷ Colo. Rev. Stat. Ann. § 26-20-104.5 (West).

³²⁸ Comprehensive Youth Justice Amendment Act of 2016, 2017 District of Columbia Law 21-238 § 203(e). The Act provided:

Except for room confinement occurring under subsection (c) of this section, room confinement shall be used for the briefest period of time possible and not for a time to exceed 6 hours. After 6 hours, the youth shall be returned to the general population, transported to a mental health facility upon the recommendation of a mental health professional, transferred to the medical unit in the facility, or provided special individualized programming.

³²⁹ *Id.* at § 203(a).

³³⁰ Tennessee Public Chapter No. 1052, House Bill No. 2271, Juvenile Justice Reform Act of 2018 § 13. The Act provided that the “use of seclusion for punitive purposes pre-adjudication or post-adjudication for any child detained in any facility pursuant to § 37-1-114 is prohibited.”

³³¹ Nebraska Legislative Bill 870, *supra* note 305, at § 2(5).

³³² *Id.* at § 2(a).

³³³ 2018 Connecticut House Bill No. 5041 § 33(e), Connecticut General Assembly – February Session, 2018. The bill would require that “no child shall at any time be held in solitary confinement or held for a period that exceeds six hours.”

³³⁴ Colo. Rev. Stat. Ann. § 17-1-113.8 (West).

³³⁵ CRIMES AND OFFENSES, *supra* note 306, at § 39A(a). The law provided:

A prisoner shall not be held in restrictive housing if the prisoner has a serious mental illness or a finding has been made, pursuant to subsections (c) or (d) of section 39 or otherwise, that restrictive housing is clinically contraindicated unless, not later than 72 hours after the finding, the commissioner, the sheriff or a designee of the commissioner or sheriff certifies in writing: (i) the reason why the prisoner may not be safely held in the general population; (ii) that there is no available placement in a secure treatment unit; (iii) that efforts are being undertaken to find appropriate housing and the status of the efforts; and (iv) the anticipated time frame for resolution. A copy of the written certification shall be provided to the prisoner. A prisoner in restrictive housing shall be offered additional mental health treatment in accordance with clinical standards adopted by the department of correction.

³⁵² South Carolina elaborated on the Behavioral Management Unit policy:

The Behavioral Management Units (BMUs) are designed as a possible alternative to long-term segregation placement for inmates designated as having a mental health classification who are suffering from severe personality disorders and associated disruptive disorders. BMUs are therapeutic programs aimed to disrupt the cycle of repeated disciplinary infractions resulting in frequent, repetitive sanctions that result in long-term segregation placement. The goal of placement in BMUs is to assist inmates in achieving their highest level of functionality by developing alternative coping skills that result in behavioral stability sufficient to return safely to general population. In some cases, the goal will be preparation for re-entry to the community at the expiration of their sentence.

The prison system further explained that it planned “to open a specially designed yard” for prisoners in restrictive housing “due to their safety concerns.” South Carolina described the plan:

The focus will be segregation reduction and re-entry preparation for general population and society. Inmates will be screened for participation using specific criteria and a contract will require disagreements to be resolved through a community meeting or small staff/inmate forum. The program will consist of reception phases to introduce the program, functions, and expectations to incoming inmates. Upon completion of the reception requirements, inmates will be placed in housing units. Each inmate will be assigned a job function within the housing unit aimed at assuming responsibility and learning acceptable work habits. One program to be offered is designed to work with inmates fearful of general population environments with the goal of returning them to a yard as well as preparing them for re-entry into society. The program will determine the

reason for maladapted behavior or refusal to be housed in general population, develop a specific management plan, and thereafter move inmates to one of the therapeutic units.

South Carolina also noted that “an on-going RHU committee” was convening “a special session” to review prisoners with “high mental health needs” in restrictive housing to determine whether restrictive housing placement “is correct or whether the housing assignment should be adjusted.”

³⁵³ *Roy Parker et al. v. City of New York*, 15 CV 6733 (CLP) (E.D.N.Y. Settlement Dec. 2017) (Memorandum and Order), available at <https://cases.justia.com/federal/district-courts/new-york/nyedce/1:2015cv06733/378243/58/0.pdf?ts=1517255506>.

³⁵⁴ *Id.* They alleged that after having been placed in solitary confinement while serving one sentence, released from custody, and then returned to custody on another charge, they were placed back in solitary confinement solely on the basis of having been there previously. *Id.* at 2.

³⁷⁰ *Davis v. Ayala*, 135 S. Ct. 2187, 2210 (2015) (Kennedy, J., concurring). Justice Thomas concurred specifically to disagree, as he pointed to the harms that the prisoner had imposed by killing others. *Id.* at 2210 (Thomas, J., concurring).

³⁷¹ *Id.* at 2209. Justice Kennedy stated that it was “as if a judge had no choice but to say:

‘In imposing this capital sentence, the court is well aware that during the many years you will serve in prison before your execution, the penal system has a solitary confinement regime that will bring you to the edge of madness, perhaps to madness itself.’”

³⁷² *Ruiz v. Texas*, 137 S. Ct. 1246 (2017) (Breyer, J., dissenting). See also *Glossip v. Gross*, 135 S. Ct. 2726, 2765 (2015) (Breyer, J. & Ginsburg, J., dissenting). In 2018, Justice Breyer reiterated the concern in another dissent from a denial of certiorari. He commented that the death-sentenced prisoner had been incarcerated since 1977 and spent “most of the time on death row living in isolated, squalid conditions.” *Jordan v. Mississippi*, 138 S.Ct. 2567, 2568 (2018) (Breyer, J., dissenting) (citing petition for certiorari).

³⁷³ *Nordstrom v. Ryan*, CV-15-02176 (D. Ariz. 2015). See also <https://deathpenaltyinfo.org/node/6824>; http://www.abajournal.com/news/article/condemned_to_death_and_solitary_confinement1. As a result of a settlement reached in that case, the plaintiff and others with clear disciplinary records will be moved from solitary confinement.

³⁷⁴ *Lopez v. Brown*, 4:15 CV 02725 (N.D. Ca 2015), available at <https://www.clearinghouse.net/chDocs/public/PC-CA-0071-0001.pdf>. See also <http://solitarywatch.com/2017/10/10/lawsuits-challenge-the-cruelty-of-decades-in-solitary-confinement-on-death-row/>. A settlement reached in this suit placed a five-year limit on placement in restrictive housing on death row, and provided for more frequent placement reviews.

³⁷⁵ *Davis et al. v. Jones et al.*, 3:17CV820J34PDB (M.D. Fl. 2017), available at <https://www.venable.com/files/upload/Complaint-David-v-Jones.pdf>. On July 19, 2017, a group of nine death-row prisoners filed a class-action lawsuit against the Florida Department of Corrections, and challenged its practice of automatically keeping death-row prisoners in solitary confinement until the prisoners’ release or execution. Plaintiffs Mark Davis and others—whose stays in solitary confinement range from four to thirty years and total over 150 years—asked the United States District Court for the Middle District of Florida to hold the practice unconstitutional in violation of the Eighth Amendment prohibition against cruel and unusual punishment and the Due Process Clause of the Fourteenth Amendment.

³⁷⁶ *Hamilton et al v. Vannoy et al*, 3:17CV00194 (M.D. La. 2017), available at <https://cardozo.yu.edu/sites/default/files/Angola%20filed%5DNEW.pdf>. In March 2017, prisoners on death row at Louisiana State Penitentiary filed a class-action lawsuit seeking to change the prison’s policy of keeping all people sentenced to death in solitary confinement for the duration of their time in prison. The complaint alleged that Marcus Hamilton and his co-plaintiffs were in isolation “between twenty-five and thirty-one years.” *Id.* at para. 1. The case is pending, and a settlement conference was set to take place in August 2018. Meanwhile, starting in May 2017, Louisiana began allowing death-row prisoners to be let out of their cells together for four hours a day. See Julia O’Donoghue, *Louisiana Tests Relaxed*

Restrictions on Death Row Inmates, The Times-Picayune, Oct. 25, 2017, https://www.nola.com/politics/index.ssf/2017/10/louisiana_death_row_changes.html.

³⁹⁵ *CCLA v. Canada*, *supra* note 394, at para. 272. In response to a suit brought by the Corporation of the Canadian Association of Civil Liberties (CCLA), the Ontario Superior Court of Justice ruled that so-called “fifth working day review” of a decision to place a prisoner in administrative segregation was insufficient. The court analyzed the claim under *Baker v. Canada (Minister of Citizenship and Immigration)* [1999] 2 S.C.R. 817. The *Baker* decision listed five factors affecting procedural fairness: the nature of the decision, and the process followed in making it; the nature of the statutory scheme; the importance of the decision to the individual; the legitimate expectations of the person challenging the decision; and the choices of procedure made by the agency. The court held that given that the institutional head (akin to a warden) controls the decision to place, maintain, and release a prisoner from administrative segregation—i.e. there is no independent review—“the decision to segregate is procedurally unfair.” *Id.* at para. 155. This aspect of the decision relied on Section 7 of the Charter of Rights and Freedoms, which provides, “Everyone has the right to life, liberty and security of the person and the right not to be deprived thereof except in accordance with the principles of fundamental justice.” *Canadian Charter of Rights and Freedoms*, § 7, Part I of *Constitution Act, 1982*, being Schedule B to the *Canada Act 1982* (U.K.), 1982, c. 11.

⁴¹⁹ *Id.*

⁴²⁰ *Id.* at 8.

⁴²¹ *Id.* at 8–9.

⁴²² The 40 jurisdictions that provided numbers of prisoners in restrictive housing in both 2015 and 2017 were Alabama, Alaska, Arizona, Colorado, Connecticut, Delaware, FBOP, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, Missouri, Montana, Nebraska, New Jersey,

New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming.

Three jurisdictions (Arkansas, Nevada, and Rhode Island) responded to the survey in 2017 but not in 2015. Eight jurisdictions (California, D.C., Florida, Minnesota, New Hampshire, Vermont, Virgin Islands, and Virginia) responded in 2015 but not 2017.

⁴²³ We clarified the definition of restrictive housing in 2017–2018. In 2015–2016, the survey defined restrictive housing as being in-cell for 22 hours or more for 15 continuous days or more; in 2017–2018, the survey defined restrictive housing as being in cell for *an average of* 22 hours or more for 15 continuous days or more. *See supra* note 20.

⁴²⁴ The 29 jurisdictions with decreases in the number of prisoners reported in restrictive housing were, in order of number of prisoners: New York (decrease of 1,832); Texas (1,560); Illinois (1,334); FBOP (968); Georgia (680); Utah (616); Tennessee (587); Alabama (547); Michigan (436); North Carolina (408); New Mexico (369); New Jersey (359); Delaware (338); South Carolina (331); Nebraska (270); Pennsylvania (218); Colorado (207); Oklahoma (184); Kansas (130); Idaho (94); Ohio (92); Iowa (80); Kentucky (79); Maryland (68); Wyoming (50); North Dakota (46); Wisconsin (38); South Dakota (16); and Hawaii (10).

⁴²⁵ Together, New York, Texas, Illinois, FBOP, and Georgia accounted for a reduction of 6,374 prisoners in restrictive housing from 2015 to 2017.

⁴²⁶ The 11 jurisdictions with increases in the number of prisoners reported in restrictive housing were, in order of number of prisoners: Missouri (increase of 962); Mississippi (344); Oregon (308); Massachusetts (208); Connecticut (200); Arizona (179); Indiana (120); Washington (113); Alaska (26); Montana (23); and Louisiana (20).

⁴²⁷ Those 28 jurisdictions, starting with the largest decrease in percentage points, were Utah (from 14.0% to 4.7%); Delaware (from 8.8% to 0.8%); New Mexico (from 9.0% to 4.2%); Nebraska (from 11.0% to 6.3%); Tennessee (from 8.8% to 5.3%); New York (from 8.5% to 5.3%); Illinois (from 4.8% to 2.2%); North Dakota (from 3.0% to 0.4%); Wyoming (from 6.2% to 3.8%); Alabama (from 5.7% to 4.0%); New Jersey (from 6.7% to 5.2%); South Carolina (from 5.1% to 3.7%); Kansas (from 5.9% to 4.6%); Colorado (from 1.2% to 0.1%); Maryland (from 7.5% to 6.5%); Georgia (from 6.8% to 5.8%); North Carolina (from 4.0% to 3.0%); Texas (from 3.9% to 2.9%); Iowa (from 3.0% to 2.0%); Kentucky (from 4.2% to 3.4%); Michigan (from 3.1% to 2.3%); Idaho (from 5.0% to 4.3%); South Dakota (from 3.0% to 2.3%); Oklahoma (from 5.6% to 5.1%); Wisconsin (from 3.7% to 3.2%); Pennsylvania (from 3.4% to 3.2%); Ohio (from 2.7% to 2.6%); and Hawaii (from 0.5% to 0.4%).

⁴²⁸ That jurisdiction was Utah.

⁴²⁹ Those 12 jurisdictions, starting with the largest increase in percentage points, were Louisiana (from 14.5% to 19.0%); Mississippi (from 1.0% to 4.1%); Montana (from 3.5% to 6.4%); Missouri (from 6.3% to 9.0%); Massachusetts (from 2.3% to 4.9%); Oregon (from 4.3% to 6.4%); Connecticut (from 0.8% to 2.3%); Alaska (from 7.2% to 8.6%); Indiana (from 5.9% to 6.6%); Washington (from 1.7% to 2.3%); Arizona (from 6.0% to 6.5%); and FBOP (from 4.7% to 5.2%).

⁴³⁰ That jurisdiction was Louisiana.

⁴³¹ The number used for total custodial population in 2015 is the total custodial population about which the jurisdiction had restrictive housing data. *See* ASCA-LIMAN AIMING TO REDUCE TIME-IN-CELL 2016, *supra* note 13, at 22.

⁴³² Those jurisdictions were Alabama, FBOP, Georgia, Hawaii, Idaho, Illinois, Iowa, Kansas, Michigan, Nebraska, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, South Carolina, Texas, and Utah.

⁴³³ Those jurisdictions were Missouri and Washington.

⁴³⁴ As previously noted, we clarified the definition of restrictive housing in 2017–2018. In 2015–2016, the survey defined restrictive housing as being in-cell for 22 hours or more for 15 continuous days or more; in 2017–2018, the survey defined restrictive housing as being in cell for *an average of* 22 hours or more for 15 continuous days or more. *See supra* note 20.

The 31 jurisdictions that provided numbers on length of stay in restrictive housing in both 2015 and 2017 were Alaska, Arizona, Colorado, Delaware, FBOP, Hawaii, Indiana, Iowa, Kansas, Kentucky, Louisiana, Massachusetts, Mississippi, Montana, Nebraska, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming.

Five jurisdictions (Alabama, Illinois, Michigan, Missouri, and Rhode Island) provided data on length of stay in 2017 but not in 2015. Ten jurisdictions (California, Connecticut, District of Columbia, Florida, Idaho, Maryland, Minnesota, Vermont, Virgin Islands, and Virginia) provided data in 2015 but not 2017.

Appendix A: ASCA-Liman 2017–2018 Restrictive Housing Survey

In the fall of 2017 we sent a survey in to the corrections departments in all 50 states, the District of Columbia, and the Federal Bureau of Prisons, and to four large metropolitan jail systems. We corrected the survey in February 2018 to eliminate errors in drafting. The survey reproduced below is a Word version of the full survey distributed on the Qualtrics platform.

Q1. As you know, ASCA and Yale’s Liman Center have an ongoing data collection project to understand the use of restrictive housing in departments of corrections. The goal is to continue to map changes by keeping data current. Further, since the last survey, the American Correctional Association (ACA) has new standards for restrictive housing.

This brief questionnaire therefore gathers basic information about all forms of restrictive housing so as to provide a national picture of the number of people in all forms of restrictive housing, the length of their stay, policy reforms, and the impact of the ACA 2016 Standards. As we did in the 2014 and 2015 surveys, we ask for responses to this survey. Thereafter, ASCA members will receive a draft report of the analysis, and after we review the comments and corrections, the report will be finalized for publication. Much of the survey repeats questions from 2015, to which almost all of the ASCA membership responded.

Instructions and Definitions

The questionnaire need not be filled out in one sitting. The Qualtrics platform automatically saves your answers in your browser, so that you can return to the survey again at a later time, but **ONLY** if you use the same computer for inputting the answers. Most questions can be answered by checking boxes in a list; a few questions provide opportunities for open-ended responses. The Qualtrics Program alerts users when numbers do not add up to the total. If your answers prompt that flag, please recheck or explain the variations (such as subtotals not equaling the total). Because we may have follow-up questions to clarify the information provided, please include the name, contact information, and title for the person to whom such questions should be directed.

We ask first about all individuals in your jurisdiction’s correctional facilities, including both sentenced prisoners and pre-trial detainees, as well as about whether you are reporting on facilities operated state-wide, and/or by either local entities housing state prisoners at your behest, or by private entities with whom your jurisdiction contracts. We also want to learn the numbers of prisoners held outside your jurisdiction. That background enables us to understand the context for the numbers provided on the facilities for which you have accessible data on the use of restrictive

housing, on the numbers in restrictive housing, the length of stay, and demographics. A section is also devoted to learning about policies and reforms.

Please answer all the questions with information about your jurisdiction that is current as of on or about September 24, 2017, and indicate the date on which the data was collected. (For example, some jurisdictions collect data on the first or the fifteenth of every month.)

Not all jurisdictions have information on all the questions. A general “not applicable” (N/A) answer can be confusing. Therefore, we have set up the questionnaire to enable you to clarify if your jurisdiction does not track the information at all, or the information is not available for other reasons. In contrast, if your jurisdiction tracks information and has no prisoners under these conditions, then answer with a “0.”

For the purposes of this questionnaire, the term “restrictive housing” refers to separating prisoners from the general population and holding them in their cells for an average of 22 or more hours per day, for 15 or more continuous days. The definition includes prisoners held both in single cells and in double cells, if held for an average of 22 hours per day or more in a cell, for 15 or more continuous days. Thus, the questionnaire aims to gather data on all forms of restrictive housing populations, whether called administrative segregation, disciplinary segregation, protective custody, intensive management, or otherwise categorized.

Also provided is an email address (ascalimansurvey@yale.edu) and a phone number (203-436-3532) to use to let us know that you have questions and that you want a response for clarification.

PLEASE COMPLETE AND RETURN THIS QUESTIONNAIRE BY MARCH 2.
THANK YOU.

Q2. To facilitate your completion of this survey across multiple sessions, here is a PDF of this survey for download (however, please be sure to enter your responses into this online form):

Q3. **SECTION 1.** Please indicate the jurisdiction for which you are filling out the survey and the date on which data are regularly collected; if the data are collected only for this survey, please indicate the last date on which you finished gathering the data to respond.

If it is possible for your jurisdiction to report data as of September 24, 2017, this would be appreciated in order to have consistency with other jurisdictions.

☐ Jurisdiction: _____

☐ Data current as of (MM/DD/YYYY): _____

Q4. SECTION 2. Please indicate whether the following types of facilities are under the direct control of your jurisdiction's Department of Corrections (check all that apply). By control, the survey means that your jurisdiction hires and supervises staff (even if some are through subcontracts, such as health care services) and provides the governing rules and policies.

☐ Prisons

☐ Jails

☐ Juvenile facilities

☐ Mental health facilities

☐ Special facilities for death-sentenced prisoners

☐ Private prisons

☐ Immigration detention

☐ Other (please specify) _____

Q5. Please provide the total custodial population for all facilities in your system as identified in Question 4 above (for example, if you indicated in Question 4 that your system includes prisons, jails, juvenile facilities, and mental health facilities, you would provide the total custodial population for those four types of facilities).

Q6. Does your jurisdiction have prisoners housed in privately contracted facilities?

☐ Yes

☐ No

Q7. Does your jurisdiction regularly collect data on prisoners in privately contracted facilities?

☐ Yes

☐ No (please explain) _____

Q8. Does your jurisdiction contract with the federal government to provide housing for immigration detention?

☐ Yes

☐ No

Q9. Answer only if you answered “Yes” to the above question. Does your jurisdiction keep data on the population and the use of restrictive housing in these facilities?

☐ Yes

☐ No (please explain) _____

Q10. **SECTION 2a.** This survey focuses on data in your jurisdiction in facilities under your control. We also want to understand the numbers of individuals not included to learn the size of the population for which we will not have the kinds of information provided by answers to the questions below.

Q11. Are there prisoners sentenced through the state system who are **NOT** under your control and who are housed in other facilities (such as out of state, private, jails, and community residential centers)?

☐ Yes

☐ No

Q12. Answer only if you answered “Yes” to Question 11 above. Are any of these prisoners housed in local or other facilities **WITHIN** your jurisdiction?

☐ Yes

☐ No

Q13. Answer only if you answered “Yes” to Question 12 above. Please provide data, if available, on the numbers of such prisoners.

Q14. Answer only if you answered “Yes” to Question 11 above. Are any of these prisoners housed **OUTSIDE** of your jurisdiction?

☐ Yes

☐ No

Q15. Answer only if you answered “Yes” to Question 14 above. Please indicate the numbers of such prisoners and to what jurisdictions they are sent.

Q16. **Section 2b.** Please indicate which facilities use restrictive housing (check all that apply).

☐ Prisons

☐ Jails

☐ Juvenile facilities

☐ Mental health facilities

☐ Privately contracted facilities

☐ Special facilities for death-sentenced prisoners

☐ Immigration detention contract facilities

☐ Other (please specify) _____

Q17. Please indicate the facilities for which you have data on the use of restrictive housing (check all that apply).

- ☐ Prisons
- ☐ Jails
- ☐ Juvenile facilities
- ☐ Mental health facilities
- ☐ Privately contracted facilities
- ☐ Special facilities for death-sentenced prisoners
- ☐ Immigration detention contract facilities
- ☐ Other (please specify) _____

Q18. Please provide the total custodial population in each type of facility for which you have data on the use of restrictive housing. (For example, if you indicated in the question above that you have data on the use of restrictive housing in prisons, jails, and juvenile facilities, you would provide the custodial population in these three types of facilities.)

Prisons : _____

Jails : _____

Juvenile facilities : _____

Mental health facilities : _____

Special facilities for death-sentenced prisoners : _____

Private prisons : _____

Immigration detention : _____

Other (please explain) : _____

Total : _____

Q19. SECTION 2c. Please provide available data on restrictive housing.

Note: For all questions in this survey, if your jurisdiction moves prisoners from one restrictive housing status or type to another without releasing them to a non-restrictive housing living unit, please provide the total number of days in restrictive housing REGARDLESS of status or type. In these cases, please include a comment noting that the total number of days includes time in two or more restrictive housing classifications or types.

Example: A prisoner is housed for 10 days in restrictive housing as a disciplinary sanction and upon completion of that sanction remains in restrictive housing for another 10 days for administrative reasons. For the purposes of the survey, the amount of time in restrictive housing would be 20 days, with a comment that the response reflects a time in both disciplinary and administrative statuses.

Q20. How many people are in restrictive housing in the facilities for which you have data?

	Short-term restrictive housing (15 up to 29 days)	Extended restrictive housing (> 29 days)
Prisons		
Jails		
Juvenile facilities		
Mental health facilities		
Special facilities for death-sentenced prisoners		
Privately contracted facilities		
Immigration detention contract facilities		
Other (please specify)		

Q21. Do you house persons in short-term restrictive housing (15 up to 29 days) with others in the same cell?

☐ Yes

☐ No (please explain) _____

Q22. Do you house persons in extended restrictive housing (> 29 days) with others in the same cell?

☐ Yes

☐ No (please explain) _____

Q23. Answer only if you answered “Yes” to Question 22 above. Of the restrictive-housing cells you have, how many are designed to hold MORE THAN one prisoner?

Q24. Answer only if you answered “Yes” to Question 22 above. Of the restrictive-housing cells you have, how many are designed to hold ONLY one prisoner?

Q25. Answer only if you answered “Yes” to Question 22 above. As of September 15th, 2017, how many prisoners (including males and females of all ages) were in restrictive housing and sharing a cell with another prisoner?

☐ Short-term restrictive housing (15 up to 29 days)

☐ Extended restrictive housing (> 29 days)

Q26. **SECTION 3.** Please provide available data regarding prisoners' duration in restrictive housing.

Q27. For all facilities for which you have data on the numbers of persons in restrictive housing, do you regularly gather, collect, or report information on each prisoner's length of stay in restrictive housing? Please select all that apply.

- ☐ Yes, for each individual prisoner
- ☐ Yes, in aggregate
- ☐ Yes, grouped by prisoners' reason for placement
- ☐ Yes, grouped by some other measure (please explain)

- ☐ No (please explain) _____

Q28. In what year did your jurisdiction begin to track length-of-stay data? (YYYY)

Q29. SECTION 4. Please provide the number of prisoners held in each type of restrictive housing for the specified period (under 1 month, under three months, etc. in continuous/consecutive days or months). Include both male and female prisoners.

Reminder: Please check that these totals comport with the information provided elsewhere in the questionnaire or if not, please explain the differences.

Note: If you collect duration data but not data on reason or type of housing, please provide what information is available.

Please enter “N/A” if data is not available.

	Protective	Disciplinary	Administrative	Other	TOTAL
15 days – 1 month					
1 month and 1 day – 3 months					
3 months and 1 day to 6 months					
6 months and 1 day – 12 months					
12 months and 1 day – 36 months (1–3 years)					
36 months and 1 day – 72 months (3–6 years)					
72 months and 1 day or more (more than 6 years)					

Q30. If you were not able to provide some of these numbers, please explain why.

Q31. If the data include prisoners in an “Other” category of restrictive housing, please specify and explain the type(s) of restrictive housing to which you are referring.

Q32. **SECTION 5.** Please provide available data regarding prisoners’ demographics (age, race, ethnicity, gender, mental health, special populations).

Q33. What categories do you use?

- ☐ White
- ☐ Black (African American)
- ☐ Native Hawaiian or Pacific Islander
- ☐ Native American or Alaskan Native
- ☐ Hispanic or Latino
- ☐ Asian
- ☐ Other

Q34. Please explain how you define each, as some jurisdictions have variation.

- ☐ White: _____
- ☐ Black (African American): _____
- ☐ Native Hawaiian or Pacific Islander: _____
- ☐ Native American or Alaskan Native: _____
- ☐ Hispanic or Latino: _____
- ☐ Asian: _____
- ☐ Other: _____

Q35. What ethnic/racial categories fall within “Other”?

Q36. If you use additional categories, please list them and how you define them.

Q37. How are identifications of race and ethnicity made?

Q38. **SECTION 5a.** Please provide available data on the **TOTAL CUSTODIAL POPULATION** for all facilities that you identified.

Q39. Please provide information on the number of total male and female prisoners by age group.

	Male	Female
Under 18 years old		
18–25 years old		
26–35 years old		
36–50 years old		
Over 50 years old		
TOTAL		

Q40. If your system breaks down women and men by race and ethnicity, please give information on the number of male and female prisoners by those categories.

	White	Black	Native Hawaiian / Pacific Islander	Native American / Alaskan Native	Hispanic or Latino	Asian	Other
Male							
Female							
TOTAL							

Q41. **SECTION 5b.** Please provide available data on the RESTRICTIVE HOUSING POPULATION for all facilities that you identified.

Q42. Please provide information on the number of total male and female prisoners by age group who are in restrictive housing.

	Male	Female
Under 18 years old		
18–25 years old		
26–35 years old		
36–50 years old		
Over 50 years old		
TOTAL		

Q43. If your system breaks down women and men by race and ethnicity, please give information on the number of male and female prisoners by those categories who are in restrictive housing.

	White	Black	Native Hawaiian / Pacific Islander	Native American / Alaskan Native	Hispanic or Latino	Asian	Other
Male							
Female							
TOTAL							

Q44. **SECTION 5c.** Please provide available data on the population of prisoners with **SERIOUS MENTAL ILLNESS** for all facilities that you identified.

Q45. How does your jurisdiction define serious mental illness? Please provide the definition you use. If you use a manual, please identify the manual (with its date or edition) that you use.

Q46. Please provide data on how many prisoners are classified as **SERIOUSLY MENTALLY ILL** in your jurisdiction's **TOTAL CUSTODIAL POPULATION**.

	White	Black	Native Hawaiian / Pacific Islander	Native American / Alaskan Native	Hispanic / Latino	Asian	Other	TOTAL
Male								
Female								
TOTAL								

Q47. Using your definition of serious mental illness, what percentage of prisoners with serious mental illness are in restrictive housing in your jurisdiction?

☐ Short-term restrictive housing (15 up to 29 days): (1)

☐ Extended restrictive housing (> 29 days): (2)

Q48. Please provide data on how many prisoners are classified as **SERIOUSLY MENTALLY ILL** and are in **RESTRICTIVE HOUSING** in your jurisdiction.

	White	Black	Native Hawaiian / Pacific Islander	Native American / Alaskan Native	Hispanic / Latino	Asian	Other	TOTAL
Male, short-term restrictive housing (15 up to 29 days)								
Male, extended restrictive housing (> 29 days)								
Female, short-term restrictive housing (15 up to 29 days)								
Female, extended restrictive housing (> 29 days)								
TOTAL								

Q49. To understand the capacity of your jurisdiction to respond to the problems faced by the seriously mentally ill, the following questions focus on resources.

☐ What resources does your system have to respond to prisoners with serious mental illness wherever such prisoners are housed?

☐ How many trained clinicians does your system have to respond to prisoners with serious mental illness? _____

☐ How many related health professionals (such as nurse practitioners) does your system have to respond to prisoners with serious mental illness?

☐ What additional resources would you need to enable you to move prisoners with serious mental illness out of restrictive housing?

Q50. **SECTION 5d.** Please provide available data on the population of prisoners who are **TRANSGENDER** and who are in **RESTRICTIVE HOUSING** in your jurisdiction.

Note: Please enter N/A if you do not track this information. Enter “0” if you do track the information, and the answer to the question is zero.

☐ How are prisoners identified as transgender within your system?

☐ How many transgender prisoners are in your system?

☐ How many transgender prisoners are in short-term restrictive housing (15 up to 29 days)?

☐ How many transgender prisoners are in extended restrictive housing (> 29 days)?

Q51. SECTION 5e. Please provide available data on the population of prisoners who are PREGNANT and who are in RESTRICTIVE HOUSING in your jurisdiction.

Note: Please enter N/A if you do not track this information. Enter “0” if you do track the information, and the answer to the question is zero.

☐ How many pregnant prisoners are in your system?

☐ How many pregnant prisoners in your system are in short-term restrictive housing (15 up to 29 days)? _____

☐ How many pregnant prisoners are in extended restrictive housing (> 29 days)?

Q52. SECTION 6. Some jurisdictions house prisoners for most of the hours of the day in cells (in restrictive housing, segregated housing, or general population) for 15 days or more but for an average of less than 22 hours a day. Given this variation, the following section asks about the 20–22-hour interval, which reflects long amounts of time-in-cell not captured in the definition of restrictive housing, even if the placement approximates restrictive housing in other ways.

Q53. Please provide the total number of prisoners, if any, who as of the date the data were collected were not in restrictive housing as defined earlier in this survey but who have been otherwise held in cell (either in single or double cells) for an average of 20–22 hours a day for 15 days or more.

	Number of prisoners
Male	
Female	
TOTAL	

Q54. Please indicate which of the following facilities are included in the data in the above table. Select all that apply.

- ☐ Prisons
- ☐ Jails
- ☐ Juvenile facilities
- ☐ Mental health facilities
- ☐ Privately contracted facilities
- ☐ Special facilities for death-sentenced prisoners
- ☐ Immigration detention contract facilities
- ☐ Other (please specify) _____

Q55. In an ideal situation (i.e., if you had the necessary resources, and if you could do so consistent with institutional safety), what number of hours out of cell do you believe is desirable for prisoners?

Q56. **SECTION 7.** Since January 1, 2016, has your jurisdiction changed any of its policies regarding restrictive housing? If so, for the following questions, please check what changes apply, and specify when the policy change was made and whether it has been implemented. If applicable, please cite to the relevant policy statement or memorandum.

Q57. Entry Criteria

☐ Whether the criteria for placement in restrictive housing have been changed, and if so, how the criteria have been changed

☐ Whether behaviors were removed from the list of infractions qualifying prisoners for restrictive housing placement, and if so, what behavior

☐ Whether the decision to place individuals in restrictive housing required approval from the central administration or other senior officials (please specify)

☐ Whether pre-entry mental health screening affected placement in restrictive housing, and, if so, when those screenings were conducted

☐ Whether individualized needs assessments were conducted prior to placement in RH, and when those were conducted

☐ Whether placement in less restrictive alternatives to restrictive housing were considered

☐ Other (please describe any policy changes not listed above)

Q58. Criteria for Release from Restrictive Housing

☐ Creation of step-down or transition programs (if so, please describe the program/s, their implementation timeline, and which prisoners in restrictive housing are eligible)

☐ Programs and policies prohibiting direct release from restrictive housing to the community and/or to the general population

☐ Whether the decision to release or transition an individual from restrictive housing is now made by a committee, rather than by an individual

☐ Whether maximum durations on restrictive housing are in place (if so, please specify what the maximum duration is)

- ☐ Whether policies have been implemented mandating that prisoners be told the criteria for their release in advance (if so, please describe the policies)
-

Q59. Oversight and Review of Restrictive Housing Placement and Use

- ☐ Changes in the frequency of review of the placement of prisoners in restrictive housing
- ☐ Changes in the decision-making authority to continue individuals in restrictive housing
- ☐ Whether a prisoner grievance policy has been added
- ☐ Whether monitoring for mental illness has been increased (if so, how often are prisoners evaluated for mental illness, and what steps are taken if they are found to have developed mental health issues?) _____
- ☐ Whether new oversight programs have been created (if so, please describe the oversight program) _____
- ☐ Whether centralized monitoring has been implemented
- ☐ Whether improved tracking services and data collection have been introduced
- ☐ Other (please describe) _____

Q60. Please specify how often the restrictive housing status of a prisoner is reviewed and by whom. If the policy has changed, please specify how it has changed and when.

Q61. Mandated Time Out of Cell for Restrictive Housing Prisoners

☐ Increased total time out of cell (if so, please specify how many additional hours out of cell and which prisoners in restrictive housing qualify)

☐ Addition of structured time out of cell (therapeutic, programming) (if so, please specify how many additional hours of structured time out of cell and which prisoners in restrictive housing qualify) (if so, please specify how many additional hours out of cell and which prisoners in restrictive housing qualify)

☐ Addition of unstructured (recreational) time out of cell

☐ Addition of outdoor recreation

☐ Addition of more classes

☐ Addition of meals in social setting/cafeteria

☐ Other (please specify) _____

Q62. Addition of Programming in Restrictive Housing

☐ Addition of in-cell learning opportunities (if so, please describe which prisoners in restrictive housing qualify) _____

☐ Access to more entertainment or literary materials (if so, please describe which prisoners in restrictive housing qualify) _____

☐ More out-of-cell group programming (if so, please describe which prisoners in restrictive housing qualify) _____

☐ Addition of GED/diploma program (if so, please describe which prisoners in restrictive housing qualify) _____

Q63. Additional Provisions for Social Contact in Restrictive Housing

Q64. Have visitation hours/opportunities been increased?

☐ Yes☐ No

Q65. Answer only if answered yes to question 64. With regard to the increased visitation hours/opportunities:

☐ For what number of hours is visitation now available?

☐ What use is there by individuals in restrictive housing?

☐ Which prisoners in restrictive housing qualify?

Q66. Has phone time been increased?

☐ Yes☐ No

Q67. Answer only if answered yes to question 66. With regard to the increased phone time:

☐ By what frequency and length has it been increased?

☐ Which prisoners in restrictive housing qualify?

Q68. Has group recreation been added?

☐ Yes☐ No

Q69. Answer only if answered yes to question 68. With regard to the added group recreation:

☐ For what number of hours is group recreation now available?

☐ Is it available with Security Desks only?

☐ Which prisoners in restrictive housing qualify?

Q70. Have group classes or other programming been added?

☐ Yes

☐ No

Q71. Answer only if answered yes to question 70. With regard to the added group classes or other programming:

☐ What kind of programming is now available?

☐ For what number of hours is the programming now available?

☐ Is it available with Security Desks only?

☐ Which prisoners in restrictive housing qualify?

Q72. Policies or Training Related to Staffing of Restrictive Housing

☐ Mental health training _____

☐ Staff rotations (if so, please specify the intervals)

☐ Additional opportunities for education

Q73. Other

Q74. Has your jurisdiction studied the effects of the policy changes in terms of any of the following? Please select all that apply.

- ☐ Incidents of violence
- ☐ Incidents of prisoner self-harm
- ☐ Prisoner morale
- ☐ Staff morale
- ☐ Numbers of persons (or subsets of persons) placed in restrictive housing or subsets of individuals (if so, please provide specific numbers)

- ☐ Duration of placement
- ☐ Prisoner successes in coping with the general population, programs, and other activities
- ☐ Prisoner successes in returning to communities
- ☐ Changing costs
- ☐ Other (please explain) _____

Q75. If you have any research on your work in this area, please direct us to its place of publication, if applicable. Please note if you are able to email us (ascalimansurvey@yale.edu) both the policies and the research, if available.

Q76. **SECTION 8.** Please answer the following questions with regard to the revised ACA standards.

Q77. In August of 2016, the American Correctional Association (ACA) adopted new standards on restrictive housing. Has your jurisdiction reviewed its policies since then on restrictive housing?

☐ Yes

☐ No (please explain) _____

Q78. Does your jurisdiction rely on these standards to make policies?

☐ Yes

☐ No (please explain) _____

Q79. Below we ask whether four facets of the 2016 ACA standards have been implemented in your jurisdiction.

Q80. Has your jurisdiction implemented the requirements of ACA standard 4-RH-0034, which prohibits the use of extended restrictive housing (more than 29 continuous days) for offenders under the age of 18?

☐ Yes

☐ No

☐ We have substantially implemented this policy, with exceptions

☐ This was the policy before the 2016 ACA revisions

Q81. Answer only if you answered “We have substantially implemented this policy, with exceptions” to question 80. Please explain how you have implemented this policy (prohibiting extended restrictive housing for offenders under the age of 18) and what exceptions you have made.

Q82. Has your jurisdiction implemented the requirements of ACA standard 4-RH-0033, which prohibits the use of extended restrictive housing (more than 29 continuous days) for females determined to be pregnant?

- ☐ Yes
- ☐ No
- ☐ We have substantially implemented this policy, with exceptions
- ☐ This was the policy before the 2016 ACA revisions

Q83. Answer only if you answered “We have substantially implemented this policy, with exceptions” to question 82. Please explain how you have implemented this policy (prohibiting extended restrictive housing for prisoners who are pregnant) and what exceptions you have made.

Q84. Has your jurisdiction implemented the requirements of ACA standard 4-RH-0031, which prohibits the use of extended restrictive housing (more than 29 continuous days) for inmates diagnosed as seriously mentally ill?

- ☐ Yes
- ☐ No
- ☐ We have substantially implemented this policy, with exceptions
- ☐ This was the policy before the 2016 ACA revisions

Q85. Answer only if you answered “We have substantially implemented this policy, with exceptions” to question 84. Please explain how you have implemented this policy (prohibiting extended restrictive housing for inmates with serious mental illness) and what exceptions you have made.

Q86. Has your agency implemented ACA standard 4-RH-0030, whereby it attempts not to release inmates from restrictive housing directly into the community?

- ☐ Yes
- ☐ No
- ☐ We have substantially implemented this policy, with exceptions
- ☐ This was the policy before the 2016 ACA revisions

Q87. Answer only if you answered “We have substantially implemented this policy, with exceptions” to question 86. Please explain how you have implemented this policy (attempting not to release inmates from restrictive housing directly into the community) and what exceptions you have made.

Q88. Please explain any other policies your jurisdiction has revised in light of the 2016 ACA restrictive housing standards.

END OF QUESTIONS

Appendix C: Definitions of “Serious Mental Illness” in 43 Jurisdictions

Alabama	Psychotic disorders, bipolar disorders, and major depressive disorders; any diagnosed mental disorder currently associated with serious impairment in psychological, cognitive, or behavioral function that substantially interferes with the person’s ability to meet the demands of living and requires an individualized treatment plan by a qualified mental health provider.
Alaska	Mental Illness is an organic mental or emotional impairment that reduces an individual’s exercise of conscious control over the individual’s actions and reduces an individual’s ability to perceive reality, to reason or understand.
Arizona	ADC Mental Health Technical Manual, 06/18/2015 Defined: Those who according to a licensed mental health clinician or provider possess: 1) A qualifying mental health diagnosis as indicated on the SMI determination form, and 2) A severe functional impairment directly relating to their mental illness.
Arkansas	Serious Mental Illness-Psychotic, Bipolar and Major Depressive Disorders and any other diagnosed mental disorder (excluding substance use disorders) associated with serious behavioral impairment as evidenced by examples of acute decompensation, self-injurious behaviors, and mental health emergencies that require an individualized treatment plan by a qualified mental health professional.
Colorado	CDOC Clinical Services uses the Diagnostic and Strategic Manual of Mental Disorder, Fifth Edition (DSM-5) Serious Mental Illness: The current diagnosis of any of the following DSM diagnoses accompanied by the P-code qualifier of M or psychological coding of P4 or P5, denoting the presence of a major mental disorder: schizophrenia, schizoaffective disorder, delusional disorder, schizophreniform disorder, brief psychotic disorder, substance-induced psychotic disorder (excluding intoxication and withdrawal), unspecified schizophrenia spectrum and other psychotic disorder (previously psychotic disorder not otherwise specified), major depressive disorders, and bipolar disorders. Offenders, regardless of diagnosis, indicating a high level of mental health needs based upon high symptom severity and/or high resource demands, which demonstrate significant impairment in their ability to function within the correctional environment.
Connecticut	MH5 Assessment: Crisis level mental disorder (acute conditions, temporary classification). Requires 24 hour nursing care. Examples of mental health conditions meeting the MH-5 level include but are not limited to acute psychosis, severe depression, suicidal ideation, suicidal gestures or attempts, and overwhelming anxiety. Moreover, these inmates can be actively suicidal or self-mutilators. They require suicide watch, 15-minute watch or one-to-one

	monitoring. Refer to Appendix for further information. This is in accordance with the 2012 Offender Classification Manual
Delaware	Bureau of Prisons Policy 4.3, p. 3. DSM-5 is used.
FBOP	Serious Mental Illness includes offenders diagnosed with the following: Schizophrenia; Delusional Disorder; Schizophreniform Disorder; Schizoaffective Disorder; Brief Psychotic Disorder; Bipolar I, II Disorder; Substance-Induced Psychotic Disorder (excluding intoxication or withdrawal); Other Specified Psychotic Disorder; Major [D]epressive Disorder; Other Specified Bipolar Disorder. Anyone who has Significant Functional Impairment (see definition) due to their mental health (including severe Personality Disorders, Intellectual Disability, Autism Spectrum Disorder) defined as: Self-harming behaviors (i.e., cutting, head-banging, suicide attempts, self-strangulation, self-mutilation, swallowing foreign bodies, etc.); Demonstrated difficulty in his or her ability to engage in activities of daily living (i.e., eating, grooming, participation in recreation, etc.); Demonstrated a pervasive pattern of dysfunctional or disruptive social interactions (i.e., social isolation, bizarre behavior, disruptive behavior, etc.).
Hawaii	A diagnosable mental disorder characterized by alternation in thinking, mood, or impaired behavior associated with distress and/or impaired functioning; primarily inclusive of schizophrenia, severe depression, and bipolar disorder, and severe panic disorder, obsessive compulsive disorder, and post-traumatic stress disorder.
Idaho	IDOC does not have a formal definition of Serious Mental Illness. We do, however, assign inmates with Levels of Care. I believe our two highest levels of care (Acute Correctional Mental Health Services—ACMHS and Intermediate Correctional Mental Health Services—ICMHS) are generally housed in specialized mental health housing and serve as an appropriate analogue for Serious Mental Illness
Illinois	Gravely disabled—a condition where a person, as a result of a mental disorder, is in danger of serious physical harm, resulting from a failure to provide for his or her essential human needs of health or safety, or manifests severe deterioration in routine functioning evidenced by repeated and escalating loss of cognitive or volitional control over his or her actions.
Iowa	Schizophrenia, Recurrent Major Depressive Disorder, Bipolar Disorder, other Chronic and Recurrent Psychosis, Dementia and other Organic Disorder.
Kansas	DSM-V
Kentucky	Serious Mental Illness means a current diagnosis by a Department of Corrections psychological or psychiatric provider or a recent significant

	history of any of the following DSM-5 (or most current revision thereof) diagnoses: Schizophrenia, delusional disorder, schizophreniform disorder, schizoaffective disorder, brief psychotic, substance-induced psychotic disorder (excluding intoxication and withdrawal), Psychotic Disorder Not Otherwise Specified, Major Depression disorders, Bipolar I and Bipolar II disorders, or current diagnosis by a DOC psychological or psychiatric provider of a serious personality disorder that includes breaks with reality and /or results in significant functional impairment.
Louisiana	HC Policy # 36 defines as major depressive disorder, schizophrenia disorder, bipolar disorder, psychotic disorder, severe anxiety disorder, and severe personality disorder.
Maryland	The Department defines “Serious Mental Illness” (SMI) in accordance with the Code of Maryland Regulations (COMAR), as follows: COMAR 10.21.17.02 (76) (76) “Serious mental illness” means a mental disorder that is: (a) Manifest in an individual 18 years old or older; (b) Diagnosed, according to a current diagnostic classification system that is recognized by the Secretary as: (i) Schizophrenic disorder; (ii) Major affective disorder; (iii) Other psychotic disorder; or (iv) Borderline or schizotypal personality disorder, with the exclusion of an abnormality that is manifested only by repeated criminal or otherwise antisocial conduct; and (c) Characterized by impaired functioning on a continuing or intermittent basis, for at least 2 years, and includes at least three of the following: (i) Inability to maintain independent employment; (ii) Social behavior that results in interventions by the mental health system; (iii) Inability, due to cognitive disorganization, to procure financial assistance to support living in the community; (iv) Severe inability to establish or maintain a personal support system; or (v) Need for assistance with basic living skills.
Massachusetts	Serious Mental Illness (SMI) — For purposes of assessing whether Segregation may be clinically contraindicated, or whether an inmate in Segregation should be placed in a Specialized Treatment Unit, the term “Serious Mental Illness” shall be defined as the following: 1. Inmates determined by the Department’s mental health vendor to have a current diagnosis or a recent significant history of any of the following types of DSM-V diagnoses: a. Schizophrenia b. Delusional Disorder c. Schizophreniform Disorder d. Schizoaffective Disorder e. Brief Psychotic Disorder f. Substance-Induced Psychotic Disorder (excluding intoxication and withdrawal) g. Psychotic Disorder Not Otherwise Specified h. Major Depressive Disorder i. Bipolar Disorder I and II. For purposes of this definition, “recent significant history” shall be defined as a diagnosis specified above in section (a)(1)-(9) upon discharge within the past year from an inpatient psychiatric hospital. 2. Inmates diagnosed with disorders that are commonly characterized by the mental health vendor with other DSM-V breaks with reality, or perceptions of reality, that lead the individual to

	<p>experience significant functional impairment involving acts of self-harm or other behaviors that have a seriously adverse effect on life or on mental or physical health. 3. Inmates diagnosed by the Department's medical or mental health vendor with a developmental disability, dementia or other cognitive disorders that result in a significant functional impairment involving acts of self-harm or other behaviors that have a seriously adverse effect on life or on mental or physical health. 4. Inmates diagnosed by the Department's mental health vendor with a severe personality disorder that is manifested by episodes of psychosis or depression, and results in significant functional impairment involving acts of self-harm or other behaviors that have a seriously adverse effect on life or on mental or physical health. Significant Functional Impairment Factors for consideration when assessing significant functional impairment shall include the following: a. The inmate has engaged in self harm which shall be defined as a deliberate act by the inmate that inflicts damage to, or threatens the integrity of, one's own body. Such acts include but are not limited to the following behaviors: hanging, self-strangulation, asphyxiation, cutting, self-mutilation, ingestion of a foreign body, insertion of a foreign body, head banging, drug overdose, jumping and biting. b. The inmate has demonstrated difficulty in his or her ability to engage in activities of daily living, including eating, grooming and personal hygiene, maintenance of housing area, participation in recreation, and ambulation, as a consequence of any DSM-V disorder. c. The inmate has demonstrated a pervasive pattern of dysfunctional or disruptive social interactions including withdrawal, bizarre or disruptive behavior, etc. as a consequence of any DSM-V disorder.</p>
Michigan	<p>Prisoners with a mental illness have been diagnosed with a substantial disorder of thought or mood that significantly impairs judgment, behavior, capacity to recognize reality or cope with demands of basic living. We consider classifications of what we have called major mental illness including: psychotic schizophrenia, spectrum disorders, bipolar 1 and 2, major depressive disorders, neurocognitive disorders.</p>
Minnesota	<p>Minnesota has a statutory definition of Serious and Persistent Mental Illness that we use (MN Stat. 245.462 Subd. 20). (c) For purposes of case management and community support services, a "person with serious and persistent mental illness" means an adult who has a mental illness and meets at least one of the following criteria: (1) the adult has undergone two or more episodes of inpatient care for a mental illness within the preceding 24 months; (2) the adult has experienced a continuous psychiatric hospitalization or residential treatment exceeding six months' duration within the preceding 12 months; (3) the adult has been treated by a crisis team two or more times within the preceding 24 months; (4) the adult: (i) has a diagnosis of schizophrenia, bipolar disorder, major depression, schizoaffective disorder, or borderline personality disorder; (ii) indicates a significant impairment in functioning; and (iii) has a written opinion from a mental health professional,</p>

	in the last three years, stating that the adult is reasonably likely to have future episodes requiring inpatient or residential treatment, of a frequency described in clause (1) or (2), unless ongoing case management or community support services are provided; (5) the adult has, in the last three years, been committed by a court as a person who is mentally ill under chapter 253B, or the adult's commitment has been stayed or continued; (6) the adult (i) was eligible under clauses (1) to (5), but the specified time period has expired or the adult was eligible as a child under section <u>245.4871, subdivision 6</u> ; and (ii) has a written opinion from a mental health professional, in the last three years, stating that the adult is reasonably likely to have future episodes requiring inpatient or residential treatment, of a frequency described in clause (1) or (2), unless ongoing case management or community support services are provided; or (7) the adult was eligible as a child under section <u>245.4871, subdivision 6</u> , and is age 21 or younger.
Mississippi	Chronic mental health treatment or inpatient mental health treatment
Missouri	The department does not define "serious mental illness" in policy. All offenders classified MH-3 and above (Form 931-0730 Classification Analysis – Mental Health Needs) are enrolled in mental health chronic care and are offenders with a serious mental illness. Our working definition is that defined by Substance Abuse and Mental Health Services Administration (SAMHSA, Department of Health and Human Services, https://www.samhsa.gov/disorders): Serious mental illness among people ages 18 and older is defined at the federal level as having, at any time during the past year, a diagnosable mental, behavior, or emotional disorder that causes serious functional impairment that substantially interferes with or limits one or more major life activities.
Montana	No definition as of yet, still a work in progress.
Nebraska	Any mental health condition that current medical science affirms is caused by a biological disorder of the brain and that substantially limits the life activities of the person with the serious mental illness. Serious mental illness includes but is not limited to (i) schizophrenia, (ii) schizoaffective disorder, (iii) delusional disorder, (iv) bipolar affective disorder, (v) major depression, and (vi) obsessive compulsive disorder. (Neb. Rev. Stat. 44-792)
Nevada	An individual is classified seriously mentally ill or SMI by a mental health professional when the individual has a condition of such a nature that is a threat to him or herself or others or is disruptive to the orderly operation of the facility or institution. The Department ensures that inmates are evaluated and a mental health diagnoses history is analyzed. The evaluation includes, at minimum, the following components: suicide potential, symptoms of mental illness, level of intellectual function, level of aggression, potential for escape,

	<p>deviant sexual behavior, history of sexual abuse or aggression, and need of psychotropic medication. Seriously impaired individuals: a) require special housing and ongoing mental treatment; b) might be assigned to an extended care unit (ECU) or mental health unit (MHU), c) typically require single-celled housing, and d) are administered psychotropic medications monitored by a psychiatrist. The disorder is defined as a condition that affects an individual at least 18 years of age, and it must be of sufficient duration. The NDOC follows the guidelines provided in the Diagnostic and Statistical Manual of Mental Disorders (DSMS)5.</p>
New Jersey	<p>The NJDOC defines it as any inmate having a mental health problem which impairs the functioning of the inmate to the extent which the MH clinical team determines that treatment warrants admission to a mental health unit. The below mentioned numbers represent the total number of inmates in the mental health units for both males and females. It incorporates those on the SU, RTU and TCU units. It should be noted the Department currently utilizes the Diagnostic Statistical Manual, 5th Edition. The figure below reflects the inmates placed in these specialized mental health units.</p>
New Mexico	<p>We have no definition of seriously mentally ill. What we have is a Mental Health Treatment Center where we place inmates who have cognitive, affective, and/or behavioral functioning deficits inhibit them from functioning in general population. This could be long-term or short-term based on the needs of the individual inmate We have a unit in the MHTC that houses inmates in a segregated environment.</p>
New York	<p>New York State DOCCS Definition of Serious Mental Illness (Section 137 Correction Law) (e) An inmate has a serious mental illness when he or she has been determined by a mental health clinician to meet at least one of the following criteria: (i) he or she has a current diagnosis of, or is diagnosed at the initial or any subsequent assessment conducted during the inmate's segregated confinement with, one or more of the following types of Axis I diagnoses, as described in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders, and such diagnoses shall be made based upon all relevant clinical factors, including but not limited to symptoms related to such diagnoses: (A) schizophrenia (all sub-types), (B) delusional disorder, (C) schizophreniform disorder, (D) schizoaffective disorder, (E) brief psychotic disorder, (F) substance-induced psychotic disorder (excluding intoxication and withdrawal), (G) psychotic disorder not otherwise specified, (H) major depressive disorders, or (I) bipolar disorder I and II; (ii) he or she is actively suicidal or has engaged in a recent, serious suicide attempt; (iii) he or she has been diagnosed with a mental condition that is frequently characterized by breaks with reality, or perceptions of reality, that lead the individual to experience significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; (iv) he or she has been diagnosed with an organic</p>

	<p>brain syndrome that results in a significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; (v) he or she has been diagnosed with a severe personality disorder that is manifested by frequent episodes of psychosis or depression, and results in a significant functional impairment involving acts of self-harm or other behavior that have a seriously adverse effect on life or on mental or physical health; or (vi) he or she has been determined by a mental health clinician to have otherwise substantially deteriorated mentally or emotionally while confined in segregated confinement and is experiencing significant functional impairment indicating a diagnosis of serious mental illness and involving acts of self-harm or other behavior that have a serious adverse effect on life or on mental or physical health.</p>
North Carolina	<p>Psychotic Disorders, Bi-polar Disorders, Major Depressive Disorder, and any diagnosed mental disorder (excluding substance abuse disorders) currently associated with serious impairment in psychological, cognitive, or behavioral functioning that substantially interferes with the person's ability to meet the ordinary demands of living and requires an individualized treatment plan by a qualified Mental Health professional(s). M3 and above is inclusive of all inmates diagnosed with a mental illness receiving both psychological and psychiatric services.</p>
North Dakota	<p>Serious Mental Illness: People found to have current symptoms or who are currently receiving treatment for the following types of Diagnostic and Statistical Manual, 5th Edition diagnoses that cause or have caused significant functional impairment: Delusional Disorder, Psychotic Disorders of all types including Schizophrenia, Major Depressive Disorders, Bipolar I and II Disorders, Obsessive Compulsive Disorder (OCD), Panic Disorder, Post Traumatic Stress Disorder (PTSD) or Borderline Personality.</p>
Ohio	<p>Serious Mental Illness (SMI) — Adults with a serious mental illness are persons who are age eighteen (18) and over, who currently or at any time during the past year, have a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within the most current Diagnostic and Statistical Manual of Mental Disorders and that has resulted in functional impairment which substantially interferes with or limits one or more major life activities. These disorders have episodic, recurrent, or persistent features; however, they vary in terms of severity and disabling effects.</p>
Oklahoma	<p>OP-140201, Attachment B, November 2, 2006, defines serious mental illness as mental health levels B through D. Policy attachment emailed as supplemental materials to ascalimansurvey@yale.edu</p>

Oregon	<p>Serious Mental Illness: An inmate that, in the judgment of the department, because of a mental disorder is one or more of the following:</p> <p>(a) Dangerous to self or others;</p> <p>(b) Unable to provide for basic personal needs and would likely benefit from receiving additional care for the inmate's health or safety;</p> <p>(c) Chronically mentally ill, as defined in ORS 426.495; or</p> <p>(d) Will continue, to a reasonable medical probability, to physically or mentally deteriorate so to become a person described in (c) above unless treated.</p>
Pennsylvania	<p>Definition of Serious Mental Illness 1. Inmates determined by the PRT to have a current diagnosis or a recent significant history of any of the DSM5 diagnoses (using ICD10 codes and letter tags): a. Substance-Induced Psychotic Disorder (excluding intoxication and withdrawal) F10.159, Alcohol-Induced Psychotic Disorder, with mild use disorder, F10.259, Alcohol-Induced Psychotic Disorder, with moderate-severe use disorder, F10.959, Alcohol-Induced Psychotic Disorder, without use disorder Substance-Induced Psychotic Disorders employ the same specifiers (.159; .259; .959) With cannabis F12; sedative, hypnotic, anxiolytic F13; cocaine F14; amphetamine F15; other hallucinogen/ phencyclidine F16; inhalant F18; and other substance/unknown substance F19 b. Schizophreniform Disorder F20.81 c. Schizophrenia F20.9 d. Delusional Disorder F22a, Erotomanic type F22b, Grandiose type F22c, Jealous type F22d, Persecutory type F22e, Somatic type F22f, Mixed type F22g, Unspecified type e. Brief Psychotic Disorder F23 f. Schizoaffective Disorder F25.0, BIP type F25.1, DEP type g. Other Psychotic Disorders F06.0, Psychosis due med condition w/ delusions F06.2 Psychosis due med condition w/ hallucinations F28 Other specified schizophrenia spectrum and other Psychotic Disorder F29 Unspecified schizophrenia spectrum and other Psychotic Disorder h. Bipolar I and II F31.0, BIP I, current or most recent episode hypomanic F31.11, BIP I, current or most recent episode manic, mild F31.12, BIP I, current or most recent episode manic, moderate F31.13, BIP I, current or most recent episode manic, severe F31.2, BIP I, current or most recent episode manic, w/psychotic features F31.31, BIP I, current or most recent episode depressed, mild F31.32, BIP I, current or most recent episode depressed, moderate F31.4 BIP I, current or most recent episode depressed, severe F31.5 BIP I, current or most recent episode depressed, w/psychotic features F31.71, BIP I, current or most recent episode hypomanic, in partial remission F31.72, BIP I, current or most recent episode hypomanic, in full remission F31.73, BIP I, current or most recent episode manic, in partial remission F31.74, BIP I, current or most recent episode manic, in full remission F31.75, BIP I, current or most recent episode depressed, in partial remission F31.76, BIP I, current or most recent episode depressed, in full</p>

remission F31.81, BIP II disorder F31.9a, BIP I, current or most recent depressed, unspecified F31.9b, BIP I, current or most recent episode hypomanic, unspecified F31.9c, BIP I, current or most recent episode manic, unspecified F31.9d, BIP I, current most recent episode unspecified i. Major Depressive Disorder F32.0, MDD, single episode, mild F32.1, MDD, single episode, moderate F32.2, MDD, single episode, severe F32.3, MDD, single episode, w/psychotic features F32.4, MDD, single episode, in partial remission F32.5, MDD, single episode, in full remission F32.9a, MDD, single episode, unspecified F33.0, MDD, recurrent, mild F33.1, MDD, recurrent, moderate F33.2, MDD, recurrent, severe F33.3, MDD, recurrent, w/psychotic features F33.41, MDD, recurrent, in partial remission F33.42, MDD, recurrent, in full remission F33.9, MDD, recurrent, unspecified NOTE: For the purpose of this definition, the term “recent significant history” shall be defined as “currently in existence or within the preceding three months.”

2. Inmates diagnosed by PRT with DSM5 disorders that are commonly characterized by breaks with reality, or perceptions of reality, that lead the individual to experience significant functional impairment involving acts of self-harm or other behaviors that have a seriously adverse effect on life or on mental or physical health.

3. Inmates diagnosed by PRT with Intellectual Disability, a dementia, or other cognitive disorders that result in a significant impairment involving acts of self-harm or other behaviors that have seriously adverse effect on life or on mental or physical health.

4. Any inmate sentenced GBMI.

B. Clinical Guidelines for Functional Impairment Factors for consideration when assessing significant functional impairment shall include the following:

1. whether the inmate has engaged in self-harm which shall be defined as a “deliberate, intentional, direct injury of body tissue with or without suicidal intent.” Such acts include, but are not limited to the following behaviors: hanging, self-strangulation, asphyxiation, cutting, self-mutilation, ingestion of a foreign body, insertion of a foreign body, head banging, drug overdose, jumping, and biting themselves;
2. the inmate has demonstrated significant difficulty in his or her ability to engage in activities of daily living, including eating, grooming and personal hygiene, maintenance of housing area, participation in recreation, and ambulation; and
3. the inmate has demonstrated a pervasive pattern of dysfunctional or disruptive social interactions including withdrawal, bizarre or disruptive behavior.

C. Intellectual Disability Inmates scoring 70 or below on the BETA-III will be administered an individual IQ test (WASI-II or WAIS-IV) at the parent facility. If their WASI-II IQ is 70 or below then a full WAIS-IV will be administered. If this WAIS-IV comes out to 70 or below, a measurement of adaptive behavior including the following will be assessed:

1. conceptual skills—language and literacy; money, time and number concepts; and self-direction;
2. social skills—interpersonal skills, social responsibility, self-esteem, gullibility, naiveté, social problem solving, the ability to follow rules/obey laws and to avoid being victimized; and
3. practical skills—activities of daily living (personal care), occupational skills, healthcare, travel/transportation, schedules/routines, safety, use of money, and use of

	<p>telephone. NOTE: An assessment to determine if the disability originated during the developmental period should be conducted to establish if the intellectual and adaptive deficits were present during childhood or adolescence. This assessment should include corroborative information obtained from complementary reliable and valid sources, which reflect functioning outside of the prison setting. Additional factors to take into account include the community environment typical of the individual's peers and culture, linguistic diversity, cultural differences in the way people communicate, move, and behave. Assessments must also assume that limitations often coexist with strengths, and that a person's level of life functioning will improve if appropriate personalized supports are provided over a sustained period. F70, Intellectual Disability (Intellectual Developmental Disorder) mild = 50/55-70 F71, IDD, moderate = 35/40-50/55 F72, IDD, severe = 20/25-35/40 F73, IDD, profound = <20/25 F74, IDD, severity unspecified</p>
Rhode Island	<p>The Rhode Island Department of Corrections (RIDOC) defines serious and persistent mental illness (SPMI) as being a condition that affects persons aged 18 or older who currently or at any time in the past year have had a diagnosed mental, behavioral or emotional disorder of sufficient duration to meet the criteria specified within DSM-V (with the exception of substance use disorders and developmental disorders) that has resulted in significant functional impairment that has occurred on either a continuous or intermittent basis. The qualifying diagnoses recognized by our jurisdiction are as follows: Schizophrenia, Schizoaffective Disorder, Other Specified Schizophrenia Spectrum and other Psychotic Disorders, Bipolar Disorder(s), Delusional Disorder, Major Depressive Disorder, Panic Disorder, Agoraphobia, Post-Traumatic Stress Disorder, Obsessive-Compulsive Disorder and Borderline Personality Disorder.</p>
South Carolina	<p>A Diagnosed Mental Health Disorder from the DSM 5 associated with serious behavioral impairment as evidenced by examples of acute decompensation or self-injurious behaviors affecting ability to function and requiring individualized treatment by a mental health professional.</p>
South Dakota	<p>The following are the criteria used by mental health staff to identify someone who has a serious mental illness (SMI) and would benefit from those higher levels of care. (1) The consumer's severe and persistent emotional, behavioral, or psychological disorder causes the consumer to meet at least one of the following criteria: (a) The consumer has undergone psychiatric treatment more intensive than outpatient care and more than once in a lifetime, such as, emergency services, alternative residential living, or inpatient psychiatric hospitalization; (b) The consumer has experienced a single episode of psychiatric hospitalization with an Axis I or Axis II diagnosis per the DSM-IV-TR as defined in § 46:20:01:01; (c) The consumer has been treated with psychotropic medication for at least one year; or (d) The</p>

	consumer has had frequent crisis contact with a center, or another provider, for more than six months as a result of a severe and persistent mental illness; and (2) The consumer's severe and persistent emotional, behavioral, or psychological disorder meets at least three of the following criteria: (a) The consumer is unemployed or has markedly limited job skills or poor work history; (b) The consumer exhibits inappropriate social behavior which results in concern by the community or requests for mental health or legal intervention; (c) The consumer is unable to obtain public services without assistance; (d) The consumer requires public financial assistance for out-of-hospital maintenance; (e) The consumer lacks social support systems in a natural environment, such as close friends and family, or the consumer lives alone or is isolated; or (f) The consumer is unable to perform basic daily living skills without assistance.
Tennessee	TDOC Policy 113.87: Serious Mental Illness (SMI): A substantial disorder of thought or mood that significantly impairs judgment, behavior, capacity to recognize reality or cope with ordinary demands of life within the correctional environment and is manifested by substantial impairment or disability. Serious mental illness requires a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within the most current Diagnostic and Statistical Manual (DSM) or International Classification of Disease (ICD) equivalent (and subsequent revisions) in accordance with an individualized treatment plan
Texas	TDCJ does not define "serious mental illness." The numbers provided below are those offenders who are on an inpatient mental health caseload.
Utah	SPMI: Generally well known to mental health, consistently requires "intensive level of mental health treatment, observation and services." Severe to significant impairment in functioning due to mental illness.
Washington	A substantial disorder of thought or mood which significantly impairs judgment, behavior, capacity to recognize reality or cope with the ordinary demands of life within the prison environment and is manifested by substantial pain or disability. Serious mental illness requires a mental health diagnosis, prognosis and treatment, as appropriate, by mental health staff. It is expressly understood that this definition does not include inmates who are substance abusers, substance dependent, including alcoholics and narcotics addicts, or persons convicted of any sex offense, who are not otherwise diagnosed as seriously mentally ill.
West Virginia	A manifestation in a person of significantly impaired capacity to maintain acceptable levels of functioning in the areas of intellect, emotion, and physical wellbeing. W.Va. Code § 27-1-2.

Wisconsin	<p>MH-2a—A current diagnosis of, or being in remission from, the following conditions: Schizophrenia, Delusional Disorder, Schizophreniform Disorder, Schizoaffective Disorder, Other Specified (and Unspecified) Schizophrenia Spectrum and Other Psychotic Disorder, Major Depressive Disorder, Bipolar I Disorder, and Bipolar II Disorder. MH2-a also includes inmates with current or recent symptoms of the following conditions: Brief Psychotic Disorder, Substance / Medication-Induced Psychotic Disorder, head injury or other neurological impairments that result in behavioral or emotional dyscontrol, chronic and persistent mood or anxiety disorders, and other conditions that lead to significant functional disability. MH-2b—Inmates with a primary personality disorder that is severe, accompanied by significant functional impairment, and subject to periodic decompensation; i.e., psychosis, depression, or suicidality. If an inmate has stable behavior for two years, the code may be reassessed. Excluded from MH-2B classification are inmates who have a primary diagnosis of Antisocial Personality Disorder and whose behavior is primarily the result of targeted goals rather than impairment from diagnosed mental illness.</p>
Wyoming	<p>Major Depressive Disorder, Bipolar Disorder, Schizophrenia, or any type of long term Psychosis. Psychosis due to a medical or substance use condition that resolved is not included.</p>

Introduction

Solitary confinement destroys lives. Over the past four decades, prisons across the country have increasingly relied on solitary confinement—isolating prisoners in small poorly-lit cells for 23-24 hours per day—as a disciplinary tool for prisoners who are difficult to manage in the general population. But research has shown that these conditions cause serious mental deterioration and illness. Prisoners in solitary confinement hallucinate, they deliberately injure themselves, and they lose the ability to relate to other human beings. When these prisoners are eventually released from solitary confinement, they have difficulties integrating into the general prison population or (especially when they are released directly onto the streets) into life on the outside.

Because of this, human rights advocates across the country are engaged in a campaign to reduce the use of solitary confinement and to improve conditions in solitary units and facilities. Lawsuits are being filed, bills and regulations are being proposed, and exposés are being written, all with the goal of bringing about a change to this barbaric practice. A number of organizations, including my own—the American Civil Liberties Union—have committed a great deal of thought, time, and money to identifying and deploying successful strategies for reforming solitary confinement. No one approach will get the job done, but advocates are trying multiple approaches, with as much coordination as possible, to bring about significant lasting change. Maine has been one of the success stories of this effort. The number of prisoners in solitary confinement has been cut in half; the duration of stays in Maine’s solitary units is generally now measured in days rather than weeks or months; and the treatment of prisoners in these units includes substantially more meaningful human interaction and more opportunity for rehabilitation.

For seven years, I have been involved in Maine’s campaign to reduce the use of solitary confinement. Many times over those years, it seemed that nothing would ever change. Reform measures were watered down, improved policies were ignored, and legislative proposals were flat-out rejected. Then, at some point, through a combination of will, skill, and luck, reforms began to take hold. While Maine’s correction system is far from perfect, the dramatic reduction in the use of solitary confinement and the improvement in the manner in which solitary is employed are almost beyond what I could have imagined seven years ago.

The purpose of this report is twofold: first, to document those changes and the processes that led to them; and second, to inspire other prison reform advocates with Maine’s example. There are times when every advocate for prison reform feels that change is not possible—that the legal and cultural barriers are too firmly rooted, or that the public’s antipathy to prisoners and their families is too powerful. This despondency might lead reformers to settle for superficial measures or, worse yet, to give up the fight in favor of easier targets. It is my great hope that the message of this report—that reform of the use of solitary confinement is both necessary and possible—will provide some measure of encouragement in those difficult moments that every worthwhile campaign experiences.

This report (and the campaign it documents) would not have been possible without the generous support, advice, and encouragement of the ACLU National Prison Project and ACLU Center for Justice. In particular, Amy Fetting, David Fathi, and Vanita Gupta deserve enormous praise and gratitude for their commitment to Maine's reform efforts, and to my efforts to document them. Thank you also to Alysia Melnick, Rachel Myers Healy, Shenna Bellows and Alisha Goldblatt for editorial assistance, to Elizabeth Noble for generously donating her time and photography skills, and to Lance Tapley for his ongoing efforts to document abuses in Maine's prisons and jails and to prevent those abuses. Finally, thank you to Maine's Commissioner of Corrections Joseph Ponte and Maine State Prison Deputy Warden Charlie Charlton for their determination to reform the way prisoners in Maine are punished (which is as strong as any advocate's), and for their cooperation with this report. Though this report was written for an audience of lawyers, lobbyists, organizers, and advocates, the prisoners across America suffering alone, in pain, in tiny, harshly-lit cells, were never far from my mind, and it is to them that this report is dedicated.

Zachary L. Heiden
ACLU of Maine Legal Director
Portland, Maine
March 6, 2013

What Is Solitary Confinement?

More than two million people are currently incarcerated in prisons and jails in the United States.² The United States incarcerates more people, and a greater percentage of its population, than any other nation—more than twice as many people as Russia, the runner-up.³ India has a population more than three times greater than the United States, but it imprisons fewer than one-fifth as many people.⁴

With so many prisoners in

America to supervise, prison and jail administrators have had to devise methods for attempting to house and manage the prisoners in their custody, and for the past two decades the management tool of choice has been solitary confinement.

Solitary confinement is the practice of isolating a prisoner in a cell for 22-24 hours per day, with extremely limited human contact; reduced (sometimes nonexistent) natural lighting; severe restrictions on reading material, televisions, radios, or other physical property that approximates contact with the outside world; restrictions or prohibitions on visitation; and denial of access to group activities, including group meals, religious services, and therapy sessions.

Solitary cells at Maine State Prison

*"The entire time I was in the Supermax I was in a 7 x 14 reinforced concrete cell, 23 sometimes 24 hours a day. On the days I was allowed out for an hour, I was allowed to be escorted in handcuffs to a 40' long by 8' wide chain link enclosure where I would have the cuffs removed and be allowed to pace or do in-place calisthenics for an hour before I was brought back inside for a ten-minute shower, one of three I would receive each week. The lights in the cell were always on, just dimmed at night. The sound of slamming metal doors and jingling keys could be heard 24 hours a day. Each day I would read part of my book, but I had to limit how much I read, since I was only allowed three books from the library each week. If I was lucky, the three books would last me five days."*¹

Sometimes solitary confinement conditions are imposed in separate wings of existing prisons, while other times entire facilities are devoted to solitary confinement. The solitary facilities are generally referred to as "supermax" or "administrative maximum" (ADMAX). The separate solitary confinement units go by a variety of names. They are Special Management Units (SMU) in Maine, Control Units in Illinois, and

Special Housing Units (SHU) in New York and California. The American Bar Association has chosen to use “segregated housing” as an umbrella term.⁵ Prisoners and their families generally call it “the hole”.

Approximately 80,000 prisoners are held in solitary confinement in the United States.⁶ The public perception has been that solitary confinement is reserved for “the worst of the worst”⁷ —a perception that has been frequently nurtured by prison officials eager to avoid legislative or judicial oversight. In reality, though, the vast majority of prisoners subjected to solitary confinement are neither violent nor incorrigible.⁸ Many suffer from severe mental illness, while others suffer from cognitive disabilities.⁹ Both of these conditions make it difficult for people to understand prison rules or function in the prison setting. When these prisoners break the rules—even very minor rules—they are sent to solitary confinement, which only exacerbates their conditions and makes it less likely (for reasons that will be discussed) that they will be able to behave properly.

Solitary confinement accomplishes one thing: it allows corrections officials and politicians to *appear* tough on crime.¹⁰ But, this appearance is purchased in lost safety (for the public and for those who live and work in prisons), lost funds (to pay for the operation costs that are twice as high as general population facilities), and the lost lives of prisoners who are driven to psychosis and suicide.

The Origins of Solitary Confinement

In 1890, the United States Supreme Court recognized that confining human beings for long periods of time can have a profoundly negative effect on their mental well-being. Discussing the practice of solitary confinement, the Court observed:

A considerable number of the prisoners fell, after even a short confinement, into a semi-fatuous condition, from which it was next to impossible to arouse them and others became violently insane; others still, committed suicide; while those who stood the ordeal better were not generally reformed, and in most cases did not recover sufficient mental activity to be of any subsequent service to the community.¹¹

Long-term solitary confinement was first developed as a penological strategy in Philadelphia by Quaker reformers, who believed that if prisoners were left alone (with a Bible) and given time to reflect and pray, they would realize their mistakes and repent.¹² Philadelphia's Walnut Street Jail, established in 1790, became a model for the development of "penitentiaries" across the country, and the practice of isolating prisoners from all human contact (including speech, excepting that of religious advisors and official visitors) came to be known as the "Pennsylvania system."¹³ Prisoners would be taken to their cells with black hoods over their heads, and would be kept in the same cell throughout the entire term of their sentence. They would have no contact with other prisoners and only the most limited contact with prison staff, so as to allow for the most possible time for personal reflection and self-improvement.¹⁴ Due to overcrowding at Walnut Street Jail, the Pennsylvania legislature erected two new larger-scale facilities: the Western State Penitentiary, near Pittsburgh, in 1826, and the Eastern State Penitentiary, near Philadelphia, in 1829.¹⁵ These facilities included more cells designed for solitary confinement.

The "Pennsylvania system" promised more than simply safety and repentance—solitary confinement (the reformers believed) would also save the state money, because there would be no need to specially train guards to manage prisoners, to escort prisoners to meals, or to supervise them in work projects.¹⁶ And there would be cost savings associated with security as well, since isolated prisoners would not be able to concoct escape plans with other prisoners.¹⁷

That, in any case, was the theory. But, in practice, the prisoners kept in long-term solitary confinement according to the "Pennsylvania system" did not tend to discover a new positive socially responsible mode of existing in the world. Instead, they tended to go insane. This was Charles Dickens's observation of prisoners at Eastern State Penitentiary in 1842: "He is a man buried alive; to be dug out in the slow round of years; and in the meantime dead to everything but torturing anxieties and horrible despair."¹⁸ The Quakers have long since apologized for their role in the development of solitary confinement, and, through the American Friends Service Committee, they are working to end the practice and shut down the Supermax facilities in which it is practiced.¹⁹

Due to the development of new modes of prison administration (most notably, the reformatory model, which included extensive forced labor), as well as the emergence of questions about the constitutionality of long-term isolation, the “Pennsylvania system” largely disappeared by the beginning of the twentieth century. It was reborn, though, in Marion, Illinois, site of the first modern “control unit” prison, which was established by the Federal Bureau of Prisons in 1973.²⁰ This facility eventually replaced Alcatraz as the prison of choice for the federal system’s “bad apples.”²¹ Marion would be replaced by the ADX facility in Florence, Colorado in 1994, and supplemented by similarly-run “SMUs” and “SHUs” in nearly every state.

The Psychological Effects of Long-Term Isolation

"It's an awful thing, solitary... It crushes your spirit and weakens your resistance more effectively than any other form of mistreatment."
- Senator John McCain

Long-term isolation produces clinical effects that are similar to those produced by physical torture. It leads to increases in suicide rates, and even mentally healthy individuals find the experience extremely difficult to endure. For individuals with mental illness, solitary confinement can be worse than a death sentence.

Here is how the psychiatrist Terry Kupers summed up his own research, and the research of psychiatrist Stuart Grassian, into the effects of long-term isolation on the mental health of prisoners:

Every prisoner placed in an environment as stressful as a supermax unit, whether especially prone to mental breakdown or seemingly very sane, eventually begins to lose touch with reality and exhibit some signs and symptoms of psychiatric decompensation, even if the symptoms do not qualify for a diagnosis of psychosis. . . Even inmates who do not become frankly psychotic report a number of psychosis-like symptoms, including massive free-floating anxiety, hyper-responsiveness to external stimuli, perceptual distortions and hallucinations, a feeling of unreality, difficulty with concentration and memory, acute confusional states, the emergence of primitive aggressive fantasies, persecutory ideation, motor excitement, violent destructive or self-mutilatory outbursts, and rapid subsidence of symptoms upon termination of isolation.²²

Or, as a judge put it, placing inmates with mental illness in solitary confinement is “*the mental equivalent of putting an asthmatic in a place with little air to breathe.*”²³ Long-term isolation units make healthy people sick, and make people with mental illness worse, because human beings are social creatures. We depend on contact with other people to maintain equilibrium and to chase out the unpleasant thoughts that naturally occur in everyone’s mind from time to time.²⁴ More intelligent and emotionally stable prisoners may be more able to resist these effects, but even the most well-adjusted prisoner will experience adverse mental effects—“*a degree of stupor, difficulties with thinking and concentration, obsessional thinking, agitation, irritability, and difficulty tolerating external stimuli (especially noxious stimuli)*”—after just a few days of isolation.²⁵

This is how one prisoner who spent two years in isolation at Pelican Bay State Prison in Northern California described the experience:

Sometimes I feel overwhelmed. I get trepidations, nervous, agitated, I go off the deep end... Here, I feel like I'm in a kennel, closed off from life itself. I feel like I live in a coffin, like a tomb.²⁶

Another man, who spent time in Maine’s prison, described the effect that isolation had on his fellow prisoners, some of whom took extreme measures to harm themselves and disrupt the monotony:

I would have a hard time counting the times I have seen another inmate cut themselves to the point that the entire floor of their cell was coated in blood, and they were removed for medical treatment after losing consciousness. Suicide attempts were not uncommon. The mentally unstable were punished for their actions rather than treated for their illness. . . When I was finally released from the Supermax into general population after almost two years, it was overwhelming. There mere sensations of human contact was harsh on my nerves. I would break into cold sweats and shake. I was overly stimulated and anxious all the time. It was very difficult to concentrate on one thing. Even to this day, I have a very difficult time focusing on one thing for very long and I am very easily distracted. The effects of the Supermax reach beyond the confines of its walls and fences.²⁷

Self-harm is, in some ways, the clearest illustration of the break from normal mental health that accompanies isolation. After all, even the most serene and well-adjusted people sometimes experience fear or loneliness or paranoia, if only fleetingly. Most people, though, do not cut themselves until they pass out from blood loss, or engage in the kind of destructive behavior that former hostage Terry Anderson experienced. Anderson was the chief Middle East correspondent for the Associated Press in 1985, when he was taken hostage in Beirut. Atul Gawande retold the story of his isolation in “Hellhole”—his article in the New Yorker discussing the effects of long-term isolation:

‘I find myself trembling sometimes for no reason,’ he wrote. ‘I’m afraid I’m beginning to lose my mind, to lose control completely.’ One day, three years into his ordeal, he snapped. He walked over to a wall and began beating his forehead against it, dozens of times. His head was smashed and bleeding before the guards were able to stop him.²⁸

There is an additional level of complication for the use of long-term isolation. Not only does long-term isolation have disastrous effects on prisoners’ mental health, but these effects are frequently irreversible. It is this dimension that makes solitary confinement such a terrible choice for corrections institutions, because it means that prisoners will return to society less able to control themselves and relate to their surroundings. This, combined with the well-known but seldom-acknowledged fact that almost all prisoners are eventually released from prison, means that prison practices are making life worse for people both inside and outside the prison walls.

The residual consequences of isolation most commonly manifest as “a continued intolerance of social interaction,” which makes it much more difficult for former prisoners to obtain jobs, establish social connections, nurture family relationships, or become productive members of communities.²⁹ And, as Dr.

Solitary cell at Maine State Prison

Kupers testified to the Maine Legislature’s Committee on Criminal Justice and Public Safety, “*destroying a prisoner’s ability to cope in the free world is the worst thing a prison can do.*”³⁰ It is bad enough that we should destroy an individual’s ability to cope and capacity for rational thought—bad enough in the ontological sense—but the overuse of long-term isolation also makes it is less likely that former prisoners will be able to take their place in society as responsible and productive members of our communities. That makes us all less safe and secure.

Before the Reforms: Solitary Confinement in Maine

In Maine, prior to 2010, confinement in the Maine State Prison's SMU meant isolation alone in an 86 square foot cell with limited natural lighting for 23 hours per day during the week, and 24 hours per day on the weekends. The only break in this monotony of isolation was one hour of outdoor exercise (only on weekdays) alone in a small yard (though for much of the year in Maine, outdoor exercise is not an attractive proposition). Other than fleeting interactions with correction staff, prisoners had no human contact during their stays in the SMU – which could last days, weeks, months, or even years. They did not even have

"In all of England, there are now fewer prisoners in 'extreme custody' than there are in the state of Maine."

-Atul Gawande, Hellhole, THE NEW YORKER, March 30, 2009

access to radios or television, which could have provided some proxy for human contact. The cell doors in Maine's SMU are too thick to allow conversations among prisoners. Medical and mental health screenings were sporadic and brief—often conducted through the cell door—and record keeping was inconsistent. Every time a prisoner left his cell, he was in shackles.

The purported justifications for subjecting prisoners to isolation varied widely, and the nexus between such treatment and any legitimate penological goals was often impossible to discern. For example, prisoners at the Maine State Prison could be sent to the SMU for "disciplinary segregation"—as punishment for an assortment of rule violations from the serious (fighting) to the trivial (moving too slowly in the lunch line). And, despite the seriousness of solitary confinement, prisoners in disciplinary hearings were rarely provided assistance understanding the process or a meaningful opportunity to present a defense.

Other prisoners were sent to the SMU for "administrative segregation." In the event of a fight, for example, the prison might send both the aggressor and the victim to the SMU while the matter was investigated. The timeline for investigation was vague, and the depth and quality were suspect. A prisoner might spend days, weeks, or months in the SMU as a result of being attacked by another prisoner. Even after a prisoner had completed a term of disciplinary

Solitary cell at Maine State Prison

isolation or been adjudged the victim rather than the aggressor in a fight, he might remain in solitary confinement for additional days, weeks, or months because of a shortage of beds in the general population units.

There was also no policy of providing support or assistance to prisoners transitioning back into general population or out into the free world. In some cases, prisoners were released straight from the SMU onto the streets of Maine communities. Because of the destabilizing effects of isolation, releasing someone back into life on the “outside” abruptly and with no support leads to difficulty for both the former prisoner and the community. The cost of this practice was spread among family members, community members, and taxpayers who pay for court and corrections costs in the event of recidivism.

It Does Not Have To Be That Way: The Maine Reform Example

Maine State Prison

Across the country, pressure has been building to reform and reduce the use of solitary confinement. The motivation for reform has come from diverse directions: the realization that solitary confinement is overused; the awareness that it causes severe and lasting mental health consequences to prisoners; the concern that solitary confinement costs much more money than it is worth; and the belief that it actually makes our prisons and our communities less safe. These strands have come together

in a number of state-level campaigns, and to date, Maine's has been one of the most successful.

Between 2011 and 2012, the Maine Department of Corrections ("MDOC") radically transformed the way that solitary confinement is used in Maine state facilities:

- Fewer people are sent to solitary;
- Prisoners sent to solitary spend less time there;
- Prisoners in solitary are held in better conditions;
- Prisoners in solitary are given access to more care and services to prevent decompensation and deterioration of mental health;
- Prisoners in solitary are given a clear path, based on achievable goals, for earning their way out of solitary.

The same pressures that led to the overuse of solitary confinement in Maine (and elsewhere in the United States)—the political desire to appear "tough on crime," the lack of awareness of other options for prisoner management—were still present during that time, but they were met with countervailing (and ultimately overpowering) pressure to reform. This kind of change is not easy, but many of the lessons of Maine's solitary reform experience are adaptable or even reproducible for other jurisdictions.

Maine's solitary reform efforts are an important example for the rest of the country because of how rapidly the transformation took place:

- February 26, 2010, there were 91 prisoners being held in the two pods (B & C) that made up Maine's SMU.
- May 2011, the C pod of the SMU was closed completely and new policies governing the operation of the remaining pod were put into effect.
- August 23, 2012, there were 46 prisoners being held in the SMU—approximately half the number of 18 months prior.³¹

In addition to the closing of one of the solitary confinement pods, the reduction in the solitary population was accompanied by a greater use of alternative forms of punishment, such as loss of privileges and confinement to a cell in the general population area. And, the prison enacted an incentive system that allows prisoners to earn access to more recreation while in solitary and earlier release from solitary.

The rapid reduction in the use of solitary confinement at the Maine State Prison was also accompanied by a rapid improvement in conditions for the isolated prisoners, including access to radios, televisions, and reading material, which psychiatrists believe reduces the likelihood of decompensation. Prisoners in solitary have also been given more opportunity to interact with other prisoners through group recreation and counseling sessions, and more opportunities to earn perks like additional hours of recreation through positive behavior.

Commissioner Joseph Ponte

Maine's example shows both that change to solitary confinement practice is possible, and also that these changes do not require years or decades for implementation. MDOC Commissioner Joseph Ponte had this to say with regard to the tendency of prison administrators to rely heavily on solitary confinement as a tool for keeping order and imposing discipline: "This is how people grew up. This is how we grew up in Corrections. This is how we did business. . . People don't want to look at other ways to do that."³² But Commissioner Ponte was willing to look for other ways to keep order and protect prisoners and staff, and he was willing to implement those new ways of doing business without hesitation.

What Happened

I can promise you today, if you got up from your chairs and drove to a correctional facility right now, without letting any of them near a phone to call ahead, and you went into the segregation unit; you would find inmates there that were only supposed to be there a couple of week or months, but that have been there for months and months, sometimes more. Now the excuse is bed space. "Yes your time is up down here, but there is no bed space so you have to stay." I can tell you there is plenty of bed space.

-Anonymous testimony of Maine prisoner, public hearing on solitary reform legislation.³³

The story of the success of the Maine solitary reform campaign is evidenced in the policies that have been put in place to govern discipline in Maine's prisons and administration of the Maine State Prison's SMU. Classification of prisoners has been transformed, and admission standards for the SMU have been tightened. Solitary confinement is no longer the default punishment at the Maine State Prison, but rather it is the punishment of last resort when no other option is adequate. Even in situations where prisoners are sent to solitary confinement, corrections staff is required to work with prisoners to develop a road map of behavior that will lead back to the general population. Staff have been given new training and skill-building opportunities for managing difficult prisoners and challenging situations. The administration has placed a greater emphasis on de-escalating situations before there is a serious problem, rather than extracting and punishing the perpetrators afterwards. In addition, it has removed incentives for supervisors to send difficult (but not dangerous) prisoners to the SMU.

The easiest way to understand these policy changes is by reference to the three different mechanisms by which solitary confinement was imposed at the Maine State Prison ("MSP"):

1. Disciplinary Segregation:

Formerly, Disciplinary Segregation was used for prisoners who were being punished for a concrete offense. According to policy, prisoners were only assigned to Disciplinary Segregation following a hearing, in which they had a meaningful opportunity to present a defense, and in which they would also be provided with assistance from a specially-trained prisoner advocate. In practice, though, prisoners were rarely (if ever) given any assistance, and most prisoners felt that the hearings were not meaningful. An investigation into the use of solitary (which is discussed in greater detail later in this report), made this finding about the availability of advocates at MSP, "At MSP reportedly no inmates are currently trained and the two trained staff are in the process of being transferred. In our observation of the hearings taking place . . . none were used or discussed with inmates at MSP."³⁴ In addition, Disciplinary Segregation terms were supposed to be of a definite duration, but in practice many prisoners spent longer

than ordered in Disciplinary Segregation, supposedly due to lacks of bed space in the general population pods.

Currently, the policy and practice favors disciplinary sanctions carried out within the general population environment, and Disciplinary Segregation is reserved for the most serious offenses. The MSP now uses a range of options for punishing prisoners that do not involve long-term isolation: confining the prisoner to his own cell; limiting contact visits; restricting the visitors allowed to immediate family; loss of work opportunities; et cetera. Segregation is only considered when responding to an extremely

Solitary confinement block at Maine State Prison

serious offense, such as a fight involving weapons. In addition to committing a serious offense, prisoners must also satisfy one of four requirements to be sent to Disciplinary Segregation: 1) the prisoner constitutes an escape risk in less restrictive status; 2) the prisoner poses a threat to the safety of others in less restrictive status; 3) the prisoner poses a threat to his/her own safety in less restrictive status; or 4) there may be a threat to the prisoner's safety in a less restrictive status.

2. Administrative Segregation:

Formerly, Administrative Segregation was used anytime the prison wanted to isolate prisoners for an indefinite amount of time. New arrivals to the prison were frequently sent to Administrative Segregation while their status was being reviewed. In the event of a fight, all the prisoners involved in the fight (aggressors and victims alike) were sent to Administrative Segregation while the facts of the incident were sorted out and the officers decided who to charge with an offense. According to policy, Administrative Segregation status was subject to review and was only to be used for limited purposes. But, in practice the policies were ambiguous enough, and the reviews superficial enough, that prisoners had no real due process protection. As in Disciplinary Segregation hearings, prisoners were not actually provided with any assistance to understand the process or mount a defense (despite the promise of such assistance in policy).

Currently, Administrative Segregation is only used in extreme circumstances. Under current policy 15.01, prisoners are first placed under Emergency Observation Status in their usual housing environment. That prisoner may only be transferred to the SMU upon approval of supervisory staff, and the reasons for the transfer are documented and reviewed within 72 hours. Like Disciplinary Segregation, Administrative Segregation is only used when 1) the prisoner constitutes an escape risk in less restrictive status;

2) the prisoner poses a threat to the safety of others in less restrictive status; 3) the prisoner poses a threat to his/her own safety in less restrictive status; or 4) there may be a threat to the prisoner's safety in a less restrictive status.

3. High Risk Segregation:

Formerly, High-Risk segregation was, in theory, reserved for the “worst of the worst”—prisoners who were thought to be incorrigible threats to the safety of those around them. In reality, though, this was the status assigned when the prison officials gave up on their “corrections” responsibility. The status was broad enough to encompass a wide range of prisoners. According to the former MDOC Policy 15.04, High-Risk Segregation was appropriate when: 1) the prisoner had committed, attempted, or planned an act of violence or arson; 2) the prisoner had committed, attempted, or planned an escape; 3) the prisoner had engaged in (or planned to, attempted to, or threatened to engage in) trafficking in drugs or dangerous contraband; 4) the prisoner had committed at least three infractions resulting in disciplinary segregation; 5) the prisoner had served at least three months of administrative segregation; or 6) the prisoner was at risk of harm if housed in the general population. In effect, when prisoners lost the ability to control their behaviors or to cope with their surroundings because of long-term isolation in Disciplinary or Administrative Segregation, the prison's answer was to send them to more long-term isolation, by simply altering their designation to High-Risk Segregation. Status reviews were carried out only every six months.

Currently, the High-Risk Segregation status has been eliminated.

Small changes can make a remarkable difference. Previously, prisoners frequently found themselves serving extended periods in segregation because their bed in general population had been given to another prisoner. That prisoner would remain in the SMU for additional days, weeks, or months until another bed in general population opened up. This was not accidental. Unit supervisors were using the SMU as a way to get rid of prisoners that were challenging to manage. But now, MDOC policy 15.01 includes this requirement: “If a prisoner is moved out of his/her bed, the prisoner's bed shall be retained pending the review of emergency observation status.”³⁵ Under the current policy, a prisoner may spend time in the SMU, but during that period the prisoner's bed in the general population remains open. This change accomplished two things: first, prisoners are not spending more time than planned in the SMU; and second, unit staff are now pressured to find ways to manage difficult prisoners within their units.

The new requirements for corrections staff have been accompanied by additional training opportunities in methods and techniques for managing difficult prisoners, as well as additional tools for disciplining prisoners in the general population. Commissioner Ponte believes that the training program should incorporate more tools and techniques, such as “verbal judo”—a verbal and emotional conflict management tool—and to reduce training that is not truly connected to the responsibilities of the corrections staff:

We spend a lot of time on firearms and self-defense—those kinds of things. We don't spend a lot of time on verbal judo and the kinds of interventions you would use most of the time.

We really need to look at that. You're not shooting prisoners every day. If you fire a gun in your lifetime, it would be something. But you're talking to prisoners every day, so let's spend time on the kinds of things that really make a difference. We haven't done that yet.³⁶

One of the biggest advances, from both the perspective of constitutional rights and prisoner health, has been the dramatic curtailment of the use of Administrative Segregation pending the outcome of an investigation. For example, previously, if one prisoner attacked another and the second prisoner tried to defend himself, both prisoners would be sent to segregation while staff made a determination of who actually started the altercation. These investigations could take weeks or months, during which time the victim of an attack would be subjected to all of the negative health effects of long-term isolation, as well as interruption of educational or therapeutic programming and inability to earn or accrue "good time" credits. That practice was changed by Maine DOC Policy 20.1, which provides that:

No prisoner shall be detained pending investigation, hearing, or review or appeal of recommended disciplinary dispositions except as provided in Policy 15.1, Administrative Segregation, using the procedures and criteria for the placement of a prisoner on administrative segregation status.

Finally, prisoners are made aware as soon as they arrive at the SMU that the prison wants their stay to be temporary and to last as little time as possible. For each prisoner in segregation, a team of staff made up of corrections and mental health professionals meets to create and document a plan for returning the prisoner to the general population.³⁷ The plans include specific requirements, which might include the following:

- Meet with mental health staff;
- Meet with correctional case worker;
- Meet with unit management team.

The plans also have specific goals for the prisoner to work towards, with the assistance of staff:

- No ideation or acts of harm to self;
- No ideation or acts of harm to others;
- Adequate control of impulses;
- Socially appropriate interactions with others.

This approach stands in marked contrast with the previous approach of either keeping prisoners locked up with no control over their future, or else moving prisoners from the SMU to the general population (and back again) with no attention to the kinds of skills and behaviors necessary for living in a society (either in or out of prison). The previous default assumption reflected circular logic about the role of the SMU: we only use the SMU for the "worst of the worst" so if a prisoner is in the SMU it must be because he is among the "worst of the worst." The current approach attempts to break that circle: the prisoner did something that resulted in him being sent to the SMU, but there is no reason that needs

to happen again. This approach also demonstrates awareness that long-term isolation itself can cause the exact kinds of anti-social or aggressive behaviors that would earn a prisoner the label “worst of the worst.” Seen in that light, the reforms to Maine’s SMU are more than a collection of policy changes; they are evidence of a deeper shift in attitude about the nature of human behavior, the impacts of isolation on that behavior, and the potential efficacy of corrections staff to make a positive contribution to an individual’s life.

How It Happened

“Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.”

-United States Constitution, Amendment Eight

“[A]ll penalties and punishments shall be proportioned to the offense; excessive bail shall not be required, nor excessive fines imposed, nor cruel nor unusual punishments inflicted.”

-Maine Constitution, Article One, Section Nine

Pre-History of the Solitary Reform Campaign

Maine was not an overnight success story. The early 1970s saw substantial class action litigation over the conditions in the segregation unit at the Maine State Prison in Thomaston. A federal consent decree was entered in 1973 in the matter of *Inmates of the Maine State Prison v. Mullaney*, which required that the MDOC adopt (and comply with) a new policy regarding “the use and management of solitary confinement cells.”³⁸ That policy provided for basic due process for prisoners before they were sent to isolation cells, ensured that conditions in the cells met basic minimal standards, and capped the number of days that prisoners could spend in isolation.³⁹ Additional litigation followed in the late 1970s and early 1980s, including a class action lawsuit *Lovell v. Brennan*, brought by the ACLU National Prison Project, the Maine Civil Liberties Union (now the ACLU of Maine), and Pine Tree Legal Assistance.⁴⁰ That case, which was based in part on the earlier consent decree, “in large measure” sparked “substantial improvements” in the way prisoners were treated.⁴¹ But, subsequent to those decisions, the State of Maine built a new “Supermax” facility down the road from the antiquated Thomaston prison, and—whether by operation of law or as a result of neglect—the earlier consent decree requirements were pushed aside.⁴²

In 2005, the MCLU and ACLU National Prison Project took up the question of long-term isolation of prisoners with serious mental illness. Courts across the country were unanimous in the conclusion that subjecting prisoners with serious mental illness to long-term solitary confinement violates the Eighth Amendment’s prohibition on “cruel and unusual punishment.”⁴³ Courts had approved consent decrees across the country that

Maine State Prison

prohibited prisons from confining prisoners with schizophrenia, bipolar disorder, and other serious illnesses in solitary confinement units or facilities. If Maine would not agree to such a prohibition as well, the ACLU National Prison Project and the MCLU were prepared to take them to court.

The MDOC ultimately agreed, and the ACLU, MCLU, and Disability Rights Center of Maine negotiated a series of rule changes that resulted in the creation of a

“Secure Mental Health Unit” where prisoners with serious mental illness could be given extra monitoring and treatment without compromising the safety of the facility.⁴⁴

Unfortunately, good policies do not always result in good practice. Subsequent visits to the Maine State Prison by the MCLU and Amnesty International revealed that the “Secure Mental Health Unit” was simply being used as an SMU with a different name. Prisoners were still being warehoused, were still denied meaningful human contact, and were not being given any of the treatment or therapy (except for pharmaceuticals) that their conditions warranted. The advocates had hoped that the rule changes would lead first to better treatment for prisoners with serious mental illness and, later—after the prison administration had grown comfortable with a new way of thinking about prisoner well-being—to better treatment for all prisoners. Instead, the prison officials had kept the same punishment philosophy in place, while moving a few beds around and changing the name on the unit.

At that point—in early 2009—the MCLU and the ACLU National Prison Project began planning in earnest for a class action lawsuit aimed at reforming the use of solitary confinement in Maine.

The Legislative Campaign

At around the same time that the ACLU was preparing for litigation in Maine, other activists in Maine began developing plans for legislation aimed at curing a number of documented problems in the Maine State Prison—the overuse of restraint chairs and chemical agents, the lack of due process in prisoner discipline, and the

Question: Why is solitary confinement reform important?

Rev. Jill Saxby, Maine Council of Churches: “For us, it’s a moral issue and human rights issue. It has to do with affirming the inherent worth and dignity of every person, who is made in the image of God. Everything we’ve learned about solitary and its effects on the human person (the prisoner, the jailer, the society) tells us that it is morally wrong and that society needs to be reminded of our moral responsibility to those whose behavior leads to imprisonment.”⁴⁵

inhumane effects of long-term isolation. Emily Posner was an early leader of that effort. She was inspired by Atul Gawande's New Yorker article⁴⁶ and by her correspondences with Herman Wallace, one of the "Angola Three" who was held in solitary confinement in Angola Prison in Louisiana for decades.⁴⁷

Gawande mentioned that Maine had one of the highest rates in the country in regards to percentage of inmates in solitary confinement compared to the facility's total population. I was shocked and upset that my state was making such headlines. I wrote a letter to Jim Schatz, a member of the Maine state legislature's Criminal Justice Committee. I also sent him a copy of 'Hell Hole.' I asked if he would be interested in crafting a piece of legislation that addressed the use of long-term solitary confinement in Maine prisons. He agreed and we were off.⁴⁸

Posner and Rep. James Schatz (D-Blue Hill) ultimately drafted a bill, An Act to Ensure Humane Treatment for Special Management Prisoners,⁴⁹ which the MCLU and other advocates helped shape. The bill had a number of components:

- A 45-day cap on the number of days that a prisoner could spend in solitary confinement (with exceptions for prisoners who commit serious acts of violence, sexual assault or murder on staff or other prisoners; prisoners who escape or attempt to escape; or prisoners who present an immediate risk of harm to others);
- a prohibition on the placement of prisoners with serious mental illness in solitary confinement, and a process for removing formerly healthy prisoners who begin to exhibit symptoms of serious mental illness from solitary;
- a set of basic due process requirements for prisoner disciplinary proceedings and status reviews;
- a prohibition on the use of chemical agents or forcible extractions for the purpose of punishment; and
- a prohibition on the transfer of prisoners to out-of-state facilities lacking analogous protections.

MCLU Public Policy Counsel Alysia Melnick observed that the bill was not perfect,

But philosophically it was on the right track. It reflected the emerging understanding that solitary confinement, particularly when prolonged or when used with mentally ill prisoners, is ineffective, costly, and extremely damaging – both to the prisoners themselves and to the cell blocks and communities to which they return.⁵⁰

A coalition of organizations (the MCLU, NAACP, Maine Council of Churches, Disability Rights Center of Maine) and individuals (prison volunteers Jim Bergen and Judy Garvey, former prisoner Ray Luc Lavasseur, journalist Lance Tapley) came together to form the Maine Prisoner Advocacy Coalition (M-PAC) to advocate for the passage of the bill. As Bergen noted in recent written comments submitted to the U.S. Senate Judiciary

Committee's Subcommittee on the Constitution, Civil Rights and Human Rights, the original goals were modest:

The resulting Bill – LD 1611 – was modest in that given the DOC's intransigence, advocates were not optimistic in gaining a major transformation. It established necessary limits to the use of solitary based on the current research findings on this form of deprivation, presumably before the point where severe psychological damage can take place. Advocates also wanted to ensure that each prisoner in solitary would be checked at regular intervals for mental and physical deterioration by a trained mental health practitioner. We also hoped to enforce an end to 'cell extractions,' 'restraint chairs,' and other so-called 'tools.' With this Bill, it seemed that we were not pushing the envelope too far, and that our legislation would be viewed as moderate and politically capable of passing through the state legislative process successfully, despite views to the contrary on the part of Maine's DOC.⁵¹

Despite the fact that the goals of the legislation were modest (from an administrative standpoint) and necessary (from a human rights standpoint), the legislation met with immediate and forceful opposition from the MDOC.

On February 17, 2010, the Maine Legislature's Joint Committee on Criminal Justice and Public Safety held a public hearing on LD 1611. The hearing began at 1:00 in the afternoon and continued until 11:00 that night and featured 45 witnesses. Of those, 29 spoke in favor of the bill, 14 spoke in opposition, and two spoke neither for nor against the bill.

Supporters included representatives from the Maine Association of Psychiatric Physicians, the Maine Psychological Association, the Maine Council of Churches, the Roman Catholic Diocese of Portland, the American Friends Service Committee, the Maine Prisoner Advocacy Coalition, the Immigrants Legal Advocacy Project, and the Maine Civil Liberties Union. Psychiatrist and author Dr. Stuart Grassian also testified in support, as did Prof. Richard Maiman of the University of Southern Maine political science department and Prof. Craig McEwan of Bowdoin College. Numerous former prisoners and parents of former prisoners also testified in support.

Opponents included representatives from the MDOC and the unions that represent prison staff (AFSCME and MSEA), and the Maine Sheriff's Association, as well as a number of corrections officers, a psychiatric nurse, and other members of the public.

A lawyer for the Maine Medical Association and a representative of the Healing Justice Program of the American Friends Service Committee testified neither for nor against.

The lead sponsor of the bill, Rep. Schatz, spoke first:

The passing of this bill will allow Maine citizens to be more informed and certain that what takes place in our institutions is consistent with our values as human beings and the need to return offenders to their communities as productive citizens.⁵²

Prisoners were unable to attend the hearing, so their testimony (in the form of letters and comments) was presented by Judy Garvey of M-PAC.

Numerous religious figures testified in support of the bill. Among them was Rev. Susan

Murphy, an Episcopal priest from Sanford, Maine:

There are those who say, prisoners deserve to be treated like animals and yet we arrest people for treating animals in the same way we are treating persons in segregation but we often just turn our eyes away because it will cost us something. We are already paying the price for the inhumane treatment of prisoners in solitary confinement. These persons—most of them—will return to society and what have we created?⁵³

and Eric C. Smith, Associate Director of the Maine Council of Churches:

Each of us is worthy of respect and dignity simply because we are human beings. This is the starting point for all laws that protect human life and mandate minimum standards by which we will live together in society. This principle is so foundational, that even when we violate those laws, even when we harm another person, even when we must be punished and removed from society, we do not negate our humanity.⁵⁴

Experts in corrections policy and penology, including Maiman and McEwen, testified in support of the bill as an important step towards reversing long-term destructive priorities in the corrections industry:

In a well-functioning prison system, special management should be used as a last resort and applied for relatively short periods of time. Long applications of special management and their routine use as a punishment device fuel anger, resistance, and future bad conduct. They not only disable inmates from smooth adaptation to later release from prison, but more immediately, disable them from effective participation in the social system of the prison.⁵⁵

Some of the most compelling testimony came from parents and family members of prisoners or former prisoners. One mother, Daureen Stevens, told how she felt like she was experiencing the pain of solitary confinement with her son—a feeling familiar to parents:

My son spent many years in solitary confinement which seemed like an endless dark tunnel to me. Even though I had my freedom, I was also imprisoned within my desperation for him to survive. My thoughts and fears of losing my son is an unbearable gut-wrenching empty feeling whenever he is in solitary confinement. The thought of losing him to a delusional/mental state of mind, or even death sat in the deepest part of my soul and mind. . . Ask yourself, would you send your child to their room for a week, a month, or even years to punish them for something they did wrong?⁵⁶

Those concerns were echoed by mental health professionals. Dr. Janis Petzel testified as President of the Maine Association of Psychiatric Physicians:

When the extreme stressor of solitary confinement is layered on top of a pre-existing psychiatric condition, the results are disastrous for the individual: psychosis, suicide or self harming behaviors, complete emotional breakdown. This type of overwhelming experience can make permanent, negative changes in the brain.⁵⁷

And Dr. Grassian, one of the world's foremost experts on the psychological effects of long-term isolation, testified about the problems with Maine's facilities, programming, and lack of adequate mental health supervision:

Institutions like the SMU 'look' good; they make it seem like we are 'getting tough on crime.' But in reality, we are getting tough on ourselves. 95% of all incarcerated individuals are eventually released, some directly out of SMU settings. We have succeeded in making those individuals as sick, as internally chaotic, as we possibly can. Over the long term, the SMU does not create a safer environment; it creates a far more dangerous environment.⁵⁸

Civil rights advocates, including the MCLU's Melnick, drew the explicit connection between the harms caused by solitary confinement and the promise of change embodied in the proposed legislation:

We understand that change is hard. Supporters of reform must fight against formidable limits to training, staff and programmatic resources. And, in presentations before this Committee, OPEGA,⁵⁹ and the Board of Visitors noted the serious challenges in trying to change a long-standing and ingrained prison culture. But make no mistake, change is both possible and necessary.⁶⁰

Opposition to the solitary reform legislation was lead by then-Commissioner of the MDOC, Martin Magnusson:

This bill would seriously jeopardize the health and safety of both staff and inmates and require substantial additional costs to the Department and the State during a budgetary crisis. I can tell you with 100% certainty that more of our staff and inmates would be at serious risk to be injured or killed if this LD was passed.⁶¹

That promise of future harm to prisoners and guards was enough to carry the day, and all but two members of the Committee (one of whom was the lead sponsor) ultimately voted against the legislation. When the bill came to the floors of the House and Senate, a number of legislators echoed the concerns expressed by the Commissioner that the safety of staff and prisoners would be jeopardized by a reduction and regulation of the use of solitary confinement, while others disputed the scientific basis for concern about long-term isolation.

Following that substantial setback, advocates for reform were able to achieve what they believed at the time was the most modest shred of a victory: the conversion of the thorough and detailed oversight bill (with strict prohibitions and clear requirements) into a legislative resolve requesting that a government entity hand-picked by the MDOC study the limited question of due process rights for prisoners with mental illness. It would be an overstatement to say that advocates were not terribly optimistic about the potential value of such a study. As the reform advocates awaited the study, they took comfort in the knowledge that they had forced lawmakers and those charged with overseeing corrections policy to have a real and deep conversation about solitary confinement in Maine's prisons.

The Sherrets Report

Maine's proposed solitary-reform legislation, LD 1611 (124th Legislature) was ultimately converted into Resolve Chapter 213, LD 1611. The legislation had been titled "An Act to Ensure Humane Treatment for Special Management Prisoners,"⁶² but the resolve

was ultimately titled “Resolve, Directing the Department of Corrections to Coordinate Review of Due Process Procedures and To Ensure Transparency in Policies Regarding the Placement of Special Management Prisoners.” The gap between those two titles provides a fair proxy for the gap in enthusiasm that the advocates (and their supporters in the legislature) felt between the original bill and its final approved form.

The Resolve was short:

Sec. 1 Commissioner of Corrections’s review of due process and other policies related to placement of the special management prisoners at the Maine State Prison. Resolved: That the Commissioner of Corrections shall, in consultation with the mental health and substance abuse focus group of the State Board of Corrections, review due process procedures and other policies related to the placement of special management prisoners. In its review of due process procedures and placement policies, the commissioner shall also consider and propose an appropriate timeline for regular reporting to the joint standing committee of the Legislature having jurisdiction over corrections matters; and be it further.

Sec. 2 Reporting date established. Resolved: That the Commissioner of Corrections shall report findings and recommendations pursuant to the report under section 1, including any suggested policy or legislative changes, to the joint standing committee of the Legislature having jurisdiction over corrections matters by January 15, 2011.

The Mental Health and Substance Abuse Focus Group (“the Group”) of the State Board of Corrections was comprised of staff members from the MDOC and the Department of Health and Human Services (MDHHS), as well as corrections and health care professionals from Maine jails. The Group was chaired by Dr. Steve Sherrets, a psychologist who served as the Mental Health/Criminal Justice Manager for MDHHS.

The Resolve was finally approved on April 15, 2010, but the Group did not begin its work until the summer of 2010. Once the Group began to work, though, it worked extremely diligently. By its own account, the Group went “beyond the required scope of the charge” to consider the broader implications of corrections procedure and practice on the mental health and well-being of prisoners, as well as the safety and administrative needs of staff.⁶³ The Group accepted suggestions from outside groups and individuals, including many of the advocates who had worked on the legislative campaign. The MCLU submitted multiple memoranda and kept in touch with Sherrets throughout the process. The Group spent “100s of hours doing the ground work” for the report, and it was given broad access and assistance by the MDOC.⁶⁴

The Group’s conclusions were shocking in their thoroughness and honesty, and they confirmed many of the claims that the advocacy community had made in support of the legislation. The report went beyond simply identifying serious problems to recommending necessary changes to address those problems.

The first problems that the report identified was the amount of discretion exercised by corrections officers in sending prisoners to the SMU, coupled with a lack of clear record keeping and reporting about the population of the SMU—why were prisoners there,

what had they done wrong, and when would they be returned to the general population. The Group's first recommendation—one that overlays and informs all subsequent recommendations—embodies the need for prison staff to get away from using long-term isolation as the punishment of choice:

- Recommendation 1 Overview: The Focus Group recommends consideration of exploration and development of alternatives developed for the general population of inmates so general population staff will have more alternatives for behavioral intervention than what is afforded by the use of Disciplinary Segregation, Administrative Segregation and the Protective Custody inmates. This should result in hopefully preventing many of them from being placed in an SMU. When an inmate is placed they frequently lose their bed and receive the most intensive/costly interventions available in the facility. The individual also has the experiences of the greatest degree of restriction and loss of liberty and rights. This could arguably be justifiable if the program worked at permanently changing behavior but current research and experience suggest that we achieve questionable positive effects on the inmate or their future behavior. One can even argue that repeated use of SMU's without the type of behavioral/prescriptive programming we are suggesting may well have a deleterious effect on future pro-social behavior. Better management of behavioral responses and contingent reinforcers, could well reduce not only the use of these units but result in an increase in appropriate behavior in the general population and hopefully a better transition to appropriate behavior in the community.⁶⁵

Additional recommendations include the following:

- The hiring of professional behavioral health staff with backgrounds in behavior modification (Recommendation 2);
- regular periodic meetings between mental health staff from various facilities (Recommendation 3);
- ongoing collection of data concerning the SMU population, including the yearly cumulative time that any prisoner spends in the SMU (Recommendations 4 and 3U);
- review of the use of the SMU to house prisoners awaiting completion of investigations (Recommendation 7);
- keep the beds of prisoners sent to the SMU open in order to ensure that there is a place for them in the general population as soon as they are ready to be released from the SMU (Recommendation 1U);
- develop additional tools and sanctions for imposing discipline in the general population so that the SMU is only a last-resort punishment (Recommendation 2U);
- make sure that fully-trained "counsel substitutes" are available to assist all prisoners, especially prisoners with limited cognitive abilities (Recommendation 4U and 6U);

- improve the physical space in the SMU so that there is adequate airflow and enhanced sensory stimulation available (Recommendation 8U and 9U);
- flexibility in relaxing the conditions of confinement in the SMU when there are mental health concerns, including increased human contact, out-of-cell time, and access to therapy (Recommendation 11U);
- special training for SMU staff, including mental health treatment protocols, de-escalation techniques, and special cognitive challenges (such as brain injuries) (Recommendation 14U); and
- include mental health and security staff in joint planning sessions to develop intervention plans for prisoners (Recommendation MHU 20).⁶⁶

Because the recommendations were so detailed, and because they were based on both insider knowledge and insider access by well-credentialed authors, they would have been difficult to ignore. Difficult, though, is not the same as impossible. Like all institutions, corrections departments naturally resist pressure to change. Advocates for reform at the MCLU viewed the report as the MDOC's last best chance to reform itself, or else the report would be Exhibit One in a federal civil rights case.

Commissioner Ponte, though, took the recommendations head on. In an interview conducted for this report, he noted that "the facts are the facts...clearly, that was our practice. That is how we ran prisons forever. So, I couldn't back away and say 'we don't do that.'"⁶⁷ The commissioner set up a second working group tasked with developing plans for implementing the recommendations, and the group was instructed that if they were opposed to implementing any of the particular recommendations, they needed to have a very good reason.

Jim Bergin, one of the advocates who leads the Maine Prisoner Advocacy Coalition, is a member of that group:

*This Working Committee had weekly meetings through a year, meeting at Maine State Prison in Warren, Maine, and consisted of [staff and advocates]. The presence of the two Advocates on the Committee, at the suggestion of Commissioner Ponte, was a radical innovation for the MDOC that was in marked contrast to the previous MDOC Administration for which "transparency" was a dirty word, and M-PAC was a problem that wouldn't go away.*⁶⁸

Bergin believes that the ultimate goal of the working group is "the potential of all but eliminating the use of solitary" and he sees the use of rigorous data collection as "a means to measure the success or failure of the Policy changes" in achieving that ultimate goal safely and efficiently.⁶⁹ Bergin continues to receive regular briefings on policy development, as well as data on prisoner discipline, which he in turn shares with the larger prisoner-advocacy community.

Keys to Success

Honest Assessment

Maine’s solitary reform successes were built upon an honest assessment of how Maine’s prison officials were using long-term isolation and the effect that isolation was having on prisoners. This is, in itself, remarkable. Most reform efforts are met with apologism and sophistry—“this is the only way to do things, it isn’t as bad as you think, and you really don’t understand how the system works.” That is a very difficult barrier for advocates—most of whom, most of the time, are working outside the system they are trying to reform.

The second-to-last step that led to Maine’s remarkable overhaul of its solitary system—

View of recreation area at Maine State Prison

right before Commissioner Ponte created and implemented the new governing policies, but after the long years of legislative advocacy, negotiations, and litigation threats—was an investigation of Maine’s SMU by government officials. Normally, the prospect of government officials investigating themselves would not inspire a great deal of confidence or enthusiasm by advocates. At best, the investigators would normally be predisposed to present their co-workers and superiors in a favorable light, and at worst the

investigatory impulses would normally be captured by the greater interest in maintaining the status quo. One would expect this to be especially true in a specialized field, such as corrections, where there is a sharp divide between insiders and outsiders and a strong concern over basic safety that permeates even the most modest policy challenges.

Luckily, that was not the dynamic that emerged in Maine. As described before, the Maine Legislature charged the corrections commissioner to consult with a small subcommittee of a relatively-inactive policy setting board—the Mental Health and Substance Abuse Focus Group of the Maine Board of Corrections—in order to review “due process procedures and other policies related to the placement of special management prisoners.” That group went deeper and further than anyone—advocates or corrections professionals—expected. Their report documented that there were, in fact, significant problems with the way that long-term isolation was used in Maine prisons, and it included many substantial recommendations for ways that solitary could be reformed. These findings and recommendations are discussed in greater detail in a separate section of the report,

but it is the existence of this honest self-critical report—independent of the information contained within it—that is almost more remarkable than the changes that stemmed from the report. After all, very little (if any) of the information in the report was news to the many experts and advocates who worked on solitary reform in Maine, and certainly none of it was news to the prisoners who were forced to endure brutal and dehumanizing treatment. What is news, and is important to note, is that the report – detailing the serious problems with solitary and recommending significant change – was produced by government officials, many of whom had worked in corrections.

It would have been easy for the Group to stick to its narrow mandate of reviewing due process procedures, and it would have been a surprise to nobody if the Group had said that those procedures were adequate or that they satisfied basic constitutional minimums. That, in fact, had been the conclusion of a Maine Assistant Attorney General who was asked to review and explain the due process implications of the Maine State Prison's procedures for imposing solitary confinement. But instead, the Group decided to take a serious and objective look at the entire operation of Maine's SMU—the policies, the actual practices, and the shortcomings in each. Their research reinforced many of the claims and concerns made by advocates, and because the group included both mental health and corrections personnel, their conclusions could not easily be dismissed.

Expert reports and reviews are frequently used in the solitary reform process, and advocates have been extremely fortunate to be able to rely on so many highly credentialed, deeply experienced medical, psychological, and penological experts to help conduct those investigations and produce those documents. Maine's experience, though, points out the value of a different kind of investigation—one conducted by government insiders of their own system. This is not to say that individuals with as much integrity and commitment as the group that conducted the Maine investigation will be easy to find—they will not. But advocates should begin the search and devote serious energy to nurturing any potential they find in government insiders, particularly those with mental health, corrections, or public safety backgrounds. The Maine report ended up being one of the most important components fueling the state's reform efforts – and it had the impact it did because of who the authors were (insiders) and where they were from (Maine).

Organizing and Cooperation

Most of the history of Maine's solitary reform campaign was antagonistic. Lawsuits were brought, and more lawsuits were threatened. Solitary reform legislation was proposed and debated, which the MDOC leadership viewed as a hostile and unjustified intrusion into their sphere of operations. They marshaled every available resource—lobbying, personal appeals, a media campaign, demonstrations by staff and their family members, dire warnings of riots and mayhem—to oppose it. Many legislators and other government officials were dismissive of the scientific and medical claims of advocates, and of those advocates themselves. As just one example: Dr. Grassian has studied the mental health

consequences of long-term isolation for decades. His testimony was challenged by the Maine Legislature's Criminal Justice and Public Safety Committee with derisive inquiries about what makes him an expert and why he thought his decades studying prisoners outside of Maine had any applicability to Maine prisoners. It was that kind of campaign.

For their part, the advocates were not shy about using the word "torture" to describe long-term isolation, which upset many corrections officials as well as sympathetic staff members. One staff member asked advocates, repeatedly and incredulously—"You are calling us torturers—how can we work with you after that?"

Harsh words were also accompanied by threats. Commissioner Ponte acknowledged that the threat of litigation by the MCLU played a significant role in creating a sense of urgency. In an interview with Lance Tapley, a Maine journalist who has documented the problems of long-term isolation in Maine's prison, Commissioner Ponte noted that he did not come to Maine looking to reform the use of solitary—the issue was waiting for him, in the form of "threats of lawsuits by the ACLU."

But, despite these antagonisms, the final stages of the Maine campaign were characterized by a great deal of cooperation between advocates and corrections professionals. In large part, this was due to the arrival of a new corrections commissioner, who felt no ownership over the prior policies, who had an interest in working with advocates, and who had not been scarred by previous years of contentiousness. For example, as described before, Commissioner Ponte established a working group with the directive of implementing the recommendations of the Mental Health/Substance Abuse Focus Group's report—not "reviewing and discussing" the recommendations, but "implementing" them. That group includes the commissioner and administrative staff from the MDOC, the warden and deputy warden of the Maine State Prison, the president of the Portland branch of the Maine NAACP, and the co-coordinator of the Maine Prisoner Advocacy Coalition. Outside groups, including the ACLU and the Maine Council of Churches, have had extensive meetings with staff at the Department of Corrections and at the Maine State Prison, and have been given the opportunity to speak with line officers and prisoners about changes to the use of solitary confinement.

Maine represents an example of the need for forceful advocacy (including, sometimes, litigation) and an openness to working collaboratively. Neither strategy on its own was able to bring about broad and deep changes to the entrenched views and practices surrounding solitary confinement. In Maine's case, advocates were only able to switch from antagonism to cooperation after a change in leadership at the Department of Corrections. Hopefully that will not be necessary in every jurisdiction, but it is a dynamic that advocates would do well to notice, consider, and take advantage of when possible.

Overcoming Institutional Inertia

The first challenge for a solitary reform campaign is overcoming inertia. Using long-term isolation to punish prisoners has been the normal practice in the United States for a very long time—as Commissioner Ponte put it, “It’s how we were brought up.”⁷⁰ And, unfortunately, overcoming that resistance to change is not easy. Despite volumes of evidence, settlements and court decisions, and the experiences of places like Maine and Mississippi, the Director of the Federal Bureau of

Maine State Prison

Prisons nonetheless told a Senate hearing in 2012 that the Bureau hardly uses long-term isolation, and that solitary confinement not really a problem anyway.⁷¹ Since the Federal Bureau of Prisons is the largest prison system in the country, the director’s views and lack of concern carry unfortunate weight.

But, by telling prisoners’ stories, sharing the medical science in support of reform, reminding people of their moral obligation to treat other human beings with dignity, and applying judicious pressure, inertia can eventually be overcome.

Once that happens, advocates must find ways to overcome the next set of barriers—the predictable counter-arguments in support of the status quo. These, too, can be overcome, but it will be more challenging. Luckily, Maine’s experience can help.

Is It Safe?

Safety is the primary objection that sinks every unsuccessful prison reform effort—it was successfully deployed by Maine’s former corrections commissioner, Martin Magnusson, to derail proposed legislation, and it was echoed by every unsupportive legislator. Nobody wants to be responsible for needlessly risking the safety of corrections staff or prisoners, and, faced with the specter of that possibility, many decision makers will find it easier to simply do nothing.

But, given the experiences in Maine, the safety excuse is no longer a tenable argument for completely blocking reform. Even after reducing the population of the SMU by more

than half, Maine has seen no statistically significant rise in incidents of violence. In fact, by some measures, the violence has decreased. Commissioner Ponte requires regular data collection concerning violent incidents, and he reviews that data regularly. He noted in August 2102 that “the violence in the population is a little better than before we made the changes. You could say it is about the same—it hasn’t really gone up or gone down, it is about the same.”⁷² Inevitably, there will be serious violent incidents in prison. But Maine’s experience shows that using long-term isolation to punish prisoners does not prevent to such incidents. Prisons can punish prisoners in more humane ways than long-term isolation without risking anyone’s safety.

Are There Any Alternatives?

Long-term isolation has been the punishment of choice for so long in so many prisons and jails that it is difficult for corrections officials to imagine any other way of doing things. Solitary, they will insist, is the only tool they have for punishing those prisoners who will not follow the rules.

Unlike the safety argument (which the public may be willing to accept on face value), this excuse should not easily gain traction with the public, judges, or legislators. After all, this is prison—there are an endless number of things that staff can do to enforce rules that do not involve solitary confinement. In Maine, these alternatives include short-term confinement within the general population unit, temporary loss of work privileges, temporary loss of contact visits, and limits on numbers of approved visitors. On top of that, the Maine State Prison has trained its corrections staff to look for ways to defuse situations before there are violations of the rules. Staff are trained to take copious notes on prisoner interactions, so that they are able to anticipate problems. They are also trained in “verbal judo”—a technique for redirecting a prisoner’s energy and de-escalating a situation.

Not only are there plenty of disciplinary alternatives to solitary confinement, but the alternatives actually work much better. Prisons do not impose discipline for its own sake (if they do, that is another problem altogether); they impose discipline to correct behavior and keep people safe. But, using solitary confinement as a form of discipline makes it so that prisoners lose the ability to control themselves and their thoughts, which means they are less likely to act rationally and correctly in the future. That, in turn, makes everyone less safe—guards, other prisoners, and the public.

Is Reform Really Worth the Effort?

Unfortunately, it is a widely held view in the national corrections community that reform is not worth the effort. Commissioner Ponte shared that he initially learned about the process of solitary reform from Mississippi’s Commissioner Christopher Epps at a national meeting of corrections commissioners. But, he found that few of his colleagues were

interested in learning more: “there are not a lot of people saying, ‘Hey what’d you do and how’d you do that?’”⁷³ Some people will be persuaded by the moral case against torture, and others will be persuaded by the medical concerns or the public policy arguments. But, for those who are still unpersuaded, there is one important remaining response: money.

It costs two to three times as much money to keep a prisoner in solitary confinement as it does to keep him or her in the general population. In Maine, a prisoner in the SMU was not allowed to go anywhere without full shackles and two guards for escorts. A prisoner in Maine’s SMU would have arm and leg shackles placed on for a 10-foot walk to the shower cell, and the two guards that were needed to escort that prisoner were not available for any of the other tasks that needed to be performed at the prison during that shower. Prisoners in Maine’s SMU, and in analogous facilities around the country, were not allowed to go to the dining hall for meals, which meant that staff needed to package up the meals, bring the meals to the SMU, and then bring the dirty dishes back to the dining hall. In prison, staff time equals money, and Maine (like most states) spends inordinate amounts of money on solitary confinement that could be better spent elsewhere. After all, under Maine’s previous policies, prisoners might be housed in the SMU for all sorts of reasons, very few of which correlated with a tendency towards violence. But, the blanket security practices at the SMU made it an extremely expensive facility to operate, in addition to all the related costs that stem from the long-term effects of solitary confinement.

The money Maine now saves on its SMU can be put towards programing and facilities, which is especially important given the financial crisis that the state has experienced in recent years. New money from the state budget has been extremely hard to come by, and solitary reform provided a way for the MDOC to free up money that was being spent unnecessarily. That process should appeal to decision-makers across the country, no matter how they feel about the moral or medical case for solitary reform.

Do Advocates Really Understand?

The leaders of Maine’s solitary reform campaign were doctors, lawyers, clergy, parents, spouses, organizers, and former prisoners. Despite concerted recruitment efforts, though, the campaign did not include any corrections officers. Many of the people involved had spent substantial amounts of time in prisons and jails, and a number of the leaders, like former State Representative Stan Moody, had spent time as chaplains at various facilities. But reform opponents were still enthusiastic about claiming superior knowledge based on personal experience. Advocates were told that if they really knew what it was like in prisons and jails, they would have a different position—maybe they would believe that long-term isolation did not cause health problems, or maybe they would believe that these problems did not matter because prisoners deserve whatever ill treatment they receive. A desire to reform the use of solitary confinement will frequently be portrayed as evidence of a lack of understanding.

Fortunately, advocates for solitary reform have a growing list of allies with substantial personal experience working in corrections, including Maine's Corrections Commissioner Ponte and Mississippi's Corrections Commissioner Epps. Both of these men and many of their senior staff have gone through the process of reducing and reforming the use of solitary confinement, and they have said on multiple occasions that it is a worthwhile undertaking. Here is Commissioner Epps, who has also served as the President of the American Correctional Association, testifying before the Senate Judiciary Committee:

The Mississippi Department of Corrections administrative segregation reforms resulted in a 75.6% reduction in the administrative segregation population from over 1,300 in 2007 to 316 by June 2012. Because Mississippi's total adult inmate population is 21,982 right now, that means that 1.4% are currently in administrative segregation. The administrative segregation population reduction has not resulted in an increase in serious incidents. The administrative segregation reduction along with the implementation of faith-based and other programs has actually led to 50% fewer violent incidents at the penitentiary.⁷⁴

And here is the testimony of Commissioner Ponte:

The MDOC has been able to keep one segregation pod closed for the last year. There has not been an increase in violent incidents as a result. Efforts to improve the unit management approach are still underway as the culture shifts from punitive responses to more positive responses. Shifting thinking among staff is challenging and takes time and education. As positive outcomes are seen and experienced, staff buy-in increases.⁷⁵

Maine State Prison

Inevitably, advocates for reform will encounter influential decisionmakers who do not want to listen to science, who do not want to listen to doctors, who do not care what clergy have to say, and who are unmoved by the first-person accounts of people who have actually experienced long-term isolation. They may not want to hear from the ACLU either. Maine advocates experienced all those forms of hostility, and the last refuge argument was, "you just don't understand."

To them, you can say that Commissioner Ponte understands and the head of the American Correctional Association understands as well. They understand, and they believe that reforming the use of solitary in prisons and jails is in everyone's best interest. With each passing year, as more and more states undertake reform efforts, there will be more corrections officials available to testify to the possibility of safely and efficiently moving away from a corrections system that depends on locking people in a dark room, alone, to lose their minds.

The Lessons of The Maine Reform Campaign

It is the great hope of prison reformers in Maine (including this author) that Maine will serve as an example for what is possible in solitary confinement reform. Commissioner Ponte has noted that Mississippi's solitary reform efforts were inspiring to him—once he heard the story of Mississippi Corrections Commissioner Christopher Epps's actions, he felt that “if he can do that in Mississippi I know we can do that in Maine.”⁷⁶ In turn, Commissioner Ponte hopes that Maine's successes will be inspiring to others.

Lesson One: Bring All the Pieces Together

Advocates, like the MCLU's Alysia Melnick, hope that colleagues around the country recognize how many different pieces there are to a successful solitary reform campaign, and how they can fit together:

*It's crucial that the benefits of reducing and reforming use of solitary be communicated from all perspectives – meaning, this isn't just about humane treatment of prisoners, or our moral and societal obligation to refrain from torturing those we incarcerate. It's about that – but it's also about good public policy, and about reforming a practice that's proven so costly to our nation not just in terms of ruined lives of the prisoners themselves, but also in terms of increased recidivism, injuries to staff and other inmates, and the tremendous fiscal burden on taxpayers. Overuse and abuse of solitary serves no one.*⁷⁷

Maine's solitary reform campaign was made up of diverse voices and perspectives committed to the same goals: doctors, clergy, lawyers, prisoners, family members, legislators, and volunteers who were simply moved to action. Each of these people had different critical roles to play, personal stories to share, medical information to explain, and moral visions to proclaim. The reform efforts would not have been possible without all of them. Advocates around the country who are embarking on a solitary reform effort should pull together the largest, most diverse coalition that can be successfully organized and managed.

In Maine, the faith community provided important moral leadership and represented a perspective free from partisan influence. Rev. Richard Kilmer of the National Religious Coalition Against Torture (“NRCAT”) is a resident of Maine, and he was committed to seeing his home state light the way for other states across the country. As Rev. Kilmer noted,

*The National Religious Campaign Against Torture advocates for reform because prolonged solitary confinement destroys prisoners' minds, denies the opportunity for community, and violates the inherent, God-given dignity and worth of every person. As people of faith, we are called to speak for those in our community who have no voice, including individuals who are incarcerated.*⁷⁸

NRCAT's participation led, in turn, to the involvement of the Maine Council of Churches, for whom the campaign was a way of "affirming the inherent worth and dignity of every person, who is made in the image of God."⁷⁹ And, once the Maine Council of Churches became involved, its individual member congregations became interested, which led to volunteers writing letters, attending hearings, and visiting prisoners to collect stories.

Lesson Two: The Importance of Leadership

A reform effort will not manage itself, and a shared goal is not the same as a shared plan. Organizations like the ACLU, with experience in legal, legislative, and public advocacy, can provide help getting reform efforts off the ground, but they are not the only ones and they cannot do it alone. The Maine Prisoner Advocacy Coalition that formed around the solitary reform campaign included both professional advocates (including the ACLU) and grassroots volunteers, many of whom had personal connections to the problems associated with the overuse of solitary confinement—either because they themselves had experienced it, or because they had tried to help friends or relatives rebuild their lives after a long stay in solitary. That coalition, in turn, provided leadership to the larger community of concerned individuals who were able to pressure their elected representatives to support reform.

Leadership from the advocacy community is, unfortunately, only one ingredient. Maine's reforms were only possible after leadership in the state correction system made reform a priority. Identifying and encouraging corrections officials who are interested in following in the path set by Commissioner Ponte ought to be a goal of a successful reform effort.

Lesson Three: The Judicious and Timely Application of Pressure

In the end, the MDOC overhauled its use of long-term isolation without being ordered to by a judge or a piece of legislation. But, that end would never have been reached if not for the application of pressure along the way in the form of threatened lawsuits and proposed legislation. Maine's Corrections Commissioner acknowledged this: when asked in an interview about the motivation for change, he noted that he did not come to Maine looking to reform the use of solitary but that the issue was waiting for him in the form of "threats of lawsuits by the ACLU."⁸⁰

Credible legal threats and well-crafted legislation do not appear by magic. Because of the ACLU's long history of litigating complex prisoner rights cases, and its nationwide presence, it can be an important resource in developing a strategy for applying the right types of pressure at the right time. There is a saying from Abraham Maslow that it is tempting, if all you have is a hammer, to treat everything like a nail. One of the great strengths of the ACLU is that it has access to a diverse selection of tools. The problem of

solitary confinement is one in which different settings, and different moments, will demand the application of different forms of pressure: a lawsuit, a public education campaign, legislation, grassroots pressure, or some combination. In preparing for a solitary reform campaign, advocates should think about how to maximize the efficiency of that pressure.

Conclusion

When the pressure does eventually cause the resistance to change to give way, and when the campaign begins to experience more successes than setbacks, it will be as a result of the combined commitments of every sort of person. No campaign will be identical, but the movement to reform solitary confinement is developing both volume and momentum. As remarkable as the reforms in Maine have been, there is reason to hope that in coming years they will seem insignificant.

I. INTRODUCTION

As the first human rights treaty of the twenty-first century, the United Nations Convention on the Rights of Persons with Disabilities (CRPD) aims to protect the “world’s largest minority”—some 650 million people in the world living with a disability.² It is the most recent and “the most extensive recognition of the human rights of persons with disabilities.”³ The United Nations General Assembly approved the text of the CRPD on December 13, 2006, in order “to promote, protect and ensure the full and equal enjoyment of all human rights and fundamental freedoms by all persons with disabilities, and to promote respect for their inherent dignity.”⁴ On March 30, 2007, the CRPD opened for signatures, and eighty-two countries signed the convention with forty-four signing the Optional Protocol—the largest number of signatories on an opening day in the history of the United Nations.⁵ On May 3, 2008, thirty days after the twentieth ratification, the CRPD became legally binding on all state parties.⁶ Today, the CRPD has 149 signatures and 103 ratifications.⁷ The Optional Protocol for the CRPD has 90 signatures and 62 ratifications.⁸ As a result, this convention will have far-reaching implications for those with disabilities around the world and for any nation whose domestic policies violate the precepts of the CRPD.⁹

On July 24, 2009, President Obama signed the CRPD, referring to it as a “historic piece of civil rights legislation” that furthers “our global commitment to fundamental human rights for persons with disabilities.”¹⁰ While President Obama has not yet submitted the CRPD to the Senate, a requirement for future ratification,¹¹ the potential implications of this document for domestic policy cannot be ignored. Specifically, this piece will analyze whether the use of supermax solitary confinement is consistent with the CRPD.¹²

Supermax solitary confinement prison facilities are designed for mass and indefinite solitary confinement.¹³ They deprive the prisoner of virtually all forms of human interaction and sensory stimulation. Unlike traditional solitary confinement where inmates are placed briefly into cells as a form of punishment, supermax solitary facilities keep inmates in confinement for years on end and use solitary confinement as a “prison management tool.”¹⁴ In other words, supermax solitary confinement is a form of long-term confinement as opposed to a brief punishment for a disciplinary infraction.

While supermax solitary confinement units vary in their details, they share certain common features. The cells in supermax solitary units are basically the equivalent of a small “concrete exercise pen”¹⁵ in which prisoners must live for months and possibly years. Deprivation of sensory experience, human interaction, and intellectual stimulation are hallmarks of supermax confinement. In many instances, the cells are designed without color and are furnished with only a stainless steel sink, a toilet, and a concrete bed and writing desk.¹⁶ Inmates are denied access to a clock, television, radio, computer, telephone, and books (except for

16. Tracy Hresko, Article, *In the Cellars of the Hollow Men: Use of Solitary Confinement in*

a religious text).¹⁷ They are subjected to “almost complete idleness” for indefinite periods of time.¹⁸ When there is contact with other people, it is usually brief, routine, and superficial, such as being escorted to the showers by a guard.¹⁹

Confinement in a supermax facility typically has profound, long-lasting, and adverse effects on the majority of individuals. One description of life at the Pelican Bay State Prison is as follows: “One inmate stands in the middle of his cell, hollering at no one in particular. Another bangs his head against the door. Many of the inmates are naked, some exposing themselves.”²⁰ The monotony and sensory deprivation of everyday life become overwhelming. “There is simply nothing to do. Sit in your bathroom alone with none of your intimate possessions and try to imagine years of it, week after week. Slowly it tears you down, mentally and physically.”²¹ Tommy Silverstein, who was in solitary confinement for over twenty-five years, described solitary confinement as a “slow constant peeling of the skin, stripping of the flesh.”²²

The criteria for the use of supermax confinement differ by facility, and the length of such confinement is left to the discretion of prison officials.²³ Supporters of supermax confinement in the United States typically offer several justifications for its use. Often supermax facilities claim to house the “worst of the worst”²⁴—prisoners who are extremely dangerous to others and utterly incorrigible—though this is quite debatable.²⁵ Supermax confinement is sometimes used as a way of protecting

TIMES, July 17, 2011, <http://www.nytimes.com/2011/07/18/opinion/18dayan.html> (stating that the decision to place an inmate in solitary is “haphazard and

certain prisoners from attacks by others,²⁶ and as a form of punishment for disciplinary infractions—nonviolent as well as violent.²⁷ Prison officials also place inmates in solitary merely because the inmates are “perceived as troublemakers or simply disliked by correctional officers.”²⁸ Inmates have also been placed in supermax confinement in order to suppress activity that prison officials deem “dissident”—a category that can include helping other inmates with habeas petitions or trying to bring suit against the prison administration.²⁹ Finally, inmates may be confined to supermax confinement for purely administrative reasons—*e.g.*, prison overcrowding or a lack of more suitable space when they are ill.³⁰ In general, the criteria behind supermax solitary’s use varies from facility to facility, and the term of confinement is entirely dependent on the discretion of prison officials.³¹

Today the use of supermax solitary confinement in the U.S. prison system is on the rise. Conservative estimates report that there are at least 25,000 inmates in supermax solitary confinement in the United States.³² Nicholas Katzenbach, the former Attorney General of the United States, noted that “the growth rate in the number of prisoners housed in segregation far outpaced the growth rate of the overall prison population.”³³ The increase of supermax prisons and solitary confinement has been called “perhaps the most troubling” human rights trend in the United States corrections system.³⁴ The Commission on Safety and Abuse in America’s Prisons stated that after ten days in solitary confinement, there are “practically no benefits” to such confinement, while the “harm

arbitrary” and that while prison officials claim that those imprisoned in the Pelican Bay State Prison are “the worst of the worst . . . often it is the most vulnerable, especially the mentally ill, not the most violent, who end up in indefinite isolation”).

is clear.”³⁵

Equally important, there are alternatives to the use of supermax facilities. For example, in the 1980’s, Great Britain prison officials began to reduce isolation and to offer inmates access to work and educational opportunities within the prison.³⁶ The officials also began to allow inmates more free time for exercise and phone calls.³⁷ This change caused “impressive” results, and now the use of solitary confinement in Great Britain is negligible.³⁸

This article argues that the use of supermax facilities is inconsistent with the CRPD. Confining an individual to a supermax facility in essence creates a mental disability. While the major concern of the CRPD is to protect “the rights and development of people with disabilities,”³⁹ it cannot be consistent with the CRPD for the government to make someone disabled. Accordingly, the use of supermax facilities violates the CRPD.⁴⁰

Because the disability inflicted by supermax facilities is inconsistent with the CRPD, what effect will ratification of the convention have? This article addresses a major policy question heretofore not analyzed in the already significant body of commentary on the CRPD.⁴¹ Specifically, with what reservations, understandings, and declarations might the Senate approve the treaty? The United States has an established pattern of ratification of human rights treaties, the ratification of which is typically accompanied by a standard package of reservations, understandings, and declarations.⁴² This package is designed to modify the

substantive commitments the United States takes on, bring them into conformity with existing domestic U.S. law, and ensure that U.S. courts lack jurisdiction to enforce the treaty.

Were the Senate to take up the question of ratifying the CRPD, it would likely give serious consideration to exempting supermax facilities from its scope. This article will analyze how it might seek to do so, arguing that it may be extraordinarily difficult to formulate a reservation or understanding that is both politically acceptable and successful in exempting supermax facilities from international scrutiny under the CRPD.

Part II of this article discusses the background of the CRPD and the concept of disablement. Part III presents the history and current use of solitary confinement in the United States. Part IV discusses the medical and psychological effects of supermax solitary confinement and the implications of those effects in reference to the CRPD. Following that, Part V explains an additional avenue of relief for inmates under Article 15 of the CRPD. Lastly, Part VI analyzes possible reservations, understandings, and other procedural mechanisms that the United States might employ in order to limit the effect of a possible ratification of the CRPD.

II. THE CRPD

The CRPD aims to protect the civil, political, economic, social, and cultural rights of disabled persons. The rights protected by the CRPD include the right to equality before the law without discrimination,⁴³ the right to physical and mental integrity,⁴⁴ freedom of movement⁴⁵ and work,⁴⁶ and the right to an adequate standard of living.⁴⁷ Article 1 of CRPD defines those who are disabled as those who have “long-term physical, mental, intellectual or sensory impairments.”⁴⁸ The Secretariat for the CRPD stated that a disability “should be seen as the result of the interaction between a person and his/her environment” and “not something that resides in the individual as the result of some impairment.”⁴⁹

COVENANT ON CIVIL AND POLITICAL RIGHTS, S. Exec. Doc. No. 102–123, Cong., 2d Sess. 6–12 (1992), *reprinted in* 31 I.L.M. 645 (1992) [hereinafter US ICCPR Conditions].

47. *Id.* art. 28.

48. *Id.* art. 1; *see also* *World Report on Disability*, *supra* note 2, at 21 (defining a disability as a “complex multidimensional experience [that] poses several challenges for measurement. Approaches to measuring disability vary across countries and influence the results.”).

49. *See* Secretariat for the Convention on the Rights of Persons with Disabilities, *Focus of the Convention*, U.N. ENABLE, <http://www.un.org/disabilities/default.asp?id=216> (last visited Aug. 16, 2011) [hereinafter *Focus of the Convention*].

The Secretariat for the CRPD has also made it clear that the CRPD definition of a disabled person is not exhaustive and does not “exclude broader categories of persons . . . with short-term disabilities or persons who had disabilities in the past.”⁵⁰ In other words, the CRPD does not appear to impose a temporal limitation on disabilities based on the broad language and interpretations of Article 1. For example, one who suffers from a mental disability that is either permanent *or* temporary would be covered by the CRPD.

It is also important to note that both physical and mental impairments are recognized under Article 1 of the CRPD. The Secretariat for the CRPD acknowledged on his official website, U.N. Enable, that the Article 1 definition is not an exhaustive definition for individuals who might be able to claim relief under the CRPD.⁵¹ Therefore, the mental effects produced by supermax solitary would not be excluded under Article 1 of the CRPD.

A. *The CRPD and State-Imposed Disabilities*

As noted, the primary aim of the CRPD is to ensure the full equality and integration into society of people who have disabilities.⁵² But there is an equally fundamental right under the CRPD—specifically, the right not to be disabled by government action. Support for this proposition is found in the text and drafting history of the treaty.

Article 4(d) of the CRPD requires states to “refrain from engaging in any act or practice that is inconsistent with the present Convention”⁵³ It cannot be consistent with the CRPD for a state to impose a disability on someone. Consider what an alternate interpretation would mean: A state party could deliberately disable an individual, and then would be obligated to take a variety of measures designed to ensure that the disability the state imposed has as little limiting or restrictive effect on that person as possible. To put it another way, by this reading, a state party would be free to take an action, but would then be obligated to undo its effects as much as possible. Any such reading of the CRPD would be inconsistent with the fundamental requirement of international law that a treaty be “interpreted in good faith . . . in light of its object and purpose.”⁵⁴ In fact, any such reading would be “manifestly absurd” or “unreasonable.”⁵⁵

55. *Id.* art. 32(b).

The preparatory materials to the CRPD state that “[d]isability often arises from war and inhumane treatment” and that steps must be taken to protect “those who have become disabled as a result of inhumane treatment as well as to promote prevention.”⁵⁶ Consistent with this admonition, the Secretary-General spoke on the day of the adoption of the CRPD of the “need to enable every person to contribute to the best of their abilities and potential.”⁵⁷ A state that imposes a disability on an individual is plainly acting contrary to that need.⁵⁸ The *World Report on Disability*, meant to facilitate the implementation of the CRPD, also highlights the importance of preventing health conditions that cause disabilities such as nutrition and preventable diseases⁵⁹ and the increased risk of disability associated with poverty.⁶⁰ The report goes on to mention the “huge effect” environment can have on both the prevalence and extent of a person’s disability.⁶¹ For example, environmental changes such as armed conflict and natural disasters can disable individuals.⁶²

B. *Disablement as a Legal Concept*

The term “disablement” here refers to state action, intentionally undertaken, that predictably results in the imposition of a disability on the majority of the population subjected to the state action.⁶³ It is not necessary to show that state officials are motivated by a desire that those

56. Secretariat for the Convention on the Rights of Persons with Disabilities, *Human Rights and Persons with Disabilities*, U.N. ENABLE (2007), <http://www.un.org/esa/socdev/enable/rights/humanrights.htm>; see also U.N. 62. *Id.*

63. Some scholars have used the term “disablement” in a broader though related sense, as the social, political, legal, and economic factors by which people who have disabilities are mistreated. Factors such as a lack of medical care and nutrition in prison constitute a form of such disablement. See Marta Russell & Jean Stewart, *Disablement, Prison & Historical Segregation*, 53 MONTHLY REV. 3 (2001). Beth Ribet analyzes disablement in the context of prison rape, where a disability is created through external factors and suffering. Beth Ribet, *Naming Prison Rape as Disablement: A Critical Analysis of the Prison Litigation Reform Act, the Americans with Disabilities Act, and the Imperatives of Survivor-Oriented Advocacy*, 17 VA. J. SOC. POL’Y & L. 281, 285 (2010) (referring to disablement as “the process by which some disabilities . . . are produced by violence, inequality, and subordination” in the context of U.S. prisons); see also *World Report on Disability*, *supra* note 2, at 169 (stating that “[e]nvironments—physical, social, and attitudinal—can either disable people with impairments or foster their participation and

subjected to the policy become disabled, but it may be easiest to set out the legal elements of disablement in the context of state action that is so motivated—deliberate physical maiming as punishment.

In 2010, a Saudi Arabian judge asked several hospitals whether they would sever a man's spinal cord as punishment for paralyzing another man during a fight.⁶⁴ There is no sign the punishment was ever actually imposed, but it is worth analyzing whether Saudi Arabia would have violated its obligations under the CRPD had the severing been carried out.⁶⁵ Additionally, an example of disablement occurred in Iran in 2008, when Iranian authorities amputated the hand of a young man as punishment for stealing.⁶⁶ Like Saudi Arabia, Iran is a party to the CRPD.⁶⁷

These examples of governmental action inflicting permanent disabilities would certainly qualify as a violation of the CRPD. "Disablement" has four basic elements, all of which are present here. First, both of these actions were official government actions. In both the Iran and Saudi Arabia examples, a judge imposed a criminal sentence. However, the scope of the CRPD may not necessarily be limited to state action. For instance, the CRPD guarantees protection of disabled people from "all forms of exploitation, violence and abuse,"⁶⁸ an obligation which may entail state action to protect people with disabilities from private abuse. But whatever its scope may be, it certainly includes all official state action.

Second, the result of this action is a permanent disability under Article 1 of the CRPD. In the Iran example, the victim would be permanently deprived of the use of his or her hand. In the Saudi Arabia example, were the spine-severing carried out, the victim would permanently

inclusion"). The *World Report* also enumerates types of "disabling barriers" such as negative attitudes and inadequate policies and standards. *Id.* at 262.

68. CRPD, *supra* note 4, art. 16(2).

lose the ability to walk. Article 1 of the CRPD defines “[p]ersons with disabilities” as those who have “long-term physical, mental, intellectual or sensory impairments . . . [that] may hinder their full and effective participation in society on an equal basis with others.”⁶⁹ The severing of a spinal cord and the chopping off of a hand undoubtedly meet the Article 1 definition of “long-term,” given that these are permanent disabilities for which there is no hope of recovery. It should be emphasized, though, that Article 1 imposes no permanency requirement on a disability, but rather the requirement of “long-term.”⁷⁰ The second part of Article 1 is also satisfied in these examples. The severing of a spinal cord or hand creates a disability that prevents one’s full and effective participation in society on an equal basis with others. These actions do so by depriving someone of the use of his hand or his ability to walk.⁷¹

Third, in both instances, there is intent to impose a disability. “Intent” for this purpose means intentionally undertaking an action that the state knows or should know will result in disablement. There is nothing unusual in international law about such an understanding of intent. For example, under Article 30(2) of the Rome Statute of the International Criminal Court, an individual has “intent” to cause a consequence when he or she “means to engage in . . . conduct ” and “is aware that . . . [the consequence] will occur in the ordinary course of events.”⁷² Under Article 1 of the Convention Against Torture, moreover, “consent or acquiescence” is sufficient to show that the torture was intentionally inflicted.⁷³ In the cases of Saudi Arabia and Iran, government authorities took a specific action, which they knew would permanently disable. Thus the disablement would be intentional.

One might argue that there is a lack of intent to inflict a disability on these individuals, as the true reason for purposeful maiming is to uphold religious law. The disability that results is simply a side-product of that true intention. However, this argument confounds the subjective motive of the governmental officials with that of an objective analysis of an overall intent to disable. From an objective standpoint, the requisite intent is present because officials were fully aware of the consequences of deliberately chopping off an individual’s hand. There is an intent to

69. *Id.* art. 1.

70. *Id.* Indeed, the Secretariat of the CRPD has suggested that the CRPD can be construed as to cover those with “short-term disabilities or persons who had disabilities in the past.” See *Focus of the Convention*, *supra* note 49.

71. CRPD, *supra* note 4, art. 4.

72. Rome Statute of the International Criminal Court, art. 30(2), July 17, 1998, A/CONF.183/9.

73. United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, art. 1(1), Dec. 10, 1984, G.A. Res. 39/46, Annex, 39 U.N. GAOR Supp. No. 51, U.N. Doc. A/39/51 (1984) [hereinafter CAT].

chop a person's hand off, and the resulting physical disability is the objectively foreseeable consequence of that intent. Any subjective religious or other purpose is irrelevant. In other words, the element of intent can be the knowledge that such an action will logically cause the disability and can exist in conjunction with other motives such as maintaining security.

One additional qualification to the definition of intent is needed. What is *not* covered by an intent standard is strict liability or negligence. Many government actions, legitimate in themselves, might occasionally and unpredictably result in an individual becoming disabled. A police officer using reasonable force to save someone's life might accidentally shoot someone and cause him to be paralyzed. At that point the obligations of the CRPD would become relevant, but the state's action in causing the paralysis would not constitute a violation. Where a state action that is intentionally undertaken predictably causes a disability in the majority of cases, however, it is nonsensical to say that the imposition of the disability was not intended.⁷⁴

Fourth, these two examples present conduct that produces a disability in *all* cases. In other words, there is no chance that an individual will *not* be disabled once his spinal cord is severed or her hand is chopped off. There is, however, no reason why the concept of disablement should

74. One might ask whether a state's use of armed force violates the CRPD, especially given that it predictably causes disability on the part of many individuals, civilian and soldier, enemy and national. The answer is no: The CRPD is not the Kellogg-Briand Pact. *See* Treaty Providing for the Renunciation of War as an Instrument of National Policy, Aug. 27, 1928, art. 1, 46 Stat. 2343, TS No. 796, 94 LNTS 57. International law traditionally distinguishes between *jus ad bellum* (the right to engage in war) and *jus in bello* (the law governing the conduct of war). With regard to the former, just as a state party to a treaty that bans capital punishment is not absolutely barred from the use of armed force even though doing so will predictably result in many deaths, so, too, is it reasonable to read the CRPD as having nothing to say about a state's resort to armed force. Similarly, it is clear that whatever application the International Covenant on Civil and Political Rights (ICCPR) may have in time of war, it does not govern a state's decision to resort to armed force—a matter governed by the U.N. Charter. *See* U.N. Charter, arts. 2(4), 51. Confining the CRPD to actions other than the decision to use armed force has no impact on its applicability to all other actions, including the treatment of prisoners, veterans, or the population at large.

With regard to the international law governing the conduct of war, Article 3 of the Geneva Convention bars "mutilation" of civilians, prisoners of war, and the wounded, but not, of course, soldiers taking part in combat. Geneva Convention Relative to the Treatment of Prisoners of War, art. 3, Aug. 12, 1949, 6 U.S.T. 3316, 75 U.N.T.S.135. *See also* Theodor Meron, *The Humanization of Humanitarian Law*, 94 AM. J. INT'L L. 239 (2000); Kenneth Watkin, *Controlling the Use of Force: A Role for Human Rights Norms in Contemporary Armed Conflict*, 98 AM. J. INT'L L. 1 (2004). There is controversy over whether international human rights law has any application here, or whether armed conflict is governed solely by international humanitarian law. The CRPD is part of human rights law, and there is no reason to think that the question of its applicability to how war is conducted is any different from that of, say, the ICCPR. It is not necessary for the argument in this article to resolve this larger question. If human rights law applies in some way to the conduct of war, then so would the CRPD; if it does not, then the CRPD would not.

be limited to actions that have one hundred percent efficacy in producing a disability. If a state action results in a disability for a particular individual, it is irrelevant that the imposition of that action on other individuals might not have produced a disability. The affected individual is still disabled. The question of how often the action results in disability can be relevant to intent, as noted, but less than perfect efficacy overall is no defense in an individual case.

In short, physical maiming of the sort that Iran committed and a Saudi judge considered is a clear violation of the CRPD, and so is the use of supermax confinement. First, like the decision to maim, the decision to submit an inmate to supermax confinement is obviously state action.⁷⁵ Second, as will be shown in Part IV.B., solitary confinement produces an Article 1 disability because the psychiatric effects of prolonged supermax can be long-term and of a devastating nature.⁷⁶ Third, the production of a disability is intentional. Once again, the motive—observance of religious law, a desire to punish or control—is irrelevant. What matters is that a prisoner does not happen into supermax confinement; rather, a prison administrator intentionally authorizes placing the individual into solitary confinement for punishment or for other purposes. Fourth, the disability occurs in a majority of cases. While the devastating effects of solitary confinement do not manifest themselves one hundred percent of the time, as they do in the context of purposeful maiming, intentionally subjecting an inmate to long-term solitary confinement will more often than not result in severe and long-term psychological impairments.⁷⁷

III. SUPERMAX SOLITARY CONFINEMENT

A. *History of Supermax Solitary Confinement*

The rise of supermax prison facilities owes much to prison overcrowding. From 1975 to 2000, the rate of incarceration in the United States quintupled.⁷⁸ The size of many state prison systems doubled.⁷⁹ Prisoner administrators could no longer manage the large number of inmates or the “inevitable tensions and conflicts that festered behind the

75. The analysis here assumes that the prison is run by the government. Where a prison is run by a private contractor, the article assumes that the state would still be responsible, but an analysis of this issue is beyond the scope of the article.

76. See Stuart Grassian, *Psychiatric Effects of Solitary Confinement*, 22 J.L. & POL'Y 325 (2006), law.wustl.edu/journal/22/p325grassian.pdf.

walls.”⁸⁰ Supermax was the solution. In 1983, the first supermax prison facility in the United States opened in Marion, Illinois, in reaction to inmates killing two of the Marion prison guards.⁸¹ Today, most supermax facilities are modeled after the “Marion Model.”⁸² In this model of incarceration, solitary confinement is used as a disciplinary measure as opposed to a source of rehabilitation.⁸³ This “super-maximum security approach” soon spread to other parts of the United States with the Pelican Bay State Prison, which opened in 1989, followed by the ADX Florence supermax-style prison in Colorado in 1994, the federal government’s main supermax facility.⁸⁴ By 1997, there were fifty-seven supermax prisons in thirty-four states, and by 1998, approximately 20,000 prisoners were held in these facilities.⁸⁵ By 2000, over sixty supermax institutions were open in the United States,⁸⁶ and in 2004, forty-four states had at least one supermax facility.⁸⁷

B. *Current Description of Solitary Confinement in U.S.
Supermax Prisons*

The cells in supermax prisons reflect the purpose of these facilities: “to monitor, to control, to isolate.”⁸⁸

Reflect for a moment on what a small space that is not much larger than a king-sized bed looks, smells, and feels like when someone has lived in it for 23 hours a day, day after day, for years on end. Property is strewn around, stored in whatever makeshift way possible, clothes and bedding soiled from recent use sit in one or another corner or on the floor, the residue of recent meals (that are eaten within a few feet of an open toilet) here and there, on the floor, bunk, or elsewhere in

the cell.⁸⁹

[The cells] are structured to deprive prisoners of most of the things that all but the most callous commentators would concede are basic necessities of life—minimal freedom of movement, the opportunity to touch another human being in friendship or with affection, the ability to engage in meaningful or productive physical or mental activity, and so on.⁹⁰

With virtually around the clock surveillance and a total lack of human contact and interaction, the effects of supermax solitary confinement are truly experiences of “stark sterility and unremitting monotony.”⁹¹ Although the exact conditions of solitary confinement differ by prison, author Leonard Orland gives a basic description of the current physical conditions of supermax solitary confinement:

I was placed in a 4 x 8 foot steel box with no windows, a bare light bulb, a small peephole (which only the guards could control and which was kept closed most of the time), a sink (occupied by three cockroaches), a toilet, and one steel shelf on which, if the guards so desired, a mattress could be placed for sleeping. It was very much like being forced into a very small stalled elevator.⁹²

Generally, the physical layout of supermax facilities is designed to divide and isolate; prisoners in supermax facilities are divided into small and manageable groups of individuals in cell-blocks and then placed in their own individual cells.⁹³ Each facility has four cell-blocks that are called “pods,” each of which has its own shower and recreation areas.⁹⁴

The individual units where inmates are confined are called “secure housing units” (SHUs).⁹⁵ These units are usually about eight feet by six feet in size, which means that these cells are equal to the size of a bathroom.⁹⁶ As in Orland’s description, there is generally a stainless steel sink and toilet, as well as some type of desk and bed.⁹⁷ The walls of the cell are bare and white with no windows.⁹⁸ Usually the only light is a

bare light bulb, which hangs from the ceiling and remains on twenty-four hours a day.⁹⁹ Inmates are unable to control the brightness of their cells and are unable to tell what time of day it is.¹⁰⁰ Prisoners who try to shield the light can be subject to other disciplinary measures.¹⁰¹ The doors of the SHUs are different from the doors used in cells in other parts of the prison.¹⁰² They are “made of solid steel, interrupted only by a small approximately eye-level clear window and a waist-level food slot.”¹⁰³ These doors are made of a heavy-gauge metal, which block all light, in order to prevent inmates from throwing objects at guards and other inmates.¹⁰⁴ Moreover, the door is usually outfitted with strips on each side so as to muffle any possible conversations between inmates in adjacent cells.¹⁰⁵ These doors “effectively cut inmates off from the world outside the cell, muffling sound and severely restricting visual stimulus.”¹⁰⁶ The doors also have the effect of cutting off ventilation in the units, so that the air becomes “heavy and dank.”¹⁰⁷

There is usually no recreational equipment, and so prisoners generally just pace back and forth. The “the image created is hauntingly similar to that of a caged feline pacing in the zoo.”¹⁰⁸ Indeed one inmate in supermax solitary confinement began to think of himself as an animal, stating:

Look at me. They have reduced me to an animal. I can't take care of myself, I smell, my hair is matted together, I eat all of my meals just a few feet away from the toilet in my cell. I am living like an animal. I am afraid I am becoming one.¹⁰⁹

The physical exercise facilities are so limited that they are often referred to as “dog runs.”¹¹⁰ Furthermore, when an inmate leaves his cell, he must usually undergo a “visual strip search” in front of the control tower officers.¹¹¹ When the prisoners are escorted from their cells to the exercise cage, they are usually placed in restraints and are sometimes

also attached to a leash that is held by the escorting officer.¹¹² These protocols have the effect of discouraging many inmates from taking advantage of the recreation time, as leaving the cell is actually more humiliating than remaining in the cell.¹¹³

In some instances, the food in solitary is a tasteless block called nutra-loaf, which contains “just enough nutrition for survival.”¹¹⁴ Inmates consume all meals within their cells, which deprives the prisoners of an invaluable socializing opportunity with other inmates. Thus even mealtime has become another opportunity for sensory deprivation. Inmates in solitary confinement are also forbidden to have a variety of personal objects and educational materials.¹¹⁵ However, in the federal supermax facility, ADX-Florence, educational and religious programs are broadcast through the TV channels of the prison.¹¹⁶

In general, once a prisoner is placed in a SHU, there is very minimal human contact, and the prisoner could go years without actually seeing another human being.¹¹⁷ Overall, it is difficult to pinpoint the average length most prisoners are kept in solitary confinement because so much of the statistics depend on the particular supermax facility as well as the type of prisoner.¹¹⁸ However, once placed in solitary confinement, the prisoner is confined to the SHU for about twenty-two or twenty-three hours a day. The remaining hour or two are for either a brief computer-controlled shower or recreation time.¹¹⁹

Throughout solitary confinement, the inmates are not allowed to talk to other inmates by yelling from cell to cell.¹²⁰ Interaction with prison guards is also severely limited, as prison officials are able to give

all instructions through loud speakers.¹²¹ The only form of habitual human contact that a prisoner in solitary has is when his meal is pushed through a slot in the door.¹²² The heightened security and technology essentially mean that inmates “may go for months or even years without any meaningful social or physical contact.”¹²³

For example, many supermax facilities now employ computerized locking and tracking systems, which allow guards to observe an inmate’s movement without any human interaction.¹²⁴ The inmates are usually watched by camera and speak through intercoms instead of through direct contact with guards.¹²⁵ Also, some newer facilities now use videoconferencing equipment for visits so that there is never any direct human interaction.¹²⁶ Even more disturbing, some supermax facilities use “tele-medicine” and “tele-psychiatry,” which are procedures that allow physicians to “examine” the inmates through the use of television screens located miles away.¹²⁷ Sadly, “tele-medicine” seems like a better option than the alternative of “cell front therapy,” where inmates are required to shout their medical concerns to a physician on the other side of the door, allowing other inmates to hear.¹²⁸ If inmates have a visitor, they are only able to interact with the visitor through a small video screen that is located across the room and has poor sound quality.¹²⁹ During the visit, the inmate must remain handcuffed, shackled, and belly chained.¹³⁰ To make matters worse, in some facilities, only about ten percent of inmates receive visitors at all.¹³¹

The fusion of the old practice of solitary confinement and the more modern and sophisticated technology is what really sets these supermax facilities apart from usual solitary confinement and makes supermax solitary an “extraordinary and extreme form of imprisonment unique in the modern history of corrections.”¹³²

IV. THE MENTAL EFFECTS OF SENSORY DEPRIVATION FROM
SOLITARY CONFINEMENT CONSTITUTE DISABLEMENT
UNDER THE CRPD

A. *Mental Effects*

The mental effects caused by prolonged solitary confinement are well documented and widely recognized in extensive historical evidence, clinical research, and empirical data. Solitary confinement has “serious psychological, psychiatric, and sometimes physiological effects on many prison inmates,” ranging from insomnia to hallucinations to outright insanity.¹³³

The devastating mental effects of solitary confinement were already recognized early in the nineteenth century.¹³⁴ The Cherry Hill prison was built in Philadelphia in 1829, representing an approach to imprisonment that aimed to emphasize isolation and self-reflection over whipping and other corporal punishments. Each prisoner was kept entirely isolated, with “absolute silence” imposed on them all.¹³⁵ In 1842, after visiting Cherry Hill, Charles Dickens characterized its system as one of “rigid, strict, and hopeless solitary confinement.”¹³⁶ Though he viewed the prison authorities as well-intentioned, he asserted that “no man has the right to inflict upon his fellow creature” the “dreadful punishment” of prolonged solitary confinement.¹³⁷ Alexis de Tocqueville’s views on penology were considerably stricter than Dickens’. He believed that prisoners should be kept from communicating with each other to avoid “mutual corruption”¹³⁸ and viewed flogging as an appropriate means of discipline.¹³⁹ Even so, he was appalled by the approach taken in the Auburn prison in New York when it opened a new wing in 1821. Speaking of the prisoners there, he wrote:

In order to reform them, they had been submitted to complete isolation; but this absolute solitude, if nothing interrupts it, is beyond the strength of man; it destroys the criminal without intermission and

139. See DAMROSCH, *supra* note 138, at 39.

without pity; it does not reform, it kills.¹⁴⁰

Sadly, when a former warden of a modern supermax facility wrote in 2004 that “[a]fter long-term confinement and the loss of hope for offenders controlled under [supermax] conditions, mental deterioration is almost assured,”¹⁴¹ he said nothing that had not been recognized for well over a century and a half. There is now a large body of literature documenting the physical and mental effects of supermax solitary confinement. Overall, the mental effects of solitary confinement, such as post-traumatic stress disorder (PTSD) are similar to the effects seen in torture and trauma victims.¹⁴² And they are long-lasting. Prisoners of war during the Korean war, who were held in conditions similar to those in supermax solitary confinement, displayed “psychosomatic ailments, suspicion, confusion, and depression,” and were “detached from social interaction” for as long as forty years after being released.¹⁴³

The mental effects of solitary confinement are so common that psychiatrists now associate a specific psychiatric syndrome known as Reduced Environmental Stimulation (RES) Syndrome or “isolation sickness” with prolonged solitary confinement.¹⁴⁴ The most common symptoms associated with this syndrome include hyperresponsivity to external stimuli, perceptual distortions, illusions and hallucinations, panic attacks, difficulties in thinking, concentration, and memory, “intrusive obsessional thoughts” or “emergence of primitive aggressive ruminations,” overt paranoia, and problems with impulse control.¹⁴⁵ These side effects comprise what Dr. Stuart Grassian, a Boston psychiatrist and former member of the Harvard Medical School faculty, has called an “acute organic brain syndrome” or “delirium.”¹⁴⁶ This syndrome also results in electroencephalogram (EEG) abnormalities in the brain.¹⁴⁷ More specifically, EEG studies show “diffuse slowing of brain waves” in most prisoners after only a week in solitary confinement.¹⁴⁸

This overall EEG decline is connected to “a reduction in stimulation seeking behavior.”¹⁴⁹ Individuals in supermax solitary become withdrawn and develop a “shut-in” or reclusive personality.¹⁵⁰ Their

day-to-day mental functioning becomes impaired. There is a “drop in sensory input,” which in turn produces a “drop in mental alertness.”¹⁵¹ Concentrating becomes difficult, as prisoners suffer from a decline in motivation.¹⁵² This in turn can cause difficulty in using the speech and motor systems coupled with a “disinclination to learn” and decline in physical activity.¹⁵³

In 1993, in preparation for a class-action lawsuit challenging the use of solitary confinement at the Pelican Bay State Prison, Grassian conducted an in-depth study of forty-nine inmates in that prison.¹⁵⁴ Of those forty-nine inmates, at least seventeen were characterized as “actively psychotic and/or acutely suicidal” and urgently in need of hospital treatment as a result of their confinement.¹⁵⁵ Twenty-three others exhibited “serious psychopathological reactions to solitary confinement,” leading Grassian to declare that the sensory deprivation that results from solitary confinement is “toxic to brain functioning.”¹⁵⁶ In another study, Grassian studied over two hundred prisoners in solitary confinement and found that about a third suffered from acute psychosis with hallucinations.¹⁵⁷ Grassian also found that the inmates in supermax solitary were hypersensitive to stimuli and suffering from distortions of perception.¹⁵⁸ In some cases inmates developed a “full-blown psychosis and functional disability” while in supermax solitary.¹⁵⁹

Dr. Craig Haney, a professor of psychology at the University of California, Santa Cruz, has also researched the effects of solitary confinement.¹⁶⁰ His study of one hundred prisoners in the Pelican Bay Security Housing Unit reported that ninety-one percent of the prisoners suffered from anxiety and nervousness; eighty percent suffered from headaches, lethargy, and trouble sleeping; and seventy percent were concerned about having an “impending breakdown.”¹⁶¹ The prisoners also suffered physical effects such as dizziness and heart palpitations.¹⁶²

162. *Id.*

Haney identified several “social pathologies” that develop in prisoners placed in supermax confinement.¹⁶³ For example, because prisoners are unable to organize their lives around a purpose or goal, they begin to suffer from apathy, lethargy, and despair.¹⁶⁴ They lose the ability to concentrate and complete even the most routine of tasks.¹⁶⁵ They lose a sense of self and become “literally at risk of losing their grasp on who they are, of how and whether they are connected to a larger social world.”¹⁶⁶ These social pathologies of supermax confinement can “significantly interfere” with post-confinement adjustment upon release.¹⁶⁷

When analyzing the plethora of mental and physical effects caused by solitary confinement, one must be cognizant of the fact that the side effects are probably worse than we know. In many cases researchers have found that inmates have a tendency to minimize their reaction to solitary confinement and downplay any mental health problems.¹⁶⁸ This was a concern present in both the Haney and Grassian studies.¹⁶⁹

B. *The Effects of Solitary Confinement Meet the Article 1
Disability Definition*

1. “LONG-TERM”

Article 1 of the CRPD defines people with disabilities as “those who have long-term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.”¹⁷⁰ As previously stated, the vast majority of studies analyzing the mental effects of supermax confinement of more than sixty days show long-lasting and negative mental effects.¹⁷¹ Such effects include not only “persistent symptoms of post traumatic stress . . . but also lasting personality changes—especially including a continuing pattern of intolerance of social interaction.”¹⁷² Examples of personality changes include an inability to tolerate even the most basic social interaction as well as vivid flashbacks and a sense of hopelessness.¹⁷³ Many studies also show

163. *Mental Health Issues*, *supra* note 18, at 137.

164. *Id.* at 139.

166. *Id.*

167. *Id.* at 144.

168. Shalev, *supra* note 14, at 12.

169. *Id.*

170. CRPD, *supra* note 3, art. 1. The *World Report on Disability*, which is meant to “facilitate” the implementation of the CRPD, defines disability as “complex, dynamic [and] multidimensional.” *World Report on Disability*, *supra* note 2, at 3.

171. Lobel, *supra* note 22, at 118.

172. Grassian, *supra* note 76, at 353.

173. *Id.*

serious and long-term effects such as chronic isolation syndrome.¹⁷⁴ Such prolonged mental effects undoubtedly meet the CRPD definition of “long-term.” Moreover, that some of these effects might recede in varying degrees in some individuals after release from solitary confinement does not diminish the fact that solitary confinement still imposes a significant chance that the inmate will indeed “suffer permanent harm as a result of such confinement.”¹⁷⁵

2. “FULL AND EFFECTIVE PARTICIPATION”

The long-term and sometimes permanent effects caused by solitary confinement create an inability for the inmate to participate in society upon release, thereby hindering his or her “full and effective participation in society,” as stated in Article 1 of the CRPD. A preliminary question concerns the meaning of “participation in society.” Plainly, the term “society” as used in the CRPD includes prison. While a major concern of the use of solitary confinement relates to its impact on prisoners’ ability to function effectively after release from prison, the CRPD is also concerned with the prisoners’ ability to function effectively *in* prison. Article 14 makes it clear that the CRPD does protect persons in prison.¹⁷⁶ Of course, “full and effective participation in society” is contextual; prisoners, for example, do not have the same freedom of movement as those not in detention. Consequently, “full and effective participation” is implicated not only by impediments to functioning upon release from prison, but also by impediments to functioning effectively as a prisoner upon release from supermax confinement to the general prison facilities.

While in solitary confinement, all parts of the prisoners’ daily life are controlled in the solitary unit.¹⁷⁷ As a result, inmates effectively lose any ability to control their behavior or to set limits for themselves.¹⁷⁸ Moreover, prisoners in supermax solitary begin to “lose the ability to initiate behavior of any kind . . . because they have been stripped of any opportunity to do so for such prolonged periods of time.”¹⁷⁹

Human beings rely on social interaction with other people in order

174. Smith, *supra* note 85, at 495.

175. Grassian, *supra* note 76, at 332.

176. Article 14(2) provides:

States Parties shall ensure that if persons with disabilities are deprived of their liberty through any process, they are, on an equal basis with others, entitled to guarantees in accordance with international human rights law and shall be treated in compliance with the objectives and principles of this Convention, including by provision of reasonable accommodation. CRPD, *supra* note 4, art. 14.

177. *Mental Health Issues*, *supra* note 18, at 139.

178. *Id.*

179. *Id.*; see also Arrigo & Bullock, *supra* note 29, at 628.

to test their understanding of their surroundings.¹⁸⁰ Without this opportunity, inmates in supermax confinement begin to blur the distinction between fantasy and reality.¹⁸¹ The inmates also become “unnaturally sensitive, and vulnerable to the influence of those who control the environment around them.”¹⁸² Inmates then begin to act out in anger as a result of developing intense frustration and rage while in solitary.¹⁸³ “[I]rrational anger” and being “consumed with revenge fantasies”¹⁸⁴ are characteristic of maladaptive strategies that inmates use to cope and survive in supermax solitary. Suicide attempts and self-mutilation are also tragic effects that occur with more frequency in solitary confinement.¹⁸⁵ These effects are devastating for those prisoners who might one day be integrated back into the general prison population.

As expected, these psychiatric effects hinder one’s “full and effective participation within society” upon release, whether in the context of the general prison environment or the community at large. Grassian has stated that prolonged solitary confinement creates “a handicap . . . which severely impairs the inmate’s capacity to reintegrate into the broader community upon release from imprisonment”¹⁸⁶ and leaves the “individual socially impoverished and withdrawn, subtly angry and fearful when forced into social interaction.”¹⁸⁷ It is a sad paradox that after yearning for human interaction for so long, individuals released from supermax solitary become unable to tolerate social interaction upon release.¹⁸⁸

Prisoners become unable to “manage” their conduct when they are released into the world.¹⁸⁹ They are more likely to have clinical depression and long-term impulse-control disorder.¹⁹⁰ Because so much of our personality and identity is socially constructed, the loss of all social contact leads to “a disconnection of experience from meaning” and creates a risk of prisoners “losing their grasp on who they are.”¹⁹¹ It is hard to imagine a set of side effects more problematic for these inmates who one day will be expected to survive and function in the world outside supermax facilities.

3. UNIFORMITY OF RESULT AND FREQUENCY OF “LONG-TERM”
PSYCHIATRIC CONSEQUENCES

The consistency with which supermax solitary has devastating mental effects is clear; however, one possible issue with utilizing the framework of the CRPD for a disablement claim is that fewer than one hundred percent of those placed in supermax solitary confinement actually suffer from an Article 1 mental disability as a result.

Variability in mental effects has proved to be legally significant in U.S. law. In 1995, while reviewing the conditions of California’s first supermax prison, a California federal court ruled that even though solitary confinement may “hover on the edge of what is humanly tolerable for those with normal resilience,” there could be no valid objection to its use because such confinement failed to make *every* inmate go insane.¹⁹² More specifically, the routine use of solitary confinement did not pose “a sufficiently high risk to *all* inmates of incurring a serious mental illness.”¹⁹³ It is possible that variability in the frequency of mental disabilities might be an obstacle for disablement claims, as this lack of inevitable disability differentiates solitary confinement from physical maiming. Overall, the frequency with which disabilities develop from solitary confinement depends on many factors such as one’s pre-existing mental state and the amount of time one spends in solitary.

a. pre-existing mental state

In his 2006 study, Grassian stated that there “is great variability among individuals in regard to their capacity to tolerate a given condition of sensory restriction.”¹⁹⁴ He noted that generally, those with a “mature, healthy personality” and average intelligence usually demonstrate fewer psychiatric consequences due to solitary confinement.¹⁹⁵ Human Rights Watch stated that “[h]ow destructive [solitary confinement is] depends on each inmate’s prior psychological strengths and weaknesses.”¹⁹⁶ The organization went on to say that:

Although not everyone will manifest negative psychological effects to the same degree, and it is difficult to specify the point in time at which the destructive consequences will manifest themselves, few [long-term supermax inmates] escape unscathed The psychological consequences of living in these units for long periods of time are predictably destructive, and the potential for these psychic stressors

to precipitate various forms of psychopathology is clear-cut.¹⁹⁷

A wide range of psychiatric reactions are possible, as some people suffer all symptoms of RES syndrome, some suffer only a few, and some suffer none at all.¹⁹⁸ However, in another study performed by both Grassian and Dr. Nancy Friedman, results showed that even some prisoners with no previous psychotic tendencies became “grossly psychotic.”¹⁹⁹

b. the amount of time spent in supermax solitary

The amount of time one spends in solitary confinement has some impact on the frequency with which permanently disabling mental effects occur. In this article, “long-term” solitary confinement is the focus of my discussion, but what exactly constitutes “long-term” solitary confinement can be nebulous. How long does one’s placement in solitary have to be before negative side effects become disabling in the “long-term” under the CRPD? Many studies analyzing the mental effects of supermax confinement state that more than sixty days in solitary will create long-lasting and negative mental effects.²⁰⁰ Other studies have said ten days.²⁰¹ Dr. Kaufman has studied the effects of solitary confinement in consideration of the amount of time spent in the cell.²⁰² He found that after only a few hours in solitary confinement, the prisoner’s brain waves “shift[ed] toward a pattern characteristic of stupor and delirium.”²⁰³ Studies at Montreal McGill University show that with intense sensory deprivation (elimination of sounds, sight, and tactile stimulation), the subject can experience hallucinations within as little as forty-eight hours.²⁰⁴ The American Correctional Association, on the other hand, has designated thirty days as the time when detrimental mental effects usually appear and when a prisoner must be psychologically evaluated.²⁰⁵

While there is some variation in the precise amount of time before these effects occur, it is clear that those prisoners placed in solitary confinement are less likely to be rehabilitated and are much more likely to become violent rather than less so.²⁰⁶ What is also clear is that despite some variability stemming from individual characteristics or other con-

textual factors, there is “remarkable consistency” in finding negative mental health effects after supermax solitary.²⁰⁷ To ignore the consistent data and studies on supermax solitary confinement would be ethically and politically irresponsible.

In sum, the mental effects of supermax confinement produce a disability within the meaning of the CRPD. Supermax solitary confinement socially incapacitates inmates while in prison and produces prolonged or permanent psychiatric disabilities including impairments, which “may seriously reduce the inmate’s capacity to reintegrate into the broader community upon release from prison.”²⁰⁸

V. ARTICLE 15 AS ANOTHER AVENUE FOR A DISABLEMENT CLAIM

A. Supermax Confinement as Torture or Cruel and Inhuman Treatment

Article 15 is another possible basis for claiming a violation of the CRPD. Article 15 states: “No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment. In particular, no one shall be subjected without his or her free consent to medical or sci-

207. Shalev, *supra* note 14, at 10. All studies of inmates who have been detained more than ten days involuntarily show negative physical and mental health effects. *Id.* at 21; *see also Mental Health Issues*, *supra* note 18, at 132 (stating that “there is not a single published study of solitary or supermax-like confinement in which non-voluntary confinement lasting for longer than 10 days . . . failed to result in negative psychological effects”); Kupers, *supra* note 15, at 1006 (stating that all prisoners held in supermax confinement for longer than three months have “lasting emotional damage” or “full-blown psychosis and functional disability”). Even federal judges continually recognize the detrimental effects of solitary confinement. *See* Jones ‘El v. Berge, 164 F. Supp. 2d 1096 (W.D. Wis. 2001); Ruiz v. Johnson, 37 F. Supp. 2d 855 (S.D. Tex. 1999), *rev’d and remanded for further findings sub. nom.* Ruiz v. United States, 243 F.3d 941 (5th Cir. 2001); Madrid v. Gomez, 889 F. Supp. 1146 (N.D. Cal. 1995). While the consensus is clear, one study by the Colorado Department of Corrections has recently reached a different conclusion, sparking much controversy and dissent. *ACLU and Experts Slam Findings of Doc Report on Solitary Confinement*, ACLU (Nov. 29, 2010), <http://aclu-co.org/news/aclu-and-experts-slam-findings-of-doc-report-on-solitary-confinement>. The study, entitled “One Year Longitudinal Study of the Psychological Effects of Administrative Segregation,” concluded that supermax solitary confinement does not cause the health of mentally ill prisoners to deteriorate. *Id.* The ACLU pointed out that this conclusion contradicts “considerable previous research” and “prevailing expert opinion.” *Id.* Dr. Terry Kupers, an expert on the mental effects of prison confinement, stated, “[T]he methodology of the study is so deeply flawed that I would consider the conclusions almost entirely erroneous.” *Id.* He also pointed out that the researchers “did not even spend time talking to the subjects about their experience in supermax” and “minimize[d] the emotional pain and suffering because they judge[d] the prisoners to have been already damaged before they arrived at supermax.” *Id.* Dr. Kupers then went on to say that the report only included prisoners who volunteered and who were able to read and write, thus excluding two groups of inmates who would be most severely impacted by supermax solitary—“those who refuse to participate in social interaction and those unable to pass time by reading and writing.” *Id.*

208. Grassian, *supra* note 76, at 354.

entific experimentation.”²⁰⁹ It is important to note that an Article 15 claim would be entirely separate from an Article 4 claim under the CRPD. An Article 4 claim in no way depends on an assertion that solitary confinement constitutes torture or cruel or inhuman punishment. Article 15 provides an additional, independent basis for evaluating supermax confinement.

Given its dehumanizing and extreme impact on an individual’s mental health, supermax confinement would seem to present a textbook case of torture. The Convention Against Torture is quite relevant to the interpretation of Article 15 of the CRPD. The United States is a party to the Convention Against Torture.²¹⁰ When the United States ratified that treaty, it specifically added an understanding defining torture.²¹¹ As shown below, supermax confinement would seem to qualify as torture under this definition.

Even if it were not torture, however, supermax confinement would still be inconsistent with Article 15.²¹² Generally, when one of the elements of the definition of torture is not present, certain acts and treatment such as solitary confinement will amount to “cruel, inhuman or degrading treatment or punishment.”²¹³ Manfred Nowak, the Special Rapporteur on Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment, stated that prolonged isolation could constitute cruel and inhuman treatment and “in certain instances” even torture.²¹⁴ This conclusion finds support in several sources. The United Nations Human Rights Committee (HRC) has stated that the phrase “cruel, inhuman or degrading” in Article 7 of the International Covenant on Civil and Political Rights “should be interpreted so as to extend to the widest possible protection against abuses” in order to protect an individual from the deprivation of the use of “any of his natural senses, such as sight or hearing or of his awareness of place and the passing of time.”²¹⁵ This broad interpretation could also apply to supermax solitary confinement, given that many cells lack windows and are padded to make them

soundproof.²¹⁶ The HRC has also pointed out that solitary confinement for a prolonged amount of time and not under exceptional circumstances may constitute torture and cruel, inhuman or degrading treatment or punishment.²¹⁷ The European Court of Human Rights, moreover, has ruled, “[I]nhumane treatment covers at least such treatment as that which deliberately causes severe suffering, mental or physical . . . or treatment that drives [one] to act against his own will or conscience.”²¹⁸

B. *Disablement and Article 15*

There is a second way in which supermax confinement could violate Article 15. Unlike the first type of violation,²¹⁹ this violation would depend on both Article 15 and Article 4. Torture or cruel and inhuman treatment has long-lasting effects that produce a disability. Thus, supermax solitary confinement would amount to torture or cruel and inhuman treatment under Article 15 of the CRPD, and its effects during and after release from such confinement would amount to disablement under Articles 1 and 4.

The concept of disablement through torture is not new in the world of international human rights. One need only look to the language and purpose of the World Programme of Action Concerning Disabled Persons (World Programme), which recognizes such a concept, stating that:

With the emergence of “victimology” as a branch of criminology, the true extent of injuries inflicted upon the victims of crime, causing permanent or temporary disablement, is only now becoming generally known. Victims of torture who have been disabled physically or mentally, not by accident of birth or normal activity, but by the deliberate infliction of injury, form another group of disabled persons.²²⁰

This is highly significant and informs the concept of disablement in the CRPD. This language recognizes that torture can produce a disability and even designates those disabled by torture as a separate, legally distinct group of people. Such language gives credence to a possible disablement claim under Article 15 of the CRPD in that Article 15 can be viewed as a continuation of the World Programme’s prohibition of disablement through torture. In other words, the text of Article 15, especially when read in conjunction with the World Programme, can be read as implicitly saying that people in general (those with *and* without disa-

bilities) have an explicit right to not only be free from torture and “inhuman” treatment, but also to be free from disablement through the use of torture or “inhuman” treatment.

VI. U.S. RATIFICATION AND IMPLEMENTATION OF THE CRPD

If the Obama Administration or some future administration submits the CRPD to the Senate for its advice and consent, ratification of the treaty will make it the “supreme Law of the Land” under the Supremacy Clause of the Constitution.²²¹ This Part discusses two key questions relating to the impact of ratification. First, what do the CRPD and U.S. law provide with regard to implementation and enforcement? Second, how might the terms on which the Senate gives its consent to ratification affect the implementation and enforcement of the treaty?

A. *The CRPD’s Provisions for Implementation and Enforcement*

Article 32 of the CRPD requires states to take “appropriate and effective” steps to implement the CRPD through international cooperation.²²² More importantly, the CRPD obligates states to take a variety of domestic steps to ensure implementation. Parties to the CRPD must adopt “appropriate” legislation and take “other measures” in order to implement the legislation.²²³ The state party must implement the Article 4 measures to the “maximum of its available resources.”²²⁴ Under Article 4(1)(c), state parties must consider the “protection and promotion of the human rights of persons with disabilities in all policies and programmes.”²²⁵ Article 4(1)(d) also imposes a broad obligation on state parties to “refrain from engaging in any act or practice that is inconsistent with the present Convention.”²²⁶ In light of its effects on individuals, the CRPD will require state parties to enact legislation against the use of supermax confinement. To the extent that a state continues to use it, prison officials will have to collect statistical information and conduct research to show compliance with the purpose and policies of the CRPD. This might include psychological evaluations of prisoners and in-depth tracking of the frequency and extent of solitary confinement use.²²⁷

A variety of national and international enforcement mechanisms

221. U.S. CONST. art. VI, cl. 2.

222. CRPD, *supra* note 4, art. 32, art. 40(1).

223. *Id.* art. 4(1)(a).

224. *Id.* art. 4(2).

225. *Id.* art. 4(1)(c).

226. *Id.* art. 4(1)(d).

227. Given the effects of supermax solitary confinement, however, it is almost certain that such monitoring would show that the use of supermax confinement is inconsistent with the CRPD, so ultimately compliance would entail ceasing to use it.

could also be employed once the CRPD is ratified. Article 34 of the CRPD provides for a Committee on the Rights of Persons with Disabilities.²²⁸ Parties to the CRPD are required to submit reports to the Committee every four years concerning the implementation of the goals of the convention.²²⁹ While the Committee has no binding power over state parties, the very process of international examination of U.S. policy could place some pressure on the United States to change practices that are inconsistent with the CRPD.

Domestically, Article 33(2) of the CRPD requires state parties to establish independent mechanisms and organizations that will “promote, protect and monitor the implementation of the present Convention.”²³⁰ In particular, states must identify an office within the government that will be responsible for issues relating to the implementation of the CRPD.²³¹ By requiring not only international but also domestic monitoring, the CRPD has created a second and important layer of enforcement. This requirement has been used before in the 2006 Optional Protocol to the Convention Against Torture and other Cruel, Inhuman or Degrading Treatment or Punishment (OPCAT), which required that national officials visit detention facilities.²³² These national reporting requirements are significant, as the “struggle for human rights will be won or lost at the national level.”²³³

One final implementation mechanism is unlikely to be available in the case of the United States: the individual petition procedure under the Optional Protocol to the CRPD. Under the Optional Protocol, individuals can present complaints to the Committee, and the Committee has the authority to conduct inquiries into the alleged violations of the CRPD.²³⁴ The United States, however, has not signed the Optional Protocol²³⁵ and seems unlikely to submit itself to any type of individual complaint mechanism.

B. *The Impact on U.S. Law*

1. THE IMPACT OF “CLEAN” RATIFICATION OF THE CRPD

If the Senate were simply to ratify the CRPD with no conditions, the treaty might well have a profound impact on the use of supermax confinement. Under Article VI of the Constitution, a ratified treaty is the supreme law of the land.²³⁶ This would make the CRPD superior to all state law and earlier federal statutes.²³⁷ Individuals confined in supermax facilities could therefore seek relief in court under the CRPD, so long as the CRPD were self-executing under U.S. law.²³⁸ As the Supreme Court noted in *Medellín v. Texas*,²³⁹ self-executing treaties “automatically have effect as domestic law,” whereas non-self-executing treaties, though they “constitute international law commitments—do not by themselves function as binding federal law.”²⁴⁰

Under the Restatement, a treaty is “non-self-executing” only if (1) the treaty itself manifests such an intention, (2) the Senate makes it non-self-executing as a condition of ratification, (3) or the constitution requires implementing legislation. Nothing in the United States Constitution would require implementing legislation.²⁴¹ As to the first requirement, there does not appear to be any intention in the CRPD to require that it be non-self-executing. On the contrary, Article 4(1)(b) requires states to “take *all* appropriate measures” to bring domestic law into conformity; these measures include legislation, but are not limited to it. One might argue that *Medellín* requires a conclusion that the CRPD is non-self-executing. *Medellín* emphasized the word “undertakes” as a way of showing an intent by state parties that a treaty be non-self-executing.²⁴² The Court treated the use of that word as indicating something more like a promise to take action, rather than an acceptance of a presently binding obligation. The word “undertake” or some variation appears in the CRPD thirteen times.²⁴³ The context of *Medellín* was, however, quite different. In *Medellín*, there was an underlying concern that finding self-execution in the case before it would deprive the United States of its flexibility in the U.N. Security Council concerning the enforcement of

orders by the International Court of Justice.²⁴⁴ No such circumstance would be present in a challenge to supermax facilities.

A better approach focuses on the comment in the Restatement that “[s]ome provisions of an international agreement may be self-executing and others non-self-executing.”²⁴⁵ The issue of self-execution should not be determined for the treaty as a whole, but on a case-by-case basis. Some provisions clearly would require implementing legislation or perhaps executive action. Any obligation that could be enforced by traditional injunctive relief, on the other hand, would seem appropriate for self-executing status. The treaty concerns individual rights and obligates state parties to ensure that persons who are disabled have access to justice.²⁴⁶ An injunction against the use of supermax facilities would be entirely within a court’s traditional competence.²⁴⁷

As the Restatement notes, however, the Senate does have the power to attach a condition to ratification providing that the treaty should be non-self-executing. Whether the Senate would do so in the case of the CRPD is of great significance because, as shown, without such a condition there would be a very strong basis for a court to enjoin the use of supermax facilities as a violation of the CRPD. Even with such a condition, the treaty would still have some significance in U.S. courts. Courts would consider the CRPD in construing federal and state regulations and statutes and in interpreting the Constitution.²⁴⁸ Still, the question of the conditions that the Senate might attach to ratification (including regarding self-execution) is an important one and is discussed in the next section.

2. THE IMPACT OF CONDITIONS TO THE SENATE’S CONSENT TO RATIFICATION

The United States has never given a human rights treaty a “clean” ratification—that is, one devoid of qualifying reservations, understand-

244. *Medellín*, 552 U.S. at 492.

245. RESTATEMENT (THIRD) OF THE FOREIGN RELATIONS LAW OF THE UNITED STATES § 111 cmt. h (1987).

247. *Cf. Brown v. Plata*, 131 S. Ct. 1910 (2011) (upholding federal court order to end overcrowding in California prisons).

248. *See Roper v. Simmons*, 543 U.S. 551, 554, 578 (2005) (acknowledging the “overwhelming weight” of international law and of the Convention on the Rights of the Child (CRC) when striking down the juvenile death penalty, despite the United States not having ratified the CRC); *see also Atkins v. Virginia*, 536 U.S. 304 (2002); *State v. Romano*, 155 P.3d 1102, 1114 n.14 (Haw. 2007) (relying partially on the United Nations Convention for the Suppression of the Traffic in Person and the Exploitation of the Prostitution of Others); *In re Peggy*, 767 N.E.2d 29, 38 (Mass. 2002) (stating that while the CRC is not binding on U.S. courts, the ruling of the court was “completely in accord with principles expressed therein”).

ings, and declarations (RUDs). It is unlikely that any ratification of the CRPD will depart from this pattern. Accordingly, it is important to consider what kinds of RUDs the Senate might adopt in any future ratification of the CRPD and what impact they would have on the United States' use of supermax facilities.

The Senate's use of RUDs will likely fall into two categories: those that affect implementation and enforcement of the CRPD and those that affect the substantive obligations the United States takes on in ratifying the CRPD. As an examination of the likely RUDs makes clear, the conditions the Senate adopts will have a significant impact on domestic implementation and enforcement, but are unlikely to prevent ratification of the CRPD from having important effects on the use of supermax facilities.

a. RUDs relating to implementation and enforcement

Past U.S. practice indicates that the Senate will likely adopt two RUDs that will affect domestic implementation and enforcement. The first is a provision declaring that the entire treaty is non-self-executing. The United States adopted such a declaration in connection with the International Covenant on Civil and Political Rights,²⁴⁹ the International Covenant on the Elimination of Racial Discrimination,²⁵⁰ and the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment.²⁵¹ Such a declaration would deprive federal and state courts of the power to enforce the treaty. Critics have decried the practice and suggested ways to lessen its impact,²⁵² but inclusion of such a provision appears highly likely if the CRPD is to win ratification.

249. See US ICCPR conditions, *supra* note 42; U.N. Secretary-General, Treaty Collections: International Covenant on Civil and Political Rights (Aug. 21, 2011), http://treaties.un.org/Pages/ViewDetails.aspx?src=TREATY&mtdsg_no=IV-4&chapter=4&lang=en (stating that the "the United States declares that the provisions of articles 1 through 27 of the Covenant are not self-executing").

250. U.N. Secretary-General, Treaty Collections: International Convention on the Elimination of All Forms of Racial Discrimination (Oct. 21, 1994), http://treaties.un.org/Pages/ViewDetails.aspx?src=TREATY&mtdsg_no=IV-2&chapter=4&lang=en#EndDec (stating that "the United States declares that the provisions of the Convention are not self-executing").

251. CAT Treaty Collections, *supra* note 210 (stating that "the United States declares that the provisions of articles 1 through 16 of the Convention are not self-executing").

252. E.g., David Sloss, *The Domestication of International Human Rights: Non-Self-Executing Declarations and Human Rights Treaties*, 24 YALE J. INT'L L. 129 (1999); see also Harold Hongju Koh, Commentary, *Is International Law Really State Law?*, 111 HARV. L. REV. 1824 (1998). Even Harold Koh, the current legal advisor at the Department of State, has criticized the United States' pattern of RUDs, stating, "To proceed with such a qualified, 'swiss cheese' ratification in which the legal exceptions would overshadow the core act of ratification would be politically unwise, legally questionable, and practically unnecessary to protect American national interests." Harold Hongju Koh, *Why America Should Ratify the Women's Rights Treaty (CEDAW)*, 34 CASE W. RES. J. INT'L L. 263, 271 (2002).

Ratification even with a non-self-execution declaration would have some impact. Courts are bound to take even a non-self-executing treaty into account in interpreting domestic law. Ratification would formally commit the United States to the basic aims of the CRPD, making clear, for example, that the United States could not reject international criticism of how it handles disability issues as an intrusion on its sovereignty. And it would give a rallying point for domestic advocates for people with disabilities.

A second likely condition concerning implementation and enforcement would be an understanding concerning federalism. In ratifying the International Covenant on Civil and Political Rights (ICCPR), the United States stated that it understood

that this Covenant shall be implemented by the Federal Government to the extent that it exercises legislative and judicial jurisdiction over the matters covered therein, and otherwise by the state and local governments; to the extent that state and local governments exercise jurisdiction over such matters, the Federal Government shall take measures appropriate to the Federal system to the end that the competent authorities of the state or local governments may take appropriate measures for the fulfillment of the Covenant.²⁵³

The U.S. government also submitted a similar understanding when it ratified the Convention Against Torture.²⁵⁴ These federalism understandings have come under severe criticism.²⁵⁵ While their meaning is not entirely clear, these reservations are plainly intended to create some kind of division of responsibilities between the federal government and the states in implementing the treaty. It seems likely that a similar proviso will be included in any ratification of the CRPD. With the exception of a few federally run supermax prisons such as the ADX Florence and the USP Marion facility, most other supermax facilities are state-run.²⁵⁶ Such an understanding could complicate application of the CRPD to state supermax facilities.

b. RUDs limiting the substantive scope of the CRPD

Typically, when the United States has ratified human rights treaties, it has made use of reservations and understandings to bring the United States' treaty obligations into conformity with existing domestic law. This approach undercuts much of the domestic benefits of ratification,

253. US ICCPR Conditions, *supra* note 42.

254. CAT Treaty Collections, *supra* note 210.

255. See Carlos Manuel Vázquez, Breard, Printz, and the Treaty Power, 70 U. COLO. L. REV. 1317, 1353–57 (1999). But see Edward T. Swaine, Does Federalism Constrain the Treaty Power?, 103 COLUM. L. REV. 403, 442–43, 425 n.96 (2003).

256. Arrigo & Bullock, *supra* note 29, at 624.

but it seems likely that the Senate will utilize such conditions in the case of the CRPD. The difference between this kind of RUD and those that relate to implementation and enforcement is important. The latter have no impact on U.S. obligations on the international plane. For example, even if a treaty is non-self-executing, the United States remains obligated as a matter of international law to implement its provisions. In contrast, substantive adjustments to the obligations of the treaty do affect the extent of U.S. obligations on the international plane.

Past examples of the practice of limiting the treaty obligations the United States takes on are numerous. Some of them are quite specific. For example, when the United States ratified the ICCPR, it reserved the right to apply the death penalty to those who were juveniles at the time they committed a crime.²⁵⁷ At the time, U.S. law permitted such executions,²⁵⁸ but Article 6 of the ICCPR forbade them.²⁵⁹ As noted earlier, when the United States ratified the Convention Against Torture, it limited the definition of Torture under Article 1 by adopting an “understanding” that no act inflicting severe mental pain could constitute torture unless the mental suffering was “specifically intended to inflict severe physical or mental pain”; the pain was “prolonged”; and the mental harm resulted from certain specified conditions, including the “administration . . . [of] procedures calculated to disrupt profoundly the senses or personality.”²⁶⁰ According to the Department of Justice, this understanding was so that “mental torture would rise to a severity seen in the context of physical torture.”²⁶¹

Other RUDs have been framed more broadly. One example relates to Article 16 of the Convention Against Torture, which prohibits “cruel, inhuman or degrading treatment or punishment.”²⁶² When the United States ratified the Convention Against Torture, it adopted a reservation that it would be bound by Article 16 “only insofar as the term ‘cruel, inhuman or degrading treatment or punishment’ means the cruel and unusual punishment prohibited” by the Constitution.²⁶³

As to the RUDs that the Senate might consider in relation to the

CRPD, the most obvious candidate concerns Article 15 of the treaty. The United States might well adopt a declaration concerning the meaning of torture and a reservation regarding cruel, inhuman or degrading treatment or punishment along the lines of the RUDs adopted in connection with the Convention Against Torture. Presumably the intention would be to limit the U.S. obligations under the CRPD to those of current domestic law. If successful, adoption of such RUDs could preclude the Committee from criticizing the United States' use of supermax facilities as a violation of the CRPD.

In gauging whether these RUDs would have their intended effect, two considerations are paramount. First, what substantive impact would they have on the United States' obligations regarding torture and cruel, inhuman or degrading treatment or punishment? Second, would they be valid under international law? With regard to the first point, there is a potential tension between the two RUDs. The declaration on mental suffering as torture would not, by its terms, seem to rule out application of the CRPD to supermax facilities. The reservation regarding cruel and unusual punishment would.

Article 15 of the CRPD does not define torture, but the definition in Article 1(1) of the Convention Against Torture might well give guidance. That Article defines torture as "any act by which severe pain or suffering, whether physical or mental, is intentionally inflicted on a person."²⁶⁴ As previously stated, the U.S. declaration on torture would preclude mental suffering from constituting torture unless the harm was prolonged and rose to the severity of physical pain. This requirement would be satisfied in the case of supermax facilities because loneliness can actually manifest itself as severe physical pain, making solitary confinement a form of "no-touch torture"²⁶⁵ and causing the mental effects of solitary confinement to fit under the United States' tailored definition of torture.

The U.S. declaration on torture also added requirements that the suffering be intentionally inflicted—the declaration refers to suffering "specifically intended" to inflict severe mental pain, as the result of procedures "calculated" to "profoundly disrupt" the senses or personality.²⁶⁶ Certainly supermax facilities meet the latter criterion: the whole point is to disrupt the senses. If such a declaration is read, though, to require that officials be driven by evil motives—that is, if they must want to inflict pain and to destroy personality—then it could present a

264. CAT, *supra* note 73, art. 1.

265. Kluger, *supra* note 105.

266. CAT Treaty Collections, *supra* note 211.

serious obstacle.²⁶⁷ However, such an extreme reading of the declaration should be avoided.²⁶⁸

A U.S. reservation on the meaning of cruel, inhuman or degrading treatment or punishment under Article 15 of the CRPD would likely limit it to whatever constitutes cruel or unusual punishment under the Constitution. This reservation could well be a problem for application of Article 15 to supermax facilities, because as noted earlier, courts have so far rejected challenges to prolonged solitary confinement under the Eighth Amendment.²⁶⁹ Paradoxically, this could mean that the use of supermax facilities could constitute torture under Article 15, but not cruel, inhuman or degrading treatment under Article 15. How U.S. courts or the Committee might resolve this paradox remains to be seen.

The second question one might raise about the reservations to Article 15 is whether they are valid under international law. Article 46 of the CRPD provides that “[r]eservations incompatible with the object and purpose of the present Convention shall not be permitted.”²⁷⁰ Given the fundamental nature of the ban on torture under international law—it constitutes a peremptory norm²⁷¹—one might wonder how any qualification to or limitation on a treaty provision banning torture could be compatible with its object and purpose. While this question is important—and could have relevance to the potential RUDs discussed below—there is no definitive mechanism for resolving disputes over the validity of reservations. The likely declaration that the treaty is non-self-executing means that U.S. courts would not have the occasion to rule on this question, and while the Committee could express views on the subject, the United States would almost certainly consider such comments to be non-binding. In any event, for the reasons given in the next section, the validity or invalidity of any Article 15 RUD will have little impact on the application of the CRPD to supermax facilities.

Potential RUDs for other parts of the treaty will likely pose more difficult problems for the Senate. Already there is some political sparring over highly controversial issues. For example, U.S. officials have stated in reference to the term “reproductive health” in the CRPD²⁷² that

267. Michael L. Perlin & Henry A. Dlugacz, “It’s Doom Alone That Counts”: *Can International Human Rights Law Be an Effective Source of Rights in Correctional Conditions Litigation?*, 27 BEHAV. SCI. & L. 675, 693 (2009).

268. Vienna Convention, *supra* note 54, art. 31(1).

269. See *supra* Part IV.B.3.

270. CRPD, *supra* note 4, art. 46.

271. Restatement § 702 cmt. n (1987).

272. Jeanne E. Head, *U.N. General Assembly Approves Disability Convention; Clear Understanding That the Term “Sexual and Reproductive Health” Does Not Include a Right to Abortion Reaffirmed*, NAT’L RIGHT TO LIFE (Dec. 13, 2006) <http://www.nrlc.org/UN/DisabilityConventionApproved.html>.

“the phrase . . . does not include abortion, and its use in that Article does not create any abortion rights, and cannot be interpreted to constitute support, endorsement, or promotion of abortion.”²⁷³

Some of the likely RUDs would have only indirect or limited effect on the question of supermax facilities. For example, one might predict that the Senate will seek to limit the CRPD definition of “disability.” Some conservative groups opposed to ratification of the CRPD have already criticized its definition of disability on the ground that it “invites abuse by persons or groups who do not suffer from a recognized medical disability yet seek resources and protection under the authority of the convention.”²⁷⁴ Rather than accept paragraph (e) of the preamble to the CRPD, which states that disability is an “evolving” concept, the Senate might prefer to tie the definition to that under the Americans with Disabilities Act (ADA).²⁷⁵ One such reservation could be framed as follows: “The United States considers itself bound by the convention only insofar as the term “disability” is understood in the ADA” (or federal law generally). Under the ADA, a disabled person is one who has “a physical or mental impairment that substantially limits one or more . . . major life activities” and “has a record of such an impairment” or has been “regarded as having such an impairment.”²⁷⁶ While any limitation on the definition of disability under the CRPD seems unnecessary, simply using the ADA definition of disability in connection with the CRPD would be unlikely to pose any barrier to the conclusion that the use of supermax facilities is inconsistent with the treaty. It is entirely predictable that the Senate will consider attaching a condition to ratification that aims to exempt supermax confinement from coverage by the convention. What is debatable, however, is whether any such RUD would be both effective and feasible.

What RUDs might be sufficient to remove supermax facilities from scrutiny under the CRPD? While it might be far more desirable to ratify the treaty without seeking to blunt its domestic impact, ratification of the treaty without any RUDs is not a realistic prospect. Therefore, it makes sense to ask what those RUDs might be in relation to the issue of disablement through long-term solitary confinement.

273. *Id.*

274. STEVEN GROVES, THE HERITAGE FOUND., RATIFICATION OF THE DISABILITIES CONVENTION WOULD ERODE AMERICAN SOVEREIGNTY 10 (2010), *available at* http://www.heritage.org/research/reports/2010/04/ratification-of-the-disabilities-convention-would-erode-american-sovereignty#_ftn32.

275. CRPD, *supra* note 4, preamble.

276. Americans with Disabilities Act (ADA) of 1990, 42 U.S.C. § 12102(1) (2006). The ADA then provides further clarification by defining “major life activities” as “caring for oneself, performing manual tasks, seeing, hearing, eating, sleeping, walking, [and] standing” *Id.* § 12102(2).

The most obvious place for the Senate to start is Article 4. As noted earlier, Article 4 provides that States must “refrain from engaging in any act or practice that is inconsistent with the present Convention and to ensure that public authorities and institutions act in conformity with the present Convention.”²⁷⁷ As this article has argued, prolonged solitary confinement is inconsistent with Article 4. What kind of RUD might be formulated that would exempt it from scrutiny under Article 4?

The first point to note here is that exempting supermax facilities from claims under Article 15 (as discussed earlier) would not, by itself, exempt them from scrutiny under Article 4. The claim that prolonged solitary confinement causes disablement in violation of the treaty in no way rests on the distinct assertion that such confinement amounts to torture or cruel, inhuman or degrading treatment. Article 4(d) states that state members must “refrain from engaging in *any* act or practice that is inconsistent with the present Convention.”²⁷⁸ The Article 4 argument would simply not be affected by any conclusion that solitary confinement is not torture or cruel, inhuman or degrading treatment.

Accordingly, a separate RUD would be needed to address Article 4. And this may prove to be a daunting task, for formulating such a RUD in a way that is politically acceptable *and* legally effective may well prove difficult or impossible. Explicitly limiting the scope of Article 4 as it relates to prolonged solitary confinement would be politically unpalatable. It is unclear how the U.S. Government would be able to craft a reservation that would address the implicit violation of disablement without conceding that there is in fact a link between solitary confinement and long-term mental disabilities. Stating, for example, that “nothing in Article 4 will limit the use of solitary confinement” could easily be taken as an admission that solitary confinement does in fact disable people and would be inconsistent with the treaty in the absence of the reservation.

A second strategy would be to adopt a treaty-wide reservation or understanding, stating, for example, that “nothing in this treaty bears on the practice of long-term solitary confinement.” This kind of reservation might be more politically palatable, as it could be read to imply not that solitary confinement is disablement but is exempted, but that the CRPD as a whole simply has nothing to say one way or the other as to solitary confinement. The problem with this approach, however, is that it would sweep too broadly, utterly exempting solitary confinement even from Article 15 scrutiny. The United States would be announcing that even if solitary confinement amounts to torture, whether as defined internation-

277. CRPD, *supra* note 4, art. 4.

278. *Id.* (emphasis added).

ally or as narrowed by a RUD, it would still be acceptable. That is a very different kind of approach from the likely reservation to Article 15 as discussed earlier, which claims to accede to the ban on all forms of torture, though leaving the definition to domestic rather than international law. Nor would it help to modify the reservation to something like the following: “Nothing in this treaty bears on the practice of long-term solitary confinement, except insofar as it may constitute torture under Article 15.” This qualification would solve the problem of inadvertently claiming a right to practice torture, but once again at the cost of appearing to concede that prolonged solitary confinement can be torture.

Another conceivable reservation might be one providing that “nothing in this treaty bears on the administration of prisons.” A reservation of this sort would almost certainly be too broad to be acceptable politically. Federal law itself protects disabled prisoners.²⁷⁹ Simply to exempt prisoners from the protection of the CRPD is therefore not a realistic option.

The Senate might, however, consider more limited versions of such a RUD. For example, it might state, “Nothing in this treaty restricts the right of prison administrators to impose on persons under lawful detention conditions of detention that are valid under federal or state law or the U.S. Constitution.” This reservation, if valid under Article 46, might achieve the Senate’s aims, but once again, at the cost of seeming to exempt the United States even from Article 15 obligations.

Alternatively, the Senate might adopt a declaration that “in the case of persons under lawful detention, the treaty shall be interpreted to provide no more rights than are protected under federal or state law or the U.S. Constitution.” This would make the full range of U.S. obligations under the CRPD exactly the same as those under domestic law when it comes to prisoners. In turn, that would give one group of people—prisoners—explicit second-class status under the CRPD, at least in the absence of a general RUD declaring that for all those subject to U.S. jurisdiction, the obligations of the United States under the CRPD are limited to those under U.S. law. Because prisoners are not a politically popular or powerful group, a reservation or declaration of this sort might conceivably be politically possible.

The most extreme reservation would be generally to limit the scope of Article 4 to that of the domestic law of the United States. A reservation of this sort would avoid any drawing of attention to the practice of solitary confinement and the question of whether it violates human rights. But if there were any textbook case for the invalidity of a reserva-

279. 42 U.S.C. §§ 12131, 12132; *see, e.g.*, *Pa. Dep’t of Corr. v. Yeskey*, 524 U.S. 206 (1998).

tion as “incompatible with the object and purpose” of a treaty,²⁸⁰ it would be just this. What is the point of ratifying a treaty if its entire substantive content is effectively cancelled in favor of domestic law in the course of ratification—which is what such a reservation would accomplish in practice? Obviously, a reservation that essentially replaced the content of the treaty with current or future domestic law would entirely negate the purpose of the treaty. A reservation of this sort might well be invalid under international law, and more importantly, under the CRPD itself. As previously mentioned, Article 46 of the CRPD states, “Reservations incompatible with the object and purpose of the present Convention shall not be permitted.”²⁸¹ The importance of this observation is not that the reservation would be struck down by a court or international body, but that the Senate would be unlikely to adopt it in the first place.²⁸²

In short, crafting a reservation or understanding that would effectively remove prolonged solitary confinement from international scrutiny under the CRPD may well prove politically and legally impossible. One possibility is that the Senate, upon drawing such a conclusion, would reject the treaty in its entirety. Doing so would be unfortunate, and it would effectively amount to a concession that prolonged solitary confinement is inconsistent with a major human rights treaty. Alternatively, the Senate might proceed with ratification, accepting as a price of the benefits of ratification the strong possibility that U.S. practice in supermax facilities would now be subject to a new level of international scrutiny. Which path the Senate takes remains to be seen.

VII. CONCLUSION

Supermax solitary confinement runs counter to international human rights law, undercutting its fundamental aim of “preserving the right to human dignity.”²⁸³ The international community has developed a broad understanding and appreciation of the mental effects produced by solitary confinement, and the United States should follow suit.

Even weighted down with qualifying conditions, U.S. ratification of the CRPD has the potential to vindicate the rights of prisoners in

280. CRPD, *supra* note 4, art. 46.

281. *Id.*

282. Adopting such a reservation would put the United States in the company of states that ratified the Convention on the Elimination of All Forms of Discrimination Against Women, but took a general reservation to Article 2 (requiring states to take appropriate measures to implement the Convention) that made compliance subject to Sharia law. See Belinda Clark, *The Vienna Convention Reservations Regime and the Convention on Discrimination Against Women*, 85 AM. J. INT'L L. 281, 299–300 (1991).

DISABLED BY SOLITUDE

565

supermax solitary confinement. Even reduced largely to a moral statement rather than a legal instrument, the CRPD might help guide the United States in drafting legislation and forming policy. It could provide the groundwork for the gradual limitation and elimination of supermax solitary confinement. Indeed, even as the treaty awaits ratification, it has some force, given that we have signed it. The Secretariat for the CRPD has stated:

[B]y signing the Convention or Optional Protocol, States or regional integration organizations indicate their intention to take steps to be bound by the treaty at a later date. Signing also creates an obligation, in the period between signing and ratification or consent to be bound, to refrain from acts that would defeat the object and purpose of the treaty.²⁸⁴

The time to begin bringing U.S. practice into conformity with the CRPD is now.

Acknowledgments

John Jay College wishes to thank the Jacob and Valeria Langeloth Foundation for making this project possible. The Foundation is committed to promoting effective and creative programs, practices, and policies related to healing from illness, accident, physical, social or emotional trauma, and to extending the availability of programs that promote healing to underserved populations. They have taken a leading position in supporting efforts to ameliorate the effects of extreme social isolation and, through their efforts, have moved the conversation forward in important ways. This Colloquium was conceived to further that work.

We are very grateful to the committed corrections executives and the advocates who took three days from their busy schedules to participate in this ambitious effort to find areas of consensus on a very challenging topic. This was a working meeting and no one worked harder than the three facilitators who guided the work groups in addressing a range of difficult questions: Brian Fischer, retired Commissioner, New York State Department of Corrections and Community Supervision; Andie Moss, President of The Moss Group, Inc.; and Professor Michael Mushlin of Pace University Law School. Their leadership was supported and documented by our able team of reporters: Susruta Sudula and Jennifer Peirce of John Jay, Abigail Marion and Nick Reck of Columbia Law School, and Erika Danielsen and Sarah Lusk of Pace University Law School.

This Colloquium was designed and directed by Martin Horn and was made possible through the support of the staff of the Prisoner Reentry Institute (PRI) at John Jay College of Criminal Justice. We particularly wish to thank Daonese Johnson-Colón and Aimée Baker, whose skill and perseverance ensured that the Colloquium would be well managed, and Lila McDowell who was involved in the production of this report. We also thank Cindy Reed, our editor, who sought to make sure that the hard work of the group was presented in a manner that could benefit others wrestling with similar issues.

Finally, the outcome of the Colloquium, these discussions, and our recommendations are the result of the commitment and hard work of our facilitators: Brian Fischer, retired Commissioner, New York State Department of Corrections and Community Supervision; Andie Moss, President of The Moss Group, Inc.; and Professor Michael Mushlin of Pace University Law School. Their leadership was supported and documented by our able team of reporters: Susruta Sudula and Jennifer Peirce of John Jay, Abigail Marion and Nick Reck of Columbia Law School, and Erika Danielsen and Sarah Lusk of Pace University Law School.

About The Jacob & Valeria Langeloth Foundation

The Langeloth Foundation views the field of healing broadly, recognizing that in many cases helping people to heal may also help to prevent future problems. The constitution of the World Health Organization defines health as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity. For the Langeloth Foundation, healing is seen as including not only physical recovery from illness, accident or trauma, but also the emotional dimensions of recovery.

The Foundation's grant-making program is centered on the concepts of health and well-being. The Foundation's purpose is to promote and support effective and creative programs, practices and policies related to healing from illness, accident, physical, social or emotional trauma, and to extend the availability of programs that promote healing to underserved populations.

The Foundation is particularly interested in funding programs that address the health of individuals who, because of barriers to accessing care, experience poor and sub-optimal health, including: those with no or severely limited income, cultural differences, lack of English language skills, lack of health insurance or inadequate health insurance, limited access to health care services, mental illness, substance abuse, homelessness, incarceration, and exposure to trauma. More specifically, the Foundation favors proposals that seek to promote healing, healthy lives and healthy communities through:

- Innovative demonstration projects that address a major gap in the field
- Outreach to communities and populations whose health care needs are not being met
- Targeted advocacy efforts for vulnerable populations
- Collaboration among providers and other organizations

About John Jay College Of Criminal Justice

John Jay College of Criminal Justice of The City University of New York is an international leader in educating for justice, offering a rich liberal arts and professional studies curriculum to upwards of 15,000 undergraduate and graduate students from more than 135 nations. In teaching, scholarship, and research, the College approaches justice as an applied art and science in service to society and as an ongoing conversation about fundamental human desires for fairness, equality, and the rule of law.

John Jay is a community of motivated and intellectually committed individuals who explore justice in its many dimensions. The College's liberal arts curriculum equips students to pursue advanced study and meaningful, rewarding careers in the public, private, and non-profit sectors. Its professional programs introduce students to foundational and newly emerging fields and prepare them for advancement within their chosen professions.

Martin F. Horn is the Distinguished Lecturer in Corrections at the John Jay College and serves as Executive Director of the New York State Sentencing Commission by appointment of the Chief Judge of the State of New York. He served as Commissioner of the New York City Department of Probation and simultaneously as Commissioner of the New York City Department of Correction, the City's jail system. For five years, Horn served as Pennsylvania's Secretary of Corrections. Earlier, Horn was executive director and chief operating officer for the New York State Division of Parole and held a variety of positions within the Department of Correctional Services, including Superintendent of Hudson Correctional Facility.

The Prisoner Reentry Institute (PRI), directed by Ann Jacobs, is one of twelve institutes that collectively comprise the Research Consortium of John Jay College of Criminal Justice. The mission of PRI is to spur innovation and improve practice in the field of reentry by advancing knowledge, translating research into effective policy and service delivery, and fostering effective partnerships between criminal justice and non-criminal justice disciplines.

Professor Horn and PRI collaborated on designing and conducting the Colloquium on Solitary Confinement.

Report on a Colloquium to Further a National Consensus on Ending the Over-Use of Extreme Isolation in Prisons

Executive Summary

With support from the Jacob and Valeria Langeloth Foundation, on September 30, 2015, John Jay College of Criminal Justice convened a colloquium including 15 corrections agency heads and a like number of attorneys, academics, and experts from the community of those seeking to reform the use of social isolation, often called “solitary confinement,” in U.S. prisons and jails.

The purpose of the Colloquium was to determine if consensus might be achievable about ways to reform the use of social isolation by coming to common agreement rather than resorting to litigation. To facilitate discussion, all participating parties agreed to be bound by the “Chatham House Rule,” that provides that the outcomes and discussion would be limited to the participants and that the report would not identify discussants by name or affiliation and that in the future the participants would not make reference to statements or admissions by other participants. The result was a remarkable two-day experience that generated a great deal of argument and debate, as well as an equally exciting degree of agreement and consensus. Instead of advocates and corrections officials experiencing an “us versus them” mentality, participants engaged in furthering what one attendee called “a shared mission and goal, but with different intelligences about the pathways to and barriers resisting change.”

The gathering provided a first opportunity for many to meet with those they might previously have considered policy adversaries, enabling them to listen to and consider the other side’s point of view, forge new friendships and alliances, and establish the basis for constructive conversation. An energized group emerged from the meeting united in the belief that the United States can do better to both limit how it employs extreme social isolation and to ameliorate many of the most damaging results from its overuse.

As a result of the deliberations, several clear themes and areas of agreement became apparent:

- *The use of social isolation is greater than it has to be, in large measure because prisons have been called upon to do things they were never intended to do and are inadequately resourced to accomplish.*
- *Persons with mental illness and other vulnerable populations who do not require imprisonment should be treated elsewhere.*
- *The only criterion for confining a person to social isolation within prison should be behavior; persons should not be confined based upon their affiliation or status.*
- *If isolation is used at all, a person should be separated from the general population for the least amount of time necessary and under the least restrictive conditions.*
- *Separation from general population must always provide for adequate living conditions, meaningful routine, and periodic medical and mental health assessments.*
- *Transparency and accountability in the use of segregated housing is essential.*
- *Decisions about the use of social isolation in prison for disciplinary reasons should be made using an appropriate due process procedure.*
- *The use of isolated confinement should be a last resort, and prison discipline should develop alternatives to isolated confinement as punishment, incorporating a continuum of measures to hold incarcerated persons proportionately accountable for their behavior.*
- *Multi-disciplinary teams should make decisions about the use of segregation in prison for other reasons, with a view toward improving outcomes.*
- *Isolated confinement for non-disciplinary reasons should not feel punitive to the affected individual.*
- *The purpose of isolated confinement must be to improve the outcome for the affected individual and to make the prison and the community safer. To that end, there must be meaningful interventions designed to address the reasons for the confinement and attainable means for the individual to transition back to the general population of the prison.*
- *Wherever and whenever possible, opportunities to relieve the social isolation of the confined individual should be employed.*
- *Corrections administrators and advocates for incarcerated persons must work together to obtain political and financial support for needed changes.*
- *Efforts should be made to educate line corrections staff about the utility of reform.*

These themes are reflected in the 24 specific recommendations contained at the end of this report, which can serve as a roadmap for reform. The road to reforming and reducing the use of extreme social isolation will be long and there remains much to be done. But, as the proverb says, a journey of a thousand miles begins with a single step. These recommendations can serve as the map to the first turn.

Introduction

Over the last three decades, corrections systems have increasingly relied on isolation and segregation as a prison management tool, even building entire “supermax” prisons where prisoners are held in extreme social isolation, often for years or even decades. The massive increase in the numbers of men, women, and children behind bars has placed extreme stress on existing facilities, corrections systems, and criminal justice budgets, which struggle to accommodate the unprecedented growth in population without the resources or political support necessary to create rehabilitative environments. Prison administrators were left with few tools to keep their prisoners safe and to enforce reasonable prison rules. This fostered an environment where the use of extreme social isolation and segregation became the default approach to addressing many of the complex challenges faced in operating places of detention and incarceration. On an average day in 2011–12, for example, up to 4.4% of the state and federal prison inmates and 2.7% of jail inmates were held in administrative segregation or extreme social isolation. Based on current prisoner populations, this translates into 69,000 state and federal prisoners and 20,100 jail inmates.¹

Both legal and medical professionals have come to criticize extreme social isolation as unconstitutional and inhumane, pointing to the well-known harms associated with placing people, especially those with mental illness, in such confinement.² Research is also emerging which suggests that extreme social isolation can actually have a negative effect on public safety.³ The results of this questioning of the status quo can be seen in administrative and legislative reform now occurring in jurisdictions around the country.⁴ Corrections organizations are engaging on the topic and beginning to develop guidelines for the field.⁵ Civil rights and human rights organizations, faith community leaders, lawyers, and mental health organizations all have called for reforms in policy and practice. There is a broad and emerging sense that the use of solitary confinement has gone too far in American correctional facilities. Promising approaches are emerging in some jurisdictions and political space is opening up for reform in numerous states.

While opinions on how to reform the use of isolation differ, common ground exists among corrections practitioners, academics and experts, and prison advocates on the need for change. This consensus provides a unique opportunity to form unlikely partnerships and explore alternative approaches to public engagement on one of the most pressing challenges to the safe, effective, and humane management of our prisons and jails: the over-use of prolonged social isolation.

To leverage this common ground, on September 30, 2015, John Jay College of Criminal Justice, with support from the Langeloth Foundation, convened a two day meeting between 15 corrections leaders, including state corrections directors and leading officials from the major urban jails, and 15 experts, academics, and leaders in the advocacy community working for reform of isolation practice. The goal of the meeting was to bring together these leaders to plan next steps, forge greater connections and collaborations, identify “lessons learned” from efforts to date, and formulate plans to ensure sustainability for a reform effort that still has much to accomplish.

Advocates and administrators emerged from the Colloquium unified in the belief that we must seize the momentum of the day to address and reduce the overuse of extreme social isolation across its myriad incarnations. The Colloquium demonstrated that while different constituents have different priorities, they share the overarching goal of creating a safe, measured, and humane correctional environment. Just as importantly, a reasoned discussion is not only possible, but also essential to progress.

Seizing on the increasingly recognized need for reform, the Colloquium facilitated a candid and productive discussion among key figures of the prison policy community regarding the use of extreme social isolation. From top correctional officials in 15 states to representatives from the ACLU, the Center for Constitutional Rights, the National Alliance for the Mentally Ill, and other organizations, many contrasting perspectives were brought to the table.⁶ While disagreements remain, a single thread united the two days of spirited discussion: We have arrived at an extraordinary moment in time where real change is possible.

The outcome of the Colloquium is this document – a written reform agenda bearing the imprimatur of the participants and carrying “weight” in each of their communities of practice. In subsequent reports, John Jay College will document the changes and improvements resulting in the participating jurisdictions and identify the barriers that may have impeded their reform efforts.

Format and Themes

Case Study Presentations. The first day of the Colloquium began with presentations setting forth three case studies of reform: (i) reduction of segregation in Washington State; (ii) removal of the seriously mentally ill from administrative segregation in Colorado; and (iii) reforms for youth at Rikers Island in New York City. This opening session framed the successes and challenges of these approaches and built in time for lively discussion and comparative analysis among participants.

Small Group Sessions. Following the case studies, participants moved into small working groups designed to confront the core areas where reform is necessary, but hard questions about achieving real and meaningful change remain. These key areas included the following questions:

- *What does meaningful, effective, and humane order maintenance within correctional facilities look like without the use of isolation?*
- *How can correctional institutions respond to prison gangs and dangerous predatory individuals effectively and safely without the use of segregation/isolation housing?*
- *How can vulnerable individuals, such as the seriously mentally ill, pregnant women, and adolescents be protected adequately without the use of isolation?*

Developing a National Reform Roadmap. While the full group had different perspectives and agendas, the goal of the meeting was to establish specific areas of commonality to create a national roadmap for supporting the reduction in the use of long-term isolation. These points of common ground and consensus are outlined in the Recommendations section in Part III of this report.

Post-Colloquium Reporting. Progress towards realizing these principles will be self-reported by participants to Martin F. Horn, John Jay Coordinator, over the course of the next year. John Jay will report on the progress of these reform efforts and lessons learned.

Overarching Themes. This initial discussion raised several themes that would recur throughout the Colloquium, namely, definitional difficulty, goals for reform, and obstacles to reform.

- **Defining Solitary Confinement.** *One of the first challenges encountered was the lack of a uniform definition of solitary confinement. Administrative, disciplinary, and protective segregation are defined and treated differently across jurisdictions. Despite these distinctions, a common definition is key to reform, as failure to reach definitional consensus may lead to the continued misuse of extreme social isolation—albeit under a different name. The Colloquium largely settled on the Mandela Rules definition—22 hours of social isolation a day—as the base point for discussion, but was unable to reach consensus on an absolute limit to the duration of that confinement.⁷*
- **Setting Goals for Reform.** *The participants also discussed the goals of reform. One primary concern is curbing the negative effects of social isolation on the mental and physical well-being of incarcerated persons. Concurrently, the physical safety and mental health of the correctional staff is of paramount importance and must be a central focus for any reforms on the use of social isolation.*

One participant suggested that when we talk about “segregated confinement” we need to distinguish between two concepts: “Separation” versus “Deprivation.”

- **Separation** *is the need to keep an incarcerated person separated from some or all others because of danger. This would include, for example, isolation for infectious disease, restricted confinement to prevent harm to a suicidal patient, isolation of vulnerable persons from would-be aggressors, and the like.*
- **Deprivation** *is the restriction of meaningful perceptual, social, and occupational stimulation. Deprivation leaves the individual with an inadequate basis upon which to maintain a state of attention and alertness, thus resulting in solitary confinement syndrome marked by stupor and delirium, along with a multiplicity of other burdens, such as loneliness and free-*

In practice, these two concepts are often not distinguished; an individual who needs to be separated is often exposed without cause to extensive deprivations. Moreover, imposing extensive deprivation, especially over long periods of time, creates problems and danger, rather than reducing them.

Participants frequently noted that social isolation is a form of intervention. Many people agreed that a shift from punitive, isolation-dependent models might well be displaced by positive reinforcement and incentive-based models. Such programs have shown promising outcomes, including decreased institutional violence and improved facility safety.⁸ There is no real penological justification to put an individual in segregation for an administrative (as opposed to punitive or investigative) purpose without attempting to enrich his environmental opportunities as much as possible using such mechanisms as conjoint recreation, education, religious worship, books, writing material, letters, phone calls, and visits. Even in the case of punitive confinement, corrections staff must consider whether the deprivations – especially when imposed for more than a short period of time – serve any purpose in keeping the prison safe or in preparing individuals for return to general population or release to the larger community after their prison sentence ends.⁹

• **Identifying Challenges to Reform.** Participants also identified numerous impediments to reform and discussed ways in which these barriers could be overcome:

- **Staff** can be resistant to decreasing the use of isolation for fear that prison safety might be compromised if incarcerated persons are placed in less restrictive housing. Prison administrators noted that correctional professionals could be won over by highlighting that, in many instances, reducing the use of social isolation is correlated with lower rates of violence.
- **Political support** for reform, though growing, must be expanded significantly.
- **The public** is frequently resistant to increased expenditures on prisons. People might be more willing to invest in prison reform if administrators and advocates emphasize that because over 90% of all incarcerated persons will eventually return to the community, prison policy directly affects public safety. The treatment prisoners experience while incarcerated will determine their abilities and behaviors after release.¹⁰ Advocates can be partners in communicating the financial and safety benefits of responsible segregation policy to the general public, relevant interest groups, correctional staff, and affected labor unions.
- **Resource constraints** are another significant barrier to change. Even where prison administrators are able to cut costs, state legislatures frequently will not allow correctional officials to reallocate those funds within the correctional system. Instead, legislatures may reclaim the newly freed funds, effectively reducing correctional budgets.¹¹
- Current prison **architectural infrastructure** can be an impediment to reform. Supermax prisons were not designed for any useful purpose beyond detention, and correctional administrators strain to re-purpose them usefully as institutions that facilitate social interaction.
- Lastly, participants noted that correctional facilities were never meant to be **mental health** care facilities. Yet the 20th century deinstitutionalization of the mentally ill has led too often to correctional re-institutionalization of these individuals.¹² Reform must address the abysmal shortcomings of the patchwork American mental health care system and the counter-therapeutic environment of prisons, neither of which addresses the root causes of these individuals' criminal behavior.

Part I

Case Study Presentations

A. Reduction of Segregation in Washington State

*Presented by **Bernie Warner**, Secretary of Corrections, State of Washington, followed by comments from **Jack Beck**, Director, Prison Visiting Project, Correctional Association of New York (presentation available at Appendix A)*

Bernie Warner, Secretary of Corrections for the State of Washington, described the ongoing evolution in the use of restrictive housing in the State of Washington as an effort to move from suppression and containment toward intensive programming, and from punishment to the development of management tools to address the challenge presented by prisoners who cannot be safely managed in the general population of a prison. He identified the most important change as the recognition that one size does not fit all. The agency needs different responses to different people and mission-specific housing to target risk and be responsive to the needs of the prisoner. As he described it, their goal is to change behavior through programming and congregate activity, rather than through the mere service of time in socially isolating situations.

Warner pointed out that since the implementation of their new approach, the number of use of force incidents in the Washington State Penitentiary Intensive Management Unit have decreased and, at the Clallam Bay Corrections Center, where the Intensive Transition Program targets chronic Intensive Management recidivists and includes mixed cognitive-behavioral therapy, they are experiencing an 80% success rate. They have accomplished this by providing staff with more tools, training in motivational interviewing, and by encouraging interaction between prisoners and staff.

Following Warner's presentation and comments from Jack Beck, Director of the Prison Visiting Project of the Correctional Association of New York, Colloquium participants made the following observations:

- *A common definition for isolation or solitary confinement is necessary so that practices can be compared and monitored, but is difficult to pin down given the variation in practices and terminology throughout the prison system;*
- *Uniform definitions are also needed for disciplinary, administrative, and long-term segregation, because without such standardization, some programs purporting to curtail isolation practices might continue severe isolation under euphemistic titles; Trauma suffered by corrections officers is weighty and must be addressed;*
- *Culture change among corrections officers is necessary to effect reforms, but might require significant changes to hiring practices given the reluctance of unions to embrace change where there is perceived risk to their members' safety;*
- *Informing corrections officers that new policies promote officer safety has been effective in reforming facility culture;*

- *Merit-based approaches to getting out of social isolation/segregation may not properly capture a given individual's level of fault;*
- *Additional research needs to be conducted on the impact of various isolation methods on mental health;*
- *There is danger in releasing individuals directly from segregation into the general prison population or the community; and*
- *One way to monitor practices is to enhance opportunities for additional transparency and access to prisons by outside groups.*

B. Reforms for Youth at Rikers Island in New York City

*Presented by **Joseph Ponte**, Commissioner of Correction, City of New York, followed by comments from **Ron Honberg**, Senior Policy Advisor, Advocacy & Public Policy, National Alliance on Mental Illness (presentation available at Appendix B)*

Joseph Ponte, Commissioner of Correction for the City of New York, described the 14-point program to reduce violence adopted by the New York City jails. New York City's agenda includes efforts to keep weapons and drugs out of the jails, create an integrated classification and housing strategy, design and implement effective inmate educational opportunities and services, and support culture change through expanded training throughout the agency.

As part of this effort, the City is implementing new leadership development training, revamping their internal investigations, improving their recruitment, hiring and staff selection plans, and putting in place a performance management plan that includes operational metrics and analysis. Additionally—and equally importantly—the City is working to improve facility maintenance so that all housing units are in a good state of repair and changing its custody management processes.

Following Ponte's presentation and comments from Ron Honberg, Senior Policy Advisor with the National Alliance on Mental Illness, participants raised the following points for exploration:

- *The importance of corrections officials expressing how the failures of the American mental health system has impacted corrections;*
- *Lack of commitment from elected officials to recognize the problem in the American mental health system and a lack of understanding as to how such reform can be institutionally vital to corrections;*
- *That the "deinstitutionalization [of the American mental health system] led to a different kind of institutionalization";*
- *The importance of understanding different categories of responses to and impacts of isolation, including social, perceptual, and occupational; and*
- *Definitions of isolation are not "black and white."*

C. Removal of the Seriously Mentally Ill from Administrative Segregation in Colorado

Presented by Rick Raemisch, Executive Director, Colorado Department of Corrections, followed by comments from The Reverend Laura Markle Downton, Director, U.S. Prisons Policy and Program, National Religious Campaign Against Torture (presentation available at Appendix C).

Rick Raemisch, Executive Director of the Colorado Department of Corrections, began his presentation by describing the events surrounding the assassination of Tom Clements, his predecessor at the Colorado DOC, who was murdered by Evan Ebel, a formerly incarcerated person who had spent considerable time in restrictive housing. Raemisch described his approach since taking office as telling staff to “just open the door.” The Colorado DOC policy is to establish and provide effective restrictive housing management procedures for offenders who have demonstrated through their behavior that they pose a significant risk to the safety and security of staff and other offenders, as well as to the safe and orderly operation of general population. The use of Restrictive Housing, to include Maximum Security Status, is an offender management process requiring specific action and review for placement and/or progression. The Colorado DOC has taken to heart the United Nations Mandela rule and believes “indefinite solitary confinement should be abolished,” and that by opening the door, you open opportunities. From housing 1484 prisoners in administrative segregation in May 2011, the Colorado DOC now has an entirely empty maximum-security prison.

Following Raemisch’s presentation and comments from Rev. Laura Markle Downton, Director of U.S. Prisons Policy and Program for the National Religious Campaign Against Torture, participants raised the following concerns and issues for discussion:

- *Prisons must respect an incarcerated person’s inherent dignity;*
- *Disparate racial outcomes in the use of social isolation must be addressed; Trauma suffered by corrections officers is weighty and must be addressed;*
- *Incentive structures are more effective in reforming problematic behavior, even among people with mental illness, and should be broadly implemented;*
- *Reforms and practice must recognize gender differences, as women very rarely need isolation and rarely respond positively to its use;*
- *It will be difficult to re-purpose supermax prisons for any other housing uses;*
- *Colorado’s quick turnaround in results is an example of what energized leadership can accomplish, suggesting that perhaps organizational culture is not as much of a barrier as is often discussed;*
- *Therapy dogs are an example of an effective intervention that can be used as an alternative to isolation; and*
- *More must be done to address mental illness in the prison population. Simply noting the trouble with America’s mental health system may serve merely to pass the buck.*

Part II

Work Group Discussions

Following the three case study presentations, participants were organized into three groups of ten for facilitated small group discussions. Each group focused on one aspect of social isolation:

- *Group 1: Reducing Reliance on Long-Term Segregation/Isolated Confinement as a Corrections Tool*
- *Group 2: Managing Prison Gangs and Dangerous, Predatory Individuals Effectively and Safely Without the Use of Isolated Confinement*
- *Group 3: Managing Vulnerable Individuals, Such as Individuals with Mental Illness, Youth, and Protective Custody Populations Without the Use of Isolated Confinement*

For each key area, the groups addressed the following three questions:

- *What strategies and programs can be used to ameliorate social isolation effectively where segregated housing is necessary for the safety and security of an individual/institution?*
- *What is necessary to effectuate reform?*
- *What are the barriers to reform and how can we overcome them?*

The small work groups were tasked with reaching consensus on as many specific reform recommendations as possible. The discussions of each are laid out in turn below.

A. Reducing Reliance on Long-Term Segregation/Isolated Confinement as a Corrections Tool (Group 1)

Group 1 tackled the key issue of reducing the overall segregation population while creating alternative tools and strategies for the management of correctional institutions without over-reliance on isolation. A central question for this group was: What strategies and tools allow correctional institutions to maintain order and hold prisoners accountable for their behaviors in meaningful, effective, and humane ways without excessive reliance on extreme social isolation?

Background and Context. Currently, segregation/isolated confinement is too often used as a one-size-fits-all approach to correctional management. It is used for multiple purposes: discipline for rules violations; “protective custody” for vulnerable prisoners; and housing for disruptive or dangerous prisoners. As corrections strategies, such placement of inmates can be unnecessary and even counterproductive for prison and public safety. Using isolated confinement as a default management tool has led to the over-use of this extreme form of housing, incurring unsupportable human and fiscal costs.

Recent research conducted by the Vera Institute of Justice indicates that isolated confinement is too often used to punish minor misbehavior rather than true threats to institutional security. In Illinois, for example, Vera’s data analysis found that “more than 85 percent of the people released from disciplinary segregation during a one-year period had been sent there for relatively minor infractions, such as not standing for a count and using abusive language.” Similarly, according to Vera, in Pennsylvania, 85% of prisoners found guilty of “failure to obey an order” were placed in isolated confinement, and this charge was the most common violation among prisoners in the isolation units.

Auditing the actual use of isolated confinement to ensure that the population housed there includes only individuals who are guilty of serious misconduct requiring separation is critical for all systems, as is creating alternative tools and practices that better serve safety, security, and rehabilitative purposes. But once isolated confinement populations are so limited, the question remains how to assist prisoners who are justifiably assigned there to expeditiously move out and stay out. Setting up programs that establish privilege levels within isolation units that give inmates clear guidance on the behavior necessary to move to the next level is one step. Ameliorating the conditions of extreme isolation on such units is another goal, including increasing access to group activities; fostering more staff-prisoner interaction; and creating more opportunities for both structured and unstructured out-of-cell time.

A number of correctional systems have implemented such programs. Research on their efficacy is still thin. Some have noted that these programs fail to account for the behavioral problems endemic in isolated confinement—often caused by the psychological stress that confinement induces or exacerbates—and, as a result, fail to create practical mechanisms for allowing inmates to work their way out of segregation. In particular, questions have been raised about programs and strategies that require perfect behavior or penalize minor misbehavior with months and months of additional time in segregation. Preventing long-term stays in isolated confinement both before and after placement must be an objective. But systems continue to grapple with defining what is sufficient compliance with rules to demonstrate that an inmate no longer needs to be placed in isolation housing for safety or security reasons and how to punish misbehavior without resort to isolation.

Questions for Discussion. Group 1’s conversation on these issues was guided by the following discussion questions:

- *What behaviors require the use of segregation?*
- *What are the criteria for using segregation?*
 - *For how long?*
 - *What procedures should apply?*
 - *What should be the standard for review?*
 - *Appeal*
 - *Length of stay/reduction in stay/step down*
 - *What should conditions be like for these prisoners?*
 - *Can we humanize conditions in ways that are safe and secure?*

- *Does staff working in these areas need special skills? What are they?*
 - ◆ *Are there structural changes needed? E.g., staffing patterns? Architecture?*
 - *How can we do segregation without extreme social isolation?*
 - *What resources would be needed to provide the process and conditions recommended?*
 - *What oversight and controls are necessary to ensure the limited use of segregation?*
- *For those prisoners whose behavior does not merit segregation, what penalties/incentives should apply?*
 - *What other alternatives to segregation need to be considered?*
 - *What resources would be needed to make these penalties effective?*
- *What would a realistic incentive structure look like?*
- *What is the role of transparency and accountability in ensuring the success of these units?*
- *What are the barriers to achieving these reforms?*
 - *How can we overcome them?*
 - *How can we ensure and document continued operationalization of these reforms?*

Conversations and Areas of Consensus. In considering these questions, Group 1 maintained the Colloquium's commitment to voicing a diverse range of opinions while engaging in a robust discussion on the role of segregation as a correctional tool. To narrow its dialogue, the group's discussion was generally limited to disciplinary segregation; participants explicitly did not consider administrative segregation or other forms of isolation. The group focused on four issues: the criteria for using segregation, viable alternatives to segregation, the role of transparency, and the barriers to reform.

1. Criteria for Using Segregation. The group reached consensus on several key points. First, all participants agreed that segregation should be used for the minimum time and in the least restrictive conditions necessary to resolve the issue that led to isolation. Participants further agreed that all isolation should have an incentive component, which would restore certain privileges if the individual is able to reach certain behavioral goals. Ideally, these incentive programs would operate on relatively short timeframes—e.g., two days of good behavior earns a reward—so that the individual would quickly begin to see their good behavior pay off. Participants also agreed that isolation should have a goal of changing specific behavior and an individualized achievable path to reach it.

As to the conditions of social isolation, Group 1 members agreed that segregation must include mental health rounds, health care rounds, and basic adequate living conditions such as physical space, light, and air. Participants also agreed that there should be a minimum amount of family contact allowed while individuals are in segregation, as the loss of family contact can be extremely agitating for both the incarcerated person and the family. Increasing family contact and visits could thus prove to be a strong incentive to produce improved behavior. Group 1 also reached consensus that there must be due process protections in place. These must include procedural safeguards for placement in segregation, periodic review of an individual's status during segregation, and an exit mechanism. This process should consider the severity of the offense, the length of time spent in segregation, fairness, and the ability of the individual to comply with imposed conditions.

Group 1 did not reach consensus on an acceptable duration for periods of isolation. About half of the participants agreed that disciplinary segregation must be for a determinate length of time and recommended that disciplinary segregation not exceed 15 days, unless extenuating circumstances otherwise dictate. Of those who disagreed with a hard 15-day upper limit, several participants preferred to use the 15-day mark to trigger a procedural review of whether to extend time in isolation, rather than as a hard upper limit. Other participants suggested that the 15-day limit might be used to trigger a different type of segregation with increased access to, for example, television or some type of congregate activity. Others felt that a year in isolation would be an acceptable limit for serious offenses, such as rape or seriously assaulting a staff member.

2. Viable Alternatives to Segregation. Group 1 discussed the use of alternatives to the default use of segregation, agreeing that punishment should be imposed on a continuum, with segregation used as a tool of last resort. Less serious punishments might include loss of commissary privileges or personal property. For more serious infractions or after other punishments have proved ineffective, corrections officials might impose loss of programming, social contact, and/or family contact. Group members agreed that the loss of privileges must be proportionate to the infraction and include a prosocial incentive system for their restoration.

3. The Role of Transparency. Both advocates and administrators were quick to acknowledge the importance of transparency in furthering reform. Transparency increases awareness and trust for the public, prison staff, and incarcerated people. Advocates tended to focus on the importance of granting faith-based, academic, civil rights, and rehabilitation organizations internal access to correctional facilities and data collection. Correctional administrators were particularly interested in internal feedback loops between prison administrators, the staff, and the incarcerated regarding behavior and punishment expectations. The group agreed that such communication between advocates and correctional administrators may avoid needless litigation, assure the responsible stewardship of funds, and help both correctional staff and the public at large to understand reform in public safety terms. In turn, transparency of statistics about the use of segregation and a public safety narrative could serve to educate all interested parties about the benefits of reducing long-term isolation.

4. Barriers to Reform. Group members most easily reached consensus on the multitude of problems both advocates and administrators face in effecting change. Participants agreed that efforts must be made to obtain staff “buy in” on reforms from the outset. Correctional management should find ways to celebrate courage in the service of public safety through small victories, so that when the inevitable tragic but isolated incident occurs, they can resist the impulse to abandon all reform. If staff is invested, change will be collaborative, rather than totalitarian. Absent such involvement, corrections staff will have less incentive to implement reforms, especially if they perceive risk to their personal safety and/or face opposition from unions, victims’ rights advocates, and other interest groups.

All Group 1 members were quick to agree that limited resources create a significant barrier to reform. Supermax prisons, for example, cannot easily be transformed into rehabilitative programming spaces. Legislatures have little political cover or incentive to lead reform efforts. In many jurisdictions, correctional staff is grossly underpaid and has little incentive to see themselves as part of the rehabilitative process rather than as “just guards.”

Participants acknowledged the importance of clear messaging and outreach to promote the public safety narrative as a means of fighting inertia. That narrative – that the use of isolation actually decreases the safety of the prison, inmates, guards and, ultimately, the community to which these prisoners return – must be communicated to correctional staff, who face considerable mental and emotional trauma in addition to physical danger, as well as to the media, general public, and immediate community around a prison. That message is that the “tough on crime” opposition to reform is ultimately “tough on the community.” A partnership between advocates and correctional administrators can play a vital part in fostering reform through a public safety narrative.

Included in SCDC’ 4.29.19 letter to LOC

B. Managing Prison Gangs and Dangerous, Predatory Individuals Effectively and Safely Without the Use of Isolated Confinement (Group 2)

Group 2 tackled the serious policy and practice issues involved with managing the population of inmates who do present a legitimate security risk and require some form of segregation. Group 2 considered two central questions:

1. When inmates must be segregated because they are dangerous or disruptive, how can social isolation and environmental deprivation be ameliorated safely and what strategies can be used to return those prisoners to general population and the community?
2. Concurrently, how can correctional systems deal effectively with Security Threat Groups (STGs)/prison gangs without reliance on segregation or with limited segregation?

Background and Context. Once correctional facilities reduce their segregation populations to the individuals who need to be there for legitimate safety/security reasons, questions remain about the conditions under which those individuals are housed, as well as the impact of such housing on rehabilitation and ultimately a safe return to the community. Many systems are employing strategies to reduce social isolation for even the most disruptive of prisoners, such as providing access to television, radio, books, MP3 players, and in-cell programming. Increasing social interaction through one-on-one and group programming has also met with success. Allowing increased access to outdoor exercise and recreation, as well as increasing dayroom time and other privileges such as visitation and phone calls, are other areas where systems can enhance social interaction and environmental stimulation to lower the psychological stress of isolated confinement.

Ensuring that conditions in segregation do not damage the physical and mental health of prisoners is central to efforts to make such units more humane and effective. In response, some systems are putting in place policies and practices that rigorously monitor health conditions for prisoners in segregation housing. This is achieved by mandating more frequent and in-depth rounds by health staff; facilitating better communication and coordination between health care and custody staff; allowing prisoners confidential opportunities to seek treatment; and facilitating staff opportunities to observe and talk with prisoners and incorporate such observations into case work and unit management strategies.

Another notable challenge for ameliorating isolation conditions is finding ways to surmount the architectural barriers of some institutions to create more socially stimulating environments while maintaining safe and secure units. A key constraint/challenge for implementing reform and improving outcomes in these units is ensuring that corrections staff have the tools and skills necessary to deal with difficult and potentially dangerous populations without defaulting to the extreme measure of social isolation and lockdown.

Beyond ameliorating the worst features of isolated confinement in corrections, a key challenge remains in the management of prison gangs. Some have pointed to problems of overuse, confining persons not deeply involved in gang culture, in relying on isolation and containment strategies, while others have noted the failure of such strategies to either abate or prevent prison gang activity in most systems. Fresh approaches based on community models may hold out some promise for building alternatives to the segregation model of gang management, but further research and investigation is necessary to build more effective programs and strategies in this critical area.

Questions for Discussion. Group 2's conversation on these issues was guided by the following questions and topics:

- *What behaviors require the use of segregation?*
 - *Are different responses required for prison gangs than for dangerous predatory prisoners? If so, what are the differences?*
 - *For how long?*
 - *What procedures should apply?*
 - *What should be the standard for review?*
 - *Appeal*
 - *Length of stay/reduction in stay/step down*
 - *What is an effective approach to gang de-briefing/renouncing that would allow inmates previously involved in serious gang activity to move safely back to a general population setting?*
 - *What resources would be needed to make these penalties/incentives effective?*
 - *What oversight and controls are necessary to ensure the limited use of segregation?*
- *What should conditions be like for these prisoners?*
 - *Can we humanize these environments in ways that are safe and secure?*
 - *What resources would be needed to provide the process and conditions recommended?*
 - *What programs/policies are necessary to return these prisoners either to general population or the community in a safe manner?*
- *What alternatives to segregation and isolated confinement can be used to deal with prison gang problems in prisons and jails?*
 - *Are there community models that can be transferred to the correctional setting?*
 - *What does effective gang prevention, as opposed to using a containment model, look like in a correctional setting?*
- *Does staff working in these areas need special skills? What are they?*
- *Are there structural changes needed such as staffing patterns and architecture?*
- *What type of internal and external oversight is necessary to ensure that reforms are successful and lasting?*
- *What is the role of transparency and accountability in ensuring the success of these units?*
- *What are the barriers to achieving these reforms?*
- *How can we overcome them?*
- *How can we ensure and document continued operationalization of these reforms?*

Conversations and Areas of Consensus. Group 2's early conversation demonstrated the range of perspectives on its major themes of discussion, such as who should be put in segregation, for what reasons, under what rules, and with what level of transparency. Group members reached significant agreement on some questions, particularly the categories of people and/or behaviors that should or should not be eligible for segregation, but experienced a divergence of opinion on others, notably as to the appropriate conditions of confinement.

The scope of the questions sparked one participant to begin the conversation with a fundamental baseline inquiry: Is segregation ever necessary? There was a clear division here. Some participants argued that because there is no evidence that segregation deters either the individual or the general population, it does not achieve its intended results in terms of

behavior change, deterrence, or safety and, therefore, should not be used except for logistical reasons, such as during an investigation. Additionally, several participants said that there is little evidence – research or anecdotal – about what interventions or practices work to change behavior during periods of segregation. Other participants suggested that segregation is an appropriate punishment for egregious transgressions and/or to manage individuals who are seriously dangerous.

Group members did agree that segregation often makes people worse and that reducing the use of segregation creates a safer institution. Further, everyone agreed that since segregation is widely used and can cause harm, it is important to develop rules and guidelines to reduce its use and its harshness as much as possible. Thus, even though some group members preferred to work toward the elimination of segregation entirely as a longer term goal, the group agreed to discuss the various dimensions of segregation in detail, since the most realistic intermediate goal is to reduce its use. The group therefore reached consensus that the prison system's goal should be to get those in segregation out of segregation – or to less restrictive housing – as soon as possible.

Based on this discussion, Group 2 reached consensus on numerous points that were then converted into recommendations. On a few topics, members held strongly divided views and agreement was not reached. The group did not address every topic on its list before time ran out, and so, for a few areas, recommended further discussion. The areas of consensus, compromise, disagreement, and points for additional exploration are outlined below.

1. Behaviors as the Criteria for Segregation. Group 2 first addressed the criteria for employing segregation, agreeing that it should be used for behaviors only, and not for other “status” reasons, such as a person’s gang affiliation. The group then moved to the question of which behaviors do merit segregation, reaching consensus only on including the most serious violent behaviors: murder, rape, or assault. After some discussion, participants agreed that “threats of violence” – such as one individual ordering another to commit violence – should also be included in this category.

As for behaviors that should not result in segregation, everyone agreed that it is not appropriate for minor rule infractions. There was less clarity, however, as to what behavior constitutes a “major” versus “minor” infraction, as well as whether segregation is an appropriate response to a major infraction. Some participants argued that major “disturbances” – such as participating in a riot, attempting escape, or trafficking drugs inside prison (not simply possession) – justify segregation, while others argued that these actions merit a disciplinary response, but not necessarily segregation, since the individual does not pose a risk of harm to others.

Members also disagreed as to what constitutes “assault” on a staff member. Most participants agreed that prison staff can abuse their discretion and label a minor slight – such as profanity or spitting toward staff – an “assault,” and that segregation is not an appropriate response to such incidents. However, no agreement was reached on the level of serious violence that constitutes the type of assault that would merit segregation. Moreover, some participants noted that prison officials used harsher discipline – including segregation – for lesser levels of violence toward a staff member, while an equivalent level of violence against another person would not result in segregation. Responding to this assertion, other participants contended that an assault against a staff member implies a level of “disturbance” to the prison environment and is thus legitimately considered more serious by corrections staff.

Ultimately, the group did not reach consensus on defining a “serious” assault or distinguishing assaults on staff from assaults against another incarcerated person. Nor did the group agree on how to determine whether a seemingly “minor” altercation or fight could count as a “major” infraction if the staff had reason to believe it would escalate.

2. Defining Types of Segregation. A few of the participants held the view that segregation is almost never justifiable, except in a very few cases of extremely violent or predatory individuals – what was colloquially termed “the Hannibal Lecters.”¹³ Those who favored the most extreme limits on the use of segregation did, however, support talking about a spectrum of “types” of segregation, since it remains a widely used tactic, with the goal of using the harshest type the least often. All participants agreed that this “spectrum” is a useful concept to reflect the different rationales for segregation, such as punitive versus risk-management.

Since this group was addressing segregation only for predatory or dangerous individuals (i.e., not for protection from others), the participants agreed to consider the types of segregation in this framework:

- *Short-term for investigative purposes;*
- *Short-term for disciplinary reasons;*
- *Short-term for “cooling-off” reasons; and*
- *Longer-term for reasons of risk of violence or harm.*

The group agreed that more austere conditions are acceptable for short-term segregation, but not for longer-term segregation, although there was rigorous debate as to the length of time that should delimit “short-term” segregation, as well as about acceptable minimum conditions of such isolation.

Group 2 generally agreed that too many people are placed in the “longer-term” segregation category than should be. One participant offered the example of prison systems that put condemned persons in long-term segregation because of the conventional view that they are risky due to their “I have nothing to lose” position. Yet, according to this participant, when condemned persons were housed in non-restricted housing, they did not exhibit more violent or risky behavior and, in fact, showed improvements in mental health and social interactions.

a. Conditions for Short-Term Segregation.

The group agreed that setting a specific number of hours of cell confinement per day as a minimum standard was not as important as defining the minimum standards for various conditions of segregation: physical space, food, services, staff interaction, allowable activities, interaction with other people, programming, etc. After some debate, the group reached agreement on a specific phrasing for these basic conditions – which is set out in the recommendations in Part III, below.

The group agreed that in order for short-term segregation to serve a punitive purpose, more restrictions and more austere conditions are necessary than exist in the general population or any separated population. These minimum conditions are meant to represent the floor for what constitutes humane confinement. Some participants mentioned examples of privileges that should not be offered in short-term segregation, including additional recreation, TV, phone calls, and contact visits. Participants explained that in order to create positive incentives, prison officials would need to have the ability to offer privileges that could be earned. Thus, prison officials cannot offer all the privileges as a minimum standard. Other members agreed with this premise, but maintained that this should not mean that persons in segregation are not allowed any of these privileges.

b. Conditions for Longer-Term Segregation.

The group then considered appropriate conditions for longer-term segregation. They agreed that only people who pose more serious or ongoing risks of violence to others should be in longer-term segregation and that professional clinicians should determine this risk through regular inter-disciplinary assessments. The group also agreed that corrections staff should make a clear decision to transfer a person from short-term to longer-term segregation, documenting the reasons, rather than simply shifting them automatically after a certain period of time.

Some participants argued that the risk of harm posed by longer-term segregation is only justifiable if the facility provides interventions or programs that attempt to address the underlying cause of the risk of violence – that is, if there is an effort to give the individual a path out of the longer-term segregation by changing his or her behavior. The other participants agreed with this view in principle, but expressed concerns about resource requirements for such programs. The group agreed that, in theory, this approach could also involve a graduated program, in which behavior improvements could lead to more time out of the cell. Group members acknowledged that such interventions would not necessarily work for everyone whose behavior merits longer-term segregation, but that it is important to offer such opportunities. All the participants agreed that these interventions should address the behavior we seek to change, and not merely be recreational in nature.

Group 2 frequently mentioned having a minimum standard of 20 hours per week of programming activities for those in longer-term segregation.¹⁴ A few participants noted that some of this programming could occur with some level of restraint, if necessary, rather than denying it completely to those needing restraint.

The group then discussed the sometimes-used “levels system,” in which prisoners can earn stepped up privileges through good behavior. Meant to be a path out of segregation, some participants expressed concern that such systems act as a trap for people who have underlying behavioral or mental health problems. Members also generally agreed that the term “step down” could be unhelpful. There was no explicit agreement, however, on whether to recommend eliminating levels systems.

Several participants stressed that the conditions in longer-term segregation needed to be more restrictive than the conditions in the general population, expressing concern that individuals might attempt to get into longer-term segregation on purpose, viewing it as a means to a private cell with nearly equal access to services and privileges. Group members therefore agreed to add the caveat that conditions in longer-term segregation should typically be more restrictive than in general population.

3. Maximum Length of Time for Short-Term/Punitive Segregation. The group agreed that the current length of time used for disciplinary segregation is too long – many years, in some cases – and that those in segregation for “risk” reasons tend to be re-assessed too infrequently.

The group discussed the notion of a 15-day limit on short-term segregation under the most austere of conditions for disciplinary or cooling-off reasons. The 15-day limit provides a clear reference point because it is defined as “prolonged solitary confinement” in the Mandela Rules¹⁵ and recommended by the UN Rapporteur. All conceded, however, that this is a relatively arbitrary number without a clear rationale from social science. Some members strenuously argued that the maximum amount of time allowed in the harshest of segregation should be less than 15 days. Views on an appropriate maximum length of time for the harshest segregation ranged dramatically – from one day to more than a year.

Some members repeatedly said that imposing an absolute 15-day limit on short-term segregation would be “too much, too fast” for some prison officials, and that having such a number risks causing a backlash. Given this and the fact that other members would not accept a higher number of days, no consensus on a maximum time limit was reached. Ultimately, the group agreed to recommend the “briefest possible period” – a phrase that conveys the urgency of a short time without prescribing a number of days.

The group also considered the issue of “suspending” the crediting of time toward the confinement period when a person misbehaves. Some participants argued that this tactic is not effective as a deterrent and can make a person more angry and violent. Although no explicit recommendation on this issue emerged, the group agreed that “time suspended” is not a helpful or effective practice.

4. Alternatives to Segregation. The group easily agreed to recommend that alternatives to segregation should be used more widely and that segregation should be used as a last resort. One primary alternative to segregation is separation, which can be used, for example, to separately house gang members who are predatory only towards specific individuals with others to whom they do not pose a risk, and with access to a communal space, programs, etc. The main obstacle to this alternative is architectural: many facilities do not have the structure or space for this type of physical separation. Some participants also pointed out that classification systems attempt to accomplish such separation to some extent, but that prison staff and buildings often do not have the resources to build a separation system with enough levels and categories.

Group members suggested other types of separation, including transferring individuals from segregation to the general population of another facility or another state system. Participants noted that in many cases the individual’s behavior problems were contextual and thus stopped after the transfer. Members agreed that such transfers should be promoted as another version of separation, providing a further alternative to segregation.

5. Due Process. The group briefly discussed issues of due process in the hearings on incidents of misconduct and disciplinary decisions leading to segregation. Several participants commented that because the administrative systems are overloaded with cases, hearings are often delayed for weeks or months, and sometimes officials do not have time to consider each case in sufficient detail. Participants underlined the dilemma that incarcerated persons face: If they accept a short disciplinary segregation “sentence” without a full hearing, they de facto incriminate themselves. However, if they insist on a hearing, they can be in segregation for several months, waiting for that process to take place. Some members suggested that the hearings are not fair because most of the accused are found guilty. A few people suggested that individuals are pleading guilty – regardless of actual guilt – simply to reduce their time in segregation. Overall, there were many concerns about due process, but all agreed that additional external oversight or interventions might not solve the problem. Due to a lack of time, the group did not reach a consensus or recommendation on this topic, and therefore listed it as requiring further discussion in the future.

6. Transparency and Accountability. The group agreed that there is a clear need to collect and analyze more data related to segregation practices. Some participants noted, however, that states have different capacities for in-house data analysis. Therefore, the group agreed to allow for flexibility in how and by whom data is collected and analyzed, whether via the agency itself or through partnerships with universities. Many participants pushed for more detail as to the type of data that should be made available pertaining specifically to segregation. The group agreed to recommend that agencies should collect and make data available on a specific set of issues related to segregation.

7. Staff Buy-In. In the initial exercise, several participants listed lack of staff buy-in as an obstacle to change. During the discussion, administrators argued that even if everyone agrees on the end goal in terms of how to reduce the use of segregation, the implementation should be gradual, as staff is often resistant to change. Members suggested that changes in recruiting and hiring of staff – for example, selecting people for their social work skills and orientation – could shift the level of buy-in. A few participants commented several times that even the best-designed policies require consistent understanding and implementation by staff and that, in some facilities, high staff turnover is more of an obstacle than is staff resistance to change. The group did not agree to make a concrete recommendation on this topic, although this resulted more because there was not a clear suggestion made, rather than because of any explicit disagreement.

8. Strategies for Change. Group 2 then identified a variety of strategies to change segregation practices. All participants agreed that sustainable change to segregation policies requires some change in legislation. They also agreed that there should be a concerted effort to focus on this arena.

The group also discussed strategies related to resources. Everyone recognized that reducing the number of people in segregation and the length of segregation may save money, but some members noted that, typically, state governments reabsorb any savings resulting from changes in prison expenditures, rather than reinvesting them in other prison services or expanding buildings or staff. Thus, removing people from isolation may require new resources and incur new costs. The group thus agreed that advocating for the reduced use of segregation on a cost-savings rationale alone is unhelpful, as it contradicts the equally important need for additional resources for more restorative services. Several participants noted that the problem of the over-use of segregation is in some ways self-generated by the under-resourcing of prisons: When incarcerated persons are under pressures due to overcrowding and lack of services, they are more likely to lash out, which leads to discipline and the over-use of segregation, which in turn drains resources away from better conditions and services for the general population.

With regard to how to “sell” changes in segregation policies to the public and to politicians, some members cautioned against advocating that reducing segregation results in reduced recidivism within prison. Given punitive public attitudes, they suggested that the only argument that resonates with the public is that reducing segregation has clear public safety outcomes.

Finally, the group debated the tradeoffs between prescriptive recommendations versus general guidance. Some members suggested that when guidance is too directive, prison officials might balk. Instead, they suggested that general guidance backed up by examples of successful outcomes of new initiatives or changes in policy would be more persuasive.

All participants agreed that this meeting was a unique and crucial opportunity for generating real change – and that if this change process is not done quickly and well, the window for reform will vanish.

Group members frequently noted during the discussion that the key points or conclusions would only apply to prisons and not jails, particularly on topics of clear differentiations of physical space and programs for different categories of individuals, given that there is less space, fewer resources, and more flux in jails, and that different types of infractions and incentives are common in jails versus prisons. The group recommended that separate discussions be held on the topic of the over-use of segregation with specific reference to jails and also, separately, on the use of segregation in the juvenile justice system.

C. Managing Vulnerable Individuals, Such as Individuals with Mental Illness, Youth, and Protective Custody Populations without the Use of Solitary Confinement (Group 3)

Group 3 was charged with discussing the key policy and practice issues involved with managing vulnerable populations without the use of isolated confinement. Central questions for this group to address included how to identify vulnerable groups and, once identified, what alternative programs to isolated confinement should be provided for these individuals with regard to their particular vulnerabilities, such as mental illness. Equally important questions were how to prevent such programs from devolving into isolation units, and how to deal with vulnerable populations that present legitimate safety and security risks to the facility.

Background and Context. Currently, segregation/isolated confinement is too often used as a one-size-fits-all approach to correctional management. It is used for multiple purposes: discipline for rules violations; “protective custody” for vulnerable prisoners; and housing for disruptive or dangerous prisoners. As corrections strategies, such placement of inmates can be unnecessary and even counterproductive for prison and public safety. Using isolated confinement as a default management tool has led to the over-use of this extreme form of housing, incurring unsupportable human and fiscal costs.

Many correctional facilities do nothing to distinguish between populations in segregation for protective versus punitive reasons. As a result, vulnerable prisoners are subject to extremely onerous conditions and denied access to the types of jobs and programming they will need to successfully return to the community. Due to such harsh conditions, vulnerable prisoners can also be discouraged from seeking the protection they need or even reporting legitimate risks. When isolated confinement is the only choice offered a vulnerable prisoner, that prisoner is confronted with a Hobson’s choice: Opt for protection but pay the price of isolation or avoid isolation and risk injury or even death. This choice often means that the facility has undermined its access to the information it needs to operate in a safe and secure manner.

Alternatives to the one-size-fits-all use of segregation are needed. Some jurisdictions have already implemented special units for vulnerable prisoners with custodial conditions similar to general population. These are sometimes called “safekeeping” or “special needs yards.” This is a good start, but is not enough. We need clear principles and practices across corrections to ensure that we deal humanely and effectively with vulnerable prisoners without resorting to isolation settings.

At the outset, we need clear definitions of categories of persons who qualify as vulnerable if held in the general prison population. For corrections facilities everywhere, the vulnerable group that presents the greatest challenges is often those with mental illness. This cohort is a large and ever-growing part of the corrections population. Decades of experience demonstrate that prisoners with mental illness often adapt very poorly to life in prison. They frequently experience social difficulties with other prisoners and staff; they are often vulnerable to attack by other prisoners; and they typically violate rules both large and small due to an inability to conform to the strict constraints of incarcerated life. For all of these reasons, prisoners with mental illness are disproportionately represented in isolated confinement settings.

But decades of research have demonstrated that individuals with mental illness are uniquely vulnerable to isolation and solitary confinement settings. Many deteriorate dramatically and engage in bizarre and extreme acts of self-injury and suicide. As a result, nearly every federal court to consider the question has ruled that placing individuals with serious mental illness in such conditions violates the Eighth Amendment prohibition against cruel and unusual punishment. In systems where lawsuits have been brought on behalf of the seriously mentally ill in isolation housing, new policies and programs have been implemented. Promising practices for

this population are now emerging and enhanced staff training and collaboration with health care professionals have led to better run, more humane, and safer units for those with mental illness. Yet many systems still house significant populations of seriously mentally ill people in extreme isolation settings.

More recently, reforms have extended to other vulnerable populations, such as youth, pregnant women, and individuals with cognitive impairments and other disabilities. Other groups, such as inmates involved in notorious cases and transgendered inmates, may also be vulnerable. But the programs that have been established in a few locales have yet to become widespread in practice across the country.

A key concern in this area of reform has been the tendency for systems to revert back to the use of isolation once court cases end or public scrutiny relents. Some critics have noted that the exclusion of “special populations” from traditional segregation units has often resulted in a mere relabeling of the units or the prisoners housed there. For example, concerns have been raised that where systems have implemented policies to exclude seriously mentally ill individuals from isolated confinement, there has been a notable trend in re-diagnosing prisoners with long-time mental health diagnoses to lower acuity illnesses so they no longer qualify for alternative housing. In other systems, alternative mental health units—although not labeled as isolation—often look, smell, and feel just like a solitary confinement unit, albeit with a less harsh sounding name.

Another key concern is ensuring that custody and health staff has the skills necessary to deal with difficult populations, such as individuals with mental illness who present serious security concerns. The success of alternatives to segregation is dependent on the ability of staff to do the job intended. Often, this will involve providing substantial, additional training. Line staff is key to the success of new programming and modes of operation that do not rely upon isolation. Just as critical are the significant cultural shifts often necessary within the institutions, including management, line staff, health staff, and the prisoners themselves. Fostering, supporting, and solidifying such culture change is an ongoing challenge for institutions and one that may benefit from outside scrutiny, monitoring, and technical assistance from researchers, advocates, experts, political leaders, and the public.

Questions for Discussion. Group 3 faced the challenge to find consensus on proposals as to how best to reform this system and implement change. To guide its discussions, Group 3 considered the following questions:

- *What groups require special protections?*
 - *Mentally ill? Does the particular diagnosis of mental illness matter in formulating policy?*
 - *Cognitively impaired?*
 - *Informants, former law enforcement, or public officials?*
 - *LGBTQ?*
 - *Other groups? What types are vulnerable?*
- *What procedures should apply to determine the level of protection necessary? For protective custody? For special population housing?*
 - *What does effective screening and classification look like?*
 - *Are there inherent conflicts between medical and mental health care staff and custodial decisions?*
 - *How can those conflicts be resolved?*
- *What procedures should allow appeal by the prisoner of placement or denial in special population units and protective custody?*
 - *How and when should determinations about step down and return to population be made?*

- *Are special population units appropriate? Useful? Counterproductive? In what contexts?*
 - *What tensions does the use of specialty units create in a system? A facility? How can these tensions be avoided or managed?*
 - *What measures must be taken to ensure that special population units maintain their original mission? Do not devolve into isolation housing?*
- *What should the conditions of confinement be like in units for vulnerable individuals?*
 - *What services/programming should be made available?*
 - *What new or specific skills does custodial staff need to work in these settings?*
- *What resources would be needed to make these approaches effective?*
- *What is the role of transparency and accountability in ensuring the success of these units?*
- *What are the barriers to achieving these reforms?*
- *How can we overcome them?*
- *How can we ensure and document continued operationalization of these reforms?*

Conversations and Areas of Consensus. Participants initially disagreed on how to interpret the questions posed by conference organizers. One participant raised a concern about whether to start the discussion by identifying individuals who need protection or those who need services, noting that inadequately treated individuals could potentially be vulnerable and, if those individuals were treated adequately, they would not need protection.

Some members interpreted the questions as asking “Who is vulnerable and who should be placed in a special environment?” Others thought they were being asked “Which categories of individuals should we worry about when removing them from the general population and placing them in a separate unit?”

Given the multiple interpretations of the questions Group 3 was asked to address, the facilitator suggested that there are two conversations to have:

- Whether, if individuals are treated with services and programs, they would still need to be isolated; and
- If those individuals do need to be isolated what conditions of confinement and services should they receive?

The group’s conversations and the areas of consensus it reached on these issues are set out below. The group defined vulnerable populations, discussed methods of separating vulnerable individuals from the general population without resorting to isolation, considered when and under what conditions extreme isolation might be used for vulnerable persons and, more generally, considered issues of accountability, transparency, and barriers to reform.

1. Defining the Scope: Who are the Vulnerable Populations? The group contemplated two different vulnerabilities to approach its discussion. The first vulnerability occurs when an individual is vulnerable to the harm associated with isolation. The second vulnerability arises when an individual is vulnerable to other prisoners. When someone in the first category is placed in isolation, the goal should be to work on getting him or her out as soon as possible. When an individual from the second category is placed in isolation based on their status, the system should instead work to find alternative responses to address these vulnerabilities.

a. Individuals Who are Vulnerable in the General Population.

Group 3 reached an agreement on the following categories of individuals who are **potentially** vulnerable in the general population:

- Serious Mental Illness “SMI”¹⁶
- People with Intellectual Disabilities
- Juveniles
- Old/Elderly
- Infirm
- New Admissions
- LGBT¹⁷
- Protective Custody
- Pregnant
- Chronically Ill
- Sex Offenders

After discussion, group members reached consensus quickly on populations that are vulnerable in general population. This category was defined as including the following people:

- Serious Mental Illness
- Intellectual Disabilities/Developmental Disabilities
- Juveniles (18 and under/defined by state law)
- Elderly/Infirm (without a specific age)
- Protective Custody
- Chronically Ill
- Sex Offenders

Group members cautioned, however, that corrections officials should not be forced to place these individuals in segregation in order to protect them, but rather that these individuals should be provided opportunities to find ways to live safely within general population.

b. Individuals Who are Vulnerable to the Harms of Segregation.

The above categories relate to those who are vulnerable – either from threat of harm to themselves or others – within the general population. In discussing categories of potentially vulnerable individuals, Group 3 next considered individuals who, if placed in segregation, could become dangerous to themselves and/or who are especially vulnerable to the conditions of isolation.

Participants first addressed the elderly and infirm. The group agreed that the elderly and infirm should be included under the vulnerable to isolated confinement list, but did not specify age ranges. They did not reach consensus as to whether LGBT individuals, those in protective custody, the chronically ill, or sex offenders should be included in this particular list.

The group then considered issues related to pregnant women in isolated confinement. It was argued that women are not provided with the healthcare, exercise, and nutrition necessary to keep their gestating babies healthy while they are in isolation. Some group members pushed back against this notion, contending that women in prison might receive better healthcare than they would otherwise, depending on their circumstances. One corrections official shared a story of a pregnant woman who was jumping and diving off of her prison bed in order to abort her baby, noting that because the state has a moral obligation to protect an unborn child from such attempts to harm it, the woman was placed in isolated confinement to protect her life and the life of her unborn child. Participants acknowledged that if someone is harming herself or others – as in this scenario – then the prison needs to protect her, but she should not be placed in 22-hour isolated confinement for more than 30 days.

Following this discussion, the group reached consensus that pregnant women are a population that is especially vulnerable to the harms of isolated confinement. In sum, it was agreed that the following persons are significantly vulnerable to the effects of isolation:

- Serious Mental Illness
- Intellectual Disabilities
- Serious Cognitive Limitations/Impairments
- Juveniles (18 and under/defined by state law)
- Elderly/Infirm (without a specific age)
- Pregnant Women

2. Housing Vulnerable Persons: Should Vulnerable Individuals Be Held in Separate Groups or Can They Live in the General Prison Population and, If So, Under What Conditions?

a. Separate Housing for Vulnerable Populations.

Group 3 addressed how vulnerable individuals should be housed within prison populations and whether, based on their vulnerable status alone, such individuals should be housed separately. Participants suggested that, as a default, all incarcerated persons should be housed in general population irrespective of their classification. Some suggested that corrections officials could create separate units that place vulnerable individuals with others of like status; while others expressed concern that this would merely create a facility segregated by categories, with perhaps some stigmatizing effects.

Several participants agreed that isolation is not a solution to the problem of vulnerable populations and should not be used as a means to protect people: Individuals should not be placed in segregation based solely on their status in a vulnerable category, but rather because their behavior merits it. Instead, such individuals should receive programming to address their unique needs. Ultimately, the question becomes: How do we create living units for vulnerable individuals separate from the general population, yet not isolated or of lesser quality?

One participant suggested that the analysis be as follows:

- 1 What is the person's status? Based on status alone, a person should not be placed in isolation.
- 2 What special needs does this individual have and how can corrections officials address them?
- 3 If the individual has a vulnerable status and also has behavioral issues, how do corrections officials respond? If an individual is mentally ill, for example, can therapeutic programs travel with that person if his or her behavior merits a segregated environment?
- 4 How can corrections officials handle people who cannot safely be housed in the general population because of their status?
- 5 What resources do prisons need to create separate housing for vulnerable persons?

b. The Need for Services and Programs for Vulnerable Populations

The group agreed that vulnerable individuals might require services and programs to help keep them safe and/or address their special needs, but that services available in the general population are often insufficient to accomplish this. Units with vulnerable populations thus need additional services and socialization directed towards a goal. Moreover, progress should not be based on a behavior plan, negative reinforcement, or a punishment-based system, methods that often prove impossible for some vulnerable individuals to meet, such as those with mental disabilities. Rather, a positive incentive-based program should be used.

The group also discussed the conditions of separation for vulnerable populations. It was suggested that for those individuals who are separated, but not in isolation, separation should not work to deprive them of habilitative, rehabilitative, educational, or similar opportunities.

A participant suggested that vulnerable populations should have as close to the same level of amenities as in the general population, in a setting as similar to the general population as possible, while still being afforded the rights and privileges an individual would otherwise have in the general population. It was even suggested that these populations should receive more amenities than the general population.

Others were concerned that this would result in some individuals seeking to be placed in these separate units in order to be housed in a quiet, single cell while still receiving all the same amenities as the general population. They expressed a need for caution in extending social interactions and services beyond what is offered in general population because, if prison life becomes better in these separate units, individuals may seek placement there in order to obtain these additional privileges.

The question was then posed: “How do you meet the needs of individuals who are in a vulnerable population who want to participate in programs that are only available to the general population, such as congregate religious activities or school?” The following solutions were suggested:

- 1 Use escorts to take the individuals to the services or programs;*
- 2 Allow the individuals to interact with other incarcerated people they trust and are in the same status; and*
- 3 Allow the individuals out-of-cell time with staff and outside personnel who come to fill that individual's day with art conversation, passive recreation, etc.*

Group members agreed that the mere fact an individual is in a vulnerable population should not deprive them of the same services that are provided to the general population.

3. Discipline and Isolation for Vulnerable Persons: When, if Ever, Can Isolation Be Imposed on Vulnerable Individuals, and Under What Conditions?

Having defined vulnerable categories of individuals in prison and discussed the preference for separation versus isolation to keep such people, other prisoners, and corrections staff safe, the group moved to considering whether isolation would ever be appropriate for vulnerable individuals. In this discussion, they defined and debated the use of extreme social isolation, focusing on a timeline for initial assessment, its duration and conditions, and step-down procedures.

a. When, if Ever, May Extreme Social Isolation (22 Hour per Day Lockdown) be Imposed on Vulnerable Individuals?

In discussing extreme social isolation, the group considered the question: “To what extent should people in vulnerable categories be held in cells for 22 hours a day because of their status?” The group quickly reached consensus that no one in a vulnerable category should be held in their cell for 22 hours a day solely because of their status, characteristics, or vulnerabilities.

In reaching this consensus, the group discussed the various risks posed by, and the resources available to prison officials to deal with, vulnerable populations. A correctional administrator commented that until he can assess and stabilize an individual who has slashed someone, he knows that the individual is going to present a risk and he struggles with how to allow this person contact with general population while still protecting others.

An advocate conceded that the current practice is to put these individuals in isolation, but encouraged development of a more flexible system that acknowledges that prolonged confinement is not the answer. The advocate stressed that the risk to the individual needs to be balanced with the risk to others and that even in violent situations, these individuals should not be placed in isolation. An administrator suggested that ignoring the behavior of a vulnerable person who assaults another prisoner is not a realistic option.

The group came back several times to the needs of the seriously mentally ill in isolation – both the behaviors that might cause such a person to be placed in isolation and the special treatment needs they might have in that environment. Participants noted that the services available in prison do not compare to the services of a psychiatric hospital, and that correctional resources might be limited during the time an individual is in isolation. Most prison systems do not have enough psychiatric beds and sometimes there are worse conditions of confinement in psychiatric cells than in isolation. Participants suggested that while in isolation, there should be daily mental health services that involve contact with mental health staff, interaction, programs, treatment, and out-of-cell time. Participants also posited that mentally ill individuals in isolation should receive an immediate evaluation and treatment.

All agreed that the best result is to treat such individuals so that their behavior does not merit isolation in the first place, recognizing, however, that SMI will occasionally run afoul of prison rules and require discipline. The group discussed how best to respond to rule violations by the SMI. When an individual with SMI also has a behavioral issue, that person may need to be separated to keep everyone safe, but that separation should not diminish the level of services that person is provided. Group 3 did not contemplate isolation as being used in any way to punish a vulnerable person.

The group considered the method used in Colorado where, if an individual with SMI commits an act caused by their mental illness, an intervention to address the underlying mental illness is provided instead of punishment. In Colorado, even for discipline, corrections officials use a 10/10 plan¹⁸ and some individuals stay in 10/10 forever. This system does, however, raise the question of determining whether a person's underlying mental illness caused a particular behavior. Participants agreed that this system does not mean that staff can never discipline someone with a mental illness. Rather, SMI as a vulnerable population can be held accountable without the use of social isolation.

b. Is there a Limit to the Number of Days a Vulnerable Person Can Be Placed in Isolation?

Having determined that isolation may sometimes be necessary for individuals in vulnerable populations, the group turned to the duration of such confinement. The group agreed that placing a vulnerable individual in 22-hour a day lockdown for an indefinite period is not the answer. Rather, there should be an initial period of isolation to calm and address the threat. Thereafter, these individuals should be transferred to another unit that will address their needs. Another advocate countered that an individual should be placed in isolation only when all other alternatives to de-escalation of the immediate dangerous situation fail. The restraint needs to end when the emergency ends. There need to be time limits that govern when the individual could be released and these should relate to when the individual is no longer dangerous to themselves or others.

As to a specific time limit on isolation, the group considered whether 15 days was workable for vulnerable people to be held in 22-hour lockdown. One administrator argued that 15 days is not workable, but that 30 days might represent an acceptable upper limit and that 45 days would be excessive. Another commented that any system should allow for flexibility. The group next debated what the alternative to isolation should be, acknowledging that a higher standard or threshold should exist to put vulnerable individuals in isolated confinement in the first place. Most participants suggested 10/10, which averages to about three hours out of cell per day.

Group 3 considered a recommendation that vulnerable populations should not be placed in isolation for longer than 30 days. Some participants were not willing to come up with an exact time limit, but suggested instead that isolation should be used for the shortest amount of time necessary. Strong opposition was voiced to the 30-day limit for SMI, with reference to the American Psychiatric Association's Position Statement on Segregation of Prisoners with Mental Illness:

Prolonged segregation of adult inmates with serious mental illness, with rare exceptions, should be avoided due to the potential for harm to such inmates. If an inmate with serious mental illness is placed in segregation, out-of-cell structured therapeutic activities (i.e., mental health/psychiatric treatment) in appropriate programming space and adequate unstructured out-of-cell time should be permitted. Correctional mental health authorities should work closely with administrative custody staff to maximize access to clinically indicated programming and recreation for these individuals.¹⁹

Opinions were that 30 days is punishment; nothing is served by 30 days; and that 30 days should be the limit but less is better. The consensus proposal was that the recommendation should be for a duration of "much less than 30 days."

In discussing duration and time limits, the group also considered the issue of repeated or multiple placements in isolation and the frequency of isolated confinement for the same individual. Group members suggested many ideas, including a limit of only 15 out of 30 days per month depending on the circumstances, and no more than 15 days at a time without at least seven days of non-isolation between being released and before placing the individual back in isolation again. Some in corrections expressed concern about how to then handle disciplinary issues that might arise even immediately after a vulnerable person is released into general population. The group did not reach consensus on this issue.

c. When Should a Vulnerable Person in Isolation Be Assessed?

The group considered the need for prompt assessment of a vulnerable individual placed in isolation, particularly those with SMI needs. As a practical matter, participants noted there might be a lack of available hospital beds, limited resources in smaller or more rural facilities, or lack of other alternatives to remove the individual from isolated confinement. In such circumstances, a suggestion was made to assess the individual within 24 hours of being placed in isolation and to have access to mental health and medical services immediately, if possible, while in isolation.

However, it was recognized that there may not be another facility, unit, or alternative placement available because of a lack of resources, especially in areas that have small prison populations. Expanding on this suggestion, one advocate commented that the individual should be seen by a physician within an hour of being placed in isolated confinement, then must be reassessed a certain number of hours later, followed by a disciplinary team meeting to determine a treatment plan, and a reassessment once out of isolation.

The group considered how fast medical attention or assessment in isolation could occur and how detailed or specific a recommendation to make on this issue. Many seemed to think that it would only take two or three hours after a vulnerable person is placed in isolation to have that person assessed by a medical professional or a corrections official and that a treatment team should meet with the individual on day one. This assumption, however, runs counter to the current standard that provides for 72 hours to assess and formulate a plan. The group's ultimate recommendation adhered to this 72-hour standard.

d. Step-Down Programs for Vulnerable Populations.

The group considered methods for transitioning vulnerable populations out of isolation and back into less restrictive areas. In particular, participants considered step-down programs, which are incentive-based, multi-step processes that provide those placed in isolation the opportunity to earn enhanced privileges by refraining from participation in Security Threat Group affiliations and behaviors. The ultimate goal of a step-down program is to release the persons from the isolation unit.

Group 3 briefly discussed this issue and commented that a step-down program is a very good idea and should be a goal, but that some prisons with small populations of vulnerable individuals may not have the resources for such programming. One advocate noted that incarcerated persons should never be serving “dead time” – meaning time with no intervention or opportunity to improve one’s condition or term of imprisonment – and there should always be a next step where they receive services. This advocate mentioned that the mental health treatment programs function similarly to the step-down programs in some cases.

In the interest of time, group members agreed that they would endorse that step-down programs are a good idea, but that there was not enough time to discuss the details of such programs. Members also reached an understanding that resources or special circumstances might not allow for step-down programs in certain facilities.

4. Should There Be a Classification Appeal for Vulnerable Individuals?

The group disagreed whether the incarcerated person should have a say in his or her classification and placement into a separate unit. One advocate argued that the individual should have input, though not necessarily a vote. A corrections official countered that this might create an expectation that he did not believe was warranted. Others suggested that classifications to place people into separate units are a decision to be made at the facility level by mental health professionals. Ultimately, the group reached consensus that the procedures for determining whether to place a vulnerable person in the general population or in a separate unit should be reached through a multidisciplinary process that includes input from the individual. The group agreed, however, that this procedure need not be a formal process as is the case for an Individual Education Plan or a disciplinary due process hearing.

Group 3 then considered how to handle individuals who disagree with their classification either to be housed in a separate unit or to be placed in general population. Participants discussed liberty interests, due process issues, and the fact that, in many systems, classification is not grounds for a grievance. One of the corrections administrators stated that there may be procedures for an appeal to challenge one’s classification. No consensus was reached as to the nature of any such appeals process.

5. The Importance of Accountability and Transparency.

The members of Group 3 were unanimous in their belief that accountability and transparency is essential to reform efforts. Participants suggested that the public should be allowed into the prisons, critical advisory boards should be in place, outside monitoring allowed, and statistics about decisions should be made public. As part of this improved accountability, facilities should collect more data as to the performance of correctional institutions’ treatment of vulnerable populations to show the impact of implementing the Colloquium’s recommendations. Group 3 agreed that:

- *Transparency is critically important, because it ensures ethical and moral appropriateness and a commitment to positive performance.*
- *Transparency, external and internal accountability, and robust data that supports measuring outcomes are essential and critical to the success of these units and should be publicly available.*

The group also agreed on some measures that would help guarantee success, including collecting data on institutional force and violence, suicide attempts, grievances, disciplinary tickets, assaults on staff, and cell extraction.

6. The Road Ahead: Barriers to Reaching Goals Related to Vulnerable Populations. For its final question, Group 3 tackled barriers to reform measures. Everyone agreed that lack of resources is a barrier. Many of those most at risk present an expensive problem for the system, and money and resources need to be reinvested in separation units to address these vulnerable individuals. One participant suggested that it might be that we cannot run our current prison systems the way we want to with currently allocated resources and funding. States must invest in creating new prison environments in locations that will support the needs of vulnerable populations.

To express these thoughts it was agreed that:

- *These are barriers to achieving reform that will be distinct based on the facility and jurisdiction.*
- *Resources will vary by the system and state and each jurisdiction is ultimately going to have to come up with a solution for adequate resources that will work for their system through new funding or redistribution.*

Part III

Recommendations

What follows is a reconciliation of the recommendations emerging from each of the three groups and reflects the general consensus of the participants of the Colloquium. Not all participants are in agreement with each and every recommendation, but the recommendations that follow have the support of the majority of those in attendance.

- 1. Segregation should be used for the minimum time and in the least restrictive conditions necessary to resolve the condition that led to the segregation.**
 - 1.1. For those in segregation or restricted housing, the goal should be to get them into the least restrictive housing possible. If they are separated from the general population, it should be for the shortest amount of time necessary. We urge correctional officials to consider alternatives to segregation or restricted housing.
- 2. Separation is one alternative to segregation or restricted housing. This can be accomplished through moving someone to a different area of a facility, a different facility, or a different prison system.**
- 3. Positive incentives should be incorporated into the management of all incarcerated people, including those in segregation or restricted housing.**
 - 3.1 All isolation should have an incentive component, which would restore certain privileges if the individual were able to reach certain behavioral goals. Ideally, these incentive programs would operate on relatively short timeframes—e.g., two days of good behavior earns a reward—so that incarcerated persons would quickly begin to see their good behavior rewarded. Participants also agreed that isolation should have a goal of changing specific behavior and an individualized achievable path to reach it.
- 4. Even for the most restrictive segregation, the conditions should be humane. These conditions should include, at a minimum: access to natural light; control of light in cells; basic sanitary and safe environmental conditions including adequate space, ventilation and temperature; adequate nutrition; adequate medical and mental health services; and reading materials. There should be initial and subsequent periodic mental health evaluations of those in segregation or restricted housing to determine whether changes in conditions of confinement are warranted for mental health reasons.**
 - 4.1 Segregation must include meaningful mental health rounds, health care rounds, and adequate basic conditions.
 - 4.2 Apart from the briefest possible initial period, all incarcerated persons in segregation or restricted housing should have some access to out-of-cell time, congregate activity, meaningful social interaction, programming/interventions, phone calls, and visits, recognizing that the extent of these privileges may be more limited than in general population. The most restrictive segregation should be for the shortest amount of time necessary.

- 4.3 Segregation or restricted housing for investigation purposes should be brief and may require a brief period of restricted contact with others.
- 5. We recognize that there is a small number of people who will require prolonged separation from the general population because they pose a threat of violence to incarcerated persons or staff.**
- 5.1 Their separation from the general population is not punitive and should not be experienced that way. For these people, the conditions should be humane and as close to general population conditions as possible (in addition to the basic conditions listed in item 4 above).
- 5.2 These people should be provided with interventions to address their needs and to promote their safe transition back to less restrictive settings.
- 6. All people in segregation or restricted housing should be periodically reviewed to determine whether they could be released to a less restrictive environment (e.g., having met treatment goals).**
- 7. Responses to disciplinary infractions should be imposed on a continuum, with segregation as the tool of last resort.**
- 7.1 Segregation or restricted housing for disciplinary or management purposes should be used only for the most serious behavioral offenses, such as violence or threats of violence.
- 7.2 It should not be used for problems such as gang affiliation, status, or political beliefs, or for minor infractions, except for a brief segregation period for investigation or cooling-off purposes.
- 8. There must to be due process protections in place.**
- 8.1 These must include procedural safeguards for placement in segregation, periodic review during segregation, and an exit mechanism.
- 8.2 This process should consider the severity of the offense, length of time spent in segregation, fairness, and the ability of the individual to comply with imposed conditions.
- 9. The loss of privileges needs to be proportionate to the infraction and must include a pro-social incentive system to restore the privileges.**
- 10. There should be family contact allowed while incarcerated people are in segregation, as the loss of family contact can be extremely agitating for both the incarcerated person and the family; increasing family contact and visits for improved behavior can provide a strong incentive.**
- 11. Loss of programming, social contact, and family contact should be reserved for more serious infractions or after other punishments have proved ineffective.**
- 12. Anyone who is in segregation or restricted housing for more than a brief period of time should be provided with interventions to address their needs and promote their safe transition back to less restrictive settings.**
- 13. Incarceration should be avoided whenever possible to prevent bringing vulnerable populations²⁰ into the prison system in the first place (e.g., juveniles should be in youth systems and should never be in adult prisons; people with mental illness should receive treatment and services elsewhere; elderly and infirm should be released on parole; etc.).**
- 14. Where incarceration cannot be avoided, every reasonable effort should be made to manage the vulnerable individual within the general population environment and provide adequate services to meet their needs while in the general population.**

- 14.1** The determination to place a vulnerable person in the general population or in a separate unit should be made through a multidisciplinary process that includes input from the prisoner, regarding which special unit they should be placed in. The procedure need not be a formal procedure such as an IEP or a disciplinary due process hearing.

15. Where general population placement cannot be effectively managed without posing an unacceptable risk, vulnerable populations should be assigned to separate living units where their needs can be appropriately met with a goal of maximizing congregate activity, habilitative, rehabilitative, and programmatic opportunities.

- 15.1** The separation accomplished in these living units is separation from the risk posed by general population, not separation or isolation from all other individuals. The conditions of confinement in these separate units should never be punitive.

16. For significantly vulnerable individuals at high risk of harm in extreme isolation, such isolation should be imposed only as a very temporary emergency measure, for no more than 15 days, when absolutely necessary to address immediate serious safety needs. No later than 72 hours following placement in extreme isolation:

- 16.1** Measures to reduce social isolation, to ameliorate the risks from extreme isolation, and to soften the environment should begin: e.g., for prisoners with serious mental illness, structured therapeutic activities (i.e., mental health/psychiatric treatment) in appropriate programming space and adequate unstructured out-of-cell time; measures to allow pregnant women adequate access to large-muscle exercise; etc.
- 16.2** Efforts to assess the prisoner's behaviors and the best strategies towards a goal of alternative long-term housing should begin.

17. In extraordinary cases in which a stay of longer than 15 days is essential, any extension must be based on an authorization by medical or mental healthcare professionals in the exercise of their independent professional judgment, with additional review each seven days thereafter, or more often if needed, and in no case shall extreme isolation for significantly vulnerable individuals extend beyond 30 days.

18. There is a consensus on endorsing step-down programs for vulnerable individuals, but no exact procedures for step down were agreed upon.

19. We acknowledge the importance of transparency in furthering reform and believe transparency and accountability further the goals of public safety. Transparency increases awareness and trust for the public, prison staff, and incarcerated persons. Transparency is mission critical and ensures ethical and moral appropriateness and the commitment to positive performance.

20. Every agency should have data on the use of segregation or restricted housing, including:

- 20.1** Demographics of individuals in segregation/restricted housing;
- 20.2** The nature of segregation/restricted housing;
- 20.3** Length of time in segregation/restricted housing; and
- 20.4** Where individuals were released (internally or to the community).
- 20.5** Agencies should track the outcomes of those who are released from segregation.

20.6 It is essential there be robust data collection that measures the outcomes critical to the success of these units. This should be publicly available. Data should include:

- 20.6.1 Institutional violence*
- 20.6.2 Cell extraction*
- 20.6.3 Suicide attempts*
- 20.6.4 Grievances*
- 20.6.5 Disciplinary tickets*
- 20.6.6 Assaults on staff*

20.7 Agencies should also:

- 20.7.1 Have the capacity to undertake research and data collection.*
- 20.7.2 Make data publicly available on their websites on a regular basis.*
- 20.7.3 To the extent possible, be open to outside research projects for both external and internal accountability.*

- 21. Communication between advocates and correctional administrators may avoid needless litigation, assure the responsible stewardship of funds, and help both correctional staff and the public at large to understand reform in public safety terms.**
- 22. Advocacy should also focus on legislation to ensure sufficient resources, including reallocation of resources saved by reducing segregation or restricted housing. There are barriers to achieving reform that will be distinct based on the facility and jurisdiction. There is consensus that adequate resources will be needed to meet the recommendations set out above either through new funding or reallocation of savings.**
- 23. Efforts must be made to get staff “buy in” on reforms from the outset. Correctional management should find ways to celebrate courage in the service of public safety through small victories.**
- 24. We call for a separate conversation and set of recommendations on segregation or restricted housing for jails and juvenile justice facilities.**

Part IV

After the Colloquium: Next Steps

Although the Colloquium resulted in the consensus recommendations above, much remains to be done. Areas of disagreement and questions for further exploration remain. For instance, participants recommended continuing discussions specifically directed to the unique challenges facing jails and juvenile corrections institutions.

The first step that should be taken is to publicize and write about the recommendations herein. Jurisdictions that did not participate will require assistance to understand and implement these recommendations. Opportunities to incorporate the ideas emanating from this Colloquium exist in the work of the Vera Institute of Justice's "Safe Alternatives to Segregation" initiative to provide assistance to state and local jurisdictions interested in implementing some of these ideas. We have already discussed and shared these recommendations with the Vera Institute and are exploring opportunities to support its work and incorporate these recommendations into its practice.

As important as the recommendations themselves, what emerged from this Colloquium was the beginning of meaningful and respectful dialogue between parties on both sides of the issue who hold competing views of the problem. This dynamic should be continued by bringing the group together again to hear about progress, learn from the research being done by the Vera Institute and others about what works, advance the discussion of outstanding issues, and narrow the range of disagreement.

Consensus methods have been used productively to solve problems in medicine and health.²¹ Their main purpose is to define levels of agreement on controversial subjects. Learning from the medical profession, this Colloquium can serve as the beginning of a "consensus development" effort within corrections to address the use of social isolation. Advocates suggest that, when properly employed, consensus strategies can create structured environments in which experts are given the best available information, allowing their solutions to problems to be more justifiable and credible than otherwise. The challenge moving ahead will be selecting problems, choosing members for consensus panels, specifying acceptable levels of agreement, properly using empirical data, obtaining professional and political support, and disseminating results.

Examples of issues requiring further discussion include the best ways to manage the process of "stepping down" an individual from social isolation in prison, specific time limits on the use of extreme social isolation, and definitions of "serious" disciplinary infractions as distinguished from minor infractions that do not warrant the use of social isolation as punishment. The goal would be to identify common definitions and develop best practices.

Finally, the strong recommendation from the Colloquium for transparency and accountability requires further work to determine accurately the state of knowledge and available data in each jurisdiction regarding the prevalence and frequency with which different forms of social isolation are being employed, how they are defined, and their outcomes. Efforts have begun, including groundbreaking work by the Liman Center at Yale Law School and the Association of State Correctional Administrators to quantify the use of “Administrative Segregation.”²² A first step would be to survey jurisdictions to determine where their segregation policies meet, exceed, or fall short of these articulated consensus principles, then to assess which policies require rewriting. Subsequent reports could analyze how changes based on these principles have impacted policy and program outcomes. Finally, there may be an opportunity to revisit the principles in a few years to see where greater consensus or new principles have emerged as a result of implementation experiences on the ground.

John Jay College of Criminal Justice, Professor Martin Horn, and the Prisoner Reentry Institute look forward to continuing our efforts to advance these goals.

APPENDIX A

Participants' Biographies

John Baldwin was named director of the Illinois Department of Corrections on August 14, 2015, by Governor Bruce Rauner. As IDOC director, he is responsible for overseeing the management and operations of more than 35 state prisons, work camps, boot camps and transition centers as well as the supervision of parolees. Baldwin brings more than 35 years of overall experience to the position. He was the director of the Iowa Department of Corrections for eight years, where he oversaw a staff of nearly 4,000 officers and an offender population of 38,000. During his tenure, Baldwin worked with the Pew-MacArthur Results First Initiative to build a state-specific cost-benefit analysis on the state's corrections department. The data was used to make more informed policy and budget decisions in an effort to reduce recidivism. Baldwin began working for the Iowa Department of Corrections in 1983. In addition to his leadership as director, he served as the deputy director of Administration where he oversaw a number of areas including the budget, personnel, and evidence-based practices. Baldwin holds a master's degree in political science from Iowa State University and a bachelor's degree in economics from the University of Iowa.

Sarah Baumgartel, Senior Liman Fellow in Residence, joined the Liman Program at Yale Law School in 2015. From 2008 to 2015, she was an Assistant Federal Defender with the Federal Defenders of New York. She was also a Lecturer in Law at Columbia Law School from 2014 to 2015. Ms. Baumgartel holds degrees from Harvard Law School and Duke University. Prior to her work with Federal Defenders of New York, she worked as an attorney handling civil and criminal litigation.

Jeffrey A. Beard, Ph.D. was appointed as Secretary of the California Department of Corrections and Rehabilitation by Governor Edmund G. Brown, Jr., on December 27, 2012. He also serves as Chairman of the Prison Industry Board. Prior to his appointment as Secretary, Dr. Beard began his criminal justice career in 1972 with the Department of Corrections in Pennsylvania (DCP) as a corrections counselor. During his retirement, Dr. Beard has served as a consultant and/or instructor to the National Institute of Corrections, corrections agencies and various companies on correctional matters, security, performance measures, mental health issues, evidence-based programs and assessment. Dr. Beard holds a B.S. in psychology, and an M.Ed and Ph.D. in counseling, all from the Pennsylvania State University. He is a member of the Pennsylvania Prison Wardens Association (PPWA), American Correctional Association (ACA), Western Association of Correctional Administrators (WACA) and the Association of State Correctional Administrators (ASCA). During his tenure as Secretary in Pennsylvania he served on the National Institute of Justice's Law Enforcement and Corrections Technology Advisory Committee (LECTAC), the last three years of which he served as vice chair for Corrections.

Jack Beck has been the Director of the Prison Visiting Project at the Correctional Association of NY (CA) since 2014. The CA has statutory authority to inspect prisons in NY State and to report its findings to the legislature and public. At the CA, he has focused on monitoring conditions within NY prisons, including confinement in disciplinary housing; safety and violence in the prisons; prison medical and mental health care; and treatment of persons in prison with substance abuse histories. Prior to the CA, he was a Senior Supervising Attorney at the Prisoners' Right Project (PRP) of the Legal Aid Society, where he worked for 23 years. At PRP, he pursued federal class action litigation on behalf of people in state prisons and New York City jails. He specialized in medical care issues, with particular focus on HIV/AIDS and Hepatitis C. He is a member of several statewide coalitions concerned with (1) incarcerated persons placed in isolated confinement, and (2) medical and/or mental health care in prisons that advocate for legislation to improve care of persons inside, particularly those infected with HIV and/or hepatitis C and those who suffer from mental illness and have been placed in isolated confinement.

Included in SCDC' 4.29.19 letter to LOC

Leann K. Bertsch was appointed Director of the North Dakota Department of Corrections and Rehabilitation on July 1, 2005, by Governor John Hoeven. Prior to serving as Director, Bertsch served as the Commissioner of the North Dakota Department of Labor from September 2004 through June 2005. Prior to entering state government, Bertsch served as an Assistant State's Attorney for Burleigh County from August 1996 through August 2004. From 1992 through 1996, Bertsch worked as an attorney for Legal Assistance of North Dakota. Bertsch also served 21 years in the North Dakota National Guard, retiring as a Major in the Judge Advocate General's Corp in 2007. As Corrections Director, Bertsch has worked to implement evidence-based practices throughout the North Dakota Corrections system focusing resources on long-term offender behavior change as opposed to monitoring and compliance. Bertsch has been active on various commissions including the Commission for the Study of Racial and Ethnic Bias in the Courts; the Commission on Alternatives to Incarceration; the Governor's Task Force on Violent and Sexual Offenders; the Interagency Council on Homelessness; and the Stop Violence Against Women Advisory Committee. Bertsch also serves as an officer of the Association of State Correctional Administrators. Bertsch earned a Juris Doctor from the University of North Dakota School of Law and Bachelor of Science degree from North Dakota State University.

Brett Dignam joined the Columbia Law School faculty in 2010. She came to Columbia from Yale Law School, where she led the Prison Legal Services, Complex Federal Litigation and Supreme Court Advocacy clinics. An award-winning teacher, Professor Dignam has supervised students in a broad range of litigation matters and has designed and overseen workshops conducted by students for prisoners at the Federal Correctional Institution in Danbury, Connecticut, on issues including immigration, sexual assault, and exhaustion under the Prison Litigation Reform Act. She has participated in major litigation in over 30 federal and state cases in the area of prisoners' rights. Before entering the legal academy, Professor Dignam served as a law clerk for the Honorable William H. Orrick, U.S. District Court in San Francisco, California, and then developed a prison litigation practice in both federal and state courts. As an associate professor at Yale Law, Dignam taught and supervised students in Prison Legal Services, Poverty/HIV, Landlord/Tenant and Immigration clinics, guiding students through administrative hearings, state and federal trial and appellate courts on issues ranging from state habeas claims to violations of the Voting Rights Act. Dignam received her J.D. from the University of Southern California, where she was student director of the USC Prison Law Project and chair of the Hale Moot Court Honors Program. She has a Master of Arts degree in theater from the University of California at Los Angeles. She received her B.A. from Mount Holyoke College.

Jamie Fellner, Esq., Senior Advisor of the U.S. Program of Human Rights Watch, is engaged in research, documentation and advocacy on US criminal justice issues. Much of her work has focused on human rights abuses in US prisons, and she has written about inadequate treatment and conditions of confinement for inmates with mental illness, prison rape, solitary confinement, abusive use of force, aging prisoners and the lack of compassionate release. In addition, she has engaged in extensive research and advocacy on pretrial policies and practices and on racial disparities in drug law enforcement. She brings to this work decades of national and international professional experience. Ms. Fellner was a commissioner on the National Prison Rape Elimination Commission. She has authored and co-authored numerous published reports and articles addressing human rights problems in the United States. Ms. Fellner received her law degree from the School of Law at the University of California, Berkeley, a M.A. from Stanford University and a B.A. from Smith College.

Amy Fettig serves as Senior Staff Counsel for the ACLU's National Prison Project (NPP). At NPP, she litigates federal class action prison conditions cases. Her practice focuses on claims regarding medical and mental health care in prison, solitary confinement, prison rape and sexual abuse, and comprehensive reform in juvenile facilities. Ms. Fettig is also the Director of the ACLU's nationwide Stop Solitary campaign seeking to end the practice of extreme isolation in our nation's prisons, jails and juvenile detention centers through public policy reform, state and federal legislation, litigation and public education. A leading authority on women prisoners, Ms. Fettig also works with a wide range of ACLU affiliates on both campaigns to end the shackling of pregnant women and their advocacy strategies around women's health in prison. A national expert on prisoner rights law, she provides technical legal assistance and strategic counsel to advocacy groups and lawyers around the country and has served as an Adjunct Professor of Law at Georgetown University. She holds a B.A., with

Included in SCDC' 4.29.19 letter to LOC

distinction, Carleton College; a Master's from Columbia University, School of International and Public Affairs; and a J.D. from Georgetown University. Ms. Fettig is a member of the New York State Bar (2002) and the Bar for the District of Columbia (2006).

Marshall L. Fisher has served as commissioner of the Mississippi Department of Corrections since Jan. 1, 2015. He oversees over 2,600 employees with a \$357 million budget for three state prisons, four private prisons, 15 regional facilities, 10 community work centers, three technical violation centers, and four restitution centers. A reputed coalition builder who has worked in local, state and federal law enforcement, Fisher has years of experience in overseeing complex public safety issues. When Gov. Phil Bryant named him commissioner, Fisher was state director for the Mississippi Gulf Coast High Intensity Drug Trafficking Area, where he was a liaison for drug task forces and area law enforcement agencies. Fisher accepted the federal post after spending nearly 10 years as the state's top narcotics enforcer. He was executive director of the Mississippi Bureau of Narcotics from 2005-2014, acting as the senior advisor to the governor and the Mississippi Legislature on drug policy matters. Fisher led MBN after retiring from the Drug Enforcement Administration, where he once served as Agent in Charge of Mississippi DEA operations. During a DEA career that spanned two decades, he was assigned to field offices in Texas, Kansas, and Kentucky and DEA Headquarters in Washington, D.C., where he was section chief in the Office of Domestic Operations to Europe, Asia, Africa and Canada. In 2010, Fisher received the National Impact Award for his anti-methamphetamine efforts. He is also the 2011 recipient of the Jim Ingram Lifetime Achievement Award and the 2015 recipient of the George Phillips Public Service Award. Fisher started his law enforcement career as a police officer in Texas. He is a U.S. Navy veteran and a graduate of the University of Memphis, with a Bachelor of Arts degree in criminal justice.

Robert Fleischner is an attorney and assistant director at the Center for Public Representation, a national public interest law firm in Northampton, Massachusetts. He has represented people with disabilities since 1973, when he graduated from Boston College Law School. He has litigated and argued appeals in prison and juvenile justice reform cases on behalf of adults and youth with mental illness, including those held in segregation. His other litigation includes school-to-prison pipeline, civil commitment, right to treatment, guardianship and community integration cases. He has consulted with dozens of state Protection and Advocacy programs on criminal and juvenile justice issues. He is co-author of *Guardianship and Conservatorship in Massachusetts*, 2d Ed., (Lexis) and has authored numerous law journal articles. Bob has served on the adjunct faculties of Western New England University Law School and Smith College School for Social Work, teaching courses on juvenile justice and disability law.

Dr. Stuart Grassian of Massachusetts is a Board-certified psychiatrist who was on the teaching staff of the Harvard Medical School for almost thirty years. He has had extensive experience in evaluating the psychiatric effects of stringent conditions of confinement and has served as an expert in both individual and class-action lawsuits addressing this issue. Dr. Grassian described a particular psychiatric syndrome resulting from the deprivation of social, perceptual, and occupational stimulation in solitary confinement. His observations and conclusions have been cited in a number of federal court decisions, for example: *Davenport v. DeRobertis*, 844 F.2d 1310 (7th Cir. 1988), and *Madrid v. Gomez*, 889 F. Supp. 1146 (N.D. Cal. 1995). In his publications, he described the extensive body of literature, including clinical and experimental literature, regarding the effects of decreased environmental and social stimulation in a variety of situations, and specifically, observations concerning the effects of segregated prison confinement.

Ron Honberg, J.D., serves as the national director for policy and legal affairs at NAMI, the National Alliance on Mental Illness. As director of NAMI's policy team, Mr. Honberg oversees NAMI's work on federal and state policy issues and on legal issues. In recent years, he has worked particularly on issues affecting people with mental illnesses involved with criminal justice systems, including jail diversion, correctional treatment, and community reentry. He was also one of the lead authors in NAMI's 2006 "Grading the States" report. During his nearly eighteen years with NAMI, Ron has drafted amicus curiae briefs in precedent-setting litigation impacting people with mental illnesses and has provided technical assistance to attorneys and NAMI affiliates. He has also published a number of articles on policy and

Included in SCDC' 4.29.19 letter to LOC

legal issues affecting people with mental illness and other disabilities. Before coming to NAMI in 1988, Mr. Honberg worked as a Vocational Rehabilitation Counselor for the State of Maryland and in a variety of direct service positions in the mental illness and developmental disabilities fields. A former president of the Maryland Rehabilitation Counseling Association, he served in a voluntary capacity for six years on the board of directors of St. Luke's House, a psychiatric rehabilitation program serving over 400 clients in Montgomery County, Maryland. Mr. Honberg has a Juris Doctor degree from the University of Maryland School of Law and a Master's Degree in Counseling from the University of Maryland.

Terry A. Kupers, M.D., M.S.P., is Institute Professor at The Wright Institute and Distinguished Life Fellow of the American Psychiatric Association. He provides expert testimony in class action litigation regarding the psychological effects of prison conditions, including isolated confinement in supermaximum security units, the quality of correctional mental health care, and the effects of sexual abuse in correctional settings. He is author of *Prison Madness: The Mental Health Crisis Behind Bars and What We Must Do About It* (1999) and co-editor of *Prison Masculinities* (2002). He is a Contributing Editor of *Correctional Mental Health Report*. He received the 2005 Exemplary Psychiatrist Award from the National Alliance on Mental Illness (NAMI).

Gary M. Lanigan, who has more than three decades of experience in the criminal justice and financial management realms, was confirmed as Governor Chris Christie's choice as Commissioner of the New Jersey Department of Corrections (NJDOC) in March 2010. As head of the NJDOC, Mr. Lanigan is responsible for a budget of roughly \$1 billion, approximately 8,000 employees, 13 correctional institutions and more than 21,000 state-sentenced offenders housed in prisons, county jails and community halfway houses. Mr. Lanigan also was employed by the New York City Department of Correction, serving as the Deputy Commissioner of Administration, followed by a position as First Deputy Commissioner. In addition, Mr. Lanigan served as an Assistant Commissioner with the New York City Police Department and as an analyst with the New York City Office of Management and Budget. The Commissioner, a veteran of the United States Navy, received both a Master of Public Administration degree and a Bachelor of Science degree in business administration from Bernard M. Baruch College. He is also a graduate of the Police Management Institute sponsored by the Columbia University Graduate School of Business. Mr. Lanigan also attended the John F. Kennedy School of Government at Harvard University Leadership Institute.

Jules Lobel is the Bessie McKee Walthour Endowed Chair at the University Of Pittsburgh School of Law. Recently, Lobel co-authored the award winning book *Less Safe, Less Free: Why America is Losing the War on Terror* (2007) with Professor David Cole, which won the first Roy C. Palmer Civil Liberties Prize for exemplary scholarship exploring the tension between civil liberties and national security. He is also the author of *Success without Victory: Lost Legal Battles and the Long Road to Justice in America* (2003) and editor of several books on civil rights litigation as well as the U.S. Constitution. He has authored numerous articles on international and constitutional law in publications including Yale Law Journal, Harvard International Law Journal, Cornell Law Review, University of Pennsylvania Law Review and Virginia Law Review. Lobel is also President of the Center for Constitutional Rights, a national human and constitutional rights organization headquartered in New York City.

Joe Luppino-Esposito is a Policy Analyst for Right on Crime and the Center for Effective Justice at the Texas Public Policy Foundation. Joe serves as the Foundation's liaison in the nation's capital, working with Congress and allied organizations to develop criminal justice reforms. Prior to joining TPPF, Joe was the Editor and General Counsel of State Budget Solutions, focusing on public employee pensions, labor law, and state budget reforms. As the Visiting Legal Fellow at the Heritage Foundation, Joe worked on the over-criminalization project, analyzing federal criminal laws. Joe is a graduate of Seton Hall University School of Law, where he was Editor in Chief of the Circuit Review legal journal. He received a B.A. from the College of William and Mary. Joe is a licensed attorney in Virginia. He is a New Jersey native and currently resides in Virginia.

Included in SCDC' 4.29.19 letter to LOC

Gregg Marcantel, a United States Marine Corps (USMC) veteran, is an experienced law enforcement executive for over three decades. Gregg currently serves the State of New Mexico as Cabinet Secretary for the New Mexico Corrections Department. Before assuming his current post, Gregg served the New Mexico Department of Public Safety as their Deputy Cabinet Secretary following his retirement from the Bernalillo County Sheriff's Department in Albuquerque, New Mexico as a Division Commander. During Gregg's career, he successfully completed the Federal Bureau of Investigation's National Academy and currently serves as the President of the New Mexico FBI National Academy Associates. Gregg also attended the Bramshill Police Staff College in the United Kingdom, where he studied the leadership and management of serious and serial crimes. He possesses a Master of Science Degree in Forensic and Legal Psychology from the University of Leicester and a Bachelor Degree in Criminal Justice from Chaminade University of Honolulu. Throughout his public safety career, Gregg has received numerous awards ranging from the Navy Achievement Medal in the USMC to national recognition by the Department of Justice and the Drug Enforcement Administration, to include receipt of the Nation's Top Cop Award by the National Association of Police Organizations in Washington, D.C. He has presented both nationally and internationally on a host of complex criminal investigation strategies and served in university adjunct faculty roles relating to the delivery of a variety of criminal justice courses to include Criminal Investigations, Behavior-based Rape Investigations, Murder: An Analytical Study, Police Supervision and Management, as well as Forensic Psychology.

Rev. Laura Markle Downton is the Director of U.S. Prisons Policy and Program at the National Religious Campaign Against Torture (NRCAT), an interfaith membership organization working to end torture in U.S. policy, practice and culture. Rev. Markle Downton directs the state and federal advocacy agenda for interfaith leadership in NRCAT's campaign to end torture in U.S. prisons and jails, with a focus on ending long-term solitary confinement. She provides coordination, training, resource development, and technical direction to faith-based organizations nationally. Most recently, she has developed programmatic tools for faith community outreach including supervising the production of a documentary about solitary confinement called "Breaking Down the Box," and coordinated a nationwide tour of a solitary confinement prison cell replica. Prior to joining NRCAT, Rev. Markle Downton was a National Organizer for the General Board of Church and Society of the United Methodist Church, building networks among communities of faith engaged in the promotion of restorative justice. She has worked with diverse religious communities and legal advocates for employment and housing justice in Washington, DC and Philadelphia, PA. She is a Provisional Elder in the Baltimore-Washington Annual Conference of The United Methodist Church. Rev. Markle Downton holds a M.Div. from Princeton Theological Seminary, is a Midwest Academy trained organizer, and holds certification from the Strategies for Trauma Awareness and Resilience (STAR) Program of Eastern Mennonite University.

Terri McDonald, a 24-year veteran of the California Department of Corrections and Rehabilitation (CDCR) was recently appointed to the position of Assistant Sheriff by Sheriff Lee Baca and will oversee the Custody Division of the Los Angeles County Sheriff's Department. Assistant Sheriff McDonald's career in law enforcement began in 1988 as a Correctional Officer with the California Department of Corrections and Rehabilitation. During her tenure with the CDCR, she literally worked her way up through the ranks of the Department, working as an Officer, Sergeant, Lieutenant, Captain, including Captain at Folsom State Prison, Associate Warden, Chief Deputy Warden, Division Chief, Chief Deputy Secretary and Undersecretary. Additionally, she oversaw the Statewide Classification Unit, Statewide Population Management Unit, assisted in revamping the correctional officer academy, and oversaw and activated out-of-state prisons with California inmates. Prior to her employment with the Department, Assistant Sheriff McDonald oversaw California's state prisons, juvenile justice, gang unit, fugitive apprehension unit, victim services, rehabilitative programming and the Ombudsman's office. Assistant Sheriff McDonald holds a Bachelor of Science Degree in Leadership in Law Enforcement, graduating with Honors from the University of San Francisco.

Shirley Moore Smeal is the Executive Deputy Secretary for the Pennsylvania Department of Corrections. She oversees administrative, programmatic, security and operational areas for the Department. She participated in a correctional system reform effort that resulted in the largest population reduction in the Department's history. Moore Smeal is responsible for enacting all provisions of the Justice Re-Investment initiative within the Department, to include the complete restructuring of our Community Corrections System. Moore Smeal is a member of the Pennsylvania Prison Warden's Association (PPWA) and is a recipient of its lifetime achievement award. She is also a member of the American Correctional Association and Association of Women Executives (AWEC). Moore Smeal holds a bachelor's degree in business administration from Edinboro University.

Carol Higgins O'Brien was appointed Commissioner of the Massachusetts Department of Correction on September 10, 2014, by the Secretary of the Executive Office of Public Safety and Security (EOPSS) Andrea Cabral. Carol's career began as an entry level Corrections Counselor at MCI-Concord in 1984. She remained with the DOC for 15 years, served in three facilities and was promoted from Director of Programs to Director of Treatment to Deputy Superintendent. In 2000, she left the DOC to accept an appointment by Sheriff Frank Cousins to the position of Superintendent of the Essex County Correctional Facility, responsible for care, security and rehabilitation of over 1,100 inmates. In 2002, she was appointed by former Governor Jane Swift to be Undersecretary of Criminal Justice in the EOPSS. Following the transition from the Swift to the Romney Administration, she returned to the Essex County Sheriff's Office, where she managed three community corrections centers and oversaw inmate programs and education. Commissioner Higgins O'Brien holds a Master's Degree in Criminal Justice from UMass-Lowell and is a graduate of the Kennedy School of Government Senior Executive Program at Harvard University. She is also an adjunct professor at UMass-Lowell in the Criminal Justice and Criminology Department, where she teaches courses on violence in America, institutional corrections and community-based corrections and is also a member of the UMass Lowell Criminal Justice Alumni Advisory Board. She is also an active member of the American Correctional Association (ACA) and the Association of State Correctional Administrators (ASCA).

Taylor Pendergrass is a senior staff attorney at the New York Civil Liberties Union (NYCLU), and before that a staff attorney at the ACLU of Colorado. He focuses on litigation and advocacy related to criminal justice reform. He co-authored a human rights report on the use of solitary confinement in New York prisons, filed complaints with international human rights bodies regarding the issue, and is currently lead counsel in the NYCLU's class-action lawsuit challenging those practices. He has been involved in advocating for reforms to solitary confinement practices in the New York City jails on Rikers Island. He was counsel on the NYCLU's class action lawsuit challenging New York's broken indigent criminal defense system, a lawsuit challenging the NYPD's stop-and-frisk practices, and lawsuits challenging inhumane conditions in jails and prisons. He is a graduate of Duke University and the University of Colorado School of Law.

Joseph Ponte has earned a national reputation as a successful reformer in his more than 40-year corrections career. A native of Massachusetts, Ponte has served in jails and prisons around the country, including in Nevada, Florida, Tennessee, New Jersey, Rhode Island and Massachusetts. His broad experience – from frontline correctional officer, to warden, to director and commissioner – gives him a unique perspective and granular understanding of corrections-system management. Before becoming the Commissioner of New York City's Department of Correction in April 2014, Ponte served as Commissioner of the Maine Department of Corrections since 2011, where he instituted substantial reforms, making the system a national leader. He has also served as director of the jail in Shelby County, Tennessee, which includes the city of Memphis – helping transform the violence-prone jail while supporting its staff. Under his leadership, the jail gained accreditation by the American Correctional Association – a certification of merit. Ponte is a Marine Corps veteran (1965-1969) and holds a bachelor's degree in political science from Bridgewater State College.

Rick Raemisch has been Executive Director of Colorado Department of Corrections since July 2013. Mr. Raemisch's career spans three decades as a Deputy Sheriff, Prosecutor, Elected Sheriff and Head of Wisconsin's Department of Corrections. His professional career started at the Dane County Sheriff's Office in Madison, Wisconsin. He worked from 1976 to 1988 as a deputy sheriff and then as an undercover narcotics detective who also investigated homicides. During the same time, he attended law school and then joined the Dane County District Attorney's Office in Madison as an Assistant District Attorney. He held that job for a year before joining the U.S. Attorney's Office in Madison in 1989 as an Assistant U.S. Attorney. He was appointed sheriff in Dane County in 1990 and elected four more times. In 1997, he entered the private sector until 2002 when he re-entered the public sector as a tax appeals commissioner for the State of Wisconsin's Tax Appeals Commission. He joined the State of Wisconsin's Department of Corrections in 2003 and for the next four years worked as Division Administrator of Community Corrections, in which he had oversight of 68,000 probation and parolees, and then worked as Deputy Secretary. He was named Secretary of the Wisconsin Department of Corrections in 2007. He has received numerous honors throughout his career, including being named the Wisconsin Law Enforcement Executive of the Year by Wisconsin Attorney General Jim Doyle. He earned a bachelor's degree from the University of Wisconsin-Stevens Point and a J.D. with honors from the University of Wisconsin Law School.

Heather Rice-Minus serves as Director of Government Affairs for Justice Fellowship (JF), the advocacy arm of Prison Fellowship. She brings a wealth of experience in policy development and advocacy as a lobbyist on Capitol Hill. As staff lead on JF's federal and state legislative strategy, Rice-Minus works with the faith community, think tanks, and other stakeholders to advance criminal justice reforms, including policies addressing sentencing for drug offenses, prison conditions, victims' rights and services, and reentry programming, among others. Prior to joining JF, Rice-Minus worked as Director of U.S. Prisons Policy for the National Religious Campaign Against Torture and also spent a year in East Africa teaching English and volunteering in orphanages. Rice-Minus was commissioned as a Centurion by the Chuck Colson Center for Christian Worldview in May 2014. She holds a Juris Doctor from George Mason University School of Law and is a member of the Virginia Bar.

Margo Schlanger teaches and writes about constitutional law, civil rights, and prisons at the University of Michigan Law School. In 2010 and 2011, she was the presidentially appointed Officer for Civil Rights and Civil Liberties at the U.S. Department of Homeland Security, the Secretary's lead advisor on civil rights and civil liberties issues, including those relating to immigration detention. She played a key role in DHS's reforms of solitary confinement and sexual abuse prevention. Professor Schlanger earned her J.D. from Yale and served as law clerk for Justice Ruth Bader Ginsburg from 1993 to 1995. Next, she was a trial attorney in the U.S. Department of Justice Civil Rights Division, where she worked to remedy civil rights abuses by prison and police departments. She served on the Vera Institute's Commission on Safety and Abuse in America's Prisons and was the reporter for the American Bar Association's Standards on the Treatment of Prisoners. She founded and runs the Civil Rights Litigation Clearinghouse.

Scott Semple joined the Connecticut Department of Correction as a front line Correction Officer in 1988 at the high security Cheshire Correctional Institution. While working up the ranks, he has held key positions within the agency, including a supervisor at the training academy, the agency's spokesperson, and the Legislative Liaison for the department. In 2004, Commissioner Semple was assigned to the Garner Correctional Institution where he fulfilled a critical role in establishing the agency's first consolidated environment for male offenders with significant mental health needs. He would later serve as the Unit Administrator/Warden at that same facility. In November 2013, then Commissioner James E. Dzurenda appointed Semple as the Deputy Commissioner of Operations and Rehabilitative Services. Less than one year later, with the retirement of Commissioner Dzurenda in August 2014, Semple was chosen to serve as the Interim Commissioner for the agency. On March 10, 2015, a Senate resolution unanimously passed consent on the appointment of Semple as Commissioner for the Connecticut Department of Correction.

Bryan P. Stirling was appointed by Governor Nikki Haley as Director of the South Carolina Department of Corrections effective October 1, 2013. He is responsible for a staff of over 5,700 employees at SCDC that operates 24 penal institutions across the state incarcerating more than 21,500 inmates. Prior to joining the correctional system, Director Stirling served Governor Nikki Haley as her Chief of Staff from October 2012 to September 2013. As Chief of Staff, he oversaw management of the governor's cabinet and the Office of Executive Policy and Programs. Director Stirling has been an active volunteer in the community, having worked as the Pro Bono CDV Prosecutor during his time with the South Carolina Attorney General's Office. Director Stirling received his Juris Doctor from the University of South Carolina Law School in 1996 and previously received a Bachelor of Arts in Political Science from USC in 1991.

Bernie Warner has over 34 years of experience in both juvenile and adult corrections. In 2011, Mr. Warner was appointed the Secretary of the Washington State Department of Corrections. As Secretary, Mr. Warner leads an agency of 8,000 employees responsible for over 35,000 offenders in 12 prisons, 15 work releases, and 123 community offices. Mr. Warner has held executive corrections positions in Arizona, Florida, and California, where he served as Director of the juvenile justice system. Secretary Warner has focused on comprehensive system reform based on an evidence-based model of risk, need, and responsivity. Secretary Warner is leading innovative initiatives to include the reengineering of community corrections, the first statewide implementation of the HOPE model, blending swift and certain sanctions with community-based cognitive behavioral interventions; a "mission focused" response to offenders in restrictive programs, significantly reducing the number of inmates in segregation; the piloting of a prison based "cease-fire" model as a strategy to manage serious gang behavior; and a gender responsive strategy to ensure appropriate services for incarcerated women.

Heidi E. Washington was appointed Governor Rick Snyder as the director of the Michigan Department of Corrections in May 2015. Her appointment was effective July 1, 2015, and as director, she is responsible for overseeing the administration of Michigan's correctional system, which includes the state's prisons, probation and parole supervision, the Parole Board, and other administrative functions, in addition to managing a \$1.9 billion budget. Director Washington is a 17-year veteran of the Department of Corrections and has served in a number of leadership positions during her career with the department. Prior to her appointment as director, she was warden of the Charles E. Egeler Reception and Guidance Center and the Duane L. Waters Health Center. She also held positions as warden of Robert Scott Correctional Facility and administrative assistant to the department's executive bureau and director, where she provided oversight for the Legislative Affairs Office and represented the MDOC before the Legislature. She has additionally served as acting assistant deputy director, overseeing the 19 prison facilities in the southern region of the state, and acting operations administrator for the Correctional Facilities Administration. She joined the MDOC in 1998 as a legislative assistant after working for the legislature for several years. Director Washington holds a Bachelor of Arts degree in political science from Michigan State University and a law degree from Thomas M. Cooley Law School.

Facilitators

Brian Fischer spent over forty-four years in the field of corrections, becoming the Commissioner of the New York State Department of Corrections in 2007, and retiring in 2013. While Commissioner, he consolidated the Division of State Parole and the Department of Corrections into the now existing Department of Corrections and Community Supervision and coordinated the downsizing of the agency by closing prison farms, annexes, camps and several medium security prisons. During his tenure as Commissioner, Mr. Fischer implemented the Sex Offender Management Treatment Act passed into law by former Governor Spitzer and a settlement to a class action lawsuit filed by Disabilities Advocates, Inc., a state-sponsored agency authorized to protect individuals with mental and developmental disorders that required changes in how such persons were treated while in prison. While Commissioner, he also created short-term Parole Violator Treatment Centers in order to reduce the number of technical parole violators being returned to prison for long periods of time. Mr. Fischer currently sits on the board of three non-profit prisoner advocacy agencies; Hudson Link For Higher Education that provides college degree programs in State prisons, the Osborne Association that provides for in-prison and re-entry services to both jail and prison individuals, and Puppies Behind Bars that has prisoners train special service dogs for wounded veterans. Mr. Fischer has been an adjunct professor at both John Jay College of Criminal Justice and Pace University. He was a member of the Standards Committee of the American Correctional Association and the New York State Sentencing Commission. He holds a Bachelor's Degree in Psychology, a Master's Degree in Guidance and Counseling and a Master's Degree in Professional Studies.

Andie Moss is founder and President of The Moss Group, Inc., with over 30 years of experience working on sensitive correctional management issues. She has worked with all levels of state, local and federal officials in management assessment, program development and juvenile and adult operations. Andie serves as an advisor to federal and state policymakers and is a former president of the Association of Women Executives in Corrections. She also provided expertise to the National Prison Rape Review Panel and the National Prison Rape Elimination Commission. She has been recognized for her pioneering work in sexual safety and addressing institutional culture. Andie is a partner with the National PREA Resource Center and the National Resource Center for Justice Involved Women. As best practices are sought amid the national dialogue on restrictive housing, Andie encourages distinguishing the patterns of behavior seen in gender differences and adult and juvenile populations.

Michael B. Mushlin teaches Civil Procedure, Evidence, and Prisoners' Rights at Pace University School of Law. He is the author of book chapters, and articles on a variety of subjects involving evidence, federal jurisdiction, civil procedure, children's rights, and prisoners' rights that have appeared in journals such as the Yale Law and Policy Review, UCLA Law Review, Harvard Civil Rights Civil Liberties Law Review, The Journal of Legal Education, Brooklyn Law Review, and the Fordham Urban Law Journal. Professor Mushlin was selected to be a member of the Executive Committee of the New York City Bar, and was elected Secretary of the Executive Committee. He is Vice Chair of the Correctional Association of New York, and was a member of the Task Force on the Legal Status of Prisoners of the American Bar Association. He served as co-chair of the Subcommittee on Implementation of the ABA Resolution on Prison Oversight. He is a member of the New York Advisory Committee on Criminal Law and Procedure of the Office of Court Administration. Professor Mushlin is the former Associate Dean for Academic Affairs, Chair of the Committee on Corrections of the New York City Bar, and former Chair of the Board of the Correctional Association and the Osborne Association. He is a member of the Editorial Board of the Correctional Law Reporter. Professor Mushlin also served on the boards of Children's Rights Inc. and Pace Law School's John Jay Legal Services Inc. Professor Mushlin practiced as a public interest and civil rights lawyer for 15 years as staff attorney with Harlem Assertion of Rights, Inc., as staff attorney and Project Director of the Prisoners' Rights Project of the Legal Aid Society, and as Associate Director of the Children's Rights Project of the American Civil Liberties Union.

APPENDIX B

Reduction of Segregation in Washington State

Presented by:

Bernie Warner, Secretary of Corrections, State of Washington

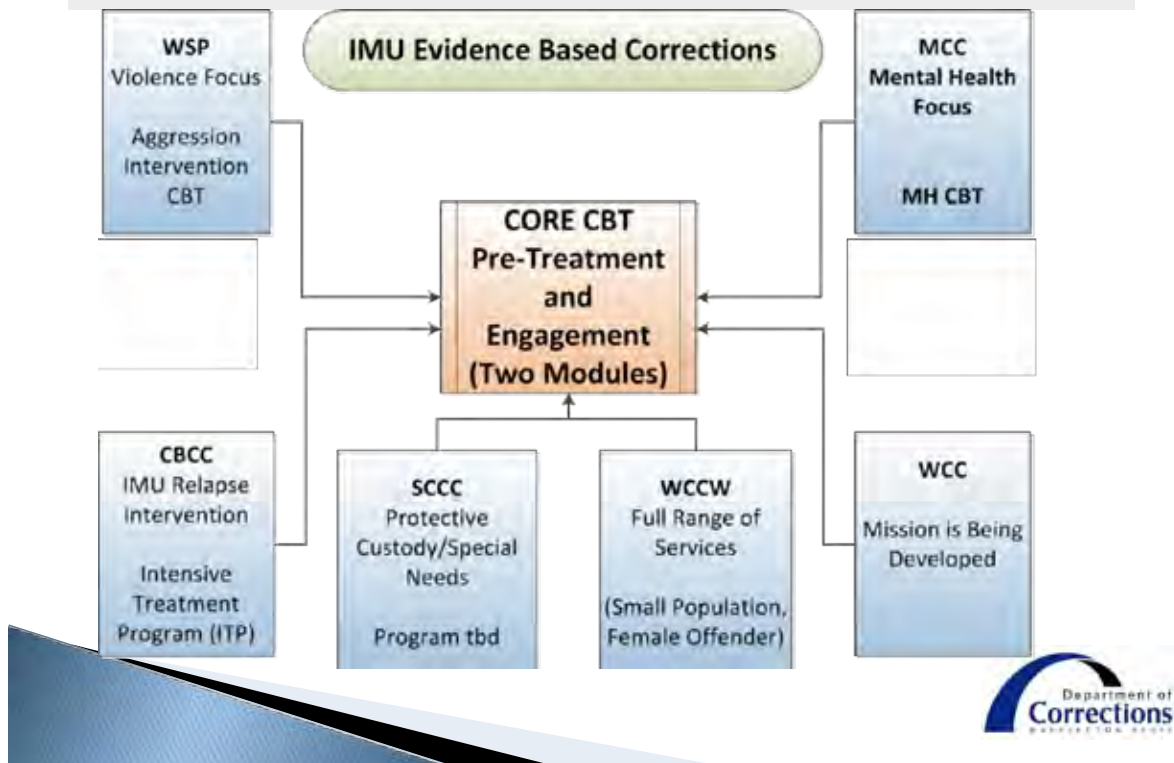

Restricted Housing

Changes to solitary housing

FROM		TO
Suppression and containment	➔	Intensive programming
Use as punishment	➔	Use as a management tool when they cannot be safely managed in population
Managing different types of prisoners the same	➔	Mission-specific housing to target risk, need, responsivity
IMS structured as a time-driven system	➔	Behavior change through programming and congregate activity

Missioned Housing

Washington State Penitentiary (WSP)

► Motivating Offender Change (MOC) Program

- Targets Security Threat Group (STG/Gang) prisoners
- General population STG units co-located at WSP
- Anger Control Training
- Four phases of behavior change and development
- Incremental reinforcers to encourage behavior change

Monroe Correctional Complex (MCC)

► Reintegration and Regression Programming (RAPP)

- Targets mentally ill prisoners
- Co-location of Intensive Treatment Unit, mental health facility at MCC
- Cognitive Behavior Therapy
- One mental health professional per 50 prisoners
- Individualized Treatment/ Behavior Management Plan

Use of Force Incidents in WSP – IMU Have Decreased

Number of Uses of Force over Fiscal Year in WSP – IMU

Clallam Bay Corrections Center (CBCC)

▶ Intensive Transition Program (ITP)

- Targets chronic IMU recidivists
- Provides prisoners pro-social skills to successfully live in general population
- Includes mixed cognitive-behavioral therapy curriculum with phases and congregate activity

▶ 80% success rate

- Of the 131 program graduates ITP; 107 have not returned

Organizational culture change

- ▶ Give staff professional development tools
 - Core Correctional Practices
 - Motivational interviewing
- ▶ Engage staff in the change process
 - Encourage interaction between prisoners and staff through physical setting and interactive tools
 - Having staff build programs, set up classroom, etc.

APPENDIX C

Reforms for Youth at Rikers Island in New York City

Presented by:
Joseph Ponte, Commissioner of Correction, City of New York

The 14 point antiviolence reform agenda will improve DOC

Reducing Violence

Keep weapons and drugs out of Rikers

Create an integrated classification and housing strategy

Comprehensive security camera coverage

Design effective inmate education opportunities and services

Redefine First Line Incident Response

Supporting the Culture Change at Rikers

Improve leadership development and culture

Redefine Investigations Division

Design a recruitment, hiring, and staff selection plan

Design a staff performance management plan

Implement operational performance metrics and analysis

Create a well-defined supply distribution process

Improve custody management processes

Expand targeted training

Raise Facilities to a state of good repair

Implement immediate improvements

Improve internal & external communications

The Ending of Punitive Segregation for 16-17 year-olds

October 1, 2014

- 50 adolescents in Punitive Segregation (25 in RHU + 25 in regular P-Seg)
- 257 in custody
- 1,477 days owed total

December 31, 2014

- 0 adolescents in Punitive Segregation
- 176 in custody

January/February 2015

- 0 days owed

September 29, 2015

- 0 adolescents in Punitive Segregation
- 205 in custody

CAPS - Clinical Alternative to Punitive Segregation

- Specialized mental health treatment of seriously ill inmates who have committed violence.
- DOC established CAPS in 2013 (Opened Oct 17, 2013, CAPS began with 4 inmates at AMKC)
- CAPS has 30 inmates (September 28, 2015)
- The Use of Force in CAPS was 40% lower than the rate on Restricted Housing Unit (RHU) during the first 6 months of 2015

PACE (Program to Accelerate Clinical Effectiveness)

- Non-punitive model
- Created in January 2015 to build on the CAPS.
- 57 inmates (September 28, 2015)
- Designed to encourage adherence to treatment.
- Continuity of care and a team-based approach.

Commissioner Joseph Ponte at the New York City Department of Correction

April 2014

- Commissioner Ponte Appointment

Summer 2014

- CAPS Program Expansion

December 2014

- Punitive Segregation for Adolescent Inmates ends

January / February 2015

- Enhanced Supervision Housing Created
- Elimination of Time Owed

April to July 2015

- PACE Units 1 & 2 Open

September 2015

- DOC Punitive Segregation Population declines
2/3

February 2016

- Punitive Segregation for Young Adult Inmates to
End

APPENDIX D

Removal of the Seriously Mentally Ill from Administrative Segregation in Colorado

Presented by:

Rick Raemisch, Executive Director, Colorado Department of Corrections

COLORADO

Residential Treatment Programs

COLORADO
Department of Corrections

Residential Treatment Program

Purpose: To provide a treatment program with incentive level systems for offenders with mental illness and/or intellectual and developmental disabilities, and criteria for movement/transition for RTP offenders.

Deter offenders being placed into Restrictive Housing for behaviors that are directly related to their mental illness.

COLORADO
Department of Corrections

Residential Treatment Programming

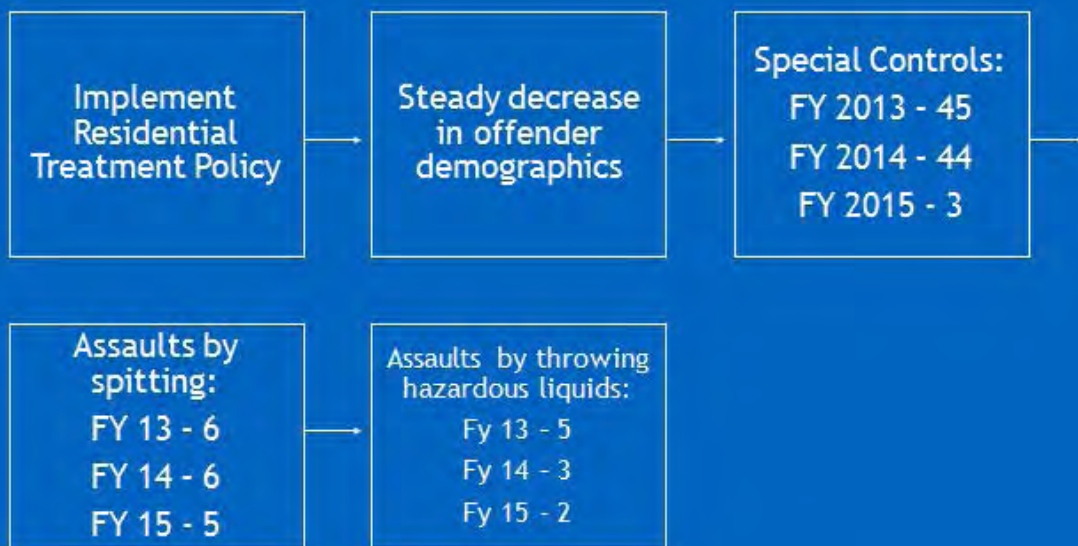

Colorado has 3 Residential Treatment Programs:

255 Bed Acute Needs Facility for males
240 bed Chronic/long term Facility for males
48 bed acute/chronic unit for females

COLORADO
Department of Corrections

San Carlos Correctional Facility Residential Treatment Program

UNITED NATIONS

Rule 82(2).

“Prisoners who suffer from other mental diseases or abnormalities shall be observed and treated in specialized institutions under medical management”

COLORADO DEPARTMENT OF CORRECTIONS

AR 650-04

It is the policy of the Department of Corrections to offer specialized programs to offenders with mental illness and/or intellectual and developmental disabilities.

COLORADO
Department of Corrections

COLORADO
Department of Corrections

UNITED NATIONS RECOMMENDATION

“Restrict the criteria in determining whether a person can be sent to isolated confinement or an alternative therapeutic confinement setting to the most serious acts”

“Indefinite solitary confinement should be abolished”

COLORADO DEPARTMENT OF CORRECTIONS

AR 650-03

It is the policy of the Department of Corrections (DOC) to establish and provide effective restrictive housing management procedures for offenders who have demonstrated through their behavior that they pose a significant risk to the safety and security of staff and other offenders, as well as to the safe and orderly operation of general population. The use of Restrictive Housing, to include Maximum Security Status is an offender management process requiring specific action and review for placement and/or progression.

14. This programming method is sometimes referred to as “10 and 10,” meaning ten hours per week of outside recreation and ten hours per week of therapeutic intervention, averaging about three hours daily.
15. See n.7, *supra*.
16. As to the seriously mentally ill category, some believed that SMI may provide both too broad and too narrow a description. Some SMI may not be vulnerable; still others may not meet specific diagnosis standards, yet require protection. Participants emphasized the importance of personalized and individual treatment plans to manage specific needs rather than focusing on a diagnosis. *The Diagnostic and Statistical Manual of Mental Disorders* (DSM), published by the American Psychiatric Association (APA), offers a common language and standard criteria for the classification of mental disorders. The DSM is now in its fifth edition, DSM-5, published on May 18, 2013. The old DSM, AXIS I, and AXIS II diagnoses related to depression, bipolar disorder, and other functional impairments that define serious mental illness is currently in litigation. The latest version of the DSM, however, has moved away from a pure diagnostic approach to a functional approach to mental illness identification and treatment.
17. Although LGBT individuals were included as a potential vulnerable population, Group 3 did not come to a consensus for this group and, ultimately, removed the LGBT category from its list of vulnerable populations.
18. See n.14, *supra*.

FEDERAL PRISON SYSTEM

AMNESTY
INTERNATIONAL

Amnesty International is a global movement of more than 3 million supporters, members and activists in more than 150 countries and territories who campaign to end grave abuses of human rights.

Our vision is for every person to enjoy all the rights enshrined in the Universal Declaration of Human Rights and other international human rights standards.

We are independent of any government, political ideology, economic interest or religion and are funded mainly by our membership and public donations.

INTRODUCTION

"Though I know that I want to live and have always been a survivor, I have often wished for death. I know, though, that I don't want to die. What I want is a life in prison that I can fill with some meaning"

Thomas Silverstein, confined for over 30 years in isolation, nine of which have been spent in ADX¹

An isolation cell in a General Population Unit at United States Penitentiary, Administrative Maximum (ADX) © Private

The USA stands virtually alone in the world in incarcerating thousands of prisoners in long-term or indefinite solitary confinement, defined by the UN Special Rapporteur on Torture and other Cruel, Inhuman or Degrading Treatment or Punishment as “the physical and social isolation of individuals who are confined to their cells for 22 to 24 hours a day”.² More than 40 US states are believed to operate “super-maximum security” units or prisons, collectively housing at least 25,000 prisoners.³ This number does not include the many thousands of other prisoners serving shorter periods in punishment or administrative segregation cells – estimated to be approximately 80,000 on any given day.⁴

While US authorities have always been able to segregate prisoners for their own protection or as a penalty for disciplinary offences, super-maximum security facilities differ in that they are designed to isolate prisoners long-term as an administrative control measure. It is a management tool that has been criticized by human rights bodies, and is being increasingly challenged by US penal experts and others, as costly, ineffective and inhumane.

The federal government currently operates one super-maximum security prison, the United States Penitentiary, Administrative Maximum (ADX) facility in Colorado. With capacity for 490 male inmates, the vast majority of ADX prisoners are confined to solitary cells for 22-24 hours a day in conditions of severe physical and social isolation. The cells have solid walls preventing prisoners from seeing or having direct contact with those in adjacent cells. Most cells have an interior barred door as well as a solid outer door, compounding the sense of isolation. Prisoners eat all meals inside their cells, and in most units each cell contains a shower and a toilet, minimising the need for the inmate to leave his cell. Visits by prison staff, including routine checks by medical and mental health staff, take place at the cell door and medical and psychiatric consultations are sometimes conducted remotely, through teleconferencing. All outside visits are non-contact, with prisoners separated from their visitors by a glass screen. Prisoners in the General Population (GP) (the majority of prisoners at ADX) are allowed out-of-cell exercise for up to ten hours a week, in a bare interior room or in small individual yards or cages, with no view of the natural world. Prisoners in some other units receive even less out of cell time.⁵

Most prisoners assigned to ADX have reportedly been convicted of serious offences in prison, such as assault, murder or attempted escape. ADX also houses a number of prisoners convicted of terrorism-related offences; most of these prisoners were sent to the facility based on their committal offence rather than for their conduct during incarceration and some have Special Administrative Measures (SAMs) placed on them by the Department of Justice which restrict their communications with the outside world. In a letter responding to concerns raised by the UN Special Rapporteur on Torture, the US government said that ADX is “designed to meet the exceptional security requirements of its inmates”, noting that prisoners are sent there only after it is determined that they would pose a serious risk to themselves or the safety of other inmates, staff, or the public if placed in a less secure setting.⁶ The letter asserts that the regime, while restrictive, is humane, pointing out that the cells have windows which allow access to natural light; that most inmates have TVs with multiple channels and access to in-cell educational and other programs; and that they have daily contact with staff. It also states that GP inmates have an opportunity to participate in a Step Down Program (SDP) where they can earn their way to a less restrictive setting and ultimately to another facility.

As discussed in this report, Amnesty International believes that the conditions at ADX are unacceptably harsh and that in-cell programmes cannot compensate for the lack of meaningful social interaction which many prisoners endure for years on end. The poverty of the exercise facilities at ADX is also disturbing, particularly given the long periods in which prisoners are otherwise confined to cells. Failure to provide suitable, daily outdoor exercise falls short of the United Nations (UN) Standard Minimum Rules (SMR) for the Treatment of Prisoners. Amnesty International recognizes that the authorities have an obligation to ensure the safety of staff and inmates and that it may be necessary at times to segregate prisoners. However all measures must be consistent with the USA's obligation to treat all prisoners humanely, without exception.

In recognition of the psychological harm that can result from isolating people even for relatively brief periods, international human rights experts and organizations have called on governments to restrict their use of solitary confinement so that it is applied only in

exceptional circumstances, for the shortest possible period of time. US professional bodies such as the American Bar Association have made similar recommendations. However, prisoners at ADX must spend a minimum of 12 months in isolation, and often far longer, before becoming eligible for the SDP. There is no detailed public information on the time prisoners spend in each unit at ADX. However, a Federal Bureau of Prisons (BOP) analysis based on a limited survey of 30 inmates in 2011 for a case before the European Court of Human Rights (ECHR) showed prisoners were likely to spend at least three years in the GP (confined to solitary cells 22-24 hours a day) before being admitted to the SDP.⁷ Other sources based on a wider sample of prisoners have found that scores of prisoners have spent more than twice as long in solitary confinement.⁸ Prisoners in the Control Unit, the most isolated section of the facility, are ineligible for the SDP as they are serving fixed terms in the unit for disciplinary infractions, terms which can extend to six or more years.

While all prisoners now receive a hearing prior to placement at ADX, advocates have criticised the internal review procedures – including those for deciding when a prisoner can access and progress through the SDP – as over-discretionary and lacking clear criteria. According to lawsuits and other sources, this means that some prisoners effectively remain in isolation indefinitely, without being able to change their circumstances.⁹ Amnesty International believes that the conditions of isolation at ADX breach international standards for humane treatment and, especially when applied for a prolonged period or indefinitely, amount to cruel, inhuman or degrading treatment or punishment in violation of international law.

Amnesty International is further concerned that prisoners with serious mental illness are detained at ADX and, according to an ongoing lawsuit, have not been adequately screened, treated or monitored.¹⁰ While not in a position to assess the quality of mental health provision currently at ADX, the organization is concerned by the cases cited in the litigation and believes that no prisoner with mental disabilities should be held in solitary confinement. Such practice is against international standards and the recommendations of mental health experts and organizations. US courts have also consistently found that isolating people who are seriously mentally ill in “super-maximum security” facilities is incompatible with the US constitutional prohibition of “cruel and unusual punishment”.

In putting together this report at a time when the BOP is conducting a “comprehensive review” into its restricted housing operations¹¹, Amnesty International is seeking to ensure that the audit be guided by the organizations’ concerns, including pre-trial isolation, and that its recommendations for best practise reflect those contained within this report.

This report will detail how conditions in ADX breach international standards for the humane treatment of prisoners. By doing so, it seeks to oppose any replication of the ADX regime as currently proposed by the BOP in the newly acquired Thomson facility. The prison, due to open within the next years has been designated as a maximum high security prison with ADX and SMU cells.¹²

This report will also show how in the period of time since ADX was built, conditions have become increasingly restrictive with prisoners held in more severe conditions of isolation for longer periods. As conditions have become more restrictive, so has access to the facility for human rights groups, experts and the press. In detailing how the original purpose of the prison- to provide a route out of isolation within a defined period – has eroded over the years, the organization seeks to underscore the increased need for external scrutiny including access to the facility for the UN Special Rapporteur on Torture.

RESTRICTIONS ON ACCESS TO ADX: LACK OF TRANSPARENCY REGARDING BOP USE OF ISOLATION

In producing this report, Amnesty International relied on a range of sources including court documents available through lawsuits and other information provided by attorneys representing ADX inmates, as well as policy directives issued by the BOP. However, there is a lack of detailed publicly available information on the facility, including length of time prisoners are held in each unit (see below). In June 2001 an Amnesty International representative was given a tour of ADX and was provided with access to most parts of the facility and an opportunity to speak to the Warden, senior staff and some prisoners. Some of the observations in this report are thus based on first-hand viewing of conditions in the facility and on policies in place at that time. However, the organization's further requests to visit the prison in 2011 and 2012 were turned down by the Bureau. This appears to reflect a more general tightening of access to the facility in recent years, including by members of the media.¹³

While Amnesty International welcomes the review of the use of segregation in federal prisons currently being carried out by outside contractors, it believes that prisons should not be insulated from outside scrutiny by human rights groups and experts. In this regard, the organization has joined with other NGOs in calling on the State Department to extend an invitation repeatedly requested by the UN Special Rapporteur on Torture to visit the USA to examine, among other things, the use of solitary confinement in federal and state facilities, including through on-site visits.¹⁴ Such an invitation would be consistent with the commitment made by the US government to support the work of the Special Rapporteurs and UN human rights mechanisms, and to encourage the full enjoyment of the human rights of persons deprived of their liberty.

External scrutiny is of particular importance in the case of "super-maximum" security facilities where prisoners are isolated within an already closed environment. In ADX there is little publicly available information about the current operation of the facility beyond a few institutional supplements giving a bare outline of the various units and programs. Lack of information on conditions and their impact on individual cases is compounded by the fact that prisoners under Special Administrative Measures (SAMs) often have severe restrictions placed on their communication with the outside world, including through visits and correspondence. A report by the General Accounting Office (GAO) in May 2013 noted more generally that "there is little publicly available information on BOP's use of segregated housing units."¹⁵

The GAO study also found that, while the BOP had an Internal Review Division which periodically inspected compliance with policies in other federal segregation units (including in Security Housing cells and Special Management Units in other prisons), "BOP does not have requirements in place to monitor similar compliance for ADX-specific policies".¹⁶ Overall, the GAO study found that BOP had not assessed the impact of segregated housing on institutional safety or the impact of long-term segregation on inmates. While the BOP has agreed to develop specific ADX internal monitoring procedures in line with GAO recommendations, Amnesty International believes there should be regular, external reporting and review of conditions at ADX and other isolation facilities.

The need for external scrutiny is heightened by information suggesting that ADX prisoners are held under more isolated conditions than before, including than at the time of Amnesty International's 2001 visit, and that the original purpose of the prison – to allow a clear route out of isolation within a defined period – has been eroded over the years. As described below, there are also conflicting accounts given by prisoners and their attorneys and ADX

administrators about aspects of the regime, such as the amount of contact prisoners have with staff and the value of programs provided.

LONG-TERM ISOLATION IN OTHER PARTS OF THE FEDERAL SYSTEM

The US Government has pointed out that only 0.25% of the federal prison population is held at ADX. This is less than the national average of around 2% of prisoners in state “super-max” facilities and significantly less than in states such as Arizona or Texas. However, other federal facilities also confine prisoners in prolonged isolation.¹⁷ Several BOP prisons operate Special Management Units (SMUs) in which prisoners are confined – usually with one other inmate -- to small cells for at least 23 hours a day for 18-24 month periods, terms which are frequently extended. According to figures provided by the BOP, the numbers in SMUs had risen from 144 prisoners when the first unit opened in Lewisburg Federal Penitentiary to 1,960 inmates as of February 2013.¹⁸ Conditions in the units are harsh, with prisoners allowed only five hours exercise a week, falling below the SMR. Although having a cell-mate may relieve some of the effects of isolation, confining two people in a small, enclosed space for 23-24 hours a day can lead to severe additional stresses. A lawsuit filed in July 2011 has challenged conditions in the SMU at Lewisburg Penitentiary as amounting to “cruel and unusual punishment”, citing, among other things, a series of assaults by prisoners on their cell-mates, including two murders and the punitive use of restraints, often for prolonged periods, for those who refuse a cell mate.¹⁹ Amnesty International believes there should be urgent review of conditions in the SMUs and that the current review of federal segregation policies should include units where prisoners are double-celled in an otherwise isolated environment.

The US government is reported to have reduced the overall number of prisoners in segregated confinement in the past year by nearly 25 percent (such confinement includes SHU cells situated in most prisons) and subsequently closed two of its segregated housing Special Management Units.²⁰ Despite this reduction, the BOP 2014 budget request to Congress includes a funding proposal to open Thomson Correctional Center, a former state maximum security facility in Illinois, purchased by the BOP in 2012, as a second federal “supermax” prison to “begin activating the facility as an Administrative-Maximum U.S. Penitentiary in Fiscal Year 2014”.²¹

The BOP explained the need to expand segregation cells at a time when the use of segregated confinement was declining with the following: “The reduction in our special housing unit population does not lessen the need for these beds...Special Housing refers to units within our prisons where inmates are placed on a temporary basis as a result of misconduct or as a result of circumstances that warrant their separation from the general population”. This response suggests that the new facility will house those held in long-term rather than short-term isolation.²²

While the exact conditions under which prisoners would be held in Thomson remain unclear, Amnesty International is concerned that the facility will replicate the regime at ADX, Florence. Any expansion of the use of long-term solitary confinement as seen at ADX, Florence, would be a retrograde move, contrary to international human rights standards²³. Such a move would also run counter to growing recognition among mental health, legal and correctional experts, of the harm caused by conditions in isolation units, and trends across states towards reducing the numbers of prisoners in solitary or isolated confinement.

PRISONERS HELD IN SOLITARY CONFINEMENT IN PRE-TRIAL FEDERAL DETENTION

SYED FAHAD HASHMI

Syed Fahad Hashmi has spent over seven years in conditions of near total isolation. A US citizen who grew up in Queens, New York, he was studying for a post-graduate degree in the UK when he was arrested in 2006 and accused of allowing an acquaintance to use his London apartment to store socks and ponchos intended for al-Qaida in Pakistan. While detained in the UK pending extradition, he was allowed to associate with other detainees without incident. However, on arrival in the USA he was placed in MCC SHU (see below), where he remained for nearly three years in pre-trial detention, confined to a small, solitary cell with no view to the outside and no association with any other inmate or access to outdoor exercise. He was placed under SAMs and had only limited contact with his immediate family (brother and elderly parents). In June 2010 he was sentenced to 15 years in prison after pleading guilty to one charge of providing material support to a terrorist organization. He was transferred to ADX in March 2011, where he remained in isolation, confined to a concrete cell for 22-24 hours a day until June 2014 when he was transferred to a Control Management Unit in USP Terre Haute, Indiana.

Prisoners may also be held in solitary confinement while awaiting trial in the federal courts. There is particular concern about conditions in the Security Housing Unit (SHU) on the 10th floor of the federal Metropolitan Correctional Center (MCC) in New York, where pre-trial detainees are confined for 23-24 hours a day to solitary cells which have little natural light and with no provision for outdoor exercise. Lack of access to natural light and fresh air are in clear breach of international standards for humane treatment. Detainees housed in the unit have included foreign nationals charged with supporting terrorism who have been extradited or subjected to a “rendition” to the USA; in addition to their harsh physical conditions of confinement, some have had only limited contact with their families and few or no social visits. Several prisoners have spent many months or years in the above conditions while awaiting trial.²⁴

Amnesty International considers that conditions under which detainees have been confined in the MCC SHU constitute cruel, inhuman or degrading treatment and are incompatible with the presumption of innocence in the case of untried prisoners whose detention should not be a form of punishment.²⁵ Lawyers who have represented detainees in the unit have described the negative impact of the conditions on their clients’ state of mind, raising concern that such conditions may impair a defendant’s ability to assist in his or her defence and thus the right to a fair trial.

FURTHER OBSERVATIONS ON CONDITIONS IN ADX

The United States Penitentiary (USP) Administrative Maximum Facility (ADX), situated in Florence, Colorado, opened in November 1994 as a purpose-built “super-maximum” security facility. It is currently the only level 6 (highest security designation) prison in the federal system.

The prison has eight units consisting of four General Population units (each with capacity to house up to 64 prisoners); the Special Security Unit (H Unit) for prisoners under SAMs; the Control Unit; the SHU (a disciplinary unit); and the Intermediate Unit for prisoners in the Step-Down Program (SDP). There is also an ultra-high security four-cell unit known as Range 13, where prisoners are held in conditions of extreme isolation. Only prisoners in the SDP, and a small number in phase 3 of H Unit, have any group association, which is limited to a few hours a week; the vast majority of the ADX population are held alone, confined to cells for 22-24 hours a day with only limited contact with staff and the outside world.

CONDITIONS IN GENERAL POPULATION UNITS

“Sitting in a small box in a walking distance of eight feet, this little hole becomes my world, my dining room, reading and writing area, sleeping, walking, urinating, and defecating. I am virtually living in a bathroom, and this concept has never left my mind in ten years.”

Mahmud Abouhalima, held under SAMS in H Unit, ADX, since 2005.

More than half the population at ADX (up to 256 prisoners) are held in the GP units, where they spend at least 22 hours a day in 87 square foot individual cells. The cells have solid concrete walls and all face the same way, so that prisoners cannot view other cells or have direct contact with inmates in adjacent cells. Each cell also has an interior barred wall with sliding door along the full width of the cell, followed by a small lobby with a solid steel outer door and window looking onto the corridor. As the living space is sited behind the barred interior wall, several feet from the corridor, prisoners are more cut off from human contact than in standard maximum security cells where inmates can stand at the cell door and watch or converse with anyone passing by. The cells have a narrow outside window at the back which allows entry of natural light but provides no view other than buildings and sky. Prisoners can control the lighting by a switch inside the cell. The cell furnishings are sparse, consisting of a fixed bunk, desk and stool made of reinforced concrete. Each cell also has a built-in shower and a metal toilet and sink unit.

The inside of a cell in a General Population Unit at ADX © Private

The vast majority of prisoners are allowed out of their cells for only a few hours a week, for exercise, occasional visits to a “law library” cell, social or legal visits, or for some medical consultations.²⁶ All meals are delivered to and eaten inside the cells. As Amnesty International has observed elsewhere, there is concern about the possible health risks from spending so much time in a confined space, and eating all meals in close proximity to the open toilet. Prisoners are placed in full restraints and are accompanied by two guards when being escorted out of their cells. Otherwise nearly all contact with staff takes place either remotely (e.g. through medical teleconferencing) or at the cell front.

EXERCISE

An outdoor recreation cage for prisoners in the Step Down Program at ADX © Private

GP prisoners are allowed up to ten hours out-of-cell exercise a week, in two hour slots five days a week, alternating between indoor and outdoor exercise. Prisoners always take indoor exercise alone, in a windowless room with only a pull-up bar. Outdoor exercise takes place either in an enclosed solitary yard attached to the unit or in one of five individual cages in a larger yard. The only time a prisoner can communicate directly with another inmate is when conversing with a prisoner in an adjacent cage, an opportunity which takes place, at most, on two or three days a week.

As shown in photographs, the exercise facilities are stark. The outdoor cages are only a little larger than the cells and have no equipment so that prisoners can do nothing other than walk a few paces. Both the individual yards and the larger concrete yard in which the cages are situated have high walls and a chain link roof, giving no view of the natural world other than sky. Lawyers have told Amnesty International that some prisoners decline to take exercise and remain in their cells all day due to depression or other illness (see section on Mental Illness, below).

An outdoor recreation area in the Control Unit at ADX © Private

According to BOP regulations, prisoners may have their exercise in the larger yards suspended for three months at a time for a single rule violation, with increased suspensions for further offences.²⁷ It is alleged that prisoners are sometimes punished for minor rule violations, such as in one case for feeding crumbs to birds.²⁸ The regulations list violations for which the yard exercise can be suspended as including “sexual acts or gestures, suicidal attempts or gestures, smearing or throwing human waste”.²⁹ Amnesty International is concerned that prisoners who have not committed serious violations, or whose behaviour may be indicative of mental health or behavioural problems, should have their outdoor yard exercise -- and thus their only limited association with other inmates -- withdrawn for such extended periods. It urges that this rule be reviewed.

The SMR state that “every prisoner not employed in outdoor work shall have at least one hour of suitable exercise in the open air daily if the weather permits” (Rule 21 (1)). These are minimum standards applying to all prisoners without exception.

The opportunity to exercise is particularly important for the physical and psychological wellbeing of prisoners who are cut off from normal activities and are confined to cells for prolonged periods. Neither the cages nor the enclosed individual yards in Amnesty International’s view meet the standard of “suitable exercise in the open air” as provided under the SMR, nor, under the present regime at ADX, is outdoor exercise provided to each prisoner daily.

Indoor recreation area in the Control Unit at ADX © Private

Amnesty International is concerned that conditions for prisoners at ADX have become more isolated and restrictive in recent years. When the prison first opened, and at the time of the organization’s visit to ADX in June 2001, GP prisoners were allowed “12 hours or more” out of cell exercise a week which could be taken in small groups of up to 12 prisoners at a time; prisoners were also allowed balls and board games during this period.³⁰ Unit staff members told Amnesty International’s representative during her visit that one of the measures used to assess prisoners’ progress and suitability for the step down program was how they interacted with others on the recreation yard.

Group recreation was reportedly withdrawn after two prisoners were killed by other inmates in separate incidents in 2005, one occurring in the Transitional (Step Down) Unit, allegedly in full view of ADX staff members.³¹ Prison administrators have a clear duty to take all reasonable measures to prevent such deaths. However, the blanket ban on any form of group recreation in the GP, given the length of time prisoners are confined to the unit, is inconsistent with standards for humane treatment. In addition to the potential adverse mental health impact of prolonged confinement to solitary cells, it is difficult to see how a prisoner’s behaviour can be effectively measured in the absence of any meaningful social and

group interaction. As described below, prisoners in the step-down program also have significantly less association and out of cell time than previously. According to a lawsuit, more could be done to ensure the safety of prisoners in group recreation.³²

Outdoor recreation cages at ADX © Private

IN CELL ACTIVITIES AND PROGRAMING

Most prisoners in ADX are provided with televisions in their cells with around 60 broadcast channels, including news channels such as CNN and ABC and a range of cable and other network programs. Institutional programs are also provided to each cell through close-circuit channels; these include educational, religious and recreational programs as well as classes on psychology and issues such as anger management. There is no congregate prayer and religious services are conducted through close-circuit TV.

Prisoners also have access to books, newspapers and periodicals, art and hobby-craft materials, and may write and receive correspondence (although limits on the latter may be imposed on prisoners under SAMs, see below). Correspondence courses are also available to some prisoners (not for example, those under SAMS) and prisoners must be able to afford it which limits their reach further. Prisoners are also allowed access to religious materials.

Outer door of a cell in the Control Unit at ADX, picture taken from the corridor © Private

A stipulated court agreement in 2008 provided that an Imam visit ADX four times a month to speak with inmates individually. Prison attorneys have reported that since there is no longer an Imam on site, inmates in the past few years have received far fewer visits from an Imam than the limit set in the court agreement.³³

The visits take place at the cell door, often, for only a few minutes at a time. It is alleged that most prisoners may confer with the Imam or other religious adviser only when both cell doors are closed with the minister standing in the hall outside, thus requiring inmates to speak at loud volume that renders private consultations impossible.³⁴ Prison advocates report that in the case of visiting priests or chaplains, they will generally be allowed beyond the solid steel

door to pray in the sally-port area, right up next to the inmate in the cell, but this does not happen in the case of most Imam visits with Muslim prisoners.

While Amnesty International's delegate recognized that there were a number of in-cell programs available at the time of her 2001 visit, these cannot compensate for the prolonged cellular confinement and social isolation experienced by ADX prisoners for many months or years, or even indefinitely. The value of in-cell programs becomes more questionable the longer a prisoner is held in isolation and unable to interact meaningfully with others. Prisoner advocates have also reported that, apart from some basic educational courses such as GED (which are required by a minority of inmates), there is not much structured educational or rehabilitative programing leading to formal qualifications or defined outcomes or goals.³⁵

CONTACT WITH STAFF

The authorities have stressed in court filings that all prisoners have daily contact with unit staff and regular contact with correctional counsellors, medical and mental health and religious staff. However, lawyers representing prisoners report that there is little meaningful contact in practice between staff and inmates, and that prisoners routinely go days with only a few words spoken to them. According to testimony to the ECHR contact could be “as little as one minute per day”.³⁶ Advocates also reported that prisoners would need to call out proactively to seek attention from staff as they walk past cells doing their daily rounds, something many prisoners are reluctant to do. Contact when it does take place is usually at the cell door. A prisoner’s isolation is compounded by the fact that psychiatric and medical consultations may also in some cases take place remotely, through teleconferencing.

There is no interaction with the teacher during the classes, all of which are delivered remotely. Although Amnesty International was told during its visit that teachers may visit prisoners at the cell door to discuss their assignments, it was acknowledged that this could in some cases be only be for a few minutes per inmate. A lawyer who has represented a number of prisoners at ADX told the organisation that none of her clients to her knowledge had ever been seen by a teacher at the cell door.

VISITS AND COMMUNICATION WITH THE OUTSIDE WORLD

“We’re poor folk,” he says of his family, “and coming to visit is too expensive...from what I can tell very few people get visits...this place is too far from anyone’s family.”

Letter sent to the ‘Solitary Watch’ website from a prisoner in ADX who has not seen or spoken to his family in the last five years³⁷

Prisoners in the GP units may write letters and make two 15-minute non-legal phone calls a month (or, six hours per year in total to speak with their family). All social and legal visits at the facility take place in a non-contact setting, behind a thick plexiglass screen. Other than when being placed in restraints and escorted by guards, prisoners may spend years without touching another human being.

Prisoners are allowed five social visits a month for up to seven hours at a time, with a maximum of three visitors per inmate allowed in the visiting room at any one time. However, it is reported that prisoners at ADX generally do not have many visits, in part because of the remote location of the facility. ADX staff told Amnesty International’s representative in 2001 that it was usual for there to be only five or six visitors in total at the week-end. According to a court brief, three prisoners who were transferred to ADX from other prisons after September 2001 had no social visits for the entire time (six and seven years) they were held at the facility; a fourth prisoner named in the lawsuit had received only two visits from family/friends in 13 years.³⁸

Prisoners are routinely shackled during non-contact attorney visits which usually take place in booths where the plexiglass barrier has a small slot to allow the passing of documents.³⁹ Prisoners are placed in three-point restraint during visits, with their wrists and ankles attached to a belly chain and waist belt. The wrist cuffs may be further secured in a black box attached to the front of the belt; this severely restricts hand movement and can cause pain and discomfort, especially when the restraints are worn for an extended period.

One lawyer told Amnesty International that the shackles worn by his client during visits (belly chain and black box) restricted his hand movements and made passing documents difficult. He said the set-up in the visiting room was very uncomfortable, with his client having to sit up on the small table by the glass screen in order to communicate with him.

Another legal representative told the organization that prisoners may have their ankles shackled during social visits also.

Amnesty International believes the degree of restraint applied routinely during non-contact visits appear to be unnecessarily punitive, especially for prisoners who do not have a history of serious rule violations or acts of institutional violence within the facility, and for prisoners needing to communicate with attorneys. International standards provide that restraints should be applied only when “strictly necessary” as a precaution against escape or to prevent damage or injury.⁴⁰

Recommendations

- Amnesty International recommends that conditions in the ADX General Population be improved so that prisoners are not held in conditions of severe isolation but have more opportunities for interaction with staff, including educational staff, as well as access to meaningful rehabilitation programs. The exercise facilities should be modified to allow more space and equipment; prisoners should be allowed daily outdoor exercise⁴¹.
- Amnesty International recommends that opportunities be reinstated for prisoners to have some social interaction with other inmates, even at the most restrictive levels of confinement, both to aid their rehabilitation and to allow their progress to be measured.
- The use of restraints should be prescribed by law and be restricted by the principles of necessity and proportionality. Prisoners should be placed in restraints only when strictly necessary; restraints should not be applied that cause pain or unnecessary discomfort.⁴²
- Facilities should be provided for prisoners to meet with their attorneys in a suitable environment that does not impede communication; when receiving visits from lawyers, prisoners behind barriers should not be restrained in such a way as to restrict their hand movement, making passing documents difficult.

THE STEP-DOWN PROGRAM (SDP)

Prisoners are assigned to ADX if it is determined that they “have demonstrated an inability to function in a less-restrictive environment” and would pose a serious risk to the safety of other inmates or staff or the public if held in a less secure setting.⁴³ Writing to the UN Special Rapporteur on Torture in 2011, the US Ambassador to the UN gave the primary reasons for referral to the facility as “murder or assault at another facility, escape behaviour or rioting”.⁴⁴ Prisoners may also be assigned to the facility if the offence for which the person has been convicted or profile prior to arrest is deemed to create a sufficient security risk; thus, some prisoners with particular connections outside prison or who have been convicted of involvement in or support of terrorism have been assigned to the facility without regard to their institutional behaviour.

The ADX mission is described as having a dual purpose: to 1) to maintain the safety of staff and inmates while eliminating the need to increase security in other institutions and 2) confine inmates under close controls while providing them with opportunities to demonstrate progressively responsible behaviour; participate in programs in a safe, secure environment; and establish readiness for transfer to a less secure institution”.⁴⁵

Prisoners may move into the SDP only after a minimum of 12 months clear conduct and “positive institutional adjustment” in the ADX GP. The SDP consists of an Intermediate Unit (IU), a Transitional Unit (TU) and a Pre-Transfer Unit (PTU) which is the final phase before a prisoner is ordinarily considered for transfer to an open population institution. Only the IU is currently sited at ADX (see below).

The IU at ADX (with capacity for up to 32 inmates): has standard single occupancy maximum security cells looking onto the unit range, with a narrow outside window providing natural light. The furnishings are the same as in the GP cells except that showers are on the range. The only difference between the GP and IU regime is that prisoners may associate in groups of up to eight prisoners on the range for an hour and a half a day five days a week, in addition to the 10 hours exercise as described above. They are also allowed three 15-minute telephone calls a month. All meals are eaten inside the cells and the same programs are provided as in GP.

Prisoners in the TU (capacity of up to 32 inmates) are assigned to groups of up to 16 inmates with whom they are allowed to associate on the range for up to three hours a day; they consume meals on the range with their assigned group. The Unit also provides outdoor group recreation and prisoners are allowed an additional 15-minute social phone call a month.

Prisoners in the PTU are usually double-celled, consume meals on the range, are unrestrained when out of their cells and participate in various work assignments.

PRISONERS IN ADX MORE ISOLATED THAN BEFORE

As with the GP (where there is no longer group exercise), conditions in the first two phases of the SDP have become more restrictive than when the prison initially opened. At the time of Amnesty International's 2001 visit to ADX prisoners in the IU were allowed out of their cells onto the ranges for several hours a day, with meals consumed in common areas located on the ranges. Recreation included use of a gymnasium. Prisoners in the TU had religious services and group recreation of up to 35 hours a week.

The TU and the Pre-Transfer Unit were both originally sited at the ADX facility but are now located at USP Florence, a high security prison which, like ADX, forms part of the Federal Correctional Complex (FCC) at Florence. ADX itself has therefore become almost entirely a "lock-down" facility in which prisoners are locked in solitary cells for all but a few hours a week. Amnesty International is concerned that, at a time when there is growing recognition of the damaging effects of isolation and moves to restrict such practice in some states, conditions in ADX have become more restrictive in recent years.

Inside of a cell in the Control unit at ADX © Private

LENGTH OF TIME IN ISOLATION/ACCESS TO THE SDP

The SDP from GP to the PTU is described as a four-phased program, with prisoners expected to spend at least 12 months in the GP, six months each in the IU and TUs and 12 months in the Pre-Transfer phase before being considered for transfer to an open population institution.

It is clear from BOP policy as set out in the Institutional Supplements on General Population and Step-down Operations that the purpose of the program is to provide inmates with incentives and an opportunity to demonstrate conduct that will enable them to progress from GP through progressively less restrictive units. The Supplements state:

“Every inmate has the opportunity to demonstrate he may be housed in a less restrictive unit”.

While the minimum period from placement in the ADX GP to transfer from USP Florence to a less restrictive facility is 36 months, it is reported that, in practice, most prisoners take much longer than this to complete the program. Most disturbing are statistics indicating that most prisoners spend far longer than the minimum 12 months at the base-line level in the GP and thus in conditions of severe social isolation.

There is no publicly available breakdown of the length of time prisoners spend in each stage. However, in October 2011, following a request by the European Court of Human Rights (ECHR) in the Babar Ahmad extradition case, the Bureau of Prisons provided an analysis based on a random sample of 30 prisoners from the ADX GP and SDP, which showed that “an inmate was likely to spend three years at ADX before being admitted to the Step Down or Special Security Programs.”⁴⁶ Lawyers for the applicants submitted evidence based on a much larger sample of more than 100 ADX prisoners which identified an average solitary confinement length of 8.2 years (see chart below).⁴⁷ The US government reported to the ECHR that the numbers of prisoners moving into the SDP had increased since their survey was conducted. However, it appears that few prisoners pass through the system within the minimum period specified. Some prisoners have spent several years in isolation in GP despite reportedly having completing programs necessary to qualify for “consideration of” advancement. According to the GAO report on segregation, there were only 15 prisoners in the ADX SDP units located at USP Florence (the TU and PTUs) in February 2013.⁴⁸

LACK OF CLEAR CRITERIA OR SAFEGUARDS FOR PROGRESSIONS TO THE SDP

"My involvement in my reviews is usually just my presence and the time it takes me to sign the forms. However it is not uncommon for prison staff to slide my prison review form under my door when I am in recreation and expect me to sign them without speaking to me at all".

Thomas Silverstein, confined for over 30 years in isolation, nine of which have been spent in ADX⁴⁹

Following litigation, all prisoners assigned to ADX now receive an administrative hearing prior to their placement at the facility, which provides some minimal procedural safeguards.⁵⁰

Prisoners assigned to the ADX GP also have six monthly Program Reviews which, according to BOP regulations, prisoners are expected to attend and can raise question and concerns about his placement in, advancement through, or transfer out of the program. Amnesty International has been told that this rarely happens. Instead, typically the review meetings take place at the cell doors, and the 'program review report' which has already been filled out by prison staff, is slid under the door for prisoners to sign. These routine reviews do not make decisions on whether a prisoner may proceed to the SDP.

The process for allowing a prisoner to move from GP to the SDP appears to be highly discretionary. There is no hearing and determinations on eligibility for, and advancement through, the SDP are carried out by an internal prison SDP Screening Committee in consultation with the unit team, with the Warden having the final decision.⁵¹ If a prisoner is determined to be "eligible" for the SDP (listed criteria for eligibility including, for example, 12 months' clear conduct in GP and active participation and completion of programs), this does not mean that he will necessarily be considered for entry into the SDP.⁵² Prisoners take

no part in the SDP Committee review of placement/advancement determinations and are not present at such reviews. Even if admitted to the SDP, prisoners may be sent back at any time, including, it has been alleged, for minor incidents.

PB, a developmentally disabled and severely depressed inmate, in the phase 2 in of the SDP in USP Florence received an incident report for a “minor rules infraction” and was returned to ADX where he was placed in the SHU. The following month, after he learned of the death of his mother and after pleading for psychiatric help for several hours, he attempted suicide. Guards who witnessed the incident gave him an incident report for “tattooing or self-mutilation”. Although this incident report was subsequently expunged after intervention by his lawyer, he remained at ADX having to accrue again a sustained period of clean conduct.

Although decisions may be appealed through an administrative remedy process, this has been described by attorneys as an ineffective remedy in practice, given the discretionary nature of the process and the wide deference afforded to prison administrators in decisions relating to institutional security⁵³. The process has been described in court documents as “meaningless because no administrative remedy challenging a Step-Down denial has ever been successful”.⁵⁴ In reporting on the practice of solitary confinement, the UN Special Rapporteur on Torture has stressed the importance of procedural safeguards when assigning prisoners to segregation, stating inter alia that prisoners “must be provided with a genuine opportunity to challenge both the nature of their confinement and its underlying justification through a process of administrative review”.⁵⁵

BOP regulations state that each inmate will receive written notification of the decision to deny entry to, or advancement through, the SDP, which will include “The reason(s) for the denial, *unless it is determined that the release of this information could pose a threat to individual safety or institutional security*” (Amnesty International emphasis). Advocates report that within the past year, prisoners have not been told that they have been considered and rejected for the SDP as they have not received any documentation at all. As a result, there is no actual “decision” that they have access to that they could challenge via the grievance process. It is alleged that some prisoners have been repeatedly denied entry to the SDP for years without being given any specific or detailed explanation, and thus without knowing what they can do to advance through the program. This has included prisoners with no history of serious misconduct, or with clear conduct records, some of whom have remained in isolation at the base-line level of ADX for many years.

- Mohammed Saleh, Ibrahim Elgabrowni and El-Sayyid Nosair were transferred to ADX without a hearing following the September 11th 2001 attacks.⁵⁶ While convicted of terrorism-related offences, all three had previously spent six years confined without serious incident at high security open population prisons, where they had jobs, were out of their cells for most of the day and could move freely with other inmates. According to court documents, once in ADX they were held in isolation in the GP and were repeatedly denied access to the SDP without explanation, apart from notices containing formulaic language such as that their “reasons for placement have not been mitigated” and/or that “safety and security” prevented them from being progressed.⁵⁷ The prisoners were placed into the SDP (in 2007 and 2009) only after filing lawsuits and following several years of unexplained denials, without any change in their conduct. They were later transferred to other prisons while the case was still in litigation and before completing the SDP. Omar Rezaq, another prisoner named in the lawsuit, spent over 12 years in isolation in the ADX GP before being placed in the SDP.⁵⁸
- While detailed information is lacking on the length of time prisoners currently in ADX have spent in the GP, cases of long-term isolation continue at the prison, with prisoners continuing to be denied access to the SDP despite reportedly having clear conduct

records.⁵⁹ According to a lawsuit filed in 2012, some prisoners with mental illness had spent more than a decade at ADX without adequate treatment or admission to the SDP or, if admitted to the SDP, were returned to the ADX GP for failure to complete the program (see section on Mental Illness, below).

- Norman Matthews, convicted for a number of criminal offences, died last year in ADX after being held for 18 years in the GP unit without being admitted to the SDP.
- John Powers, incarcerated in 1990 after conviction for bank robbery, was sent to ADX in 2001 and suffering from mental health problems spent years being transferred between the special mental health prison facility in Missouri and the Control Unit in ADX. During his 11 years in ADX he was never placed in the SDP.
- Ralph Gambina, serving a life sentence, was transferred to ADX in 1995 from the Control Unit at USP Marion and has spent 21 years in solitary confinement without being entered into the SDP.
- Syed Fahad Hashmi was transferred to ADX in March 2011 after being convicted of one count of providing material support for terrorism after nearly three years in pre-trial solitary confinement (see box) and a further period in isolation in another federal prison. He was initially placed in H-Unit under SAMs but was moved to the ADX GP in January 2012, after his SAMs expired and were not renewed. More than two years on, without being granted access to the SDP, and with no history of any serious institutional misconduct involving physical violence, nor having been convicted of any direct involvement in acts of violence or terrorism he was eventually transferred on 17 June 2014 to the Control Management Unit in Terre Haute, Indiana.
- According to a US government declaration in the Babar Ahmad case, “mitigation of the original reason for placement at ADX” is no longer an explicit factor used to determine entry to the SDP; however, it acknowledged that the SDP Committee could still have regard to the initial reasons for placement at ADX in making its decision.⁶⁰ The criteria listed in BOP procedures for placement into or advancement through the SDP are extremely broad and include such vague wording as “the inmate’s conduct while housed at the ADX” and “overall institutional adjustment”, “the institution’s safety and security needs”, as well as “The reason(s) the inmate was designated to the ADX” and criminal history. Amnesty International has been told that a number of prisoners remain confined indefinitely to the ADX GP based solely on their committal offence, and without access to the SDP.
- Thomas Silverstein, 62, originally convicted of armed robbery, and serving life without parole for the murder of two inmates and a correctional officer has been confined for 30 years in isolation, nine of which have been spent in ADX. During this time, despite a clean conduct record for 22 years, he has been denied access to the SDP on the basis of the nature of his convictions. On the 10th May, 2014, the US Circuit Court of Appeals ruled that his 30-year confinement in isolation does not violate his rights. The Judges noted that the nature of Silverstein’s convictions make it reasonable to keep him in solitary confinement. “In this case,” the ruling states, “the risk of death and physical or psychological injury to those exposed to Mr Silverstein must be balanced with the psychological risk he may face if left in administrative segregation.”

Some margin of appreciation may be necessary when officials are assessing complex factors relating to behavioural and security needs. However, the organization shares the concerns expressed by advocates about the lack of clear criteria for enabling prisoners to work their

way through the ADX SDP, and the very broad grounds that can be used to deny progress, including the original reason for assignment. This has meant prisoners spending years – or in some cases being held indefinitely – in conditions of severe isolation.

Recommendations

■ Amnesty International recommends that clear criteria be established for SDP placement decisions, with a fair process and meaningful review. Prisoners should be provided with detailed reasons if they are denied advancement through the SDP, with an opportunity to participate in, and challenge, decisions, with clear guidance on how they can progress through the system. No-one should be held continuously in isolation based solely the original reason for placement in ADX. Rehabilitation programs should be meaningful and ensure behaviour can be measured. There should be a presumption that prisoners who are eligible for the SDP will progress at the earliest opportunity.

SPECIAL SECURITY UNIT (SSU) - H-UNIT

"The longer I spent in this period of segregation, the worse it gets on my efforts to survive, to maintain my state of mind and my mental capacity. I lost fifty pounds from being on hunger strike in H-Unit and hunger strikes became a regular occurrence in the unit, with medical staff coming every weekend to weigh each inmate. This was the first time in my life that I experienced the brutality of force feeding."

Mahmud Abouhalima, held under SAMS in H Unit, ADX, since 2005.

ADX prisoners who are under Special Administrative Measures (SAMS) are housed in the SSU, commonly known as H-Unit. SAMs are special restrictions that may be imposed on an inmate under the direction of the Attorney General, when it is determined that such measures are "reasonably necessary" to "prevent disclosure of classified information" or to "protect persons against the risk of death or serious bodily injury" (28 C.F.R. Section 501.3 (a) (2008). The restrictions under SAMs may include housing an individual in administrative segregation and/or limiting privileges such as correspondence and visits. The measures may be renewed annually on the basis of written notification from the DOJ to the BOP that there remains a "substantial risk" that "a prisoner's communications or contacts with persons could result in death or serious bodily injury to persons or substantial damage to property that could entail the risk of death or serious bodily injury to persons".

Prisoners in H-Unit are held in single cells similar to those in the SDP with a narrow window to the outside and solid door with a window looking onto the range. Showers are sited on the range rather than inside the cells. Otherwise the basic regime is identical to that in the GP, with prisoners locked in their cells for 22-24 hours a day with 10 hours out of cell exercise a week, alone or in individual cages with up to five other prisoners. They have access to the same in-cell programs delivered through close-circuit TV as the GP as well as to most books⁶¹ and other TV channels.⁶² Most prisoners under SAMs have severe restrictions placed on their communication with the outside world, compounding their isolation. Visits and correspondence are typically limited to approved attorneys and immediate family members only; lawyers may further be prohibited from reporting on their clients' conditions of confinement.⁶³ Correspondence to or from approved contacts, which is monitored along with the twice-monthly non-legal phone calls allowed, may be limited to only one letter a week.

In February 2014 it was reported that between 8 to 10 prisoners in H Unit were being force fed after initiating a hunger strike in protest against their restrictive conditions of confinement.⁶⁴ BOP records, seen by CBS News "60 Minutes," indicate that this is not an isolated incident, according to the program, "there have been as many as 900 of what the Bureau calls 'involuntary feedings' of terrorists in H unit since 2001".⁶⁵

"I have engaged in two hunger strikes while on H Unit. Both of them were my decision and had nothing to do with other people. No one I corresponded with encouraged me to strike. I did not strike because other prisoners were doing it. I felt like an animal – just eating and sleeping. I decided to stop eating to object to my treatment".

Nidall Ayyad placed under SAMS in 2005 and held in H unit between 2006 and 2012. A few months after his SAMS were removed in 2012 he was transferred to a CMU where he remains today.

Prisoners assigned to H-Unit have no opportunity to enter the GP SDP – the only clear route out of ADX for most prisoners - other than through the lifting of the SAMs which is a decision made by the DOJ rather than the prison administration. However, in May 2008, the prison instituted a separate, internal step-down program for H-Unit. This consists of three "phases" each lasting a minimum of one year. At phase 2, prisoners are allowed certain limited additional privileges, while remaining confined to solitary cells for 22-24 hours a day. Only at phase 3 are H-Unit prisoners allowed some group association, with up to four other prisoners on the range for one and a half hours a day. Decisions on whether a prisoner is eligible for progression through the phases are made by an H Unit Review Committee; decisions are based on criteria relating to safety concerns, the inmate's conduct and participation in programs.

In practice, progression to phase 3 of the H-Unit program is conditional upon modification of the prisoner's SAMs restrictions, a decision which rests with the DOJ and may not depend upon the prisoner's institutional behaviour but on more general security considerations, including the committal offence. Amnesty International does not have a breakdown of the current numbers of prisoners in each phase of H-Unit or the length of time spent at each phase. However, litigation documents describe how some prisoners spent several years in H-Unit without progressing to phase 3 because their SAMs had not been modified, despite clear conduct records. The only way out of H-Unit altogether is generally for the SAMs to be lifted. At least one prisoner remains confined to H-Unit indefinitely, in conditions of severe isolation.

- Ramzi Yousef is serving two life sentences plus 240 years for his role in two terrorist attacks, including the 1993 World Trade Center bombing in New York City in which six people died. He has spent more than 15 years in solitary confinement. He is currently confined in H-Unit under SAMs; he has spent over two years on step 2 of the phased program, and despite a clear conduct record for 5 years, and an orderly appointment which allows him out of cells for few hours a week to clean cells, he continues to be denied access to phase 3. When his SAMs come up for renewal he will have a meeting with his counsellor to discuss, but he is not told when the SAMs will be renewed, nor given the opportunity to refute anything in the decision. According to a lawsuit filed in 2012, his SAMs are renewed every year based on his original conviction, without regard to his institutional behaviour and without a finding that he continues to pose any specific threat behind bars. In May, the Judge in his case ruled that there was no liberty interest under the Constitution in challenging SAMs.
- Mahmud Abouhalima was sentenced to 240 years for his role in the 1993 World Trade Center bombing. Between 1992 and 2001 he was held in GP in USP Lompoc and USP Leavenworth; on September 11 2001 he was placed in segregation and transferred to ADX in 2003 and held in GP unit for two years until his transfer to H Unit in 2005 when he was placed under SAMs. In 2008, Mahmud Abouhalima was placed in the H-Unit step-down program. Despite progress records that reportedly indicate he had positive behaviour and interactions with staff and inmates, as well as participation in education and psychology programs, in June 2011 he received a written denial for phase three of the program and was subsequently returned to phase one. He is now in phase three.

Amnesty International has joined other human rights advocates in expressing concern about the lack of transparency and fairness in the way in which SAMs have been applied in some cases.⁶⁶ Lawyers have reported that prisoners are not always provided with the reasons SAMs are imposed or renewed, and that they do not have adequate opportunity to contest the decision or know what they can do to have them lifted. As shown in Ramzi Yousef's case, SAMs have been imposed and extended on the basis of the original offence, rather than any specific or ongoing threat posed by the prisoner while incarcerated.

Any measure which imposes significant restrictions on an inmate's living conditions and access to the outside world should be subject to a rigorous and accountable review process. All prisoners, regardless of their security classification, must be provided with humane conditions.

International standards provide that prisoners should not be subjected to any hardship beyond that inherent in the deprivation of liberty and maintenance of discipline.⁶⁷ In line with this principle, they should be held in the least restrictive conditions practicable, consistent with humane treatment and the aim of rehabilitation.

Recommendations

- Amnesty International recommends that prisoners in H-Unit be afforded more out of cell time, better exercise and recreational provision, and an opportunity for some association with other inmates in the unit at all stages of their confinement rather than, as presently, only after progression to phase 3.

- Prisoners should be provided with a meaningful opportunity to challenge the imposition of SAMs. In any event, consistent with international standards, restrictions should be limited to the minimum necessary and ensure that a prisoner is not subjected to undue hardship. No prisoner should be held in indefinite solitary confinement.

- As a general rule, hunger strikers should not be forcibly fed. Any decision whether to carry out non-consensual feeding of a hunger striker should be made only by qualified health professionals and any such feeding should be done only by medically trained personnel under continuing medical supervision, and only after assessing the individual's health needs and mental competence. The authorities must never require health professionals treating hunger strikers to act in any way contrary to their professional judgment or medical ethics.

CONTROL UNIT, SHU AND RANGE 13

The SHU range in ADX © Private

The Control Unit (CU), together with the SHU and Range 13, are the most isolated units in ADX as prisoners recreate alone and have no contact with anyone other than staff. Prisoners are assigned to the CU for fixed terms for serious offences, usually committed in other prisons, after a hearing which is similar to a disciplinary hearing. The fixed terms can be as long as six years or more,⁶⁸ and may be extended if further offences are committed while the prisoner is in the Unit.

The cells are the same as in the GP, with showers and double-doors cutting off direct contact with anyone on the range or in adjacent cells. CU prisoners have access to TVs and the same

in-cell programs as GP inmates. However, they are allowed exercise for only seven hours a week, and they do not have even the limited contact that GP inmates may have with prisoners in adjacent cages. Contact with the outside world is more restrictive in that they are allowed only one 15-minute non-legal phone call a month.

Prisoners in the CU have no access to the SDP but they can receive monthly credits for positive behaviour which can reduce their terms; they may also lose credit for disciplinary offences or failure to adjust. ADX regulations require that all prisoners receive monthly reviews by a CU Team attended by a psychologist. An Executive Panel reviews each CU case every 60-90 days to determine an inmate's readiness for release (to another prison or to the ADX GP).⁶⁹

Interior of a SHU cell at ADX © Private

BOP regulations exclude prisoners with serious mental illness from being housed in the CU, and all inmates are supposed to undergo mental health screening before being assigned to the unit and assessed at the monthly reviews. However, according to an ongoing lawsuit (*Cunningham v Bureau of Prisons*, see below) prisoners with serious mental illness have been held in the CU, sometimes for years, with some prisoners having their terms extended for behaviour caused by their illness, including incidents of extreme self-mutilation. Factors used in awarding good conduct credits, or in evaluating a prisoner's readiness for release from the unit, include "Self-improvement Activities", "Personal Grooming and Cleanliness" and "Quarters Sanitation".⁷⁰ Lawyers have described how some prisoners are too ill or depressed to maintain personal hygiene and smear their cell walls with excrement; as they fail to meet positive conduct criteria they too can remain in the unit for extended periods. According to a prison mental health expert, behaviour such as self-harm and smearing excrement is often a symptom of mental health or behavioural disturbance stemming from, or exacerbated by conditions of isolation.⁷¹ While some changes have been instituted as a result of the lawsuit, Amnesty International is concerned that prisoners with mental or behavioural problems may remain in isolation, in the CU or elsewhere at ADX, effectively punished for behaviour they are unable to control, in conditions that are liable to make them worse.

Prisoners in the SHU live in similar conditions of isolation as in the CU, confined to the same double-door cells, with solitary recreation. Many prisoners in the SHU are serving fixed terms for disciplinary offences; some are held there pending investigation of an incident. ADX prisoners usually spend at least a few days in the SHU upon their arrival at the institution. Most inmates in the SHU (those confined for disciplinary reasons) are denied televisions and radios or access to programs. Although prisoners generally spend shorter periods in the SHU than in other units, prisoners' terms can be extended for repeated disciplinary infractions. According to the *Cunningham* lawsuit, seriously mentally ill prisoners have been confined in the SHU for many months, and in some cases for years, due to disturbed behaviour exacerbated by their conditions of confinement.

Range 13

"The outdoor recreation area was a concrete pit surrounded by high, featureless walls on all sides. It felt like being inside of a deep, empty, swimming pool. I couldn't see any of the mountain, even though I knew they had to be close by. I also couldn't see a single tree, a blade of grass, or any sign of nature".

Description of outdoor recreation area on Range 13⁷²

The most isolated section of the facility is a small high security unit known as Range 13. The cells have no view of the outside and light comes from a small window at the top of each cell too high to see through. Cameras are positioned on the cells 24 hours a day. Amnesty International was told during its 2001 visit to ADX that very few inmates were ever held there, and for no more than 12-30 days at a time. However, the organization has received information indicating that in recent years prisoners have spent significantly longer periods in Range 13.

- Thomas Silverstein, 62, convicted in 1975 for armed robbery, and implicated in the murder of a guard and two inmates, was held on Range 13 for almost three years between 2005 and 2008. He has had a clean conduct record for over two decades. Held under a "no human contact" order issued by the Director of the BOP in 1983 he was moved to ADX GP in 2008 after he filed his lawsuit. According to court documents, Mr Silverstein, while incarcerated on Range 13, was given no information from prison officials about the 'behavioural standards that were being applied to him and the "program" he would need to follow to have his extreme level of isolation reduced". It was

'unclear what if any objective or clear standards the BOP applied in making the decision to transfer him out of Range 13 and into D Unit'.⁷³ Even after the move to GP, he still was, and has been, treated differently from other GP prisoners in the sense that for the majority of the time he has been in GP, he has been forced to recreate alone, not even being able to interact with other prisoners in the outdoor cages.

- Ramzi Yousef, was held for seven years and eight months on Range 13.

Several H-Unit prisoners were also placed there in response to initiating hunger strikes.

Amnesty International has seen documents in which an H-Unit prisoner appealed his placement in Range 13 through the Administrative Remedy procedure, alleging that he was placed there in retaliation for having gone on hunger strike in September 2010. In a letter dated 5 January 2011, the Warden replied to the prisoner denying his appeal, stating that "On October 4, 2010, while you were engaged in the hunger strike, you were removed from H-Unit and placed on Range 13, in SHU, for medical observation and monitoring".⁷⁴ The letter goes on to state that "The decision was then made that upon completion of your hunger strike and your monitoring/observation by the Clinical Director, we would continue to house you on Range 13, in the SHU, with other H-Unit inmates". Thus, he was still in Range 13 nearly four months after being placed there, and no longer for observation or monitoring purposes.

Although the Warden states in his letter that H Unit prisoners in Range 13 were afforded "all of the same privileges and restrictions as H-Unit inmates", given the extremely isolated conditions on Range 13 it is hard to see this as other than a punitive measure taken to deter prisoners from going on hunger strike. Amnesty International opposes the imposition of punitive measures against prisoners for going on hunger strike, and is particularly concerned that where a prisoner is on hunger strike in protest against their isolated conditions of confinement, such measures place them in conditions of even more severe isolation.

Recommendations

- Prisoners with mental illness, mental disabilities or severe behavioural disorders should not be housed in ADX but should be treated in an appropriate therapeutic setting. All prisoners in ADX should be regularly monitored by mental health professionals.
- All prisoners, wherever they are housed, should have access to adequate provision for outdoor exercise and recreation and, to the maximum extent possible, opportunities for social contact with other inmates. No prisoner should be confined for prolonged periods in the conditions of severe isolation as exist in the CU or SHU.
- Given the very severe conditions of isolation in Range 13 cells, and the risk of psychological harm that can result from even short periods in isolation, Amnesty International considers that Range 13 should be discontinued for use.

MENTALLY ILL PRISONERS AT ADX

"The minds of some prisoners are collapsing in on them. I don't know what internal strife lies within them, but it isn't mitigated here. One prisoner subjected to four point restraints (chains, actually) as shock therapy, had been chewing on his own flesh. Why is a prisoner who mutilates himself kept in ADX? Is he supposed to improve his outlook on life while stripped, chained and tormented"

Excerpt from a letter written by Raymond Luc Levasseur a prisoner held in ADX, published on the 'Solitary Watch' website⁷⁵

There is a significant body of evidence that confining individuals in isolated conditions, even for relatively short periods of time, can cause serious psychological and sometimes physiological harm, with symptoms including anxiety and depression, insomnia, hypertension, extreme paranoia, perceptual distortions and psychosis. This damaging effect can be immediate and increases the longer the measure lasts and the more indeterminate it is.⁷⁶ Isolation has been found to have negative effects on individuals with no pre-existing illness and to be particularly harmful in the case of those who already suffer from mental illness.⁷⁷

In recognition of such effects, international and regional human rights bodies, mental health organizations and others have called for strict limits on the use of solitary confinement and an absolute prohibition of the practice in the case of prisoners who are mentally ill.⁷⁸ In 2012, the American Psychiatric Association approved a policy opposing the prolonged segregation of prisoners with serious mental illness.⁷⁹ There is a growing consensus among US courts that housing prisoners who are seriously mentally ill in "super-maximum security" conditions is "cruel and unusual punishment" in violation of the Eighth Amendment to the U.S. Constitution.

BOP policy also prohibits housing prisoners who are seriously mentally ill in ADX. Its written procedures for transferring prisoners to ADX state that prisoners "currently diagnosed as suffering from serious psychiatric illnesses should not be referred for placement at ... ADX." (BOP Program Statement 5100.08, "Prisoner Security Designation and Custody Clarification", Chapter 7).

However, in declarations presented to the ECHR asserting that inmates considered seriously mentally ill would not be housed at ADX, the US government stated that "The main mental health disorders such as bipolar affective disorder, depression, post-traumatic stress disorder and schizophrenia would not preclude a designation to ADX and could be managed successfully there".⁸⁰ Thus, it appears that, in practice, BOP has taken the position that prisoners with a diagnosis of serious mental illness need not be excluded from assignment to ADX and placement in isolation if they can be managed and are not actively psychotic. This position and definition of when a person is seriously mentally ill has been challenged as contrary to accepted practice in other systems and with recommendations and findings of the US Department of Justice Civil Rights Division investigations into other jurisdictions.⁸¹

"I heard the head of the BOP in Congress (on radio) saying that they do not have insane inmates housed here...I have not slept in weeks due to these non-existing inmates beating on the walls and hollering all night. And the most "non-insane" smearing feces in their cells"

Letter sent to the website 'Solitary Watch' by an inmate confined in ADX who has spent the last 12 years in solitary confinement⁸²

A lawsuit filed in 2012 and still in litigation (*Cunningham v BOP*) has presented evidence that a significant number of inmates suffering from serious mental illness have been confined at ADX without adequate screening, diagnosis or treatment, in violation of BOP's own policies and the Eighth Amendment to the US Constitution.⁸³

While all prisoners are required to be screened upon arrival at the prison, the lawsuit described the process as consisting of “perfunctory interviews that are wholly inadequate as a form of screening or diagnosis”.⁸⁴ It further stated that, even where prisoners were identified as having a serious mental illness, many were not given appropriate treatment or monitoring.

Because of the particularly severe conditions in the CU, BOP policy provides that, even if referred to ADX, any prisoner with evidence of a serious mental disorder or physical disability for which they require to be medicated should not be placed in the CU. However, cases cited in the lawsuit include several prisoners who had spent years in the CU, despite histories of mental illness and actively psychotic behaviour, including acts of self-mutilation. Some had been taken off their prescribed psychotropic medication in order to be assigned as “eligible” for placement in the unit. The lawsuit claimed that the 30 day evaluations were in practice “rarely performed on inmates in the Control Unit”.⁸⁵

JP, a prisoner with a history of mental illness, was transferred to ADX in 2001 and placed in the CU to serve a 60 month sentence imposed after he escaped from a medium security prison.⁸⁶ The lawsuit describes how he was repeatedly transferred for brief periods to the federal medical facility at Springfield for psychiatric evaluation after a series of incidents of self-harm, only to be returned to the CU after being “stabilised” with medication. The self-harming incidents included lacerating his scrotum with a piece of plastic (2005); biting off his finger (2007); inserting staples into his forehead (2008); cutting his wrists and being found unconscious in his cell (2009). He finally completed his CU term in 2011, ten years and five months after his original term would have expired had he been able to comply with the behavioural requirements. According to the lawsuit, he continued to be deprived of mental health care after being placed in the ADX GP. In January 2012, he reportedly sliced off his earlobes and in March 2012 sawed through his Achilles tendon with a piece of metal; after he again mutilated his genitals in May 2012 he was placed on the anti-psychotic medication Haldol but had no access to other treatment such as mental health counselling. In August 2013, he left ADX on an emergency mental health transfer to Springfield, Missouri. In October 2013, he was sent to USP Tucson but was transferred back to Springfield in about March 2014 after he rammed his head into an exposed piece of metal in his cell, causing a skull fracture and brain injury, for which he refused most treatment. Since arriving at Springfield he has inserted metal into his brain cavity through the hole that remain in his skull, which BOP says cannot safely be removed.

MW had been treated for mental illness since childhood and was also diagnosed with mental retardation. He was transferred to ADX despite a history of self-harming and attempted suicide at another prison. While in the CU, he twice cut his wrist with a razor blade; he allegedly received no mental health treatment for his behaviour but was punished with seven days loss of TV. He filed an administrative appeal against his placement in the CU which was denied.⁸⁷

According to the lawsuit, many prisoners housed in the SHU also suffer from chronic mental illness and some routinely smear themselves and their cells with their own faeces, howl or shriek continuously or bang their metal showers at all hours of the day or night. Mentally ill prisoners have also been housed in the ADX GP. One prisoner, who had been stabilised with regular psychotropic medication in another federal facility, deteriorated after being transferred to ADX; after cutting a blood vessel in his neck he was treated in hospital then returned to ADX where he was reportedly placed in the same cell and given a pail of water to clean up the blood.⁸⁸

The lawsuit further alleges that, as of the time of filing, there was inadequate mental health staffing at ADX. The prison reportedly had only two mental health professionals – both psychologists – serving around 450 inmates, assisted by a psychiatrist who spent only half a

day a week at the facility. It was alleged that psychotropic medication was inconsistently or incorrectly administered; that correction officers were not adequately trained to recognize symptoms of serious mental illness crises; and that counselling sessions with mental health staff almost invariably took place at the cell door, in the presence of correctional staff, rather than in an appropriate private setting.

In 2013, two years after the lawsuit was filed, and following rejection by a federal judge of BOP appeals to dismiss the case, both sides entered into a structured settlement process overseen by an assistant federal judge. While at the point of writing no definitive agreement had been reached, prison authorities have reportedly taken steps to address the concerns raised, although, according to the lead attorney in the case, the BOP remains “far from righting chronic treatment gaps”.⁸⁹

- In September 2013 a prisoner with a history of serious mental illness hanged himself in his cell in the ADX GP. He had reportedly spent more than a decade at ADX with only intermittent mental health care, having been transferred to a medical facility at least six times to be medicated only to be returned to ADX where each time he deteriorated; he suffered psychotic symptoms which had allegedly been ignored in the days before his death.⁹⁰ According to his lawyer, the BOP refused to allow the coroner to interview other prisoners, enter prisoner cells or take witness statements. They also took the reportedly unprecedented step of having three representatives attend the autopsy.

The changes under the above settlement negotiations are reported to include the creation of two new long-term residential programs to treat high security prisoners with serious psychiatric problems: the first in Atlanta, Georgia, opened in September 2013 with capacity for 30 patients –all but one of whom were transferred from ADX. In addition, a number of mentally ill prisoners have been transferred to a federal medical facility in Springfield, Missouri.

Other improvements include a new policy statement on SMI; some improvement in staff training; an increase in the size of mental health staff from two psychologists to four, and a psychiatric nurse; an improved pre-admission evaluation for inmates entering prison; and the employment of an outside consultant to evaluate all prisoners at ADX. Additionally, a change has been made to the policy that previously prohibited the administration of psychotropic drugs to inmates in the CU so that some prisoners in the unit may now receive such medication. While Amnesty International recognizes this latter change as an improvement on withholding medication from mentally ill prisoners, it is deeply concerned that prisoners with SMI should be held at all in the CU given its severe conditions of isolation.

According to information provided to Amnesty International by plaintiff’s attorneys, a number of critical objectives are being sought through the settlement process, including better evaluation and diagnostic processes for those being referred to ADX, effective treatment for mentally ill prisoners in an appropriate therapeutic setting, routine monitoring and psychological services for all prisoners at ADX and, for all prisoners, a reduction in extreme isolation time with monitoring and enforcement mechanisms to ensure changes are properly introduced.

International standards, and those set by US professional organizations, require careful monitoring of all prisoners held in isolation due to the negative impact this can have on the psychological health of individuals even without pre-existing illness. The SMR require daily monitoring of prisoners placed in “close confinement” (Rule 32). The National Commission for Correctional Health Care (NCCHC) in the USA has observed that conditions in super-maximum security isolation facilities “Even for the most stable individuals ... may precipitate

mental health or health difficulties” and that “daily contact by medical staff and at least weekly contact with mental health staff is required”, noting that such contacts “must be meaningful and allow sufficient interaction for such assessments to take place”.⁹¹ Although the standards are not binding on non-accredited facilities, they represent best practice.

Recommendations

- Amnesty International recommends that prisoners who are mentally ill are not housed at ADX; and that all prisoners in isolation have an opportunity for meaningful consultation with mental health staff on at least a weekly basis as recommended under NCCHC and international standards.
- Prisoners with a diagnosis of mental illness, mental disability or severe behavioural disorders should not be housed in ADX and should have access to treatment in an appropriate therapeutic setting.
- All prisoners in ADX should be regularly monitored by mental health professionals.
- Health care staff should report to the prison authorities if a prisoner’s health is being put at serious risk by being held in isolation.
- No prisoner with a history or risk of mental illness should be housed in ADX

OVERVIEW OF US OBLIGATIONS UNDER INTERNATIONAL LAW AND STANDARDS

The USA has ratified the United Nations (UN) Convention against Torture and other Cruel, Inhuman or Degrading treatment or Punishment and the International Covenant on Civil and Political Rights (ICCPR) both of which affirm the absolute prohibition of torture and other cruel, inhuman or degrading treatment or punishment (articles 1 and 16 of the Convention against Torture and article 7 of the ICCPR). Additionally, the ICCPR in article 10, requires that “all persons deprived of their liberty shall be treated with humanity and respect for the inherent dignity of the human person”, an obligation the UN Human Rights Committee (the treaty monitoring body) has stated is a “fundamental and universally applicable rule”⁹².

The Human Rights Committee has further emphasized that the prohibition of torture and other cruel, inhuman or degrading treatment under international law “relates not only to acts that cause physical pain but also that acts that cause mental suffering” and has stated, specifically, that prolonged solitary confinement may breach this prohibition (Human Rights Committee General Comment 20 on article 7).

The Human Rights Committee and the Committee against Torture (CAT) (the monitoring body of the Convention against Torture) have criticised conditions in US “super-maximum” facilities as inconsistent with the USA’s obligations under the above treaties. In 2006, the Human Rights Committee reiterated its concern that “conditions in some maximum security prisons are incompatible with the obligation in Article 10(i) to treat detained persons humanely”, citing, in particular, prolonged cellular confinement, lack of adequate exercise

and the “depersonalized environment” found in such units.⁹³ The Committee also observed that such conditions “cannot be reconciled with the requirement in article 10(3) that the penitentiary system shall comprise treatment the essential aim of which shall be the reformation and social rehabilitation of prisoners”.⁹⁴ The CAT has urged the USA to review “the regime imposed on detainees in supermaximum prisons, in particular the practice of prolonged isolation”, noting the effect of such treatment on prisoners’ mental health.⁹⁵

Most recently, the Human Rights Committee issued its Concluding Observations following its consideration of the USA’s Fourth Periodic Report in March 2014. It again expressed concern about holding prisoners in prolonged isolation, including in pre-trial detention, and recommended that the USA monitor conditions with a view to ensuring that persons deprived of their liberty be treated in accordance with the requirements of article 7 and 10 of the ICCPR and the SMR. The Committee recommended that the USA “impose strict limits on the use of solitary confinement, both pre-trial and following conviction, in the federal system, as well as nationwide, and abolish the practice in respect of anyone under 18 and prisoners with serious mental illness”.⁹⁶

The USA has sought to limit its obligations under article 7 of the ICCPR and Article 16 of the Convention against Torture, by entering reservations upon ratification of the treaties stating that it considers itself bound by the articles 7 and 16 only to the extent that “cruel, inhuman or degrading treatment or punishment” means the “cruel and unusual punishment” prohibited under the US Constitution. Amnesty International has repeatedly called on the USA to withdraw its reservations as defeating the object and purpose of the treaties and therefore incompatible with international law.⁹⁷ The Human Rights Committee has also noted with concern the restrictive interpretation made by the USA of its obligations under the Covenant, as has the Committee against Torture. In any event, the USA has made no similar reservation to Article 10 of the ICCPR which requires that all prisoners must be treated humanely, without exception.

As noted above, Amnesty International has found conditions in ADX, and in some other pre-trial or post-conviction federal facilities, to be in specific breach of standards under the SMR. They include standards on access to adequate outdoor exercise and fresh air, conditions essential to health and quality of life. The SMR, although not as such having the legally binding force of a treaty, set out minimum standards which the UN Special Rapporteur on Torture has said are “widely accepted as the universal norm for the humane treatment of prisoners”.⁹⁸ They have also been cited by the Human Rights Committee in its General Comment on Article 10 and, as shown above, in assessing state parties’ reports. Key standards for the treatment of prisoners are also set out in the Basic Principles for the Treatment of Prisoners, adopted by the UN General Assembly (GA) in 1990, and the Body of Principles for the Protection of all Persons under any form of Detention or Imprisonment adopted by the UN GA in 1998.

International norms also provide, as an abiding general principle, that imprisonment should not impose hardship or constraint other than that resulting from the deprivation of liberty or restrictions that are unavoidable in an enclosed environment.⁹⁹ While acknowledging the need for heightened security measures for some prisoners, Amnesty International considers that the conditions of prolonged isolation and other deprivations endured by many prisoners in ADX are unnecessarily harsh and breach the above principle.

International and regional human rights treaty bodies and experts have consistently called on states to restrict their use of solitary confinement, in recognition of the physical and mental harm and suffering this can cause even when imposed for limited periods.¹⁰⁰ This was reiterated by the UN Special Rapporteur on Torture in a detailed report issued in August

2011 in which he called on states to apply solitary confinement “only in exceptional circumstances and for the shortest possible period of time”.¹⁰¹ He defined solitary confinement as “the physical and social isolation of individuals who are confined to cells for 22-24 hours a day”. He called for the abolition of solitary confinement in the case of children under 18 and people with mental disabilities on the ground that its imposition in such cases, for any duration, constitutes cruel, inhuman or degrading treatment. He stressed the importance of safeguards for prisoners placed in segregation, including regular monitoring and review of prisoners’ mental and physical condition by qualified, independent medical personnel, and a meaningful opportunity for prisoners to challenge their confinement through a process of administrative review and through the courts. In a statement issued on 7 October 2013, the Special Rapporteur urged the US government to take “concrete steps to eliminate the use of prolonged and indefinite solitary confinement in US prisons and detention facilities”.¹⁰²

US LAW AND STANDARDS

As outlined in this report, there is concern that the federal system (as well as many state jurisdictions) has failed to put in place the safeguards called for above, including an effective system to enable prisoners to challenge their confinement through administrative review. US courts also provide only a limited remedy for prisoners held in isolation, generally deferring to prison administrators in deciding what restrictions are necessary on security grounds. The US Supreme Court has not ruled that solitary confinement, even when imposed indefinitely, is per se a violation of the Constitution.¹⁰³ It has set a high threshold for judging when prison conditions violate the Eighth Amendment prohibition of “cruel and unusual punishment”, holding that they must be so severe as to deprive inmates of a “basic necessity of life” – interpreted to mean the physical requirements of food, clothing, shelter, medical care and personal safety – and that the authorities must have shown “deliberate indifference” to a risk of harm.¹⁰⁴ The courts have been less willing to consider mental and psychological pain or suffering as sufficient to render conditions unconstitutional, a situation where US jurisprudence falls short of international human rights law (see Human Rights Committee General Comment 20, above).¹⁰⁵

While the US courts have generally allowed prison administrators broad leeway in housing prisoners in isolation, other US bodies have been more robust in calling for rigorous standards and safeguards on the use of solitary confinement.

In its 2006 report *Confronting Confinement*, the Commission on Safety and Abuse in America’s Prisons called for an end to conditions of isolation in US prisons.¹⁰⁶ The report stated that “Separating dangerous or vulnerable individuals from the general prison population is part of running safe correctional facility”. However, it found that in some systems, the “drive for safety, coupled with public demand for tough punishment, has had some perverse effects”, with prisoners who were justifiably separated from the general prison population locked in cells with little opportunity to be productive or to prepare for release, and others who were not a serious threat confined under the same conditions.

The Commission recommended making segregation a last resort, for as brief a period as possible, with tighter admissions criteria and segregated prisoners given an opportunity to engage in productive activities. Noting higher recidivism rates from prisoners released directly from segregation, the Commission also recommended that inmates should spend time in a normal prison setting before being released to the community. The Commission called on US jurisdictions to “End conditions of isolation” and “Ensure that segregated prisoners have regular and meaningful human contact and are free from extreme physical conditions that cause lasting harm”.¹⁰⁷

In 2010, the American Bar Association (ABA) promulgated standards on the treatment of prisoners which included standards on segregation.¹⁰⁸ These state that segregated housing “should be for the briefest term and under the least restrictive conditions practicable and consistent with the rationale for placement and with the progress achieved by the prisoner” (Standard 23-2.6). The standards state that segregation for more than one year should be imposed only if the prisoner poses a “continuing serious threat” (23-2.7); that “conditions of extreme isolation should not be allowed regardless of the reasons for a prisoner’s separation from the general population” (23-3.8 (b)); and that all prisoners in segregated housing should be provided with “meaningful forms of mental, physical and social stimulation”, including, where possible, more out-of-cell time and opportunities to exercise in the presence of other prisoners (23-3.8 (c)). The standards also recommend a number of procedural protections for prisoners placed in segregated housing, including a hearing at which the prisoner has a reasonable opportunity to present witnesses and information and to participate in the proceedings, with regular, meaningful review (23-2.9).

RECOMMENDATIONS

GENERAL RECOMMENDATIONS ON USE OF ISOLATED CONFINEMENT

- In line with international human rights law and standards, all jurisdictions should ensure that solitary or isolated confinement, whether imposed for administrative or disciplinary purposes, is imposed only as a last resort and for the minimum period possible.
- No prisoner should be held in prolonged or indefinite isolation.
- All prisoners in segregated confinement should have access to meaningful therapeutic, educational and rehabilitation programs.
- Conditions in all segregation facilities should provide minimum standards for a humane environment so that prisoners even in the most restrictive settings have adequate facilities for outdoor exercise, access to natural light, and meaningful human contact both within the facility and with the outside world.
- There should be adequate opportunities for some group interaction and association for prisoners at all stages of segregated confinement, both to benefit their mental and physical health and to allow their behaviour to be measured and to encourage their progress to less restrictive custody.
- Children - that is those under 18 - should never be held in solitary confinement. All youthful offenders should receive treatment appropriate to their age and developmental needs with the primary goal of rehabilitation as required under international standards.
- No prisoner with mental illness, mental disabilities or severe behavioural disorders or who is identified as being at risk of developing these conditions should be held in solitary or isolated cellular confinement.
- There should be adequate mental health monitoring of all prisoners in segregation, with frequent opportunities for prisoners to consult with mental healthcare professionals in private.
- Prisoners who have developed serious health care problems as a result of their isolated confinement (whether physical or mental) should be removed and have access to treatment in to an appropriate therapeutic setting.
- Placement in segregated confinement should be made only after an impartial hearing at which the prisoner has a fair and meaningful opportunity to contest the assignment and the right to appeal. Prisoners should be provided with regular, meaningful review of any continued segregation through a similar impartial proceeding, with clear criteria to enable them to move to less restrictive settings within a reasonable time frame.
- There should be regular, external review of conditions in segregation facilities and of the procedures and operation of such facilities.

PRISONERS IN PRE-TRIAL DETENTION

- All detainees in pre-trial detention should be held in conditions consistent with their status as untried prisoners and the presumption of innocence. They should be held in the least restrictive circumstances possible, with regular access to medical care and adequate

facilities for the preparation of their defence and communication with their lawyers and family members.

- Amnesty International urges that the current review of federal segregation policies include conditions under which prisoners are isolated during pre-trial detention, especially in high security facilities such as those in the MCC SHU.

ADDITIONAL RECOMMENDATIONS SPECIFIC TO ADX

- Conditions for all prisoners in ADX Florence should be improved so that prisoners are not held in conditions of severe isolation and have more opportunities for social interaction with staff and other inmates as well as access to meaningful rehabilitation and recreational programs. The exercise facilities should be modified to allow more space and equipment; prisoners should be allowed daily outdoor exercise¹⁰⁹.
- Opportunities should be reinstated for ADXGP prisoners to have group recreation even at the most restrictive levels of confinement, both to aid their rehabilitation and to allow their progress to be measured.
- Amnesty International recommends that clear criteria be established for SDP placement decisions, with a fair process and meaningful review. Prisoners should be provided with detailed reasons if they are denied advancement through the SDP, with an opportunity to participate in, and challenge, decisions, with clear guidance on how they can progress through the system. No-one should be held continuously in isolation based solely on the original reason for placement in ADX.
- Amnesty International recommends that prisoners in H-Unit be afforded more out of cell time, better exercise provision, and an opportunity for some association with other inmates in the unit at all stages of their confinement rather than, as presently, only after progression to phase 3.
- Prisoners should be provided with a meaningful opportunity to challenge the imposition of SAMs. In any event, consistent with international standards, restrictions should be limited to the minimum necessary and ensure that a prisoner is not subjected to undue hardship. No prisoner should be held in indefinite solitary confinement.
- Amnesty International recommends that prisoners who are mentally ill are not housed at ADX; and that all prisoners in isolation have an opportunity for meaningful consultation with mental health staff on at least a weekly basis as recommended under NCCHC and international standards.
- Prisoners with a diagnosis of mental illness, mental disability or severe behavioural disorders should not be housed in ADX and should have access to treatment in an appropriate therapeutic setting.
- All prisoners in ADX should be regularly monitored by mental health professionals.
- Health care staff should report to the prison authorities if a prisoner's health is being put at serious risk by being held in isolation.
- No prisoner with a history or risk of mental illness should be housed in ADX
- Range 13 cells should be discontinued.
- The BOP should provide publicly accessible information on ADX programs and operating policy. It should also report regularly on the number of prisoners in ADX and in the various

units and step down programs and the time spent in each program or unit.

RECOMMENDATIONS TO THE FEDERAL GOVERNMENT AND CONGRESS

- Congress should require, and the federal government institute, reforms to the use of solitary and isolated confinement in all BOP facilities so that they meet with the above standards and fully conform to international law and standards for humane treatment.
- The US Government should allow visits by human rights groups and the media and invite the UN Special Rapporteur on Torture to investigate the use of solitary confinement in US prisons, including through on-site visits under the terms requested by the Special Rapporteur.
- A national reporting system to the Bureau of Justice Statistics should be established under which state and local prison and detention facilities, including juvenile facilities, are required to provide data on their use of solitary confinement, including statistics on the numbers of prisoners held in segregated facilities, the length of confinement, the effectiveness of programs instituted, the costs of confinement and the impact on prisoners, on institutional safety and on recidivism.
- The above data and input from experts, including mental health experts and penal reformers, should be studied to provide guidance on best practice and effective measures to reduce the use of solitary or isolated confinement.
- National guidelines should be drawn up to limit the use of solitary and isolated confinement based on international standards, the ABA standards and best practice.
- Amnesty International urges that Thomson Correctional Center not be funded or designated as a super-maximum isolation facility and that the federal government take steps to reduce and provide alternatives to its use of isolated confinement.

ENDNOTES

¹ Silverstein v. Federal Bureau of Prisons et al, Civil Action No. 07-cv-02471-PAB-KMT, Exhibit 1 (Silverstein v. BOP).

² Juan E. Méndez, “Interim report prepared by the Special Rapporteur of the Human Rights Council on torture and other cruel, inhuman or degrading treatment or punishment”, A/66/268, 2011, para 26.

³ No exact current figures are available. However, a survey by the Urban Institute found that, as of 2004, 44 states had “supermax” facilities housing some 25,000 inmates (Daniel P. Mears, *A Critical Look at Supermax Prisons*, Corrections Compendium, 2005). Few US jurisdictions use the term “supermaximum” custody nowadays: maximum custody isolation facilities which fit that description are known by various terms including Special Management Units (SMUs), Security Housing Units (SHUs) or Administrative Segregation Units (ASUs).

⁴ A census of state and federal prisons in 2005 conducted by the US Department of Justice's Bureau of Justice Statistics found there were 81,622 prisoners held in some form of “restricted housing” at that time.

⁵ Written Testimony of Professor Laura Rovner, University of Denver, Before Senate Judiciary Committee, Subcommittee on the Constitution, Civil Rights and Human Rights, June 15, 2012 available at <http://www.law.du.edu/documents/student-law-office-clinical-programs/laura-rovner-university-of-denver-sturm-college-of-law.pdf> (accessed 8 July 2014).

⁶ Letter from Eileen Chamberlain Donahoe, US Ambassador to the United Nations Human Rights Council, Geneva, 30 November 2011.

⁷ The case of Babar Ahmad and Others v The United Kingdom, 10 April 2012 (Babar Ahmad and Others v. UK) before the European Court of Human Rights, an appeal against the extradition from the UK of five individuals to the USA on claims including that they would risk being subjected to cruel, inhuman or degrading treatment if confined in ADX. In a judgment in April 2012, the Court rejected this claim on finding that isolation at the facility was “partial and relative” (noting that while ADX prisoners had no physical contact with others, they could communicate through the air vents in their cells; and during limited exercise); that they had TVs and access to programs in their cells; and that the applicants had a “real possibility” of gaining to the SDP or its equivalent in H-Unit. The ruling was criticized by US human rights lawyers and NGOs as giving too much weight to the evidence submitted by the USG (which they claimed grossly understated the amount of time a prisoner spends at the facility), in the face of other evidence presented on behalf of the applicants on the extent and duration of isolation at the facility. Amnesty International also expressed concern about the reasoning that led to the decision (Amnesty International, *USA must respect rights of individuals extradited from the UK*, 8 October 2010, Index: AMR 51/086/2012). The Court itself stated in its ruling that “solitary confinement, even in cases entailing relative isolation cannot be imposed indefinitely” and that “If an applicant were at real risk of being detained indefinitely at ADX it would be possible to reach the minimum level of severity required for a violation of article 3” and that “Indeed, this may well be the case for those inmates who have spent significant periods of time at ADX”. (Babar Ahmad and Others v. UK Judgment, 10 April 2012, para 223).

⁸ A survey for the litigants in Babar Ahmad and Others v. UK, found 43 inmates at ADX had spent eight years in isolation (including, in some cases, periods spent in solitary confinement in other prisons before transfer to ADX); similar findings were revealed from a larger sample of 110 ADX prisoners.

⁹ Silverstein v. BOP.

¹⁰ Cunningham v BOP, Case 1:12-cv-01570 (formerly Bacote v BOP), filed 06 June 2012. At the time

of writing the case was pending a decision on a motion to have it certified as a class action. The case is one of a number of lawsuits filed in recent years on behalf of inmates mentally ill in ADX including Jose Martin Vega, who committed suicide by hanging in his ADX cell in 2010 (Cunningham v. BOP).

¹¹ The BOP awarded the contract for the 'Special Housing Unit Review and Assessment' to CNA Corporation. The review will include an operational assessment of eight BOP special housing units; the Bureau's mental health assessment process; and inmate due process rights. It will not include inmates under SAMS, H Unit, or prisoners held in pre-trial isolation. For further information, see James Ridgeway & Jean Casella, "Federal Bureau of Prisons details limited audit of solitary confinement practices", 'Solitary Watch', <http://solitarywatch.com/2013/11/22/federal-bureau-prisons-details-limited-audit-solitary-confinement-practices/> (accessed 08 July 2014).

¹² Lisa Dawson, "Funding Approved for Activation of ADX/USP Thomson, New Federal Supermax Prison", 'Solitary Watch' website, March 2014, <http://solitarywatch.com/2014/03/14/funding-approved-for-activation-of-adxusp-thomson-new-federal-supermax/> (accessed 8 July 2014).

¹³ According to documents obtained under Freedom of Information Act requests in 2007, from January 2002 through May 2007, officials denied every single media request for face-to-face interviews with ADX prisoners, or tours of the facility (source: Fortress of Solitude, by Alan Pendergast, 16 August 2007. (<http://www.westword.com/2007-08-16/news/fortress-of-solitude/full/>)). Prior to this, some journalists had had regular access to the facility. Following criticism of lack of access, the BOP arranged a restricted tour of the facility in September 2007 for some major media: the Washington Post, the Los Angeles Times, CNN, FOX News, CBS 60 Minutes and two local papers. No similar tours are believed to have been arranged since then.

¹⁵ GAO report, "Improvements Needed in Bureau of Prisons' Monitoring and Evaluation of Impact of Segregated Housing", May 2013, p. 2. The GAO is the audit, evaluation and investigative arm of the US Congress and examines and reports on the use of public funds and federal programs and policies (GAO report).

¹⁶ GAO report, p 18.

¹⁷ Amnesty International uses the term "solitary confinement" and "isolation" interchangeably to describe circumstances in which prisoners are confined to small, usually single (but sometimes double) cells for 22 hours or more a day, with no group activities and only limited contact.

¹⁸ GAO report, p 15.

¹⁹ Richardson v Kane, filed December 2011 (Richardson v. Kane).

²⁰ According to the GAO report some 7% of federal prisoners were in some form of segregated confinement as of February 2013; they included prisoners in SMUs as well as in SHUs where prisoners are often confined for fixed terms for rule violations; for their own protection; or while awaiting classification on entry to the prison system. The GAO found this constituted an increase in use of segregation over five years which exceeded the rate of increase in the prison population as a whole, mainly due to the expansion of SMUs. However, a press release issued from Office of Dick Durbin, US Senator for Illinois, *Durbin Statement on Federal Bureau of Prisons Assessment of Its Solitary Confinement Practices*, 4 February 2013, noted the BOP has reduced its segregated population by nearly 25 per cent in the past year. It is unclear how far this reduction is due to closure of some SMU units or relates to short-term isolation (e.g. as short fixed penalties or short periods in administrative detention while awaiting classification or during an investigation) or applies to those held for long periods in administrative or disciplinary segregation.

²¹ <http://justice.gov/jmd/2014factsheets/prisons-detentions.pdf> (accessed 8 July 2014).

²² Jean Casella & James Ridgeway, “Feds to Open New Supermax Prison Cells at ‘Gitmo North’”, ‘Solitary Watch’ website, 8 February 2013, <http://solitarywatch.com/2013/02/08/feds-to-open-new-supermax-prison-cells-at-gitmo-north> (accessed 8 July 2014)

²³ Basic Principles on Treatment of Prisoners state that “7. Efforts addressed to the abolition of solitary confinement as a punishment, or to the restriction of its use, should be undertaken and encouraged.”

²⁴ They include Syed Hashmi who spent nearly three years in solitary confinement in MCC SHU and Oussama Kassir and Victor Bout who spent 18 months and 15 months respectively in solitary confinement at MCC, all confined to cells 23 or 24 hours a day with only one hour a day exercise in a small inside room not much larger than their cell.

²⁵ Amnesty International, *Cruel conditions for pre-trial prisoners in US federal custody*, 12 April 2011 (Index: AMR 51/030/2011); *Open Letter to US Attorney General Eric Holder on Special Housing Unit in the Metropolitan Correctional Center, New York*, 16 February 2011 (Index: AMR 51/2011/27).

²⁶ The only job available is a three-month position as an orderly, cleaning the unit tiers. It is alleged that some prisoners have repeatedly applied for this coveted position and been turned down. *Rezaq v Nally*, 11-1069, 10th Circuit Court of Appeals (*Rezaq v Nalley*).

²⁷ BOP Institutional Supplement, October 8, 2009, 6a-5 (BOP Institutional Supplement 2009). The ruling of the ECHR in the case of *Babar Ahmad and Others v UK* also noted information in the declarations of General Population Unit Manager Patricia Rengel that “Restrictions on outdoor recreation were in three-month increments (three months for a first offence, six for a second offence and so on)”. *Babar Ahmad and Others v. UK* Judgment, 10 April 2012, para 88.

²⁸ Lawyers for the plaintiffs in *Babar Ahmad and Others v. UK* submitted testimony that some ADX prisoners were placed on “single recreation status” for minor violations. In one case, a prisoner was denied outdoor exercise for 60 days for trying to feed crumbs to birds; when he challenged this through the internal grievance process, it was increased to 90 days (Judgment in the case *Babar Ahmad and Others v the United Kingdom*, ECHR 10 April 2012, para 101).

²⁹ BOP Institutional Supplement 2009 6a.

³⁰ Information from Amnesty International’s representative Angela Wright. Institutional Supplement No. FLM 5321.1B, May 26, 1995 on General Population and Step-Down Unit Operations: Procedures for General Population Units state inter alia that “These units have multiple and single occupancy exercise areas ... Inmates will ordinarily be afforded twelve (12) hours or more out of cell exercise per week.” (4.A). (see also *Design Meets Mission at New Federal Max Facility*, by John M. Vanyur, *Corrections Today*, July 1995, a detailed description of the operation of the facility at that time, noting, inter alia that General Population inmates “are fed in their cells but are permitted to recreate in small groups of up to 12 inmates for 12 hours per week”.

³¹ *Cunningham v. BOP*, p. 14. The lawsuit alleges that two prisoners in K Unit (the Intermediary Unit) “stomped and beat a third prisoner to death over a period of many minutes in full view of ADX staff members, who made no effort to intervene until the victim was lying still...”.

³² *Cunningham v. BOP*. The lawsuit alleges that, while inmates in the TU are grouped so that they are separated from hostile inmates (e.g. rival gang members) during recreational periods, guards often fail to take adequate precautions, for example, opening cell doors unexpectedly so that hostile inmates have sometimes gained unauthorized access to others in the day room.

³³ As with a number of current privileges as ADX, inmates were provided with access to religious materials only after extensive litigation. According to a Stipulated Agreement dated December 2008 in *Saleh et al v BOP*, ADX inmates may meet with the prison approved Imam at least weekly, and may communicate with him in Arabic or English at the cell door from within their cells without restraints. The agreement stipulates that if he opens an ADX cell door, the Imam must be accompanied by a BOP

official.

³⁴ Nidal Ayyad et al v Nalley, Third Amended Complaint, April 2009, p. 13-14

³⁵ Examples have been given in litigation documents of programming consisting of shows broadcast on TV, from parenting shows to those on Greek history such as the Peloponnesian wars (Rezaq v Nalley, 11-1069, 10th Circuit Court of Appeals).

³⁶ Laura Rovner, testimony to ECHR, Babar Ahmad and Others v. UK Judgment para 101.

³⁷ Sal Rodriguez, 'Profile of an ADX prisoner: "Just half crazy and trying to hold on to the other half"', 'Solitary Watch' website, <http://solitarywatch.com/2012/12/09/profile-of-an-adx-prisoner-just-half-crazy-and-trying-to-hold-on-to-the-other-half/> (accessed 8 July 2014)

³⁸ Rezaq v Nalley and Saleh, Nosair et al v Federal Bureau of Prisons, Appellants Brief May 2011.

³⁹ According to a letter Amnesty International received from the Warden at ADX in 2012, in response to the organization's concerns about the conditions of Syed Fahad Hashmi at ADX, Hashmi was allowed to visit with his attorney unrestrained through a telephone handset, rather than in a room where there was a slot in the barrier and through which correspondence could be exchanged.

⁴⁰ UN Standard Minimum Rules for the Treatment of Prisoners (SMR) stipulate that: "Instruments of restraint, such as handcuffs, chains, irons and strait-jackets, shall never be applied as a punishment. They further provide that restraints may only be used when other measures are ineffective and only for so long as is "strictly necessary" (Rules 31, 33 and 34).

⁴¹ International standards require that prisoners not engaged in outdoor work should have at least an hour of suitable exercise in the open air daily (SMR 21 (1)). The SMR further provide that "Young prisoners and others of suitable age and physique shall receive physical and recreational training during the period of exercise" and that, to this end, "space, installations and equipment should be provided" (SMR 21 (2)). While the time allowed in the yard meets the above minimum standard, if adhered to daily, Amnesty International does not believe that conditions in the exercise yards at ADX are adequate to qualify as "suitable outdoor exercise", particularly for prisoners otherwise confined to cells for long periods. The need for adequate exercise is particularly important where prisoners are cut off from normal activities and spend long periods in their cells, and in view of the detrimental effects on health of lack of exercise.

⁴² The use of restraint techniques and/or instruments may amount to ill-treatment when they are applied unnecessarily or in a degrading manner. See also report of the Special Rapporteur on Torture E/CN.4.2004/56 (2003), para 45.

⁴³ Inmate Security Designation and Custody Classification, Fed. Bureau of Prisons, 92 (12 September 2006).

⁴⁴ Letter from Eileen Chamberlain Donahoe, US Ambassador to the United Nations Human Rights Council, Geneva, 30 November 2011.

⁴⁵ This language has been repeated in a number of documents, including letter from Ambassador Eileen Chamberlain Donahoe, US Representative to the Human Rights Council, in her letter to the UN Special Rapporteur on Torture on 30 November 2011, in which she refers to the "penological missions" of ADX. See identical language used also in the Declaration of Mark Collins, Unit Manager for the General Population of ADX on the missions of ADX in Reid v Wiley et al, Civil Action No. 07-cv-01855-PAB-KMT, US District Court for the District of Colorado, November 2009; and Rezaq v Nalley, et al, 10th Circuit Court of Appeals, April 2012.

⁴⁶ Judgment in Babar Ahmad and Others v. UK, para. 96. The 30 prisoners in the sample were almost entirely from the GP and SDP but also included two prisoners from the Special Security Unit (housing prisoners held under SAMs) where a separate step down program had been recently instituted.

⁴⁷ Judgment in *Babar Ahmad and Others v. UK*, para 101, noting a survey by lawyer Mark Donatelli which found that at least 43 inmates of ADX had spent eight years or more in “lock-down” conditions there and at previous institutions. Also included in the defence team’s rebuttal evidence was a chart using a sample of 110 ADX prisoners which identified an average solitary confinement length of 8.2 years.

⁴⁸ GAO report, p. 13

⁴⁹ *Silverstein v. BOP*.

⁵⁰ These safeguards are less than would be required if a prisoner was facing removal to a disciplinary segregation unit. The procedures for transfer to ADX provide that the inmate has at least 24 hours’ notice of, and an opportunity to appear before, an administrative hearing at which he can make an oral statement and provide documentary evidence (but without legal representation or an opportunity to present witnesses); is provided with a written summary of the reasons for transfer; has right of administrative appeal of the Regional Director’s decision by BOP General Counsel.

⁵¹ While the Institutional Supplement (October 2009) states that the unit team’s review of the eligibility of a prisoner to enter into, or advance through, the SDP will “ordinarily” be “conducted in connection with” the regularly scheduled Program Reviews which the inmate can attend and “raise questions and concerns” about his situation, this is not the same as participation in the SDP Committee review itself. Furthermore, as already noted, “eligibility” does not mean that the prisoner will be considered for advancement through the Program. It has also been reported that the regular Program Reviews themselves often consist of nothing more than a visit to the cell door and a few minutes discussion with the prisoner.

⁵² The Institutional Supplement setting out the review procedure states, “Eligibility for consideration does not equate to appropriateness for placement into or advancement to the next phase of the Program”, FLM 5321.061(1) CN-01, C1(d).

⁵³ Admission and Orientation Handbook, USP Administrative Maximum Facility Florence, Colorado, November 2008. The first step in the Administrative Remedy procedures is for the inmate to informally resolve his complaint documenting the procedure using an Informal Resolution form. Should this not succeed, the second step is for the inmate to file a formal complaint, an ‘Institution Administrative Remedy’, which a staff member will review and the decision is then approved by the Warden. Inmates may appeal the decision within 20 calendar days to the Regional Director, FBOP, in Kansas City. The Regional Director will normally respond within 30 days. This decision can then be appealed to the General Counsel who will have a further 30 days to respond.

⁶⁶ See Center for Constitutional Rights, "Rights Groups Issue Open Letter on Upcoming Trial of Syed Fahad Hashmi and Severe Special Administrative Measures", 23 April 2010, <http://ccrjustice.org/newsroom/press-releases/rights-groups-issue-open-letter-upcoming-nyc-trial-syed-fahad-hashmi-and-sev> (accessed 8 July 2014)

⁶⁷ See section on International Standards and reference inter alia to UN Human Rights Committee General Comments. The SMR also state as a guiding principle that: "Imprisonment and other measures which result in cutting off an offender from the outside world are afflictive by the very fact of taking from the person the right of self-determination by depriving him of his liberty. Therefore the prison system shall not, except as incidental to justifiable segregation or the maintenance of discipline, aggravate the suffering inherent in such a situation." (Article 57)

⁶⁸ During her 2001 visit to ADX, Amnesty International's representative was told the longest fixed term assignment on the unit at that time was 104 months; the prisoner in question had his term extended still further after a serious assault on a staff member.

⁹⁵ Conclusions and recommendations of the Committee against Torture on the second report of the USA,

para 36, CAT/C/USA/CO/”, 18 May 2006.

⁹⁶ Concluding Observations, Adopted by the Committee at its 110th Session (10-28 March 2014).

⁹⁷ Under treaty-based and customary rules of international treaty law, states may not enter reservations which are incompatible with the object and purpose of a treaty (Vienna Convention on the Law of Treaties, adopted 22 May 1969, entered into force 23 May 1980).

⁹⁸ Interim Report of the Special Rapporteur on Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, 5 August 2011, United Nations General Assembly A/66/268/, para 46.

⁹⁹ Human Rights Committee General Comment 21; similar provisions are affirmed under the UN Standard Minimum Rules (Article 57) and the Basic Principles for the Treatment of Prisoners (Principle 5).

¹⁰⁰ E.g. the Basic Principles for the Treatment of Prisoners states under Principle 7 that efforts to abolish solitary confinement as a punishment, or to restrict its use, should be undertaken and encouraged. The European Prison Rules, adopted by the Council of Europe in 2006, state that solitary confinement should be imposed as a punishment “only in exceptional cases and for a specified period of time that shall be as short as possible”. See also the Istanbul Statement on the use and effects of solitary confinement.

¹⁰¹ Interim Report by the Special Rapporteur on Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, 5 August 2011, United Nations General Assembly A/66/268, para 46.

¹⁰² “US: ‘Four decades in solitary confinement can only be described as torture’ – UN rights expert”, 07 October 2013, <http://www.ohchr.org/EN/NewsEvents/Pages/DisplayNews.aspx?NewsID=13832> (date accessed 8 July 2014)

¹⁰³ The Court has held only that some due process is required where prisoners are assigned to isolated custody under conditions which impose “an atypical or significant hardship” in relation to the “ordinary incidents of prison life” (Sandin v O’Connor). While courts have found that conditions in some US supermax facilities constitute “atypical or significant hardship”, the Tenth Circuit Court of Appeals (the judicial circuit covering Colorado where ADX is situated) has ruled more narrowly than some other jurisdictions in rejecting a claim that conditions at ADX constituted “atypical or significant hardship”; this was based in part on the court’s finding that confinement at ADX was not indefinite because prisoners had regular reviews, despite its acknowledging that the applicants had spent years at the facility; the court also compared ADX conditions to those in other isolation facilities rather than the general prison population, and it took into account the administration’s legitimate penological interest when assessing the harshness of conditions (as opposed only to decisions on assignment) and whether these amounted to atypical hardship, a ruling which has been criticized by human rights lawyers as contrary to constitutional interpretation elsewhere. (US Court of Appeals ruling in Rezaq v Nally et al, April 20, 2012.)

¹⁰⁴ Wilson v Seiter, 501 U.S. (1991) and Farmer v Brennan 511 U.S. (1994)

¹⁰⁵ As noted above, one exception is that US courts have repeatedly ruled in recent years that housing prisoners who are seriously mentally ill in isolation in super-maximum facilities is in violation of the Eighth Amendment of the US Constitution. Some courts have specifically noted that isolation in extreme conditions is likely to inflict some degree of psychological trauma on most inmates, but that this did not under US law bring conditions to the level of constituting deprivation of a “basic necessity of life” (Madrid v Gomez (1995)). A further obstacle to prisoners bringing claims on grounds of mental injury or suffering is the Prison Litigation Reform Act (PLRA) passed by Congress in 1995 which provides that “[n]o Federal civil action may be brought by a prisoner confined in a jail, prison, or other correctional facility, for mental or emotional injury suffered while in custody without a prior showing of physical injury.” 42 U.S.C. section 1997e (e).

¹⁰⁶ The Commission on safety and abuse in America's prisons, "*Confronting Confinement*", Vera Institute of Justice, 08 July 2006, <http://www.vera.org/content/confronting-confinement> (accessed 08 July 2014) (Confronting Confinement). The Commission was established by the Vera Institute of Justice in 2005 and conducted a year-long inquiry which included public hearings. It was co-chaired by former US Attorney General Nicholas B. Katchenbach and the Hon. John Gibbons, former Chief Judge of the US Court of Appeal for the Third Circuit. Its 20 members included prison administrators, prisoner rights advocates, religious representatives and members of both main political parties.

¹⁰⁷ Confronting Confinement p. 57

¹⁰⁸ ABA Criminal Justice Standards on Treatment of Prisoners, approved by the ABA House of Delegates, February 2010. ABA standards are not binding but are "grounded in legal and constitutional principles" and have "guided the development of law and practice in the American criminal justice system" (Statement submitted to Hearing before the Senate Judiciary Committee, 19 June 2012).

¹⁰⁹ International standards require that prisoners not engaged in outdoor work should have at least an hour of suitable exercise in the open air daily (SMR 21 (1)). The SMR further provide that "Young prisoners and others of suitable age and physique shall receive physical and recreational training during the period of exercise" and that, to this end, "space, installations and equipment should be provided" (SMR 21 (2)). The need for adequate exercise is particularly important where prisoners are cut off from normal activities and spend long periods in their cells, and in view of the detrimental effects on health of lack of exercise.

ENTOMBED

ISOLATION IN THE US FEDERAL PRISON SYSTEM

The USA incarcerates thousands of prisoners in long-term or indefinite solitary confinement. This report describes Amnesty International's concerns about conditions of severe isolation at the United States Penitentiary, Administrative Maximum (ADX) facility in Colorado, currently the only super-maximum security prison operated by the federal government. It also examines conditions in Special Management Units (SMUs) and Security Housing Units (SHUs) operated at other federal prison facilities.

Since Amnesty International toured ADX prison in 2001 subsequent requests to return to the facility have been denied. The organisation is concerned that as conditions of isolation within federal prisons have become more severe, external oversight of the facilities has declined.

With prisoners held in their cells for 22-24 hours a day in severe physical and social isolation, Amnesty International believes the conditions described in this report breach international standards for the humane treatment of prisoners. Many have been held in isolation for prolonged or indefinite periods - without a means to change their circumstances – amounting to a violation of the prohibition against cruel inhuman or degrading treatment or punishment under international law. The report also details disturbing evidence of prisoners with serious mental illness being detained in harsh isolated conditions without adequate screening, treatment or monitoring.

Solitary Confinement: Common Misconceptions and Emerging Safe Alternatives

MAY 2015

Alison Shames • Jessa Wilcox • Ram Subramanian

FROM THE CENTER DIRECTOR

The overuse and misuse of solitary confinement by our prisons and jails is yet another indication of the overly punitive approach that has characterized our nation's sentencing and corrections practices. Not only do we incarcerate too many people and for far too long, we also have a corrections system that employs, all too frequently and—at times, too casually—the most extreme form of confinement as a routine management strategy; this persists despite decades of evidence pointing to the manifold negative impacts of subjecting people to such conditions. Any serious effort to reduce over-incarceration and its harmful consequences must rest on a commitment to human dignity and focus on the treatment of those in jail and prison.

Although this practice goes by many names—isolation, restricted housing, administrative segregation, protective custody, special housing, disciplinary segregation, etc.—the old adage about ducks applies: if it looks like a duck... As this report makes clear, whatever the label, the experience for the person placed in solitary confinement is the same: confinement to an isolated cell for the overwhelming portion of each day, often 23 hours a day, with limited human interaction and minimal, if any, constructive activity; an experience that all too often leads to harmful outcomes for the person's mental and physical health and the well-being of the community to which he or she returns. As U.S. Supreme Court Justice Anthony Kennedy recently opined, "This idea of total incarceration just isn't working, and it's not humane." It's also a significant drain on the budgets of corrections departments.

Solitary confinement need not be corrections' sole first response to incidents of misconduct, nor should it be casually and routinely used to solve custody management challenges that arise in making housing decisions. In the past decade, several jurisdictions, some of which have worked with Vera, have reduced their use of solitary confinement and implemented safe alternatives.

This report shines a bright light on the use/abuse of solitary confinement and pushes us to recognize the critical connection between what happens to people inside penal institutions and the success of their return to community. It is my sincere hope that it fosters both debate and change, which balance respect for human dignity and safety and security concerns, as these are not—nor need not be viewed as—mutually exclusive. Humane and effective management of our nation's prisons and jails requires nothing less.

26	MISCONCEPTION #10 Incarcerated people are rarely released directly to the community from segregated housing
28	Conclusion

Introduction

What is commonly known as solitary confinement is a practice still widely used by corrections officials in the United States today, largely as a means to fulfill a prison's or jail's top priority: the safety of its staff and the incarcerated people under its care. While it is most often deployed when incarcerated people break rules or engage in violent or disruptive behavior, it is also used as a preventative measure in an effort to protect those at high risk of sexual assault and physical abuse in a prison's or jail's general population (for example, incarcerated people who are transgender or former law enforcement officers). The term solitary confinement, however, is often not used by corrections officials, who prefer labels such as restricted housing, segregated housing, and special or intensive management.

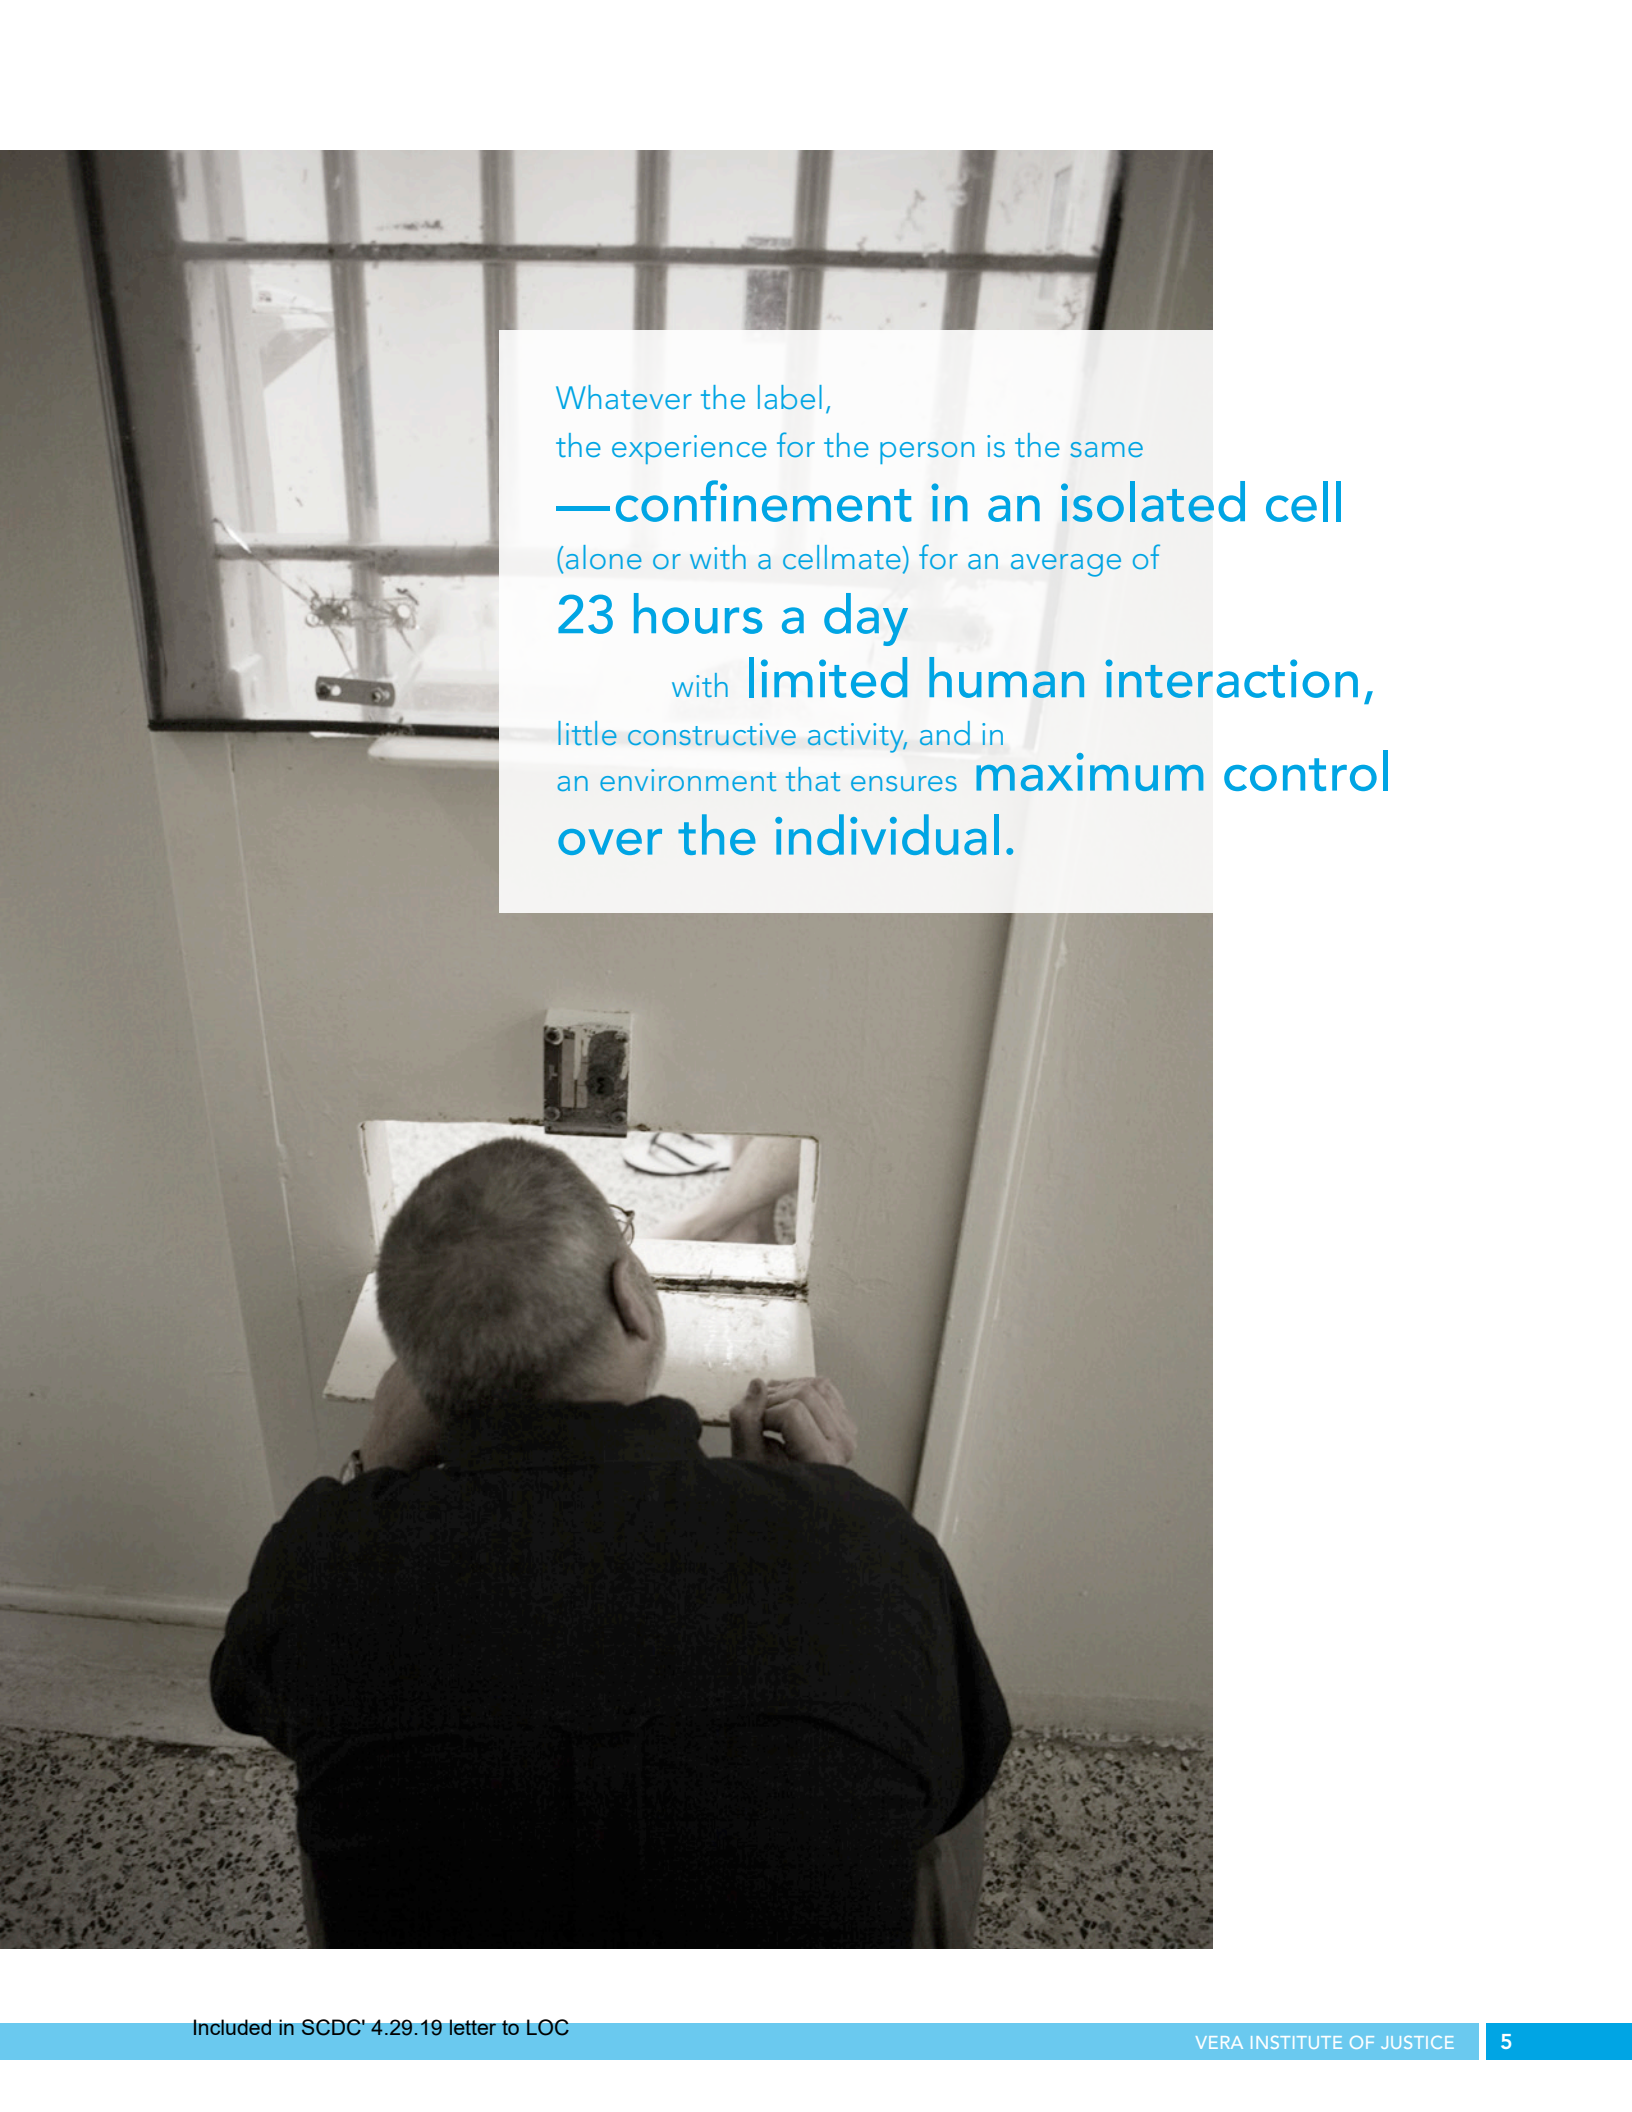

NAMING THE PRACTICE

Corrections officials in the United States refer to solitary confinement by many names, and placement policies also vary by jurisdiction and facility type. The terms in most frequent use today include:

- > **Disciplinary or punitive segregation** is used to punish incarcerated people for violating facility rules. As in the larger criminal justice process, charges are written, a hearing is held, evidence is presented, and, if found guilty, a term in segregated housing is imposed.
- > **Administrative segregation** is used to remove incarcerated people from the general prison or jail population who are thought to pose a risk to facility safety or security. It may be used for those believed to be members of gangs or active in other restricted activities, even if no violation has been identified. Administrative segregation is not technically a sanction or a punishment, and can be indefinite.
- > **Protective custody** is a form of administrative segregation that is used to remove incarcerated people from a facility's general population who are thought to be at risk of harm or abuse, such as incarcerated people who are mentally ill, intellectually disabled, gay, transgender, or former law enforcement officers. While some people who fear for their safety in the general population may request protective custody, this status is often conferred involuntarily.
- > **Temporary confinement** in segregated housing is used when a reported incident is being investigated or related paperwork is being completed, or when no beds are available for transfers.

Some incarcerated people are held in solitary confinement in prisons or jails, while others are held in disciplinary and administrative segregation in supermax facilities, which are freestanding prisons or distinct units in prisons where the entire incarcerated population is housed in solitary confinement.^a

All prisons and many jails in the United States use some form of solitary confinement. Whatever the label, the experience for the person is the same—confinement in an isolated cell (alone or

with a cellmate) for an average of 23 hours a day with limited human interaction, little constructive activity, and in an environment that ensures maximum control over the individual.^b When sources cited in this report refer to the practice as solitary confinement, the authors do as well. Otherwise, consistent with American Bar Association standards, “segregated housing” is used as the generic term for the practice.^c

For the definition of a supermax, see National Institute of Corrections, *Supermax Prisons: Overview and General Consideration* (Washington, DC: US Department of Justice, 1999), 2-3.

^b In 2013, the Arthur Liman Program at Yale Law School reviewed the policies related to administrative segregation for 46 states and the federal Bureau of Prisons. See Hope Metcalf et al., *Administrative Segregation, Degrees of Isolation, and Incarceration: A National Overview of State and Federal Correction Policies: Public Law Working Paper* (New Haven: Yale Law School, 2013), 2. The states not included in the review—Louisiana, South Carolina, Texas, and Utah—all have forms of segregated housing. For information on Utah, see *ibid.*, p. 24, endnote 7. For information on Louisiana, see Editorial, “Four Decades of Solitary in Louisiana,” *New York Times*, November 21, 2014. For information on South Carolina, see Emily Bazelon, “The Shame of Solitary Confinement,” *New York Times*, February 19, 2015. For information on Texas, see American Civil Liberties Union of Texas, Texas Civil Rights Project-Houston, *A Solitary Failure: The Waste, Cost and Harm of Solitary Confinement in Texas* (Houston: ACLU of TX, 2015).

^c The American Bar Association defines “segregated housing” as “housing of a prisoner in conditions characterized by substantial isolation from other prisoners, whether pursuant to disciplinary, administrative, or classification action.” See American Bar Association, *ABA Standards for Criminal Justice Treatment of Prisoners* (Washington, DC: ABA, 2010), § 23-1.0.

There are indications that the use of segregated housing has grown substantially in recent years (perhaps as much as by 42 percent between 1995 and 2005), yet the precise number of people held in segregated housing on any given day is not known with any certainty.¹ Estimates range from 25,000 (which includes only those held in supermax facilities) to 80,000 (which includes those held in some form of segregated housing in all state and federal prisons).² None of these estimates include people held in segregated housing in jails, military facilities, immigration detention centers, or juvenile justice facilities in the United States. Based on research conducted by the Vera Institute of Justice (Vera) and others, the percentage of a state’s prison system’s daily population that is held in segregated housing ranges from five to eight percent, while more recent research found that, in November 2013, the Federal Bureau of Prisons—the largest prison system within the United States—held five percent of its prisoners in segregated housing units.³ Moreover, because these estimates are only one-day snapshots, they most likely underestimate the total number of people subjected to one or more periods in segregated housing over the course of their incarceration.

Against this backdrop, evidence mounts that segregated housing produces many unwanted and harmful outcomes—for the mental and physical health of those placed in isolation, for the public safety of the communities to which most will return, and for the corrections budgets of jurisdictions that rely on the practice for facility safety. As these negative impacts have come to light, concern about its overuse has grown. The severe conditions to which people in segregated housing are subjected are now regularly exposed by mainstream journalists.⁴ Incarcerated people who participate in hunger strikes against its use, such as those at Pelican Bay state prison in California in 2013, receive sympathetic national attention.⁵ And in response to the shift in public opinion, local,

RESEARCH AND DATA LIMITATIONS

A full appreciation of the prevalence and impact of segregated housing in the United States is not yet within our grasp because up-to-date and reliable national data on the number of people held in segregated housing do not exist. While many individual jurisdictions can report accurately the number of incarcerated people they hold in segregated housing, comparing and aggregating this information across jurisdictions is highly problematic as the nomenclature used to describe segregated housing varies widely from state to state and there are no national standards for reconciling these differences.^a For example, the terms “administrative segregation,” “supermax,” and “administrative separation” are used interchangeably, and housing conditions defined as supermax in some states are classified differently in others. For example, in one state, such conditions are formally termed “high-security control.”^b In addition, differences in the criteria for admission to, and release from, segregated housing further confound efforts to compare the use of segregated housing between jurisdictions. Not only do these vary from state to state, they can change significantly even within jurisdictions from year to year.^c

The most recent and comprehensive prison census data, published by the Bureau of Justice Statistics (BJS) in 2008, concern people incarcerated in 1,821 state and federal facilities in 2005.^d However, the number of people reported to be in segregated housing is questionable because the census form used to collect the data did not supply definitions for many of the key terms used by jurisdictions to classify those held in segregated housing. More than 100 facilities indicated that they either did not have people in segregated housing or simply did not answer the question. Moreover, many states failed to match the total number of people in segregated housing with the sum of the segregated sub-types provided (e.g., punitive segregation, death row, protective custody). Researchers encountered similar challenges in a review of supermax custody.^e For example, they discovered that some jurisdictions changed the way in which they counted supermax prisoners over time with some states inconsistently including or excluding people in administrative segregation and protective custody in their count of supermax prisoners. And even more confusingly, some states reported having supermax prisoners but no supermax housing, and vice versa.

Given these challenges and the prevalence of outdated data systems among corrections departments, it should come as no surprise that nearly 12 percent of the total number of people held in segregated housing reported in the 2005 census is an estimate. Until jurisdictions are compelled to create robust reporting systems, with nationally accepted definitions and measures, accurate data on segregated housing practices in the United States will remain elusive.

^a For example, such a count was recently done of the federal prison system by the U.S. Government Accountability Office. That count found that from 2008 through 2013, the number of people in restricted housing units in federal prisons grew by 17 percent (almost triple the six percent rise in the total prison population for that same period). See U.S. Government Accountability Office, *Bureau of Prisons: Improvements Needed in Bureau of Prisons’ Monitoring and Evaluation of the Impact of Segregated Housing* (Washington, DC: GAO, 2013).

state, and federal policymakers are turning their attention to the overuse of segregated housing by the nation's prisons and jails. A subcommittee of the U.S. Senate Judiciary Committee held a series of hearings in 2012 and 2014 focused on reassessing the use of solitary confinement.⁶ In 2014, 10 states announced or implemented policy changes to reduce the number of adults or juveniles held in segregated housing, improve the conditions in segregation units, or facilitate the return of segregated people to a prison's general population.⁷ Some, like Colorado, passed legislation that removed entire classes of people—for example, those with serious mental illnesses—from being housed in long-term segregation.⁸ And, most recently, New York City's Department of Correction made the historic decision to ban the use of segregated housing for all those in its custody 21 years old and younger.⁹

Despite increased attention to the issue, many people—policymakers, corrections officials, and members of the public—still hold misconceptions about and misguided justifications for the use of segregated housing. This report aims to dispel the most common of these misconceptions and highlight some of the promising alternatives that are resulting in fewer people in segregated housing.

MISCONCEPTION #1

Conditions in segregated housing are stark but not inhumane

"...[I]t's anything but quiet. You're immersed in a drone of garbled noise—other inmates' blaring TVs, distant conversations, shouted arguments. I couldn't make sense of any of it, and was left feeling twitchy and paranoid. I kept waiting for the lights to turn off, to signal the end of the day. But the lights did not shut off. I began to count the small holes carved in the walls. Tiny grooves made by inmates who'd chipped away at the cell as the cell chipped away at them."¹⁰

This is solitary confinement, described not by an incarcerated person or an advocate but by Rick Raemisch, director of the Colorado Department of Corrections. Charged by the governor with reforming the use of segregated housing by the state's prison system, Director Raemisch decided he needed to experience it firsthand.

When an incarcerated person is placed in segregated housing, he or she is confined to a cell (either alone or with a cellmate) for 22 to 24 hours a day.¹¹ The cell is typically six by eight feet, smaller than a standard parking space. It is furnished with a metal toilet, sink, and bed platform. Reading materials are either strictly limited or prohibited altogether. Natural sunlight in the cell is limited to a very small window or does not exist at all, and fluorescent bulbs light the cell, often throughout the night.¹² Recreation is limited to one hour a day, five days per week, which is taken alone in a cage outdoors or an indoor area (sometimes with a barred top).¹³ Every time the incarcerated person is taken out of solitary

confinement and returned to it, he or she is strip-searched.¹⁴ Interactions with people (other than a cellmate, if double celled) are brief and infrequent. Officers deliver meal trays through a slot in the door; there are only occasional meetings with healthcare practitioners, counselors, or attorneys; and visitation with family may be restricted or prohibited. Any meetings or visits, when they do occur, are almost always conducted through the cell door or conducted by video, speaker, or telephone through a thick glass window.¹⁵ When an in-person visitation is permitted, the incarcerated person is placed in restraints and separated from the visitor by a partition.

Although this is how most incarcerated people experience segregated housing, it need not be this restrictive. Some jurisdictions are experimenting with making conditions more humane and less solitary. For example, Colorado now requires that incarcerated people held in its Management Control Unit receive four hours of time outside their cell each day.¹⁶ New York State, as part of a legal settlement, gives 16- and 17-year-olds in segregated housing at least five hours of exercise and programming outside of their cells five days per week.¹⁷ Maine requires that incarcerated people in segregated housing receive group recreation, counseling sessions, and opportunities to increase privileges through good behavior, as well as greater access to radios, televisions, and reading materials.¹⁸

Some jurisdictions have developed different levels of segregated housing, including “step-down” incentive programs that are structured in progressive phases that provide increasing privileges—such as more time out of the cell,

IS SOLITARY CONFINEMENT TORTURE?

The Eighth Amendment to the United States Constitution protects individuals from “cruel and unusual punishment.”^a Although the United States Supreme Court has affirmed that solitary confinement is a form of punishment subject to scrutiny under Eighth Amendment standards, most federal courts have been unreceptive to limiting its use.^b This may be, in part, because in order to demonstrate an Eighth Amendment violation, an incarcerated person must satisfy a particularly onerous two-part test: first, his or her alleged suffering must be reasonably serious; and second, prison officials must have acted with “deliberate indifference to the prisoner’s health and safety”—where “deliberate indifference” is only proved if it is shown that prison officials “kn[e]w that inmates face[d] a substantial risk of serious harm,” but “fail[ed] to take reasonable measures to abate it.”^c As a result, successful Eighth Amendment claims regarding prison conditions have usually involved the direct action or inaction of prison officials, including medical indifference, failure to protect, and excessive use of force, rather than an overall challenge to general penal practices, such as solitary confinement.^d Indeed, only a few federal courts have held that certain segregation practices—those narrowly limited to the isolation of incarcerated people with serious pre-existing mental illness or those prone to suffer severe mental injury—violate the Eighth Amendment.^f

The reluctance by federal courts to outlaw solitary confinement is in direct contrast to international human rights standards. For example, the United Nations General Assembly, through the Basic Principles for the Treatment of Prisoners, adopted in 1990, encourages governments to undertake efforts to abolish or restrict the use of solitary confinement as a punishment. The European Prison

Rules limit the use of solitary confinement to only exceptional cases and for short periods of time. And the Committee Against Torture, the official body established pursuant to the United Nations' Convention Against Torture, consistently recommends that the practice be abolished altogether.⁹

On an international level, specific reasons are given for why solitary confinement is considered inhumane and degrading. For example, the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT)—the monitoring body formed out of the European Convention for the Prevention of Torture—has criticized the physical and psychological effects of lengthy solitary confinement on incarcerated people—including increased suicidal thoughts, “fatigue, insomnia, loss of appetite, nausea, headaches, crying fits and bouts of depression becoming more acute in solitary confinement...[as well as] distress upon not being allowed contacts with families and friends....”^h The CPT has also critiqued procedural weaknesses—such as the lack of laws and regulations governing the use of solitary confinement—and noted the risk of permanent damage to incarcerated people due to the absence of appropriate mental and physical stimulation in prolonged isolation.ⁱ The European Court of Human Rights too has emphasized that the long-term dangers inherent in social and sensory isolation can make solitary confinement inhuman or degrading and, in certain circumstances, could amount to torture.^j The Inter-American Court of Human Rights is even more categorical, stating that “prolonged isolation and coercive solitary confinement are, in themselves, cruel and inhuman treatments, damaging to the person’s psychic and moral integrity, and[...]the dignity inherent to the human person.”^k

^a The Eighth Amendment states, “Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.” U.S. Constitution, Amendment VIII.

the opportunity to participate in group activities, television in the cell, and additional reading materials—for sustained compliance to facility rules. Pennsylvania, Washington, and New Mexico have all created step-down programs for gang members held in segregated housing.¹⁹ Washington has an Intensive Transition Program for incarcerated people with chronic behavior problems who are frequently placed in segregated housing, in which they move through a curriculum in stages, progressively learning self-control and gradually engaging in opportunities to socialize until they are ready to return to the prison's general population.²⁰ Michigan operates an Incentives in Segregation pilot project, in which incarcerated people work through six stages (each stage requiring different tasks and bestowing additional privileges) over several months.²¹ The Virginia Department of Corrections has developed a successful step-down program for incarcerated people in administrative segregation that uses evidence-based practices first developed in the community corrections setting. Since 2011, the program has reduced the number of incarcerated people in administrative segregation by 53 percent and the number of prison incidents by 56 percent.²²

MISCONCEPTION #2

Segregated housing is reserved only for the most violent

It is still widely believed that the incarcerated people who end up in segregated housing are the worst of the worst, the most feared, the incorrigibly dangerous. However, several studies have revealed that a significant proportion of the segregated population is placed there for being neither violent nor dangerous. Many are there not as punishment for actually engaging in violence; rather they are there because they have been categorized as potentially dangerous or violent—often because prison officials have identified them as gang members.²³ This type of segregation, based on identification rather than individual activity, is referred to as administrative segregation.²⁴

Segregated housing is not only used to anticipate or react to dangerous or disruptive behavior, it is also used for incarcerated people in protective custody who prison officials believe will be unsafe in the general population. They may be at risk for reasons of mental illness (or other special needs, such as developmental disability), age (such as young people under the age of 18 tried, convicted, and sentenced as adults), former gang or law enforcement affiliation, sexual vulnerability or gender nonconformity, or other reasons, including temporary confinement of someone who has been victimized in general population pending an investigation of the incident.²⁵ Individuals may even request to be removed from the general population. Although these incarcerated people are separated for their own safety, they are subject to the same restrictive conditions as others in segregation.

The most commonly understood justification for segregation is as punishment for a violation of a prison rule. While this practice, known as disciplinary

...disruptive behavior—such as
talking back,
being out of place,
failure to obey an order,
failing to report to work or school, or
refusing to change housing units or cells—

frequently lands incarcerated
people in disciplinary segregation.

segregation, is used as a response to behavior that is violent or dangerous, Vera's experience in the field has shown that disruptive behavior—such as talking back, being out of place, failure to obey an order, failing to report to work or school, or refusing to change housing units or cells— frequently lands incarcerated people in disciplinary segregation.²⁶ In some jurisdictions, these “nuisance prisoners” constitute the majority of the people in disciplinary segregation.²⁷ Before collaborating with Vera, Illinois found that more than 85 percent of the people released from disciplinary segregation during a one-year period had been sent there for relatively minor infractions, such as not standing for a count and using abusive language.²⁸ In Pennsylvania, the most common violation associated with a sentence to segregated housing was “failure to obey an order,” with 85 percent of those written up for this type of violation sent there.²⁹ In 2013, an incarcerated person in South Carolina received a penalty of more than 37 years in solitary confinement for posting on Facebook on 38 different days.³⁰ Piper Kerman, who was incarcerated in a federal prison and is the author of the memoir *Orange is the New Black*, reported to the United States Senate Judiciary Committee in 2014 that she saw many women sent to solitary confinement for at least 30 days for minor infractions such as moving around a housing unit during a count, refusing an order from a corrections officer, and possession of low-level contraband such as small amounts of cash or underwear other than that issued by the prison.³¹

MISCONCEPTION #3

Segregated housing is used only as a last resort

Although many jurisdictions have a list of alternative sanctions that can be used to discipline incarcerated people who are unruly or difficult to manage, the reality is that far too many turn to segregated housing as the first response to bad behavior. This is in stark contrast to the system used in certain European countries, where corrections officers are trained to impose disciplinary measures that are relative and proportionate to the disruptive behavior. Dutch and German prison officials use sanctions such as reprimands, restrictions on money and property, and restrictions on movement or leisure activities. Care is taken to relate the sanction to the alleged infraction.³² In these countries, solitary confinement is used rarely and only for very brief periods of time. For example, an adult male prison in Germany reported using segregation just two or three times in 2012, and another German prison for young adults had utilized its segregation cell twice between 2008 and 2012, and only for a few hours each time.³³

One of the most basic measures that a prison can take to ensure that disciplinary segregation is reserved for those who truly pose a risk to the safety of staff and other incarcerated people is to prohibit its use as a punishment for less serious violations. For instance, Pennsylvania no longer sends anyone to

segregated housing as a sanction for the least serious violations, such as taking unauthorized food from the dining hall and unexcused absences from work, school, or mandatory programs.³⁴ The Illinois Department of Corrections also prohibits the use of segregated housing as a response to certain disciplinary violations.³⁵ And corrections officials in Maine use a range of less severe restrictions, such as limiting work opportunities, in response to minor infractions.³⁶

Some states use structured sanction grids to provide corrections officers with guidance on the appropriate and proportionate punishment for particular behaviors. The sanction grids articulate when less restrictive sanctions (such as mediation or anger management classes, withholding access to the commissary, removing TV privileges, restricting visitation rights, making the prisoner responsible for the costs of damaged property, and assigning the prisoner to an undesirable work shift) may be used, and when more serious sanctions, such as revocation of good time credit and segregation, are appropriate.³⁷

MISCONCEPTION #4

Segregated housing is used only for brief periods of time

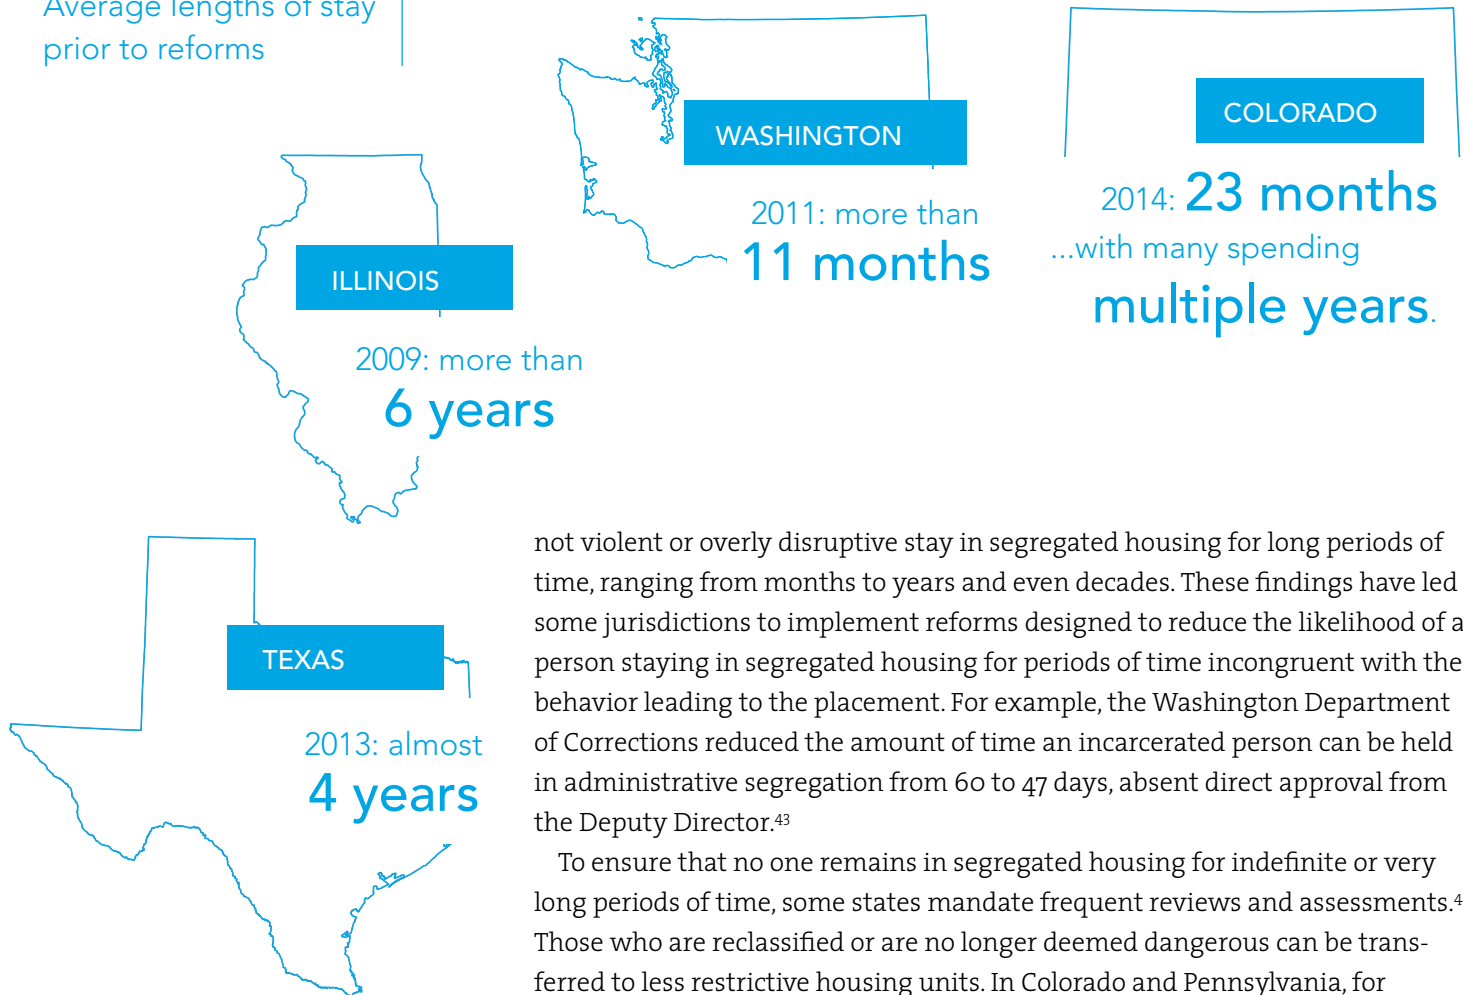

As a matter of policy within the federal prison system and in at least 19 states, corrections officials are permitted to hold people in segregated housing indefinitely.³⁸ While placement in administrative segregation can, with some level of periodic review, be open-ended, a term in disciplinary segregation is almost always a defined period of time.³⁹ Notably, if a term in disciplinary segregation is thought to be too brief, corrections officials can easily “move” incarcerated people from “short-term” disciplinary segregation to long-term administrative segregation by the simple process of reclassification.⁴⁰

After Colorado Department of Corrections Director Rick Raemisch spent 20 hours in a cell in segregated housing, he reported that it was “practically a blink” in comparison to the experience of incarcerated people in Colorado who, at the time, spent an average of 23 months in segregation, with many spending multiple years.⁴¹ In 2009, the average length of stay at the Illinois supermax facility, since closed, was more than 6 years; in 2011, the average length of stay in Washington’s intensive management unit was 11 months; and in Texas, the average amount of time in administrative segregation is almost four years.⁴²

Vera begins its work with a jurisdiction by conducting a comprehensive analysis of administrative data in order to understand how the jurisdiction is actually using segregated housing. Vera’s inquiry encompasses areas that, due to the data limitations addressed above (see “Research and Data Limitations” on page 7), are not typically examined by corrections systems. The findings from these analyses often surprise corrections officials, who overwhelmingly agree that no one should stay in segregation any longer than necessary to achieve the original safety and disciplinary goals underlying the placement. However, Vera’s review of the data regularly shows that incarcerated people who are

Average lengths of stay
prior to reforms

not violent or overly disruptive stay in segregated housing for long periods of time, ranging from months to years and even decades. These findings have led some jurisdictions to implement reforms designed to reduce the likelihood of a person staying in segregated housing for periods of time incongruent with the behavior leading to the placement. For example, the Washington Department of Corrections reduced the amount of time an incarcerated person can be held in administrative segregation from 60 to 47 days, absent direct approval from the Deputy Director.⁴³

To ensure that no one remains in segregated housing for indefinite or very long periods of time, some states mandate frequent reviews and assessments.⁴⁴ Those who are reclassified or are no longer deemed dangerous can be transferred to less restrictive housing units. In Colorado and Pennsylvania, for example, multi-disciplinary committees review segregated housing placements, making it more likely that they are appropriate and objective.⁴⁵ In Pennsylvania, those sentenced to disciplinary segregation may be released upon completion of one-half of the imposed sanction and a review of the Program Review Committee.⁴⁶ In California, after changing its segregated housing placement criteria, the state conducted case-by-case reviews of all people held in segregation that resulted in many being transferred to less restricted housing.⁴⁷

Another method of reducing the amount of time someone spends in segregated housing is to implement a system of incentives that allows an incarcerated person to earn his or her way out earlier than the imposed term. This strategy is informed by research that has demonstrated that positive reinforcement of pro-social behavior increases the chances of that behavior being repeated in the future.⁴⁸ To this end, several states have devised programs designed to target behavior issues.⁴⁹ Some states provide programming for certain incarcerated people, such as gang members with histories of violence, who would otherwise face long-term administrative segregation. Washington instituted the Motivating Offender Change program, which focuses on gang-affiliated people in its maximum custody units. It provides opportunities to learn and practice cognitive-behavioral skills to help reduce violent behavior. Successful graduates

of the program are transferred to a lower custody environment within the general prison population.⁵⁰

MISCONCEPTION #5

The harmful effects of segregated housing are overstated and not well understood

Despite the long-established consensus among researchers that solitary confinement damages, often irreparably, those who experience it for even brief periods of time, its continued use in prisons and jails in the United States implies that many jurisdictions and correctional officials are unaware of or minimize the importance of this body of evidence. According to one report, “[n]early every scientific inquiry into the effects of solitary confinement over the past 150 years has concluded that subjecting an individual to more than 10 days of involuntary segregation results in a distinct set of emotional, cognitive, social, and physical pathologies.”⁵¹ The characteristics that define segregated housing—social isolation, reduced environmental stimulation, and loss of control over all aspects of daily life—create a “potent mix” that produces a litany of negative impacts, including: hypersensitivity to stimuli, distortions and hallucinations, increased anxiety and nervousness, diminished impulse control, severe and chronic depression, appetite loss and weight loss, heart palpitations, talking to oneself, problems sleeping, nightmares, self-mutilation, difficulties with thinking, concentration, and memory, and lower levels of brain function, including a decline in EEG activity after only seven days in segregation.⁵² Upon release from segregated housing, these psychological effects have the potential to undermine significantly an incarcerated person’s adjustment back in the prison’s general population or the community to which he or she returns.⁵³

The harmful effects are compounded for people with mental illness, who make up one-third to one-half of all incarcerated people in segregated housing.⁵⁴ The conditions of segregated housing can exacerbate a preexisting condition or prompt a reoccurrence. As one psychiatric expert explained, “Prisoners who are prone to depression and have had past depressive episodes will become very depressed in isolated confinement. People who are prone to suicide ideation and attempts will become more suicidal in that setting. People who are prone to disorders of mood...will become that and will have a breakdown in that direction. And people who are psychotic in any way...will have another breakdown.”⁵⁵

Suicide rates and incidents of self-harm (such as banging one’s head against the cell wall) are much higher for people in segregation than those in the general prison population.⁵⁶ For example, in California, where an estimated five

percent of the prisoners are placed in segregated housing, 69 percent of the suicides in 2006 occurred in those units.⁵⁷ In Texas, incarcerated people in segregation are five times more likely to commit suicide than those in the general population.⁵⁸ In New York, between 1993 and 2003, suicide rates were five times higher among incarcerated people in segregation than among those in the general prison population.⁵⁹

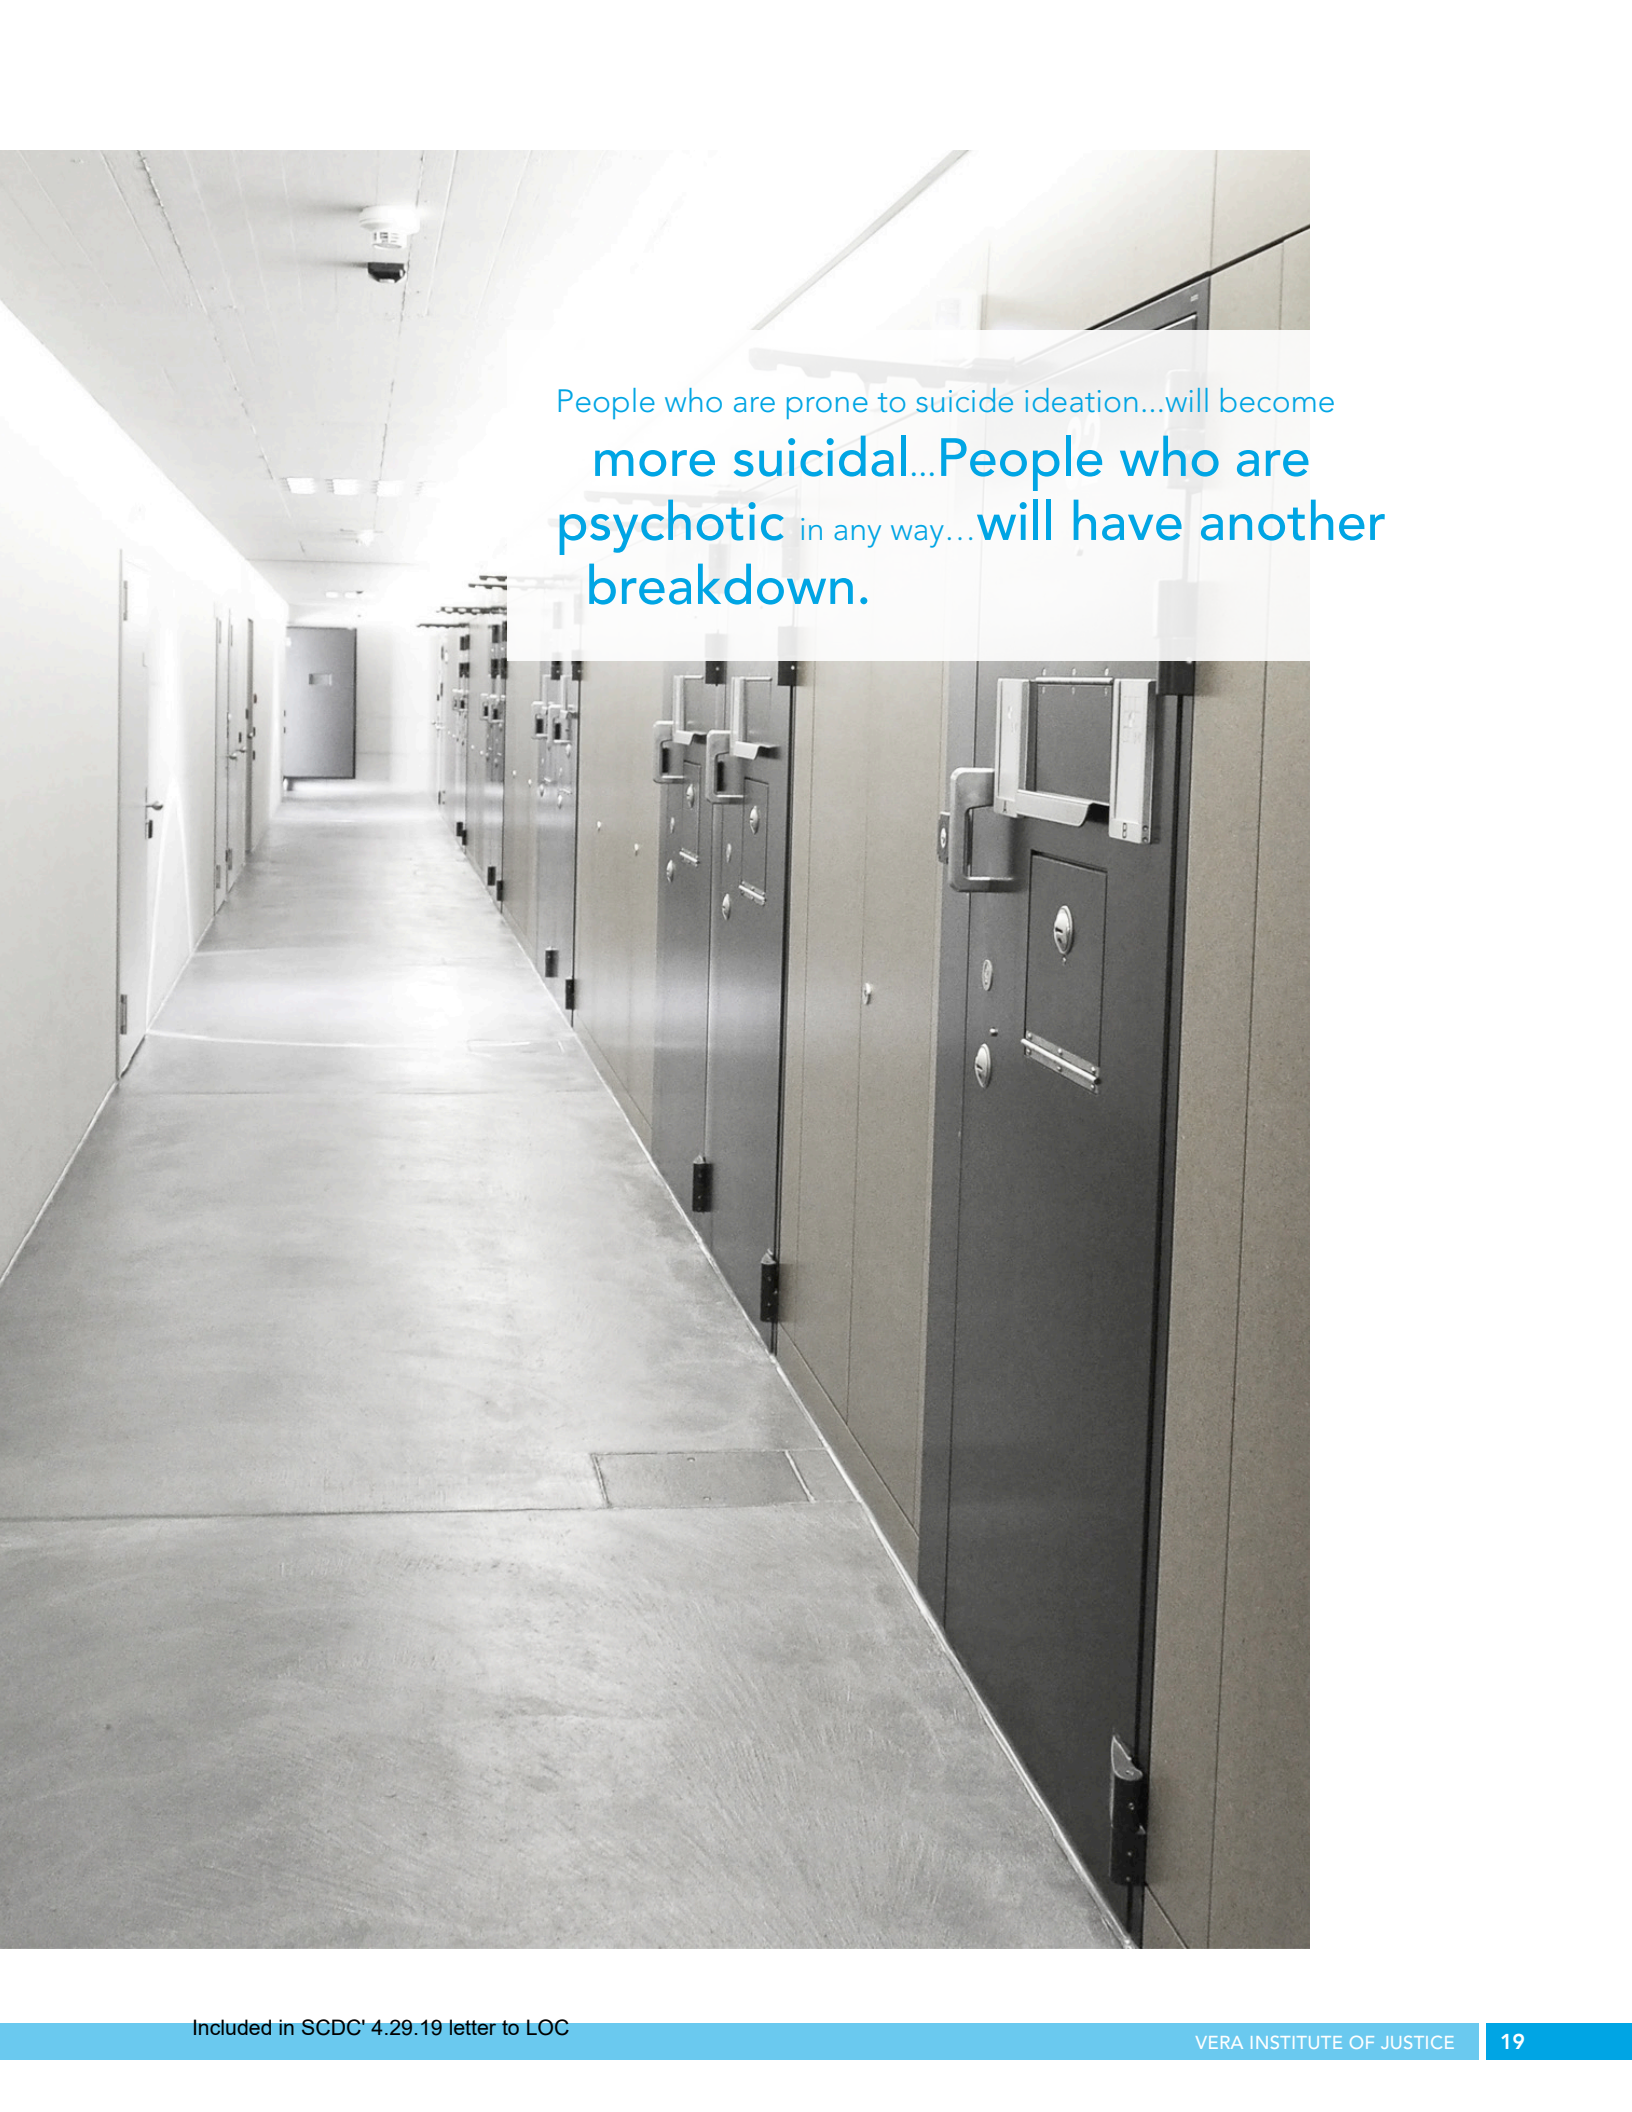

Several states are revising their segregation policies in light of the harm it poses to vulnerable populations, especially those with mental illness. To settle a lawsuit that charged Pennsylvania with violating the constitutional rights of incarcerated people with serious mental illnesses by keeping them in solitary confinement without access to treatment, the state agreed in January 2015 to keep them out of non-therapeutic segregated housing and to improve their care.⁶⁰ In Colorado, a law enacted in 2014 requires the removal from long-term segregated housing of all incarcerated people with serious mental illness.⁶¹ Washington created a Reintegration and Progression Program that targets incarcerated people with mental health issues, especially those who engage in chronic self-injurious behavior. The program addresses maladaptive thought and behavior patterns and teaches enhanced coping skills to gradually integrate them into a lower level of custody.⁶²

MISCONCEPTION #6

Segregated housing helps keep prisons and jails safer

The most widely accepted and cited reason for using segregated housing is to ensure safety, order, and control within a prison.⁶³ Some prison officials believe that the mere existence of segregated housing controls the amount and seriousness of violence within their facilities (both among prisoners and between officers and prisoners).⁶⁴ However, there is little evidence to support the claim that segregated housing increases facility safety or that its absence would increase in-prison violence.⁶⁵ One study found no relationship between the opening of supermax prisons and the aggregate levels of prisoner-on-prisoner assaults in three prison systems (Illinois, Arizona, and Minnesota).⁶⁶ With respect to the impact on the number of prisoner-on-staff assaults after the opening of supermax facilities, although the number of staff assaults dropped in Illinois, staff injuries from prisoner assaults temporarily increased in Arizona, and there was no effect in Minnesota on the incidents of violence directed toward staff.⁶⁷

While corrections administrators and officers remain concerned that a decrease in the use of segregated housing will endanger both incarcerated people and staff, the fear may be unsubstantiated. Colorado has decreased its use of segregated housing by 85 percent and prisoner-on-staff assaults are the lowest they have been since 2006.⁶⁸ Colorado decreased its use of segregated housing by narrowing the criteria for placement and reducing the length of stay, which included a step-down program that allows those with compliant behavior to be

People who are prone to suicide ideation...will become
**more suicidal..People who are
psychotic** in any way...**will have another
breakdown.**

released to the general population.⁶⁹ Other states (for example, Illinois, Maine, New Mexico, and Washington) have also reduced their use of segregated housing and increased the use of alternative strategies.⁷⁰ Although it is too soon to fully assess outcomes in these states, evidence to date suggests there has been little or no increase in violence.⁷¹

MISCONCEPTION #7

Segregated housing deters misbehavior and violence

Many prison officials support the use of segregated housing for managing disruptive and violent behavior because they believe that it has both a general and individual deterrent effect on misbehavior.⁷² However, empirical and anecdotal evidence suggests that segregated housing may have little influence on improving the behavior of incarcerated people.

Studies have contrasted “control-oriented” prisons, which rely on formal sanctions like segregated housing, with others that are “responsibility-based,” which provide incarcerated people with self-governance opportunities, or “consensual,” which incorporate features of both the control-oriented and responsibility-based models of prison management.⁷³ Researchers tested the relationship between these approaches and prison order and found that prisons that employed a responsibility-based or consensual management model experienced lower levels of minor and serious disorder than prisons that were more control oriented.⁷⁴ Moreover, there is no evidence that confinement in a supermax facility produces a deterrent effect on the individual.⁷⁵ A recent study found that exposure to short-term disciplinary segregation as a punishment for initial violence did not deter incarcerated people from committing further violence in prison.⁷⁶

Some theoretical models describe the behavior of incarcerated people as a reaction to the strains, frustrations, and pains of imprisonment combined with little access to mitigating factors.⁷⁷ Subjecting incarcerated people to the severe conditions of segregated housing and treating them as the “worst of the worst” can lead them to become more, not less, violent.⁷⁸

Rather than rely on segregated housing to deter misbehavior, some prison systems are providing incarcerated people who are most likely to misbehave with special programming. For example, Washington has an Intensive Transition Program for incarcerated people with chronic behavior problems who are frequently placed in segregated housing, in which they move through a curriculum in stages, progressively learning self-control and gradually engaging in opportunities to socialize until they are ready to return to the prison’s general population.⁷⁹ Pennsylvania is in the process of implementing Behavior Modification Units with a similar focus.⁸⁰

A recent study found that **exposure to short-term disciplinary segregation as a punishment** for initial violence **did not deter**

incarcerated people from committing further violence in prison.

MISCONCEPTION #8

Segregated housing is the only way to protect the vulnerable

Some people in segregated housing are not violent and do not misbehave but require or request protection from the general population. These include incarcerated people who suffer from mental illness, have developmental or intellectual disabilities, are vulnerable because of their sexuality (e.g., they are lesbian, gay, bisexual, or transgender), may be retaliated against by other prisoners (e.g., they are former gang members or have testified against someone in the facility), committed sex offenses against children, or are former law enforcement officers or public officials. Many prison officials believe these vulnerable incarcerated people can only be kept safe by placing them in segregated housing with conditions as restrictive as those imposed on people who commit the most violent and dangerous acts.

Some jurisdictions are taking a different approach. Rather than isolating those at risk of victimization, they are creating specialized units, which house vulnerable incarcerated people together and provide privileges and programs that are similar to those available in the general population units.⁸¹ In Washington state, for example, the Skill Building Unit houses incarcerated people with developmental and intellectual disabilities in a general population setting that is dedicated to meeting their needs.⁸² The unit provides out-of-cell programming, including daily opportunities to interact with each other and staff during meals and recreation in the dayroom. Unit residents also participate in supported work and other activities to help them function more independently while in prison and upon release. Corrections officers assigned to the unit are trained how to respond appropriately to people with special needs and help them live healthy and safe lives.⁸³ The Washington Department of Corrections reports that the unit has resulted in safer living conditions for these incarcerated people and safer working conditions for corrections staff.⁸⁴

Still other jurisdictions have reformed or are in the process of reforming their use of segregated housing for certain types of vulnerable incarcerated people: Pennsylvania now sends those with significant mental illness, who formerly would have been placed in disciplinary or administrative segregation, to therapeutic units; New York State banned the use of segregated housing to discipline pregnant women or any incarcerated person under the age of 18; in California, a federal judge has ordered the state to find more suitable housing for physically disabled prisoners; and New York City has pledged to eliminate the use of segregated housing for all incarcerated people aged 21 years old and younger.⁸⁵ Alaska and Maine have also enacted laws that ban the use of segregated housing for juveniles for punitive reasons.⁸⁶

Rather than isolating those at risk of victimization,
[some jurisdictions] are creating
specialized units,
which house vulnerable incarcerated people together and
provide privileges and programs
that are similar to those available in the general population units.

MISCONCEPTION #9

Safe alternatives to segregated housing are expensive

A common objection among corrections officials to reducing the use of segregation is that few safe alternatives exist and they are too costly to implement. However, growing concern among policymakers and the public about over-incarceration in the United States has put the use of segregated housing under particular scrutiny, and for good reason: segregated housing harms those subject to it, produces little, if any, improvement in public and prison safety, and is much more expensive than less restrictive housing. The significant fiscal costs associated with building and operating segregated housing units and facilities are due to the reliance on single-cell confinement, enhanced surveillance and security technology, and the need for more corrections staff (to handle escorts, increased searches, and individualized services).⁸⁷ For example, in 2013, the estimated daily cost per inmate at the federal administrative maximum (supermax) facility was \$216.12 compared to \$85.74 to house people in the general prison population.⁸⁸ In 2003, the daily per capita costs of operating a supermax prison in Ohio were estimated at two-to-three times that of regular security units—\$149 per day compared to \$63 per day, with one corrections officer for every 1.7 prisoners in supermax compared to one for every 2.5 in less restricted housing.⁸⁹

Many of the policy and practice changes undertaken by jurisdictions to reduce their reliance on segregated housing described in this report cost little to implement. Time and patience are required, but not necessarily an enhanced budget. In addition, many of the alternative programs, such as reentry programming and integrated housing units, may only require extending programs that already exist, which would save on start-up costs. Finally, by safely decreasing the number of incarcerated people held in segregated housing, jurisdictions may be able not only to close expensive segregation units and supermax prisons, but free up the staff and other resources needed to pursue evidence-based programming that will help many more incarcerated people return successfully to their communities.

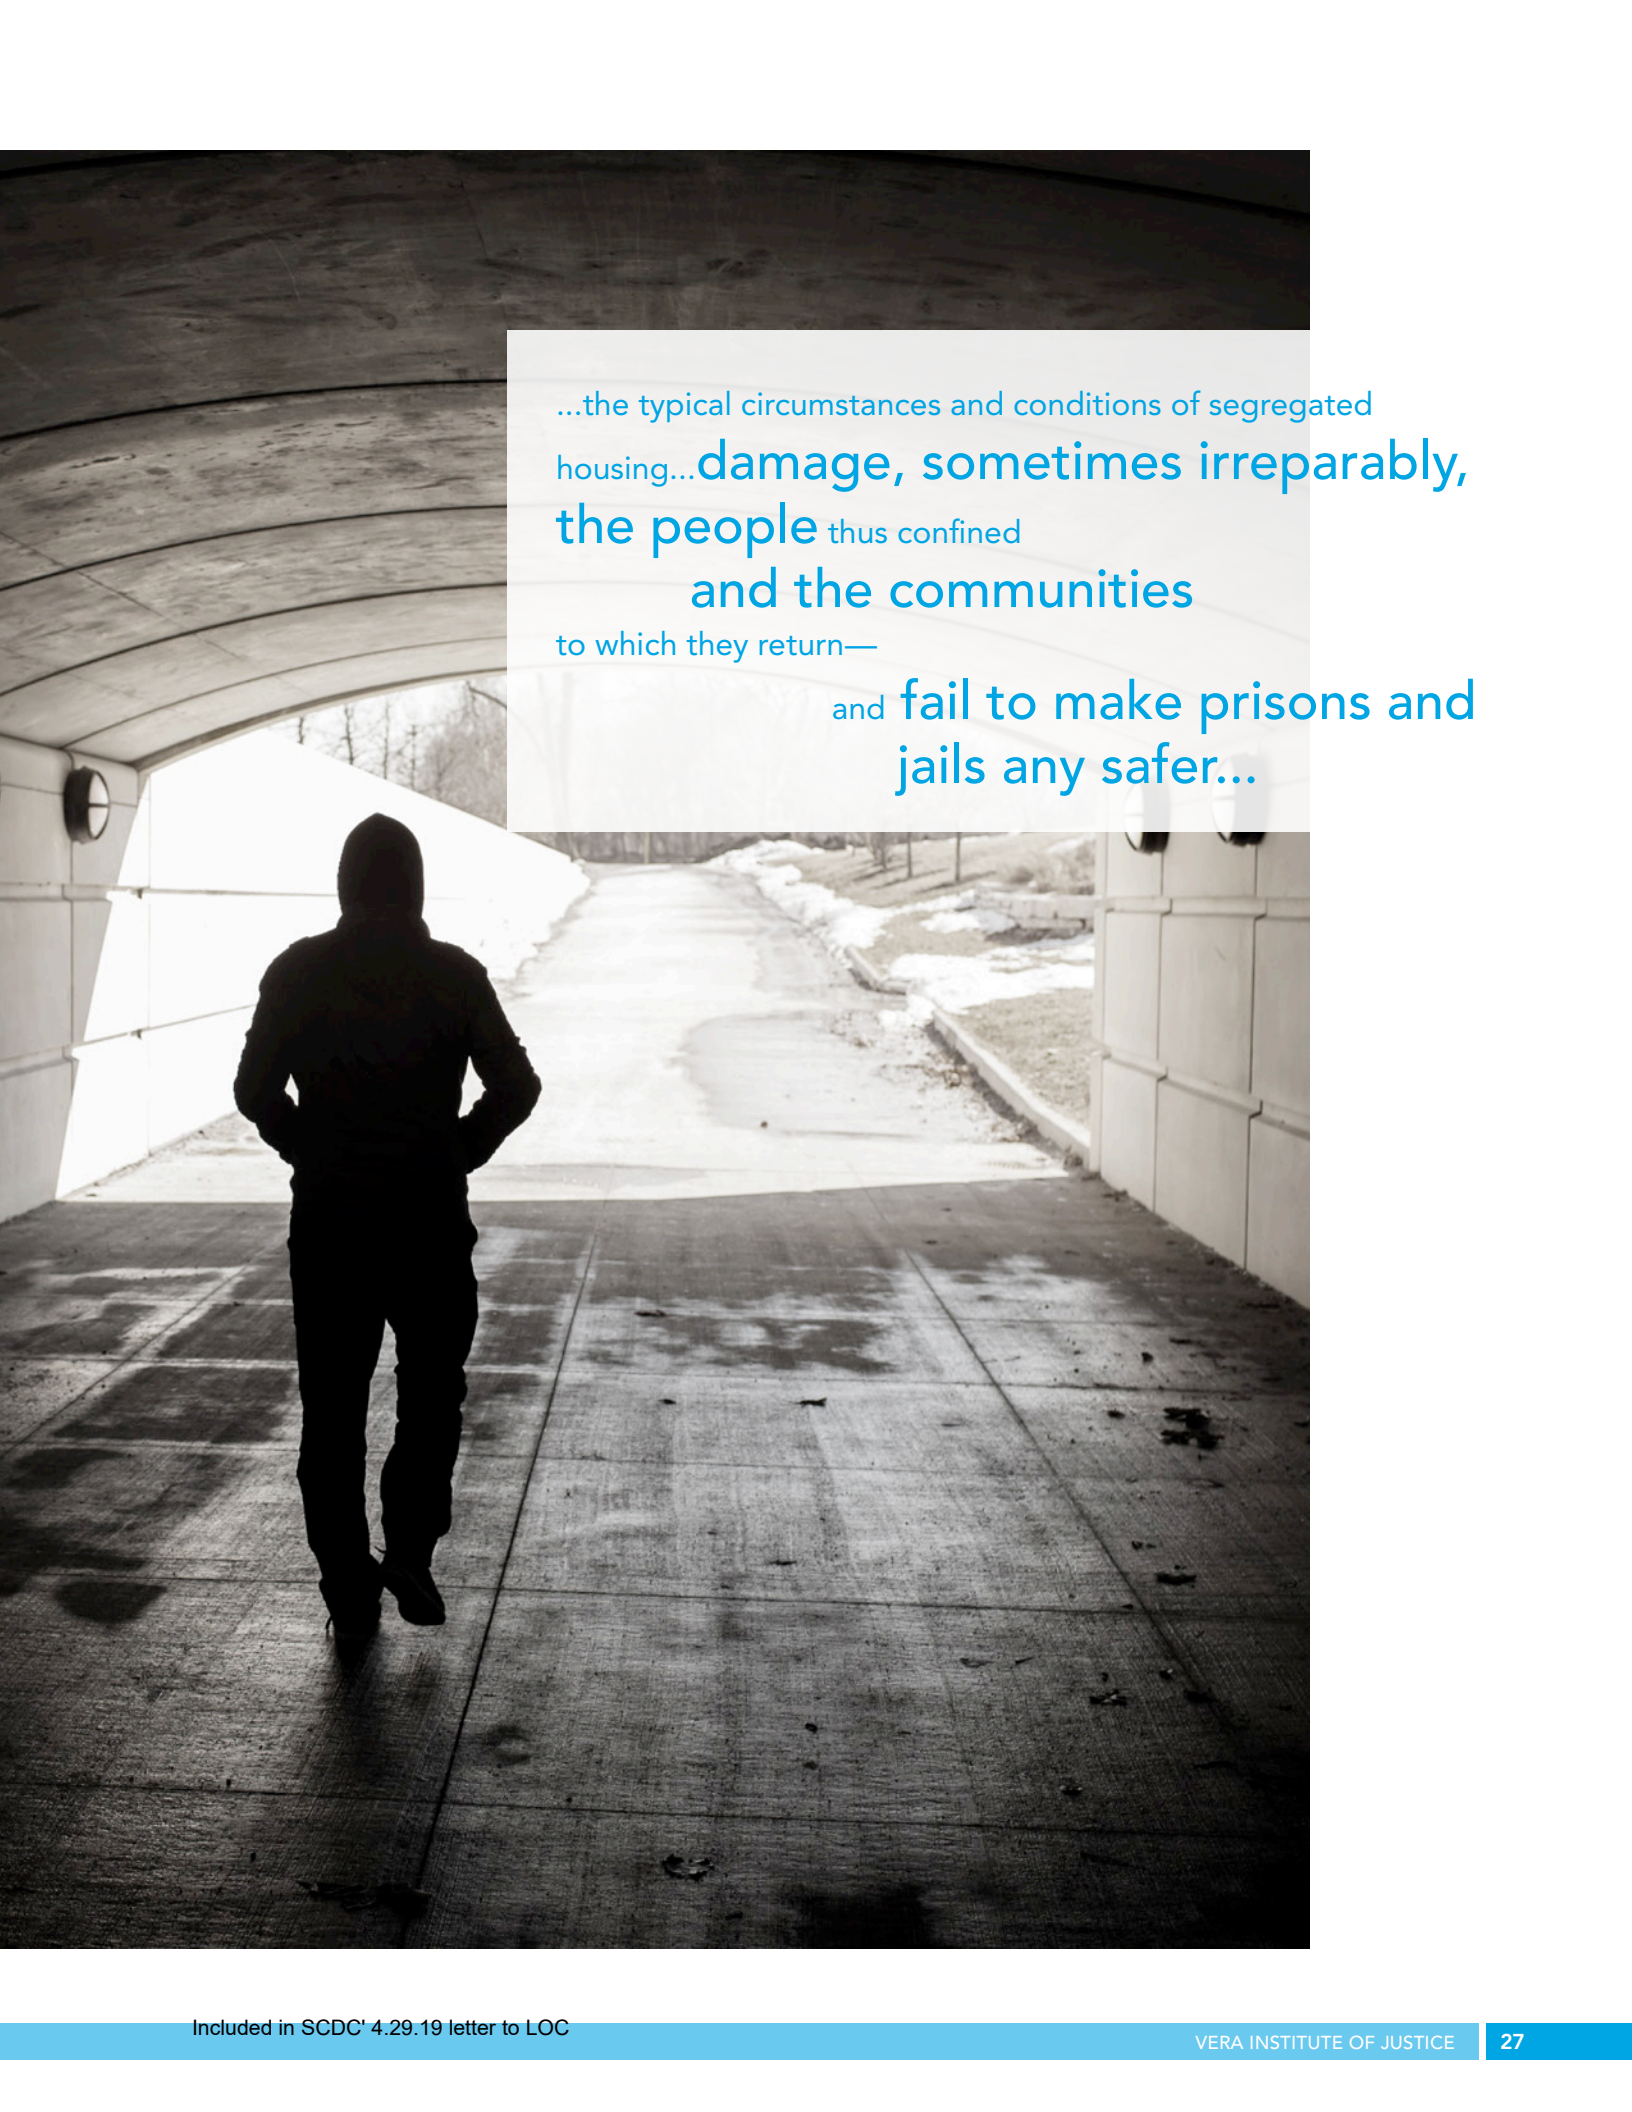

In 2013, the daily **cost** per inmate at the **federal supermax** facility was **\$216.12** compared to **\$85.74** to house people in the **general prison population.**

Incarcerated people are rarely released directly to the community from segregated housing

While national data are not available, jurisdictions often hold people in segregated housing until they complete their sentences, releasing them directly to the community. Between 1987 and 2007, California released an estimated 900 incarcerated people each year directly to the community from its secure housing units; in 2013, Texas released more than 1,200 incarcerated people in this way.⁹⁰ Releasing people directly from segregated housing into the community sets them up for failure—and endangers the safety and well-being of the communities to which they return—because in segregated housing, people more often than not receive no reentry planning services or rehabilitative programming, such as substance abuse counseling or classes related to life skills or anger management.

Moreover, data from some states suggest that recidivism rates for incarcerated people who have been held in segregated housing, regardless of whether they are released directly to the community, is significantly higher than for those who have not spent time in segregated housing while in prison. A 2001 review of recidivism data in Connecticut found that 92 percent of those who had been held in administrative segregation were rearrested within three years, compared to 66 percent of incarcerated people who had not been held in administrative segregation.⁹¹ Another study found that confinement in super-max housing is associated with an increased risk of violent reoffending.⁹² In Colorado, the recidivism rate for those who had been held in administrative segregation was between 60 and 66 percent, while the recidivism rate for those in general population was 50 percent.⁹³

While the research is mixed, there is at least one study that shows the likelihood of reoffending by those who have been held in segregated housing may be reduced by returning them to the general prison population for as brief a period as three months before they are released to the community.⁹⁴ In Colorado, all people leaving restrictive housing (formerly called administrative segregation) spend up to 180 days in a transition unit where they receive cognitive behavioral programming and spend six hours a day outside of their cell before they return to the general prison population or to their communities.⁹⁵ Other jurisdictions have introduced reentry programming to those in segregated housing, primarily aimed at helping them re-socialize and get accustomed to interacting with other people. New Mexico created a Re-Entry and Release Unit for people in segregated housing who are within 180 days of release where

A person wearing a dark hoodie and pants is walking away from the camera through a concrete tunnel. The tunnel has a curved ceiling and walls. At the end of the tunnel, there is a bright opening leading to an outdoor area with a paved path and some snow on the ground. The person's hands are in their pockets.

...the typical circumstances and conditions of segregated housing...**damage, sometimes irreparably,**

they participate in education and behavioral health programming, are not in restraints during group education activities, and move freely amongst other incarcerated people in recreation areas.⁹⁶

Conclusion

Segregated housing remains a mainstay of prison management and control in U.S. prisons and jails largely because many jurisdictions still subscribe to some or all of the common misconceptions laid out in this report. Few in American corrections would dispute that its use may be unavoidable from time to time and for very brief periods to manage incarcerated people who have committed especially violent or dangerous acts. However, increasingly, policymakers, corrections officials, and the general public are justifiably questioning the human and societal toll of its widespread use. A large body of evidence has now well established that the typical circumstances and conditions of segregated housing—the deprivation of regular social intercourse and interaction, the removal of the rudimentary sights and sounds of life, and the severe restrictions on such basic human activities as eating, showering, or recreating—damage, sometimes irreparably, the people thus confined and the communities to which they return. And they fail to make prisons and jails any safer for those incarcerated or for the people who work in them.

Much of this research affirms the objections expressed by the United States Supreme Court 125 years ago in its landmark case of *In re Medley*. The court declared that solitary confinement is not “a mere unimportant regulation as to the safe-keeping of the prisoner....[A] considerable number of the prisoners...f[a]ll, after even a short confinement, into a semi-fatuous condition...[while] others bec[o]me violently insane; others still, [commit] suicide; while those who st[an]d the ordeal better [are] not generally reformed, and in most cases d[o] not recover sufficient mental activity to be of any subsequent service to the community.”⁹⁷

Whether prompted by the public’s growing appetite for broad criminal justice reform or compelled by court orders, some jurisdictions are making progress. But much more remains to be done. Every effort must involve the implementation of policies and practices that effectively ban the use of segregated housing as an emergency response to minor rule infractions and as the default placement for those in need of protection—such as incarcerated people with serious mental illness, physical disabilities, or who are at risk of sexual victimization or violent retaliation. Not only will safe alternatives to segregated housing improve overall conditions in prisons and jails, but they will help build the foundation all incarcerated people need to return successfully to their communities.

ENDNOTES

- 30 An investigation revealed that South Carolina was sending incarcerated people caught posting on social media sites to segregated housing for an average of 512 days. See Emily Bazelon, "The Shame of Solitary Confinement," *New York Times*, February 19, 2015.
- 31 Testimony of Piper Kerman, Senate Committee on the Judiciary, Subcommittee on the Constitution, Civil Rights and Human Rights, "Reassessing Solitary Confinement II: The Human Rights, Fiscal, and Public Safety Consequences," (February 24, 2014), <http://www.judiciary.senate.gov/imo/media/doc/02-25-14KermanTestimony.pdf>.
- 32 Ram Subramanian and Alison Shames, *Sentencing and Prison Practices in Germany and the Netherlands: Implications for the United States* (New York: Vera Institute of Justice, 2013), 13. The corrections systems in Germany and the Netherlands embrace two principles that the National Research Council finds particularly missing from current criminal justice policies and practices in the United States: proportionality—i.e., offenses should be punished in proportion to their seriousness—and parsimony—i.e., the period of confinement should be sufficient but not greater than necessary to achieve the goals of the disciplinary policy. See National Research Council, Committee on Causes and Consequences of High Rates of Incarceration, Jeremy Travis, Bruce Western, and Steve Redburn, eds., *The Growth of Incarceration in the United States: Exploring Causes and Consequences* (Washington, DC: The National Academies Press, 2014).
- 33 Subramanian and Shames, 2013, p. 13.
- 34 These violations are eligible for informal resolution, which does not permit segregated housing as a sanction. Should these violations be referred for formal resolution, the only sanctions levied are those sanctions other than segregated housing.

- 42 For information on length of stay in Illinois, see Illinois Department of Corrections, *Tamms Closed Maximum Security Unit: Overview and Ten-Point Plan* (Springfield, IL: Illinois Department of Corrections, September 3, 2009), p. 39, Table 4; in Washington, Carlyne Kujath, manager of strategic operations, Washington Department of Corrections, e-mail exchange with Vera, Washington, DC, April 17, 2015; and in Texas, see American Civil Liberties Union of Texas, 2015, 2. This report does not specify the year(s) for which data was analyzed. According to the report's author, the average length of stay in Texas

was calculated using data available as of August 13, 2013. Burke Butler, Arthur Liman Fellow, the Texas Civil Rights Project, e-mail exchange with Vera, Washington, DC, April 18, 2015.

- 43 Bernie Warner, secretary, Washington Department of Corrections, e-mail exchange with Vera, Washington, DC, March 12, 2015.
- 44 In a review of the policies of 47 jurisdictions, Metcalf et al. found that every jurisdiction required some form of review of prisoners in administrative segregation. The majority of jurisdictions required an initial review within seven days with subsequent reviews ranging from weekly to yearly. The decision makers for the review can include facility staff, warden, a specially designated committee, and high-level administrators. Additional research is needed on whether and how the frequency of reviews correlates with the length of time spent in segregation. Metcalf et al., 2013, pp. 15-16.
- 45 Shirley Moore Smeal, executive deputy secretary, Pennsylvania Department of Corrections, e-mail exchange with Vera, Washington, DC, February 27, 2015. Kellie Wasco, deputy director, Colorado Department of Corrections, e-mail exchange with Vera, Washington, DC, April 17, 2015.
- 46 Shirley Moore Smeal, executive deputy secretary, Pennsylvania Department of Corrections, e-mail exchange with Vera, Washington, DC, February 27, 2015.
- 47 Data obtained from the California Department of Corrections and Rehabilitation reveals that 69 percent of Security Housing Unit case reviews led to release to a step down program or a general population setting and 63 percent of administrative segregation unit case reviews led to a return to the general population. See Sal Rodriguez, "In California Prisons, Hundreds Have Been Removed from Solitary Confinement—and Thousands Remain," *Solitary Watch*, January 27, 2015.

- 50 Bernie Warner, secretary, Washington Department of Corrections, e-mail exchange with Vera, Washington, DC, March 12, 2015. The Washington State Department of Corrections uses the Risk-Need-Responsivity Model as a foundation of the Washington State Department of Corrections Offender Change Model. For more information on the Risk-Need-Responsivity model, see James Bonta and D. A. Andrews, *Risk-Need-Responsivity Model for Offender Assessment and Rehabilitation* (Ottawa: Public Safety Canada, 2007), <http://www.publicsafety.gc.ca/cnt/rsrcs/pblctns/rsk-nd-rspnsvty/index-eng.aspx>.
- 51 David H. Cloud, Ernest Drucker, Angela Browne, and Jim Parsons, "Public Health and Solitary Confinement in the United States," *American Journal of Public Health*, 105, no.1 (2015): 18-26. For a comprehensive summary of the published studies documenting this statement see Haney, 2003, pp. 124-156. On historical research on the "sizable and impressively sophisticated literature, now largely forgotten," that documented significant damage to incarcerated people held in segregated housing, see Peter Scharff Smith, "The Effects of Solitary Confinement on Prison Inmates: A Brief History and Review of the Literature," *Crime and Justice*, 34, no. 1 (2006): 441. One contrasting study of incarcerated people in administrative segregated housing in Colorado found no mental deterioration while in segregation, see Maureen L. O'Keefe et al., "One Year Longitudinal Study of the Psychological Effects of Administrative Segregation." (National Institute of Justice Document 232973, October 2010). However, experts with long professional track records in correctional mental health have taken issue with the design of that study and caution not to draw any conclusions from the study. See Kirsten Weir, "Alone in the Hole: Psychologists Probe the Mental Health Effects of Solitary Confinement," *American Psychological Association* 43, no. 5 (May 2012): 54, <http://www.apa.org/monitor/2012/05/solitary.aspx>; and Stuart Grassian and Terry Kupers, "The Colorado Study vs. the Reality of Supermax Confinement," *Correctional Mental Health Report*, 13, no.1 (May/June 2011): 1-4.
- 52 For information on the "potent mix," see Sharon Shalev, *A Sourcebook on Solitary Confinement* (London: Mannheim Centre for Criminology, London School of Economics, 2008). For information on negative effects of solitary confinement, see Haney, 2003, pp. 130-136; Paul Gendreau, et al. Acknowledgments

The authors would like to thank Christine Herrman and Fred Patrick for their insight and guidance throughout the drafting of this report. We would like to thank Sara Sullivan for her review and comments and Angela Browne, Léon Digard, and Ari Agha for their assistance in understanding and explaining the research data. A special thank you to Patricia Connelly for her help and expertise in the planning and editing of this report; Paragini Amin for designing the report; and, finally, Mary Crowley for her generous assistance.

This publication is the first in a series about solitary confinement, its use and misuse, and how to safely reduce it in our prisons and jails. This series was made possible in part by the Robert W. Wilson Charitable Trust. Both during his lifetime and currently through his charitable trust, Mr. Wilson supported Vera's work with government partners around the country to reduce our nation's reliance on solitary confinement and improve conditions of confinement. We are honored to name this series of publications in his memory.

About Safe Alternatives to Segregation Initiative

In March 2015, the Vera Institute of Justice (Vera) launched the Safe Alternatives to Segregation (SAS) Initiative—a two-year national campaign aimed at reducing the number of incarcerated people held in segregated housing while simultaneously improving safety in prisons and jails. In addition to providing technical assistance to state and local jurisdictions selected through a competitive bidding process, SAS features a series of publications and an online resource center (to be launched in June 2015) that highlight the latest research and policy analysis by leaders in the field. For more information about SAS, contact Christine Herrman, project director, Center on Sentencing and Corrections, at cherrman@vera.org.

New Report on Prisoners in Administrative Segregation **Prepared by the Association of State Correctional Administrators and the** **Arthur Liman Public Interest Program at Yale Law School**

Prolonged isolation of individuals in jails and prisons is a grave problem in the United States. The insistence on change comes not only from legislators across the political spectrum, judges, and a host of private sector voices, but also from the directors of correctional systems at both state and federal levels.

Even as a national outcry has arisen about isolation, relatively little information exists about the actual number of people held in restrictive housing, the policies determining their placement, and whether and how conditions vary in different jurisdictions. Indeed, the figures cited on the number of people held in isolation vary from 25,000 to more than 80,000. But that information comes from a decade and more ago.

To rectify the absence of data and to pave the way for changes, the Association of State Correctional Administrators (ASCA) joined with the Arthur Liman Public Interest Program at Yale Law School to develop a national database of the policies and practices on what correctional officials call “restricted housing” and is frequently referred in the media as “solitary confinement.” ASCA is the only national organization of persons directly responsible for the administration of correctional systems and includes the heads of each state’s corrections agencies, as well as the Federal Bureau of Prisons, the District of Columbia, New York City, Philadelphia and Los Angeles County.

The result is the new report *Time-in-Cell: The Liman-ASCA 2014 National Survey of Administrative Segregation in Prison*, which is the first to provide updated information, as of the fall of 2014, on both the numbers and the conditions in restrictive housing nationwide. This Report represents the commitments of correctional leaders to make such changes. But without a baseline, it is not possible to know the impact of the many efforts underway. *Time-in-Cell* provides one way to measure and to learn whether the hoped-for changes are taking place, to reduce and to eliminate the isolation of prisoners, so as to enable prisoners and staff to live and work in safe environments, respectful of human dignity.

Getting the numbers is a piece of the news; the other is that changes are underway at both the state and federal levels. Correctional leaders across the country are committed to reducing the number of people in restrictive housing and altering what it means to be there. Thus, prison system directors insist that the 2014 figures are or will soon be out-of-date because they are placing new limits on putting prisoners into restrictive housing and developing activities to change what restricted housing means. In a few jurisdictions, for example, new programs mandate out-of-cell time (of up to 20 hours) for subpopulations, such as those with significant mental illness.

Thirty-four jurisdictions -- housing about 73% of the more than 1.5 million people incarcerated in U.S. prisons - provided data on all the people in restricted housing, whether termed “administrative segregation,” “disciplinary segregation,” or “protective custody.” In that subset, more than 66,000 prisoners were in restricted housing. If that number is illustrative of the whole, some 80,000 to 100,000 people were, in 2014, in restrictive housing settings in prisons (and these numbers do not include jails, juvenile facilities, or immigration and military detention).

The 2015 *Time-In-Cell* Report analyzes the results of a survey of more than 130 questions, again sent to the directors of all the prison systems. Forty-six jurisdictions responded with details on a subset of restricted housing, the 31,500 male prisoners reported held in administrative segregation. Across the country, in many jurisdictions, prisoners are required to spend 23 hours in their cells on weekdays, and in many, 24 hours in their cells on weekends. The permitted hours out-of-cell ranged from 3 to 7 a week in many jurisdictions. Phone calls and social visits ranged from one per month in several jurisdictions; in others, more opportunities existed. In virtually all jurisdictions, the possessions that prisoners can keep in their cells, the programs, visits, and telephone calls they might be able to have access to could be cut back or stopped as sanctions for misbehavior.

Most jurisdictions had no fixed time limits on administrative segregation; only one state imposed a one-year limit. Several jurisdictions did not track the numbers of continuous days a person has been held. In the 24 jurisdictions that did, the time spent varied widely. In a substantial number, people remained in segregation for more than three years. For those released, the 30 jurisdictions tracking information estimated that, in 2013, 4,400 prisoners were directly released from administrative segregation to the community.

Prison directors also described the challenges of staffing administrative segregation, and the need for additional training, flexible schedules, rotating staff, or more benefits. Many directors reported on the many incentives for changing the current policies – citing prisoner and staff well-being, litigation, and the costs and, as a few put it, because it “is the right thing to do.”

By facilitating cross-jurisdictional comparisons of the rules and practices that surround administrative segregation, the two Report both reflect and support ongoing efforts to limit or end extended isolation. In some states, new legislation limits administrative segregation for subpopulations, such as the mentally ill, juveniles, and individuals with disabilities; many more proposals are pending at the state and national level. Litigation has addressed segregation in specific state, and some advocates call for abolition. The 2015 “Mandela Rules,” shaped with input from leaders of ASCA and promulgated two months ago by the Committee on Crime Prevention and Criminal Justice of the United Nations, have called confinement of prisoners for 22 hours or more for longer than 15 days a form of “cruel, inhuman or degrading treatment.”

By way of background, the 2015 Report is the second in a series. In 2012, the Liman Program and ASCA asked the directors of state and federal corrections systems to provide their policies governing administrative segregation, defined as removing a prisoner from general population to spend 22-23 hours a day in a cell for 30 days or more. Thus, *Administrative Segregation, Degrees of Isolation, and Incarceration: A National Overview of State and Federal Correctional Policies* (2013) is based on responses from 47 jurisdictions.

That report details how broad the criteria for being put into administrative segregation were – staff has wide discretion to do so if perceiving that the prisoner posed “a threat” to institutional safety or was a danger to “self, staff, or other inmates.” The kind of notice and what constituted a “hearing” varied substantially, as did the level of staff with the authority to make the decision. In short, at the formal level, getting into segregation was relatively easy, and few policies focused on how people got out.

I. Prisons Within Prisons

Since the 1980s, departments of corrections have sharply increased the use of segregation as a discipline and management tool. For example, according to the U.S. Bureau of Justice Statistics, in just the five years between 1995 and 2000, the number of prisoners held in segregation beds increased 40 percent nationally.¹ By 2004, more than forty U.S. states reported having some form of supermax housing.² Based on the most recent data available from the Bureau of Justice Statistics census, in 2005 U.S. prisons held 81,622 people in restricted housing.³

Segregation is used for a variety of reasons, most commonly as a form of punishment for rule violations, as a way to remove prisoners from the general prison population who are thought to pose a risk to security or safety, and as a way to provide safety to prisoners believed to be at risk in the general prison population. Prisoners placed in segregation are moved to special housing units with high levels of restrictions and control. Prisoners may stay in segregated housing for years without the opportunity to engage in the types of interactions, treatment, and education experiences that would help them adjust when reentering either the general prison population or society. In effect, segregation is a secondary sentence imposed by the correctional facility—one that follows long after and usually is unrelated to the conviction for which the person is incarcerated.

The consequences of holding an individual in these conditions over time may include new or exacerbated mental health disturbances, assaultive and other anti-social behaviors, and chronic and acute health disorders. People who have been housed in segregation for long periods of time may also find it difficult to be in the company of others, whether in the general prison population or later in the community. In fact, studies show that prisoners who are released from segregation directly to the community reoffend at higher rates than general-population prisoners.⁴

Also, significant fiscal costs are associated with housing people in segregation. In the Ohio State Prison in 2003, it cost \$149 a day to house a supermax prisoner, compared with \$101 per day for maximum-security and \$63 per day for an average general-population prisoner.⁵

The majority of these higher costs come from the need for additional staff to monitor segregation units. In the Ohio State Prison, the supermax facility required one corrections officer for every 1.7 prisoners; maximum-security housing required one officer for every 2.5 prisoners.⁶

A. The Emergence of Segregation in U.S. Prisons

The use of solitary confinement in the United States dates back to Pennsylvania in the late 1770s. At that time, the philosophy was that prisoners who were isolated would have time to repent and rehabilitate themselves. Although this system spread to other jurisdictions and survived for nearly a century, its use was reduced when the psychological and physical damage caused by this seclusion became apparent.⁷ In 1890, a prisoner on death row in Colorado filed a writ of habeas corpus in the Supreme Court challenging his imprisonment under an ex post facto law that required all death row prisoners be held in solitary confinement. In a landmark decision, the Court noted some severe effects of this isolation, stating,

A considerable number of the prisoners fell, after even a short confinement, into a semi-fatuous condition . . . and others became violently insane; others still committed suicide; while those who stood the ordeal better were not generally reformed, and in most cases did not recover sufficient mental activity to be of any subsequent service to the community.⁸

Following these observations, the Court found that this prisoner's placement in solitary confinement "was an additional punishment of the most important and painful character," and thus the application of the new law to his situation violated the Constitution.⁹

This shift away from segregation was short lived, however, and reversed when the federal government opened Alcatraz Prison in 1934 and the United States Penitentiary in Marion, Illinois, in 1963. Both prisons were built to house the nation's worst criminals; they relied primarily on isolating prisoners who posed the greatest behavioral and management concerns in order to maintain control. States followed suit and began to add segregation units to house those they deemed dangerous

and threatening. The first supermax prison, built solely to house prisoners in segregation, was Pelican Bay State Prison, opened in California in 1989.

B. Types of Segregation in U.S. Prisons

Segregation is used in minimum-, medium-, and maximum-security facilities and may have varying conditions and restrictions. Generally, prisoners in segregation are confined to a special housing unit—essentially prisons within prisons—unless they are sent to a supermax facility, which houses only prisoners in segregation. The following are the main types of segregation in the United States:

1. **Disciplinary segregation** is a form of punishment for rule violations occurring within the prison setting. For example, a prisoner may be sentenced to a year in segregation for assault or possession of contraband, or for a period of months for violation of a direct order.
2. **Administrative segregation** typically is used to remove prisoners from the general prison population who are thought to pose a threat to safety or security, or for prisoners who are believed to have information about an incident under investigation; this type of segregation is not a form of punishment for a specific violation. For example, a gang leader believed to be responsible for coordinating gang activities within the prison may be placed in administrative segregation even if that individual has not been found in violation of any rules. Administrative segregation usually lasts for an indeterminate period of time and, for those considered a threat to safety and security, may be of long duration. In some systems, prisoners are not told the reason for their transfer to administrative segregation, and options for reevaluation or release back to the general prison population may be few.
3. **Protective custody** is the use of segregation to provide safety for prisoners believed to be at risk in the general prison population, such as a prisoner who provides information to correctional staff about violations committed by others, or someone who is considered at risk due to physical characteristics or other individual factors. Although segregated for their own protection, restrictions on human contact and programming for prisoners in protective custody can be as severe as for prisoners in disciplinary or administrative segregation.
4. **Temporary confinement** is the use of segregation while a reported incident is being investigated; it usually lasts for a short period of time and begins immediately after a rule violation is identified but before a hearing is conducted.
5. **Supermax (or closed maximum-security) prisons** may hold both administrative and disciplinary segregation prisoners. All prisoners in supermax facilities are held in high levels of confinement, often for long periods of time. Architecturally, supermax prisons are built to restrict visual and

tactile stimulation for prisoners, as well as contact with others. Educational and programmatic activities are greatly restricted in these environments.

C. Conditions of Confinement in Segregation

The use of segregation that began in the mid-1980s was accompanied by increasingly severe conditions of confinement, both in supermax facilities and in prison segregation units throughout the country. Conditions in segregation typically include intense isolation and control.

Prisoners usually spend at least twenty-three hours a day in their cells. The federal district court in 1995 in *Madrid v. Gomez* described a segregation cell at Pelican Bay State Prison in California in these words:

Each cell is 80 square feet and comes equipped with two built-in bunks and a toilet-sink unit. Cell doors are made of heavy gauge perforated metal; this design prevents objects from being thrown through the door but also significantly blocks vision and light. . . . [The] interior is designed to reduce visual stimulation. . . . The cells are windowless; the walls are white concrete. When inside the cell, all one can see through the perforated metal door is another white wall.¹⁰

Prisoners in segregation are generally taken out of their cells for only one hour out of every twenty-four hours, either for recreation or a shower. However, in some systems, prisoners are released only one day a week for a total of five hours. Before being taken to showers, recreation, or appointments, prisoners are cuffed and also may be shackled at the waist and placed in leg irons. Recreation times may occur anytime from 7:00 a.m. until 3:00 a.m. Typically, recreation takes place in either an open cage outdoors (called a yard) or an indoor area with an open barred top. Because exercise areas usually are exposed to the weather, prisoners must choose whether to use them during extreme weather conditions or remain in their cells. Periods of extreme weather may greatly reduce the amount of time prisoners are out of the cell, particularly when recreation periods are offered in five-hour blocks.

Except when overcrowding requires double celling, face-to-face human contact—except with corrections officers—is virtually eliminated in segregation. Meal trays are delivered through a slot in the door, visits with counselors and mental health staff also are usually conducted through the cell door, and exercise is taken alone. Segregation prisoners typically are not allowed contact with other prisoners, and visits with family members are curtailed or may be completely prohibited for a year or more. When family visits are allowed, they usually are conducted by speaker or telephone through a thick glass window, precluding the opportunity for human touch. Mental health and medical services are often extremely limited for prisoners in segregation as well, further reducing human contact.

II. A New Way Forward

Even with high fiscal costs and exposure to litigation related to conditions of confinement, prison officials fear that moving prisoners out of segregation will lead to violence and other serious violations. Two states—Ohio and Mississippi—have tested that concern. In the mid-2000s, Ohio and Mississippi reduced their supermax populations by 89 percent and 85 percent, respectively, while apparently decreasing violence and disruption. Mississippi went from 1,000 to 150 prisoners in segregation;¹¹ Ohio went from 800 to 90 prisoners.

Mississippi provides a particularly vivid example of multifaceted reform. In the early 1990s, reports on conditions in the Mississippi Department of Corrections' (MDOC) Parchman Unit 32 indicated that prisoners were severely isolated. The unit was filthy with excrement, and prisoners with mental illness created constant disturbances by starting fires, flooding the cells, and screaming all night.¹² Officers in the unit often responded to these disturbances with force. The unit also became infested with mosquitoes in the summer, forcing prisoners to keep cell windows closed, thereby exacerbating the poor conditions. In 2005, the American Civil Liberties Union filed suit against the MDOC related to conditions in Unit 32. In response, the MDOC convened a task force to address the issues identified, in particular the assignment of prisoners to segregation.

In 2007, the MDOC voluntarily implemented the task force's recommendations. Within a year, the department successfully reclassified and moved more than three quarters of its supermax prisoners to the general prison population. Prisoners remaining in Unit 32 were allowed to eat meals together and spend several more hours out of their cells each day. The MDOC also physically transformed Unit 32 by building program and recreation areas and providing access to educational programming and mental health treatment.

Mississippi successfully implemented these changes by dramatically revising its classification system and creating more restrictive criteria for placement in administrative segregation. Specifically, the new objective classification system allowed placement in Unit 32 only for prisoners who had committed a serious infraction, were active, high-level gang members, or had prior escapes or escape attempts from a secure facility. Only the commissioner had the authority to place an individual in segregation without these criteria. In addition, the MDOC implemented a step-down program so that prisoners with mental illness could transition out of segregation; participants received intensive mental health treatment and rewards for success in the program, and special training was provided to assist officers in dealing with mentally ill prisoners. These changes not only reduced the number of people held in segregation but also were associated with an almost 70 percent decrease in prisoner-on-prisoner and prisoner-on-staff violence, and use of force by officers in the unit plummeted.¹³

III. Vera's Segregation Reduction Project

Inspired by the success of Ohio and Mississippi, and informed by the *Confronting Confinement* report issued by the Commission on Safety and Abuse in America's Prisons, the Vera Institute of Justice launched its Segregation Reduction Project (SRP) in 2010. The SRP seeks to safely reduce the number of prisoners held in segregation by facilitating policy changes that reassess violations qualifying a prisoner for segregation and that redefine prisoners' length of stay in segregation (especially for minor violations). The project also focuses on improving conditions of confinement in segregation and enhancing programming and support for transitions back to the general prison population. The overall goal of the SRP is to develop a national model that can be adapted for use in many jurisdictions.

To that end, Vera is currently collaborating with Illinois, Maryland, and Washington to implement the SRP in those states. Although the exact process varies depending on the specific challenges and concerns of each state corrections system, Vera staff do the following:

- conduct intensive site visits to supermax facilities and segregation units
- review policies and practices related to the use of segregation
- complete comprehensive analyses of segregated populations, violations resulting in segregation time, and new violations by prisoners moved to other levels of security
- provide data-based presentations to corrections officials about patterns in and outcomes of their use of segregation
- in consultation with corrections staff, recommend strategies to safely reduce segregation and improve conditions of confinement
- in close partnership with corrections staff, help pilot changes and track the outcomes of those changes on institutional safety and new violations over time.

IV. Making a Positive Change in Segregation in U.S. Prisons

Given the current fiscal crisis, many jurisdictions now are looking for new and effective paths forward, away from reliance on this expensive form of incarceration. Especially with the current U.S. recession, states can no longer afford these unsustainable costs. Illinois—with approximately 46,000 men and women in state prisons in February 2010—provides one example of why it is important to reassess the use of segregation in the nation's prisons. Although only about 5 percent of the prison population was in segregation on any given day, more than half (56 percent) had spent some time in segregation during that prison stay. Reducing the use of segregation and improving conditions of confinement in segregation nationally will affect thousands of individuals.

With this project, Vera hopes to demonstrate that it is possible for states to reduce the numbers of prisoners they hold in segregation without jeopardizing institutional or public safety, as well as create a replicable model that can be adapted for use in other jurisdictions. Based on observations and analyses so far, it seems clear that segregated populations in U.S. prisons *can* be dramatically reduced in a safe way. A substantial number of prisoners are being sent to segregation for relatively nonserious types of behavior, such as unauthorized movement, failure to report to work or school, insolence or talking back, and disobeying a direct order. Confinement to segregation is often out of scale for these violations, especially when alternative sanctions (e.g., restricted movement in their current housing and reduction of other privileges) are available. Policy changes that will reduce the use and long-term impact of segregation include the following:

- using alternative sanctions for minor violations
- reducing segregation time for certain categories of violations
- employing standardized incentivized reductions in segregation time for sustained good behavior
- providing opportunities for gradual resocialization to the general prison population

Changes in Mississippi and Ohio segregation practices suggest that this change can be made safely, without loss of staff positions, and with cost savings. Enhancing the programming available to individuals held in segregation also has the potential to decrease violence and disturbances and increase prisoners' positive adjustment. The provision of safe and healthy conditions in segregation will benefit not only the staff and prisoners in these units

but also ultimately the well-being of facilities, systems, and the community.

The effects of solitary confinement: Commentary on *One Year Longitudinal Study of the Psychological Effects of Administrative Segregation*

By Peter Scharff Smith

Abstract

Solitary confinement is a common practice in many prisons, but it has sparked debates and research on its effects on prisoners. This article examines a recent study on administrative segregation in Colorado in the context of relevant European research on the effects of solitary confinement

Key words: administrative segregation, solitary confinement

The use of large scale solitary confinement became common with the rise of the modern penitentiary during the first half of the 19th century and has remained a feature of Western prison systems. A debate about the effects of solitary confinement was largely settled early in the 20th century, when both experts and practitioners tended to agree that solitary confinement was harmful. Discussions on the effects of solitary confinement resurfaced in the 1950s and the following two decades when sensory deprivation studies were carried out in reaction to, among other things, stories of the brainwashing of U.S. prisoners of war during the Korean War. During the 1980s, solitary confinement regained topicality in the wake of the creation of supermax prisons in the United States. But solitary confinement has also been used, debated, and researched extensively elsewhere. As one example, solitary confinement has been an integral part of Scandinavian pre-trial prison practice for many years (Smith 2006). In 2010, the Colorado Department of Corrections and the Department of Psychology at the University of Colorado issued a new study on solitary confinement. In this article, I will discuss research on the effects of solitary confinement and make some comments on the Colorado study. (*Editor's note: All references to, or quotes from, the Colorado study are from O'Keefe et al., 2010.*)

Colorado Study

The Colorado study is longitudinal and mainly based on self-reported data. The battery of tests used in this study looks impressive and covers the various symptoms and health issues described in the earlier solitary confinement literature, such as anxiety, depression, and suicidal thinking. However, it is clearly important that all these tests were used without in-depth interviews being conducted, and that the self-reported data was not collected by a psychiatrist, a psychologist, or an experienced prison researcher. The main conclusion in the Colorado study was that the results “were largely inconsistent with (...) the bulk of literature that indicates AS is extremely detrimental to inmates.” and that “there was initial improvement in psychological well-being across all study groups, with the bulk of the improvements occurring between the first and second testing periods.” However “all of the study groups, with the exception of the GP NMI (general population, non-mentally ill) group, showed symptoms that were associated with the SHU (special housing unit) syndrome” (i.e. high degrees of psychological disturbance). In this article, I will discuss a number of issues that will help explain the apparent discrepancy between the Colorado study conclusions and the results gathered in other available research.

Why not use the available research?

The Colorado report begins with the claims that the debate on the use of long-term administrative segregation “has suffered from a lack of empirical research” and that “the scant empirical research conducted to date suffers from research bias and serious methodological flaws.” This is a seriously misleading statement. The problem is not that relevant and rigorous empirical research does not exist, but that the authors of the Colorado report haven’t used it. Much of this research is European, but it has been presented and reviewed in international journals, including U.S.-based journals (Smith, 2006 and Haney, 2009).

European studies on the effects of solitary confinement

A growing body of American research is clearly relevant to a discussion of solitary confinement and segregation regimes (see, for example, Lovell, 2008; Cloyes, Lovell, Allen, and Rhodes, 2006; Rhodes, 2004; and Haney, 2008). In the following, I will briefly review some of the European research, which seems to be less known to American readers. This research has not been carried out in supermax prisons in the U.S. (for European supermax research, see King, 2005 and Shalev, 2009) but it is, in fact, research on how prisoners react to being subjected to 22-23 hours of solitary confinement in their cell each day, so it is most certainly relevant. According to the Colorado study, the “defining feature” of administrative segregation in Colorado is single-cell confinement for 23 hours per day.

For various reasons, the use of pre-trial solitary confinement has historically been extensive in Sweden, Norway, and Denmark and has sparked intense debates and also research on the effects of solitary confinement, especially in Denmark and Norway (Smith 2006). In Norway, a 1993 longitudinal study of 63 isolated remand prisoners found widespread health problems after four weeks of solitary confinement, including depression, anxiety, stomach and muscle pains, and an inability to concentrate. The study excluded inmates with obvious withdrawal symptoms and those deemed at risk of suffering from a psychosis (Gamman 2001). A longitudinal follow-up in 1995 with a sample of 54 remand prisoners

included a control group and reported significantly more physical and psychological suffering, including sleeplessness, concentration problems, anxiety, and depression, among the prisoners in solitary confinement, who were also given much more medication than the control group (Gamman, 1995, 2001). The author of this study found that several of the isolated prisoners developed symptoms of a hallucinatory nature, that there were “important differences” between the health of those isolated and those not, and concluded that “the isolated had more symptoms of both psychological and somatic nature” (Gamman, 1995, p. 2245).

In terms of the prevalence of symptoms, 94 percent of those in pre-trial solitary confinement suffered from adverse symptoms after four weeks. More than half suffered from serious symptoms like depression and anxiety, and 13 percent had mutilated themselves (Gamman, 2001). In a third Norwegian study on disciplinary segregation, more than 43 percent of the isolated prisoners suffered adverse symptoms after only an average of 39.7 hours in solitary confinement (Stang et al., 2003).

In Denmark during the 1980's and 90's, extensive research on the effects of solitary confinement was carried out in the form of a number of interview-based studies as well as a so-called “isolation-study,” which was a large-scale longitudinal study consisting of a comprehensive psychiatric and psychological study (1994) and a follow-up study (1997), both with control groups. The Colorado report authors are not aware of some of the most important articles and results from these studies (Sestoft et al., 1998; Andersen, 2004; see also Smith, 2006), and furthermore do not fully incorporate the findings of the two related studies they actually list in their references. The Danish 1994 study involved 367 remand prisoners and reported a significantly higher rate of psychiatric problems among prisoners in isolation. A higher incidence of psychiatric morbidity – mainly adjustment disorders - was found among those in solitary confinement (28 percent) compared to those not in isolation (15 percent). The rate of psychiatric morbidity was highest (43 percent) among a third group of remand prisoners who had been in solitary confinement for more than two months (Andersen et al., 1994). A number of standardized instruments were used to measure health quantitatively. The scores for those in solitary (as a group) were unchanged throughout the isolation period, while those not in isolation “had a gradual improvement on most quantitative mental health scores during this early phase of imprisonment (Andersen, 2004, p. 39)” Those in solitary confinement experienced an improvement in health scores when the solitary confinement conditions were relieved (Andersen 2004). The researchers concluded that the differences between the isolated remand prisoners and the control group were caused “mainly by different conditions of SC and non-SC” (Andersen 2004, p. 39), and that pre-trial detention in isolation compared with pre-trial detention without isolation involved strain and risk of damaging the mental health of the imprisoned individuals (Andersen et al. 1994, 2000).

The 1994 study was longitudinal, incorporated both quantitative and qualitative elements, used standardized instruments to measure health, incorporated in-depth interviews, used highly-skilled researchers, included control groups and a very large number of prisoners in solitary confinement, produced statistically significant results, and verified their results through other objective data regarding the hospitalization of remand prisoners.

Still, the thoroughness of the study caused the research itself to constitute a significant intrusion into the lives of the study's participants (Andersen, 2004). During the first three weeks of imprisonment those in solitary confinement were typically subjected to four or five days of intense interviews and testing (2–4

hours each day, not counting filling out questionnaires, having blood samples taken etc.). These remand prisoners were, in other words, effectively *not* in solitary confinement during those four or five days. This constituted around 20 to 25 percent of the period between the first test and the end of the second test round after approximately three weeks. This must have downgraded the measured differences between the isolated prisoners and the control group significantly, especially since the interviews constituted meaningful social contact in which the well-being and innermost thoughts of the imprisoned individual was in focus (Smith, 2006).

Given this issue, it is not surprising that the second part of the 1994 study - a survey of hospitalization among remand prisoners – gave even more clear-cut results. A sample of 124 remand prisoners who had been transferred to prison hospital revealed that, if “a person remained in SC [solitary confinement] for four weeks the likelihood of being admitted to the prison hospital for a psychiatric reason was about twenty times as high as for a person remanded in NSC [non-solitary confinement] for the same period of time” (Sestoft et al., 1998, p. 103).

A 1997 follow-up study was based on reports (questionnaires) from former participants in the original study, and illustrated how former remand prisoners in solitary confinement found their incarceration significantly more straining than did remand prisoners not in isolation. Thirty-eight percent of those in solitary confinement and 36 percent of those in long-term solitary found their remand imprisonment extraordinarily straining, as opposed to 12 percent of those not in solitary (Andersen et al., 1997). Furthermore, 23 percent of those in solitary confinement and 27 percent of those in long-term solitary reported that they experienced severe psychological reactions after their remand imprisonment, as opposed to nine percent of those not in solitary (Andersen et al., 1997). The authors concluded that from a medical and psychological perspective the practice of pre-trial solitary confinement should be abandoned (Andersen et al., 1997).

A Swiss study on the effects of solitary confinement documented a similar problem surrounding hospitalization of inmates in solitary confinement. The study sample consisted of 203 male patients in a psychiatric clinic in Zurich, of whom 102 were committed from a prison (76 percent of these came directly from solitary confinement). The study concluded that remand prisoners in solitary confinement were much more often hospitalized for psychiatric reasons than were prisoners who came from communal prison conditions (Volkart, Rothenfluth, et al., 1983).

Volkart and colleagues also compared 30 prisoners in solitary confinement with a control group of 28 prisoners in communal imprisonment. The study was cross-sectional and incorporated no longitudinal data. Isolated inmates had spent an average of ninety-one days in solitary confinement while the control group had spent on average 326 days imprisoned. All participants had normal intelligence and their health and personalities were assessed through psychiatric questionnaires. The group of isolated inmates “showed considerably more psychopathological symptoms than the control group [and these] effects were mainly caused by solitary confinement; age, schooling, duration of detention and personality turned out to be of subordinate importance.” (Volkart, Dittrich, et al. 1983, p. 44)

Social contact and contamination across groups

The available research, including the above-mentioned studies, demonstrates that solitary confinement “causes serious health problems for a significant number of inmates. The central harmful feature is that it reduces meaningful social contact to an absolute minimum: a level of social and psychological stimulus that many individuals will experience as insufficient to remain reasonably healthy and relatively well-functioning.” (Smith, 2006, p.503)

This should be a starting point for further research on solitary confinement. Previous research does not show, for example, that the availability of television, radio, or newspapers, or even good material conditions of confinement, will offset the negative impact of solitary confinement on many prisoners, although access to such items and conditions can ameliorate any prison experience to a certain extent. But as the Colorado report concludes, the availability of modern technology, such as videoconferencing, is not always positive for the prisoners since “it also increases the degree of isolation experienced by inmates.”

Therefore, it is unfortunate that the Colorado study does not explore this issue convincingly, i.e., measuring the relative level of psychologically meaningful social contact in administrative segregation (AS), punitive segregation, and general population (GP). If we look closer at the Colorado study it describes basic AS conditions as single-cell confinement for around 23 hours per day. In AS, prisoners are given five 1-hour recreation spells each week, as well as three 15-minute showers (although apparently inmates use less time for showers). Prisoners are escorted to recreation in “full-restraints.” Depending on custody level, inmates are allowed either two 2-hour noncontact visits per month (Level 2) or four 3-hour visits per month (Level 3). Phone calls for those in the Colorado State Penitentiary apparently amounted to only a few minutes daily. If we look at both recreation, visits, and showers, an inmate on level 2 will apparently (assuming he receives visitors) stay at least around 23 hours in his cell on a daily basis, while those on level 3 get two more hours out of their cell on a weekly basis (once again assuming that they receive visits) – i.e. less than 20 minutes less cell time on a daily basis.

In addition to the above, there is some contact with mental health clinicians who do monthly rounds and occasional “mental health sessions” for one to two hours per week. Furthermore inmates in AS go through a “Quality of Life Program,” which includes cognitive classes, but as far as I can see this does not result in increased social contact since these classes, along with some recreational activities, take place over the television.

Punitive segregation, where many inmates stayed prior to AS, is single-cell confinement for 23-24 hours per day, during which inmates only come out for recreation and showers in the living unit. So most inmates stay inside the segregation unit during their entire stay and are “placed in full-restraints” if escorted out of the cell. Inmates in punitive segregation are not allowed to work or participate in any programs or education, and do not have a television.

Descriptions of these conditions indicate that the amount of psychologically meaningful social contact is extremely scarce in both AS and punitive segregation, with the latter regime apparently allowing even less out-of-cell time and social contact. There is, however, one unclear factor. According to the Colorado

report, the inmates in AS can communicate with sign language and they can also yell to each other. Exactly how much and what kind of contact this results in is not described. Furthermore, GP conditions are not described along with the amount of social contact allowed under that regime.

Basically, it is somewhat unclear in the Colorado study how much meaningful social contact inmates in AS had access to during the study. AS conditions suggest that they had very limited access to such contact, although it is not entirely clear what level of communication was allowed through yelling and sign language, where especially the former might potentially yield some level of meaningful contact. Furthermore, it is unclear how much staff contact inmates have, although it is seemingly not a lot.

To confuse matters even more, there was “contamination across groups” meaning that “all offenders in AS were not confined in segregation for their entire period of participation in the study” and inmates in GP may “at some time during their study participation [have] been placed in punitive segregation or even AS.” In fact, when looking at “pure cases” of continuous AS, there were only 26 among the mentally ill and 39 among the non mentally ill, and even more alarming, there were only 13 “pure cases” of continuous GP prison time among the mentally ill GP control group (GP-MI) and 11 “pure cases” of continuous GP prison time among the non mentally ill GP control group (GP-NMI). This means that out of the 33 GP-MI and 43 GP-NMI who participated in the study (some of which later dropped out) only 13 GP-MI and 11 GP-NMI spent their entire study time in GP conditions. So the GP control group was not really a GP control group at all since the majority of these experienced either AS or punitive segregation during their participation in the study, and in addition most – perhaps all – experienced AS immediately prior to their AS hearing, after which they went into GP.

The Colorado researchers looked at their “pure cases” and found no major differences between these and other GP inmates. Then, they disregarded the problem, although such a finding questions the validity of their self-reported data and the setup of the entire study. Under all circumstances, the Colorado study is in fact *not* a study comparing segregation/solitary confinement with non-segregation/solitary confinement, since most of the GP inmates experienced solitary confinement during the study.

Equally important are uncertainties surrounding the levels of meaningful contact the study participants had prior to the start of the study. It is unclear how many participants came from solitary confinement when they entered AS or how much time they spent under such conditions before their initial tests. If some came directly from GP conditions to AS, then it is a problem that we do not know what that means in terms of a change in the level of available, meaningful social contact. We do know that some inmates – although not how many - came directly from punitive segregation and given the way these conditions are described in the Colorado study it seems likely that these inmates experienced better conditions with more meaningful contact when they entered AS. In that case, it is hardly surprising that the study found positive developments between the first and second testing of the inmates.

Were the study participants harmed by solitary confinement prior to the study?

The mental health of the Colorado inmates when they entered AS is very important, as are the conditions they arrived from prior to the start of the study. Needless to say, it puts the Colorado study in different light if many participants were actually in segregation prior to the start of the study. Unfortunately, the Colorado study is somewhat unclear about this.

The Colorado report states that “all study participants classified to AS were waitlisted for and placed in CSP,” which as far as I understand means that they were living in AS conditions when waiting for their AS hearing. The introduction to the report says something slightly different, however, when it states that “in the time leading up to and during their AS hearing, inmates have typically been in segregation.” So some prisoners were apparently not in segregation? The Colorado authors “recognized that significant changes could occur while inmates were held in segregation at their originating facility.” Therefore, they collected a pre-baseline measure “as close to the AS hearing as possible.”

In order to use the study to discuss the effects of solitary confinement, we need to know exactly how many were in segregation prior to the study and, even more importantly, we need to know for how long those subjected to a pre-baseline measure had been in segregation before they were subjected to the pre-baseline measure. This information is crucial and seems lacking in the report. All we are told is that pre-baseline measures were collected “as close to the AS hearing as possible.” But what does this mean in practice? The question, of course, involves the extent to which participants were possibly affected by solitary confinement prior to the start of the study. This is important since we know from other research that reactions to solitary confinement vary from one individual to another, but they “often set in very quickly.” (Thelle & Traeholt, 2003, p.769)

The Colorado report concludes that “all of the study groups, with the exception of the GP-NMI group, showed symptoms that were associated with the SHU syndrome. These elevations were present from the start and were more serious for the mentally ill than non-mentally ill.” So if many study participants had been subjected to segregation prior to the study that would likely explain their symptoms. In other words, the study participants were already damaged by solitary confinement when the study began, and the Colorado study shows us that these prisoners continued to show “symptoms that were associated with the SHU syndrome” during their time in AS.

Furthermore, positive developments between the first and second test could be explained by the transfer from punitive segregation conditions to apparently better AS conditions, which include a more meaningful form of social contact (visits). Seen in this light, the results of the Colorado study are in line with previous research. The AS inmates in Colorado got slightly better when they had access to slightly more meaningful social contact, but they remained in a very bad condition, and continued to show symptoms, as they stayed in solitary confinement.

How was the self-reported data obtained?

According to the Colorado study, all the self-reported data were collected by one field researcher who was a female university employee with CDOC training and badge that allowed her unescorted access to the prison facilities. The field researcher had an undergraduate degree and is not the responsible author. This is a very big difference in contrast to Danish and Norwegian studies, where the actual researchers who designed the studies and wrote the reports were trained psychiatrists and psychologists and also operated as field researchers. They accessed the health of the study participants themselves and did the in-depth interviews. In my opinion, this is the only serious and professional way to design and conduct a study about health in prison, which includes obtaining data directly from prisoners. Sending a “researcher” who is neither a health practitioner nor a PhD-level researcher with experience doing prison research, into a prison in order to access the health of prisoners by collecting self-reported data simply means that the

data are likely to be unreliable. That the field researcher had to report to an employee of the prison system studied (the leading author of the report) is also problematic.

The Colorado report itself describes instances in which the self-reported data appeared questionable. When this occurred, the field researcher apparently asked prisoners to retake the test if they admitted to “not being truthful.” If study participants said they were being honest and the researcher still did not believe them, she “marked the test as questionable.” This validation process seems outright naive. On what grounds did the university’s inexperienced field researcher assess whether or not the prisoners were “being truthful” about their psychological problems and mental health? This obviously requires education, experience, and psychological or medical knowledge. Seen in this light, it is interesting to note that when the Colorado study authors removed persons “with questionable or inconsistent responses” it “did not change the overall effects and results” so they used all the responses in their analysis. This raises serious questions about the field researcher’s capacity to assess whether or not the prisoners were ‘truthful’ and, once again, raises questions about the reliability of all of the self-reported data.

Professional researchers report that it can be difficult to learn about symptoms suffered by isolated inmates since many (male prisoners in particular) try to hide their condition (Smith, 2006). Researchers also explain that it is often extremely difficult, traumatic, and painful for formerly isolated individuals to talk about their experience of solitary confinement: “A few studies seem to explain the fact that some inmates do not complain and seem to adapt more or less peacefully to solitary confinement as a sign of a healthy coping strategy, while others explain this as an unhealthy sign of social withdrawal typically accompanied by severe psychological problems. Such problems often will be discovered only by personal in-depth interviews in a positive (therapeutic) atmosphere.” (Smith, 2006, p. 474; see also Koch, 1982; Toch, 1992; Jackson, 1983)

King, who has interviewed many supermax prisoners, observes that a significant number of these prisoners “found it extremely difficult to bring themselves to talk about their experience” and only after “considerable persistence some prisoners came to regard a researcher from another culture, who treated them with respect and clearly wanted to learn, as an acceptable proxy and began to open up.” (King, 2005, p.130)

Furthermore, the study authors made a mistake by advising inmates that “the purpose of the study was to learn about their adjustment to prison.” It is well known that within a prison community it is important for prisoners to seem capable of adjusting to prison, and those who do not manage to do this are typically placed at the bottom of the prison hierarchy. Approaching study participants with an overall question regarding “their adjustment to prison” in other words makes it likely that they will try to hide possible weaknesses and try to convey the impression that they cope and adjust relatively well. In a prison context, it is not an “open” but a “leading” question.

Crisis events, hospitalization, and objective data

The Colorado researchers describe initial attempts to include “crisis events” such as self-mutilation or suicide attempts recorded by prison clinicians in their study, but they decided not to, because the number of participants who experienced these events allegedly was too small and because crisis events could occur without staff’s knowledge. The authors conclude that the available data “raise more questions than they provide answers.” If we look carefully at these data, however, they certainly raise some questions.

If we compare the number of crisis events among the mentally ill in GP and in AS, we find that throughout the study two persons had two crisis events in the former group, while 10 persons had 26 crisis events in the latter group (one suicide attempt, 14 cases of suicidal/self harm ideation, and 11 cases of self harming behavior). This seems a significant difference with respect to important behaviors that have been identified in past research as among the adverse effects of solitary confinement. The numbers are small, but, still, five times as many prisoners in the AS-MI group had crisis events compared to the GP-MI group, and 13 times as many crisis events occurred in the AS-MI group compared to the GP-MI group. Furthermore, 11 crisis events in the AS-MI group were associated with psychotic symptoms compared to one such crisis event in the GP-MI group.

These data are important in two ways. They suggest that solitary confinement had a negative impact on the health of the mentally ill, but also, even more importantly, they seriously question the reliability of the study’s self-reported data. These crisis event data raise questions about why the difference among the AS-MI and GP-MI groups was not found through the self-reported data. After all, a significant number of participants in the AS-MI group had crisis events and the prevalence of these events were much higher than in the GP-MI group. Furthermore, such crisis events would normally be considered “the tip of the iceberg.” A likely hypothesis would be that a prison environment producing significantly more self-harm and suicidal thoughts than other prison regimes would also reveal many more “lesser” psychological problems. One cannot help asking how and why the Colorado researchers chose to ignore this data, which in fact questions the entire setup of their study?

Conclusion

The Colorado study suffers from several major problems. First, some of the most relevant research available was not used and it was wrongfully claimed that previous research was biased and flawed. Secondly, the way the self-reported data was collected very likely made these data unreliable. Thirdly, the study authors ignored that their crisis data seriously questioned the validity of their self-reported data and in fact suggested that AS might have serious ill effects. Fourth, the majority of the study participants apparently came directly from segregation, and were thus likely to be harmed from solitary confinement before the study started. Finally, the Colorado study in fact did not compare segregation/solitary confinement with non-segregation/solitary confinement since most of the GP participants also went into solitary confinement during the study. Imagine a similar situation with, for example, medical research on the effects of a new type of medicine where it turns out that most of the control group participants also received the new medicine being tested both during the study and prior to study start. It does not make sense. It is therefore extremely difficult to gain any valuable information about the effects of AS and solitary confinement from the Colorado Study.

Author note: Peter Scharff Smith, Ph.D., has studied the history, practice, and effects of solitary confinement for more than a decade. Currently a Senior Research Fellow at the Danish Institute of Human Rights, his published articles on solitary confinement have appeared in, for example, **Crime and Justice**, **Criminal Justice & Behavior**, **Torture**, and **Punishment & Society**. Reforming Restrictive Housing 2018: Prison Systems Trying to Reduce Numbers in ‘Solitary Confinement’

Two new reports by the Association of State Correctional Administrators (ASCA) and the Liman Center at Yale Law School find that prison directors around the country are aiming to limit the use of what they call “restrictive housing” and what is generally known as solitary confinement. Once, prison administrators viewed isolating individuals as the solution to prison security. Now, they see it as a problem to be solved.

The 2018 Reports provide the only comprehensive, current national data on the number of prisoners in restrictive housing and the length of time they spend there. Because ASCA-Liman has done a series of these surveys, the impact of changing policies can be seen through the new numbers. The 2014 ASCA-Liman survey estimated that 80,000 to 100,000 prisoners were in segregation. The 2016 Report pegged the number at about 68,000 people. As of the fall of 2017, about 61,000 prisoners were in isolation across the country.

In the aggregate, from the 43 prison systems providing data on 1,087,671 prisoners, we totaled 49,197 individuals—or 4.5%—that were confined in cells 22 hours per day for 15 continuous days or more. But in one state, almost no prisoners were in those conditions. In contrast, in other states, more than a tenth of their prisoners were in segregation.

How are some prison directors getting the numbers down? Several systems no longer put prisoners in restrictive housing for minor rule violations. Prison administrators have also increased oversight, so that decisions to keep prisoners in isolation require high-level approval. And many states are implementing new standards from the American Correctional Association that prohibit putting juveniles into restrictive housing and limit its use for pregnant women and seriously mentally ill prisoners.

In *Reforming Restrictive Housing: The 2018 ASCA-Liman Nationwide Survey of Time-in-Cell* and the related report, *Working to Limit Restrictive Housing: Efforts in Four Jurisdictions to Make Changes*, the directors of prison systems in Colorado, Idaho, Ohio, and North Dakota detail how they are making changes to or abolishing solitary confinement. But the picture is not uniform. In more than two dozen states, the numbers of prisoners in restrictive housing decreased from 2016 to 2018, but in eleven states, the numbers went up.

Two areas of special concern are the impact of mental illness and the length of time individuals spend in restrictive housing. States have a variety of definitions for serious mental illness. Using their own descriptions, jurisdictions counted more than 4,000 prisoners identified as seriously mentally ill and in restrictive housing. Not all correctional systems track how long prisoners remain in restrictive housing. Thirty-six jurisdictions reported on 41,000 prisoners in segregation; 80% were held for a year or less. At the other end of the spectrum, almost 2,000 were held for more than six years.

**Rethinking “Death Row”:
Variations in the Housing of Individuals
Sentenced to Death**

**The Arthur Liman Public Interest Program
Yale Law School**

July 2016

The Arthur Liman Public Interest Program, Yale Law School, New Haven, CT

The Arthur Liman Public Interest Program was endowed to honor one of Yale Law School's most accomplished graduates, Arthur Liman, who graduated in 1957 and who personified the ideal of commitment to the public interest. Throughout his distinguished career, he demonstrated how dedicated lawyers, in both private practice and public life, can serve the needs of people and causes that might otherwise go unrepresented. The Liman Program was created in 1997 to forward the commitments of Arthur Liman as an exemplary lawyer dedicated to public service in the furtherance of justice.

**Rethinking “Death Row”:
Variations in the Housing of Individuals Sentenced to Death¹**

In 2015, individuals sentenced to death in the United States were housed in varying degrees of isolation. Many people were kept apart from others in profoundly isolating conditions, while others were housed with each other or with the general prison population. Given the growing awareness of the debilitating effects of long-term isolation, the placement of death-sentenced prisoners on what is colloquially known as “death row” has become the subject of discussion, controversy, and litigation.

This Report, written under the auspices of the Arthur Liman Public Interest Program at Yale Law School, examines the legal parameters of death row housing to learn whether correctional administrators have discretion in deciding how to house death-sentenced individuals and to document the choices made in three jurisdictions where death-sentenced prisoners are not kept in isolation. Part I details the statutes, regulations, and policies that govern the housing of those sentenced to death and reviews prior research on the housing conditions of death-sentenced prisoners. Part II presents an overview of decisions in three states, North Carolina, Missouri, and Colorado, where correctional administrators enable death-sentenced prisoners to have meaningful opportunities to interact with others. Given the discretion that correctional officials have over housing arrangements, these states provide models to house capital-sentenced prisoners without placing them in solitary confinement.

Appendix A: Table of Statutes, Administrative Regulations and Case Law by Jurisdiction

In 2015, nearly 3,000 death-sentenced prisoners were incarcerated in state and federal facilities in the United States.² Most were housed in some form of isolation. A growing body of research documents the harms of long-term isolation on prisoners' mental and physical health, and correlates isolation with increased violence in prison.³ Further, prison administrators report the challenges and costs of staffing isolation units.⁴ Proposals for reducing the use of isolating conditions in prison have been put forth by the executive branch of the federal government,⁵ by state correctional leaders,⁶ and by the legislative branches of the federal⁷ and state governments.⁸ Detention of juveniles in solitary has been a specific source of concern. In 2016, both the Colorado legislature and the Los Angeles County Board of Supervisors enacted provisions banning the use of isolation for juveniles, defined in Colorado as individuals under the age of 21,⁹ and in Los Angeles as individuals younger than 18.¹⁰ Lawsuits have successfully challenged isolating conditions – resulting in consent decrees to limit the use of isolation either for all prisoners¹¹ or for subpopulations, such as the seriously mentally ill and juveniles.¹² Reports and articles document the harms of such isolating confinement and analyze its legal parameters.¹³

These concerns raise questions – in terms of both practices and as a matter of law – about the use of long-term isolation for a specific set of prisoners, those serving capital sentences and often housed on what is colloquially known as “death row.” A few prior reports have surveyed conditions; for example, in 2013, the American Civil Liberties Union (ACLU) detailed the severity of isolation experienced by death-sentenced prisoners and criticized the practice of imposing long-term isolation as an automatic consequence of death sentences.¹⁴

Lawsuits challenging the practice have also been filed. In 2012, Alfred Prieto, a death-row prisoner in Virginia, argued that automatic segregation violated his constitutional right to an individualized decision about the need for placement in isolation. A trial-level judge agreed¹⁵ but on appeal, the Fourth Circuit reversed. The court held (over a dissent) that because all death-sentenced prisoners in Virginia were subjected to the same treatment, Mr. Prieto's isolation was not “atypical” and therefore he had no liberty interest protected by the Due Process Clause in avoiding such confinement.¹⁶ Although U.S. Supreme Court review was sought, after Mr. Prieto was executed¹⁷ his petition for certiorari was dismissed as moot.¹⁸

More generally, members of the U.S. Supreme Court have questioned the constitutionality of profound isolation.¹⁹ In June 2015, Justice Kennedy raised the issue when concurring in the reversal of a grant of habeas corpus relief obtained by Hector Ayala, who had been sentenced to death. Justice Kennedy wrote that in all likelihood, Mr. Ayala would have spent “the great majority of his more than 25 years in custody in ‘administrative segregation’ or, as it is better known, solitary confinement.”²⁰ Justice Kennedy explained that, if following “the usual pattern,” the prisoner had likely been held “in a windowless cell no larger than a typical parking spot for 23 hours a day; and in the one hour when he leaves it, he likely is allowed little or no opportunity for conversation or interaction with anyone.”²¹ Justice Kennedy drew attention to the “human toll wrought by extended terms of isolation,” and called for change through more “public inquiry,” through judicial discussion of the harms; and, in an appropriate case, through decisions by judges about “whether workable alternative systems for long-term confinement exist, and, if so, whether a correctional system should be required to adopt them.”²²

The isolation of prisoners is also the subject of case law in many jurisdictions and of international concern. The European Court of Human Rights has concluded that the Convention on Human Rights imposes limits on isolating conditions,²³ and research in Great Britain detailed the injuries of what it termed “deep custody.”²⁴ International standards also address isolation. In 2015, the United Nations Commission on Crime Prevention and Criminal Justice met to revise its standards for the treatment of prisoners. The result are the Standard Minimum Rules for the Treatment of Prisoners (known as the “Nelson Mandela Rules”), which were adopted by the U.N. General Assembly in 2015.²⁵

These rules define “solitary confinement” to be “confinement of prisoners for 22 hours or more a day without meaningful human contact;” “[p]rolonged solitary confinement” is “solitary confinement for a time period in excess of 15 consecutive days.”²⁶ The Mandela Rules state that, “[i]n no circumstances may restrictions or disciplinary sanctions amount to torture or other cruel, inhuman or degrading treatment or punishment.” The Mandela Rules provide specific “practices, in particular” that “shall be prohibited;” included are “[i]ndefinite solitary confinement;” and “[p]rolonged solitary confinement.”²⁷ Moreover, the Rules state that “[s]olitary confinement shall be used only in exceptional cases as a last resort, for as short a time as possible and subject to independent review, and only pursuant to the authorization by a competent authority,” and “shall not be imposed by virtue of a prisoner’s sentence.”²⁸ In addition, “solitary confinement should be prohibited in the case of prisoners with mental or physical disabilities when their conditions would be exacerbated by such measures” as well as for “women and children.”²⁹

This Liman Report contributes to this discussion by providing an analysis of the statutory, administrative, and procedural rules governing the housing of death-sentenced prisoners in the United States; by summarizing past research on conditions for death-sentenced prisoners; and by offering a detailed account from correctional administrators in three states who have chosen to use their discretion not to put individuals sentenced to death in isolation. Part I provides both an overview of the legal parameters governing the housing of death-sentenced individuals in the thirty-five jurisdictions that had such prisoners in 2015,³⁰ and a review of prior research on housing conditions of death-sentenced individuals. After examining statutes, administrative codes, and available department of correction policies in those jurisdictions, we learned that correctional officials have substantial discretion to decide how to house death-sentenced prisoners. An appendix provides the legal rules and policies of each jurisdiction.

Part II summarizes interviews conducted in the spring of 2015 with correctional administrators in three jurisdictions – North Carolina, Missouri, and Colorado – that permitted death-sentenced prisoners some degree of direct contact with each other or the general prison population. Specifically, as of 2015:

North Carolina housed 156 death-sentenced prisoners, separated them from the general population, but afforded them similar access to resources and programs as other prisoners. Death-sentenced prisoners were able to spend sixteen hours each day in a common room and were permitted to exercise and dine in groups.

Missouri housed 28 death-sentenced prisoners, integrated them into the general population of a maximum-security prison. Death-sentenced prisoners shared cells with other prisoners and had all the same privileges and opportunities as those who had not been sentenced to death.

Colorado, which confined 3 death-sentenced prisoners, placed them in a designated unit together with other prisoners classified as in need of increased supervision. All prisoners housed in the unit had access to a common room in small groups for at least four hours each day; death-sentenced individuals had most of the opportunities available to other prisoners in the unit.

A central finding of this Report is that prison officials have many options when determining the housing of individuals sentenced to death. Our hope is that this Report will provide models for lessening the isolation of death-sentenced individuals and invite innovations in the housing arrangements for all prisoners.

I. A Nationwide Look at Discretion in “Death Row” Housing

As of 2015, thirty-five jurisdictions (thirty-four states and the federal government) housed death-sentenced prisoners. These thirty-five jurisdictions varied widely in the number of death-sentenced prisoners in custody. As of the fall of 2015, California had the largest number – 745. Both Wyoming and New Hampshire each housed one person sentenced to death.³¹

We searched the statutes and administrative codes of these jurisdictions to identify materials governing death-sentenced prisoners.³² Such provisions may be found in a jurisdiction’s criminal laws, capital sentencing provisions, or rules governing the execution of death sentences. We also reviewed case law discussing housing for death-sentenced prisoners.

We sought to learn about whether laws addressed single-celling; hours in cell; participation in groups for meals, recreation, and programming; contact with other death-sentenced prisoners, the general population, visitors, or prison staff; access to books, television, or other media; and opportunities, if any, for periodic reviews of and changes in housing. As we detail below, many of these topics were not the subject of statutes, regulations, and administrative policies. A summary of this research is compiled in Appendix A.

We also researched policies adopted by state and federal corrections departments to govern the housing of death-sentenced prisoners. We consulted the publicly available policy and procedure manuals for each jurisdiction’s department of corrections, and supplemented our findings with secondary sources, such as law review articles and newspaper reports.

Further, we sought to learn about prior resources on the housing of people serving capital sentences. Below, we summarize four surveys that included information on housing practices for death-sentenced prisoners: a 2013 survey by the ACLU; a 2014 survey by the Association of State Correctional Administrators (ASCA) and the Liman Program at Yale Law School; a 2013 survey by ASCA; and a 2008 survey that was prepared by Professor Sandra Babcock for the

Death Penalty Information Center. The surveys all reported high degrees of isolation for death-sentenced prisoners.

To preview what follows, this review of statutes and regulations documents that most jurisdictions do not require isolation of death-sentenced prisoners and leave correctional officials substantial discretion to determine housing conditions. Many correctional departments' policies impose isolation; the four surveys further document how profoundly isolating the conditions have been for many prisoners. In contrast, in a few jurisdictions, correctional officials have published policies describing the placement of death-sentenced prisoners in less restrictive housing conditions.

A. Laws Governing Isolation of Death-Sentenced Prisoners

1. Placement in Isolation or Segregation

In nineteen of the thirty-five jurisdictions with death-sentenced prisoners, statutes and regulations specifically address death-sentenced prisoner housing. Seventeen states do so by statute,³³ and four of those seventeen also address housing in regulations.³⁴ Two (Florida and Ohio) do so by regulation.³⁵ A compilation of relevant statutes, regulations and policies is included in Appendix A.

In three states – Idaho, Pennsylvania and Wyoming – statutes require, but do not define, “solitary confinement” for death-sentenced prisoners.³⁶ Idaho’s statute states, “Whenever a person is under death warrant, execution of which has not been stayed, the warden of the prison in which the person is incarcerated shall keep the condemned person in solitary confinement until execution.”³⁷ Pennsylvania’s statute provides, “Upon receipt of the warrant, the secretary shall, until infliction of the death penalty or until lawful discharge from custody, keep the inmate in solitary confinement.”³⁸ The Wyoming statute states that a death-sentenced prisoner shall be kept “in solitary confinement until execution of the death penalty”³⁹

Three state statutes – Washington, Texas and Florida – reference single cells. Washington’s statute provides that a death-sentenced prisoner “shall be confined in the segregation unit, where the defendant may be confined with other prisoners not under sentence of death, but prisoners under sentence of death shall be assigned to single-person cells.”⁴⁰ Texas’s governing statute calls for prisoners confined in “death row segregation” to be held “in single occupancy cells.”⁴¹ Florida’s administrative regulations require “single-cell special housing . . . of an inmate who, upon conviction or adjudication of guilt of a capital felony, has been sentenced to death”⁴²

Florida, South Dakota, and Texas call for death-sentenced prisoners to be segregated from the general prison population, although not necessarily from each other. The governing regulation in Florida provides, “Death row housing shall be separate from general population housing.”⁴³ South Dakota’s statute directs that death-sentenced individuals “shall be segregated from other inmates at the penitentiary.”⁴⁴ In a general provision not limited to death-sentenced prisoners, Texas states that institutions “may not house inmates with different custody classifications in the same cellblock or dormitory unless the structure of the cellblock or dormitory allows the physical separation of the different classifications of inmates.”⁴⁵

Administrative regulations in Oregon and Ohio reference “death row.” Oregon regulations state: “It is the policy of the Department of Corrections to assign inmates with a sentence of death to the Death Row Housing Unit or to a Death Row status cell.”⁴⁶ Ohio’s regulations provide both that prisoners sentenced to death “may be assigned to an area of the institution . . . which area shall be known as ‘death row’” (and that “absent significant extenuating circumstances, no inmate shall be assigned to or housed in death row unless that inmate has been sentenced to death . . .”),⁴⁷ as well as that correctional officials “may assign or reassign an inmate who has been sentenced to death to a security classification or special management status other than that which is normally used for such inmates, based on the security or medical and mental health requirements for the inmate.”⁴⁸

Connecticut has legislation crafted in 2012 when the state legislature abolished the death penalty. In lieu of the death penalty, the statute created a new category, “murder with special circumstances,” and specified certain conditions of confinement for individuals convicted under the statute.⁴⁹ The Connecticut statute states that the Commissioner of Correction place “special circumstances” inmates in administrative segregation until reclassification.⁵⁰

In Alabama, California, Colorado, and New Hampshire, statutes name specific institutions at which death-sentenced individuals are to be housed.⁵¹ Alabama directs death-sentenced prisoners to the “William C. Holman unit of the prison system at Atmore”;⁵² California references San Quentin State Prison;⁵³ Colorado directs prisoners to the “correctional facilities at Canon City” after a death warrant is delivered;⁵⁴ and New Hampshire names the “state prison at Concord.”⁵⁵

In a few jurisdictions, statutes expressly state that corrections officials have discretion when making decisions on housing death-sentenced prisoners. For example, Louisiana’s statute directs the Department of Public Safety and Corrections “to incarcerate the offender in a manner affording maximum protection to the general public, the employees of the department, and the security of the institution.”⁵⁶

In sum, most jurisdictions do not have statutes mandating segregation, isolation, or other particulars related to the housing conditions provided to death-sentenced prisoners.

2. *Visiting and Time Out-of-Cell*

Some jurisdictions discuss visiting and out-of-cell time for death-sentenced prisoners. Colorado, Idaho, South Dakota, and Wyoming all state that a death-sentenced prisoner should be permitted visits with his lawyer, spiritual adviser, and family.⁵⁷ Under Colorado’s statute, prison “rules shall provide, at a minimum, for the inmate’s attendants, counsel, and physician, a spiritual adviser selected by the inmate, and members of the inmate’s family” to have “access” to the inmate.⁵⁸ Idaho permits “access” to “the attorney of record, attending physicians, a spiritual adviser of the condemned’s choosing, and members of the immediate family of the condemned.”⁵⁹ South Dakota, which requires segregation of death-sentenced prisoners, mandates that “[n]o other person may be allowed access to the defendant without an order of the trial court except penitentiary staff, Department of Corrections staff, the defendant’s counsel, members of the clergy if requested by the defendant, and members of the defendant’s family.”⁶⁰ Wyoming

authorizes access by “physician and lawyers [and] . . . [r]elatives and spiritual advisers of the prisoner.”⁶¹

The laws of Alabama, Indiana, and Pennsylvania address visiting and describe categories of individuals who may do so.⁶² Under Alabama’s statute, “while so confined, all persons outside the said prison shall be denied access to [a death-sentenced prisoner], except his physician and lawyer . . . , and the relatives, friends and spiritual advisors of the condemned person, who shall be admitted to see and converse with him at all proper times, under such reasonable rules and regulations as may be made by the Board of Corrections.”⁶³ In Indiana, the death-sentenced prisoner’s “(1) attorney; (2) physician; (3) relatives; (4) friends; and (5) spiritual advisor may visit the convicted person while the convicted person is confined.”⁶⁴ If a death warrant has been issued, Pennsylvania requires that death-sentenced prisoners be housed in solitary confinement and that, other than correctional staff, “no person shall be allowed to have access to the inmate without an order of the sentencing court,” other than “counsel of record or other attorney requested by the inmate” and “a spiritual adviser selected by the inmate or the members of the immediate family of the inmate.”⁶⁵

Most jurisdictions’ laws do not address in-cell conditions or the number of hours that death-sentenced prisoners must spend in cell each day. A few – including Florida, Ohio and Oregon – discuss out-of-cell time and certain other conditions.⁶⁶ For example, Florida’s regulations provide for a minimum of six hours per week of outdoor exercise.⁶⁷ Ohio’s regulations specify “[f]ive hours of recreation per week.”⁶⁸

B. Policies Governing Isolation of Death-Sentenced Prisoners

Eighteen states had published policies addressing death-sentenced prisoners.⁶⁹ Further, in jurisdictions where we could locate no official policy, we supplemented our knowledge by reviewing the Department of Corrections’ websites or handbooks, as well as secondary sources such as reports in periodicals and law review articles.

Policies varied widely in terms of specificity and topics. For example, Ohio’s policies do not require automatic assignment of death-sentenced prisoners to the highest security classification, which carries the most restrictive housing conditions.⁷⁰ In Idaho, death-sentenced prisoners are initially placed in restrictive housing (also known as administrative segregation), and corrections officials must then conduct a hearing to determine if the prisoner can be moved to the less restrictive “close-restrictive custody.”⁷¹ If remaining in segregation, the death-sentenced prisoner’s placement must be reviewed “at least once a year” to decide if a shift to close-restrictive custody is appropriate.⁷² In contrast, as of the fall of 2015, in Virginia, death-sentenced prisoners were required under Department of Corrections’ policy to be held in single-person cells and confined for 23 hours per day. According to news reports, when the *Prieto* litigation was pending, policy shifts occurred to allow death-sentenced prisoners some access to each other and to visitors.⁷³ Jurisdiction-by-jurisdiction policies are included in Appendix A.

C. Prior Research Regarding Death-Sentenced Prisoner Housing

This Report is not the first to consider death-sentenced prisoner housing, which has been the subject of research focused specifically on the topic, as well as on solitary confinement more generally. Four such surveys, based on different information sources, are detailed below. The reports consistently portray corrections officials as housing death-sentenced prisoners in very restrictive and isolating conditions. In addition, some commentators have also raised questions about the necessity and the legality of isolation on death row.

In 2013, the ACLU published a report, *A Death Before Dying: Solitary Confinement on Death Row*, which was drawn from a survey of “advocates for death row prisoners and others knowledgeable about death row conditions.”⁷⁴ Based on responses about housing conditions in twenty-six states,⁷⁵ the Report concluded that ninety-three percent of those states held death-sentenced prisoners in their cells for twenty-two hours or more per day.⁷⁶ The cells ranged in size from thirty-six to one hundred square feet; most were “the size of an average bathroom.”⁷⁷ Meals and medication often came through slots in the cell door,⁷⁸ and death-sentenced prisoners were allotted an hour or less of exercise a day, alone in a small pen.⁷⁹

As the ACLU survey put it: “Many prisoners will go years without access to fresh air or sunshine.”⁸⁰ Policies on visits were highly restrictive.⁸¹ In most of these states, death-sentenced prisoners were not permitted to have physical contact with their visitors⁸² and, in some, prisoners were required to remain in arm and leg restraints during visits.⁸³ In general, the ACLU found that prisoners were forced to live in a state of “extreme social isolation” and “enforced idleness,” as the “overwhelming majority of states” did not provide access to work opportunities, educational programming or vocational training.⁸⁴

In 2014, ASCA joined with the Liman Program to gather information on the numbers of people in isolation and the conditions in “administrative segregation,” one form of restrictive housing. The resulting Report, *Time-in-Cell*, was based on survey responses from forty-six jurisdictions. Thirty-four of those jurisdictions – housing about 73% of the more than 1.5 million people incarcerated in U.S. prisons – provided data on all the people in restricted housing, whether termed “administrative segregation,” “disciplinary segregation,” or “protective custody.” In that subset, more than 66,000 prisoners were in restricted housing. Given that number, ASCA and Liman estimated that some 80,000 to 100,000 people were, in 2014, in restrictive housing settings in prisons. *Time-in-Cell* focused on conditions in administrative segregation across the country; demographic information regarding these prisoners; the length of prisoners’ stay in administrative segregation; their weekly time in-cell; conditions within these cells; and segregated prisoners’ access to recreation, programming, visits, and social contact.⁸⁵ One subset of the survey’s questions, answered by some of the responding jurisdictions, addressed the housing conditions of death-sentenced prisoners. Twenty-eight jurisdictions reported that death-sentenced prisoners were housed in administrative segregation or some other form of separation from the general population.⁸⁶

A third source of information comes from a 2013 ASCA survey, asking correctional directors about housing policies; officials in twenty-nine states responded, providing jurisdiction-specific information.⁸⁷ Two states, Maryland (which has since abolished the death penalty) and Missouri, reported holding death-sentenced individuals in the general population.⁸⁸ Correctional

departments in the other twenty-seven jurisdictions all indicated that death-sentenced prisoners were held in some form of “segregated” or “other” housing.⁸⁹ Of these twenty-seven jurisdictions, fourteen reported that segregated death-sentenced prisoners could engage in some form of congregate activity.⁹⁰ In addition, eleven states indicated that death-sentenced individuals were permitted some movement without restraints.⁹¹ Twenty-five jurisdictions reportedly provided programming for death-sentenced prisoners.⁹²

Another survey, for the Death Penalty Information Center, conducted in 2008 by Professor Sandra Babcock working with a group of her students, compiled a state-by-state comparison of thirty-one jurisdictions based on interviews with capital defense attorneys and through materials published by various departments of corrections.⁹³ This research identified twenty jurisdictions that held death-sentenced prisoners in cells for twenty-two hours or more per day.⁹⁴ Eleven permitted death-sentenced prisoners to participate in group recreation,⁹⁵ and nine provided some educational opportunities, occupational training, or work opportunities.⁹⁶ Ten jurisdictions allowed contact visits with the prisoner’s family,⁹⁷ and seventeen permitted contact visits with the prisoner’s lawyer.⁹⁸

As noted, other commentators have also raised concerns about death-row housing. For example, in 2005, Andrea Lyon and Mark Cunningham reviewed analysis of the “mainstreaming” of death-sentenced prisoners in Missouri and argued that evidence of the success of that practice raised questions about the constitutionality of imposing profound isolation.⁹⁹ More recently, Marah Stith McLeod also relied on the Missouri data as well as on other literature to argue that prison administrators ought not have the discretion to impose the isolation of death row; given the severity of conditions on most death-rows, she argued that the democratic processes of legislatures ought to decide whether that form of punishment is necessary and just.¹⁰⁰

II. Housing Arrangements for Death-Sentenced Prisoners in North Carolina, Missouri, and Colorado

We identified at least six states – California, Colorado, Missouri, Montana, North Carolina, and Ohio – that did not impose confinement of 20 hours or more in cells each day for death-sentenced prisoners. To learn more about the policies and their implementation, we chose North Carolina, Missouri and Colorado, three states that varied in the size of their death-sentenced prisoner populations and in the degree of these prisoners’ integration with the general prison population. We then reviewed their statutes, administrative regulations, and prison policies, as well as scholarly research, surveys, and media reports, and we interviewed administrators from each state’s corrections department. Like many states, neither North Carolina nor Missouri have a specific statute or regulation governing the housing of death-sentenced prisoners. As noted, Colorado’s statute leaves correctional administrators significant discretion by providing for incarceration at the correctional facilities at Canon City and for visiting by the prisoner’s “attendants, counsel, . . . physician, a spiritual adviser . . . and members of the inmate’s family.”¹⁰¹

Below, we begin with North Carolina, the state with the largest death-sentenced prisoner population – 156 people – of the three. We interviewed Kenneth Lassiter, Deputy Director of Operations for the North Carolina Department of Public Safety (NCDPS); he served as the warden at Central Prison, the facility holding male prisoners sentenced to death. In April of 2015, at the time of the interview, North Carolina’s death-sentenced housing arrangement had been in place for over a decade.

We then turn to Missouri, and the materials provided by George Lombardi, Director of the Missouri Department of Corrections (MDOC), who was the Director of Adult Institutions in 1989, when MDOC changed its policies on death-sentenced prisoners; Director Lombardi also co-authored a report on the transition. As noted, others have also done research on the Missouri “mainstreaming” practices; we had the benefit of a study by Mark D. Cunningham, Thomas J. Reidy, and Jonathan R. Sorensen, who compared the rate between 1991 to 2002 of violent misconduct by integrated death-sentenced prisoners to that of non-death sentenced prisoners,¹⁰² as well as a follow-up study published in 2016 and reviewing twenty-five years of data.¹⁰³

To learn about Colorado, we interviewed Rick Raemisch, Executive Director, and Kellie Wasko, Deputy Executive Director, of the Colorado Department of Corrections (CDOC).¹⁰⁴ Director Raemisch, who was appointed in 2013, instituted a series of changes in the housing of death-sentenced prisoners and for the general prisoner population.

As is detailed below, in each state, correctional officials praised their own systems, each of which enabled death-sentenced individuals to live with other prisoners. In each interview, the Directors explained the reasons for and the process of transition, and why they understood the reforms to be a success in terms of improving the lives of those in prison, lowering rates of violence, and reducing the challenges faced by staff.

A. North Carolina

North Carolina has one of the largest death-sentenced populations in the country, with 156 death-sentenced prisoners as of 2015.¹⁰⁵ Since 1984, the state has executed forty-three people.¹⁰⁶ As of the spring of 2016, the last execution was in 2006.¹⁰⁷

According to Deputy Director Lassiter, North Carolina’s death row policies have been in place for more than a decade.¹⁰⁸ Deputy Director Lassiter recalled having looked into the history of death row during his time as warden of Central Prison; he reported finding no information suggesting that the prisoners had previously been held in a greater degree of isolation.¹⁰⁹

Deputy Director Lassiter explained that, as of 2015, the NCDPS housed 153 male and three female death-sentenced prisoners.¹¹⁰ The men were incarcerated in Central Prison,¹¹¹ and the women at the North Carolina Correctional Institution for Women, both in Raleigh.¹¹² Men sentenced to death were placed in what was known as Unit III of Central Prison.¹¹³ Though they were housed separately from the general population, they were afforded roughly the same privileges as other serious offenders held in Central Prison.¹¹⁴

Deputy Director Lassiter described Unit III as including eight cell pods.¹¹⁵ In each pod, twenty-four single cells opened onto a central dayroom.¹¹⁶ Each cell measured approximately

eleven-by-seven feet and was equipped with a bed, a sink, a toilet, a small writing table, a narrow window, and a radio.¹¹⁷ The dayrooms were outfitted with a television, several stainless steel tables, and showers.¹¹⁸ Death row prisoners could spend time and watch television in the dayroom together from 7 a.m. until 11 p.m.¹¹⁹

Death-sentenced prisoners ate their meals as a group in a common dining hall, at a different time than other prisoners.¹²⁰ Individuals sentenced to death were permitted at least one hour per day to exercise in groups and to shower.¹²¹ Deputy Director Lassiter estimated that, depending on which unit activities were scheduled, the prisoners typically spent more than one hour a day in their recreation yard.¹²² Death-sentenced prisoners were also permitted to work jobs within Unit III, including as a barber, janitor, recreation clerk, and in the library, canteen, or clothes house.¹²³

North Carolina permitted two noncontact visitors each week.¹²⁴ Access to religious services was within the unit.¹²⁵ The religious services consisted of a one-hour Christian worship service every Sunday; a one-hour Islamic worship service every Friday, and a ninety-minute Bible study class every Tuesday morning.¹²⁶ Programming, such as working towards a GED, was not regularly available to death-sentenced prisoners, but Director Lassiter indicated that case managers would try to find volunteers to fulfill individual requests.¹²⁷ In the case of a disciplinary infraction, a death-sentenced prisoner would be sent to what was called Unit I, the restricted housing unit, where he would eat meals, exercise, and shower apart from other prisoners.¹²⁸

Deputy Director Lassiter also explained that, if an execution date were set, both male and female death-sentenced prisoners would be moved three to seven days prior to the scheduled execution to the “death watch” area of Central Prison.¹²⁹ The single cells in the death watch area each had a bed, lavatory, commode, and writing table. The prisoner, who spent the entire day in the cell except fifteen minutes for a shower, had no contact with other prisoners.¹³⁰ Visits from attorneys, religious advisers, psychologists, and family were permitted; contact visits were at the warden’s discretion.¹³¹

Housing policies for death-sentenced prisoners had not been a subject of significant political debate.¹³² One brief flurry took place after a death-sentenced prisoner wrote a letter in 2012 to a newspaper and claimed that he enjoyed a luxurious life on death row.¹³³ In response, legislators introduced a bill that would have banned television on death row.¹³⁴ Deputy Director Lassiter, then the warden of Central Prison, testified that television served the Department as a management tool.¹³⁵ Although the bill came out of committee, it was not enacted.

Deputy Director Lassiter expressed unequivocal support for NCDPS’s death row policies.¹³⁶ He explained that prisoner-on-officer violence was nearly non-existent on death row, and prisoner-on-prisoner violence was extremely rare.¹³⁷ Death row had fewer disciplinary infractions, fewer fights, and fewer assaults than any of the other units at Central Prison.¹³⁸ According to Lassiter, death row prisoners who subsequently had their death sentences commuted had better behavioral records in the general population than other prisoners.¹³⁹

Deputy Director Lassiter explained that “giving inmates an opportunity to create social connections with other inmates and providing some sense of normalcy is an important part of why our policies are successful.”¹⁴⁰ He acknowledged that some corrections officials believed that death-sentenced prisoners were inherently more dangerous, but said that North Carolina had a “totally opposite mentality.”¹⁴¹ “Our inmates police themselves within their own community,” he continued, “Part of the reason that works is that they are not isolated twenty-three hours each day.” The mental health consequences of isolating death row prisoners were, from his point of view, likely to lead to more problems with violence and discipline than isolation solved.¹⁴²

Deputy Director Lassiter also believed that the relatively safe conditions on North Carolina’s death row were in part because most of the prisoners no longer viewed death row as the place where they were going to die. “The majority of inmates sentenced to death ultimately don’t end up being executed. The list of people removed from death row is a lot longer than the list of executions,” he explained.¹⁴³ Accordingly, death row prisoners had a strong incentive to behave well. Moreover, he noted that many death row prisoners were of a different profile than other prisoners at Central Prison.¹⁴⁴ They were generally not habitual offenders, but tended to have been convicted of a single, serious crime. Deputy Director Lassiter speculated that this difference in background helped explain the success of North Carolina’s policies.¹⁴⁵

Deputy Director Lassiter noted that when he was the warden of Central Prison, he dined on a regular basis with the death row prisoners on Unit III, in part because they were his “favorite prisoners to interact with.” He added that death row prisoners tended to be “extremely remorseful and take responsibility for what they have done and wish they could go back and change it. Generally, prisoners with a death sentence have a totally different view of life than another inmate.”¹⁴⁶ When asked whether he had ever considered changing North Carolina’s approach to housing death-sentenced prisoners, Deputy Director Lassiter responded emphatically: “Our system is proven to work and we have no desire to tweak it.”¹⁴⁷

B. Missouri

As of January 2016, Missouri had 28 death-sentenced prisoners, all of whom were housed at the Potosi Correctional Center (PCC) in Mineral Point. Since 1989 and as of the spring of 2016, the state had executed 86 people.¹⁴⁸ The state’s last execution occurred in May 2016.

The housing system for death-sentenced prisoners in Missouri was designed in response to protest and litigation challenging the use of isolation and poor conditions. Before 1989, death-sentenced prisoners in Missouri were housed in a separate, below-ground unit at the now-closed Missouri State Penitentiary (MSP).¹⁴⁹ Death-sentenced prisoners did not leave the housing unit for services, programming, or recreation; the limited program opportunities available were brought to the unit.¹⁵⁰ Prisoners were allowed to exercise an hour each day in a separate area,¹⁵¹ and were kept in six-by-ten foot cells for the other twenty-three hours of the day.¹⁵² Director George Lombardi characterized conditions on death row in MSP as “marginal.”¹⁵³

In August 1985, a class of death-sentenced prisoners at the Missouri State Penitentiary filed a lawsuit pursuant to 42 U.S.C. § 1983.¹⁵⁴ The prisoners alleged that defendants, administrators in the MDOC, had violated their First, Sixth, Eighth, and Fourteenth Amendment rights.¹⁵⁵ According to Director Lombardi, opposing this lawsuit seemed “futile.”¹⁵⁶

On May 22, 1986, the parties initially entered into a consent decree intended to eliminate conditions that “may” have denied death-sentenced prisoners their constitutional rights.¹⁵⁷ The consent decree included provisions to protect prisoners’ access to legal mail, religious services, telephones, medical and mental health services, visitation, and recreation.¹⁵⁸ The decree provided for specialized training for corrections staff, including administrative segregation training for custody staff and mental health care training for caseworkers.¹⁵⁹ The consent decree also described a multi-tiered classification system for death-sentenced prisoners, with different custody or security levels, in which death-sentenced prisoners with good behavior could receive greater privileges.¹⁶⁰ MDOC was also permitted, with court approval, to transfer death-sentenced prisoners to a new location.¹⁶¹ In 1989, with court approval, the MDOC moved all death-sentenced prisoners to PCC, a recently opened maximum security prison.¹⁶²

When death-sentenced prisoners were first moved to PCC, they were housed in a separate unit, with death-sentenced prisoners classified as minimum custody in one wing, and all other death-sentenced prisoners in another wing.¹⁶³ Director Lombardi described PCC as better and cleaner than MSP, but noted that staff still had to arrange for services to be brought separately to death-sentenced prisoners.¹⁶⁴ Following the transfer, death-sentenced prisoners filed a motion for contempt to challenge conditions at PCC and their segregation from other prisoners.¹⁶⁵

While the renewed challenge was pending, administrators and staff in the MDOC began to consider better ways to manage death-sentenced prisoners and to provide them with a similar level of services as provided to the general population.¹⁶⁶ The process of bringing meals and medical services to death-sentenced prisoners, as well as locking down the prison whenever these prisoners left their cells, was cumbersome.¹⁶⁷ Director Lombardi stated that the idea that capital offenders were inherently more dangerous than other long-term prisoners did not make sense to corrections staff.¹⁶⁸ The conversation developed into a discussion of the feasibility of integrating death-sentenced prisoners into the general population at PCC.¹⁶⁹

The full integration of PCC took place incrementally.¹⁷⁰ Prison officials started calling death-sentenced prisoners “capital punishment inmates,” and began to escort minimum custody death-sentenced prisoners to the dining room to eat with the general population.¹⁷¹ Death-sentenced prisoners were then given permission to visit the law library and to work in the laundry. For the first time, these individuals were classified using the Adult Internal Management System (AIMS).¹⁷² Prisoners were able to play softball together, and did so without incident.¹⁷³ By January of 1991, all individuals with capital sentences were mainstreamed into the general population.¹⁷⁴ At the time, corrections staff “expressed surprise at the ease with which the transition occurred.”¹⁷⁵

The transition was completed before the district court ruled on the plaintiffs’ motion for contempt, and the defendants moved thereafter to vacate the consent decree.¹⁷⁶ The District Court of the Eastern District of Missouri (to which jurisdiction had been transferred following the transfer of the prisoners to PCC) found that the defendants had complied with the requirements of the consent decree and that no unconstitutional conditions existed. The court vacated the decree and terminated its continuing jurisdiction over the matter.¹⁷⁷ The prisoners appealed, but the Eighth Circuit affirmed the lower court decision.¹⁷⁸

As of the winter of 2015, all of Missouri's death-sentenced prisoners were housed at PCC.¹⁷⁹ PCC houses death-sentenced prisoners, life-sentenced prisoners, and parole-eligible prisoners.¹⁸⁰ As of 2015, the procedure for receiving and housing prisoners was that death-sentenced prisoners were transferred directly from courts and jails to PCC, a maximum security facility (Custody Level 5);¹⁸¹ non-death sentenced prisoners were first sent to one of three diagnostic centers in the state to determine their custody level before being assigned to a facility.¹⁸² Once death-sentenced prisoners arrived at PCC, they were treated no differently than other prisoners in the institution.¹⁸³

Upon arrival at PCC, all prisoners were initially assigned to one of the administrative segregation units during their reception and orientation,¹⁸⁴ and could then be moved to a double cell in the transitional administrative segregation unit.¹⁸⁵ PCC then used its AIMS classification system to categorize all prisoners into one of thirteen housing units.¹⁸⁶

Prisoners could be promoted from the transitional unit to one of two "baseline" general population units, where they ate meals with the rest of the prisoners and could attend religious and educational services.¹⁸⁷ If approved, prisoners could advance to one of the two general population units, where they had access to recreation and programming in large groups and could purchase a television and radio.¹⁸⁸ Prisoners who were conduct-violation free for a certain period of time could be moved to the "honor dorm,"¹⁸⁹ where they were "out of their cells most of the day."¹⁹⁰ Death-sentenced individuals could be double-celled with other general population prisoners, regardless of sentence.¹⁹¹

Like the rest of the prison population, death-sentenced prisoners could be assigned to the protective custody unit, where they ate and participated in recreation as a group.¹⁹² Prisoners could be placed in the special needs unit, where they exercised and attended mental health programming separately but took meals with the general population.¹⁹³ Correctional administrators assigned some death-sentenced prisoners who were not special needs to this unit for the purpose of ensuring a permanent single cell.¹⁹⁴ Prisoners who had "difficulty in adjusting to institutional life" were placed in the partial treatment unit.¹⁹⁵

Death-sentenced prisoners had the same privileges and could access the same services afforded to all prisoners in their housing unit. For example, death-sentenced prisoners in general population were allowed eight hours of recreation each day and permitted to do crafts for six of those hours.¹⁹⁶ PCC offered Narcotics Anonymous and Alcoholics Anonymous programs and vocational education programs.¹⁹⁷ Prisoners at PCC could also participate in a dog adoption program that enabled prisoners to train dogs that had been held in shelters and could be adopted by people in the community.¹⁹⁸ Death-sentenced prisoners could apply for jobs, access the commissary, enjoy equal access to visitation and phones, and visit the law library.¹⁹⁹ Visitation hours were three days a week for eight hours each day.²⁰⁰

Unique to death-sentenced prisoners was their housing prior to execution: after an execution date was set, a death-sentenced prisoner was moved into protective custody. The prisoner was subsequently taken to a segregated holding cell two to three days prior to the scheduled execution.²⁰¹

Director Lombardi stated that mainstreaming death-sentenced prisoners eliminated the burdensome costs of maintaining separate death row facilities.²⁰² PCC no longer had to assign staff to escort death-sentenced prisoners around the facility.²⁰³ There was no longer a need to arrange for death-sentenced prisoners to have access to health care and medications, psychological counseling, and the law library.²⁰⁴ Commissary hours, visitation days, and medical services access were expanded after the transition because separate time windows for death-sentenced prisoners were no longer required.²⁰⁵ Jobs in the laundry also became available for administrative segregation prisoners when death-sentenced prisoners gained access to all employment.²⁰⁶ Director Lombardi thought that the MDOC would incur less in legal expenses arising from prisoners' litigation about death row conditions.²⁰⁷

Director Lombardi noted that in the prison as a whole, disciplinary infractions and violence had decreased after the integration of death-sentenced prisoners.²⁰⁸ He stated that while there was some initial skepticism, staff encountered no problems with the gradual process of integration, and that he had generally found no difference between death-sentenced prisoners and other long-term prisoners.²⁰⁹ Additionally, Director Lombardi believed that because death-sentenced prisoners were no longer subject to automatic long-term administrative segregation, there were fewer mental health problems following integration.²¹⁰

Director Lombardi stated that it seemed that death-sentenced prisoners at PCC have slightly lower rates of assaultive behavior than other prisoners.²¹¹ Director Lombardi credited the incentive structure: just like any other prisoner, a death-sentenced prisoner could be sent to administrative segregation for harming someone but could earn the highest level of privileges available with a good disciplinary record.²¹² Furthermore, most prisoners facing execution were still engaged in appeals or collateral attacks on their convictions, motivating them to avoid sanctions.²¹³ Lombardi believed that such a system, in conjunction with services such as counseling and the dog adoption program, motivated death-sentenced prisoners to behave well.²¹⁴

Lombardi considered the integration of death-sentenced prisoners into the general population a success. He stated that integration is "so ingrained in the system now that it's no big deal. We don't even think about it."²¹⁵ According to him, "We did the right thing, and it's proven time and again that it is the right thing."²¹⁶

C. Colorado

As of 2015, the Colorado Department of Corrections (CDOC) had a total of three death-sentenced prisoners, all male, who were housed at Sterling Correctional Facility in Sterling, Colorado, which was overseen by Warden James Falk. As of 2016, the last execution in Colorado was in 1997.²¹⁷

The question of solitary confinement has been an issue for the Colorado prison system for several years. Relatively few individuals were sentenced to death, but a significant number of other prisoners were held in isolation until 2011, when Tom Clements became the Director of Corrections. Under his leadership, Colorado reduced that population from more than 1,400 to about 700.²¹⁸ After Director Clements was murdered by a former prisoner in 2013, Rick

Raemisch, who had been the head of the Wisconsin Department of Corrections, was appointed;²¹⁹ he continued Director Clements's efforts to lower the number of individuals in isolation.

Until 2014, Colorado housed death-sentenced prisoners in administrative segregation at Sterling Correctional Facility;²²⁰ no separate facility was provided for those with death sentences.²²¹ At the time, administrative segregation was the most secure custody level in the CDOC.²²² Prisoners were locked in their cells twenty-three hours a day, with one hour out for exercise and showering. Prisoners could not leave their cells unless they were in full restraints and escorted by at least two correctional officers. Meals, pharmaceutical, educational, and library services were delivered to the cells. Prisoners were permitted to have a television and two and a half hours of non-contact visitation time per week.²²³

Colorado reformed its housing policies for death-sentenced prisoners in 2014 as part of its more general effort to reduce reliance on administrative segregation.²²⁴ According to Director Raemisch, a long period of isolation is psychologically damaging and has the effect of "taking someone who has committed a very violent act and possibly making them more violent."²²⁵ Director Raemisch noted during our interview that, prior to reform:

Colorado had failed in its mission Its mission is not to run a more efficient institution, which is what segregation is for. Running an efficient institution is a noble goal, but the mission really is to protect the community. You don't do that by sending someone out worse than they came in.²²⁶

By March 2014, CDOC had decreased the population held in solitary confinement to 577²²⁷ and, as of the spring of 2016, to some 160 prisoners.²²⁸

CDOC extended its reform efforts to death-sentenced prisoners. On March 4, 2014, Deputy Executive Director Kellie Wasko sent an email to all CDOC employees announcing the planned introduction of a policy eliminating administrative segregation for death-sentenced prisoners.²²⁹ Director Raemisch noted that part of the impetus for this change was the long period that death-sentenced prisoners would likely spend living in Colorado prisons.²³⁰ While death-sentenced prisoners might never re-enter the larger community, Director Raemisch viewed reform of those prisoners' conditions as an issue for the well-being of the prison community and its safety.²³¹

As a first reform, CDOC permitted the three male death-sentenced prisoners²³² to be with each other; this change evolved into the current policy under which death-sentenced prisoners are housed with non-death-sentenced prisoners in a "close custody management control unit" (MCU), first housed at Sterling Correctional Facility in Sterling, Colorado²³³ and, by 2016, at the Colorado State Penitentiary (CSP).²³⁴

The discussion about reforming housing for death-sentenced prisoners originated in the upper level of CDOC, and administrators then sought feedback on the reforms from corrections officers. Director Raemisch called his staff's handling of segregation reform "amazing." He noted that they had achieved "a complete change in culture" in a short amount of time. Deputy Executive Director Wasko said that the biggest part of training staff on these reforms was to

point out that death-sentenced prisoners were functionally the same as many others in the prison; staff were “already walking around with that type of offender [convicted of serious crimes of violence]. The only difference is the sentence. Several hundred inmates have life without possibility of parole.”²³⁵

As of the spring of 2015, death-sentenced prisoners were classified as “close custody” prisoners.²³⁶ Within the “close custody” classification, prisoners were placed into various status designations based on their management needs.²³⁷ Death-sentenced prisoners were designated to and housed in a close custody MCU.²³⁸ Prisoners in the MCU each had their own cell, measuring about seven-by-thirteen feet. Each MCU had about sixteen prisoners, and both death-sentenced and non-death-sentenced prisoners could be housed together within the same MCU. Death-sentenced prisoners generally had the same living conditions and privileges as other close custody prisoners in the MCU. According to Wasko, “they are not identified as death-sentenced offenders. You couldn’t pick them out. They are treated like all other prisoners in the management control unit.”²³⁹

As of 2015, MCU prisoners were permitted to leave their cells for a minimum of four hours a day, seven days a week; prisoners spent two hours in the morning and two hours in the afternoon in groups of about eight prisoners, some of which was spent together in a dayroom. During such times, corrections officers, who were not physically in the dayroom, maintained visual contact at all times.²⁴⁰ Prisoners were permitted four hours of indoor or outdoor recreation per week.²⁴¹

In terms of the backdrop before the reforms under Director Raemisch, the Colorado prison system had also faced litigation (as had Missouri) about conditions for death-sentenced prisoners. In 2009, three individuals claimed that they had been subjected to cruel and unusual punishment because they were denied the opportunity for outdoor exercise for an extended period of time.²⁴² The case was settled by the joint request of the parties under an agreement in which Colorado moved death-sentenced prisoners to Sterling so they could have access to outdoor recreation.²⁴³ At the time, Sterling Correctional Facility did not have outdoor areas for groups; recreation was available on an individual basis.²⁴⁴ As noted above, death-sentenced individuals were part of the MCU, and those prisoners were later moved to another facility, the Colorado State Penitentiary (CSP). That prison was the subject of another case, brought by a non-death sentenced prisoner about its lack of outdoor recreational space.²⁴⁵ As of the spring of 2016, Colorado was building an outdoor recreation area for CSP; the expected completion date is in December 2016.²⁴⁶

Returning to the rules for the MCU prisoners in general, Colorado permits six non-contact visits a month, each lasting two hours. After thirty days, MCU prisoners become eligible for no more than two contact visits (of no more than ninety minutes) per month.²⁴⁷ In addition to legal telephone calls, death-sentenced and other MCU prisoners could make eight twenty-minute telephone calls per month.²⁴⁸

MCU prisoners received meals in their cells. They were eligible for in-unit work opportunities.²⁴⁹ They were also eligible for in-cell programming through a television or self-service kiosk.²⁵⁰ While MCU prisoners were given access to religious guidance and publications

from the prison Chaplain's Office, they were not authorized to attend group religious services or group programming.²⁵¹ Director Raemisch expected that CDOC MCUs will continue to evolve and that more programming, such as cognitive-behavioral therapy and anger management, will be added.²⁵²

These reforms have encountered some political resistance. In 2014, in *The Complete Colorado*, an online political blog, a CDOC employee, a district attorney, and a relative of a victim of a Colorado death row prisoner all expressed opposition to the proposed reforms.²⁵³ Bob Beauprez, the 2014 Republican candidate for governor, also opposed the change and referenced it in advertisements criticizing the incumbent, John Hickenlooper,²⁵⁴ who was thereafter reelected, and the reforms continued.

Director Raemisch views the revised policies on housing of death-sentenced prisoners and the larger project of reforming segregation in Colorado as a success. In his view, the changes have had a positive effect on the demeanor and personalities of prisoners. Director Raemisch and his top administrative staff "believe that in the long run this policy will lead to a safer facility . . . [A]ll the evidence is pointing in that direction." Director Raemisch reported that prisoner-on-prisoner violence had stayed the same since the segregation reforms began and that prisoner-on-staff assaults were at their lowest since 2006.²⁵⁵

When asked about the popular perception of death-sentenced prisoners as more dangerous because they have nothing left to lose, Director Raemisch explained that the CDOC "believes just the opposite." They "have no evidence to show that [death-sentenced prisoners] are more violent in the facility." Director Raemisch's sense was that, while "there may be a few inmates who are very dangerous," those inmates can be managed accordingly; their presence does not mean that isolation reform cannot be done safely. He and his administrative staff "all believe that people can change."²⁵⁶

III. Looking Forward

This review of the laws and policies governing death-sentenced individuals makes plain that many correctional systems have a range of options when deciding on the conditions of confinement for death-sentenced prisoners. The correctional leaders in North Carolina, Missouri, and Colorado report the success of their systems. In addition, as discussed below, empirical work has been done on the Missouri system and, in Colorado, studies of the impact of reforms of solitary confinement are underway.

Specifically, the assessment by Director Lombardi that death-sentenced prisoners in Missouri were not more likely to commit disciplinary infractions than their fellow prisoners was confirmed in an analysis by Mark Cunningham, Thomas Reidy, and Jon Sorenson. The researchers reviewed incidents of violent misconduct by prisoners at PCC between 1991 and 2002, a period after the integration of death-sentenced prisoners.

That study compared the rate of misconduct by prisoners sentenced to death to that of prisoners sentenced to life without parole or to shorter prison terms.²⁵⁷ The researchers found

that death-sentenced prisoners committed violent misconduct at roughly the same low rate as prisoners sentenced to life without parole.²⁵⁸ Both groups were also significantly less likely than parole-eligible prisoners to commit violent misconduct: their rate was “about one-fifth of the rate of violent misconduct among parole eligible inmates.”²⁵⁹ In addition, from 1991 to 2002, there were no homicides or attempted homicides committed by the death-sentenced prisoners.²⁶⁰ The authors concluded that the “practice of integrating death-sentenced inmates in the general population of a maximum-security prison is strongly supported by these findings” and that the findings undermined “[c]onventional assumptions that death-sentenced inmates require super-maximum security protocols.”²⁶¹ The authors concluded that this demonstrated death-sentenced prisoners could be integrated safely into the general prison population.²⁶²

In 2016, the authors published a follow up report that relied on twenty-five years of data on the Missouri “mainstreaming” policy.²⁶³ The researchers evaluated eighty-five prisoners with capital sentences who were housed in the general population, and 702 prisoners serving life-without-parole sentences, as well as 3,000 prisoners serving term sentences.²⁶⁴ The study concluded that those prisoners with capital sentences had “equivalent or lower rates of violent misconduct” than did either of the other sets of prisoners. In addition, the study found that “rates of violence among Missouri [death-sentenced] inmates were markedly lower after being mainstreamed than they had been under the prior era of heightened security conditions on ‘death row.’”²⁶⁵ The researchers argued that the “failure of assumptions of high violence risk undergirding death row has important public policy and correctional implications.”²⁶⁶ As the title, *Wasted Resources and Gratuitous Suffering: The Failure of a Security Rationale for Death Row* reflected, the authors viewed their data as supporting a national change in policies to reduce the isolation of individuals serving capital sentences.²⁶⁷

In sum, the mix of empirical work and reports of experiences of North Carolina, Missouri, and Colorado demonstrates that less restrictive, less isolating housing policies on death row have, in the judgment of correctional officials, contributed to the safety and security of prisoners and correctional staff alike.

ENG. J. MED. 1704 (2016) (calling for new research on the health consequences of solitary confinement).

⁴ Sarah Baumgartel, Corey Guilmette, Johanna Kalb, Diana Li, Josh Nuni, Devon Porter & Judith Resnik, *Time-In-Cell: The ASCA-Liman 2014 National Survey of Administrative Segregation in Prison*, THE LIMAN PROGRAM, YALE LAW SCHOOL 58 (2015) [hereinafter ASCA-Liman, *Time-in-Cell*] (reporting that incentives for making changes to administrative segregation policies according to members of the Association of State Correctional Administrators included, *inter alia*: concerns about prisoner and staff well-being, concerns about prisoner and staff safety, space/facility constraints, and possible cost savings), *available at* https://www.law.yale.edu/system/files/documents/asca-liman_administrativesegregationreport.pdf; see also *A Solitary Failure*, *supra* note 3, at 9 (estimating that Texas taxpayers spend \$46 million or more per year to house prisoners in solitary confinement rather than in the general population).

⁵ President Barack Obama ordered a Justice Department review of solitary confinement in 2015, and expressed concerns about the effects of long-term solitary confinement on safety and prisoner reentry. Peter Baker & Erica Goode, *Critics of Solitary Confinement Are Buoyed as Obama Embraces Their Cause*, N.Y. TIMES (July 21, 2015), available at <http://www.nytimes.com/2015/07/22/us/politics/critics-of-solitary-confinement-buoyed-as-obama-embraces-cause.html?rref=collection%2Ftimestopic%2FSolitary%20Confinement>. The Department of Justice released a final Report in January 2016, setting out best practices for correctional facilities and policy recommendations for the Federal Bureau of Prisons and related agencies. *Report and Recommendations Concerning the Use of Restrictive Housing*, U.S. DEPT OF JUSTICE (Jan. 2016), available at <https://www.justice.gov/dag/file/815551/download>. President Obama published a presidential memorandum ordering implementation of the DOJ Report in March. *Presidential Memorandum – Limiting the Use of Restrictive Housing by the Federal Government*, THE WHITE HOUSE, OFFICE OF THE PRESS SEC’Y (Mar. 1, 2016), available at <https://www.whitehouse.gov/the-press-office/2016/03/01/presidential-memorandum-limiting-use-restrictive-housing-federal>.

⁶ In 2013, the Association of State Correctional Administrators (ASCA) adopted new restrictive housing guidelines, calling for individual jurisdictions to develop policies to “manag[e] inmates in the least restrictive way necessary.” *Restrictive Status Housing Policy Guidelines*, ASS’N OF STATE CORR. ADMINS. (Aug. 9, 2013), available at <http://www.asca.net/system/assets/attachments/6145/B.%20ASCA%20Restrictive%20Status%20Housing%20Policy%20Guidelines-Final%2008092013.pdf?1375723019>. ASCA uses the term “restrictive status housing” to encompass restrictive forms of housing for prisoners who “would pose a serious threat” in the general prison population. *Id.* at 1.

When the ASCA-Liman *Time-in-Cell* Report was released in the fall of 2015, ASCA’s press release introducing the Report explained that it provided “one way to measure and to learn whether the hoped-for changes are taking place, to reduce and eliminate the isolation of prisoners, so as to enable prisoners and staff to live and work in safe environments, respectful of human dignity.” *New Report on Prisoners in Administrative Segregation Prepared by the Association of State Correctional Administrators and the Arthur Liman Public Interest Program at Yale Law School*, ASS’N OF STATE CORR. ADMINS. 1 (Sept. 2, 2015), <http://www.asca.net/system/assets/attachments/8895/ASCA%20LIMAN%20Press%20Release%2008-28-15.pdf?1441222595>.

⁷ The Senate Judiciary Committee’s Subcommittee on the Constitution, Civil Rights and Human Rights held hearings in 2012 and 2014 on the topic of isolation in prisons. *Reassessing Solitary Confinement: The Human Rights, Fiscal and Public Safety Consequences*, U.S. SENATE COMM. ON THE JUDICIARY (June 19, 2012), available at <http://www.judiciary.senate.gov/meetings/reassessing-solitary-confinement-the-human-rights-fiscal-and-public-safety-consequences>; *Reassessing Solitary Confinement II: The Human Rights, Fiscal and Public Safety Consequences*, U.S. SENATE COMM. ON THE JUDICIARY (Feb. 25, 2014), available at <http://www.judiciary.senate.gov/meetings/reassessing-solitary-confinement-ii-the-human-rights-fiscal-and-public-safety-consequences>.

Senator Richard Durbin, who presided over the hearings, expressed serious concerns about the psychological impact of solitary confinement, noting that half of prison suicides occur among isolated prisoners. Erica Goode, *Senators Start a Review of Solitary Confinement*, N.Y. TIMES (June 19, 2012), available at <http://www.nytimes.com/2012/06/20/us/senators-start-a-review-of-solitary-confinement.html>. Senator Durbin requested an independent review of the Federal Bureau of Prisons’ use of restrictive housing, which was completed in 2014. Kenneth McGinnis, James Austin, Karl Becker, Larry Fields, Michael Lane, Mike Maloney, Mary Marcial, Robert May, Jon Ozmint, Tom Roth, Emmitt Sparkman, Roberta Stellman, Pablo Stewart, George Vose & Tammy Felix, *Federal Bureau of Prisons: Special Housing Unit Review and Assessment*, CNA ANALYSIS & SOLUTIONS (Dec. 2014), available at https://www.bop.gov/resources/news/pdfs/CNA-SHURReportFinal_123014_2.pdf. Senator Durbin noted that, while the BOP had successfully reduced the number of prisoners in solitary confinement, further work remained to be done to reform its segregation policies. *Durbin: First-Of-Its-Kind Report on Solitary Confinement Shows Need for More Improvement*, DICK DURBIN, U.S. SENATOR, ILL. (Feb. 27, 2015), available at <http://www.durbin.senate.gov/newsroom/press-releases/durbin-first-of-its-kind-report-on-solitary-confinement-shows-need-for-more-improvement>.

⁸ Several state legislatures have introduced bills that would place limits on the extent and duration of solitary confinement. For example, in Illinois, a pending bill would limit the permissible uses of solitary confinement, prohibit the use of solitary confinement for members of vulnerable populations in most circumstances, and prohibit

holding anyone in solitary confinement for more than five consecutive days in most situations. H.B. 5417, 99th Gen. Assemb. (Ill. 2016). In Massachusetts, several pending bills would limit the use of segregation. HB 3451 would limit the use and extent of segregation for prisoners under 21, and limit isolation for any prisoner over 21 to fifteen days for one offense. H.B. 3451, 189th Gen. Court (Mass. 2015). HB 1475 would limit disciplinary segregation to fifteen days, and prohibit segregation for certain classes of prisoners. H.B. 1475, 189th Gen. Ct. (Mass. 2015). In New Jersey, a pending bill would limit the purposes for which solitary confinement may be used, prohibit its use for more than fifteen consecutive days under most circumstances, and limit the use of solitary confinement for members of vulnerable populations. S51, 217th Leg. (N.J. 2016). In New York, a bill in committee would limit the use and length of time of segregated confinement, prohibit segregation for certain classes of prisoners, and create alternative therapeutic and rehabilitative confinement options. A8588A, 2013-2014 Legis. Sess. (N.Y. 2014).

⁹ See H.B. 1328, 70th Gen. Assemb. (Co. 2016) (defining “youth” to mean “an individual who is less than twenty-one years of age” and forbidding holding youth “in seclusion under any circumstances for more than eight total hours in two consecutive calendar days without a written court order”); and <http://aclu-co.org/colorado-legislature-passes-bill-protect-children-solitary-confinement>.

¹⁰ Motion by Chair Hilda L. Solis and Supervisor Sheila Kuehl, *Ending Juvenile Solitary Confinement in Los Angeles County*, BD. OF SUPERVISORS, CNTY. OF LOS ANGELES (May 3, 2016), available at <http://supervisorkuehl.com/wp-content/uploads/2016/05/5.3.16-Solitary-Confinement-Motion-REVISED.pdf> (providing that “[i]n very rare situations, after all other interventions have been exhausted, a juvenile may be separated from others as a temporary response” and that “[e]ven in such cases, the placement should be brief, designed as a ‘cool down’ period, and done only in consultation with a mental health professional”); see also Adam Nagourney & Timothy Williams, *Los Angeles County Restricts Solitary for Juveniles*, N.Y. TIMES (May 3, 2016), available at http://www.nytimes.com/2016/05/04/us/los-angeles-county-restricts-solitary-for-juveniles.html?_r=0.

¹¹ In 2015, a class of California prisoners reached a settlement agreement with the state of California, in which the California Department of Corrections and Rehabilitation agreed to limit the amount of time a prisoner could be held in a segregated housing unit, to cease placing prisoners in segregation solely on the basis of gang affiliation, and to speed up the rate at which segregated prisoners are reintegrated to the general population. See *Ashker v. Governor*, Case No: 4:09-cv-05796-CW (Oct. 6, 2015), available at <http://documents.latimes.com/californias-solitary-settlement/>; see also Ian Lovett, *California Agrees to Overhaul Use of Solitary Confinement*, N.Y. TIMES (Sep. 1, 2015), available at <http://www.nytimes.com/2015/09/02/us/solitary-confinement-california-prisons.html>. The United States District Court for the Northern District of California granted final approval of the settlement agreement. *Ashker v. Governor*, Case No: 4:09-cv-05796-CW (N.D. Cal. Jan. 26, 2016), available at <http://www.clearinghouse.net/chDocs/public/PC-CA-0054-9001.pdf>.

In 2016, the United States District Court for the Southern District of New York approved a settlement between a class of New York prisoners and the New York State Department of Corrections and Community Supervision that would limit the circumstances in which disciplinary solitary confinement can be imposed, implement a step-down program for prisoners leaving solitary confinement, and create alternatives to solitary confinement for juveniles and special needs prisoners. *Peoples v. Annucci*, Case No: 1:11-cv-02694-SAS (S.D.N.Y. Mar. 31, 2016), available at http://www.nyclu.org/files/releases/3_31_Solitary_Confine_settlement_approval.pdf.

¹² Several agreements illustrate the role played by such challenges. The Disability Rights Network of Pennsylvania reached a settlement agreement with the Pennsylvania Department of Corrections in 2013 to stop housing prisoners with serious mental illness in solitary confinement in the Restricted Housing Units and to establish new treatment units that provide significant out-of-cell time. *Disability Rights Network of Pennsylvania v. Wetzel*, Case No: 1:13-CV-00635 (M.D. Pa. Jan. 5, 2015), available at https://www.aclupa.org/download_file/view_inline/2714/677/. The United States District Court for the Middle District of Pennsylvania ordered the matter dismissed without prejudice in accordance with the terms of the settlement agreement. *Disability Rights Network of Pennsylvania v. Wetzel*, Case No: 1:13-CV-00635 (M.D. Pa. Jan. 15, 2015), available at <http://www.clearinghouse.net/chDocs/public/PC-PA-0031-0004.pdf>.

The Illinois Department of Corrections entered a settlement agreement under which prisoners with mental illness in solitary confinement must be allowed a certain minimum number of hours per week out of the cell, receive periodic reviews of placement, and continue to receive mental health treatment while in segregation. *Rasho v. Baldwin*, Case No. 1:07-CV-1298-MMM-JEH (C.D. Ill. Jan. 21, 2016), available at <http://www.clearinghouse.net/chDocs/public/PC-IL-0031-0009.pdf>. The settlement was approved by the United States District Court for the

Central District of Illinois in May, 2016. *See* *Rasho v. Walker*, 07-CV-1298-MMM-JEH (C.D. Ill. May 13, 2016) (finding agreement “fair and reasonable”).

The Arizona Department of Corrections entered a stipulation in 2014 to increase access to health care, increase time spent out-of-cell, and restrict the use of chemical agents for seriously mentally ill prisoners in solitary confinement. *Parsons v. Ryan*, No. CV 12-00601-PHX-DJH (D. Ariz. Oct. 14, 2014), *available at* <http://www.clearinghouse.net/chDocs/public/PC-AZ-0018-0028.pdf>.

³⁰ *Fins*, *supra* note 2, at 36 (listing the number of prisoners on death row in each jurisdiction as of October 1, 2015). These thirty-five jurisdictions included: thirty-two jurisdictions, including thirty-one states and the federal system (including the federal government and the U.S. military – counted as one jurisdiction), with a death penalty statute in effect for all of 2015; one state (New Mexico) that repealed the death penalty prospectively prior to 2016, but continued to hold prisoners whose death sentences may or may not be carried out; one state (Nebraska) in which the status of the death penalty was the subject of a pending referendum; and one state (Connecticut) in which, at the time, the retroactive application of the death penalty after a prospective legislative repeal was an issue pending before the state supreme court.

³¹ *Fins*, *supra* note 2, at 1.

³² In doing this research, at least two law students reviewed each jurisdiction’s statutes and administrative codes on LexisNexis or WestLaw, consulted each jurisdiction’s Department of Corrections policies, where publicly available, and ran a Google search for relevant news articles and reports. Specifically, the following search strings were used: “death w/3 sentence,” “death AND row,” “solitary AND confin*,” and “execut*.” In addition, the students individually read all death penalty-related sections of each jurisdiction’s statute or administrative code. This functioned as an additional accuracy check to ensure that the search strings did not omit important information.

³³ The jurisdictions are Alabama, California, Colorado, Connecticut, Georgia, Idaho, Indiana, Kentucky, Louisiana, Nebraska, New Hampshire, Oregon, Pennsylvania, South Dakota, Texas, Washington and Wyoming. See Appendix A.

⁶⁷ FLA. ADMIN. CODE r. 33-601.830 (2015).

⁶⁸ OHIO ADMIN. CODE r. 5120-9-12 (2016).

⁶⁹ The eighteen states with published policies were: Arizona, California, Colorado, Idaho, Indiana, Kansas, Kentucky, Montana, Nebraska, New Mexico, North Carolina, Ohio, Oklahoma, South Carolina, South Dakota, Tennessee, Virginia, and Washington. In determining which states had published policies, we considered only states in which the state's Department of Corrections had made available online a formal statement of policy or procedure regarding the housing of death-sentenced prisoners – whether referred to as a "policy," "regulation," or by some other name – to have a published policy. States for which information regarding housing procedures for death-sentenced prisoners could be inferred from descriptions of death row conditions on Department of Corrections websites, in handbooks intended for use by prisoners and their families, or from media reports were not considered to have published policies. These states included Alabama, Arkansas, Delaware, Georgia, Mississippi, Missouri, Nevada, and Utah.

¹⁰⁸ Telephone Interview with Kenneth Lassiter, Deputy Dir. for Operations, N.C. Dep’t of Pub. Safety (April 2, 2015). Although death-sentenced prisoners were moved within Central Prison in 2000, the relocation did not entail a change of conditions.

¹⁰⁹ *Id.*

¹¹⁰ *Fins*, *supra* note 2, at 52.

¹¹¹ A description of the conditions on North Carolina's death row for men at Central Prison can be found on the NCDPS website. See *Death Row and Death Row Watch*, N.C. DEP'T OF PUB. SAFETY [hereinafter *Death Row and Death Row Watch*], available at <https://www.ncdps.gov/index2.cfm?a=000003,002240,002327>. The policies on conditions of confinement are available online. See Division of Prisons, *Policies and Procedures: Conditions of Confinement*, N.C. DEP'T OF CORR. (Nov. 1, 2011), available at http://www.doc.state.nc.us/dop/policy_procedure_manual/C1200.pdf. In addition, a number of media accounts have reported on Unit III. See Steve Daniels, *I-Team: Inside the Walls of Raleigh's Central Prison*, ABC NEWS (Feb. 24, 2014), available at <http://abc11.com/archive/9443918/>; *Life on Death Row: 'Am I Going to Be Next?'*, WRAL (Feb. 27, 2013), available at <http://www.wral.com/life-on-death-row-am-i-going-to-be-next-/12160383/>; *WRAL Visits NC's Death Row*, WRAL (Feb. 27, 2013), available at <http://www.wral.com/news/local/video/12161641/>; *Inside NC's Death Row*, WRAL (Feb. 27, 2013), available at http://www.wral.com/news/local/image_gallery/12155529/; *On Death Row...a Rare Look Inside the Chambers*, WFMY NEWS (May 17, 2012), available at <http://archive.digtriad.com/news/article/229062/1/On-Death-RowA-Rare-Look-Inside-The-Chambers>.

¹¹² *Death Row and Death Row Watch*, *supra* note 111. This Report focuses on Central Prison, which houses male prisoners. However, NCDPS reported that the conditions for women were similar, consisting of a single cell with a bed, lavatory, and commode, in a cellblock with a dayroom that had a television and table and chairs for meals. Women were given at least an hour per day for exercise and showers and had access to religious services.

²⁴⁵ Troy Anderson challenged the conditions of confinement in administrative segregation at Colorado State Penitentiary (CSP). *See Anderson v. Colorado, Dep't of Corr.*, 848 F. Supp. 2d 1291, 1294 (D. Colo. 2012). Mr. Anderson alleged that he had been denied appropriate diagnosis and treatment for serious mental health issues; that the Colorado State Penitentiary provided no facility for outdoor exercise and therefore caused physical and mental harm; and that an arbitrary system prevented him from earning his way out of administrative segregation and effectively punished his improperly treated mental illness. *Id.*

The district court held that the long-term lack of access to outdoor exercise, coupled with the problems in conditions, violated the Eight Amendment. *See Anderson v. Colorado*, 887 F. Supp. 2d 1133, 1140-42 (D. Colo. 2012). The court ordered the CDOC to develop and present a plan that “ensures that Troy Anderson has access for at least one hour, at least three times per week, to outdoor exercise in an area that is fully outside and that includes overhead access to the elements, e.g., to sunlight, rain, snow and wind.” *Id.* at 1157. Colorado initially transferred Mr. Anderson to Sterling. *See Anderson v. Colorado*, 10 Cv. 1005 (RBJ/KMT), at 3 (D. Col. Apr. 7, 2015). Subsequently, Colorado agreed to build an outdoor recreation area at CSP. *See Alan Pendergrast, Colorado Supermax Will Build Rec Yards to Settle Prisoners’ Lawsuit*, WESTWARD (Dec. 7, 2015), available at <http://www.westword.com/news/colorado-supermax-will-build-rec-yards-to-settle-prisoners-lawsuit-7402391>.

C.S.A. § 4303 (West 2016):</p> <p>“Upon receipt of the warrant, the secretary shall, until infliction of the death penalty or until lawful discharge from custody, keep the inmate in solitary confinement. During the confinement, no person shall be allowed to have access to the inmate without an order of the sentencing court, except the following:</p> <p>(1) The staff of the department.</p> <p>(2) The inmate's counsel of record or other attorney requested by the inmate.</p> <p>(3) A spiritual adviser selected by the inmate or the members of the immediate family of the inmate.”</p>		<p>Jones v. Sec'y Pennsylvania Dep't of Corr., 549 F.Appx 108 (3d Cir. 2013) cert. denied sub nom. <i>Jones v. Wetzel</i>, 135 S. Ct. 94, 190 L. Ed. 2d 77 (2014):</p> <p>Court ruled that former death row prisoner's Eighth Amendment rights were not violated by his confinement in solitary while awaiting resentencing to LWOP. State statute 61 Pa. Cons.Stat. Ann. § 4303 requires solitary confinement of death row prisoners, and prison policy requires that any death row prisoners who may still be subject to death after resentencing must reside in the CCU. Prisoner challenged that prison policy; Third Circuit held that the prison was reasonably exercising the power given to it by the legislature to house and classify prisoners, and that prisoner could not</p>	

				demonstrate that the administrative-segregation-like conditions of death row infringed on his constitutional rights.				
South Carolina								<p>South Carolina Department of Corrections (SCDC) Policy and Procures OP-22.16 (2014): Policy Statement</p> <p>To promote safety and security, inmates assigned to the Death Row Unit at Lieber Correctional Institution will be housed in an area that is separate and independent from all other areas where other SCDC inmates are assigned. . . . NOTE: THESE PROCEDURES APPLY ONLY TO MALE INMATES ON DEATH ROW AT LIEBER CORRECTIONAL INSTITUTION. FEMALE DEATH ROW INMATES WILL BE ASSIGNED TO A HOUSING AREA WITHIN THE SPECIAL MANAGEMENT UNIT AT CAMILLE GRIFFIN GRAHAM CORRECTIONAL INSTITUTION (CGGCI). IF A FEMALE IS ASSIGNED TO DEATH ROW AT CAMILLE GRIFFIN GRAHAM CORRECTIONAL INSTITUTION, INSTITUTIONAL SPECIFIC PROCEDURES FOR THIS INMATE WILL BE DEVELOPED... [AND] WILL BE PUBLISHED AS A SUPPLEMENT</p>

				<p>TO THIS POLICY/PROCEDURE.</p> <p>(2) ASSIGNMENT OF INMATES TO LEVELS:</p> <p>Death Row inmates will be assigned to Level I, II, or III based upon their behavior/classification status. Most inmates on Death Row will be assigned to Levels II or III.</p> <p>(2.2) .. The following will be applicable for all Death Row inmates who are placed on execution status:</p> <p>(2.2.1) The inmate placed on execution status will be housed in a specific location of the B-Wing on the Death Row Unit.</p> <p>(2.2.2) The inmate placed on execution status will not be allowed to associate with other inmates at anytime while in execution status. Separate visiting hours will be established for those inmates.</p> <p>(2.2.3) Inmates placed on execution status will not be allowed out of the cell at the same time as other Death Row inmates.</p> <p>(3) DEATH ROW UNIT: The U-1 housing unit will be utilized for Death Row inmates at Lieber. Death sentenced inmates will be separated from those in Security Detention as well as from inmates in the general population for the purpose of maintaining the safety, security, and</p>
--	--	--	--	--

			<p>order of the facility.</p> <p>(7) INSTITUTIONAL CLASSIFICATION COMMITTEE (ICC)</p> <p>(7.3.1) ... New arrivals will be classified as Level I.</p> <p>(7.3.3) Level I – Inmates assigned to Level I will be reviewed every 30 days for behavior change and as needed for status change.</p> <p>(7.3.4) Level II – Inmates assigned to Level II will be reviewed for a possible change in level status every 90 days following their initial placement in Level II.</p> <p>(7.3.5) Level III – Inmates assigned to Level III will have an annual status review once per year, unless a change occurs (i.e., disciplinary, court decision, or another event) that would affect status.</p> <p>(9) RECREATION</p> <p>(9.1) Schedule: Death Row inmates in any category of segregation will be allowed out-of-cell recreation privileges (indoor/outdoor) five (5) days a week, to exclude weekends and holidays, at least one (1) hour per day, weather permitting, unless safety and security reasons dictate otherwise.</p> <p>(9.1.1) Level I: Level I Death Row inmates will retain their restraints while they are secured within the</p>
--	--	--	---

				<p>individualized recreation area. (Only one [1] inmate at a time may be recreated in these areas.)</p> <p>(9.1.2) Level II: Inmates will have general recreation with other Level II and Level III inmates. Only one (1) inmate will be allowed in recreation area.</p> <p>(28) DEATH ROW SECURITY STAFF DUTIES:</p> <p>(28.2) Death Row Escort Procedures: Death Row inmates will be strip-searched and placed in restraints before exiting the cell block.</p> <p>(28.3.1) . . . Inmates in Level I will be housed in a separate physical location. Inmates in Level II and III may be housed in the same physical location; however, an empty cell will be maintained between the two (2) levels.</p> <p>(28.3.2) Inmates on Death Row will be single-celled.⁵¹</p>
South Dakota	<p>S.D. Codified Laws § 23A-27A-31.1 (2016):</p> <p>“Segregation of defendant from other inmates—Access to defendant by others limited. From the time of delivery to the penitentiary until the infliction of the punishment of death upon the defendant, unless lawfully discharged from such imprisonment, the defendant shall</p>			<p>DOC Policy 1.3.D.2 (2015):</p> <p>(3)(B)(1) Capital punishment inmates will be housed one (1) inmate to a cell.</p> <p>3)(B)(2) Unless extenuating circumstances exist, capital punishment inmates will not be allowed to have personal contact with inmates in general population.</p> <p>(3)(B)(3) Capital punishment inmates will have meals brought to them by</p>

	<p>be segregated from other inmates at the penitentiary. No other person may be allowed access to the defendant without an order of the trial court except penitentiary staff, Department of Corrections staff, the defendant's counsel, members of the clergy if requested by the defendant, and members of the defendant's family. Members of the clergy and members of the defendant's family are subject to approval by the warden before being allowed access to the defendant.”</p>			<p>staff. They will eat their meals in their assigned cell.</p> <p>(3)(C)(1) Transportation of a capital punishment inmate throughout the facility (e.g. to Health Services, to meet with an attorney, etc.) will be scheduled when there is the least amount of potential for the capital punishment inmate to have contact with general population inmates.</p> <p>(4)(B) Capital punishment inmates will normally receive forty-five (45) minutes out of cell recreation each weekday.⁵²</p> <p>DOC Website:</p> <p>Male inmates sentenced to death are housed in a separate wing of the Jameson Annex of the South Dakota State Penitentiary in Sioux Falls. The Jameson Annex is the maximum-security area of the Penitentiary. Female inmates sentenced to death are housed at the South Dakota Women's Prison in Pierre.⁵³</p>	<p>staff. They will eat their meals in their assigned cell.</p> <p>(3)(C)(1) Transportation of a capital punishment inmate throughout the facility (e.g. to Health Services, to meet with an attorney, etc.) will be scheduled when there is the least amount of potential for the capital punishment inmate to have contact with general population inmates.</p> <p>(4)(B) Capital punishment inmates will normally receive forty-five (45) minutes out of cell recreation each weekday.⁵²</p>
Tennessee				<p>Administrative Policy 404.11 (2011)(IV)(A) Mandatory Segregation:</p> <p>“Mandatory Segregation: Assignment to maximum security housing of those inmates committed to the Department under the sentence of death or in the physical custody of the Department by court order for safekeeping. . . .</p>	<p>Administrative Policy 404.11 (2011)(IV)(A) Mandatory Segregation:</p> <p>“Mandatory Segregation: Assignment to maximum security housing of those inmates committed to the Department under the sentence of death or in the physical custody of the Department by court order for safekeeping. . . .</p>

				<p>(V) POLICY: Inmates who are sentenced to death or housed in the TDOC for the purpose of safekeeping shall be assigned to mandatory segregation...</p> <p>(VI) PROCEDURES:</p> <p>(A) Inmates with a sentence of death shall be:</p> <p>(A)(2) Designated as maximum custody and assigned to mandatory segregation on LIBD.</p> <p>(A)(7) Reviewed annually thereafter in compliance with Policy #401.05.⁵⁴</p> <p>Administrative Policy 506.14 (2014):</p> <p>“(IV)(D) Maximum Security Administrative Segregation (MSAS): The purposeful separation of inmates which are a threat to the safety and security of an institution, the welfare of staff, inmates, or public due to past or current acts of violence and/or escape or are committed to the Department under sentence of death.</p> <p>(VI)(B)(2) Inmates who are under a sentence of death shall be single-celled and housed in a Maximum Security Administrative Segregation (MSAS) unit separate from the general population.</p>
--	--	--	--	---

				(V)(B)(3) Inmates placed in MSAS shall be single-celled and confined within a maximum security unit separate from the general population.” ⁵⁵
Texas	<p>Tex. Gov’t Code Ann. § 501.113 (West 2015): “(b) The institutional division shall house the following classes of inmates in single occupancy cells: (1) inmates confined in death row segregation; (2) inmates confined in administrative segregation; . . .”</p> <p>Tex. Gov’t Code Ann. § 501.112 (West 2015): “(a) Except as provided by Subsection (b), the institutional division may not house inmates with different custody classifications in the same cellblock or dormitory unless the structure of the cellblock or dormitory allows the physical separation of the different classifications of inmates. (b) If an appropriate justification is provided by the unit classification committee or the state classification committee, the board may permit the institutional division to house inmates with different custody classifications in the same cellblock or dormitory,</p>		<p>Trottie v. Thaler, 2013 U.S. Dist. LEXIS 19373 (E.D. Tex. 2013): Resolving a case where an inmate complained that automatic administrative segregation for death row inmates violated his due process rights.</p> <p>Young v. Stephens, 2014 U.S. Dist. LEXIS 16007 (W.D. Tex. 2014): Noting that a Texas DOC Warden testified that only death row inmates remain in administrative segregation permanently.</p> <p>Allen v. State, 2006 Tex. Crim. App. LEXIS 2545 (Tex. 2006): Noting that a correctional official testified that death row is basically identical to administrative segregation.</p>	

	but only until sufficient beds become available in the division to allow the division to house the inmates in the manner required by Subsection (a) and in no event for more than 30 days.”			
Utah				<p>DOC website: “The Uintas . . . include the Maximum Security facilities at the Utah State Prison. . . . The Uintas also house high-profile inmates, death-row inmates, and inmates who pose severe management problems such as active gang members. . . .</p> <p>Uinta 1 is the highest-security building in the State’s prison system. The building is capable of housing 96 inmates. Inmates are ‘single-celled,’ meaning they do not have cellmates. Unlike traditional depictions of ‘solitary confinement,’ inmates housed in this area can communicate with one another through the doors of their cells. Each cell has a window that provides natural light, and inmates have the opportunity to recreate either indoors in a common area, or outdoors on a concrete pad confined by side walls and chain-link fencing overhead. Like inmates in other facilities, privilege levels vary based on behavior. Nearly all inmates in this section have the ability to earn</p>

				<p>greater privileges and transition to other areas over time by demonstrating positive behavior. Generally, death-row inmates are the only exception, requiring a sentence to be overturned or commuted to life. Utah currently has nine men on death row.”⁵⁶</p>
<p>US Govt./ Military</p>				<p>Army Regulation 190-47: The Army Corrections System (last updated in 2006)</p> <p>3-2. Authorized place of confinement: “Except in time of war, the USDB [United State Disciplinary Barracks] is the only ACS facility authorized to incarcerate prisoners under the sentence of death.”</p> <p>11-1. Custody procedures: “ACS facilities will place prisoners under sentence of death into administrative segregation until they are prepared for transfer to the USDB.”</p> <p>12-6. Segregation: “Prisoners who have been adjudged a sentence of death will be segregated from the remainder of the prison population at all times. These prisoners will not be commingled with other than death sentence prisoners in billets, recreation, employment, or subsistence that is separate from general population.”⁵⁷</p>

Virginia				<p>Virginia Department of Corrections, Operating Procedure 830.2, (IV)(D)(7) (2015): “Any offender sentenced to death will be assigned directly to Death Row. . . . No reclassification will be completed.”⁵⁸</p> <p>News Sources: Following Prieto, news sources have reported that the Virginia DOC relaxed some of the policies to now allow death row prisoners to interact with one another in groups of up to four, see their family on a weekly basis, and access showers and recreational opportunities more often.⁵⁹</p>
Washington	<p>Wash. Rev. Code § 10.95.170 (2015): “The defendant shall be imprisoned in the state penitentiary within ten days after the trial court enters a judgment and sentence imposing the death penalty and shall be imprisoned both prior to and subsequent to the issuance of the death warrant as provided in RCW 10.95.160. During such period of imprisonment, the defendant shall be confined in the segregation unit, where the defendant may be confined with other prisoners not under sentence of death, but prisoners under</p>		<p>In re Gentry, 170 Wash. 2d 711, 716, 245 P.3d 766, 768 (2010): "In contrast to Colorado statutes, Washington statutes and DOC regulations in effect at the time of Gentry's crime and sentence provide that death row inmates are initially placed in the IMU and remain there for at least one year. Ford Decl., Ex. 1A. Subsequent transfer to SHU, with its attendant privileges, is dependent upon inmate</p>	<p>DOC Policy 320.250 and 300.380 (2015): “(II)(C)(2) Inmates Sentenced to the Death Penalty (ISDPs) will be housed in the IMU at the Washington State Penitentiary (WSP) or Washington Corrections Center for Women, as applicable.”⁶⁰</p>

	<p>sentence of death shall be assigned to single-person cells.”</p> <p>Wash. Rev. Code § 72.02.250 (2015): “Female persons sentenced to death shall be committed to the Washington correctional institution for women, notwithstanding the provisions of RCW 10.95.170, except that the death warrant shall provide for the execution of such death sentence at the Washington state penitentiary as provided by RCW 10.95.160, and the secretary of corrections shall transfer to the Washington state penitentiary any female offender sentenced to death not later than seventy-two hours prior to the date fixed in the death warrant for the execution of the death sentence.”</p>			<p>conduct.”</p> <p>Jeffries v. Reed, 631 F. Supp. 1212, 1214–15 (E.D. Wash. 1986): “Plaintiff initially claims that defendants violated his rights by transferring him to IMU solely because he is subject to the death penalty. Death Row inmates are the only prisoners incarcerated in IMU for reasons other than institutional misconduct. ”</p> <p>“...[S]tate law requires that all Death Row inmates be confined in a segregation unit. R.C.W. 10.95.170. Accordingly, this court finds that Washington law does not create a protected liberty interest regarding the location of plaintiff’s confinement.”</p>	
Wyoming	<p>Wyo. Stat. Ann. §7-13-907 (West 2015): “(a) The administrator of the state penal institution shall keep a person sentenced to death in solitary confinement until execution of the death penalty,</p>				

	except the following persons shall be allowed reasonable access to the prisoner: (i) The prisoner's physician and lawyers; (ii) Relatives and spiritual advisers of the prisoner; and (iii) Persons involved in examining a prisoner believed to be pregnant or mentally unfit to proceed with the execution of the sentence.”

Acknowledgments

This project would not have been possible without the assistance of the Nuffield Foundation. Their support has been generous and unstinting.

Particular thanks are due to Jonathan Beynon and Monica Lloyd, who helped shape the Sourcebook from its early stages to its final form and contributed to the drafting of particular sections. Hernan Reyes and Camille Giffard also deserve a special mention for their extensive and perceptive comments on later drafts.

Many others have given generously of their time during the preparation of this Sourcebook by sharing their expertise, providing practical and professional insight and by commenting on whole or part of drafts. Thanks are due to: Henrik Steen Andersen, Helen Bamber, Jamie Bennett, Francesca Cooney, Andrew Coyle, Kimmet Edgar, Neil Frazer, John Gale, Dougie Graham, Andy Flynn and the Mental Health Team at Woodhill CSC, Stuart Grassian, Adrian Grounds, Craig Haney, Alison Hannah, Morit Heitzler, Lucy Kralj, Juliet Lyon, Clive Meux, Marlies Morsink, Lars Moller, Mary Murphy, Patrick Owen, Paul Rock, Peter Scharff-Smith, Julian Sheather and Ann Somerville.

Views expressed in the Sourcebook and any errors made in it are my own.

October 2008

Preface

The wide use of solitary confinement in prisons and other places of detention has long been a source of grave concern to those involved with the international protection of human rights. Never more so than in recent years, which have seen a marked increase in the use of strict and often prolonged solitary confinement across the world: in the context of the 'war on terror'; as disciplinary punishment; with pre-trial detainees, the mentally ill and former death-row prisoners; and, in the so-called 'supermax' prisons.

As this sourcebook clearly demonstrates, solitary confinement has a well documented negative impact on mental health and wellbeing and may amount to cruel, inhuman or degrading treatment or punishment, particularly when used for a prolonged time. The use of solitary confinement should therefore be strictly limited to exceptional cases or where it is absolutely necessary for criminal investigation purposes. The severe suffering caused by solitary confinement means that in all cases it should only be used as a last resort, and then for the shortest possible period of time. When used for interrogation purposes, either in combination with other methods or on its own, solitary confinement can amount not only to cruel, inhuman or degrading treatment but even to torture.

This comprehensive sourcebook brings together the accumulated knowledge and standards relating to solitary confinement and its harmful consequences. It identifies how solitary confinement may be misused and the protections that should be put in place. It is a valuable resource for prison staff and policy makers in the effort to promote the respect and protection of the rights and wellbeing of prisoners and detainees. Let us not forget that persons deprived of liberty are among the most vulnerable human beings in every society.

Solitary confinement has not received the attention it merits in international standards. There is a need to further develop protections aimed specifically at reducing its use and mitigating the harm it causes. The Sourcebook on Solitary Confinement is thus an important contribution in a shared endeavour that seeks the universal protection of human rights in all places of deprivation of liberty. I commend it to a wide readership.

1 | Introduction

1.1 What is the Sourcebook about?

Isolation, segregation, separation, cellular or solitary confinement are some of the terms used to describe a form of confinement where prisoners are held alone in their cell for up to 24 hours a day, and are only allowed to leave it, if at all, for an hour or so of outdoor exercise. Solitary confinement may be imposed on prisoners as short-term punishment for prison offences, or indefinitely for the prisoner's own protection, either at his request or at the discretion of the prison authorities. In other cases prisoners may be isolated from others for months and even years on administrative grounds: as a long-term strategy for managing challenging prisoners or where prisoners are deemed to be a threat to national security. Finally, pre-charge and pre-trial detainees may be isolated from others whilst their interrogation or the investigation into their case is ongoing.

This Sourcebook provides a single reference point for those concerned with the practice of solitary confinement, particularly when it is imposed for prolonged periods of time. Its purpose is to a) inform prison operational staff, health professionals, and policy makers of the human rights position regarding solitary confinement, of ethical and professional standards and codes of practice relating to prisoner isolation, and of research findings on the health effects of solitary confinement, and b) propose safeguards and best practice in light of the above. More broadly, it aims to raise awareness of the potential consequences of prolonged solitary confinement.

The basic premise in compiling this Sourcebook is that prolonged solitary confinement is inherently damaging and is not good practice. It should only be used as a last resort and be reserved for a handful of the most extreme cases. In the few cases where solitary confinement may be exceptionally and absolutely necessary, it should only be used for the shortest possible time, and be managed within established guidelines and strict safeguards. By extension, prison regimes which are entirely constructed around a solitary confinement model cannot but be damaging to prisoners and run contrary to principles of rehabilitation and social reintegration. While prison authorities may sometimes need to resort to short term disciplinary segregation, it must, again, only be as a last resort and managed within strict safeguards. The use of solitary confinement as a means of coercing a 'confession' or as means of 'softening up' detainees for interrogation must be prohibited under all circumstances.

1.2 How is the Sourcebook structured?

The rest of this chapter addresses issues of definition, provides the historic context for the use of solitary confinement, and sets out the legal and regulatory framework for the operation of prisons and the treatment of prisoners. Chapter Two examines the documented health effects of solitary confinement, both physical and psychological, and attempts to understand what makes solitary confinement damaging. Chapter Three examines the different roles of solitary confinement in

contemporary prison systems – as punishment, for the prisoner’s own protection, as a tool for managing difficult prisoners and as part of the investigation or interrogation process – and some of the standards, safeguards and recommendations relating to the placement of prisoners and detainees in solitary confinement. Chapter Four examines international standards, research findings and recommendations regarding the design, physical conditions and regime in isolation units. Chapter Five addresses some of the ethical issues and dilemmas facing health professionals working in solitary confinement units, and Chapter Six briefly examines international, regional and national mechanisms for inspecting and monitoring solitary confinement units. Chapter Seven recaps some of the main issues and themes discussed throughout the Sourcebook.

1.3 Definition: what constitutes solitary confinement?

For the purpose of the Sourcebook, solitary confinement is defined as a form of confinement where prisoners spend 22 to 24 hours a day alone in their cell in separation from each other¹. Notwithstanding the different meanings attached to each of these terms in different jurisdictions, the term ‘solitary confinement’ will be used interchangeably with the terms ‘isolation’ and ‘segregation’ when describing regimes where prisoners do not have contact with one another, other than, as is the case in some jurisdictions, during an outdoor exercise period².

1.4 Brief historic context

Solitary confinement is one of the oldest and most enduring prison practices. Bar the death penalty, it is also the most extreme penalty which can legally be imposed on prisoners. Solitary confinement was first widely and systematically used on both sides of the Atlantic in the ‘separate’ and ‘silent’ penitentiaries of the 19th century, with the aim of reforming convicts. It was believed that once left alone with their conscience and the Bible, prisoners would engage in inner reflection, see the error of their ways and be reformed into law abiding citizens. It soon transpired, however, that rather than being reformed, many prisoners became mentally ill, and there was little evidence that the newly built, expensive prisons were more successful than their predecessors in reducing offending. Such criticisms, combined with growing prison populations and pressures for additional prison spaces, led to the dismantling of the isolation system in most countries by the late 19th century³. By then, however, solitary confinement had become a permanent feature of prison systems world-wide, used mainly as a form of short term punishment for prison offences, for holding political prisoners, for protective custody, and as a technique for ‘softening-up’ detainees, particularly those suspected of crimes against the State, before and between interrogation sessions.

In addition to these ‘traditional’ uses, towards the end of the 20th century and at the beginning of the 21st, the use of long term, large scale solitary confinement returned in the form of ‘supermax’ (short for super-maximum security) and ‘special security’ prisons. These are large, high tech prisons, designed for long term and strict isolation of prisoners classified as high risk and/or difficult to control. This phenomenon is particularly evident in the United States, where the Federal Government and some 44 States operate at least one such prison, but similar units can now also

be found in other countries. The use of prolonged solitary confinement has also increased in recent years in the context of the ‘war on terror’, not least at Guantanamo Bay where detainees have been held in supermax-like facilities for years, for the most part without any charge and without trial, and in secret detention centres where isolation is used as an integral part of interrogation practices⁴. Another form of solitary confinement, favoured in a number of European countries, is ‘small group isolation’ wherein prisoners who are classified as dangerous or high risk are held in solitary confinement in small high security units, and allowed limited association with one to five others at designated times, typically during the one-hour long outdoor exercise period required under international law. Paradoxically, although prison overcrowding is a major issue in many jurisdictions, the use of various forms of solitary confinement has increased in the last two decades.

1.5 Legal and regulatory framework

The operation of prisons and other places of detention, and the treatment of those held in them, are regulated by national laws, standards and directives, which vary from State to State. Such national instruments must also, however, be compatible with both international and regional human rights standards and laws⁵ as established by the United Nations and regional standard setting bodies (such as the Council of Europe, the Organisation of American States, the African Union etc.).

The Sourcebook draws on international and regional human rights instruments and their interpretation by the courts and monitoring bodies. It also draws on standards set by professional bodies to guide those working with prisoners. The Sourcebook does not, however, aim to provide a comprehensive review of human rights law and practice, but rather to address some of the most pertinent issues relating to solitary confinement⁶. Some of the key human rights instruments and bodies which are referred to throughout the Sourcebook are briefly introduced below, and Appendix 1 contains selected texts with which readers are encouraged to familiarise themselves. These resources are ‘living instruments’ which evolve over time, and the Sourcebook reflects current views and directives.

Human rights instruments and bodies

International human rights law includes both instruments designed for the universal protection of all human beings, and those designed specifically for the protection of prisoners and detainees. The basic premise of these instruments is that, other than limitations inherent in the deprivation of liberty, prisoners retain their human rights whilst incarcerated. These rights include, for example, the right to a free and fair trial; the right to freedom of thought, conscience and religion; the right to a private and family life; the right to adequate food, shelter and clothing; the right to health; and, the right to education.

The right of prisoners to be treated in a manner respectful of their human dignity and the prohibition against all forms of torture, inhuman or degrading treatment or punishment are reaffirmed in a large number of human rights instruments, including two international treaties, the International Covenant on Civil and Political Rights (ICCPR) and the UN Convention Against Torture (CAT) which are legally binding on all signatory parties to them, and parallel regional instruments. Additional instruments lay out rules of conduct for prison officers, health and other

personnel, and set acceptable minimum standards for prison design, provisions and conditions. These include the UN Standard Minimum Rules for the Treatment of Prisoners (SMR), discussed below, and the Body of Principles for the Protection of All Persons under Any Form of Detention or Imprisonment⁷.

A. International human rights instruments and bodies

The International Covenant on Civil and Political rights (ICCPR)

The ICCPR came into force in 1976. Its provisions are interpreted and its implementation monitored by the **UN Human Rights Committee (HRC)**. Under Article 40 of the ICCPR, all State parties to it are required to submit a report on their compliance with the ICCPR initially upon ratification, and periodically thereafter. In addition, under the Covenant's Optional Protocol, the Human Rights Committee may consider individual communications from nationals of signatory states to the Protocol.

Two articles of the ICCPR relate directly to the treatment of prisoners and prison conditions, including solitary confinement. Article 7 of the ICCPR proclaims that *"No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment..."*.

The Human Rights Committee has interpreted Article 7 to mean⁸:

[2] The aim of the provisions of Article 7 is to protect both the dignity and the physical and mental integrity of the individual... [3] The text allows no limitation, even in time of public emergency...no justification or extenuating circumstances may be invoked to excuse a violation of Article 7 for any reason. [4] [The Committee] does not consider it necessary to draw up a list of prohibited acts, or to establish sharp distinction between the different kinds of punishment or treatment; the distinction depends on the nature, purpose and severity of the treatment applied.

The terms cruel, inhuman or degrading treatment or punishment, *"should be interpreted so as to extend the widest possible protection against abuses, whether physical or mental, including the holding of a detained or imprisoned person in conditions which deprive him, temporarily or permanently, of the use of any of his natural senses, such as sight or hearing, or of his awareness of place and the passing of time"* (Note to Principle 6, Body of Principles). This interpretation would apply to some uses of solitary confinement, for example in dark, windowless or soundproofed cells. In such cases, solitary confinement may amount to inhuman or degrading treatment and sometimes even to torture⁹.

Article 7 is closely linked to Article 10 of the ICCPR, which proclaims that *"All persons deprived of their liberty shall be treated with humanity and with respect for the inherent dignity of the human person ... the penitentiary system shall comprise treatment of prisoners the essential aim of which shall be their reformation and social rehabilitation"*. Solitary confinement, by definition, deprives the individual from human contact and social interaction, and therefore clearly runs contrary to this principle.

Together, articles 7 and 10 of the ICCPR set out a blanket protection of detainees from any form of ill-treatment. The Human Rights Committee stipulated that:

Article 10(1) imposes on state parties a positive obligation ... thus, not only may persons deprived of their liberty not be subjected to treatment that is contrary to Article 7...but neither may they be subjected to any hardship or constraint other than that resulting from the deprivation of liberty; respect for the dignity of such persons must be guaranteed under the same conditions as that of free persons. Persons deprived of their liberty enjoy all the rights set forth, subject to the restrictions that are unavoidable in a closed environment. [4] treating all persons deprived of their liberty with humanity and respect for their dignity is a fundamental and universally applicable rule... this rule must be applied without distinction of any kind, such as race, colour, sex, language, religion, political opinion, national or social origin, property, birth or other status...¹⁰.

The UN Convention Against Torture and other Cruel, Inhuman or Degrading Treatment or Punishment

The Convention Against Torture was adopted by the UN General Assembly in 1984 and came into force in 1987. Article 1 of the Convention stipulates that:

For the purpose of this Convention, the term “torture” means any act by which severe pain or suffering, whether physical or mental, is intentionally inflicted on a person for such purposes as obtaining from him or a third person information or confession, punishing him for an act he or a third person has committed or is suspected of having committed, or intimidating or coercing him or a third person....

The implementation of the Convention by State parties is monitored by a body of independent experts, the **Committee Against Torture (CAT)**. All State parties to the Convention are required to submit a report within a year of ratification, and periodically thereafter. The Committee considers these reports and publishes its findings. In 2006 the **Optional Protocol to the CAT (OPCAT)** came into force with the aim of preventing torture and other ill-treatment through a system of regular inspection visits to all places of deprivation of liberty. The OPCAT establishes both an international inspection body (the Sub-Committee for the Prevention of Torture) and a permanent national inspecting body (known as the National Preventative Mechanism).

UN Standard Minimum Rules for the Treatment of Prisoners (SMR)

The SMR were adopted by the UN Economic and Social Council in 1957¹¹, and set out principles and guidelines as to “*what is generally accepted as being good principle and practice in the treatment of prisoners and the management of institutions*” (SMR preamble). The SMR list a very specific set of guidelines for the treatment of offenders, ranging from basic food, shelter and exercise requirements to guidelines on prisoner classification and the provision of educational and vocational training. The SMR also clearly set out general principles, including Rule 60 which reaffirms that prisoners are entitled to respect due to their dignity as human beings, Rules 64 & 65 which reaffirm that prisoners should be imprisoned as punishment, not for punishment, and Rule 27 which affirms that prisons should operate with “*no more restriction than is necessary for safe custody and well ordered community life*”. Rule 31 addresses solitary confinement directly in prohibiting placement in a dark cell and all cruel, inhuman or degrading punishments for disciplinary offences. Although the SMR are not strictly legally binding on States, they set out minimum standards and recommendations for the operation of prisons which are now widely accepted as the main universal guidance for the treatment of prisoners. This is evidenced by the fact that in some countries they have been enacted into law or form the basis for national prison regulations.

The UN Special Rapporteur on Torture

An independent expert appointed by the UN Commission on Human Rights (now replaced by the Human Rights Council), who is mandated to report on the situation of torture anywhere in the world, regardless of whether or not the country is a signatory of the Convention Against Torture and other Cruel, Inhuman or Degrading Treatment or Punishment. Successive Rapporteurs have addressed the use of various forms of solitary confinement around the world, and have identified situations where its use constitutes cruel, inhuman or degrading treatment or punishment and sometimes even torture.

B. Regional human rights instruments and bodies¹²

European Convention on Human Rights (ECHR)

The European Convention on Human Rights was adopted by the Council of Europe in Rome in 1950 and came into force in 1953. The **European Court of Human Rights (ECtHR)** monitors compliance with the Convention by Member States.

The ECHR proclaims in its Article 3 that *“No one shall be subjected to torture or to inhuman or degrading treatment or punishment.”* The prohibition of torture and ill treatment is absolute. States cannot derogate from it in times of war or other public emergency, and it is expressed in unqualified terms. The threshold which ill treatment has to attain in order to fall within the scope of Article 3 of the ECHR is a relative one; *“It depends on all the circumstances of the case, such as the duration of the treatment, its physical or mental effects and, in some cases, the sex, age and state of health of the victim”*¹³. Inhuman treatment *“covers at least such treatment as deliberately causes severe suffering, mental or physical, which, in the particular situation, is unjustifiable”*¹⁴. Prison conditions, and therefore the use of solitary confinement, may also fall within the scope of Article 3. When assessing any one case the Court will take account of the cumulative effects of those conditions, as well as the specific allegations made by the applicant¹⁵.

The European Prison Rules (EPR)

The EPR¹⁶ contain 108 Rules, affirming that prisoners retain their human rights and setting detailed standards to guide the administration of prisons, prison conditions, the provision of health care in prisons, prison discipline, and the conduct of prison management and staff. Like the UN SMR, the EPR are not legally binding but they do set out minimum standards below which prison conditions must not fall.

The Committee for the Prevention of Torture (CPT)

The European Committee for the Prevention of Torture was created under Article 2 of the European Convention for the prevention of torture and inhuman or degrading treatment or punishment (1987), with a view to providing a non-judicial machinery of a preventive character and strengthening the protection of prisoners and detainees from torture or degrading treatment prohibited by Article 3 of the ECHR, through a system of visits. The CPT may visit any place where people are deprived of liberty within the jurisdiction of State parties. Through developing a set of standards which it applies when carrying-out visits to places of detention, the CPT also plays an important standard-setting role.

Notes

- 1 Prison segregation should be distinguished from isolation or seclusion for medical purposes or in psychiatric settings, which are not discussed in this publication. The Sourcebook focuses mainly on adult, male prisoners and does not address issues relating specifically to other groups, such as women or young offenders.
- 2 The exercise period usually lasts for one hour, which is the minimum required by international law, but in some jurisdictions it may last up to two hours.
- 3 For an excellent account of the thinking behind the isolation prisons of the 19th Century see Evans, R. (1982) *The Fabrication of Virtue: English prison Architecture 1750-1840*. Cambridge: Cambridge University Press. See also: Morris, N. and Rothman, D., eds. (1998) *The Oxford History of the Prison: The Practice of Punishment in Western Society*. Oxford: Oxford University Press; Rothman, D.J. (1980) *Conscience and Convenience: The Asylum and its Alternatives in Progressive America*. Boston: Little, Brown and Company.
- 4 See Human Rights Watch report: *Locked Up Alone: Detention Conditions and Mental Health at Guantanamo*, June 2008.
- 5 Human rights laws include: treaty law (treaties, conventions, covenants), which is legally binding on States which are parties to it and on State agents, including prison officials; customary law, which reflects long established practices that are accepted as unwritten laws, and; human rights declarations, recommendations, principles, codes of conduct and guidelines, which are not in themselves legally binding but nonetheless reflect international norms and customs.
- 6 For a more general discussion of human rights and prisons see: Andrew Coyle (2002) *A Human Rights Approach to Prison Management*, International Centre for Prison Studies, London; Office of the United Nations High Commissioner for Human Rights (2005) *Human Rights and Prisons*, Professional Training Series No.11, available online at: www.ohchr.org
- 7 The Body of Principles was adopted the UN General Assembly in December 1988. It contains 39 principles reaffirming that prisoners and detainees retain their human rights when detained, and lists some of the procedural and substantial principles which should direct the operation of all places of detention universally. Other relevant human rights instruments include the Basic Principles for the Treatment of Prisoners (adopted in 1990, affirming that prisoners retain their fundamental human rights); UN Code of Conduct for Law Enforcement Officials; Principles of Medical Ethics; and, in situations of armed conflict, the Geneva Conventions of 1949 and their Additional Protocols of 1977.

2 | The health effects of solitary confinement¹⁷

2.1 Introduction

Being held in solitary confinement is, for most prisoners, a stressful experience with potentially harmful health effects. The prisoner is socially isolated from others, his human contacts reduced to superficial transactions with staff and infrequent contact with family and friends. He is almost completely dependent on prison staff – even more than is usual in the prison setting – for the provision of all his basic needs, and his few movements are tightly controlled and closely observed. Confined to a small sparsely furnished cell with little or no view of the outside world and with limited access to fresh air and natural light, he lives in an environment with little stimulation and few opportunities to occupy himself.

Throughout the long history of its use in prisons – from the ‘silent’ and ‘separate’ penitentiaries of the 19th century through to modern-day segregation units and ‘supermax’ prisons – practitioners and researchers have observed the adverse effects of solitary confinement on prisoners’ health. In the context of coercive interrogation, international experts have identified solitary confinement as psychological torture¹⁸. The potentially damaging effects of solitary confinement are also recognised by national and international instruments and by monitoring bodies, which view it as an extreme prison practice which should only be used as a last resort and then only for short periods of time. Indeed, expressing strong concern about the use of solitary confinement as punishment, in 1990 the United Nations went as far as to call for its abolition¹⁹.

This chapter examines some of the research findings on the health effects of solitary confinement dating back to the 19th century, and attempts to explain how and why solitary confinement adversely affects physical, mental and social wellbeing²⁰. Although negative health effects may emerge after a very short period of time in solitary confinement, this chapter is mostly concerned with the more serious health effects that are associated with longer periods of solitary confinement.

2.2 The health effects of solitary confinement: a brief review of the literature and prisoners' accounts

General observations

There is unequivocal evidence that solitary confinement has a profound impact on health and wellbeing, particularly for those with pre-existing mental health disorders, and that it may also actively cause mental illness. The extent of psychological damage varies and will depend on individual factors (e.g. personal background and pre-existing health problems), environmental factors (e.g. physical conditions and provisions), regime (e.g. time out of cell, degree of human contact), the context of isolation (e.g. punishment, own protection, voluntary/ non voluntary, political/criminal) and its duration.

Notwithstanding variations in individual tolerance and environmental and contextual factors, there is remarkable consistency in research findings on the health effects of solitary confinement throughout the decades. These have mostly demonstrated negative health effects, with studies reporting no negative effects being few and far between, and virtually no study reporting positive effects²¹.

Historic accounts

The extensive use of solitary confinement in prisons of the early 19th century was well documented, and its effects on prisoners reported in medical journals of the time. Grassian and Friedman (1986) cite thirty seven reports and articles published in Germany alone between 1854 and 1909, identifying solitary confinement as the single central factor in the development of psychotic illness among prisoners. Examples include an 1854 report by the chief physician of Halle prison, Germany, who observed what he termed Prison Psychosis among isolated prisoners and concluded that *"prolonged absolute isolation has a very injurious effect on the body and mind and seems to predispose to hallucinations"* and should therefore be immediately terminated (Nitsche & Williams, 1913). A report from 1863 describes vivid hallucinations, delusions, apprehension and psychomotor excitation experienced by 84 prisoners suffering from what its authors termed the Psychosis of Solitary Confinement. In 1881, a summary of diagnostic assessments of 186 prisoners held at the 'insane department' at Waldheim prison, also in Germany, concluded that over half of the prisoners suffered reactive manifestations to solitary confinement (Grassian & Friedman, 1986).

Similar observations were made in England, where in 1850 for example, 32 out of every 1000 prisoners had to be removed from their solitary cells in Pentonville prison on grounds of insanity, compared to 5.8 prisoners per 1000 in prisons not practising solitary confinement (McConville, 1981:208-9). In the US, the Boston Prison Discipline Society, which helped devise the 'Separate' or 'Pennsylvania' system of solitary confinement, reported from as early as 1839 serious mental problems amongst isolated prisoners, including hallucinations and dementia (cited in Scharff-Smith, 2004). Referring to similar reports several years later, the US Supreme Court noted that the effects of solitary confinement were such that *"a considerable number of prisoners.... fell into a semi- foetus condition... and others became violently insane"* (*Re Medley*, 1890:167-8). Indeed, the understanding that instead of its intended role of helping to 'cure the disease of crime', solitary confinement was creating mental illness in prisoners, played a central role in the dismantling of the isolation prisons on both sides of the Atlantic by the late 19th century.

Yet, although the use of solitary confinement on a large scale ceased, it remained an integral part of prison systems and, as previously noted, in the last decade its use has increased in many jurisdictions. Throughout the decades researchers have continued to report negative effects associated with solitary confinement, and their findings are strikingly similar to those made by their historic counterparts.

Contemporary findings

More recent studies have mostly reaffirmed that solitary confinement adversely affects those subjected to it, and have identified “confinement psychosis” as a medical condition typified by *“psychotic reaction characterised frequently by hallucinations and delusions, produced by prolonged physical isolation and inactivity in completely segregated areas”* (Scott & Gendreau, 1969:338).

A 1975 inquiry into the use of isolation in Canadian prisons concluded that administrative isolation over long periods of time represented a *“serious danger for prisoners”*²². Two years later a Council of Europe (1977) study suggested that prolonged close-confinement of long-term prisoners led to what was termed ‘separation syndrome’ that included emotional, cognitive, social and physical problems²³. Benjamin & Lux (1977:262) stated that *“evidence overwhelmingly [indicates] that solitary confinement alone, even in the absence of physical brutality or unhygienic conditions, can produce emotional damage, decline in mental functioning and even the most extreme forms of psychopathology such as depersonalization, hallucinations and delusions”*. Ruling in a case involving prisoners held in strict isolation in Germany, the European Human Rights Commission (1978:97) similarly noted that *“isolation can be sufficient in itself to gravely impair physical and mental health”*.

Grassian’s (1983) psychiatric evaluation of 14 prisoners held in the solitary confinement block at the Massachusetts Correctional Institution at Walpole reported perceptual changes, affective disturbances, difficulty with thinking, concentration and memory, disturbances of thought content, and problems with impulse control. Korn’s study (1988) of the women’s High Security Unit at Lexington, Kentucky, found that women held there suffered claustrophobia, rage, severe depression, hallucinations, withdrawal, blunting of affect and apathy. He also reported appetite loss, weight loss, visual disturbances and heart palpitations. Brodsky & Scogin’s (1988) study of 45 prisoners held in protective custody similarly reported a high prevalence of negative physiological and psychological symptoms including nervousness, talking to oneself, hallucinations and delusions, confusion, irrational anger, headaches and problems sleeping. Hodgins & Cote (1991) found severe mental disorders amongst 29 per cent of a sample of 41 segregated prisoners held in Quebec’s Special Handling Unit (SHU), and in 31 per cent of a sample of 32 prisoners segregated in the Long-Term Segregation Unit (LTSU)²⁴.

Haney’s (1993) study of 100 randomly selected prisoners in one of California’s supermax prisons, Pelican Bay Security Housing Unit, reported a very high prevalence of symptoms of psychological trauma with 91% of the prisoners sampled suffering from anxiety and nervousness, more than 80% suffering from headaches, lethargy and trouble sleeping and 70% fearing impending breakdown. More than half of the prisoners suffered from nightmares, dizziness and heart palpitations and other mental-health problems caused by isolation, which included ruminations, irrational anger and confused thought processes (more than 80% of prisoners sampled), chronic depression (77%), hallucinations (41%) and overall deterioration.

Miller's (1994:48) study of 30 prisoners in a Kentucky prison similarly found that *"inmates housed in the most restrictive environment [punitive segregation] reported significantly higher levels of psychological distress symptoms such as anxiety and hostility, than inmates in the general population"*. A follow-up study (Miller & Young, 1997:92) reported withdrawal, hostility, aggression, rage and irresistible impulses among those held in disciplinary segregation and concluded that these findings indicate that *"there may be a level of restriction that, instead of solving administrative problems, becomes both a mental health issue and a further problem for the prison administration"*. Sestoft et al. (1998:105) concluded their study of the impact of solitary confinement on subsequent hospitalisation among Danish detainees by stating that *"individuals in solitary confinement are forced into an environment that increases their risk of hospitalisation ... for psychiatric reasons"*.

In his extensive study on the effects of imprisonment on more than 900 prisoners, including those held in segregation units, Hans Toch coined the term *"Isolation Panic"* to describe the experiences of isolated prisoners. Symptoms of this syndrome included

A feeling of abandonment ... dead-end desperation... helplessness, tension. It is a physical reaction, a demand for release or a need to escape at all costs... [Isolated prisoners] feel caged rather than confined, abandoned rather than alone, suffocated rather than isolated. They react to solitary confinement with surges of panic or rage. They lose control, break down, regress... (Toch 1992:49).

Harvard psychiatrist Stuart Grassian, who has been studying the effects of solitary confinement for over two decades, similarly suggested that the symptoms experienced by isolated prisoners form a distinct syndrome, closely akin to 'delirium',

That is, a constellation of symptoms occurring together and with a characteristic course over time, thus suggestive of a discrete illness... while this syndrome is strikingly atypical for the functional psychiatric illnesses, it is quite characteristic of an acute organic brain syndrome: delirium, characterised by a decreased level of alertness, EEG abnormalities ... perceptual and cognitive disturbances, fearfulness, paranoia, and agitation; and random, impulsive and self-destructive behavior ... (Grassian, 2006:338).

Finally, the growing body of research into the health effects of confinement in 'supermax' prisons in the United States (for example: Cloyes et al. (2006); Haney (2003); Kupers (1999); Miller (1994); Miller & Young (1997); Rhodes (2004); Grassian, (2006).) largely confirms findings reported in earlier studies, namely, that *"this experience is psychologically painful, can be traumatic and harmful, and puts many of those who have been subjected to it at risk of long-term emotional and even physical damage"* (Haney& Lynch, 1997:500).

The accounts of prisoners

Researchers have found that prisoners in solitary confinement often have little insight into their own mental state and tend to minimise their reaction to solitary confinement and play down any mental health problems (Grassian, 1983; Haney, 2003). Segregated prisoners also appear to have a more negative view of psychiatric treatment in prison and tend to avoid seeking such help (Coid et al. 2003-1:315). Mental health problems are particularly stigmatised amongst Muslim prisoners who are reluctant to seek help (Robbins et al. 2005). A report of the inspection of a small unit for Muslim prisoners detained under immigration law on the grounds of national security in the UK, for

example, identified that five of the eight had significant mental health problems but that there was very little take up of the mental health service provided (An Inspection of the Category A Detainee Unit at Long Lartin, HMCIP, 2007). Nonetheless, accounts from prisoners themselves illustrate a range of severe adverse health effects. What follows is what has emerged from interviews with prisoners in isolation, or after the event, and from writings by formerly isolated prisoners.

One of the problems most commonly reported by prisoners who were isolated is that they found it hard to distinguish between reality and their own thoughts, or found reality so painful that they created their own fantasy world. Researchers link such incidents to the absence of external stimuli which results in the brain starting to create its own stimulation, manifesting in fantasy and hallucinations. One study of prisoners who were isolated for periods ranging from 11 days to 10 months reported both auditory and visual hallucinations. One interviewee described how: *"the cell walls start wavering... everything in the cell starts moving; you feel that you are losing your vision"*. Others reported auditory hallucinations: *"I overhear guards talking. Did they say that? Yes? No? It gets confusing. Am I losing my mind?"* Prisoners also reported high sensitivity to noise and smells: *"you get sensitive to noise. The plumbing system... the water rushes through the pipes- it's too loud, gets on your nerves. I can't stand it. Meals- I can't stand the smells....the only thing I can stand is the bread"* (Grassian, 1983).

Other studies have reported similar experiences, ranging from hypersensitivity to sound and smell, to paranoid episodes and self-injury. One former female prisoner described extreme sensitivity to sounds *"Your vision was highly restricted, so you live by sound... you could hear every creaking of the place, you know, the building. It was almost amplified... not that our hearing was better, it was just that we paid more attention because sound had to do with... with life"* (Cited in Shalev, forthcoming). Another former prisoner who was isolated in a dark punitive isolation cell 'saw faces' and 'held conversations' with people who were not there:

Sometimes I felt like I was losing my mind, or that I have lost it already, you know... Holding conversations with myself... I had conversations with people. I mean dialogues, long dialogues with people. Some of them I knew, and some of them I didn't know. There were times when the darkness wasn't dark. I could see faces... I think that I found out that I may be hallucinating when I touched my eyes and my eyes were open so I kind of knew I wasn't dreaming. After a while I thought that maybe I will die there. I really thought I would [Former prisoner, USA, cited in Shalev, forthcoming].

Similar findings were reported by Siegel's (1984) study of 31 people who were subjected to isolation, visual deprivation and restraint on physical movement as hostages, prisoners of war or convicted prisoners over varying periods. All interviewees reported visual and auditory hallucinations that appeared within hours of being isolated and became more and more elaborate as time went by. Prisoners participating in Toch's (1992) large-scale study of the psychological effects of incarceration reported similar experiences in solitary confinement. Interviewee 'M', for example, described panic and paranoid thoughts during his first days in isolation:

...and then I lay on the mattress, and then after I sit there I feel the walls coming in around me. And then when the guards come in and I am screaming, they say: 'what the fuck is going on here?' and I say 'the walls are closing in on me' and they say 'that's tough, you're going to die anyway. We'll strangle you'... I was thinking that if I don't get the hell out of there, they're going to kill me. And I don't feel like fighting them (Toch 1992:150).

Another former prisoner who spent two years in a supermax prison in California chose to refer to 'seeing others lose it' and described similar scenarios²⁵:

I have seen inmates lose their mind completely because of the sound of a light where they are yelling at the light, cursing at the light, believing that for some reason the [authorities] planted some kind of noise inside the light purposely... and so the inmates that ain't strong minded, don't have something to hang on to, the light, the sound of the door, can make them lose their mind... I found it strange, you know, how can a grown man, a very big, grown man, break down to a light. But that's what [that place] can do. And once you lose your mind, you don't know right from wrong. You don't know that you're breaking a rule. You don't know what to do exactly [Former prisoner, USA, cited in Shalev forthcoming].

Seeing and hearing other prisoners break down is a stressful experience in itself, as Henry Charriere ('Papillon') found during his time in isolation on 'Devil's Island', a French penal colony in Guyana: "A great many suicides and men going raving mad around me... it's depressing to hear men shouting, weeping or moaning for hours or even days on end". He himself survived eight years in solitary confinement through fantasy: "thanks to my wandering amongst the stars it was very rare that I ever had a lasting despair. I got over them pretty fast and quickly invented a real or imaginary voyage that would dispel the black ideas" (1970:354-356). One of the problems with such techniques is that the boundaries between fantasy and reality can become dangerously blurred, as was the case for one former female prisoner, who regularly 'left her body' to 'travel' in the outside world. These were not daydreams, but out-of-body experiences from which at times, according to her, it was "really hard to come back":

The first four years of prison was such a fantasy world... I was in segregation. I could be in my cell and shut everyone out and I would go travelling. I would go up and out of prison and fly over the beaches and mountains of Okinawa, where I used to live. Sometimes it was really, really hard to come back [Former prisoner, USA, cited in Shalev, forthcoming].

As her time in isolation grew longer, so did the intensity and frequency of her 'travels', until one day the prison chaplain saw her lying on her cell-floor in a near catatonic state and took her under his wing. British prisoner Doug Wakefield had somewhat less pleasant hallucinations after a period in isolation, "usually in the form of spiders and insects crawling over the floor, the bed and walls, and at such times it is common to hear voices and strange noises" (Wakefield 1980:28). Describing himself as a 'graduate of 1000 days in segregation', he wrote: "fantasising and day-dreaming become prevalent pastimes and the obvious danger here is that this activity could become a permanent feature of the mind with the consequent disadvantage of not knowing at times whether you are in reality or fantasy" (Ibid at p. 30).

The similarities between these accounts of time in isolation in different contexts, geographical locations, and for varying periods of time are striking and cannot be easily discounted. Further, the personal accounts cited above are consistent with research findings on the health effects of solitary confinement reviewed previously. Some of the reported health effects of solitary confinement, both physiological and psychological, are listed in the following section.

2.3 The negative health effects of solitary confinement: reported symptoms

Physiological effects

Although psychological effects are most common and usually dominant, physiological effects are nevertheless commonly reported. Some of these may be physical manifestations of psychological stress, but the lack of access to fresh air and sunlight and long periods of inactivity are likely also to have physical consequences. Grassian and Friedman (1986) list gastro-intestinal, cardiovascular and genito-urinary problems, migraine headaches and profound fatigue. Other signs and symptoms recorded by some of the studies reviewed above are

- Heart palpitations (awareness of strong and/or rapid heartbeat while at rest)
- Diaphoresis (sudden excessive sweating)
- Insomnia
- Back and other joint pains
- Deterioration of eyesight
- Poor appetite, weight loss and sometimes diarrhoea
- Lethargy, weakness
- Tremulousness (shaking)
- Feeling cold
- Aggravation of pre-existing medical problems.

Psychological effects

The most widely reported effects of solitary confinement are its psychological effects²⁶. These will vary with the pre-morbid adjustment of the individual and the context, length and conditions of confinement. The experience of previous trauma will render the individual more vulnerable, as will the involuntary nature of confinement as punishment, and confinement that persists over a sustained period of time. Initial acute reactions may be followed by more chronic symptoms if the confinement persists. While the majority of those held in solitary confinement will report some form of disturbance, there may be a small number of prisoners who show few signs and symptoms and may be more resilient to the negative effects of solitary confinement. Symptoms occur in the following areas and range from acute to chronic.

Anxiety, ranging from feelings of tension to full blown panic attacks

- Persistent low level of stress
- Irritability or anxiousness
- Fear of impending death
- Panic attacks

Depression, varying from low mood to clinical depression

- Emotional flatness/blunting – loss of ability to have any ‘feelings’
- Emotional lability (mood swings)
- Hopelessness
- Social withdrawal; loss of initiation of activity or ideas; apathy; lethargy
- Major depression

Anger, ranging from irritability to full blown rage

- Irritability and hostility,
- Poor impulse control
- Outbursts of physical and verbal violence against others, self and objects
- Unprovoked anger, sometimes manifesting as rage

Cognitive disturbances, ranging from lack of concentration to confusional states

- Short attention span
- Poor concentration
- Poor memory
- Confused thought processes; disorientation.

Perceptual distortions, ranging from hypersensitivity to hallucinations

- Hypersensitivity to noises and smells
- Distortions of sensation (e.g. walls closing in)
- Disorientation in time and space
- Depersonalisation/derealisation
- Hallucinations affecting all five senses, visual, auditory, tactile, olfactory and gustatory (e.g. hallucinations of objects or people appearing in the cell, or hearing voices when no-one is actually speaking).

Paranoia and Psychosis, ranging from obsessional thoughts to full blown psychosis

- Recurrent and persistent thoughts (ruminations) often of a violent and vengeful character (e.g. directed against prison staff)
- Paranoid ideas – often persecutory
- Psychotic episodes or states: psychotic depression, schizophrenia.

Self-harm and suicide

Historical reports of 19th Century isolation prisons repeatedly describe acts of auto-aggression, self-mutilation, and suicide. Contemporary studies have also shown that self-harm (including banging one's head against the cell wall) and suicides are more common in isolation units than in the general prison population (Haney & Lynch 1997:525). In California, for example, a reported 69% of prison suicides in 2005 occurred in segregated housing units (USA Today, 27/12/2006), and in England and Wales in 2004/5 a fifth of prison suicides took place in segregation units (National Offender Management Service, Safer Custody Group. Self inflicted deaths Annual Report, 2004/5).

Other forms of self-harm are also prevalent in solitary confinement. Researchers have noted that self-mutilation or cutting is often *"a result of sudden frustration from situational stress with no permissible physical outlet... Self-addressed aggression forms the only activity outlet"* (Scott & Gendreau, 1969:341). Another study found that self-mutilation was a means to *"liberate the self from unbearable tension- the physical pain becomes a compensatory substitute for psychic pain or shame"* (Dabrowski (1937), cited in McCleery, 1961:303). Former prisoners have testified that self harm played another role for them when they were held in segregation – it asserted that they were still alive.

I was totally frustrated... I started smashing up the cell. I refused to eat. I started refusing water. I was totally paranoid. I started sipping my own urine because I thought they were trying to poison me. I resorted to self-injury, was put in a body belt. You become so angry. It's an outlet, but you have to vent it out. Even your own blood is something real [Former prisoner, UK, cited in Shalev, forthcoming].

I found myself curled up in a foetal position rocking myself back and forth and banging my head against the wall. In the absence of sensation, it's hard sometimes to convince yourself that you're really there [Former prisoner, US, cited *ibid.*].

It is difficult to obtain figures for forms of self-harm that do not result in death. Nonetheless, there is compelling anecdotal evidence that the prevalence of such incidents in segregation and isolation units is particularly high.

2.4 What makes solitary confinement harmful?

Each of the three main factors inherent in solitary confinement- social isolation, reduced environmental stimulation and loss of control over almost all aspects of daily life- is potentially distressing. Together they create a potent mix. Moreover, psychiatric morbidity studies of prisoners indicate that they are a particularly vulnerable population, even when not in solitary confinement. In England and Wales, a morbidity survey of prisoners carried out by the Office for National Statistics in 1998 found that only 10% were without any history of neurotic disorder, psychotic disorder, personality disorder or substance misuse, and many experienced some or all of these in combination (ONS psychiatric morbidity survey, 1998). It is also known that about 7% of prisoners have a severe learning disability, with an IQ of 70 or below²⁷, and that those with learning disabilities find it particularly difficult to cope with isolation. About 12% will also be receiving psychiatric treatment while in prison for severe and enduring mental illness (HMCIP, The mental health of Prisoners, 2007). One cause of these high levels of disturbance is the experience of early life trauma

and the resulting poor personal and social adjustment. All these features conspire to render prisoners particularly vulnerable to the effects of isolation, reduced activity, under-stimulation and loss of control over their lives.

Conversely, anecdotal evidence suggests that some prisoners are protected from the worst impact of solitary confinement by the meaning they are able to make of the experience. Some political prisoners, for example, have demonstrated remarkable resilience during prolonged periods of confinement. That does not mean that the experience was not a difficult one. Describing his time in Robben Island, Nelson Mandela writes: *"I found solitary confinement the most forbidding aspect of prison life. There is no end and no beginning; there is only one's mind, which can begin to play tricks. Was that a dream or did it really happen? One begins to question everything."* (Nelson Mandela, *The Long Walk to Freedom*, 1995). Leaders of the Tupamaro movement in Uruguay, who were imprisoned in strict solitary confinement (they were not allowed to communicate with anyone, meals were delivered to them through a hatch in the cell-door by guards who were instructed not to exchange a word with them) for several years during the 1970's, reported that solitary confinement was the worst form of torture; one prisoner said that *"electricity [torture] is mere child's play in comparison to prolonged solitude"* (cited in Reyes, 2007:607).

Social isolation

Social well-being is seen by the World Health Organisation as integral to its definition of 'health'²⁸. Solitary confinement removes the individual from the company of others and deprives him or her of most forms of meaningful²⁹ and sympathetic social interaction, as well as physical contact. In most cases the isolated individual is deprived of any form of interaction with fellow prisoners, and sometimes with family and friends through restrictions on visits. Where visits do take place they can be closed, with a barrier separating the prisoner from his visitors, preventing any physical contact between them.

Social learning theories highlight the importance of social contact with others not just for pleasure and play but for the individual's very sense of 'self' which is shaped and maintained through social interactions. Social contact is crucial for forming perceptions, concepts, interpreting reality and providing support³⁰.

The self... is essentially a social structure and it arises in social experience. After a self has arisen, it in a certain sense provides for itself its social experiences, and so we can conceive of an absolutely solitary self. But it is impossible to conceive of a self arising outside social experience. When it has arisen we can think of a person in solitary confinement for the rest of his life, but who still has himself as a companion, and is able to think and to converse with himself as he had communicated with others....

This process of abstraction cannot be carried on indefinitely. (Mead, 1934, emphasis added).

Paradoxically, social isolation can lead to further withdrawal. One study found support for the hypothesis that the "shut-in" or "seclusive" personality, *"generally considered to be the basis of schizophrenia, may be the result of an extended period of 'cultural isolation'; that is, separation from intimate and sympathetic social contact"* (Faris, 1962:155). Faris adds that *"seclusiveness is frequently the last stage of a process that began with exclusion or isolation which was not the choice of the patient"* (Ibid. at p. 159).

Deprived of meaningful and sympathetic social contact and interaction with others, the prisoner in solitary confinement may withdraw and regress. Even when isolated prisoners do not show any obvious symptoms, upon release from isolation they can become uncomfortable in social situations and avoid them, with negative consequences for subsequent social functioning in both the prison community and the outside community, again undermining the likelihood of successful resettlement.

Reduced activity and stimulation

Monotony and reduced sensory stimulation are part and parcel of the experience of isolation. In the isolation prisons of the 19th century, where prisoners had access to work, great care was taken to ensure that they were given intentionally tedious and dull jobs usually performed in silence. In 'modern' isolation sections of prisons, work, education or other diversion such as reading material, radio or television, can be withheld or restricted as part of a system of punishment. When work is allocated, it is often conducted inside the cell and, as in the 19th century, can be simple and monotonous, for example stuffing envelopes. Prisoners can be detained in sparsely furnished cells for up to 23 hours a day with little sensory or mental stimulation.

Prisoners' accounts illustrate the effects of monotony and boredom on their mental state during a period of isolation:

Boredom is a major enemy. Sensory deprivation is a way of life. There is simply nothing to do. Sit in your bathroom alone with none of your intimate possessions and try to imagine years of it, week after week. Slowly it tears you down, mentally and physically³¹.

The utter and monstrous boredom that becomes so obvious after a short period of isolation is an all-powering one... in order to fight off the tendency to complete idleness and to retain a hold on the senses, it is necessary to make great exertions... Yet no matter how successful a prisoner may be in staving off the effects of... isolation, it is only a matter of time before it catches up with him (Wakefield 1980:28).

...you sit in solitary confinement stewing in nothingness, not merely your own nothingness but the nothingness of society, others, the world. The lethargy of months that add up to years in a cell, alone, entwines itself about every 'physical' activity of the living body and strangles it slowly to death, the horrible decay of the truly living death. You no longer do push-ups or other physical exercise in your small cell; you no longer pace the four steps back and forth across you cell. You no longer masturbate; you can call forth no vision of eroticism in any form... time descends in your cell like the lid of a coffin in which you lie and watch it as it slowly closes over you... solitary confinement in prison can alter the ontological makeup of a stone (Abbott 1982:44-45).

These personal accounts are supported by studies which indicate that reduced sensory input may lead to reduced brain activity. Building on the input-output theory, one study suggested that sensory input and motor-mental output work in parallel:

A drop in sensory input through sensory restriction produces a drop in mental alertness, an inability to concentrate, a drop in planning and motivation, together with a drop in physical activity in the speech and motor systems... In prison life boredom generates boredom. A drop in stimulus input results in mental sluggishness, a disinclination to learn and a correlated drop in planning, motivation and physical activity (Scott & Gendreau, 1969:338).

To evaluate this hypothesis, the brain activity of isolated prisoners was measured daily. Researchers found that following seven days in isolation there was a decline in brain activity. This decline *“was correlated with apathetic, lethargic behaviour... and with a reduction in stimulation seeking behaviour. Up to seven days the EEG decline is reversible, but if deprived over a long period this may not be the case”* (Scott & Gendreau, *ibid.*).

Lack of control

A third aspect of segregated confinement is the rigid regime and exceptionally high level of control over all aspects of prisoners' lives, or what has been termed “an authoritarian system of social control” (McCleery, 1961:272), or the “totality of control” (Haney, 1993).

While undergoing any special control or disciplinary measure, some degree of increased control and watchfulness from the authorities is inevitable. However, in the case of solitary confinement, this control is extreme and prisoners have few avenues or areas where they can exercise personal autonomy, and are completely dependent on staff for the provision of all their basic needs. When this degree of control is exercised over long periods of time, the psychological impact is proportionally greater.

Various studies have examined the socio-psychological aspects of long-term imprisonment in highly controlled environments and have identified some common psychological reactions³². These typically range from apathy to aggression: *“either reaction to the system of rigid discipline tends to become something very much like insanity – apathy, listlessness, vagaries, or else irritability, hatred and nervous instability”* (Sutherland & Cressey, 1955:473). Another study similarly noted that over time, symptoms experienced by isolated prisoners are *“likely to mature into either homicidal or suicidal behaviour”* (McCleery, 1961:265).

Thus, contrary to the aims of enforcing calm and control on a prisoner, solitary confinement can produce further irritability and even violent outbursts, often unprovoked. Such violent outbursts may be directed against staff, but may also be turned upon the prisoner himself in the form of self-harm or suicide. Where the prisoner does become more docile and apparently conforming to the rules, it may in fact be a pathological reaction in the form of withdrawal, emotional numbing and apathy. Further, the ‘totality of control’ means that some prisoners become so reliant on the prison to organise their lives and daily routines that they lose the capacity to exercise personal autonomy. This, again, may render them dysfunctional in society upon their release and some will seek to return to prison.

2.5 The duration of solitary confinement

All studies of prisoners who have been detained involuntarily in solitary confinement in regular prison settings for longer than ten days have demonstrated some negative health effects (Haney, 2003), and even apologists of the practice agree that prolonged punitive solitary confinement *“presents considerable risk to the inmates”* (Gendreau and Bonta, 1984:475).

A study comparing subsequent admission to psychiatric hospitals in Denmark for prisoners held in solitary confinement compared to those held with other prisoners, found that hospitalisation rates diverged significantly after four weeks. The *“probability of being admitted... for psychiatric reasons was about 20 times as high as for a person remanded in non-solitary confinement for the same period of time”* (Sestoft et al. 1998:105). Siegel’s (1984) study of 31 people who were subjected to isolation, visual deprivation and restraint on physical movement in different situations (hostages, POWs, prisoners) and for varying times reported visual and auditory hallucinations within hours of being isolated, becoming more severe with time.

Studies with volunteer prisoners isolated for periods of up to ten days have commonly reported minimal negative effects. Walters et al (1963:772) noted that for 20 long-term prisoners in a Canadian Federal Penitentiary who volunteered to stay in solitary cells for four days *“while social isolation may produce some change in subjective feelings, it does not result in mental or psychomotor deterioration or increased susceptibility to social influence.”* Similarly Ecclestone, Gendreau and Knox in 1974 reported that for eight volunteers over a period of 10 days *“solitary confinement was not more stressful than normal institutional life.”* But these outcomes may be accounted for by the short duration of stay in isolation and by the fact that prisoners who participated in these studies welcomed the opportunity to spend time away from the general prison population

Experimental studies with volunteers have reported relatively short-lived tolerances for isolation. Although such studies are not equivalent to enforced isolation in the prison context where prisoners are not free to end the experiment at any time, the findings serve to illustrate the powerful impact of isolation on human subjects. In a study aimed at measuring levels of tolerance to isolation, approximately two-thirds of the volunteers were able to remain in an isolated room for periods ranging from three to fourteen days (Zuckerman, 1964:255-276). In another, twenty volunteers were placed separately in a silent room, and asked to remain in it for as long as they could. The average quitting times were 29.24 hours for men and 48.70 hours for women. None of the participants endured the ‘silent room’ for longer than four days (Smith & Lewty, 1959:342-345). Where the duration of isolation was unspecified, two hours were sufficient to generate confusion and the fear of becoming insane (Solomon et al, 1961).

Other studies have also demonstrated that an important element in the level of endurance of solitary confinement is prior knowledge of its duration. Uncertainty as to its duration *“promotes a sense of helplessness. Finite sentences imposed for acknowledged acts seem less prone to inspire panic”* (Toch, 1992:250). Another study concluded that uncertainty is a critical factor relating to the outcome of hostility and aggression (McCleery 1961:303). Knowing how long the experience is to last is therefore a clear mitigating factor available to those responsible for placing a prisoner in segregation.

2.6 Sequelae of isolation: the lasting effects of solitary confinement

There are few longitudinal studies of the effects of solitary confinement and no follow-up studies of formerly isolated prisoners following their release from prison. Again, any long term effects are likely to be dependent on the individual, the type of confinement and its duration. One study of detainees held on remand in solitary confinement at the Western prison in Copenhagen, which examined them on the second to fourth day of their isolation and thereafter at monthly intervals, found a decrease in symptoms soon after transfer to the general population, indicating that “*solitary confinement conditions are distressing and probably temporary, at least partially*” (Andersen et al. 2003:174). The authors note, however, that “*the finding that mental health condition improved when prisoners were moved from solitary confinement to non-solitary confinement indicates that solitary confinement imposes a condition that arguably could be avoided by abolishing it*” (Ibid. at page 175).

Similarly, Grassian’s (1983) study of prisoners held in solitary confinement at Walpole prison in Massachusetts, where the legal statute required that isolated prisoners be relieved from their status for at least 24 hours every 15 days, reported rapid diminution of symptoms during breaks in confinement.

However, other studies report sleep disturbances, nightmares, depression, anxiety, phobias, emotional dependence, confusion, impaired memory and concentration (Hocking, 1970) long after release from isolated environments. These symptoms are similar to those experienced by prisoners in isolation and may imply a degree of irreversibility. But the lasting effects of solitary confinement are perhaps most evident in social settings and with interpersonal relationships:

Although many of the acute symptoms suffered by inmates are likely to subside upon termination of solitary confinement many [prisoners], including some who did not become overtly psychiatrically ill during their confinement in solitary, will likely suffer permanent harm... this harm is most commonly manifested by a continued intolerance to social interaction, a handicap which often prevents the inmate from successfully readjusting to ... general population prison and often severely impairs the inmate’s capacity to reintegrate into the broader society upon release from imprisonment (Grassian, 2006:332).

Former prisoners who have spent prolonged periods in solitary confinement have testified to experiencing difficulties in social situations long after their release:

I mean there are still times where I may go to the walk-in and after the movie’s over and, you know, it’s like I’ve been in the dark and all of the sudden the light comes on and boom all these millions of people around me, I’m like, you know, looking around like, okay, okay, who’s gonna hit me, what’s gonna happen ... I mean, you feel real uncomfortable and then all of the sudden you start shaking, you know, you feel your heart beat and then you realise, wait a minute, I’m at a theatre, what am I tripping on? There ain’t nobody out here all crazy. I’m not in prison. It gets real uncomfortable when I’m around a big crowd. Like sometimes even going to the grocery store I feel uncomfortable, you know, when people look at me, and I’m wondering, you know, wow, what are they looking at? [Former prisoner, US. Cited in Shalev, forthcoming].

My character and personality have undergone many negative changes and I am now a very paranoid and suspicious person. The paranoia has become so extensive that I find it impossible to trust anyone anymore and I have developed a tendency to hate people for no apparent reason (Wakefield, 1980:30).

Unable to regain the necessary social skills for leading a 'normal' life, some may continue to live in relative social isolation after their release. In this sense, solitary confinement operates against one of the main purposes of the prison which is to rehabilitate offenders and facilitate their reintegration into society.

2.7 Concluding remarks about the effects of solitary confinement

There are problems in drawing general conclusions from studies of particular prisoners and from experimental research with volunteers. Studies carried out with prisoners in the context of lawsuits being brought by the prisoner against the authorities raise questions about the partiality of the findings, as do studies carried out by medical professionals employed by the authorities responsible for the confinement. Getting access to prisoners in real life segregation for research purposes raises both practical difficulties and ethical concerns. There is also a clear lack of equivalence between the experience of solitary confinement in real life prisons and within the context of time-bounded experiments. The role of pre-existing mental health problems is also a significant compounding variable.

Nevertheless, there is a large and growing body of literature that demonstrates the harmful impact of isolation, particularly when used punitively, without clear time limits, for periods that are longer than four weeks and for people with prior mental health problems and poor social adjustment.

Key points

- There is unequivocal evidence, dating back to the 19th century, demonstrating the negative health effects of solitary confinement.
- The extent of psychological and physiological damage of solitary confinement will depend on the individual prisoner, his background, the context of placement in isolation, its duration, conditions of confinement and degree of mitigation.
- Uncertainty about the expected duration of solitary confinement is likely to increase its adverse effects.
- While some of the health effects of solitary confinement will subside upon its termination, others may persist.
- For these reasons, the use of solitary confinement should be reserved for extreme cases, for as short time as possible, but usually no more than a matter of days.
- The misuse of the psychological and physiological effects of solitary confinement as part of an interrogation process may amount to cruel, inhuman or degrading treatment or punishment and even to torture, and should be prohibited in all circumstances.

Notes

- 17 This chapter was co-authored with Monica Lloyd, Forensic Psychologist, formerly of the Chief Inspector of Prisons (HMCIP) office, and Jonathan Beynon, MD, Medical Co-ordinator for Health in Detention, International Committee of the Red Cross. The points of view expressed here represent the personal opinions of the authors, and do not necessarily represent the position of their organisations.

3 | The decision to place prisoners and detainees in solitary confinement

The extreme nature of solitary confinement and its potentially harmful effects on prisoners' physical and mental wellbeing require prison authorities to be particularly cautious in imposing it, even for short periods of time. By extension, long-term prison regimes based entirely on solitary confinement run contrary to two of the primary goals of imprisonment, namely rehabilitation and social reintegration. This chapter examines the different uses of solitary confinement and some of the human rights provisions and recommendations that apply to them. Where current human rights standards and provisions are lacking, it seeks to explore how they may be developed and strengthened.

3.1 When and why are prisoners and detainees placed in solitary confinement?

Where prisoners and detainees are held in solitary confinement, whether in an especially designed free-standing isolation unit or in a designated segregation wing in a general population prison, this is typically on one of the following official grounds:

Punishment: punitive segregation is used as a form of punishment for prisoners' misconduct whilst in custody, and is typically imposed for a set, limited period of time, following some form of a disciplinary hearing within the prison. Segregation is considered as the most severe form of punishment for the most serious prison offences. Cell fittings in punitive segregation units are often minimal, and prisoners are allowed fewer provisions and personal belongings than those afforded to prisoners in 'normal location'. Prisoners held in punitive isolation typically only leave their cell for a one-hour period of solitary exercise a day, but in some jurisdictions, exercise as well as access to family visits, are restricted even further. Legislation in some jurisdictions also permits courts to impose periods of solitary confinement as a part of the sentence for certain crimes. In Peru, for example, under the rule of its former president, Alberto Fujimori, those convicted of crimes against the State were automatically placed in solitary confinement for the first year of their imprisonment. In Pakistan, the Penal Code allows for convicted prisoners to be sentenced by the court for up to three months in solitary confinement at the beginning of their sentence (Pakistan Penal Code, Act XLV of 1860).

Protection: protective segregation is used for holding vulnerable prisoners separately from the general prison population for their own protection, either at the prisoner's request or at the discretion of staff. Vulnerable prisoners may include, for example, sex offenders, police informants,

former police or prison officers, debtors, prisoners at risk of self harm and those who might be harmed by other prisoners. In some jurisdictions these prisoners are allowed to associate with each other, whilst in others they are held in regimes of strict solitary confinement, identical to those in punitive segregation, for the duration of their prison sentence.

Prison management: managerial or administrative segregation is used as an internal tool for isolating prisoners variously defined as potentially dangerous, disruptive or otherwise posing a management problem, for example gang members. The rationale is that isolating such prisoners will reduce incidents of violence across the prison system and maintain prison order and discipline. This form of solitary confinement is usually imposed through an internal process governed by administrative rules. In some jurisdictions, prisoners are offered structured regimes starting with strict solitary confinement followed by gradually improved provisions and opportunities to engage with other prisoners, whilst in others, prisoners will be held in strict separation for the duration of their sentence. Where small group isolation is used, prisoners are held in single cells but allowed to associate with one to five other prisoners at designated times, usually during exercise periods.

National security: protecting the public and/or national security is, and has historically been, used as a justification for placing those suspected or convicted of politically motivated crimes and of senior membership of major organised criminal gangs in solitary confinement. The rationale is to prevent the prisoner from contact with 'terrorist' or 'subversive' groups or organised crime gangs outside the prison, or to prevent the dissemination of State secrets. Convicted prisoners isolated on grounds of national security will typically spend their prison sentence in strict solitary confinement.

Pre-charge and pre-trial investigation: suspects may be held in isolation without being charged whilst their interrogation is ongoing. In most jurisdictions such pre-charge detention is limited by law to a few hours or a few days, but some jurisdictions now have provisions for lengthier periods. In the UK, for example, terror suspects may be detained without any charge being brought against them for up to 28 days and, subject to a Bill introduced by the Government being enacted in its present form, this period may be extended to 42 days. Noting that the current provision of 28 days is already controversial, critics have called for this proposal to be scrapped. Pre-trial detainees, particularly those charged with crimes against the State, are also often isolated during the investigation or interrogation process. In some countries, most notably in Scandinavia, criminal suspects are also sometimes isolated pending investigation. The rationale in such cases is to prevent the detainee from compromising the investigation. In some cases detainees are isolated without access to legal counsel. This form of detention, called 'incommunicado', may be illegal under international law and is subject to special provisions³³.

Lack of other institutional solutions: prisoners are also sometimes held in solitary confinement because there are no appropriate alternatives available for housing them. For example, mentally ill prisoners may be isolated because there are no available secure hospital beds for them. These prisoners may not necessarily pose a danger to others or to themselves, but they are vulnerable to abuse and their behaviour may disturb or unsettle other prisoners and prison staff. Prisoners may also be segregated due to prison overcrowding whilst waiting for space to become available in a setting appropriate to their security classification.

In countries which still use the death penalty, and in those where it was only recently abolished, Death Row prisoners are also typically held in strict solitary confinement. Finally, prisoners may also be held in de-facto solitary confinement – sometimes remaining locked up in single occupancy cells due, for example, to staff shortages. To illustrate, in a recent report from the Chief Inspector of Prisons in England and Wales, 30% of prisoners surveyed in local prisons in 2006/7 (some of whom were held in single cells) claimed that they were unlocked for less than two hours a day (HMCIP Thematic Report, Time out of Cell, 6 June 2008).

Case study: Solitary confinement in England & Wales

Prisoners may be held in solitary confinement for periods of 22-24 hours a day in the following circumstances:

- In police custody, where they will invariably be held in a single cell. Most police detainees are released within less than 24 hours, but some may be held longer for questioning. Authority for this has to be granted from a senior police officer at nine hourly intervals up to 72 hours, at which point authority for continued detention has to be sought from a court. Those suspected of terrorism may be held in police custody for up to 28 days.
- If they are placed in segregation overnight for adjudication the following day (in which case their confinement may not exceed 24 hours).
- If they are awarded cellular confinement as a punishment, in which case this will last no more than 14 days in the case of young prisoners or 28 days in the case of adult prisoners.
- If they are placed in segregation to preserve good order or discipline (GOOD) or for their own protection (OP), in which case the period of time is open-ended. In these circumstances prisoners are subject to a local review of their confinement after the first 72 hours and weekly thereafter.
- If they are placed in the Close Supervision System (CSC) within a restricted regime, in which case they are provided with in-cell activities and a high level of staff engagement, and are subject to local monitoring and ongoing case management from the CSC selection committee within the High Security Directorate.
- When a CSC prisoner is transferred to a segregation unit in a high security prison and held in a designated CSC cell or high control cell* for a period of time-out, in which case they are subject to ongoing case management by the CSC selection committee within the High Security Directorate, but in practice to little local monitoring.
- When a prisoner with mental health problems is held in a single cell within the prison hospital under the care of health care staff.

*A high control cells are equipped with a feeding hatch in the cell door which allow for food and other provisions to be delivered without unlocking the prisoner at all.

3.2 Placement in solitary confinement: procedural safeguards, and special provisions and recommendations regarding the isolation of specific categories of prisoners

As solitary confinement is a harsh measure with potentially harmful consequences for the prisoner involved, the decision to isolate a prisoner, be it as short-term punishment, for longer term management or for his own protection, must not be taken lightly or in an arbitrary manner. Good practice dictates that it must always be taken by a competent body, in accordance with the law and in adherence with the requirements of due process. The authority making the decision must justify its decision in writing, and be accountable for it. This authority should not be the prison doctor, nor should the doctor certify the prisoner 'fit for isolation' (this issue is discussed further in some detail in Chapter Five). Another important safeguard where solitary confinement is imposed is to ensure that the decision to segregate a prisoner, or to continue his segregation, is substantially and regularly reviewed by an independent body, and that the prisoner has a right to appeal against the decision.

Such reviews should always be based on the continuous assessment of the individual prisoner by staff specially trained to carry out such assessment. Moreover, prisoners should as far as possible be kept fully informed of the reasons for their placement and, if necessary, its renewal; this will inter alia enable them to make effective use of avenues for challenging that measure (CPT 11th General Report, CPT/Inf (2001) 16, section 32).

Review hearings: good practice example

At Woodhill prison's (UK) Close Supervision Centre, where some of those considered to be amongst the most challenging prisoners in the prison system are held in solitary confinement, prisoners' placement is reviewed monthly, and prisoners' legal representatives are invited to attend their clients' review hearings.

The general procedural requirements and guarantees outlined above apply to the decision to place a prisoner in solitary confinement, regardless of the reason for his placement. In addition, some specific issues arise in relation to detainees and particular categories of prisoners who are placed in solitary confinement.

Punitive segregation

Punitive or disciplinary segregation is the most serious punishment which can be imposed on prisoners, and as such should be reserved for the most serious prison offences and be proportional to them. It must only be imposed as last resort and for as short a time as possible, lasting days rather than weeks or months.

Rule 30 of the UN Standard Minimum Rules for the Treatment of Prisoners (SMR) stipulates that:

(2) No prisoner shall be punished unless he has been informed of the offence alleged against him and given a proper opportunity of presenting his defence. The competent authority shall conduct a thorough examination of the case.

Article 6 of the ECHR, which guarantees the right to a fair trial, also elaborates on some of the necessary safeguards:

1. In the determination of his civil rights and obligations or of any criminal charge against him, everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law ...
3. Everyone charged with a criminal offence has the following minimum rights:
 - to be informed promptly, in a language which he understands and in detail, of the nature and cause of the accusations against him;
 - to have adequate time and facilities for the preparation of his defence;
 - to defend himself in person or through legal assistance ... ;
 - to examine ... witnesses against him ... ;
 - to have the free assistance of an interpreter if he cannot understand or speak the language used in court.

It has been established that these protections also apply to prison adjudication proceedings, particularly when a harsh penalty is imposed on the prisoner³⁴.

Pre-trial and pre-charge detainees

The isolation of those who have not yet been convicted of any crime is particularly problematic, as it inflicts punitive and potentially harmful conditions on people who are innocent until proven guilty, and serves to coerce them.

Typically, in addition to being held in isolation from others, pre-trial detainees are subjected to further restrictions on visits and communications with the outside world. In Denmark and Norway, for example, remanded detainees may be held in solitary confinement for up to three months (or indefinitely, if the crime they are charged with will result in a prison term of more than six years if they are found guilty), allowed only supervised weekly visits lasting 30 minutes, prohibited from making telephone calls and may have their communications restricted or withheld. Such practices have been the subject of ongoing concern and criticism by international and regional monitoring bodies. The UN Human Rights Committee, for example, called on the government of Denmark to *"reconsider the practice of solitary confinement so as to ensure that it was imposed only in cases of urgent need... except in exceptional circumstances, solitary confinement should be abolished, especially for pre-trial detainees..."*³⁵.

Over time, through its visits to places of detention in Europe, the Committee for the Prevention of Torture has developed the following safeguards concerning the isolation of pre-trial detainees³⁶:

- Solitary confinement of pre-trial detainees should only be resorted to in exceptional circumstances, should be strictly limited to the requirements of the case, and should be proportional to the needs of the investigation;
- Restrictions should be authorised by a court;
- Detainees should have an effective right of appeal to a court or another independent body;
- Detainees should have access to a doctor whose written report should be forwarded to the competent authorities;
- Detainees should be offered purposeful activities in addition to outside exercise and guaranteed appropriate human contact.

These safeguards should be followed as a minimum in all cases. Isolating pre-trial detainees may also pressurise them to provide confessions in order to ease their conditions of confinement. The CPT has reported that in Denmark, for example, it was ‘not unusual’ for confessions to be immediately followed by a discontinuation of solitary confinement regimes³⁷. This amounts to a form of coercion which, as stated in the introduction, should be prohibited.

The use of solitary confinement for those who have not yet been charged with any offence must be strictly limited by law and must only be used in exceptional circumstances, with judicial oversight, for as short a time as possible, and never for more than a matter of days. The misuse of solitary confinement in secret detention centres, particularly those linked with the so-called ‘war on terror’ as a means of coercing or ‘softening up’ detainees for the purpose of interrogation should be prohibited, as the deliberate infliction of mental and physical suffering for such purposes amounts to cruel, inhuman or degrading treatment and even torture.

The mentally ill

There is consensus amongst observers, experts and, increasingly, the courts, that the mentally ill and those at risk of self harm should not be held in solitary confinement – *“The already mentally ill, as well as persons with borderline personality disorders, brain damage or mental retardation, impulse-ridden personalities, or a history of prior psychiatric problems or chronic depression ... For these inmates, placing them in [isolation] is the mental equivalent of putting an asthmatic in a place with little air to breath”* (Madrid v. Gomez judgement, 1995). Yet, reports indicate that segregation is widely used to manage mentally ill prisoners, and that mentally ill prisoners are overrepresented in segregation units³⁸.

The particular vulnerability of mentally ill prisoners means that prison authorities must be especially vigilant in their treatment. The Inter-American Court on Human Rights has stated that *“... when the person kept in isolation in a penitentiary institution has a mental disability, this could involve an even more serious violation of the State’s obligation to protect the physical, mental and moral integrity of persons held under its custody”*³⁹. Thus, those suffering from mental illness must not be placed in solitary confinement and under no circumstances should the use of solitary confinement serve as a substitute for appropriate mental health care.

Challenging, dangerous, or disruptive prisoners

As noted above, in some jurisdictions prisoners who are classified as dangerous or chronically disruptive are placed in prolonged solitary confinement as a prison management tool. The practice of “isolating risk”, as one commentator termed it (Riveland 1999), is widely criticised. Supermax prisons in the United States, for example, have been criticised by the courts, the UN Human Rights Committee, the Committee Against Torture and the UN Special Rapporteur on Torture. All have stated that conditions of confinement in these prisons may amount to cruel, inhuman or degrading treatment in violation of international human rights law. Both the European Court of Human Rights and the Committee for the Prevention of Torture have expressed similar concerns about the ‘special security’ regimes imposed on prisoners in a number of European states. Referring to isolation at the Extra Security Institution (EBI) in the Netherlands, the CPT has stated that “*to subject prisoners classified as dangerous to such measures could well render them more dangerous still*” (CPT re Netherlands, 1998, para.69), and the ECtHR has stated on a number of occasions that it shares these concerns (for example, *Mathew v. the Netherlands*, 2005).

Addressing the use of ‘reinforced security’ units for holding dangerous prisoners, the Council of Europe’s Committee of Ministers called on the Governments of Member States⁴⁰:

1. To apply, as far as possible, ordinary prison regulations to dangerous prisoners;
2. To apply security measures only to the extent to which they are necessarily required;
3. To apply security measures in a way respectful of human dignity and rights;
4. To ensure that security measures take into account the varying requirements of different kinds of dangerousness;
5. To counteract, to the extent feasible, the possible adverse effects of reinforced security conditions;
6. To devote all necessary attention to the health problems which might result from reinforced security;
7. To provide education, vocational training, work and leisure time occupations and other activities to the extent that security permits;
8. To have a system for regular review to ensure that time spent in reinforced security custody and the level of security applied do not exceed what is required;
9. To ensure, when they exist, that reinforced security units have the appropriate number of places, staff and all necessary facilities;
10. To provide suitable training and information for all staff concerned with the custody and treatment of dangerous prisoners.

It is also worth noting that studies suggest that solitary confinement is not an effective tool for managing those defined as ‘problem’ or ‘difficult’ prisoners and may even be counter-productive. A study of the ‘incurable units’ in North Carolina in the late 1950s, where prisoners were subjected to a regime of strict and prolonged solitary confinement, concluded that *“the over-all impact of the incurable unit in penal practice probably is one that intensifies tendencies to criminal attitudes and behavior”* (McCleery, 1961:306). Other studies identified isolation regimes as central factors leading to prison riots. One study of events leading to the 1980 riot in the New Mexico Penitentiary (USA), for example, attributed the riot directly to the strategy of isolating prisoner leaders, which led to the fragmentation of prisoner solidarity and in turn led to growing violence. A study of ‘order and discipline’ in prisons in England and Wales concluded that *“to impose additional physical restrictions, especially of a severe character, will almost certainly lead to a legitimacy deficit; and that deficit may well in the end play itself out in enhanced violence”* (Bottoms, 1999:263).

Similar findings emerge with regard to the isolation of gang members. One study found that the policy of placing gang members in solitary confinement in special security units in California led to an increase in gang activity, as *“prison authorities’ efforts to contain the spread of gangs led, unintentionally, to a vacuum within the prison population within which new prison groupings developed”* (Hunt et al. 1993:403). Leadership struggles among these new groupings then resulted in gang related murders in general population prisons (Parenti, 1999:209). Data on prison violence before and after the introduction of special security (or ‘supermax’) units, similarly indicates that the isolation of prisoners classified as dangerous or disruptive did not result in a reduction of prison violence in general population prisons⁴¹.

In short, though solitary confinement may be a convenient tool for managing challenging prisoners in the short term, in the long term it is not effective, and may prove to be counter-productive. Further, as Chapter Two illustrated, prolonged solitary confinement may have very serious health consequences for the individual concerned and may also affect his chances of successful reintegration into society. Every effort should therefore be made to reverse the trend towards supermax prisons and similar regimes which are wholly based on solitary confinement. Where it is absolutely necessary to hold a handful of extremely dangerous prisoners in separation from others, there should be ongoing assessment of the need to keep them isolated, and they should be afforded increased in-cell provisions, access to programmes, opportunities for meaningful human contact and so on.

3.3 The human rights position and case law regarding the placement of prisoners in solitary confinement

The potentially harmful effects of solitary confinement are recognised by human rights bodies, who view it as an undesirable prison practice which can only be justified in extreme cases⁴², must only be used for the shortest time possible⁴³, and which, in certain circumstances, may be in violation of international law.

The Human Rights Committee has expressed the view that

“solitary confinement is a harsh penalty with serious psychological consequences and is justifiable only in case of urgent need; the use of solitary confinement other than in exceptional circumstances and for limited periods is inconsistent with article 10, paragraph 1, of the Covenant”⁴⁴ and may amount to acts prohibited by Article 7 (torture and cruel, inhuman or degrading treatment or punishment)⁴⁵.

The UN Committee Against Torture (CAT) has been critical of practices involving prolonged solitary confinement and has stated that these may amount to treatment in violation of the prohibition against torture or inhuman treatment. For example, the CAT has expressed grave concerns regarding the strict and prolonged solitary confinement in supermax prisons in the United States (CAT, 2000); lack of time limits on placement in solitary confinement and the number of detainees isolated for more than ten years in Japan (CAT, 2007); and, the isolation of pre-trial detainees in Denmark and Norway (CAT, 2002).

A joint report issued by UN Rapporteurs on the situation of detainees held by US forces at Guantanamo Bay stated that *“the general conditions of detention, in particular the uncertainty about the length of detention and prolonged solitary confinement, amount to inhuman treatment and to a violation of the right to health as well as a violation of the right of detainees under article 10 (1) of ICCPR to be treated with humanity and with respect for the inherent dignity of the human person”* (Report to the UN Commission on Human Rights, 62 Session, 15/2/06, UN DOC E/CN.4/2006/120).

The European Committee for the Prevention of Torture (CPT) has taken the view that solitary confinement, for whichever reason, requires particular attention. In assessing any one case,

“the principle of proportionality requires that a balance be struck between the requirements of the case and the application of a solitary confinement-type regime, which is a step that can have very harmful consequences for the person concerned”⁴⁶.

Grounds which were accepted by the European Court of Human Rights (ECtHR) as justifying solitary confinement include: the prisoner's extremely dangerous behaviour⁴⁷, the prisoner's *"ability to manipulate situations and encourage other prisoners to acts of non-discipline"*⁴⁸ and the prisoner's safety⁴⁹. The *"general situation regarding terrorist climate at the time"* was also found to justify severe security measures, including solitary confinement⁵⁰. Ten years later, in 1992, the Court somewhat narrowed this view when it stated that *"the undeniable difficulties inherent in the fight against crime, particularly with regard to terrorism, cannot result in limits placed on the protection to be afforded in respect of the physical integrity of individuals"*⁵¹. These protections are not dependent on the individual's conduct: *"The Court is well aware of the immense difficulties faced by States in modern times in protecting their communities from terrorist violence. However, even in these circumstances, the Convention prohibits in absolute terms torture or inhuman or degrading treatment or punishment, irrespective of the victim's conduct"*⁵². In a more recent case, whilst the Court reaffirmed that the absolute prohibition against torture, inhuman or degrading treatment extends even to the *"most difficult circumstances, including the fight against terrorism and organised crime"*, and that solitary confinement must never be imposed on prisoners indefinitely, it ruled that holding a man who, at the time, was *"considered to be the most dangerous terrorist in the world"* in solitary confinement for 8 years and two months did not constitute a breach of Article 3 of the ECHR⁵³.

But the Court's willingness to accept that prolonged solitary confinement may be justified in exceptional cases, particularly those involving offences against the State, does not extend more generally. The placement of a prisoner in solitary confinement because he could not adapt to an ordinary prison setting was not accepted as sufficient grounds, and was found to constitute inhuman treatment in breach of Article 3⁵⁴. A breach of Article 3 was also found where a regime of strict solitary confinement was imposed for more than three years on a former Death Row prisoner yet *"the government have not invoked any particular security reasons ... and have not mentioned why it was not possible to revise the regime"*⁵⁵.

Hence, while it is generally accepted that in the prison setting short-term solitary confinement may sometimes be necessary, its use is subjected to close scrutiny to ascertain whether it serves a legitimate purpose, and is absolutely necessary in any given case. Once it is established that the placement of a prisoner in solitary confinement has been undertaken in accordance with due process requirements and serves a legitimate purpose, the physical conditions and regime afforded to isolated prisoners are addressed. These are the subject of the following chapter.

Key points

- The decision to place a prisoner in solitary confinement, for whatever reason, must always be made by a competent body and in accordance with due process requirements, including the right to appeal against the decision.
- When used as punishment for prison offences, solitary confinement must only be used as a last resort, and then for the shortest time possible, no more than a matter of days.
- Ensuring that the process through which prisoners are isolated is transparent and adheres to due process requirements not only ensures that the decision is carried out legally and professionally, but may also contribute to prisoners' perception of their placement as being legitimate and fair and, in turn, positively affect their behaviour.
- The use of prolonged solitary confinement for managing prisoners is rarely justified, and then only in the most extreme of cases.
- Solitary confinement is an undesirable tool for the long term management of challenging prisoners, and may be counter-productive.
- Those suffering from mental illness must not be placed in solitary confinement and under no circumstances should the use of solitary confinement serve as a substitute for appropriate mental health care.
- The use of solitary confinement for pre-charge and pre-trial detainees must be strictly limited by law, must only be used in exceptional circumstances, with judicial oversight, and for as short a time as possible, never for more than a matter of days.
- The use of solitary confinement as a means of coercing or 'softening up' detainees for the purpose of interrogation should be prohibited.
- Solitary confinement should never be imposed indefinitely and prisoners should know in advance its duration.

Notes

- 33 Incommunicado detention involves the detainee being held without access to a lawyer, doctor and family members. The UN Special Rapporteur on Torture has proposed that this form of detention be declared illegal, as it is “the most important determining factor as to whether an individual is at risk of torture” and called on States to release all persons held incommunicado without delay (Report by the Special Rapporteur on the question of torture and other cruel, inhuman or degrading treatment or punishment (1999) UN doc. A/54/426, par. 42; Same, 1995 Report UN doc. E/CN.4/1995/34, par. 926). Successive resolutions of the UN Commission on Human Rights have reiterated this stance and stated that prolonged incommunicado detention can in itself constitute a form of cruel, inhuman or degrading treatment (see for example Commission on Human Rights resolutions 1997/38, 1998/37 and 1999/32). The UN Human Rights Committee called on States to make provisions against incommunicado detention (General Comment 20), and in considering individual cases involving incommunicado detention for varying periods of time found a violation of Articles 10 and/or 7 of the ICCPR (in many cases the applicant’s incommunicado detention was accompanied by other deprivations. See, for example: *de Polay v. Peru* (1997) Communication 577/1994; *Mukong v. Cameroon* (1994) Communication 458/1991; *Gilboa v. Uruguay* (1985) Communication 147/1983). The European Court of Human Rights (ECtHR) found a breach of Article 6 protections where detainees were held incommunicado for 24 hours in one case and 48 hours in another (*Averil v. UK*, ECHR 212, [2001] 31 EHRR 36; *John Murray v. UK*, ECHR 3, [1996] 22 EHRR 29). The Inter-American Court of Human Rights found a violation of the prohibition against torture, inhuman or degrading treatment where a detainee was held incommunicado for 36 days, and declared that this form of detention, in itself, may constitute a violation of human rights law (*Castillo Petruzzi et al. v. Peru*, Judgement of 30 May, 1999.).

4 | Design, physical conditions and regime in solitary confinement units

4.1 Introduction

The design layout and ‘hardware’ of a prison building- including building materials, colour schemes and surveillance mechanisms- have a great impact on the way in which the prison is managed, on its regime, on the daily experiences of prisoners and staff and on the relationship between them. The specific design features of any prison are determined by many factors including its age, size, construction and operating budgets, its mission statement and the prevailing penal policies and attitudes and managerial theories at the time. By extension, the design of segregation units varies greatly, not only between one State and another, but also within the same jurisdiction, affording prisoners different levels of interactions, sensory stimulation, comfort, privacy, and so on.

Although the architectural design of isolation units and cells varies between prisons and jurisdictions, they typically share some common features including: location in a separate or remote part of the prison; the absence of, small, or partially covered windows; sealed air quality; stark appearance and dull colours; toughened cardboard or other tamper proof furniture bolted to the floor; and, small and barren exercise cages or yards. These features constitute a claustrophobic and monotonous environment, which has health implications for both prisoners and, to some extent, staff who work in these units. Such health implications are made worse by the lack of opportunities for social, vocational and recreational activities which also characterise these units.

Newly built isolation units tend to adopt the ‘small pod’ design where cells are grouped together in small clusters (or ‘pods’) of 6-8 single cells, arranged around a centralised control room from which prisoners are supervised. These units are designed to increase surveillance and to enable prolonged solitary confinement and minimise contact between prisoners and staff. Cells are self contained with a toilet and a wash-basin. Other measures, such as feeding-slots built into cell-doors, are taken to ensure that most services can be provided to prisoners inside their cells, reducing prisoner movement in and outside the unit. Typically, physical conditions in the new, purpose built isolation units are better than those in segregation units in older prisons, which were not designed for prolonged solitary confinement. Conversely, since in the newer purpose-built units most prisoner services can be provided in the cell or at the cell-front, prisoners enjoy even less stimulation and opportunities for interaction than in older segregation units. In some of the newly built isolation units, cells are also soundproofed and/or do not have windows, further reducing sensory stimulation.

The design of the prison is closely linked to its regime. Together they have great impact on prisoners' experience of the prison and their wellbeing. The section which follows examines international standards regarding prison conditions and regime, with a special emphasis on solitary confinement units.

4.2 International standards regarding prison conditions and regime

Human rights instruments form the guiding principles and minimum standards for the humane treatment of prisoners. The daily running of prisons is governed by national laws and prison rules which include detailed practical provisions, but they must in all cases conform to the overarching international human rights standards ensuring that prisoners are held in a humane manner in a sanitary and healthy environment. Indeed, monitoring bodies and the courts pay particular attention to the physical conditions in which prisoners are held and will be more inclined to find a violation of human rights law where these fall below the required minimum standards.

Having regard to the diversity in resources, laws and cultures of states, Article 2 of the UN Standard Minimum Rules (SMR) stipulates that standards should *"serve to stimulate a constant endeavour to overcome practical difficulties in the way of their application, in the knowledge that they represent, as a whole, the minimum conditions which are accepted as suitable by the United Nations"*. In its General Comment 21, on the interpretation of what is meant by treating all persons deprived of liberty with *"humanity and with respect for their inherent dignity"* (ICCPR, Article 10), the UN Human Rights Committee made clear that such treatment is fundamental, and *"cannot be dependent on the material resources available in the State party"* (Human Rights Committee General Comment 21, Article 10 of the International Covenant on Civil and Political Rights (44th Session 1992)). In other words, these minimum requirements must be observed, *"even if economic or budgetary considerations may make compliance with these obligations difficult"*⁵⁶.

As their title implies, the Standard Minimum Rules (and other similar instruments) set out the base-level minimum requirements for the operation of prisons globally. The standards examined below are generic and apply to all prisons and to all sections of the prison, but they take on a particular importance in solitary confinement units. Conditions which fall below these minimum standards may constitute cruel, inhuman or degrading treatment or punishment. Adherence to, or even improvement on, the standards discussed below still does not mean that solitary confinement necessarily becomes any less damaging. But ensuring humane conditions and access to meaningful human contact may help mitigate some of its harmful effects.

A. Physical conditions

As noted above, instruments such as the UN Standard Minimum Rules (SMR) and European Prison Rules (EPR) prescribe minimum standards of physical conditions in all places of confinement. These include:

Cells

Rule 10 of the UN SMR stipulates that:

All accommodation provided for the use of prisoners and in particular all sleeping accommodation shall meet all requirements of health, due regard being paid to climatic conditions and particularly to cubic content of air, minimum floor space, lighting, heating and ventilation.

The European Prison Rules (2006 revisions) use similar language, adding the importance of privacy (Article 18.1). Article 18.3 of the EPR stipulates that specific minimum requirements shall be set in national law.

Cell size and fixtures are of particular importance where prisoners spend most of their day inside the cell in solitary confinement. While international instruments do not specify a minimum size for cells intended for solitary confinement, one can infer from judgements and reports what constitutes an acceptable standard. The European Committee for the Prevention of Torture (CPT) found that solitary confinement cells measuring 8 sq. m. (CPT re Germany, 1993) and 9 sq. m. (CPT re the Netherlands, 1993) to be of a 'reasonable size' for single occupancy, and cells measuring 11 sq. m. to be of a 'good size' (CPT re Netherlands, 1998). The European Court of Human Rights judged a cell measuring 6.84 sq. m. to be 'sufficiently large' for single occupancy (*Ramirez v. France*, Judgement of 27/1/2005). Clearly, any cell should be large enough to allow sufficient area for sleeping, eating and studying, whilst keeping the lavatory area separate.

Windows and light

The use of dark cells as punishment is prohibited under international human rights law (SMR 31; EPR 62.3). International standards also require that in all places where prisoners live or work:

(a) The windows shall be large enough to enable the prisoners to read or work by natural light, and shall be so constructed that they can allow the entrance of fresh air whether or not there is artificial ventilation (SMR Rule 11a).

Windows are particularly important where prisoners spend most of their day alone in the cell. The existence of windows, or lack thereof, as well as access to natural light for prisoners held in solitary confinement, have been important factors in the assessment of prison conditions by human rights bodies and the courts, and can tip the balance between acceptable conditions and inhuman treatment. In addition to natural light, international instruments also require that:

Artificial light shall be provided sufficient for the prisoners to read or work without injury to eyesight (SMR Rule 11b)

Cell fittings should enable prisoners to control artificial light inside their cells. In no case should cell lights be left on continuously.

Sanitary fixtures and personal hygiene

Articles 12 and 13 of the UN SMR stipulate that

12. The sanitary installations shall be adequate to enable every prisoner to comply with the needs of nature when necessary and in a clean and decent manner.
13. Adequate bathing and shower installations shall be provided so that every prisoner may be enabled and required to have a bath or shower, at a temperature suitable to the climate, as frequently as necessary for general hygiene according to season and geographical region, but at least once a week in a temperate climate.

The standard set by European Prison Rules is for prisoners to be allowed to shower daily if possible, and at least twice a week (EPR Rule 19.4). Cells used for solitary confinement should, at a minimum, have an in-cell lavatory and wash-basin installed, and where possible, also a shower. These should be situated in a far corner of the cell and screened-off to afford the prisoner privacy. Prisoners should be provided with water and the necessary toiletries to maintain personal cleanliness (SMR Rule 15; EPR Rule 19.6), and with cleaning materials to maintain the cleanliness of their cells. More generally, all areas used by prisoners including showers, exercise areas and corridors should be clean and well maintained.

Other environmental features

The monotonous and claustrophobic environment of segregation units can be improved by some additional design features including⁵⁷:

- Good ventilation and comfortable temperatures, ideally controlled by the prisoner
- Low noise levels
- 'Soft materials' for cell furnishings
- Colourful environment
- Privacy
- Alarm button

Physical design and conditions: country examples

The importance of good prison design and adequate physical provisions is perhaps best illustrated by examples of segregation units which fail to meet international standards. The selection below is drawn from reports on physical conditions in segregation units in various countries.

Physical conditions in segregation units: case studies

The 'S' security cells in Staubing prison (Germany)

Once inside the cell with all the doors closed, prisoners could not hear any of the usual prison sounds. The cells were located at the intersection of the wings of a building and were reached through a door opening onto a corridor, which served as a form of antechamber and where the showers were also situated. Each corridor contained two cells. In principle, there were no guards in the corridors and the occupants of the cells had no opportunities for visual or other forms of sensory contact with other prisoners or prison officers [CPT report 1993, par. 74-75.]

The isolation cells in Komotini prison (Greece)

Were also not in a fit condition to hold prisoners... [cells were] hot and filthy, with a putrid smell; there was poor ventilation, no bed (only a dirty mattress on the ground), no wash basin (hands were washed in the toilet) and minimal access to natural light [CPT report 2006, par. 41].

The disciplinary cells at Sremska Mitrovica prison (Serbia)

Were equipped with only a wooden platform (with a mattress and bedding), a box for personal belongings, a sink and an Asian-type toilet ... access to natural light and artificial lighting were at best mediocre [CPT report 2006, par.133].

Cells in Section 209 of Evin prison (Iran)

Were placed in the basement ... Cells measured about one meter by two meters, with a ceiling height of about four meters. A light at the top of the cell is on twenty-four hours a day. Cells had a toilet and a sink. The floor was made of... chalk [and] the walls were all white. Some prisoners were granted twenty minutes per day in a caged outdoor area, but others never saw the open air... [Human Rights Watch, "Like the Dead in Their Coffins" Torture, Detention and the Crushing of Dissent in Iran; June 2004, Vol. 16, No.2 (E)]

B. Prison regime

While it is generally accepted by human rights and monitoring bodies that certain restrictions may be unavoidable in segregation units where solitary confinement is imposed as a short-term disciplinary punishment, prison authorities are nonetheless required to provide prisoners with minimal regime provisions, as prescribed in international instruments. Where prisoners are held in longer term solitary confinement, international bodies make it clear that they must be afforded access to prison programmes and meaningful human contact. The minimal regime provisions prescribed by international instruments include some of the following:

Access to outdoor exercise

- 27.1 Every prisoner shall be provided with the opportunity of at least one hour of exercise every day in the open air, if the weather permits.
- 27.2 When the weather is inclement alternative arrangements shall be made to allow prisoners to exercise. (European Prison Rules (2006 rev.); SMR Rule 21(1))

The requirement for prisoners to have at least one hour of open-air exercise daily is generally accepted as an absolute minimum (CPT/Inf(93)15 at para.95). Where possible, prisoners should be allowed to associate with each other during recreation time (see also EPR 27.7). For prisoners held in solitary confinement, the exercise period is the only opportunity they have to get fresh air and a glimpse of the world outside their cells. This requirement is therefore of particular importance and should be strictly adhered to with a view to extending recreation times and enabling prisoners to exercise together. The lack of opportunity for outdoor exercise combined with the lack of access to natural light was found by the European Court of Human Rights to amount to degrading treatment in violation of Article 3 of the ECHR⁵⁸.

Designated exercise yards in segregation and special high security units often comprise a small and barren concrete enclosure (see various CPT Country Reports). In some jurisdictions the area is covered with metal mesh obstructing the view of the sky. This should be avoided. Exercise yards should be of sufficient size to enable prisoners to exert themselves and, so far as possible, should be equipped with appropriate equipment. Efforts should also be made to modify the bleakness of exercise yards through, for example, painting the area or planting greenery.

Exercise yards: good practice example

Exercise yards at the Extra Security Unit (EBI) in Vught prison (the Netherlands) were “*large enough for prisoners to exert themselves physically*” and had a ‘running strip’ for prisoners who “*wished to engage in more strenuous physical activities*”. Exercise could take place with between one to three other prisoners. Prisoners also had access to a large and well equipped gymnasium. [CPT Report, 1998, CPT/Inf(98)15.]

Access to programmes

Provisions shall be made for the further education of all prisoners capable of profiting thereby ... the education of illiterates and young prisoners shall be compulsory and special attention shall be paid to it by the administration (SMR Rule 77; EPR (2006 Rev) Rule 28)

Recreational and cultural activities shall be provided in all institutions for the benefit of the mental and physical health of prisoners (SMR Rule 78)

All prisoners shall have the right to take part in cultural activities and education aimed at the full development of the human personality (Basic Principles for the Treatment of Prisoners, Principle 6)

Programme provision in prisons has many obvious advantages for prisoners’ wellbeing and personal development as well as for their prospects of successful reintegration upon release. Research also strongly suggests that access to programmes in prison positively affects behaviour, whereas the lack of things to do may result in increased violent behaviour. A literature review of over ninety studies of the impact of prison programmes concluded that:

“Research shows a fair amount of support for the hypothesis that adult academic and vocational correctional education programs lead to fewer disciplinary violations during incarceration, reductions in recidivism, increases in employment opportunities, and to an increase in participation in education upon release” (Gaes et al. 1999:411).

Prisoners held in disciplinary segregation for a short period of time may be excluded, as part of their punishment, from participation in prison programmes. However, programme provision is crucial for prisoners who are isolated for longer periods of time, as they enjoy little or no social contact, experience substantially reduced sensory stimulation, and have very few means to occupy themselves inside their solitary cells. As Chapter Two demonstrated, these factors have negative health effects and may also lead to behavioural problems. To counteract such effects, research suggests that it is crucial for prisoners to have access to an adequate programme of activities in custody, particularly in high security prisons: *“the greater the security of an institution, the more intense must be its activity program. Maximum prison lock-up without an appropriate activity program is detrimental to the inmate’s health and his rehabilitative prognosis”* (Scott & Gendreau, 1969:341). CPT Standards elaborate:

“The existence of a satisfactory programme of activities is just as important – if not more so – in a high security unit than on normal location. It can do much to counter the deleterious effects upon a prisoner’s personality of living in the bubble-like atmosphere of such a unit. The activities provided should be as diverse as possible (education, sport, work of vocational value, etc.). As regards, in particular, work activities, it is clear that security considerations may preclude many types of work which are found on normal prison location. Nevertheless, this should not mean that only work of a tedious nature is provided for prisoners” (CPT Standards, CPT/Inf/E(2002)1 Rev. 2006, par.32).

Ideally, programmes should be provided outside the cell and in association with others. Where this is not feasible, prisoners should, as a minimum, be provided with in-cell or at-cell-door programme delivery.

Access to activities: good practice example

The Close Supervision Centre (CSC) at Whitemoor prison (UK) has a communal area with table tennis and pool tables, a classroom equipped with a computer, a trolley of books and a stock of board games, and a workshop. It also has a well equipped fitness suite with free weights and an outside exercise yard which contained a greenhouse and a secure garden. [HMCIP, Extreme Custody, June 2006]

Access to meaningful human contact within the prison

It is crucial for isolated prisoners, particularly those isolated for longer periods, to have regular and meaningful human contact. The potential health effects of social isolation have been discussed in detail in Chapter Two but here it should be noted that every effort should be made to ensure that the prisoner has some degree of interaction with other human beings. This may mean, for example, allowing some association between prisoners during meal or recreation times, encouraging contact between the prisoner and educational, health and religious staff, allowing visits by ‘prison visitors’

and so on. Informal interactions with custodial staff should also be encouraged. Monitoring bodies and the courts pay particular attention to the level and quality of human contact afforded to isolated prisoners and will be more inclined to find a violation of human rights law where these are lacking.

Contact with the outside world

Human rights law emphasises the importance of enabling prisoners to maintain contact with the outside world. This requirement covers visits by family and friends, access to written and broadcast media and various forms of communication including letters and the telephone. Where prisoners are held in solitary confinement and enjoy little human interaction and few social contacts, these requirements become all the more important. Contacts with family, friends, and the community are not only important factors for prisoners' wellbeing, but have also been shown to be important factors in positively influencing prisoners' behaviour and improving their chances of successful reintegration upon release from prison⁵⁹.

Family contacts

Article 17 of the International Covenant on Civil and Political Rights (ICCPR) stipulates that

No one shall be subjected to arbitrary or unlawful interference with his privacy, family, home or correspondence...

The right to family life is also protected under Article 11 of the American Convention on Human Rights and Article 8 of the European Convention on Human Rights. It has been established that, notwithstanding limitations inherent in prison life, prisoners retain the right to family life and prison authorities have a duty to assist them in maintaining close family contacts (*Messina (No.2) v. Italy*, 2000).

Prisoners' right to respect for their family life through visits and communications is further established in several international instruments:

Prisoners shall be allowed under necessary supervision to communicate with their family and reputable friends at regular intervals, both by correspondence and by receiving visits (SMR Rule 37. See also: SMR Rule 79; Principle 19 of the Body of Principles for the Protection of All Persons Under any Form of Detention or Imprisonment; EPR (2006 Rev) Rule 24).

To encourage family ties, where possible, prisoners should be housed in a prison close to their home (Body of Principles, Principle 20). Visits should take place in specially designated areas which should be appropriately furnished, clean and well maintained. It is good practice to allow for contact visits (i.e. not held through a glass partition) between the prisoner and their visitor(s), particularly when the visitor is a child. Visitors should be treated with respect and must not be subjected to unnecessary security procedures.

Access to written and broadcast media

Prisoners shall be kept informed regularly of ... items of news by reading newspapers... by hearing wireless transmissions ... or by any similar means (SMR Rule 39)

This requirement, again, is particularly important when the prisoner is held in prolonged solitary confinement with little access to the outside world. Knowledge of, and interest in, current and community affairs will not only assist the prisoner's eventual transition back to life as a free member of society, but may also have a positive effect on his mental wellbeing during his time in isolation. For these reasons, it is also recommended that, so far as possible, prisoners held in solitary confinement, particularly for prolonged periods, have television sets and radios in their cells.

Impoverished regimes: country examples

The main component of solitary confinement regimes, of course, is that the detainee or prisoner is held alone in their cell for up to 24 hours a day. The specific provisions which prisoners are entitled to whilst in segregation, and the degree and level of contact that they have with the outside world, however, varies from one jurisdiction to another. As noted earlier, in addition to 'regular' segregation units, some jurisdictions now also operate regimes specifically designed to place further restrictions on certain categories of prisoners who are in solitary confinement. Some examples of such regimes are set out below.

Impoverished solitary confinement regimes: case studies

Italy

Prisoners may be placed in solitary confinement for the duration of their sentence under a 'special regime' for reasons of public order and security, in particular offences relating to Mafia activities. They are held in single cells and allowed to mingle with between three to five others during exercise period. Some of the additional measures which may be applied under this regime, at the discretion of prison staff, include:

- A ban on visits by persons other than family members, a cohabitant or a lawyer;
- A maximum of one family visit lasting one hour each month;
- No access to a telephone or a maximum of one telephone call per month;
- Censorship of all correspondence except for privileged correspondence;
- No more than two hours per day to be spent outdoors;
- No extra visits allowed for good conduct;
- No more than two parcels per month;
- No sums of money to be received from outside prison or sent out;
- No handicrafts;
- No conversation or correspondence with other prisoners.

The Netherlands

Prisoners who are considered extremely likely to attempt to escape from prison and who, if they succeed, pose an unacceptable risk to society in terms of committing further serious violent crimes or in terms of severe disturbance of public order, may be placed at the extra-security units (EBI and (T)EBI) at Vaught prison, which have a total capacity of 35 cells. The regime and security arrangements at the units include some of the following:

- Two screened telephone calls of up to 10 minutes a week and screening of all non-privileged correspondence;
- Closed, pre-arranged visits with approved visitors (one weekly visit of up to an hour);
- One monthly contact visit with immediate family/spouse lasting an hour (physical contact is limited to a handshake upon arrival and departure; guards remain in close proximity throughout the visit; visitors are subjected to a search ('frisking') prior to visit)
- No educational activities and limited in-cell work opportunities;
- Staff are separated from prisoners by a glass partition; only one prisoner at a time may come into contact with staff, and at least two staff members must be present; on such occasions the prisoner must be handcuffed;
- One hour a day of outdoor exercise with between one and three other prisoners;
- Up to six hours weekly of 'group activities' with no more than three others;
- Weekly cell searches;
- Weekly strip searches.

United States

Prisoners who are classified as gang members or have been found guilty of a 'serious rule violation' in prison may be held in solitary confinement in the Security Housing Unit (SHU) at Pelican Bay State Prison (California) for periods ranging from two to five years in the case of rule violators and indefinitely in the case of gang members. Once at the SHU, which has capacity of 1056 cells, they spend 23 to 24 hours a day inside their cell and have access to the following:

- Solitary exercise in a small and barren exercise yard for one hour four times weekly;
- A 15 minute long shower in a single shower-cell three times weekly;
- One quarter of the monthly canteen allowance;
- No access to recreational or vocational activities;
- Telephone calls on an emergency basis only, as determined by staff;
- Two 2 hour long no-contact family visits on weekends once a month;
- One annual package, not exceeding 30 pounds in weight;
- One-off special purchase of one television or one radio/television unit;
- Up to ten items of reading materials (magazines and books);
- No hobby or craft materials.

As these examples demonstrate, although provisions for prisoners who are held in solitary confinement regimes vary between States, such regimes typically involve further restrictions and security measures in addition to the physical segregation of prisoners from the general prison population. It is difficult to see what legitimate penal purpose is served by restricting prisoners' access to craft and hobby materials and other in-cell activities, or subjecting them to routine strip searches even when the prisoner had no physical contact with others, and how such practices are conducive to rehabilitation and reintegration purposes or, indeed, to prison security. Such regimes are contrary to international standards and good practice and, in some cases, can be in violation of international law. Moreover, they result in boredom and frustration which may in turn lead to mental health and behavioural problems.

4.3 Research findings and recommendations regarding prison design and environmental factors

There are few studies of the relationship between the prison environment and prisoner behaviour in general, and no studies which focus on segregation units. The sparse literature and few empirical studies reaffirm the fairly obvious: *"the design of the prison environment is crucial to its operation and to the impact it has on the achievement of correctional goals for inmates, staff and public users"* (Fairweather, 2000:47). Environmental conditions in prison also affect prisoners' health and can *"easily exacerbate the symptoms of mental illness for some people. In fact, the prison environment itself can contribute to increased suicide and the inability of inmates with serious mental illness to adjust. Environmental factors can also elicit significant adjustment reactions from inmates who may not have had a previous diagnosis but who become ill while incarcerated"* (Hills et al. 2004:15). Further, design and environmental factors can influence the frequency and severity of violent incidents⁶⁰.

The design of a prison is closely linked to its regime, as the layout of the prison dictates, to a large degree, the activities and human interaction that can take place within it. Studies of the effects of specific prison design features on prisoners and staff indicate that these can have 'negative' or 'positive' effects. Positive design features are those that reduce the institutionalised atmosphere in prisons, lessen stress, aggression and violence, and generally increase prisoners' wellbeing. Negative features are those that foster and increase the above. Some of the design features that are cited as positively influencing behaviour and wellbeing are those which:

Increase opportunities for social interaction between prisoners and between prisoners and staff

Clearly, segregation units are not designed for continuous prisoner association. Yet, even in units or prisons designed for solitary confinement the design should allow for some degree of social interaction. This can be done through the inclusion of communal areas for recreational, sports and games facilities and so on.

Enable direct supervision of prisoners

The prison's supervision style is determined by both its management approach and its architectural layout, and is cited by researchers as one of the most important factors in affecting behaviour. There are two basic layouts: direct supervision and indirect supervision. In prisons with indirect supervision, staff and prisoners occupy separate territories. Supervision and control are remote and characterised by reliance on distant visual surveillance from secure staff stations, and on patrolling corridors and landings. Indirect supervision is reactive in nature, and tends to alienate prisoners and staff. With direct supervision prisons, staff areas are located inside the unit, so that staff have greater face to face contact with prisoners. These prisons are proactive rather than reactive, as their layout and the presence of staff lessen opportunities for misconduct. Research suggests that direct supervision allows more effective surveillance and better security, and results in a dramatic reduction in prison violence⁶¹. Direct supervision has also been endorsed by professional bodies, as well as the United Nations, as the best method for managing prisoners, including those classified as dangerous or disruptive.

Allow flexibility/ adaptability in the use of the unit

Positive architecture allows adaptability to future change. Planning can anticipate, and the design should include, the possibility of future alteration of internal spatial divisions, external additions or subtractions, and 'functional flexibility'. New prefabricated technologies make it possible to design prison units so that they can serve different functions according to actual needs. So, for example, the division of space and design of a unit designated for long-term solitary confinement should not be so inflexible as to preclude the possibility of prisoner association areas or the provision of programmes, should there be a change in policies regarding the prisoners held in the unit or in their individual needs.

Communicate a positive message

The appearance of the prison communicates to prisoners how they are expected to behave (Wener, 2000:52). If the design and security arrangements in segregation and high security units communicate to prisoners that they are highly dangerous and not fit for human contact, they are more likely to start perceiving themselves as such and behave accordingly. Security arrangements should therefore be as limited and un-intrusive as possible and reflect the fact that segregated prisoners are already secured, individually, in their cells. It is also important to break the monotony of segregation units to allow a degree of sensory stimulation. This can be achieved easily and inexpensively by, for example, colourful wall paint, good lighting, and so on.

4.4 Human rights case law regarding regime and physical conditions in segregation units

States have a duty to ensure that prisoners are “*detained in conditions which are compatible with respect for his human dignity, that the manner and method of the execution of the measure do not subject him to distress or hardship of an intensity exceeding the unavoidable level of suffering inherent in detention and that, given the practical demands of imprisonment, his health and well-being are adequately secured*”⁶². Where these fall below acceptable standards, prison conditions may amount to inhuman or degrading treatment, in violation of international law.

Human rights bodies pay particular attention to the use of solitary confinement which, as the previous chapter noted, is viewed as an extreme prison practice, which should only be used in exceptional cases and then for the shortest duration possible. The ECtHR has stated that “*complete sensory isolation coupled with complete social isolation can no doubt destroy the personality*”⁶³ and would constitute treatment in violation of the absolute prohibition on torture, inhuman or degrading treatment enshrined in Article 3 of the European Convention on Human Rights. The Inter American Court of Human Rights has similarly stated in several cases that prolonged solitary confinement, in itself, may violate Article 5 of the American Convention on Human Rights: “*prolonged isolation and deprivation of communication are in themselves cruel and inhuman treatment, harmful to the psychological and moral integrity of the person, and a violation of the right of any detainee to respect for his inherent dignity as a human being. Such treatment, therefore, violates Article 5 of the Convention...*”⁶⁴. Finally, the UN Human Rights Committee criticised “... *the practice of solitary confinement which affected the physical and mental health of persons deprived of freedom and which amounted to a cruel, inhuman and degrading treatment*”⁶⁵.

In two separate cases brought against Uruguay, the Human Rights Committee found that holding a detainee for one month in a cell where “*rainwater filtered in and one lives in the midst of human excrement*” violated Article 10(1) of the ICCPR but not Article 7, whilst holding a detainee for one month in a small windowless cell where artificial light is left on 24 hours a day violated both Articles 10(1) and 7 of the ICCPR (UN Human Rights Committee, 1990, CCPR/C/OP/2). The UN Committee Against Torture (CAT) has found a violation of the prohibition against inhuman or degrading treatment or punishment in several cases involving the use of solitary confinement. For example, it found that isolation in cold and damp punishment cells measuring 1.5x2 metres without proper bedding or sanitation in Bolivia was “*tantamount to torture*”, and the strict isolation in sound-proof cells of political prisoners in high security prisons in Peru amounted to torture⁶⁶.

But solitary confinement may also constitute inhuman and degrading treatment when physical conditions are not so clearly below internationally established standards. When considering whether solitary confinement constitutes inhuman or degrading treatment in any one case, the courts and monitoring bodies will assess the surrounding circumstances, including: the particular conditions of confinement, the stringency of the measure, its duration, and whether the prisoner had minimal possibilities for human contact⁶⁷. The objective pursued by the measure and its effects on the individual concerned will also be assessed⁶⁸. As some of the cases below, drawn from judgements made by the ECtHR, demonstrate, both the physical conditions in which the

prisoner is held and the degree of human contact he is afforded whilst in solitary confinement will be subjected to particularly close scrutiny. Where, in the Court's view, there are compelling reasons to hold a prisoner in separation from other prisoners, and the physical conditions of confinement are relatively comfortable, provisions are good and the extent of human contact is such that it is arguable whether the prisoner is really isolated, then case law suggests the Court is less likely to find a breach of the Convention⁶⁹.

- The placement of a pre-trial detainee in solitary confinement for just under a year was found not to constitute inhuman or degrading treatment because although *"a period of such a length may give rise to concern because of the risk of harmful effects upon mental health"* the Court considered that the extent of social isolation to which he was subjected did not reach the necessary threshold and while *"he was totally excluded from association with other inmates ... during the day he had regular contact with prison staff, [and] in addition, every week he received lessons in English and French from the prison teacher and he visited the prison chaplain. Also, every week he received a visit from his counsel. Furthermore, during the segregation period in solitary confinement the applicant had contact twelve times with a welfare worker; and he was attended to thirty-two times by a physiotherapist, twenty-seven times by a doctor; and forty-three times by a nurse. Visits from the applicant's family and friends were allowed under supervision"*. The Court also noted that the physical conditions of detention were adequate as the detainee was held in a cell measuring eight square meters equipped with a television set, and had access to newspapers (*Rhode v. Denmark*, Judgement of 21/7/2005, pars. 97-98).
- The Court found that a regime of strict solitary confinement (the prisoner was held alone in his cell for 23 hours a day and was only allowed to mingle with other prisoners for one hour during a daily walk) imposed on a former death row prisoner for over three years, and the material conditions in which he was held (cell measuring 2 by 3 metres with a small window which did not allow sufficient light or fresh air, a heating system which was covered by a layer of bricks and illumination by only one 60-Watt electric bulb which was insufficient for reading) must have *"caused him suffering exceeding the unavoidable level inherent in detention"* and constituted inhuman and degrading treatment in breach of Article 3 of the ECHR (*Iorgov v. Bulgaria*, Judgement of 11/3/2004).

In sum, the extreme nature of solitary confinement and its potential health effects give rise to special human rights concerns, and its use is subjected to close scrutiny by the courts and monitoring bodies. In particular, the physical conditions in which prisoners are held, the regime provisions they enjoy and the degree of human contact they have whilst isolated will be assessed.

Although the human rights view is that solitary confinement is an undesirable prison practice, its use is not prohibited per se. Rather, the practice will be assessed on a case by case basis to determine whether it has violated the prohibition against torture, inhuman or degrading treatment or punishment.

4.5 Concluding remarks on regime and conditions of confinement in segregation and high security units

Isolated prisoners spend up to 24 hours a day inside their cells. They have limited human contact, little or no physical contact with others, few personal possessions, and few ways to occupy themselves inside their cells. Prolonged confinement in these conditions is physically and mentally taxing. We discussed some of the potential health effects of solitary confinement in Chapter Two. These effects can be mitigated, to some degree, by ensuring that isolated prisoners:

- are accommodated in cells which are sufficiently large to enable them to conduct all their daily activities in a clean and humane environment, respectful of their human dignity;
- have daily access to fresh air and exercise;
- have access to meaningful human contact and purposeful activities; and,
- have contact visits with family members.

The deprivations inherent in segregation units should not be made worse by further restrictions on in-cell provisions such as reading materials, craft and hobby materials, personal radios and so on. Wherever possible, prisoners should be allowed to conduct daily activities in association with other prisoners. Where there are compelling reasons not to allow prisoner association, increased contact with staff, particularly non-custodial (religious, educational, health) staff should be encouraged. Custodial staff should also be encouraged to engage informally with prisoners and maintain good relationships and a good atmosphere in the unit. It is thus crucial that staff working in segregation units are carefully selected, well supported and properly trained. In particular, staff should receive training in mental health and de-escalation techniques. Well trained, experienced staff can make a huge difference in segregation units.

In short, every effort should be made to ensure that the harmful aspects of solitary confinement are mitigated through the provision of decent facilities, sensible regimes and purposeful activities. Adherence to the standards discussed in this chapter is not only legally required, but it also makes good managerial sense. Even when all these mitigating factors are in place, solitary confinement should not, as discussed in Chapter Three, be used for a prolonged time other than in a handful of cases where it may be exceptionally and absolutely necessary.

Key points

- Isolated prisoners spend most of their time inside their cell. Cells should therefore be designed to accommodate this regime and, as a minimum, contain a toilet and a wash-basin.
- Allow segregated prisoners to exercise some degree of autonomy and control over their immediate environment.
- Encourage visits by family and friends and ensure that visiting areas are clean and in good decorative order.
- Ensure that isolated prisoners have as much human contact as possible with people from outside the prison and with custodial, educational, religious and medical staff.
- Allow for as many activities as possible, for example meals, to take place in association with other prisoners.
- Where this is not possible, creative solutions should be sought to ease the restrictive monotonous environment and impoverished regime in segregation units.
- Small concessions go a long way. Be flexible and think creatively.
- One size does not fit all. Additional restrictions may be unavoidable for certain prisoners at certain times, but should not be applied as a matter of course.
- The recommendations discussed in this chapter set out *minimum* standards which prison administrations should strive to improve on.
- Further standards and safeguards need to be developed to ensure that prisoners are protected against the harm that solitary confinement causes.

- 69 The placement of a prisoner, Ilich Ramirez ("Carlos the Jackal"), who, at the time, "was considered to be the most dangerous terrorist in the world", in solitary confinement for more than eight years was found not to violate Article 3. In reaching its decision, the Court took account of the relatively comfortable conditions of his detention (his cell measured 6.84 sq. meters, was equipped with a toilet and washing facilities and had a window which provided natural light. He also had access to a television, newspapers and books), the fact that he was allowed out of his cell two hours daily for outdoor exercise and one hour in a gym, had frequent contact with people from outside the prison (he was visited by a doctor twice a week, by a cleric once a month, and frequently by his 58 lawyers, including 640 times in a period of five years by one of his lawyers, whom he later married), and, by his own testament, was in good physical and mental health. The Court also noted that he was later removed to a normal prison location, whilst reaffirming that in any case, solitary confinement should not be imposed on the prisoner indefinitely (*Ramirez v. France*, Judgement of 27/1/2005).

5 | The role of health professionals in segregation units: ethical, human rights and professional guidelines⁷⁰

5.1 Introduction: ethics as applied to prison medicine

Health professionals working in prisons and other places of detention face some particular challenges which stem from the inherent tension between the role of the prison as a place of punishment through deprivation of liberty, and their role as protectors and promoters of health (physical, mental and social). Firstly, they need to provide care in an environment which is geared towards security and all the physical arrangements – and institutional culture – that this entails. Their patients are held involuntarily in conditions which severely limit not only their freedom of movement, but the degree of control they have over most other aspects of their daily lives and activities. Other challenges include a high workload, often coupled with limited resources; work with populations with special needs and high prevalence of mental illness; dual obligations towards their patients and the prison's authorities; the competing demands of each and potential mistrust by both; poor training and, where they are employed exclusively by the prison, a degree of isolation from other members of their profession⁷¹.

The ethical challenges are especially acute when the question of the involvement of health personnel in disciplinary measures arises, and nowhere is this more contentious than in their role, if any, in segregation units⁷².

By asking a number of pertinent questions, the following section outlines the ethical and legal framework that guides the role of health personnel when confronted with the use of solitary confinement. Some of the potential dilemmas and conflicts identified below are not always easy to resolve in practice. Nonetheless, health professionals must always ensure that their conduct is not compromised by external and possibly spurious considerations. When faced with such dilemmas, advice and guidance should always be sought from senior health colleagues and from professional bodies.

5.2 Issues regarding prison medicine in solitary confinement units

What are 'dual loyalties' and where can health professionals seek support and advice?

A physician shall owe his/her patients complete loyalty and all the scientific resources available to him/her (WMA International Code of Medical Ethics, 1949).

A situation of dual loyalty arises when health professionals face *"simultaneous obligations, expressed or implied, to a patient and a third party"*⁷³. Health professionals working in prisons will almost inevitably face situations where they are asked or expected to suspend their clinical judgement in favour of other considerations or to contribute to processes and procedures that are not driven by therapeutic purposes. Codes of ethics make it clear that the duty owed to the patient takes precedence over any other obligation, and that health professionals must act in the best interest of their patients at all times. Many of the issues outlined in the following sections, such as whether to certify someone fit for punishment, or the right to access healthcare, are examples of such dual loyalties.

Clearly, as in any medical practice, there will be situations in which health professionals will have to judge whether their primary obligation to the care of the individual patient might have to be overridden in order to protect that individual, other prisoners, or staff. Again, their actions should be guided primarily by their function as health professionals, above that of their status as employees of a prison, police force or the military, but therein lies the very essence of "dual loyalties". Health professionals should strive to retain a professional independence, and thereby to retain the trust and confidence of their prisoner-patient.

Physicians seeking advice on ethical dilemmas can approach both their national medical association and the World Medical Association⁷⁴ (www.wma.net). Nursing professionals can approach their national nursing association as well as the International Council of Nurses, the body which provides ethical guidance to nurses (International Council of Nurses www.icn.ch).

Do health professionals have any role in certifying a prisoner 'fit' to undergo disciplinary measures, including solitary confinement?

In exactly the same manner as any health professional working in the community, the primary duty of the health professional working inside a prison is to protect, promote and improve the health of their patients. Naturally, when working in an environment whose over-arching aim is security, the health professional must follow the rules and procedures necessary for the safe and lawful running of the institution, but their role as health professionals must not be subordinated to this purpose. Their ethical duties remain the same as if they were working in the community but, as we shall see below, with the various constraints that working in a place of deprivation of liberty brings.

“Act only in the patient’s interest when providing medical care which might have the effect of weakening the physical and mental condition of the patient” (World Medical Association International Code of Medical Ethics 1949, amended 1983).

It is clear that for health staff to participate in any manner in disciplinary measures within a prison would, in the first place, be in direct contradiction with their fundamental role as healthcare providers. The primary duty of the physician and the nurse, wherever they work, is to the health of their patient (World Medical Association Declaration of Geneva 1949, amended 1994, and International Council of Nurses Code of Ethics for Nurses, adopted 1953 and revised 2005). Moreover, in order to establish and to maintain the professional relationship and confidence and trust with the prisoner-patient, the prison health staff cannot be seen to have any role in the prison administration, and in particular in disciplinary matters. Health care must be provided with “*full technical and moral independence*” and be based purely upon medical needs (World Medical Association International Code of Medical Ethics 1949, amended 1983, and International Council of Nurses Position Statement on Nurses’ Role in the Care of Prisoners and Detainees 1998, revised 2006).

“It is a contravention of medical ethics for health personnel, particularly physicians...to certify, or to participate in the certification of, the fitness of prisoners or detainees for any form of treatment or punishment that may adversely affect their physical or mental health and which is not in accordance with the relevant international instruments, or to participate in any way in the infliction of any such treatment or punishment which is not in accordance with the relevant international instruments” (Principle 4 (b), United Nations Principles of Medical Ethics⁷⁵).

International standards of medical ethics thus clearly state that health professionals, particularly physicians, must neither certify someone “fit for punishment”, nor participate in any way in the administering of such punishment. When isolation is used for any purpose that is not purely medical (e.g. isolating a potentially infectious patient), health staff can have no part in the process of deciding on its application or its administration.

It has often been argued that the physician can have a protective role by examining the fitness of individuals to undergo certain punishments. Indeed, the UN Standard Minimum Rules, which date from the 1950s and from a more ‘paternalistic’ view of medical ethics state that “*Punishment by close confinement or reduction of diet shall never be inflicted unless the medical officer has examined the prisoner and certified in writing that he is fit to sustain it*” (Rule 32. (1)). Standards evolve over time, however, and this rule is now clearly at odds with contemporary standards of medical ethics (see above) as well as current standards of prison administration and treatment of prisoners which, obviously, would not allow a reduction in the basic nutrition of any prisoner as a punishment. Looking at the issue from another perspective, were the physician to decide that certain prisoners are not fit to undergo solitary confinement, those people may well be spared the punishment. But this also means that in other cases the physician is effectively authorising the punishment of placing another prisoner in solitary confinement. Not only are they certifying someone fit for punishment, but they are acquiescing in a punishment that is known to adversely affect mental and physical health.

But there is a more decisive argument. The Sourcebook has set out the substantial body of research that shows the deleterious effects of solitary confinement on the mental and physical health of individuals, even if only inflicted for relatively short periods. The fact that in several international prison standard instruments and in many national prison regulations particular attention is given to solitary confinement and to attempts to mitigate its negative effects by involving health staff in its application, is a clear indication that the potentially harmful consequences are known to those writing them. Put more simply, if solitary confinement is safe, why must a physician check that someone can withstand it, and why must they be required to monitor their physical and mental health on a daily basis? No other legal disciplinary measure requires so much medical oversight.

For these reasons, the World Health Organisation (WHO) recommends that *“doctors should not collude in moves to segregate or restrict the movement of prisoners except on purely medical grounds, and they should not certify a prisoner as being fit for disciplinary isolation or any other form of punishment”* (Health in Prisons, A WHO Guide to the essentials in prison health 2007:36). The official commentary on the revised European Prison Rules (EPR) similarly states that *“medical practitioners or qualified nurses should not be obliged to pronounce prisoners fit for punishment but may advise prison authorities of the risks that certain measures may pose to the health of prisoners”*⁷⁶.

Do health professionals have any role in monitoring the effects of a disciplinary punishment once it has started?

From the previous paragraphs it is clear that health staff have no role in prison discipline, and that this includes monitoring the health effects of a sanction once it is being carried out. If the health professional, of their own volition and following their medical judgement rather than as ‘standard procedure’, was to chart the appearance of negative health effects, and at a given point intervene to end a disciplinary sanction, then effectively they are acting as arbiter of how long particular individuals can withstand the punishment. Inevitably, they will then have to decide that some individuals must be removed from isolation, while others must remain isolated (while knowing that the latter may sooner or later develop psychological, psychiatric or physical disorders linked to the isolation).

Monitoring the potential health consequences must, however, be distinguished from the right of all prisoners, irrespective of their status, location, or behaviour, to access healthcare (this will be discussed in more detail in the following section). Again, herein lies one of the key tensions of dual loyalty, since there is clearly a fine line between monitoring the punishment and providing needed clinical attention and care.

The revised version of the European Prison Rules (2006) states that solitary confinement should be an exceptional measure, and that even then it should only be applied for the shortest possible time (Rule 60.5). The Rules then require that medical staff should monitor prisoners in solitary confinement on a daily basis, and emphasise that if their mental or physical health is “seriously at risk”, this must be reported to the director⁷⁷. Similarly, the CPT in its early general reports foresaw a monitoring role for physicians (CPT 2nd General Report, CPT/Inf (92) 3 Para. 56).

However, in an often overlooked footnote contained in the revised European Prison Rules the government of Denmark objected to the proposed role of physicians in monitoring those in solitary confinement, on the basis that this could constitute certifying that the person is fit to continue the punishment of solitary confinement, which would be unethical. The objection could also have been made on the basis that this particular treatment may amount to a form of ill-treatment and not only would the participation of health staff be unethical, it would also be a contravention of international law. Addressing this ethical issue, the official commentary on the revised Rules stipulates that daily visits to isolated prisoners “*can in no way be considered as condoning or legitimising a decision to put or to keep a prisoner in solitary confinement*”.

What if the disciplinary measure actually or potentially inflicts injury?

It is self-evident that if acts of torture or other cruel, inhuman or degrading treatment are prohibited by international law, health professionals are also bound by such laws. Furthermore, their conduct is also constrained by international ethical standards which clearly prohibit not only active participation in interrogation, but also any other acts such as devising or planning methods of interrogation, particularly when the use of medical knowledge is solicited or when confidential medical information is misused against the patient ⁷⁸. The World Medical Association’s Declaration of Tokyo states in its paragraph 3:

“When providing medical assistance to detainees or prisoners who are, or who could later be, under interrogation, physicians should be particularly careful to ensure the confidentiality of all personal medical information. A breach of the Geneva Conventions shall in any case be reported by the physician to relevant authorities. The physician shall not use nor allow to be used, as far as he or she can, medical knowledge or skills, or health information specific to individuals, to facilitate or otherwise aid any interrogation, legal or illegal, of those individuals”.

Ethical standards also clearly dictate that if health professionals are aware or suspect that a criminal or other illegal act is planned or has taken place in a prison or other place of detention, they are obliged to report this act through the appropriate channels, and it is these authorities who will decide if there is criminal liability and what action is to be taken. Understandably, acting to report or denounce actions of colleagues (sometimes known as “whistle blowing”) is a very delicate issue, and in some States may even endanger the life of the person reporting such cases. In countries where there is a degree of impunity for particular authorities, then there may be separate channels established to allow confidential reporting of incidents. The World Medical Association has specifically stated that fellow professionals should provide support and protection to physicians who are either pressured to participate in acts of torture or other ill-treatment, as well as to those physicians who report and denounce such acts (WMA Declaration of Hamburg⁷⁹).

Thus, if the use of solitary confinement is considered to be inhuman or degrading treatment, and in some cases torture, then it would be contrary both to international law and to international standards of medical ethics for physicians and other health professionals to participate in the practice in any way, or to condone or acquiesce to its use. In those instances where the negative health effects of solitary confinement are deliberately used as a tool for interrogation purposes,

either to mentally or physically weaken the individual, or to instil disorientation, dependence, fear and so on, then this may amount to torture or to cruel, inhuman or degrading treatment, contrary to international law and standards of medical ethics. Health professionals involved in such acts will be culpable to the same degree that the prison or security forces are culpable. Similarly if a physician or any other health staff divulge confidential medical information on a patient primarily to serve the purposes of the interrogation, this would be unethical, and in those cases where the interrogation amounts to torture or other ill-treatment, this would amount to complicity in those acts or omissions.

Does a prisoner in solitary confinement lose the right to access healthcare?

No. It is a matter of international law that every person, including all prisoners (regardless of their location within a prison, and regardless of any disciplinary infraction they may have committed), retain the right to access and receive appropriate health care⁸⁰. This right places a positive duty on prison authorities and governments to provide prisoners with a level of healthcare equivalent to that provided in the community, and this obligation should be reflected in national legislation and national prison rules and regulations. In England and Wales, the principle of equivalence of care has been endorsed by Parliament and incorporated into the Prison Service's standards and guidelines⁸¹. This requirement excludes the right to choose one's own doctor (BMA 1992:177).

The ethical obligation to provide healthcare to prisoners on an equivalent level to that available in the local community is also clearly stated in several international instruments:

Health personnel, particularly physicians, charged with the medical care of prisoners and detainees have a duty to provide them with protection of their physical and mental health and treatment of disease of the same quality and standard as is afforded to those who are not imprisoned or detained (Principle 1 of the UN Principles of Medical Ethics relevant to the Role of Health Personnel, 1982)

Thus anyone placed in solitary confinement, for however long, does not forfeit the right to request medical attention, to be seen without delay, and to receive treatment appropriate to the nature and gravity of the problem.

As in any other section of the prison, prison staff may alert the health staff to potential or actual health problems that the prisoner himself may not have noticed. In the first instance this should be done with the consent of the prisoner, who may not wish to see a member of the health staff, but if the staff consider that the condition may be a risk to the individual then they should alert the health staff. It is also recommended that, where they have concerns about a particular prisoner in solitary confinement, doctors visit that prisoner at their own initiative, even if the prisoner did not request this (WHO Health in Prisons, 2007:36). This is good practice, which is in line with principles of assertive community treatment outside the prison.

Finally, prisoners' right to health has been recognised as an integral part of wider public health promotion and protection in the community, because prisoners are a part of society, with the vast majority passing through prison for relatively short periods before returning to the community.

Health issues within prisons usually mirror and amplify health issues in the community, so ignoring prison health effectively means that community public health is not fully attended to. This is best summarised by the WHO, who have stated that “*prison health is public health*”⁸².

Do prisoners in segregation have the right to confidential medical examinations and confidentiality of their medical files?

Again, the health staff must at all times distinguish themselves from custodial staff and, while it is accepted that in a very few cases the health staff may need to take precautions against a potentially violent prisoner, medical examinations should be carried out in a manner which is respectful of the patient’s right to privacy and allows for confidentiality to be maintained. If a relationship of trust and confidence has been established between health staff and the prisoner from the outset, then excessive security measures are rarely warranted.

Particular challenges to the principle of medical confidentiality may arise in high security and segregation units because of their security arrangements, and because they house prisoners who are regarded as high risk. This may mean, for example, that all areas of the unit are covered by CCTV, limiting the availability of private spaces in which to conduct the examination. In some situations the custodial staff may insist that medical interviews with prisoners are conducted through a glass partition, or that the prisoner is handcuffed or otherwise physically restrained, or they may insist on remaining in close proximity whilst the medical examination takes place. The previous discussion on the duties of health staff to provide an equivalent level of healthcare within prisons and to follow the same ethical practice as they must outside the prison makes it clear that such security measures would interfere with the doctor-patient relationship. It should also be noted, however, that such security measures also interfere with proper clinical care. It is obvious that conducting any kind of medical interview or intervention through either a glass partition or through the viewing slot of a cell door is unacceptable clinical practice. There will of course be instances where an individual has a proven history of violence or threats, and consideration must naturally be given to the safety of health staff. But this must be done on a case by case basis, and not form a blanket policy for all consultations with the prison population.

Thus, a prisoner in solitary confinement should be seen in the prison health centre just like any other patient. The use of restraints during a medical consultation not only interferes with the clinical procedure but can damage the relationship between the prisoner-patient and the health staff, since the latter are seen as just another facet of the security system. The need for any extra security for a specific prisoner must be assessed, and periodically reassessed, on an individual basis, preferably by an interdisciplinary group comprising of health professionals, custodial staff and management, and using established risk assessment protocols. Where a serious threat of violence does exist, health and custodial staff should attempt de-escalation techniques first, and any additional security measures deemed necessary by custodial staff should be taken on the basis of proportionality and using the minimum means necessary. Further, more attention should be given to making the examination room safe and secure than to the ultimate measure of restraining the patient⁸³. If there is thought to be a significant risk, then some form of ‘panic button’ should be available in the room, and if prison staff insist on remaining close to the patient, they may remain in sight, but must be out of hearing distance of the consultation.

The General Medical Council's (UK) Good Medical Practice Guidelines (2006) require doctors to respect the patient's right to dignity and confidentiality and the expectation is that prisoners will be examined without restraints and without the presence of prison officers unless there is a high risk of violence. Where such high risk is present, the patient's privacy, dignity and confidentiality should be maintained as much as possible (British Medical Association (BMA) Ethical Guidance, 2004). Practice shows that the circumstances in which doctors need to compromise on privacy and confidentiality are very few, and this should be a guiding principle when accepting restrictions on clinical practice. Ultimately doctors operate professional judgement and have to balance the needs of their patients against the needs for security and safety. Experience shows that the latter rarely needs to override the former.

Once a medical examination is conducted and medical notes are made, health professionals have a duty to hold information on their patients in confidence.

A physician shall respect a patient's right to confidentiality. It is ethical to disclose confidential information when the patient consents to it or when there is a real and imminent threat of harm to the patient or to others and this threat can be only removed by a breach of confidentiality (World Medical Association International Code of Medical Ethics, 1949).

This requirement is central to the doctor-patient relationship, and without the assurance of confidentiality, patients may be reluctant to give information to their health-care providers. Establishing trust and a good doctor-patient relationship in the prison setting is potentially even more difficult than it is outside the prison, as medical staff may be identified by prisoners as being part of the prison's authorities. Further, medical staff may face pressures to disclose information to non-medical prison staff who mistakenly feel that they have a right to know such information for their own protection. Good practice guidelines make it clear that any disclosure of confidential information must adhere to established principles of medical ethics, and doctors making such disclosure must always be prepared to justify their decision in accordance with these principles⁸⁴. As stated in the International Code of Ethics, there will of course be situations in which the health professional may judge that a real and imminent threat exists, either to the patient himself or to other prisoners or staff, and which may necessitate disclosing limited medical information to assist in protecting the patient or others. This would be the case, for example, if a patient is judged to have suicidal ideas which they could act upon. The doctor may then judge that they must disclose some information for the patient to be put on "suicide watch". In cases where the health professional feels that a prisoner threatened harm against another prisoner or staff, in a way which suggested a very real risk of the threat being carried out, then they must consider reporting such a threat in order to protect the potential victim.

5.3 Case law regarding the provision of medical care in prison

Failure to provide adequate medical care in prisons not only raises ethical issues, but may also breach prisoners' human rights under international law. In examining the question of access to appropriate medical care in prisons and detention centres, some of the following principles have been established.

- Prison authorities have an obligation to protect the health of persons deprived of liberty (*Hurtado v Switzerland* 1994 Series A. No. 280 par. 79) and are required to provide medical assistance and treatment to those held in their custody (*Aers v Belgium* 1998, Reports 1998-V).
- This obligation is not dependent on the prisoner's behaviour: *"It must be stressed in this respect that the applicant's alleged rude behaviour towards medical staff and, indeed, any violation of prison rules and discipline by a detainee, can in no circumstances warrant a refusal to provide medical assistance"* (*Iorgov v. Bulgaria*, 2004 par. 85).
- Failure to provide appropriate medical care to a prisoner who clearly needs it may amount to inhuman or degrading treatment in breach of Article 3 of the ECHR (*Beceiev and Sorban v. Moldova*, 2005; *McGlinchey v. UK*, Application 50390/99 ECHR 2003-V).
- An increased standard of vigilance is required where a vulnerable person, for example a mentally ill prisoner, is involved, taking into account their vulnerability and their inability, in some cases, to complain coherently or at all about how they are being affected by their conditions of detention (*Herczegfalvy v. Austria*, 1993 15 EHRR 437).

Case study: the death of Mark Keenan⁸⁵

Mark Keenan was 28 years old when he died from asphyxia caused by hanging in his cell at Exeter prison. His medical history included symptoms of paranoia, aggression, violence and deliberate self-harm. He was previously diagnosed as suffering from paranoid schizophrenia and, from the age of 21, was intermittently treated with anti-psychotic medication.

Facts of the case

On April 1st 1993 Mark Keenan was convicted of an assault on his girlfriend and sentenced to four months imprisonment. He was admitted to Exeter prison where he was initially placed at the prison's health centre for observation and assessment. When it was suggested on April 14th that he could be moved to an ordinary location at the prison, he barricaded himself at the health centre in protest. On April 16th he was discharged to ordinary location but was returned to the health centre the following evening after his cell-mate reported that he had made a noose from his bed sheet. He was placed in an unfurnished cell and placed on a 15 minute watch. On April 26th there was another attempt to return him to ordinary location, but he was again returned to the medical centre the following day. On April 29th he was assessed by the prison's visiting psychiatrist who prescribed a change in his medication, and recommended that he should not associate with other prisoners until his panic subsided. The following day the possibility of movement to ordinary location was raised again. Mark Keenan said that he did not feel fit for the move. In the course of the day his mental state deteriorated, with evidence of aggression and paranoia. The doctor, who

had no psychiatric training, considered that this might be because of the change in his medication, and prescribed a return to his previous medication. At 6 pm that day Mark Keenan assaulted two hospital officers and was placed in an unfurnished cell and put on a 15 minute watch. On May 1st the prison's senior medical officer, who had six months training in psychiatry, certified him fit for adjudication in respect of the assault, and fit for segregation. Whilst in the segregation wing, Mark Keenan appeared agitated and distressed and was threatening to harm himself. He was transferred again to an unfurnished cell in the hospital wing where he continued to appear agitated and was aggressive towards staff.

On May 3rd his medical notes recorded that Mark Keenan's attitude was 'very much better', and that he had requested to be returned to the segregation unit. Back at the segregation unit, it was noted that he seemed better but still needed watching. It was further noted that he stated that he felt that he was about to 'go off on one'. The medical notes from that evening recorded that he was being troublesome and given extra medication. There were no further entries in his medical notes until his suicide on May 15th, although entries in the segregation unit's log indicated that he was 'acting very strangely'. On May 14th, nine days before his expected release date and two weeks following the event, adjudication in respect of his assault on the officers took place and he was awarded 28 additional days in prison, and seven days in punitive segregation. The following morning he was seen by the chaplain, the doctor, and visited by a friend. They all later recalled that he seemed calm if unhappy about his punishment. At 18:35 that evening Mark Keenan was found dead in his cell. There was indication that sometime prior to hanging himself he pressed the panic button in his cell.

The court's findings

Assessing whether Mark Keenan's treatment violated Article 3 of the ECHR, the Court found that it had, and was particularly critical of the level and standard of medical care he received: *"the Court is struck by the lack of medical notes concerning Mark Keenan, who was an identifiable suicide risk and undergoing the additional stresses that could be foreseen from segregation ... the lack of effective monitoring of Mark Keenan's condition and the lack of informed psychiatric input into his assessment and treatment disclose significant defects in the medical care provided to a mentally ill person known to be a suicide risk. The belated imposition on him ... of a serious disciplinary punishment... which may well have threatened his physical and moral resistance, is not compatible with the standard of treatment required in respect of a mentally ill person"*(at pars. 113-115).

Key points

- Health staff must not participate in disciplinary procedures in any way, particularly in certifying prisoners fit to withstand procedures, including solitary confinement.
- Where the use of solitary confinement is abusive and may amount to torture or other forms of ill-treatment, health staff have a duty to report and denounce such acts to the appropriate authorities and professional bodies.
- Prisoners in solitary confinement, just like other prisoners, have the right to an equivalent level of medical care to that available outside the prison
- The providers of medical care in prison are bound by the usual established principles of medical ethics, in particular the confidentiality of medical information.
- It is the duty of medical personnel to familiarise themselves with these principles

Notes

6 | Monitoring and inspecting solitary confinement units

All the aspects of solitary confinement discussed in this Sourcebook – placement, conditions of confinement, regime, contact with the outside world, and the provision of medical care – should be subject to close scrutiny and review by national and international inspecting bodies.

The importance of installing mechanisms for inspection and scrutiny of all prisons and other places of detention is emphasised in international and regional instruments:

There shall be a regular inspection of penal institutions and services by qualified and experienced inspectors appointed by a competent authority. Their task shall be in particular to ensure that these institutions are administered in accordance with existing laws and regulations and with a view to bringing about the objectives of penal and correctional services (SMR Rule 55; Body of Principles Principle 29(1); EPR Rules 9, 92, 93).

In addition to physically inspecting places of detention, the inspecting body should have full and free access to those held within:

A detained or imprisoned person shall have the right to communicate freely and in full confidentiality with the persons who visit the places of detention or imprisonment in accordance with paragraph I of the present principle, subject to reasonable conditions to ensure security and good order in such places (UN Body of Principles for the Protection of All Persons Under Any Form of Detention or Imprisonment, Principle 29(2)).

Inspections are particularly important in segregation units, as they are closed units within closed establishments, shut off not only to the outside world, but also to other sections of the prison and to the prison society at large. As the principles cited above make clear, the inspecting body should have unhindered access to both the physical facilities at the unit, and to prisoners held in them. The inspecting body should also have access to relevant documentation, for example records of placement and review hearings, the unit log and records, CCTV footage and so on. Health staff on the visiting team must have full access to the medical registers and records. Inspectors should ensure that segregated prisoners have the opportunity to talk about their treatment privately and confidentially.

Under Article 14 of the Optional Protocol to the UN Convention against Torture (OPCAT), State Parties undertake to grant the Sub-committee on Prevention of Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment:

1 (a) Unrestricted access to all information concerning the number of persons deprived of their liberty in places of detention as defined in article 4, as well as the number of places and their location;

(b) Unrestricted access to all information referring to the treatment of those persons as well as their conditions of detention;

(c) Subject to paragraph 2 below, unrestricted access to all places of detention and their installations and facilities;

(d) The opportunity to have private interviews with the persons deprived of their liberty without witnesses, either personally or with a translator if deemed necessary, as well as with any other person who the Subcommittee on Prevention believes may supply relevant information;

(e) The liberty to choose the places it wants to visit and the persons it wants to interview.

2. Objection to a visit to a particular place of detention may be made only on urgent and compelling grounds of national defence, public safety, natural disaster or serious disorder in the place to be visited that temporarily prevent the carrying out of such a visit. The existence of a declared state of emergency as such shall not be invoked by a State Party as a reason to object to a visit.

The inspecting body will examine some of the following⁸⁶:

- Was the decision to place the prisoner in segregation taken in accordance with the law?
- What were the reasons for placing the prisoner in the unit, is the prisoner aware of these reasons and was he given an opportunity to appeal against his placement?
- Is the placement decision reviewed on a regular basis?
- Do physical conditions of detention (cells, shower area, exercise yards) comply with the required standards?
- Do prisoners have access to adequate medical care?
- Are medical records being kept in good order in a secure place?
- Do prisoners have access to an appropriate regime?
- Do prisoners have regular access to an outside area?
- Do prisoners have contact with the outside world?

Nationally inspections are usually carried out by a body appointed by the ministry in charge of prisons, and report to it. They may also appoint a local watchdog body to provide regular monitoring of individual prisoners between inspections. These bodies will pay particular attention to segregation units and to the use of force and restraints.

Case study: Extreme Custody: a report by HM Chief Inspector of Prisons for England & Wales.

In 2006 HMCIP carried out a thematic review of all the segregation units in the High Security Estate (HSE) and of the Close Supervision System (CSC) designed to manage disruptive prisoners. These were the units where prisoners were held in isolation in the most restricted and controlled environments with the most potential for prisoner damage. The thematic review followed previous criticisms of the approach of staff in high security segregation units from coroners and others.

The report charted the progress that had been made – some of it innovative, particularly in integrating mental health approaches with custodial care – but also pointed out the distance still to travel. The inspection exposed a hard core of long stay prisoners in segregation units who had complex needs and who could not be managed safely elsewhere. Though there was some psychiatric and therapeutic support in the units, it was not enough, and many prisoners were deteriorating further in lengthy solitary confinement. HMCIP recommended individual, multidisciplinary and properly resourced care plans to ensure that prisoners' health was supported and that opportunities for mental and social stimulation and time out of cell were provided.

The inspection team examined records and interviewed both prisoners and staff. It made 17 recommendations for improvements in the CSC and 21 in the HSE segregation units, and identified 17 areas of good practice. Only one recommendation was rejected.

This review illustrates the constructive role that an independent inspectorate can have, opening up to scrutiny an otherwise hidden part of a closed prison system where the potential for over-control by staff and of consequent prisoner deterioration is high. Where the prison system is also a mature user of inspection and makes good use of the findings, the process can result in positive outcomes for prisoners.

Prison inspections may also be carried out by regional bodies. In Europe, for example, the Committee for the Prevention of Torture (CPT), whose reports we have referred to throughout the Sourcebook, may visit any place of detention within the jurisdiction of Member States. International bodies charged with inspecting and monitoring places of detention include the International Committee of the Red Cross (ICRC), which is mandated to visit any place of detention in situations of armed conflict, and the UN Special Rapporteur on Torture and other Cruel, Inhuman or Degrading Treatment or Punishment. The Optional Protocol to the UN Conventions Against Torture (OPCAT) establishes both an international body of experts to conduct preventative visits to any place of deprivation of liberty in State parties (see above), and a National Preventative Mechanism, which is an independent body tasked with regular and ongoing preventative visits to any place of deprivation of liberty in that country.

Notes

7 | Summary of recommendations

A number of common themes emerge from the various sources examined in the Sourcebook: a) Solitary confinement is an extreme and potentially harmful measure; b) Its use should be reserved for a handful of exceptional cases; c) Periods in solitary confinement should be as short as possible, and; d) Where prisoners are isolated they must be held in decent conditions and offered access to **meaningful** human contact and to **purposeful** activities. The deprivations inherent in solitary confinement should not be made worse by further restrictions on family visits and in-cell provisions such as books and magazines, craft and hobby materials, personal radios and so on. These may help to mitigate the harmful aspects of solitary confinement.

It is also clear that there are currently lacunae in international safeguards and protections against the misuse of solitary confinement and its negative health effects. Further development of international human rights standards is thus necessary, building on the United Nations' call from 1990 to abolish the use of solitary confinement (Principle 7 of the UN Basic Principles for the Treatment of Prisoners). To this end, on December 9th 2007, a working group of 24 international experts adopted the Istanbul Expert Statement on the Use and Effects of Solitary Confinement, calling on States to limit the use of solitary confinement to very exceptional cases, for as short a time as possible and only as a last resort (see Appendix 2). Other such efforts should be initiated by experts, international bodies, and States

Specific recommendations that this Sourcebook makes include:

Procedural safeguards

- Inform prisoners, in writing, of the reason for their segregation and its duration.
- Allow prisoners to make representations on their case at a formal hearing.
- Undertake regular reviews of placement – substantive and at short intervals.

These safeguards apply to all forms of solitary confinement.

Placement in solitary confinement

- When used as punishment for prison offences, solitary confinement must only be used as a last resort, and then for the shortest time possible, lasting days rather than weeks or months.
- The use of prolonged solitary confinement for managing prisoners is rarely justified, and then only in the most extreme of cases.

- Those suffering from mental illness must not be placed in solitary confinement and under no circumstances should the use of solitary confinement serve as a substitute for appropriate mental health care.
- The use of solitary confinement for pre-charge and pre-trial detainees must be strictly limited by law and must only be used in exceptional circumstances, with judicial oversight, for as short a time as possible, and never for more than a matter of days.
- Solitary confinement must not be imposed indefinitely, and prisoners should know in advance its duration.
- The use of solitary confinement as a means of coercing or 'softening up' detainees for the purpose of interrogation should be prohibited.

Physical conditions and regime:

- Provide decent accommodation (as per established standards discussed in chapter 4), reflecting the fact that prisoners will spend most of their day in their cell.
- Provide educational, recreational and vocational programmes.
- Provide these activities, wherever possible, in association with others.
- Allow in-cell reading, hobbies and craft materials.
- Ensure that prisoners have regular human contact; encourage informal communication with staff.
- Allow regular and open family visits.
- Enable prisoners a degree of control of their daily lives and physical environment.
- Include a progressive element.

Health

- Health staff must maintain the same standards of care and ethical behaviour as those which apply outside the prison, in particular the right to health care and to privacy and confidentiality.
- Health staff must not participate in the decision to impose or the enforcement of any disciplinary measure.
- Provide mental health training for custodial staff

Appendix 1

Selected texts

European Prison Rules, Council of Europe Committee of Ministers Recommendation Rec (2006)2

43.2 The medical practitioner or a qualified nurse reporting to such a medical practitioner shall pay particular attention to the health of prisoners held under conditions of solitary confinement, shall visit such prisoners daily, and shall provide them with prompt medical assistance and treatment at the request of such prisoners or the prison staff.

43.3 The medical practitioner shall report to the director whenever it is considered that a prisoner's physical or mental health is being put seriously at risk by continued imprisonment or by any condition of imprisonment, including conditions of solitary confinement.

...

60.5 Solitary confinement shall be imposed as a punishment only in exceptional cases and for a specified period of time, which shall be as short as possible.

Note 1 When this recommendation was adopted, and in application of Article 10.2c of the Rules of Procedure for the meetings of the Ministers' Deputies, the Representative of Denmark reserved the right of his government to comply or not with Rule 43, paragraph 2, of the appendix to the recommendation because it is of the opinion that the requirement that prisoners held under solitary confinement be visited by medical staff on a daily basis raises serious ethical concerns regarding the possible role of such staff in effectively pronouncing prisoners fit for further solitary confinement.

UN Standard Minimum Rules

31. Corporal punishment, punishment by placing in a dark cell, and all cruel, inhuman or degrading punishments shall be completely prohibited as punishments for disciplinary offences.

32. (1) Punishment by close confinement or reduction of diet shall never be inflicted unless the medical officer has examined the prisoner and certified in writing that he is fit to sustain it.

(2) The same shall apply to any other punishment that may be prejudicial to the physical or mental health of a prisoner. In no case may such punishment be contrary to or depart from the principle stated in rule 31.

(3) The medical officer shall visit daily prisoners undergoing such punishments and shall advise the director if he considers the termination or alteration of the punishment necessary on grounds of physical or mental health.

The Oath of Athens (International Council of Prison Medical Services, 1979)

We, the health professionals who are working in prison settings, meeting in Athens on September 10, 1979, hereby pledge, in keeping with the spirit of the Oath of Hippocrates, that we shall endeavour to provide the best possible health care for those who are incarcerated in prisons for whatever reasons, without prejudice and within our respective professional ethics.

We recognize the right of the incarcerated individuals to receive the best possible health care.

We undertake:

1. To abstain from authorizing or approving any physical punishment.
2. To abstain from participating in any form of torture.
3. Not to engage in any form of human experimentation amongst incarcerated individuals without their informed consent.
4. To respect the confidentiality of any information obtained in the course of our professional relationships with incarcerated patients.
5. That our medical judgements be based on the needs of our patients and take priority

Principles of Medical Ethics relevant to the Role of Health Personnel, particularly Physicians, in the Protection of Prisoners and Detainees against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment

Adopted by General Assembly resolution 37/194 of 18 December 1982

Principle 1

Health personnel, particularly physicians, charged with the medical care of prisoners and detainees have a duty to provide them with protection of their physical and mental health and treatment of disease of the same quality and standard as is afforded to those who are not imprisoned or detained.

Principle 2

It is a gross contravention of medical ethics, as well as an offence under applicable international instruments, for health personnel, particularly physicians, to engage, actively or passively, in acts which constitute participation in, complicity in, incitement to or attempts to commit torture or other cruel, inhuman or degrading treatment or punishment.¹

Principle 3

It is a contravention of medical ethics for health personnel, particularly physicians, to be involved in any professional relationship with prisoners or detainees the purpose of which is not solely to evaluate, protect or improve their physical and mental health.

Principle 4

It is a contravention of medical ethics for health personnel, particularly physicians:

- (a) To apply their knowledge and skills in order to assist in the interrogation of prisoners and detainees in a manner that may adversely affect the physical or mental health or condition of such prisoners or detainees and which is not in accordance with the relevant international instruments;²
- (b) To certify, or to participate in the certification of, the fitness of prisoners or detainees for any form of treatment or punishment that may adversely affect their physical or mental health and which is not in accordance with the relevant international instruments, or to participate in any way in the infliction of any such treatment or punishment which is not in accordance with the relevant international instruments.

Principle 5

It is a contravention of medical ethics for health personnel, particularly physicians, to participate in any procedure for restraining a prisoner or detainee unless such a procedure is determined in accordance with purely medical criteria as being necessary for the protection of the physical or mental health or the safety of the prisoner or detainee himself, of his fellow prisoners or detainees, or of his guardians, and presents no hazard to his physical or mental health.

Principle 6

There may be no derogation from the foregoing principles on any ground whatsoever, including public emergency.

Appendix 2

The Istanbul statement on the use and effects of solitary confinement

Adopted on 9 December 2007 at the International Psychological Trauma Symposium, Istanbul.

The purpose of the statement

Recent years have seen an increase in the use of strict and often prolonged solitary confinement practices in prison systems in various jurisdictions across the world. This may take the form of a disproportionate disciplinary measure, or increasingly, the creation of whole prisons based upon a model of strict isolation of prisoners (1). While acknowledging that in exceptional cases the use of solitary confinement may be necessary, we consider this a very problematic and worrying development. We therefore consider it timely to address this issue with an expert statement on the use and effects of solitary confinement.

Definition

Solitary confinement is the physical isolation of individuals who are confined to their cells for twenty-two to twenty-four hours a day. In many jurisdictions prisoners are allowed out of their cells for one hour of solitary exercise. Meaningful contact with other people is typically reduced to a minimum. The reduction in stimuli is not only quantitative but also qualitative. The available stimuli and the occasional social contacts are seldom freely chosen, are generally monotonous, and are often not empathetic.

Common practices of solitary confinement

Solitary confinement is applied in broadly four circumstances in various criminal justice systems around the world; as either a disciplinary punishment for sentenced prisoners; for the isolation of individuals during an ongoing criminal investigation; increasingly as an administrative tool for managing specific groups of prisoners; and as a judicial sentencing. In many jurisdictions solitary confinement is also used as a substitute for proper medical or psychiatric care for mentally disordered individuals. Additionally, solitary confinement is increasingly used as a part of coercive interrogation, and is often an integral part of enforced disappearance (2) or incommunicado detention.

The effects of solitary confinement

It has been convincingly documented on numerous occasions that solitary confinement may cause serious psychological and sometimes physiological ill effects (3). Research suggests that between one third and as many as 90 per cent of prisoners experience adverse symptoms in solitary confinement. A long list of symptoms ranging from insomnia and confusion to hallucinations and psychosis has been documented. Negative health effects can occur after only a few days in solitary confinement, and the health risks rise with each additional day spent in such conditions. Individuals may react to solitary confinement differently. Still, a significant number of individuals will experience serious health problems regardless of the specific conditions, regardless of time and place, and regardless of pre-existing personal factors. The central harmful feature of solitary confinement is that it reduces meaningful social contact to a level of social and psychological stimulus that many will experience as insufficient to sustain health and well being.

The use of solitary confinement in remand prisons carries with it another harmful dimension since the detrimental effects will often create a de facto situation of psychological pressure which can influence the pre-trial detainees to plead guilty.

When the element of psychological pressure is used on purpose as part of isolation regimes such practices become coercive and can amount to torture.

Finally solitary confinement places individuals very far out of sight of justice. This can cause problems even in societies traditionally based on the rule of law. The history of solitary confinement is rich in examples of abusive practices evolving in such settings. Safeguarding prisoner rights therefore becomes especially challenging and extraordinarily important where solitary confinement regimes exist.

Human rights and solitary confinement

The use of torture, cruel, inhuman or degrading treatment or punishment is absolutely prohibited under international law (Article 7 of the UN convention on Civil and Political Rights (ICCPR) and the UN convention against Torture (CAT), for example). The UN Human Rights Committee has stipulated that use of prolonged solitary confinement may amount to a breach of Article 7 of the ICCPR (General comment 20/44, 3. April 1992). The UN Committee against Torture has made similar statements, with particular reference to the use of solitary confinement during pre-trial detention. The UN committee on the Rights of the Child has furthermore recommended that solitary confinement should not be used against children (4). Principle 7 of the UN Basic Principles for the Treatment of Prisoners states that 'Efforts addressed to the abolition of solitary confinement as a punishment, or to the restriction of its use, should be undertaken and encouraged'. Jurisprudence of the UN Human Rights Committee has previously found a specific isolation regime to violate both article 7 and article 10 of the ICCPR (Campos v. Peru 9. January 1998).

On a regional level, the European Court and former Commission on Human Rights, as well as the European Committee for the Prevention of Torture (CPT), have made it clear that the use of solitary confinement can amount to a violation of Article 3 of the ECHR (i.e. constitute torture, inhuman or degrading treatment), depending on the specific circumstances of the case, and the conditions and duration of detention. It has been recognised that "...complete sensory isolation coupled with total isolation, can destroy the personality and constitutes a form of inhuman treatment which cannot be justified by the requirements of security or any other reason" (5). The CPT has also stated that solitary confinement "can amount to inhuman and degrading treatment" and has on several occasions criticized such practices and recommended reform – i.e. either abandoning specific regimes, limiting the use of solitary confinement to exceptional circumstances, and/or securing inmates a higher level of social contact (6). The importance of developing communal activities for prisoners subjected to various forms of isolation regimes has for example been stressed (CPT, visit report Turkey, 2006, para. 43). Furthermore, the revised European Prison Rules of 2006 have clearly stated that solitary confinement should be an exceptional measure and, when used, should be for as short a time as possible(7).

The Inter-American Court of Human Rights has also stated that prolonged solitary confinement constitutes a form of cruel, inhuman or degrading treatment prohibited under Article 5 of the American Convention on Human Rights (Castillo Petruzzi et al., Judgment of May 30, 1999).

Policy implications

Solitary confinement harms prisoners who were not previously mentally ill and tends to worsen the mental health of those who are. The use of solitary confinement in prisons should therefore be kept to a minimum. In all prison systems there is some use of solitary confinement – in special units or prisons for those seen as threats to security and prison order. But regardless of the specific circumstances, and whether solitary confinement is used in connection with disciplinary or administrative segregation or to prevent collusion in remand prisons, effort is required to raise the level of meaningful social contacts for prisoners.

This can be done in a number of ways, such as raising the level of prison staff-prisoner contact, allowing access to social activities with other prisoners, allowing more visits, and allowing and arranging in-depth talks with psychologists, psychiatrists, religious prison personnel, and volunteers from the local community. Especially important are the possibilities for both maintaining and developing relations with the outside world, including spouses, partners, children, other family and friends. It is also very important to provide prisoners in solitary confinement with meaningful in cell and out of cell activities. Research indicates that small group isolation in some circumstances may have similar effects to solitary confinement and such regimes should not be considered an appropriate alternative.

The use of solitary confinement should be absolutely prohibited in the following circumstances:

- For death row and life-sentenced prisoners by virtue of their sentence.
- For mentally ill prisoners.
- For children under the age of 18.

Furthermore, when isolation regimes are intentionally used to apply psychological pressure on prisoners, such practices become coercive and should be absolutely prohibited.

As a general principle solitary confinement should only be used in very exceptional cases, for as short a time as possible and only as a last resort.

Notes

- (1) For the purpose of this document we use the term prisoner as a broad category covering persons under any form of detention and imprisonment.
- (2) The International Convention for the Protection of All Persons from Enforced Disappearance of December 2006 defines enforced disappearance as "...the arrest, detention, abduction or any other form of deprivation of liberty by agents of the State or by persons acting with the authorization, support or acquiescence of the State, followed by a refusal to acknowledge the deprivation of liberty or by concealment of the fate or whereabouts of the disappeared person, which place such a person outside the protection of the law."
- (3) For studies on the health effects of solitary confinement, see Peter Scharff Smith "The Effects of Solitary Confinement on Prison Inmates. A Brief History and Review of the Literature" in *Crime and Justice* vol. 34, 2006 (pp. 441-528); Craig Haney "Mental Health Issues in Long-Term Solitary and 'Supermax' Confinement" in *Crime & Delinquency* 49(1), 2003 (pp. 124-56); Stuart Grassian "Psychopathological Effects of Solitary Confinement" in *American Journal of Psychiatry* 140, 1983 (pp. 1450-4).

EXECUTIVE SUMMARY

The Texas Department of Criminal Justice (TDCJ) confines 4.4 percent of its prison population in solitary confinement.¹ Texas locks more people in solitary-confinement cells than twelve states house in their entire prison system.² On average, prisoners remain in solitary confinement for almost four years³; over one hundred Texas prisoners have spent more than twenty years in solitary confinement.⁴ The conditions in which these people live impose such severe deprivations that they leave prison mentally damaged; as a group, people released from solitary are more likely to commit more new crimes than people released from the rest of the prison system. Yet in 2013, TDCJ released 1,243 people directly from solitary-confinement cells into Texas communities.⁵ These prisoners return to society after living for years or decades in a tiny cell for twenty-two hours a day, with no contact with other human beings or access to educational or rehabilitative programs.⁶ As documented in this report, this dangerous and expensive practice is making our state less safe.

Alex is one of 6,564 Texas prisoners⁷ who live in a solitary-confinement cell.⁸ It is sixty square feet in size⁹; he can cross its length in six paces.¹⁰ If he lifts his arms to their full wingspan, his fingertips almost graze the walls.¹¹ The cell is completely bare; just a concrete floor and four concrete walls.¹² Alex is not allowed to place anything on his walls, not even a calendar.¹³ The door is made of solid metal with a slot for a food tray, and two thin Plexiglas rectangles to allow officers to see in.¹⁴

1 Texas Department of Criminal Justice (TDCJ) Administrative Segregation Information Sheet, at 6 (Sept. 2014) (obtained from Jeff Baldwin, Chief of Staff, TDCJ, and on file with ACLU of Texas and TCRP). TDCJ's technical term for solitary confinement is administrative segregation. Solitary confinement is the commonly accepted term, used nationwide, to describe the practice of housing prisoners alone in a cell for at least twenty-two hours a day. Therefore, we use the term solitary confinement throughout this report.

2 E. Ann Carson & Daniela Golinelli, Bureau of Justice Statistics, Prisoners in 2012: Trends in Admissions and Releases, at 23-24 (Sept. 2, 2014), available at <http://www.bjs.gov/content/pub/pdf/p12tar9112.pdf>.

3 TDCJ Administrative Segregation Information Sheet, *supra* note 1, at 6.

4 Spreadsheet from TDCJ in response to Open Records Request (ORR) (Nov. 20, 2012) (on file with ACLU of Texas and TCRP).

5 Letter from TDCJ to authors in response to open records request (July 9, 2014) (on file with ACLU of Texas and TCRP).

6 TDCJ Administrative Segregation Information Sheet, *supra* note 1, at 6.

7 Letter from TDCJ to authors, *supra* note 5.

8 We have changed the names of people we interviewed or corresponded with in order to protect confidentiality.

9 The average size of a solitary-confinement cell in Texas is sixty square feet; some are as small as forty-five square feet. Letter from TDCJ to authors in response to open records request (Feb. 27, 2014) (on file with ACLU of Texas and TCRP).

10 Letter from Alex to authors (Sept. 17, 2014) (on file with ACLU of Texas and TCRP).

Alex's drawing of the door to his solitary cell

Alex calls this cell his “house”;¹⁵ and for the past ten years, it has been the only home he has known.¹⁶

Alex’s entire life is confined within the four corners of his “house.” He eats sitting on the floor or on his bed. He sleeps on a steel bunk along one wall, covered in a thin plastic mattress.¹⁷ He goes to the bathroom in the toilet in the corner. The cell smells “[l]ike mold and urine and feces and filth,” Alex writes. “Like a downtown subway restroom. Like a locker room that’s never been cleaned.”¹⁸

Most days, Alex’s only contact with another human being is the hand that slides his food tray through a slit in his cell door. Weeks pass in which Alex never sees another person’s face, or looks another person in the eyes. He can only talk to people by shouting to other prisoners through the concrete walls. He cannot practice his Christian faith with a community of others who share his beliefs.¹⁹ He cannot play sports or games with other people.²⁰ When his niece comes to visit, he cannot hug her goodbye; he must talk to her through a pane of glass.²¹

¹⁵ Interview with Alex, individual incarcerated in TDCJ (May 28, 2014).

¹⁹ TDCJ Administrative Segregation Plan, at att. A (Mar. 2012) [unpublished] [on file with ACLU of Texas and TCRP].

²⁰ *Id.*

²¹ *Id.*

There is no window in Alex's cell.²² His field of vision is limited to peering through the Plexiglas slit in his cell door to the door of the cell opposite him.²³ Alex has not seen the stars in a decade.²⁴ "I miss that so much," he writes. "One time I was going to the hospital, down to Galveston and we were riding the ferry and the sun was coming up and it was the only one I'd seen in years. I'm a pretty tough guy, but it brought tears to my eyes."²⁵

Alex struggles to fall asleep at night. Usually, he can only sleep for four hours.²⁶ The fluorescent light hanging from his ceiling remains on all night.²⁷ The cell block constantly echoes with screams because some of the men confined in neighboring cells have gone insane, cutting themselves or eating their own feces.²⁸ Alex is overwhelmed by the noise: "Constant banging, clanking, rage, anger," he writes. "Like a jammed packed area for a boxing match with everyone screaming murder. The night sounds are the worst. More personal and filled with sadness. It sounds like hell."²⁹

Prison regulations require that officers take Alex outside his cell for one hour several times a week to exercise in a recreation yard. Often, he is deprived of even this minimal reprieve. Officers go for weeks without letting people on his block leave their cell for recreation.³⁰ But even in the recreation space—a caged outdoor box not much larger than his cell, covered in bird feces³¹—Alex is alone.

Solitary confinement forces Alex into a life of idleness. Alex wants to educate himself before returning to society. He wants to get counseling to help him deal with the abuse from his childhood.³² But he is not allowed to take group classes to get his associate's degree.³³ He cannot take classes to help him manage his anger, or join Alcoholics Anonymous to manage the addictions that led him to prison.³⁴ He cannot purchase a television to watch in his cell.³⁵

"I want something meaningful, not meaningless in my life," Alex says. "I do everything I can to make my time mean something. To take responsibility for my day."³⁶

Alex keeps a journal; he calls it “Wilson,” the name Tom Hanks gave a volleyball—his only companion and confidant while abandoned on a desert island—in the movie *Castaway*.³⁷ Every morning, Alex picks a new word out of the dictionary to learn. He reads inspiring quotations. He reads books on self-improvement from the prison library; the most recent one was *The Power of Habit*, which “is basically about replacing bad habits with good ones. . . . This is the kind of stuff we need to be addressing if we have any hope of giving ourselves a chance.”³⁸ He keeps a strict workout schedule of pushups and crunches.³⁹ On Saturdays, he cleans his cell.⁴⁰ On Sundays, he listens to Lakewood Church on the radio.⁴¹ Each morning he makes his bed; then he lays out a towel on his cell floor, sits on it, and meditates for twenty minutes.⁴² He had to train himself to meditate over time, though; it used “to be so hard because the last thing your nerves or body wants to do is relax when your neighbor is ‘cell warring’ and kicking his door, or when the whole wing is in complete chaos.”⁴³ When someone walks by his cell, he comes up to his cell door to say “hello”; he says, “It keeps the free world present and keeps my social skills from completely wasting away.”⁴⁴ He feeds the lizards that crawl in his cell to keep him company.⁴⁵ He has a “*mantra*”: “I am stronger than this place, I am stronger than these circumstances.”⁴⁶

But the cries from his neighbors’ cells shake his confidence that he will be able to withstand the isolation. Sometimes, he wonders if he will go insane before returning to the outside world.⁴⁷

“I have to be honest,” he wrote. “[W]hen your⁴⁸ back here and the guy next to you is so crazy he’s cutting on his face or eating his feces. It makes things even worse because you don’t know if they came into [solitary] this way, or the walls, this place, has caused it. So you begin to wonder, am I next?”⁴⁹

Findings

At stake in TDCJ's use of solitary confinement is whether thousands of people like Alex will successfully rejoin their families and society upon their release, or whether they will return to their communities irreversibly damaged by years of isolation and sensory deprivation. Solitary confinement permanently damages people. Rather than prepare prisoners for their eventual return to Texas communities, solitary confinement breaks down their ability to interact with other human beings; erodes their family relationships; deprives them of educational, rehabilitative, and religious programming; causes mentally healthy people to descend into mental illness; and severely exacerbates symptoms for people with pre-existing mental illness.

Because it so damages Texas prisoners by confining them in severe conditions, TDCJ ultimately increases crime in Texas communities. Ninety-five percent of incarcerated people return to our communities one day.⁵⁰ TDCJ recognizes in its mission statement that one of its most important duties is to improve public safety: "The mission of the Texas Department of Criminal Justice is to provide public safety, promote positive change in offender behavior, reintegrate offenders into society, and assist victims of crime."⁵¹ Yet years of social isolation, enforced idleness, lack of programming, and sensory deprivation make people released from solitary confinement, as a group, more dangerous within prison walls and ultimately to society. All of us pay the price.

In 2014, the American Civil Liberties Union of Texas (ACLU of Texas) and the Texas Civil Rights Project (TCRP) studied Texas's use of solitary confinement. We conducted a written survey of 147 people in solitary confinement, collected data from public-information requests to TDCJ, interviewed and corresponded with people in solitary confinement, reviewed other states' practices, researched the financial impacts of solitary, consulted with security and psychiatric experts, and interviewed correctional officers.

We discovered that TDCJ overuses solitary confinement compared to other states, houses many people in solitary confinement who could be safely confined in a lower security setting, and keeps people in solitary confinement for years and decades, long after they cease to pose a threat. By overusing solitary confinement, TDCJ increases crime, wastes taxpayer money, increases violence in prison, and causes thousands of mentally ill people to further deteriorate before returning to Texas communities.

What is Solitary Confinement?

People in Texas' solitary-confinement cells spend at least twenty-two hours a day⁵² in a cell that is sixty square feet,⁵³ about the size of a residential bathroom or a walk-in closet. During their years or decades in solitary confinement, they almost never leave their tiny cells.⁵⁴ Although TDCJ policies permit them an hour or two of recreation per day, many of our survey respondents reported that in reality officers almost never take them outside.⁵⁵

Solitary confinement deprives prisoners of any opportunity for self-improvement. People in solitary confinement cannot participate in group educational and rehabilitative programs to help prepare for their release. They cannot work in prison jobs to use their time productively and learn useful skills. They cannot participate in Alcoholics' Anonymous to cure their addictions. They cannot take group classes to get their G.E.D. or associate's degree, to receive the education they need to support their wives, children, and parents. They cannot take group therapy to help them develop healthy coping mechanisms. They cannot practice their faith with a group of like-minded believers and receive the support and moral education that comes from collective worship.⁵⁶

Solitary confinement strips people of all interpersonal contact. Prisoners in solitary confinement spend their days completely alone. They eat alone. They sleep alone. They go to the recreation yard alone. They can only speak to other people by shouting through the cell walls. They only touch another human being when an officer places handcuffs on them to take them to a medical appointment. When their family members come to visit them, they talk to them through wire mesh or a pane of glass; they cannot hold their hand or hug their loved one goodbye. They are not permitted to make phone calls to their parents, wives, or children.⁵⁷ ■

57 *Id.*

Finding One: Solitary confinement increases crime in Texas communities.

Permanently damaged by years in isolation, people released from Texas solitary-confinement cells commit more new crimes: They are rearrested at a twenty-five percent higher rate than prisoners released from the overall prison system. Of prisoners released from TDCJ in 2006, 48.8 percent were rearrested within three years,⁵⁸ whereas 60.84 percent of people released directly from solitary confinement were rearrested within the same time period.⁵⁹ According to a preliminary study in California, parolees released from solitary confinement committed new crimes at a thirty-five percent higher rate than parolees released from the overall prison system.⁶⁰ The data from Texas and California are consistent with evidence from other states that solitary confinement increases violent crime, even when controlling for common predictors of recidivism. People released from solitary-confinement cells in Washington State commit new felonies at a thirty-five percent higher rate than people released from the general population.⁶¹ People who had spent time in Florida's solitary-confinement cells are eighteen percent more likely to commit new violent crimes.⁶²

Finding Two: TDCJ overuses solitary confinement at tremendous cost to taxpayers.

TDCJ houses 4.4 percent of prisoners in solitary confinement⁶³—about four times the estimated national average of one to two percent of the prison population.⁶⁴ TDCJ uses overbroad criteria to send people to solitary confinement, capturing many individuals who did not commit any misconduct within the prison system. It also confines people to solitary confinement for lengthy periods—on average 3.7 years⁶⁵—rather than returning them to general population as soon as it is safe to do so. Recognizing the safety consequences of solitary confinement, states like Mississippi have dramatically reduced their reliance on solitary confinement, which improved safety in their prisons and communities and saved taxpayers millions of dollars. It is time for Texas to follow their lead. TDCJ spends \$46 million dollars a year above normal correctional costs to house people in solitary confinement—\$61.63 per day per person housed in administrative segregation, compared to \$42.46 per day per person in general population.⁶⁶ Since Texas taxpayers foot the bill for Texas’s use of solitary confinement, TDCJ should use it as rarely as possible. TDCJ could save taxpayers \$31 million dollars a year just by dropping its use of solitary confinement to Mississippi’s rate of 1.4 percent.⁶⁷

Finding Three: Solitary confinement increases prison violence. Serious assaults on Texas prison staff have increased 104 percent during the last seven years.⁶⁸ Texas’s largest correctional officers union attributes the rise, in part, to TDCJ’s overuse of solitary confinement and the practice of housing people with mental illness in solitary confinement.⁶⁹ In 2013, almost eighty percent of the 499 instances of prisoners exposing officers to bodily fluids occurred in Texas’s solitary-confinement units; none occurred in general-population units.⁷⁰ These assaults led Texas’s largest correctional officers union to call upon the United States Senate to regulate states’ use of solitary confinement.⁷¹ Other states have improved security by drastically reducing their use

63 TDCJ Administrative Segregation Information Sheet, *supra* note 1, at 6.

64 There are no hard numbers on the percentage of states’ prison populations in solitary confinement. Experts estimate that the state average is one to two percent. See JAMES AUSTIN & EMMITT SPARKMAN, NAT. INST. OF CORRECTIONS, PRISONS DIVISION: COLORADO DEPARTMENT OF CORRECTIONS ADMINISTRATIVE SEGREGATION AND CLASSIFICATION REVIEW 17 (Oct. 2011), available at https://www.aclu.org/files/assets/final_ad_seg.pdf.

65 TDCJ Administrative Segregation Information Sheet, *supra* note 1, at 6.

66 This data is unfortunately over eleven years old. TDCJ has said that it does not track the costs of housing people in solitary confinement compared with general population. See CRIM. JUST. POLICY COUNCIL, MANGOS TO MANGOS: COMPARING THE OPERATIONAL COSTS OF JUVENILE AND ADULT CORRECTIONAL PROGRAMS IN TEXAS, PREPARED FOR THE 78TH TEXAS LEGISLATURE 12 (2003), available at http://www.lbb.state.tx.us/Public_Safety_Criminal_Justice/Reports/2003cpd.pdf; Letter from TDCJ to Rodney Ellis, *supra* note 59.

71 See *id.*

of solitary confinement. Mississippi cut serious assaults against staff and prisoners by seventy percent when it reduced its solitary population from one thousand to fewer than 150.⁷² When Maine cut its solitary-confinement population, incidents of prison violence dropped.⁷³ Colorado saw no increase in assaults when it reduced its solitary-confinement population by sixty percent, and the Director of the Colorado Department of Corrections declared that “our institutions will actually be safer” with less solitary confinement.⁷⁴

Finding Four: Solitary confinement causes thousands of mentally ill people to further deteriorate before they return to Texas communities. The universal consensus among mental health experts is that correctional departments must never send people with serious mental illnesses to solitary confinement because complete isolation causes people with serious mental illness to fall apart.⁷⁵ Yet TDCJ confines at least 2,012 people with mental illnesses in solitary confinement⁷⁶ and inadequately monitors them during their time in isolation, providing only cursory checks that are unlikely to identify serious issues. According to our survey results, of those survey respondents who met with a mental health worker, sixty-five percent said their meetings were less than two minutes long.⁷⁷ As a consequence, rates of suicide, attempted suicide, and self-harm in solitary confinement are far higher than rates in the general population: People in solitary confinement are five times more likely to commit suicide than those in the general population.⁷⁸ For the mentally ill who do survive solitary confinement, they return to Texas communities in worse condition than when they entered TDCJ.

Recommendations

Recommendation One: Change Institutional Attitudes Toward Solitary Confinement.

TDCJ and statewide policymakers must move toward a new institutional attitude that views solitary confinement as a rare practice, to be used only in exceptional circumstances and for short periods. The State of Texas has embraced “smart on crime” reforms in recent years, and this same balancing of benefits against costs should inform our approach to solitary confinement:

- **Train correctional officers to work effectively with people with mental illness.** Texas Correctional Office on Offenders with Medical or Mental Impairments (TCOOMI) should develop additional mental-health training for correctional officers, and make this training a precondition for an additional pay raise. Increased training will allow correctional officers to identify misbehavior based on mental illness and divert people with mental illness to appropriate treatment, rather than sending them to solitary confinement. It will also help to prevent confrontations between correctional officers and mentally ill prisoners that can spiral out of control. A small amount of dedicated additional funding for mental health training is a wise investment for the state because it gives officers skills they need, makes them safer, and could increase job satisfaction and reduce turnover.
- **Enact step-down programs that allow individuals to move to less restrictive housing based on good behavior.** TDCJ should enact programs that allow individuals in solitary confinement to earn greater privileges through good behavior and eventually return to the general population. These programs will ensure that people only stay in solitary confinement for short durations. They will also give prisoners an incentive to comply with prison regulations, thereby making solitary-confinement units safer for correctional officers.
- **Institute an independent oversight entity to monitor TDCJ’s use of solitary confinement and make recommendations for reform.** The legislature should institute an independent oversight body—comprised of mental-health and corrections experts—to collect data on TDCJ’s use of solitary confinement, monitor TDCJ’s practices, and make recommendations for reform. This independent body could play a vital role in ensuring that the public is well informed about this important area of prison management. The independent entity should have the power to inspect TDCJ facilities and interview incarcerated people.

Recommendation Two: Remove People with Serious Mental Illness from Solitary Confinement

A large number of individuals housed in solitary confinement in Texas prisons have serious mental illnesses. These individuals should be removed from solitary confinement and placed in a setting where their mental health needs can be appropriately addressed, helping to ensure that they are not returned to their communities unstable and untreated.

- **Exclude people with serious mental illness from solitary confinement.**

Serious mental illnesses include, among other conditions: major depression, schizophrenia, bipolar disorder, obsessive compulsive disorder (OCD), panic disorder, post-traumatic stress disorder (PTSD) and borderline personality disorder.⁷⁹ The legislature should dedicate funds for a one-time review to ensure that all individuals with serious mental illnesses in solitary confinement are removed to therapeutic settings. TDCJ should also remove anyone whose medical or mental-health conditions will worsen in solitary confinement. Diverting those with serious mental health issues to psychiatric treatment units or other appropriate settings reduces litigation exposure and improves outcomes for this population, including reducing the causes of recidivism.

- **Provide mental-health screening to everyone within twenty-four hours of placement in solitary confinement.** TDCJ should ensure that no one spends more than one day in solitary confinement without a mental-health screening, conducted in person by a mental-health professional in a confidential setting. If a person has serious mental illness, he must be removed from solitary confinement to a setting where he can receive adequate treatment. People in solitary confinement who are undergoing mental-health treatment must receive an in-person mental-health review once per month, conducted by a mental-health professional in a confidential room where security staff cannot overhear the communication.

⁷⁹ See *What Is Mental Illness?: Mental Illness Facts*, NAT'L ALLIANCE ON MENTAL ILLNESS http://www.nami.org/template.cfm?section=about_mental_illness (last accessed Sept. 16, 2014).

- **Enact policies requiring mental-health professionals to participate in all initial decisions classifying prisoners to solitary confinement, as well as all follow-up placement reviews.** By having mental-health professionals play an ongoing role in classification decisions, TDCJ will ensure that inmates with serious mental illnesses are not sent to solitary confinement in the future.
- **Establish segregated housing with adequate mental-health treatment for the small number of mentally ill people who legitimately need to be housed in a high security setting.** For many mentally ill prisoners, misbehavior is a result of inadequate mental-health treatment and the harmful effects of solitary confinement—which could be remedied with adequate therapeutic interventions and medication. However, there may be a very small number of prisoners with mental illness who legitimately need to be isolated from the rest of the prison population. For these few individuals, TDCJ should create special mental-health segregation units. In those units, people with mental illness must receive ten to fifteen hours a week of out-of-cell therapeutic activities, and at least ten hours a week of unstructured exercise or recreation time.⁸⁰

Recommendation Three: Review Solitary-Confinement Placement System-Wide.

To ensure that TDCJ only houses people in solitary confinement if they pose a serious security risk, TDCJ should:

- **Review all individuals in solitary confinement with the goal of removing as many individuals as possible.** The legislature should fund a one-time review to ensure that the costly practice of solitary confinement is not overused within TDCJ. The review should examine the appropriateness of placement and the duration of placement for each individual currently housed in solitary confinement. If an individual poses no threat, the review should result in removal from solitary confinement. This approach is cost effective because it would right-size the solitary confinement population in Texas.
- **Cease automatic placement in solitary confinement.** Currently, association with certain prison gangs can mean automatic and long-term placement in solitary confinement. While addressing gang violence is a key element of ensuring security, other criminal justice systems have successfully housed gang members in settings less restrictive (and less expensive) than solitary confinement. TDCJ should consider alternative housing for this population, including reviewing

⁸⁰ See Jeffrey Metzner & Joel Dvoskin, *An Overview of Correctional Psychiatry*, 29 PSYCHIATRIC CLINICS N. AM. 761, 764 (2006), available at http://www.joeldvoskin.com/Metzner___Dvoskin_2006.pdf.

practices in other states that have allowed for placement in less restrictive settings.

- **End flat release of people from solitary confinement into Texas communities.** TDCJ has taken steps to expand step-down programs that provide treatment to help people transition from solitary confinement to life in the outside world. Given that solitary confinement is associated with higher recidivism rates, it is essential that TDCJ further expand this programming to make it available to all those released from solitary. To ensure accountability and transparency, TDCJ should report publicly on the success of these programs and their outcomes.
- **Never house individuals in solitary confinement for over one year except in rare circumstances.** TDCJ should cease housing people in solitary confinement for indefinite periods of time, and never for over one year, unless the following conditions are met: TDCJ conducts a hearing in which it establishes (1) by a preponderance of evidence that the individual, within the previous year, has committed an act which resulted in or was likely to result in serious injury or death to another; or (2) by clear and convincing evidence that there is a significant risk that the individual will cause physical injury to prison staff, other inmates, or members of the public, if removed from long-term isolation. Association with a prison gang alone should not be enough to meet that burden. The hearing committee must not be comprised of staff from the prisoner's unit.

Recommendation Four: Improve Conditions in Solitary Confinement.

After dramatically reducing its solitary-confinement population, TDCJ should take steps to improve conditions for people in its solitary-confinement cells to reduce isolation and the corresponding anti-social tendencies isolation causes:

- **Ensure appropriate programming for individuals held in solitary confinement.** TDCJ should provide people in solitary confinement with opportunities for out-of-cell educational, rehabilitative, and religious programs to help prepare them for their eventual release into the outside world. TDCJ should also develop educational, rehabilitative, and religious programs that people can complete in their cells.
- **Provide adequate stimulation to lower the effects of sensory deprivation.** TDCJ should provide people in solitary confinement with the same access to televisions, radios, books, and magazines that is available in general population. It should also provide more out-of-cell time.

- **Support family relationships.** Solitary confinement significantly impairs family bonds by limiting visitation to no-contact visits and prohibiting telephone calls to loved ones. TDCJ can support family relationships—which in turn aid in rehabilitation—by providing people in solitary confinement with the ability to have contact visits with their loved ones and make telephone calls to their families.
- **Provide adequate mental-health and medical services to those in solitary confinement.** TDCJ should conduct weekly reviews of people in solitary confinement by a mental-health professional. People receiving mental-health treatment should be granted out-of-cell treatment sessions with a mental-health professional, taking place in a confidential room where security staff cannot overhear the conversation. The complete isolation in solitary confinement can also make it more difficult for people to request and access urgent medical care. TDCJ should review the provision of medical care in its solitary-confinement units and ensure that people in solitary confinement receive adequate medical services.

BACKGROUND

The findings documented in this report are hardly news. The dangers of extreme isolation were first observed by correctional experts in the 1800s, causing them to abandon the practice in favor of more humane and constructive conditions of confinement. Now, after decades of experience with the ill effects of solitary confinement, a new generation of experts and policymakers has concluded that solitary confinement must be used as rarely possible and only for brief periods.

The Early Failure of Solitary Confinement

Early experiments with solitary confinement demonstrated that it completely debilitated prisoners, thwarting the fundamental correctional objective of making American communities safer by preparing people to live law-abiding lives in the outside world. In the late 1700s, the Pennsylvania legislature authorized the construction of this country's first-ever block of solitary confinement cells in the Walnut Street Jail.⁸¹

■ Opened in 1829 outside of Philadelphia, Eastern State Penitentiary utilized a system of complete isolation, like its predecessors, Walnut Street Jail and Western State Penitentiary.⁸²

81 See Craig Haney & Mona Lynch, *Regulating Prisons of the Future: A Psychological Analysis of Supermax and Solitary Confinement*, 23 N.Y.U. REV. L. & SOC. CHANGE 477, 483 (1997).

82 See *History of Eastern State Penitentiary, Philadelphia*, E. STATE PENITENTIARY HISTORIC SITE, INC. <http://www.easternstate.org/sites/default/files/pdf/ESP-history6.pdf> (last accessed Sept. 15, 2014).

Then in 1826, Pennsylvania opened Western State Penitentiary, and housed everyone there in solitary confinement.⁸³ Other states soon followed Pennsylvania's model.⁸⁴ Observers quickly recognized that solitary confinement caused lasting psychological harm, however, permanently damaging inmates beyond repair—until they were utterly unfit for return to free society.⁸⁵ As the United States Supreme Court observed in 1890, the experiment with solitary confinement had completely failed as a correctional practice:

But experience demonstrated that there were serious objections to [solitary confinement]. A considerable number of the prisoners fell, after even a short confinement, into a semi-fatuous condition, from which it was next to impossible to arouse them, and others became violently insane; others still, committed suicide; while those who stood the ordeal better were not generally reformed, and in most cases did not recover sufficient mental activity to be of any subsequent service to the community.⁸⁶

Correctional departments had largely abandoned solitary confinement by the early twentieth century because of the irreversible damage it inflicted on prisoners.⁸⁷ Until the 1980s, state and federal prisons used solitary confinement only in rare and extraordinary circumstances.⁸⁸

The Misguided Return of Solitary Confinement in the Late Twentieth Century

Fueled by the “tough on crime” movement and reeling under the pressure of a skyrocketing prison population in the 1980s,⁸⁹ correctional departments forgot the abysmal early failure of solitary confinement. Between 1925 and 1986, the size of the population incarcerated in state and federal prisons skyrocketed by 450 percent.⁹⁰ By

⁸⁸ Haney & Lynch, *supra* note 81, at 488-89; Pizarro, Stenius, & Pratt, *supra* note 87, at 7.

⁸⁹ It is beyond the scope of this report to detail the policies that contributed to exponential growth in the nation's prison population. But it is important to note that the drivers of the increase—including the misguided “war on drugs” and harsh sentencing requirements—meant that much of the growth was among non-violent, low-level drug offenders. See The Sentencing Project, Fact Sheet: Trends in U.S. Corrections (Sept. 2014), available at http://sentencingproject.org/doc/publications/inc_Trends_in_Corrections_Fact_sheet.pdf.

⁹⁰ See PATRICK A. LANGAN, JOHN V. FUNDIS, LAWRENCE A. GREENFELD, & VICTORIA W. SCHNEIDER, BUREAU OF JUSTICE STATISTICS: HISTORICAL STATISTICS ON PRISONERS IN STATE AND FEDERAL INSTITUTIONS, YEAREND 1925-1986, at 15 (May 1988), available at <https://www.ncjrs.gov/pdffiles1/digitization/111098ncjrs.pdf>.

the late 1990s, most prisons were operating at over one hundred percent of design capacity.⁹¹ As correctional departments struggled to control overcrowded prisons, many prison officials responded by locking down prisoners in solitary confinement.⁹²

And with elected officials needing to establish their “tough on crime” bona fides, legislatures poured money into the construction of expensive solitary-confinement units.⁹³ Some states even built “supermax” prisons—prisons consisting entirely of solitary-confinement cells. In 1984, there was only one “supermax” facility in the United States.⁹⁴ By 1999, there were sixty supermax facilities in thirty states.⁹⁵ In 2000, the Bureau of Justice Statistics estimated that a over 80,000 people were held in solitary confinement in federal and state prisons.⁹⁶ That was a forty percent increase from only five years earlier, even faster than the rate of growth of the general prison population, which had increased twenty-eight percent over the same period.⁹⁷

Texas was at the forefront of the renewed use of solitary confinement. Facing its own rapidly inflating prison population, Texas imposed a new regime of widespread solitary confinement in the late 1980s. Traditionally, TDCJ had used solitary confinement only as a short-term punishment for in-prison misbehavior, lasting just a few weeks at a time.⁹⁸ But Texas’s prison population boomed in the twentieth century, increasing at an even more dramatic rate than the rest of the country. Between 1925 and 1986, Texas’s prison population increased by over one thousand percent.⁹⁹ By 1986, TDCJ had the third-largest number of people in prison in all fifty states.¹⁰⁰ Rather than augment its correctional force to manage the over 38,000 people it had locked behind bars, Texas responded by warehousing a large portion of its prison population in permanent solitary confinement.¹⁰¹ TDCJ built new units with layouts that harkened back to the Pennsylvania model of the nineteenth century of “total isolation.”¹⁰² Between 1987 and 1994, TDCJ built seven maximum-security prisons, each with 504 administrative segregation cells.¹⁰³ Soon, Texas had solitary-confinement cells throughout the state—and it started to fill them.¹⁰⁴

Solitary confinement cells in the State of Texas per prison unit

Who is in Texas Solitary-Confinement Cells?

Fifty-three percent¹⁰⁵ of prisoners in solitary confinement are there because TDCJ determined that they were either an escape risk or a security threat to officers or other prisoners.¹⁰⁶ On average, they remain in solitary confinement for three and a half years, which indicates that TDCJ continues to isolate many people long after they cease to pose a threat.¹⁰⁷ Forty-six percent are in solitary confinement because TDCJ determined that they were members of one of eight gangs—not because they committed any misconduct while incarcerated.¹⁰⁸ The remaining prisoners are in in “Protective Custody”—isolated in solitary confinement for their own protection.¹⁰⁹

The population in Texas’s solitary-confinement cells is predominantly male;¹¹⁰ there are only 103 women in Texas solitary-confinement cells.¹¹¹ Nineteen people in solitary-confinement cells are under the age of 19, and forty-four are over sixty-five years old.¹¹²

Thirty-three percent of people in solitary confinement committed non-violent offenses¹¹³ such as property and drug crimes.¹¹⁴

The population in Texas’s solitary-confinement cells is disproportionately Hispanic.¹¹⁵ Hispanics comprise over fifty percent of the solitary-confinement population, even though they make up only thirty-two percent of the general population.¹¹⁶ The racial disproportion is likely because the eight gangs automatically housed in solitary confinement are predominately Hispanic.¹¹⁷ ■

Racial breakdown of general population compared to solitary-confinement population

Age breakdown of people in solitary confinement

The Renewed Consensus: Solitary Confinement is a Dangerous and Expensive Correctional Practice

Predictably, after diverting thousands of prisoners to solitary confinement, correctional departments around the country soon learned that solitary confinement increased violence both in prison and in American communities. In May 2007, violence erupted in Mississippi's solitary-confinement unit.¹¹⁸ By the summer, three people in the unit had been murdered.¹¹⁹ Officials in Mississippi recognized that "[a] different approach was needed due to the deteriorating and dangerous environment."¹²⁰ In March 2013, a former gang member released from a Colorado solitary-confinement cell assassinated the Executive Director of the Colorado Department of Corrections. His successor, Rick Raemisch, said that the murder underscored the urgent need for reform of Colorado's use of solitary confinement. "Whatever solitary confinement did to that former inmate and murderer," Mr. Raemisch wrote, "it was not for the better."¹²¹

Recognizing that solitary confinement endangers the public, many states are changing their ways. Between 2007 and 2012, Mississippi reduced its solitary-confinement population from one thousand prisoners to fewer than 150.¹²⁴ Maine cut the number of people in solitary cells in half between 2010 and 2012 and gave those who remained in solitary group recreation, counseling sessions, opportunities to earn more recreation through good behavior, and

"Is [solitary confinement] really necessary? And is it necessary at the level of current use? And I think when you look critically at it, the answer is [that] we don't need these kinds of numbers of inmates in these kinds of high security settings, and we can better prepare them for release, because ninety-eight percent of our inmates are getting out."

—Commissioner of the Maine Department of Corrections Joseph Ponte¹²²

"This is a message I deliver directly to my wardens. I say to them: 'Who wants to live directly next to someone who was just released from solitary confinement? Think about how dangerous that is.'"

—Executive Director of Colorado Department of Corrections Rick Raemisch¹²³

greater access to radios, televisions, and reading materials.¹²⁵ In 2013, Illinois closed its supermax prison, Tamms Correctional Center.¹²⁶ Colorado reduced its population in solitary confinement by nearly sixty percent between 2011 and 2014.¹²⁷ In February 2014, Mr. Raemisch vowed to further reduce Colorado's solitary-confinement population,¹²⁸ and two months later the Colorado legislature passed a bill excluding people with serious mental illnesses from solitary confinement.¹²⁹ New York corrections officials agreed to new guidelines limiting the maximum length of time people should spend in solitary and eliminated the use of solitary confinement against the most vulnerable prisoners: juveniles, pregnant women, and people with developmental disabilities.¹³⁰ In August 2014, the California Department of Corrections took preliminary steps to revise its misguided use of solitary confinement by instituting policies to greatly reduce the number of mentally ill people in solitary confinement, improve mental-health treatment, and increase suicide-prevention measures.¹³¹ Under the new measures, California will move 2,740 mentally-ill people out of solitary confinement.¹³²

By reducing their use of solitary, states made their prisons safer and saved taxpayers millions of dollars. When Mississippi reduced its solitary-confinement population, violent incidents dropped by almost seventy percent,¹³³ and it saved taxpayers \$5.6 million a year.¹³⁴ Mississippi still has one of the lowest recidivism rates in the country.¹³⁵ Incidents of violence in Maine's prisons dropped when it cut its solitary-confinement population in half.¹³⁶ By closing Tamms Correctional Center, Illinois saved taxpayers \$26.6 million a year.¹³⁷

SOLITARY CONFINEMENT INCREASES CRIME

Prisons should make our communities safer, but solitary confinement makes them more dangerous. Solitary confinement causes prisoners to develop lasting mental illnesses, destroys their ability to relate to others, tears apart their family safety nets, and deprives them of vocational, educational, rehabilitative, and religious programming. After subjecting people to years or decades of solitary confinement, TDCJ sets them free in Texas communities—where, impaired by their years of complete isolation, they commit crimes at higher rates than people released from the general population. Solitary confinement does more than cause lasting harm to the people confined there; it ultimately harms our communities.

Solitary Confinement Permanently Damages People Who Will One Day Return to Texas Communities

Solitary Confinement Causes Permanent Mental Deterioration

Solitary confinement can cause people's mental health to seriously deteriorate, creating or exacerbating psychiatric symptoms that persist long after their release and impede their ability to reintegrate to society. The medical consensus is that most human beings cannot withstand the prolonged isolation and sensory deprivation that solitary confinement entails, and our survey of people incarcerated in Texas prisons produced predictable results. Ninety-five percent of respondents to our survey had developed some sort of psychiatric symptom as a result of solitary confinement; thirty percent reported having oral or physical outbursts, fifty percent reported suffering from anxiety or panic attacks, and fifteen percent reported hallucinations.¹³⁸ Solitary confinement's impact on the human brain is as brutal as a traumatic physical injury; prisoners of war who spent six months in solitary confinement had abnormal brain-wave patterns months after their release.¹³⁹

Studies document that people in solitary confinement are also at a higher risk of suffering from psychiatric disorders.¹⁴⁰ Dr. Stuart Grassian, one of the nation's leading

¹³⁸ Data collected from survey of 147 people incarcerated in Texas prisons who previously spent time in or are currently in solitary confinement (on file with ACLU of Texas and TCRP).

experts on the psychiatric effects of solitary confinement, found that many people in solitary confinement develop a unique psychiatric syndrome: They lose their capacity to think clearly or concentrate; lose their memory; hallucinate; have panic attacks; ruminate on obsessive thoughts of “revenge, torture, and mutilation of the prison guards”; get lost in paranoid delusions; and have poor impulse control.¹⁴¹ These symptoms do not go away when people leave prison; they persist long after release, inhibiting the ability to adjust to normal life and reintegrate into the community.¹⁴²

Summing up the research on solitary confinement’s psychological impact, Dr. Terry Kupers, of the Wright Institute, writes that “it is very clear . . . that for just about all prisoners, being held in isolated confinement for longer than 3 months causes lasting emotional damage if not full-blown psychosis and functional disability.”¹⁴³ In the words of a staff psychiatrist from a California state prison, “It’s a standard psychiatric concept, if you put people in isolation, they will go insane. . . . Most people in isolation will fall apart.”¹⁴⁴

The psychological impact of Texas’s solitary-confinement cells was documented by University of California professor Craig Haney when he served as an expert in the prisoners’ rights case *Ruiz v. Estelle*.¹⁴⁵ Dr. Haney found that “high numbers of prisoners were living in psychological distress and pain” in Texas’s solitary-confinement cells:

I’m talking about forms of behavior that are easily recognizable and that are stark in nature when you see them, when you look at them, when you’re exposed to them. In a number of instances, there were people who had smeared themselves with feces. In other instances, there were people who had urinated in their cells, and the urination was on the floor. . . . There were many people who were incoherent when I attempted to talk to them, babbling, sometimes shrieking, other people who appeared to be full of fury and anger and rage and were, in some instances, banging their hands on the side of the wall and yelling and screaming, other people who appeared to be simply disheveled, withdrawn and out of contact with the circumstances or surroundings. Some of them would be huddled in the back corner of the cell and appeared incommunicative when I attempted

to speak with them. Again, these were not subtle diagnostic issues. These were people who appeared to be in profound states of distress and pain...

The bedlam which ensued each time I walked out into one of those units, the number of people who were screaming, who were begging for help, for attention, the number of people who appeared to be disturbed, the existence, again, of people who were smeared with feces, the intensity of the noise as people began to shout and ask, Please come over here. Please talk to me. Please help me. It was shattering. And as I discussed this atmosphere with the people who worked here, I was told that this was an everyday occurrence, that there was nothing at all unusual about what I was seeing.¹⁴⁶

The federal judge presiding over the Ruiz case wrote that Texas's solitary-confinement cells "are virtual incubators of psychoses—seeding illness in otherwise healthy inmates."¹⁴⁷ Based on the psychological effects of solitary confinement, the judge determined that Texas's solitary-confinement cells constituted cruel and unusual punishment in violation of the Eighth Amendment of the United States Constitution.¹⁴⁸

"Families of these individuals [placed in solitary confinement] are faced with monumental challenges in helping their loved one's adapt to life on the outside. . . . We should never lose sight of a person's humanity and their need for family and human contact. Developing pro-social services and strengthening family relationships within prison walls is paramount to public safety—both inside and outside prison fences. "

Solitary Voices

“Everyday from dusk to dawn theres noise, banging, clanking, yelling, screaming. Everyday someone is getting hurt or hurting themselves. Everyday theres fire and floods and complete chaos & hate. Everyday there’s loneliness. I woke up last night to someone screaming ‘Let Me Out of Here’ (again) over and over with so much anguish there was no doubt he was **screaming from his very soul**. But he was just screaming what we are all thinking. Everyday is a challenge here. **A challenge against insanity.**”¹⁵⁰

“Felt isolated, withdrew from people socially; clean, organize, obsessively, hand wash, felt despair, felt disoriented/confused, panic, couldn’t sleep until exhausted. Bad dreams, see **something on walls moving but nothing there.**”¹⁵¹

“Now I know how the caged animal must feel and why it paces the way it does. I feel so angry at times and I pace this cell for hours trying to get my thoughts and feelings under control. I feel suffocating feelings and have anxiety attacks that I feel are going to kill me sometimes—heart attack. **I sometimes see things in this cell like ghosts flitting around the floor & walls.** I can’t sleep for days at time and the officers count every hour and most of them bang on your door, shine their lights in your face and make you get up and show them you I.D. card—tell you make sure you are alive. I get so angry I cuss, kick the door & walls and lose any self control I have and I actually start to think about really ending this torment—I sometimes sleep so much I lose track of days at a time—sometimes several. That’s when I really feel disoriented/confused/afraid.”¹⁵²

¹⁵⁰ Alex’s Journal, *supra* note 26 (entry dated July 29, 2014).

¹⁵¹ Survey response from Anna, individual incarcerated in TDCJ (on file with ACLU of Texas and TCRP).

¹⁵² Survey response from Nathan, individual incarcerated in TDCJ (on file with ACLU of Texas and TCRP).

Sergio's Story

TDCJ sent Sergio to solitary confinement when he was nineteen years old. During his three and a half years in solitary confinement, Sergio had virtually nothing to do. Every day, he would wake up when breakfast was served, usually at three or four o'clock in the morning. Then he would listen to the radio for four to five hours, and work out in his cell. Although he could not watch television, Sergio rigged his radio so he could listen to television shows like Fox News, Anderson Cooper, *Dateline*, *Everybody Loves Raymond*, and *Seinfeld*. (Under prison regulations, he was not allowed to rig his radio that way; he just tried not to get caught.) He would eat lunch at ten o'clock, and then listen to more radio or read. His favorite books were *Tuesdays with Morrie*, which he loved "because it's about a guy who talks to his friend once a week about life lessons, success and marriage," and *The Time Traveler's Wife*. He would play chess with other prisoners by drawing out a chess board, numbering it, and then calling out his moves to people in other cells. At four in the afternoon, Sergio would have dinner, and at 8:00 p.m. officers would distribute the mail; he received a letter from his family a couple of times a month.

In January 2014, Sergio finally got out of solitary confinement. We met with Sergio in May. Although Sergio was scheduled to be released from prison in eight months, he felt damaged and unprepared for the real world after his time in solitary. Sergio said that he is not "comfortable being around people" and does not go to the recreation room. He prefers to stay in his cell and obsessively tries to order everything perfectly there because "if it ain't right, I get agitated." Before he was in solitary confinement, Sergio says, "I used to be a people person and like being around people." But, Sergio says "it's weird after three years back there" in solitary confinement. Now, he doesn't like "having other people being close to me" and says that "stuff gets balled up inside" of him.¹⁵³ ■

¹⁵³ Interview with Sergio, individual incarcerated in TDCJ (May 28, 2014) (on file with ACLU of Texas and TCRP).

Solitary Voices

"I have difficulty talking to people now and I feel paranoid at times in my cell—I see shadows and I've started to hear **voices whisper my name** the last couple of years in my cell . . . feel closed in!"¹⁵⁴

"I am an honorably discharged combat veteran diagnosed with PTSD, anxiety disorder, panic disorder, etc. Isolation is torture. There can be no other word for it. 'Isolation' simply means you are single-celled. You are not removed from the effects of other inmates' extreme behavior resultant from ad seg. People flood the areas by plugging toilets. Fires are routinely started so you wake in the middle of the night choking on black smoke. Electricity gets turned off. People scream, yell non-sensical gibberish all night. They bang doors 24 hours. . . ."

¹⁵⁴ Survey response from Greg, individual incarcerated in TDCJ (on file with ACLU of Texas and TCRP).

¹⁵⁵ Survey response from Pedro, individual incarcerated in TDCJ (on file with ACLU of Texas and TCRP).

Letter From Alex

“When you dive deep in the ocean and when you go to make your ascension, it’s very important to make stops to calibrate your air. You can’t just swim to the surface. If a diver rushes to the surface too fast, they put themselves in serious risk of injury (called “the bend”). In some cases it can be fatal if the diver cannot go immediately back down and start over, or be rushed to a hyperbaric chamber. . . .

“Coming out of my cell feels like I’ve gone to the surface too fast. When the doors roll, everything is amplified. Nerves are cranked to 10. Lights are too bright. A mop bucket being pushed by an S.S.I. sounds like a mid-day freight train with horns blaring. It’s hyper-sensitivity on the grandest scale, with the feeling like the whole world is watching. . . .

“I’m a people person. Before I came here I was outgoing, very social. Maybe even too much the life of the party. And I hate this cell, I hate it. But in some crazy way as much as I enjoyed our meeting and its purpose, a part of me couldn’t wait to get back to my cell. In one big haste to return to the very same place that cause it. My cell is my hyperbaric chamber.

“T.D.C.J., as well as I’m sure all prison systems, will claim that ad. seg. is not a punishment in itself. But the system puts an even greater burden on the segregated inmate being released. Since there’s no available programming for substance abuse (AA, NA) or groups to address Anger Management like you may find in the general population. If you’re released on parole or released period, an ad. seg. inmate not only has to struggle with the issues they had going into prison. The isolated ad. seg. inmate has to deal with the adverse symptoms caused by the prison itself.

“I feel fortunate because I recognize these things. While I’m in no way suggesting I’ll have it easier than the next man when I leave here. I’m looking forward to the challenge, I’m looking to the day I’ll leave this cell for the last time and slowly make my way to the top.¹⁵⁶ ■

¹⁵⁶ Letter from Alex to authors (May 30, 2014) (on file with ACLU of Texas and TCRP).

Solitary Voices

“Being secluded to a small cell 23 hours a day-plus affects every sane individual in one way or another. A person has to yell just to socialize. To those who are not socializing, it **is a constant cacophony of noise—constant!** A person is affected negatively in every way!”¹⁵⁷

“In another state of mind. You could not tell day from night. You were always backward. Sleep all day stay up all night. No light coming in the building. **You be lost.**”¹⁵⁸

“It **dehumanizes** you and causes a enmity in you against staff and feelings of worthlessness and despair.”¹⁵⁹

Isolation Erodes People’s Capacity to Interact with Others

Solitary confinement damages people’s ability to relate to other human beings. It erodes the social skills people need to raise children, support their spouses, help aging parents, participate in their communities, cooperate with neighbors, and hold down jobs.

Prisoners in solitary confinement are always alone. They live in a cell alone. They go to the recreation yard alone. They eat alone. For weeks, they do not see another person’s face. To speak to anyone else, even a person in a neighboring cell, they must shout through the cell walls. The only time they touch another human being is when a correctional officer places handcuffs on their wrists to take them to the recreation yard.

Stripped of all social contact for years at a time, their capacity to relate to human beings decays.¹⁶⁰ In the words of Dr. Grassian, people in solitary confinement suffer from “a continued intolerance of social interaction” even after their release.¹⁶¹ Dr. Grassian has had the opportunity to evaluate people years after their release from solitary confinement.¹⁶² He says that “these individuals had become strikingly socially impoverished and experienced intense irritation with social interaction, patterns dramatically different from their functioning prior to solitary confinement.”¹⁶³ As Dr. Haney describes, the lack of contact creates a “pervasive feeling of unreality,” which causes people to “experience a paradoxical reaction, moving from initially being starved

¹⁶³ *Id.*

for social contact to eventually being disoriented and even frightened by it.”¹⁶⁴ In our survey, fifty-nine percent of respondents reported that they had “difficulty interacting with other people” as a consequence of their time in solitary.¹⁶⁵

Indeed, many of the symptoms of mental and emotional damage caused by solitary confinement impair normal human interaction:

Consistent patterns emerge, centering around . . . extreme anxiety, anger, hallucinations, mood swings and flatness, and loss of impulse control. In the absence of stimuli, prisoners may also become hypersensitive to any stimuli at all. Often they obsess uncontrollably, as if their minds didn’t belong to them, over tiny details or personal grievances. Panic attacks are routine, as is depression and loss of memory and cognitive function.¹⁶⁶

Solitary confinement also causes “significantly increased negative attitudes and affect, irritability, anger, aggression and even rage.”¹⁶⁷ People are thus rendered incapable of resuming the normal familial and community relationships that are essential to successful reentry. According to Dr. Kupers, the inevitable result of confinement in solitary is the “decimation of life skills” because it “destroys one’s capacity to relate socially, to work, to play, to hold a job or enjoy life.”¹⁶⁸

Yet eventually, TDCJ sends these damaged people back to Texas communities. After years in solitary confinement, they are unprepared to resume the roles society expects of them: as parents, spouses, employees, and neighbors.

Solitary Voices

“Being enclosed for so long just looking at **4 walls, a toilet and metal bars is all I look at 24 hours a day**, so when and if I go to visitation, my dad says I cant stop looking around. And when I come back to my cell I get depressed to have to go thru it all again being away from any & everything & my family.”¹⁶⁹

“[Solitary confinement] makes one lose self of all humanity as we are **treated worse then animals in a kennel** feels suffocating like walls are closing in makes one lose sense of reality.”¹⁷⁰

“[T]his is a dark sad cut off place, no people interaction, no one to talk to & rec with. **You go crazy just wanting someone to talk** to or play dominos with some times, or just to talk about things with, everything keeps you isolated from others some times for years & years at a time! **How can you isolate a man that long & expect him to have good/acceptable social/people skills when hes released to gen. pop. or the free?**”¹⁷¹

“It is becoming harder to deal with real life problems. Mainly because I feel suspended in time. **No human contact.** Very little human interactions.”¹⁷²

Solitary Confinement Severs Family Bonds

TDCJ should support incarcerated people in maintaining family bonds, but solitary confinement severs those bonds. Strong family bonds can help prisoners successfully reintegrate into society; people in prison who receive visits from their family members are thirty percent less likely to commit new crimes than those who never received a visit.¹⁷³ Yet solitary confinement interferes with family bonds by limiting families to a “no-contact visit,” during which prisoners are separated from their family members by a pane of glass or metal mesh.¹⁷⁴ People in solitary confinement cannot hold their family member’s hand or hug them goodbye. “The contact visit means everything,” says Jennifer Erschabek, Director of the Texas Inmate Families Association (TIFA), a non-profit organization that advocates for the family members of people incarcerated in Texas prisons. “That little interaction is so appreciated by the guys. And you can feel it

in the hug.”¹⁷⁵ The restrictions on people in solitary confinement add further trauma to family members; they may drive a full day across Texas to visit their son, only to see him in a glass cage and speak to him through a telephone.¹⁷⁶ At the most restrictive level of solitary confinement, prisoners can only visit with their family once a month—far less than people in the general population.¹⁷⁷ People in solitary confinement also cannot call their family members, which is often their only way to maintain ties with loved ones who are too far away or cannot afford to visit. TIFA knows firsthand that solitary confinement profoundly impairs family bonds. For a person placed in solitary confinement for even the average length of almost four years, TIFA says, it is “almost impossible for that person to remain in meaningful contact with their family and other members of their support network.”¹⁷⁸ Solitary confinement cuts away the interpersonal safety net that people need to support their transition back to life in the outside world.

Lori and Frank

Lori and Frank’s love story epitomizes how solitary confinement prevents prisoners from accessing the family and religious support they need to rehabilitate. Lori met her husband, Frank, when she was fourteen and he was sixteen. “I felt in love the first moment he smiled at me,” she recollected. Frank has been in solitary confinement since 2003. Lori does everything she can to support her husband. She drives to see him every week—125 miles each way—to visit with him through a pane of glass. She writes prolifically to him, and he writes to her; when we spoke, she had just received letter 395 from Frank. Lori reconnected her husband with his estranged sister, who has visited him three times in the last several months. To show Frank love and support, she tracked down Frank’s childhood friends and took them with her on her weekend visits.

Faith has played a central role in Lori and Frank’s relationship. “He is a huge person of faith,” Lori said of her husband. “Over the years, he’s recognized that God is working in him and refining him, and he definitely has some things to be fixed in his life. He believes that God created both of us as spirit mates together.” God is a central focus of their meetings and letters. “We talk about

¹⁷⁸ E-mail from Erschabek to Simpson, *supra* note 149.

God, we write about God, we write about us having faith with each other,” Lori explained. “And as implausible as it is, my pastor, our friends, our families, are in constant prayer that those walls are gonna fall down.”

Yet rather than nurture the seeds of Frank’s faith, TDCJ places many limitations on his religious practice. “Faith plays a part in our relationship,” Lori told us. “But Frank has no ability for faith to play a part in what he does. He has never seen a chaplain set foot in [the solitary-confinement unit].” Lori knows a woman whose husband is imprisoned in general population; the woman participates in a guided Bible study with her husband every week. Lori has no such opportunity to study the Bible with her husband under the guidance of a pastor. And her husband cannot attend religious services, like people in general population can. “We’re gonna figure out a way to get him home,” Lori says. “Until then, it would certainly be nice if he could go to a church service.”

Lori wishes she could speak to her husband on the phone or hold his hand during their visits. “Human touch is so restorative, and he deals with negativity 24/7, and that two hours we have every weekend, he calls it his ‘charging up time,’” she explained. “To be able to hold hands, and connect without the glass—I’m pretty darn strong, but just being able to hold his hand so he felt the connection, so he can be strong for what he has to endure in there.” Lori started to cry when she recounted what it would mean to her and Frank to be able to hold hands once a week. “I wouldn’t care what hoops I would have to go through to have a contact visit with my husband,” she said. “I would do whatever they wanted me to. Even if had to be in a separate room, with his leg chained to the floor, whatever they have to do, I would be willing to. . . . It would make such a difference for him to endure what he has to endure to pay his debt to society. . . . And I could endure, too. Because I am in there with him.”¹⁷⁹ ■

“From the year 2000, in April, when my stepson went into [solitary confinement], the next time his mother was able to touch him was in 2010. . . . In other words, there is no ability to hug each other—you can have no physical contact with that individual if they are in [solitary], period. From a mother’s perspective, that’s heartbreaking. The fact that you can’t hug periodically.”¹⁸⁰

TDCJ Deprives People in Solitary Confinement of All Opportunities for Self-Improvement

Solitary confinement forces people into lives of complete idleness, depriving them of any opportunity for self-improvement. TDCJ excludes people in solitary confinement from all rehabilitative programs—programs designed to prepare people for life in the outside world.¹⁸¹ They cannot take group courses to earn their G.E.D. or associates' degree to support a future career.¹⁸² They cannot work in a prison job to pass their hours productively.¹⁸³ They cannot learn a trade that could help them one day meet their responsibilities as breadwinners for their families.¹⁸⁴ Seventy percent of respondents to our survey professed adherence to a religion;¹⁸⁵ yet people in solitary confinement cannot practice their faith with others and receive the many educational, moral, and spiritual benefits of collective worship.¹⁸⁶ Although over sixty-five percent of people in solitary confinement have an addiction,¹⁸⁷ they cannot join recovery programs like Alcoholics Anonymous.¹⁸⁸ They cannot learn how to manage their anger by receiving group counseling.¹⁸⁹ They cannot watch television to keep up with the news.¹⁹⁰ TDCJ makes it impossible for people to use their time in prison productively. Instead, it confines them in cells to waste away. Dr. Haney observed that many people in isolation “lose the ability to initiate or to control their own behavior” because they are stripped of all ability to meaningfully direct their lives.¹⁹¹

Solitary Voices

“That’s the difference between [solitary confinement] and general population. There’s no structure. In GP unless your medically unassigned your gonna work, if you want to shower you have a certain time. If you want to eat you got to be there. There’s school. There’s church. There’s commissary. There’s medical. There’s laundry. Like in the freeworld if you want something you have to go and get it. That’s how GP is. . . . I’m saying there’s structure and a sense of living that comes with accountability and responsibility. . . . In [solitary confinement] . . . Everything is brought to you. There’s no responsibility, no purpose no schedule forced upon you. **No reason to get up and live.** You get out of your cell for rec, medical, visit, or death.”¹⁹²

“[Solitary confinement] has been the reason I’ve really & **truly never gotten any true rehabilitation** in getting rid of these problems that have made me so aggressive!”¹⁹³

“**My mental illness has worsened** because as a ad-seg category ... prisoner, I am not allowed to attend my alcohol anonymous/narcotic anonymous, religion study class, chapel library session to help me stay occupied and balanced. I was also taken out of school and vocation trade masonry brick laying.”¹⁹⁴

The Consequence of Overusing Solitary is More Crime in Texas Communities

When it permanently scars Texas prisoners, TDCJ ultimately damages our communities. Solitary confinement increases recidivism. As a group, people released directly from Texas’s solitary-confinement cells every year—1,243 in 2013 alone—commit more new crimes than people released from the general population.¹⁹⁵ Of all prisoners released from Texas prisons in 2006, 48.8 percent were rearrested within three years,¹⁹⁶ whereas 60.8 percent of people released from solitary confinement were rearrested within that same time period.¹⁹⁷

Moreover, studies from other states show that solitary confinement increases crime. In California, preliminary data suggests that people released on parole from solitary-

confinement cells recidivate at a thirty-five percent higher rate than parolees from the overall prison system.¹⁹⁸ And a 2007 study of 1,205 people released from federal prisons found that harsher prison conditions increased rearrest rates after release.¹⁹⁹

People who had spent time in Florida solitary-confinement cells committed new violent crimes at an eighteen percent higher rate.²⁰⁰ In Washington State, people released directly from solitary committed new felonies at a thirty-five percent higher rates than their peers released from general population, even when controlling for common predictors of recidivism.²⁰¹

“[W]e are releasing inmates into our communities every day, who have spent years in solitary conditions with little or no treatment to correct the behavior which lead to their incarceration in solitary conditions.”

—Lance Lowry, President AFSCME Local 3807, Texas Correctional Employees²⁰²

TDCJ’s short re-entry programs cannot erase the social and mental deterioration caused by years of isolation. TDCJ now provides a handful of re-entry programs to help some prisoners readjust to ordinary life before their release from solitary confinement. For example, the Serious and Violent Offender Reentry Initiative (SVORI) gives people seven months of in-cell programs designed to help them manage their anger, reduce “thinking errors,” teach them about employment, and prevent substance abuse.²⁰³ The Administrative Segregation Pre-Release Program (ASPP) provides people with ninety days of instruction through workbooks they can fill out in their cell, instruction via a computer monitor from a remote instructor, and weekly one-hour meetings with case managers to discuss rehabilitative opportunities in the outside world.²⁰⁴ While more programming should always be encouraged, a few months of in-cell workbooks or computer instruction cannot repair the destruction caused by years or decades of sensory deprivation and social isolation. Moreover, these programs have limited capacity and therefore can only serve a small handful of the people who could benefit from them. For example, the SVORI program can only accommodate sixty-three people at once,²⁰⁵ and ASPP can only accommodate less than two hundred people.²⁰⁶ TDCJ should provide rehabilitative programming throughout people’s time in prison—not just as a Band-Aid solution a few months before their release into the outside world.

TEXAS OVERUSES SOLITARY AT TREMENDOUS COST TO TAXPAYERS

Contrary to the trend nationwide to reduce the population confined in solitary, TDCJ overuses solitary confinement on people who pose no threat, while Texas taxpayers foot the bill. TDCJ could save taxpayers tens of millions of dollars each year by lowering its use of solitary confinement to Mississippi's level of 1.4 percent.

Solitary Confinement Costs Texas Taxpayers at Least \$46 Million a Year

Texas taxpayers currently spend an extra \$46 million or more each year to house 6,564 prisoners in solitary confinement instead of general population. Solitary confinement is more expensive than regular housing: It costs forty-five percent more than housing the same person in general population, or \$61.63 per person per day compared to \$42.46 per person per day.²⁰⁷ The solitary-confinement units require more staff to maintain security and deliver services; moreover, people in solitary confinement are single celled, such that TDCJ must operate more cells in order to house them.²⁰⁸ Indeed, the actual cost of solitary confinement is likely much higher, as this estimate fails to capture expenses that are difficult to measure or not borne by the prison system itself. Hidden costs include stress on correctional officers, weakened family relationships, and reduced ability to function in the world outside TDCJ. And Texas taxpayers unquestionably spend more money when people return to prison after their release because their time in solitary confinement created or exacerbated anti-social behaviors and mental illnesses.

Given the fiscal implications for taxpayers, TDCJ should approach housing decisions with the mindset of using solitary confinement as rarely as possible. TDCJ should send people to solitary confinement only when necessary to maintain safety and order; and it should regularly and thoroughly review the placement of individuals in solitary confinement with the intention of removing them as soon as it is possible to do so safely.

²⁰⁷ See CRIM. JUST. POLICY COUNCIL, *supra* note 66, at 12.

Texas Overuses Solitary Confinement

Unfortunately, TDCJ is trapped in the outdated and expensive mindset of using solitary confinement as a routine correctional practice. TDCJ houses 4.4 percent of Texas prisoners in solitary confinement, much higher than the estimated national average of one to two percent.²⁰⁹ And prisoners remain in solitary-confinement cells for an average of almost four years,²¹⁰ indicating that TDCJ makes little effort to return people to general population as soon as they cease to pose a threat. TDCJ could save taxpayers \$31 million dollars a year just by lowering its population in solitary confinement to Mississippi's rate of 1.4 percent.²¹¹ TDCJ could reduce its solitary-confinement population while still preserving prison safety: Mississippi had seventy percent fewer violent incidents in its prisons when it reduced its solitary-confinement population from one thousand to 150.²¹²

TDCJ houses too many people in solitary confinement in part because its standard is overbroad, capturing many people who could be safely housed in general population. TDCJ automatically houses 3,194 people²¹³ in solitary confinement on the grounds that they “associate[e] or affiliate[e]” with a gang.²¹⁴ Gang status alone—divorced from individual misbehavior or active participation in gang activities—is not a threat to prison safety. Security expert Steve Martin—a former TDCJ correctional officer who served as TDCJ Legal Counsel from 1981-83 and TDCJ General Counsel from 1983-85—explains that using gang affiliation alone ends up “catching folks that don’t really need segregated confinement; their status as a gang member is not in and of itself a threat.”²¹⁵ Isolating suspected gang members or affiliates is an extreme overreaction that fails to improve prison safety and actually may undermine it. In a survey of wardens and superintendents of adult prisons in forty-eight states conducted by the National Gang Crime Research Center (NGCRC), over half of the respondents said that “no human contact status” was not “effective for the control of gang members.”²¹⁶ Toni V. Bair, former warden of Virginia’s death row, describes Texas’s practice of automatically segregating gang members as “the antithesis of what modern correctional professional classification management is supposed to be about. . . . That’s not twentieth century corrections—that’s eighteenth century corrections.”²¹⁷ Mr. Bair emphasizes that the entire purpose of classifying people in prison is to “find out what the needs are so you

217 Telephone Interview with Toni V. Bair, former Warden, Virginia death row (Sept. 30, 2014).

can habilitate them, and to better manage your inmate population”; when correctional departments automatically place people in solitary confinement, Mr. Bair says, “you miss so many people coming in that we could have helped, such as suicidal inmates, mentally ill inmates, and inmates with alcohol and drug problems.”²¹⁸ TDCJ should send people to solitary confinement only if they pose an actual danger to officers or other inmates as demonstrated through their actions. Instead, it isolates thousands of people who do not actually present a security risk, such as low-level or inactive gang members who behaved peacefully within prison.

Moreover, once people are confined to solitary for gang affiliation, TDCJ does little to shorten their stay. These prisoners can only get out of solitary confinement by participating in the Gang Renouncement and Disassociation Process (GRAD), which provides nine months of programming on substance abuse, alcohol abuse, group classroom instruction, anger management, and criminal-addictive behavior.²¹⁹ While the GRAD program is a useful avenue to help people return to general population, it does not resolve the underlying problem that TDCJ sends too many people to solitary confinement in the first place. Moreover, people must go through a probationary period of one year in solitary confinement to even qualify for the program.²²⁰ The long wait, combined with too few spots in the GRAD program, creates a bottleneck that traps people in solitary for far too long. As the GRAD program itself only has a capacity to hold 180 people at any one time,²²¹ it would take over twelve years for every eligible person to enter the program and be diverted from solitary. As a consequence, people affiliated with a gang spend on average over five years in solitary confinement.²²²

■ A solitary confinement cell on Texas death row.

The Texas Comptroller of Public Accounts—“the chief steward of the state’s finances”²²³—has condemned TDCJ’s policy of automatically isolating gang members in solitary-confinement cells who could be more cheaply housed in a lower security setting. The Comptroller conducted a public study of Texas’s use of solitary confinement in 1994, sampling 131 prisoners. He discovered that fifty-four of them—forty-one percent—had no prison record of disciplinary assaults, meaning that they did not present a security risk

to the safety of correctional officers or other prisoners.²²⁴ The Texas Comptroller also criticized TDCJ’s policy of “warehousing gang members” because it “prevents them from receiving any rehabilitative treatment”; he found no reason that the gang members could not be double celled, work, and take group classes.²²⁵ The Comptroller observed that solitary-confinement cells should be exclusively used for “the most difficult inmates.”²²⁶ TDCJ failed to implement the Comptroller’s recommendations.

Other states use more appropriate measures to identify gang members who pose an actual threat. Colorado amended its statute to limit its use of solitary confinement against gang members to situations where it is necessary to maintain safety, for example, when a person “actively participates in disruptive” gang behavior.²²⁷ Mississippi limits solitary confinement to people who have attempted an escape, committed a serious infraction, or are active, high-level members of a gang.²²⁸ Virginia houses gang members in solitary confinement only if they commit certain offenses tied to gang activity, or serve in a “documented” leadership role.²²⁹ Washington does not automatically isolate gang members; instead, it employs an “Operation Ceasefire” model that restricts the privileges of individuals and groups who commit serious violent infractions.²³⁰ With the use of “Operation Ceasefire,” violent infractions dropped by fifty percent.²³¹

Tom's Story

TDCJ demonstrated the irrationality of its addiction to solitary confinement recently when it condemned a prisoner to more time in isolation for growing a five o'clock shadow. Tom is twenty-four years old; he has been in solitary confinement for forty-one months. TDCJ sent Tom to solitary confinement because it believed he was a member of the Aryan Brotherhood, though Tom claims that he is not. Tom was on the waiting list for the GRAD program, his only avenue to get out of solitary, but he was recently kicked off the list for not shaving. TDCJ policy forbids all facial hair; but Tom was only permitted to use a razor when he showered. When Tom missed his chance to shower, TDCJ determined that his "scruff" violated TDCJ policy—a policy that bears no connection to gang activity, and represents no security threat. On account of that minor infraction, he was sent to the bottom of the waiting list for participation in the GRAD program.²³² ■

²³² Interview with Tom, individual incarcerated in TDCJ (June 26, 2014).

TDCJ INCREASES PRISON VIOLENCE BY OVERUSING SOLITARY CONFINEMENT

■ Hunstville Unit.

Solitary confinement increases violence in Texas prisons. Trapped in solitary confinement with no social contact and no programming, people become increasingly aggressive and disturbed—and more difficult to control.

Solitary Confinement Makes Texas Prisons Less Safe

Serious assaults on Texas prison staff have increased 104 percent during the last seven years.²³³ Texas's largest correctional officers union attributes the increase in violence in part to TDCJ's overuse of solitary confinement and practice of housing mentally ill people in solitary.²³⁴ Lance Lowry, president of the union, says that solitary confinement "creates a different individual, it really does—socially, psychologically. It is the equivalent of locking a kid in a closet. It's not going to fix a lot of problems."²³⁵ In 2013, almost eighty percent of the 499 instances of prisoners exposing officers to bodily fluids occurred in Texas's solitary-confinement units; none occurred in the general population.²³⁶ With absolutely nothing to do, people in solitary take out their anger on officers. "They're bored," Mr. Lowry explains. "What else are they going to do? They're locked in a box all day. It's a game for them. They can't play checkers or dominos together. So, the first guy who can get the Lieutenant down here and piss him off wins. . . . Let's focus these guys on something other than the staff."²³⁷ Texas's correctional officers union called for national standards governing the use of solitary confinement, explaining that its overuse makes Texas prisons more dangerous for correctional officers.²³⁸ It further recommends that TDCJ utilize a greater array of sanctions, short of solitary confinement, to address misconduct.²³⁹

²³⁹ Telephone interview with Lance Lowry, President, AFSCME Local 3807 (Sept. 19, 2014).

Solitary Confinement Deprives Officers of the Option to Incentivize Good Behavior

Solitary confinement also deprives officers of an important tool—their power to incentivize good behavior by creating a system of earned privileges. People in solitary confinement have no freedoms; nor can they earn greater freedom through good behavior. As a consequence, they have no incentive to comply with prison regulations. Jeanne Woodford, who served as Director of the California Department of Corrections and Warden of San Quentin, writes that “allowing inmates privileges based on good behavior enhances security because it creates incentives for inmates to comply with prison regulations. When inmates are permanently and automatically housed in highly restrictive environments . . . it is more difficult to control their behavior.”²⁴⁰ Mr. Lowry explains that the lack of incentives in solitary confinement ends up impairing correctional officers’ ability to control prisoners:

I think the best people know how to control human behavior, is your cable company. If you don’t pay your bill, they take your privileges away. They’re smart. If you don’t pay your bill, they don’t leave you with a salty screen. They leave you with a preview of what’s on. . . . They leave this message on for a reason. You know everyone else is watching Days of their Lives. I don’t know why prison administrators don’t see that. . . . Controlling privileges is how you control these individuals.²⁴¹

Mr. Lowry suggests that TDCJ could offer a step-down program that allows people to earn their way to greater privileges, and out of solitary confinement, through good behavior.²⁴²

Violence Escalates When Officers Deny People in Solitary Confinement Basic Necessities

Violence in solitary confinement further escalates when correctional officers deny prisoners basic necessities. Eighty percent of our survey respondents reported that they received an “insufficient amount” of food;²⁴³ and thirty-one percent reported that prison staff had served them the “loaf,”²⁴⁴ a “bland, brownish lump” of ground-up food without seasoning—which they may be forced to eat over and over again for weeks at a time.²⁴⁵ People reported other deprivations besides food: Twenty-two percent claimed they were denied water,²⁴⁶ and another twenty-two percent said they were denied showers.²⁴⁷ Numerous people also said that officers almost never take them out of their cells for recreation despite TDCJ policies requiring that prisoners in isolation receive one to two hours of recreation a day.²⁴⁸ Ted, a correctional officer who asked us not to use his real name, reports that solitary confinement breeds hostility between prisoners and officers. In the unit in which Ted works, officers punish individuals in solitary confinement by refusing them food, showers, or recreation time, which angers inmates. According to Ted, it is not uncommon for prisoners to act out, even after the original officers have already finished their shifts. As a result, the hostility can spiral out of control, culminating in correctional officers violently subduing the prisoner.²⁴⁹

Other States Improved Prison Safety by Reducing Solitary Confinement

Other states have found that drastically reducing the use of solitary confinement improves prison safety. When Mississippi reduced its solitary population from one thousand to less than 150, serious assaults against staff and prisoners dropped by seventy percent.²⁵⁰ Mississippi lowered violence in part by instituting an incentive system to encourage good behavior and allow people in solitary to acquire greater freedoms. Mississippi Department of Corrections Deputy Commissioner Emmitt Sparkman explained that people in solitary “participated in the programs, we gave them more

freedoms, and we saw a huge decrease in violence. . . . Typically, people in segregation just sit idle and alone, sometimes for years. You have to give a guy an incentive to do better.”²⁵¹ When Maine cut its solitary-confinement population, incidents of prison violence dropped.²⁵² Colorado saw no increase in assaults when it reduced its solitary-confinement population by sixty percent, and the Director of the Colorado Department of Corrections declared that “our institutions will actually be safer” with less solitary confinement.²⁵³ According to Commissioner Sparkman, lowering solitary confinement also improved working conditions for staff: “In segregation, you typically have two-on-one escorts and use restraints, and there are continuous searches—and that’s a drain on staff. When we had large numbers of people in segregation, staff were under constant pressure. . . . With these lower numbers, there’s much less stress on staff.”²⁵⁴

MENTALLY ILL PEOPLE DETERIORATE IN SOLITARY CONFINEMENT

TDCJ must never place people with serious mental illnesses in solitary confinement. Although solitary confinement causes mental distress for anyone, the impact of solitary confinement is especially profound for people with serious mental illnesses such as major depression, schizophrenia, bipolar disorder, OCD, panic disorder, PTSD, and borderline personality disorder.²⁵⁵ Already vulnerable, people with serious mental illnesses inevitably fall apart in isolation.²⁵⁶ According to Dr. Haney, people with serious mental illness “will be unable to withstand the psychic assault of dehumanized isolation, the lack of caring human contact, the profound idleness and inactivity, and the otherwise extraordinarily stressful nature of [solitary] confinement without significant deterioration and decompensation.”²⁵⁷ Corrections expert Steve Martin refers to the phenomenon of placing the mentally ill in solitary confinement as “the perfect storm” because of the way in which people with mental illness get stuck in solitary confinement.²⁵⁸ Dr. Pablo Stuart, who served as an expert witness in a California class-action suit about solitary confinement, explained that people with mental illness deteriorate in solitary, until they can no longer comply with prison regulations and start to act out.²⁵⁹ As their mental health unravels, their misbehavior escalates; as a consequence, many people with mental illness end up permanently trapped in solitary.²⁶⁰

The Universal Consensus: Never Place the Seriously Mentally Ill in Solitary Confinement

The consensus is universal: Federal courts, the American Bar Association (ABA), the American Psychiatric Association (APA), and the United States Department of Justice (DOJ) agree that correctional departments must exclude people with serious mental illness from solitary confinement. Federal courts have ruled that our prisons should not place mentally ill people in solitary confinement because it exacerbates their symptoms, in violation of the Eighth Amendment’s prohibition on cruel and unusual punishment.²⁶¹ In the words of one federal judge, placing a mentally ill person in solitary confinement

“is the mental equivalent of putting an asthmatic in a place with little air to breathe.”²⁶² In its Standards for the Treatment of Prisoners, the ABA called for the exclusion of people with mental illness from solitary confinement.²⁶³ The APA issued a formal position statement explaining that people with serious illness should almost never be placed in solitary confinement; when they are, they need extra clinical support.²⁶⁴ The United Nations Special Rapporteur on Torture declared that prolonged solitary confinement is a form of torture, and should never be used against people with mental disabilities.²⁶⁵ After an extensive investigation, the DOJ announced that Pennsylvania’s policy of housing people with mental illness in solitary confinement was an unsound correctional practice—both on humanitarian and public-safety grounds:

Neither the interests of the Pennsylvania Department of Corrections nor those of the Commonwealth of Pennsylvania are served when one of its prisons subjects prisoners to conditions that deny prisoners with psychiatric disabilities the benefit of mental health treatment and exacerbate their mental illness. When the mental health of prisoners deteriorates, when their episodes of paranoia and psychosis intensify, and when they engage in behaviors more dangerous to themselves and others, taking care of them becomes more difficult and more dangerous for correctional officers and more expensive for the Commonwealth. Moreover, those living outside the prison’s walls feel the negative impact of the prison’s mistreatment of prisoners with serious mental illness when these prisoners return to the community.²⁶⁶

Texas Sends Thousands of People with Mental Illness to Solitary Confinement

Despite this universal consensus, TDCJ does not even track the number of people with serious mental illness in solitary confinement.²⁶⁷ Mr. Martin says that TDCJ’s failure to track people with serious mental illness is “an alarming flaw from a correctional

management standpoint—on its face it calls into question TDCJ’s management.”²⁶⁸ TDCJ has 2,012 people in solitary confinement on its mental-health case load, however.²⁶⁹ Moreover, our investigation revealed that TDCJ houses many people with serious mental illness in solitary confinement—and solitary confinement significantly worsens their mental health. During our research, we met with multiple people whom TDCJ had diagnosed with a serious mental illness, but who nonetheless remained in solitary confinement. In many cases, their symptoms appeared significantly exacerbated by complete isolation. Several of these individuals appeared to us in such an obvious and advanced stage of psychosis that we determined they lacked the capacity to understand our legal disclosures or to consent to have their stories shared in this report. They described violent auditory and visual hallucinations and appeared trapped in paranoid and obsessive thinking.

Henry’s Story

Henry is one of over two thousand people in solitary confinement with a mental illness. TDCJ diagnosed him with bipolar I disorder with psychotic features. He attempted suicide while in general population. Despite Henry’s prior suicide attempt, TDCJ sent him to solitary confinement in 2005, where he remains to this day. In isolation, Henry felt that “everything was crushing in on me at one time,” and told us, “[I] see things that aren’t there and have conversations with people who aren’t there.” He attempted suicide a second time while in solitary confinement. Although TDCJ documented Henry’s mental illness, visual and auditory hallucinations, and suicide attempts in his medical chart, it failed to take him out of solitary confinement.²⁷⁰ ■

The prevalence of mental illness among people in TDCJ’s solitary-confinement cells is epitomized in their high rates of suicide and self-harm. A person trapped in solitary confinement is five times more likely to kill himself than someone in general

²⁶⁸ Telephone interview with Steve Martin, *supra* note 258.

population.²⁷¹ For every one hundred prisoners in solitary confinement, there are 2.4 instances of self-inflicted injury, compared to 0.3 instances in general population.²⁷²

TDCJ Inadequately Monitors and Treats People with Mental Illness in Solitary Confinement

TDCJ also fails to adequately treat people with mental illness once they are trapped in solitary confinement. TDCJ only evaluates a person's mental health immediately upon sending him to a solitary-confinement cell if he currently receives mental-health treatment. All others only receive a mental-health evaluation after a full month.²⁷³ Under this policy, people who need mental-health treatment but are not on TDCJ's current caseload fall through the cracks. After the initial evaluation, mental-health officers only conduct mental-health assessments every three months.²⁷⁴ In a three-month period, people can easily deteriorate into a crisis state.

Worse, TDCJ may be falling short of meeting even its own meager standards for mental-health screenings. We requested all mental-health evaluations for several prisoners who had been diagnosed with a serious mental illness by TDCJ. Yet the files for several people had few or no evaluations covering their period in solitary confinement. For example, TDCJ diagnosed Paul with a mental illness. While in general population in 2009, he attempted to kill himself by overdose. Afterward, he was treated at a TDCJ psychiatric unit for his mental-health problems.²⁷⁵ Although we requested all of Paul's mental-health evaluations, TDCJ did not turn over a single evaluation for the three-year period he spent in solitary confinement.²⁷⁶ This lack of documentation suggests that TDCJ may not provide frequent, in depth review of the mental-health needs of people in solitary, even those with a history of serious mental illness.

Moreover, to the extent it provides them, TDCJ's mental-health reviews are too superficial to properly identify people's mental-health needs.²⁷⁷ Of those survey respondents who met with a mental health worker, sixty-five percent said their meetings were less than two minutes long.²⁷⁸ Sixty-two percent of survey respondents said

they never had enough time to discuss their mental-health needs with mental-health workers.²⁷⁹

TDCJ's mental-health reviews are also not confidential. Seventy-five percent of respondents said their mental-health review was merely conducted by speaking through their cell door, rather than in a private meeting room.²⁸¹ Eighty-nine percent of survey respondents said that their medical treatment was not confidential.²⁸² Numerous people reported that officers overhear all of their confidential medical conversations²⁸³ and repeat confidential medical information to other officers or prisoners.²⁸⁴ Because of the lack of confidentiality, prisoners may not disclose mental-health issues, fearing stigma or humiliation.²⁸⁵

“I thought that someone from mental health was suppose to make rounds but this only happens here once a year. And its ‘How you doing today?’ And if you say ‘ok’ they move on to the next cell.”²⁸⁰

Solitary Voices

“**Non-medical staff** are always present during interviews and exams and I have heard them discussing it between the guards and in front of other inmates.”²⁸⁶

“I’ve witness medical talk to officer about other inmates **medical problem** and I’ve even had officers tell me that a inmate has AIDS.”²⁸⁷

“Every single time I go talk to the mental health lady, the officers who escort me stand in the room with me listening to **every word** of what I say.”²⁸⁸

“[The treatment] was the same day only due to me threatening to kill myself, an the interview was not held confidentially, it was either talk to mental health in front of the prison official’s or they wouldn’t talk with me, so I was force’d **against my will** to expose alot of my mental health history before the prison official’s.”²⁸⁹

In October 2014, TDCJ announced a new program called the Administrative Segregation Therapeutic Diversion Program (ASTDP).²⁹⁰ According to TDCJ, the program will divert a small number of people with mental illness from solitary confinement to an alternative treatment environment.²⁹¹ Unfortunately, this program only includes 252 beds.²⁹² Therefore, it can only serve thirteen percent of the 2,012 mentally ill people in solitary.²⁹³ Moreover, TDCJ has not provided advocates with details about the program, such as the criteria for entering it, the length of the program, the type and frequency of treatment available, and the amount of out-of-cell time and rehabilitative programming people in it can access.²⁹⁴ Consequently, it is impossible to evaluate whether ASTDP will be an effective alternative to solitary confinement for people with mental illness.²⁹⁵

Texans do not want mentally ill prisoners to return to their communities in an even more deteriorated mental state than when they entered prison. Yet TDCJ places people with mental illnesses in conditions that seriously exacerbate their symptoms, and it fails to provide them with adequate treatment while they are there.

CONCLUSION: OUR VALUES AND COMMITMENTS AS TEXANS

Solitary confinement violates our fundamental values as Texans—the values that define who we are as a state and set us apart. We value self-starters who take steps to improve their lives and overcome hardship. We value hard work. We value religious worship, along with the high moral standards it encourages and the community bonds it nurtures. We value family relationships because they form our lifelong moral commitments, bring us joy, and sustain us through times of difficulty. A Texan, responding to a recent blog post about Texas values on the Houston Chronicle website, put it perfectly: “Texas values—Freedom, Faith, Family.”³⁰¹

We expect our criminal justice system to reflect these values. We want our neighbors to have these values. We want our prisons to foster these values in the incarcerated people who will one day become our neighbors. Yet as detailed in this report, solitary confinement destroys all opportunities for self-improvement, denies the option to work, deprives prisoners of collective religious worship, and impairs family relationships. We have known since the 1800s that solitary confinement does not work for American prisons. This report documents that solitary confinement does not work for Texans.

Texas’s outdated mindset also runs contrary to our commitment as Texans to employ fiscally prudent policies that increase the safety of our communities. In many respects, Texas has led the country on smart-on-crime reforms that utilized best practices, decreased crime, and saved taxpayer money. But in a key area, Texas legislators and TDCJ have failed to implement smart-on-crime policies: solitary confinement. Texas relies heavily on solitary confinement even though it was discredited in the nineteenth century as an unsound correctional practice, wastes taxpayer money, and increases insecurity in our prisons and communities.

Less solitary confinement is not about going “soft” on crime; it is about being smart on crime. It makes how we punish more cost-effective, and more likely to produce positive outcomes that decrease crime in our communities. With less solitary confinement, Texas prisons can carry out their mission more effectively. It is time for Texas to drastically reduce its use of solitary confinement—and ensure that our prison system employs policies that reflect the values and commitments that unite us as Texans.

³⁰¹ Craig Hlavaty, *What exactly are “Texas values” these days?*, TEXICAN, June 28, 2012, <http://blog.chron.com/thetexican/2013/06/what-exactly-are-texas-values-these-days/>.

METHODOLOGY

This report was researched and written by Burke Butler, Arthur Liman Fellow, TCRP, and Matthew Simpson, Policy Strategist, ACLU of Texas, and edited by Rebecca L. Robertson, Legal and Policy Director, ACLU of Texas.

To research this report, we submitted public information requests to the Texas Department of Criminal Justice (TDCJ) and University of Texas Medical Branch (UTMB); sent a survey to people in Texas prisons about solitary confinement and collected and analyzed the responses; interviewed experts on incarceration, security, mental illness, and the Texas prison system; and interviewed people who were either currently housed in or had previously spent time in solitary confinement.

We sent surveys to **668 people** incarcerated in Texas prisons between December 2013 and May 2014 to ask about their experiences in solitary confinement, and received **147 responses**—a twenty-two percent response rate. Those surveys included forty-nine closed and open-ended questions, based on a similar survey developed by the Correctional Association’s Prison Visiting Project in New York. We sent:

- (1) **585 surveys** randomly to people incarcerated at nine facilities with high solitary-confinement populations: Coffield, Connally, Darrington, Eastham, Estelle, Ferguson, Lewis, Telford, and Wynne (sixty-five surveys sent randomly to each facility); and
- (2) **Eighty-three surveys** to people in Texas prison who had written to the TCRP, the Prison Justice League, or the non-profit Texas Interfaith directly or whose families had reached out on their behalf.

In May to August 2014, lawyers and clerks with TCRP and the ACLU of Texas conducted interviews with people in solitary confinement. We met with each person one to two times and in many cases corresponded with them extensively after our visit. Where possible, we confirmed their stories with their prison records. These interviews were conducted by Burke Butler, Satinder Singh, Priscilla Kennedy, Monique Rodriguez, Pedro Blandon, Margaret Brunk, Ryan Jones, Rebecca Pillar, Hunter Jackson, and Ethan Ranis.

Cindy Eigler, Amy Fettig, Craig Haney, and Steve Martin reviewed drafts of this report and generously provided their feedback and guidance.

We appreciate the hard work of the many dedicated volunteers and staff who made this report possible: Pedro Blandon, Priscilla Kennedy, Professor Dennis Kao, Christopher Clay, Monique Rodriguez, Philip Koelsch, Mandy Nguyen, Elizabeth Nuñez, Bryan Mejia, Margaret Brunk, Ryan Jones, Rebecca Pillar, Hunter Jackson, and Ethan Ranis.

We are also indebted to the Arthur Liman Program for providing fellowship support for Burke Butler to work on reducing Texas's overuse of solitary confinement.

Finally, we are profoundly grateful to the many men in solitary confinement in prisons across the state of Texas who wrote to us, responded to our surveys, and spoke with us in person about their experiences. Their courage to share their stories, many of which were difficult to tell, made this report possible. We fervently hope that their willingness to help us expose all that is wrong with solitary confinement will put Texas at long last on the path to reform.

The Context: Nationwide Efforts to Limit Time-in-Cell

This monograph provides excerpts from the ASCA-Liman Report, *Reforming Restrictive Housing: The 2018 ASCA-Liman Nationwide Survey of Time-in-Cell*. That Report is the fourth in a series of ASCA-Liman research projects focused on restrictive housing – or what is popularly known as “solitary confinement” – defined in this Report as placement of an individual in a cell for 22 hours or more on average for fifteen days or more.

Over the course of the past several years, ASCA and the Liman Center have asked each of the correctional departments in the fifty states, the Federal Bureau of Prisons, and a few jail systems to answer survey questions and provide policies to understand the use of restrictive housing. Our goal is to enable longitudinal, evidence-based assessments of the use of restrictive housing by providing a composite picture at particular intervals. As detailed in the Report, we gathered information about the numbers and demographics of people held in restrictive housing. We asked questions about sex/gender, race and ethnicity, and age. We also sought to learn about the subpopulations of the seriously mentally ill, pregnant prisoners, and transgender individuals. In addition, the ASCA-Liman survey included requests for information on the length of time that people spent in restrictive housing and about whether, how, and why policies governing restrictive housing were changing.

Forty-three jurisdictions provided information in response to the 2017-2018 survey on the numbers of people in restrictive housing. According to the Bureau of Justice Statistics, those 43 jurisdictions housed about 80.5% of the total prison population. The 43 jurisdictions reported a total of 49,197 prisoners in restrictive housing, which was 4.5% of the prisoners confined across this set. Correctional directors around the country also reported that they were making changes to reduce and, in some instances, to abolish holding people in cell for 22 hours or more on average for fifteen days or more.

Below, we provide first-hand accounts by correctional leaders describing their efforts to make major changes in the use of restrictive housing in Colorado, Idaho, North Dakota, and Ohio. These prison administrators explain the ways in which they have revised policies, the challenges that they have faced, and the impact of their efforts.

Colorado Reforms: What Do You Mean “Culture”?

**Rick Raemisch,
Executive Director, Colorado Department of Corrections**

During the fall of 2017, Colorado became the first, and thus far, the only state in the United States to limit the use of Restrictive Housing to 15 days maximum, and this use is only for the most serious violations. Extended Restrictive Housing, the former Administrative Segregation, has been abolished. Following the United Nations Mandela Rules, this change means that a person in the Colorado prison system who was involved in a serious violation will be in Restrictive Housing for 22 hours per day, 7 days per week for a maximum of 15 days. Violations are not to be “stacked.” In other words, no one will be placed in Restrictive Housing for 15 days, removed, then immediately placed back in.

This change comes on top of others. Through the Department’s policy and then by statute, Colorado had already ended Restrictive Housing for seriously mentally ill prisoners. In fact, Colorado developed the policy that, if a person is involved in a disciplinary incident, and it is determined by a team consisting of correctional officers and clinicians that mental illness was the cause of the incident, the offender is taken out of the disciplinary process and given treatment. In addition, Colorado policies prohibit placing pregnant females and juveniles in Restrictive Housing under any circumstances.

When we initially started our reforms we adopted the philosophy “just open the door.” We control it. Open it. Of course many discussions, debates, committee work, and staff input were completed in order to develop the proper procedures and programs to allow us to open the door. As I have explained elsewhere, when we went in the direction of abolishing extended restrictive housing, there was no map, and there was no road. Dedicated staff were challenged to complete the reforms, and they not only accepted the challenge but excelled at it.

When the decision was made to finally go to the 15 day maximum Restrictive Housing, we adopted a new philosophy: “You can restrain, but you don’t have to isolate.” We were unable to find proper restraint tables, and we have never used cages, nor would we. Once again, staff answered the challenges, and we built our own furniture to fit our needs. Formerly dangerous, restrictive housing prisoners are now out of their cells for a minimum of four hours per day, at restraint tables with up to four other inmates, for programming and other activities.

We have all heard the adage: “You can lead a horse to water, but can’t make them drink.” I don’t believe that. I believe that: “If you throw the horse in the pond they are going to get some water just trying to get the hell out of the pond.” The point is to give them programming regardless of whether they want it or not. Although this practice is new, it appears to be working. The goal of course is first to get them at the table, then give programming, and work towards safely removing the restraints. The goal is to have the programming be successful to the point where they can be back in general population.

We have been asked numerous times how we were able to accomplish this. How were you able to change the culture? When we have responded, we have heard: “That won’t work here, the culture is too embedded in the way we are doing business now.” Culture was never an issue with us. Of course our staff was used to using segregation on a regular if not overused basis. It’s not a question of culture. It’s a question of leadership. There is debate as to whether or not Henry Ford actually made this famous quote, but he is credited with saying: “If I had asked my customers what they wanted, they’d have said a faster horse.”

The point obviously is that sometimes the vision needs to come directly from the leader. I gave the Colorado Department of Corrections the vision of where the Department would go. My approach was not “should we or would we?” Rather, it was: “This is what we are going to do.” I put together an executive team that believed in my vision. My other philosophy is that if you have someone who wants to try something different, and it makes sense, give it a try. I’ve stated many times that if what we do doesn’t work, we can always go back to the way things were before.

I consider my Executive Team and the other corrections leaders here as jet fighter pilots. I give them the target and then allow them to figure out how to get there. Not all of our staff believed in our reforms. Some retired, some transferred, but the results of our reforms have changed a good number of those who did not think it would work. At our two mental health prisons, where restrictive housing is completely banned, assaults, self-harm, and suicides have decreased dramatically. Staff enjoy work more because prisoners are acting in a more positive manner. It is quiet and safer. Safer facilities mean safer communities when they are released.

In the past, we had a waiting list for people with mental illness to be transferred to our facility for the seriously mentally ill. Today we have over fifty vacant beds. Our other facility for those with mental health issues has over 45 empty beds. It is too early to tell if the reason for this is because we have stopped manufacturing or multiplying mental illness by the overuse of segregation, but before our reforms there were none.

The bottom line: We have one vacant super max, and one re-purposed super max. We are back on track with our mission of public safety.

Idaho: Efforts to Reform Restrictive Housing

Henry Atencio

Director, Idaho Department of Correction

Keith Yordy

Warden, Idaho State Correctional Institution,

Idaho Department of Correction

Idaho Department of Correction [IDOC] made a decision to reform restrictive housing because it was the right thing to do for public and for community safety. Given that ninety-eight percent of prisoners in IDOC will return to the community, it is inconsistent with IDOC's mission to keep a prisoner in long-term restrictive housing, which results in no access to programming or educational opportunities, until they are released back into the community. Moreover, reforming restrictive housing has many benefits. It encourages safe and humane practices for the prison population. Reform permits compliance with international and national law, as the United Nations has declared that being confined in a cell 23 hours a day for more than 15 days is considered torture. Prison-based reform reduces IDOC's exposure to litigation regarding restrictive housing.

IDOC's reform process began in 2016 and was guided by nationwide standards addressing restrictive housing, which included principles of the U.S. Department of Justice and the thirteen guiding principles provided by the Association for State Correctional Administrators (ASCA).¹ Early on in the process, IDOC made the decision to include staff from multiple disciplines and at various leadership levels in the command structure. IDOC formed a command staff group comprised of agency and division leadership and reached out to external entities, who agreed to provide feedback and guidance to the agency during the reform process. The external partners included staff from the State Appellate Public Defenders' Office, the Office of the Federal Defenders of Idaho, and the Idaho Chapter of the American Civil Liberties Union. They have been an integral part of the process, as they have provided feedback on policy revisions, suggested language to use, and identified areas where the policy was unclear.

IDOC's path to reform also entailed having individual members of the department attend trainings and go on site visits to other states. Wardens, joined by correctional and mental health staff, visited Arizona and Washington Departments of Correction to see firsthand how reforms were implemented and to have discussions with those jurisdictions' staff about challenges and innovative ideas. In addition, several IDOC agency and facility leaders participated in training at the National Institute of Corrections (NIC) on restrictive housing reform. Idaho was selected as a pilot for an on-site NIC restrictive housing training that took place in August of 2017. Attendance at the training by wardens from facilities that housed men and women and that had long-term

¹ The ASCA principles are available here: <https://www.asca.net/pdffdocs/9.pdf>.

restrictive housing was crucial, as they both gained insight and learned about the importance and implementation of the restrictive housing guidelines of the U.S. Department of Justice.

As a result of this process, Idaho wardens began reviewing all prisoners who had been in long-term restrictive housing to reevaluate them with the goal that placement in restrictive housing should be reserved only for individuals who posed an imminent threat to the security of the institution. Doing so entailed taking a comprehensive approach to restrictive housing reform. The agency decided that two key policies, addressing restrictive housing and the disciplinary process, had to be updated. As a consequence, a revamped disciplinary policy added an alternative sanction process and changed the Disciplinary Offense Report (DOR) codes, and the restrictive housing policy was split into three separate policies—a short-term restrictive housing policy, a long-term restrictive housing policy, and a protective custody policy. The new policies² reflect and implement a shift in the purposes and in the practices, and the result has been that fewer people are placed in restrictive housing.

A few specifics are in order. The short-term restrictive housing policy begins with a statement of purpose reflecting IDOC's mission statement on restrictive housing reform: "Restrictive housing protects staff and inmates by segregating those who are the most violent or present the greatest danger to the safe operations of the facilities." The policy provides that time spent in short-term restrictive housing is capped at fifteen days. Past that point, prisoners must be afforded, at a minimum, three hours of out-of-cell time a day and provided with personal property as they would have in general population. The policy also requires prisoners who have a language barrier, physical/sight/hearing impairment, or medical or mental health issues to have accommodations when placed in restrictive housing or an alternative placement, as needed.

Further, IDOC has limited the behaviors that can result in short-term restrictive housing placement to those that pose an imminent risk to safety. This change in the criteria for entry has reduced the number of short-term restrictive housing beds at some facilities, and, at others, the people put into such beds. In addition, some facilities have implemented "calm down" areas for prisoners to de-escalate, while others have implemented diversionary tiers for those in possession of drugs or alcohol or who have tested positive on urinalysis tests.

The long-term restrictive housing policy (addressing individuals in such housing for fifteen days or more) also begins with a statement of purpose, again stemming from IDOC's mission statement. "Restrictive housing is a structured program that protects staff and inmates by segregating those who are the most violent or present the greatest danger to the safe operations of the facilities." The policy requires that all prisoners placed into long-term restrictive housing programs are in Idaho's "Step Up Program," which consists of five stages designed to provide behavioral expectations to prisoners, teach them to identify concepts and skills to assist in behavior change, and assess their behavior to determine if placement in long-term restrictive housing is

² Idaho's policies can be found at www.idoc.idaho.gov.

necessary. The policy requires that prisoners identified as having a serious mental illness be exempted from long-term restrictive housing placement and instead be placed in an alternative setting, which is usually a mental health unit. Further, the policy adds an administrative review committee for all long-term restrictive housing placements. That committee is at the prisons' division leadership level and includes both of the deputy chiefs of prisons and the chief psychologist, who is a non-voting member.

As of the writing of this report in the spring of 2018, the new disciplinary policy is in effect; the short-term and long-term restrictive housing and the protective custody policies are in the final drafting stage. The command staff is doing a policy review, and the goal is to have training in place during the summer of 2018 to complete a rollout of the reforms. And even before the full implementation, IDOC has seen the impact in the reduction in the numbers of people in long-term restrictive housing and new methods of responding to problems. One example comes from Idaho Maximum Security Institution (IMSI), a facility whose operating capacity was 412 inmates prior to restrictive housing reform and which had included 320 single-occupancy restrictive housing cells. IMSI has expanded its capacity to house 564 prisoners and as of the end of June, IMSI has 134 prisoners in long-term restrictive housing and 24 in short-term restrictive housing. The facility has revised its practices to have more prisoners in close-custody general population.

At Pocatello Women's Correctional Center (PWCC), the facility operating capacity was 313 prisoners prior to restrictive housing reform, with a total of 20 single-occupancy restrictive housing cells. The current operating capacity has increased to 333. Today, one prisoner under the sentence of death is in what is termed long-term restrictive housing status, but, in practice, she is out of her cell three or more hours per day. At the South Idaho Correctional Institution (SICI), 17 short-term restrictive housing beds were taken off line, which enabled the placement of 34 minimum custody general population prisoners to be housed there. As of the end of June 2018, the population in restricted housing had declined from 294 long-term restrictive housing prisoners to 134 people held in long-term restrictive housing.

Reflections on North Dakota's Sustained Solitary Confinement Reform

Leann Bertsch

Director, North Dakota Department of Corrections and Rehabilitation

Since late 2015, the North Dakota Department of Corrections and Rehabilitation (ND DOCR) has maintained an approximately 60–70% reduction in the population of its Administrative Segregation Unit (renamed the Behavioral Intervention Unit or BIU) at the North Dakota State Penitentiary (NDSP). The number of people residing in BIU as of April 5, 2018 was 24. The daily count within this unit has remained under 40 people over more than two years, down from over 100 people in 2015. The average length of stay in BIU has fluctuated between 30 and 60 days, although there are a few people who reside in the unit much longer based on the severity of violence, their expression of continued risk for violence, or their own preference for the BIU setting.

This population reduction has been sustained by continuing to adhere to a multi-faceted screening and assessment process. In fact, NDSP was able to convert one of the tiers within BIU to a preferred housing tier, which is home to 20 of the most consistently pro-social residents within the facility. Another 20-cell unit was converted to the Administrative Transition Unit, where people live when they are in the process of moving from BIU to a general population setting. ND DOCR continues to focus on those who commit any of 10 of the most serious in-custody offenses that may make a person eligible for BIU placement, with some exceptions for fighting and other harmful behaviors when they become severe or chronic. ND DOCR also continues to avoid placing people diagnosed with serious mental illnesses in BIU when possible and divert them to the Special Assistance Unit for more individualized services when it is determined that it is not safe to keep them in general population.

The sustained decrease in the number of people in the BIU setting has allowed for staff to make much better use of their time and to have a greater impact. Corrections officers engage each resident in friendly conversation, change-oriented discussion, or practice of a cognitive or behavioral skill at least twice per day. The unit Sergeant is also tasked with planning one pro-social, structured recreational activity each weekend to increase positive engagement with staff and out-of-cell socialization. Unit staff also provides reinforcement in the form of tangible property items, extra recreation time, extra showers, and the like, based on the person's participation in therapeutic and social activities, as well as the parameters of individualized behavior plans. Currently, BIU residents can access up to two hours and 40 minutes of recreation per day when they engage in skill practices and therapeutic groups, in addition to time spent in groups, individual sessions, and specially-planned enrichment activities.

Behavioral health staff also provides at least one structured leisure activity each week, such as an art project, mindfulness practice, or a movie. Three times per week they facilitate a group that focuses on applying skills to reduce or eliminate the use of violence, manage trauma reactions,

and cope with segregation. Each resident completes an individualized Success Plan, detailing how he plans to apply skills in high-risk future situations, prior to or soon after moving to the Administrative Transition Unit. Once the person has moved to the Administrative Segregation Unit, he has the opportunity to continue to participate in group two times per week to work on skills application as the amount of time spent in general population settings increases. These group curricula and the Success Plan served as the foundation to inform a curriculum developed by Dr. Paula Smith for a Bureau of Justice Assistance Encouraging Innovation Grant related to applying interventions in restrictive housing settings, which ND DOCR will continue to implement as a data collection site related to that grant project.

Over the past two and a half years, ND DOCR has sustained a substantial reduction in the use of the Special Operations Response Team within the BIU (no use of the team at all in this unit since October 2017), along with a reduction in overall uses of force. The prevalence of negative behaviors by residents of the unit has also dramatically decreased. ND DOCR believes the focus on reinforcement of positive change, building friendly relationships between staff and residents, and allowing residents access to pro-social coping skills (music, television, puzzle books, etc.) are collectively responsible for these changes. Perhaps our most exciting outcome to date is the fact that, of the 149 residents placed on BIU program status from October of 2015 to February of 2018, only 26 have returned to BIU program status. That is a 17% “recidivism” rate into the BIU program. ND DOCR is working to collect more precise data regarding these outcomes, but we are very encouraged by these initial results.

These changes, while overwhelmingly positive, have not been without challenges. NDSP did see a significant increase in physical fights between residents in mid-2016 to mid-2017. This increase occurred at the same time that our overall prison population was the highest it has ever been and we have some suspicions that this may be correlated more strongly with the population increase than the changes in the use of restrictive housing. As the population has slowly stabilized and begun to decrease, the prevalence of fighting has decreased as well. While most staff members have been supportive of the changes, there has been a perception that the overall safety of the facility has been compromised. Factually, there has been no increase in assaults on staff, assaults on residents by peers, or the overall level of violence perpetrated within the institution. There has also been a perception that residents are not “held accountable” for rule violations. In reality, residents continue to receive significant sanctions—the only difference is those sanctions are much less likely to include lengthy placements in restrictive housing, especially for non-violent offenses.

In order to address the problem of institutional violence more thoroughly, ND DOCR is excited to begin assessing people entering prison using the Risk of Administrative Segregation Tool (Labrecque & Smith, 2017) in order to identify those at highest risk for displaying institutional violence resulting in placement in restrictive housing. A copy of the tool is below.

Those identified as high risk will then be offered a 10-session group intervention program focused on establishing a pro-social adjustment to prison and managing high-risk situations for violence in an effective, non-violent manner. This program will begin in April 2018. Dr. Paula Smith and Dr. Ryan Labrecque will evaluate the effectiveness of this intervention in preventing future violence as compared to a no-treatment control group. Another future direction is to develop a peer support specialist certification program for prison residents, with the goal of providing additional support to those at risk for placement or placed in BIU.

One way to provide an overview of the outcomes, as of the spring of 2018, is by the chart below.

Type of Seg.	Investigative	Disciplinary	BIU Program	Total Unit
Avg. # of days	5.55	7.63	18.97	32.14

Type of Seg.	Investigative	Disciplinary	BIU Program	Total Unit
Total # Stays Over 14 Days	30	38	60	128

Restrictive Housing: The Challenge of Reforming the Fabric of an Agency

Gary Mohr,

Director, Ohio Department of Rehabilitation and Correction

Restrictive housing reform represents one of the most extensive reforms in the history of corrections in the United States. The use of restrictive housing to respond to prisoner misbehavior has been the foundation of correctional management philosophy for over a century. The practice is embedded in the philosophy and logic of nearly all agency staff and is interwoven into the fabric of any correctional agency's culture.

The use of restrictive housing remains an essential part of managing safe and secure prisons. Changing the way a correctional organization uses restrictive housing requires a delicate balancing act of improving conditions of confinement for prisoners who are more conducive to rehabilitative ends, while simultaneously ensuring we protect our staff and prisoners from individuals whose behavior indicates they are poised to harm others. Further, for most of my 44 years in this work, restrictive housing has been used as the default penalty for all types of rule violations, whether violent or not. Changing practices associated with the use of restrictive housing is a delicate operation because our staff, those who work in the trenches of our prisons, firmly believe the use of restrictive housing as a default disciplinary sanction is tied directly to their safety. Reforming the system to use restrictive housing only when there is a threat to safety and security, rather than as punishment, often becomes viewed as an attempt to jeopardize safety.

Today, that cultural belief has been reinforced by the horrific incidents in prisons throughout our country from North and South Carolina, to Pennsylvania, Arizona and many other jurisdictions including Ohio. In 2018, an Ohio Correctional Officer was stabbed 32 times by two prisoners who were in extended restrictive housing; miraculously, he survived. This event not only magnified the challenge of continuing to reform restrictive housing, but also changed my life, as it was a vivid reminder of how precious life is and how we as leaders carry the heavy responsibility for the welfare of so many. As we continue the much-needed reform regarding the practice of placing prisoners in confined settings, an area where there is still much work to be done, the realities and images of individuals who have experienced serious, life-changing incidents cannot be ignored. The impact on their lives, as well as on the lives of their loved ones and fellow staff members, must be of paramount concern.

Ohio can clearly report success in reducing prisoners in restrictive housing as evidenced by data comparing the use of restrictive housing between 2013 to 2017. In fact, there has been a 45% reduction in the number of prisoners in restrictive housing during that time period. While this reduction is meaningful and significant, it is also a reminder of the need for restrictive housing now and in the future. The reality is that there are people in prison who pose a serious and direct threat to others, and we have a duty to protect others from these prisoners. As agency leaders, we count on our staff in all correctional systems to carry out post orders and follow our directives 24

hours a day, 7 days a week. Those dedicated public servants must acknowledge and trust their leaders, even though they will not always agree, or the overall agency goals will not be achieved. Leaders cannot merely issue edicts directing a course of action when those directives are contrary to the will of the workforce if they expect the vision of the policy to be realized. In matters that challenge the foundational beliefs and values of the staff, change must occur over time through consistent reinforcement of the philosophy underlying the policy direction.

Operational Challenges to Restrictive Housing Reform: The Ohio Department of Rehabilitation and Corrections (DRC) began restrictive housing reform in late 2013 by conducting wide-ranging discussions on how and why correctional supervisors/executives use restrictive housing. In 2014 and 2015, the DRC examined all policies and procedures, even hiring external consultants to provide insight into current practices, assess areas for improvement, and recommend a pathway for reform. In 2015, it became apparent restrictive housing reform was intrinsically linked to discipline reform. As such, the DRC needed to re-examine the entire way prisoner rule violations were addressed. Below, I outline our reforms.

Reform Initiative A: Prison Disciplinary Reform (Swift, Certain, and Fair): In late 2015 and early 2016, the DRC began to change the philosophy associated with the offender disciplinary system to encourage sanctions that adhere to swift, certain, and fair (SCF) principles of discipline. Most importantly, this change included using alternative sanctions to reduce the use of restrictive housing. Implementation required, and continues to require, ongoing changes to organizational culture.

Challenge 1: Operationalizing the changes in sanctioning practices remains an on-going challenge by trying to achieve consistency, fairness, and immediacy of application across all prisons.

Reform Initiative B: Alternatives to Restrictive Housing—Limited Privilege Housing: The DRC has the option in Ohio's Administrative Regulations to use limited privilege housing. Limited privilege housing is a condition of confinement that significantly limits a prisoner's privileges, so it can be used to respond to low-to-moderate severity rule violations. Limited privilege housing is not restrictive housing. It is, however, a meaningful sanction that adheres to swift, certain, and fair principles of sanctioning. It also removes prisoners from the housing area where they committed their offense. In late 2015 and lasting until today, the DRC greatly expanded the use of limited privilege housing and encouraged staff to not use restrictive housing as the default placement for prisoners who have misbehaved unless they posed a danger to the prison or to others.

Challenge 2: Proper utilization of the limited privilege housing sanction has been a challenge. DRC continues to experience under-utilization and over-utilization of the sanction as an alternative to restrictive housing, and there is inconsistency in the security practices between areas.

Challenge 3: One of the greatest cultural challenges was passive resistance by staff who, in frustration over being asked not to use “segregation” for many offenses, assumed an “all or nothing” stance towards security. Simply put, if they could not place a prisoner in segregation (restrictive housing), then they just had to let prisoners do “whatever they wanted” and could take no meaningful action. Others felt a limited privilege housing unit could have a “relaxed” security posture when in reality limited privilege housing units can be just as secure as a restrictive housing unit if the type/kind of prisoner needs such levels of supervision. The critical difference is the out of cell time and access to programming and services which require all staff to change the way they work.

Challenge 4: A cultural myth developed that restrictive housing reform’s goal was to reduce the use of restrictive housing regardless of the prisoner’s behavior. DRC leadership was compelled to constantly remind staff that restrictive housing reform never meant prisons could not use restrictive housing to address violence or seriously disruptive behavior. This myth was persistent and remains even when policies were released providing staff the option of stronger and lengthier disciplinary sanctions. The written words contained in the policy, as well as emails sent to all staff, were overshadowed by this mythology that is still persistent five years into reform.

Reform Initiative C: Widespread Training/Communication on Restrictive Housing: Throughout 2016 and carrying into 2018, the DRC has revised dozens of policies, lesson plans, and in-service training on restrictive housing Reform and its related components within the DRC.

Challenge 5: Communication of the “why” behind restrictive housing Reform remains our prevailing challenge. A significant number of staff still report they do not understand the reasons for reform despite training, memos, policies, and emails that have tried to explain all aspects of the reform effort. More importantly, many of them do not understand the permanence of these changes and are “waiting to go back to the way it was.” Finally, it cannot be ignored that there are some staff who simply believe prisoners should be severely restricted while in prison and especially when they commit any rule violations. It is reasonable to say that when an organization operates for nearly a century in one manner, it will take a very long time to change the fundamental beliefs of the staff who operate that organization. These individuals who, regrettably, exist at all levels in our agency continue to passively, or sometimes actively, resist restrictive housing reform, likely in the hope the reform will fail and the DRC will have to return to the status quo which existed in 2013.

Challenge 6: The volume and pace of change is a significant, on-going challenge for staff at all levels. Change for any organization is difficult, but the root nature of

this change coupled with the fact the change requires a shift in personal, organizational, and leadership philosophy, makes it incredibly challenging.

Challenge 7: Staff perceptions exist by some at all levels (line, supervisor, and executive staff) that are less than supportive of/favorable to restrictive housing reform efforts thus far. There is a strong feeling these policies are making people less safe and reform values prisoners over staff safety. The serious incident of the stabbing of our correctional officer mentioned earlier has kept this belief alive.

Challenge 8: There is substantial message dilution in training and communication. As information is passed down from each level of leadership and supervision, the message gets changed and altered, greatly affected by the cultural resistance outlined in previous challenges. As such, the DRC must continually improve the content and delivery of the restrictive housing Reform “communication plan.”

Reform Initiative D: Serious Misconduct Panels and External Oversight of Extended Restrictive Housing: Prior to reform, local wardens possessed the authority independently to place prisoners into restrictive housing for six months, and in some cases, for a year or more. There was no centralized oversight for these two review processes. Wardens applied this power based on their individual perspective about misbehavior rather than an organizational view. In response, the DRC established the “serious misconduct panel” (SMP) as the only process by which offenders can be referred to “extended restrictive housing” and implemented centralized oversight of all placements and releases. The SMP referral is still made by a warden but is approved by a regional director and the panel is comprised of two exempt employees from a prison other than the one where the offense occurred.

Challenge 9: There have been concerns expressed that the use of the SMP implies a mistrust of the professional judgment of local teams who know the prisoners best. The delicate balancing act of ensuring consistency across all prisons while respecting local decision makers becomes interpreted as a form of heavy-handed oversight. In addition, prison leaders believe the new policies curtailed their ability to control violence and disruption at their prisons.

Challenge 10: The procedural aspects of the SMP are cumbersome and time consuming. The ongoing challenge is to streamline the SMP process without hindering the objectivity, due process, or thoroughness of the review.

Reform Initiative E: Conditions of Confinement and Programming for Extended Restrictive Housing: The DRC examined the conditions of confinement for offenders in extended restrictive housing and implemented additional programming, meaningful activities, and out-of-cell time. This process includes enhanced release preparation programs as best exemplified by the Ohio State Penitentiary [OSP] reversion program. This program introduces pro-social elements such as

employer engagement, family activities/events, and meals in group settings, including meals with the warden, into our highest security setting.

Challenge 11: The physical plant and infrastructure of all DRC facilities were not designed to provide a lot of out-of-cell time for prisoners in restrictive housing. The facilities were designed according to the philosophy of corrections in the United States at the time. The last prisons constructed were designed in the mid-1990s, almost a quarter of a century ago. The only way to offset some of these design issues is with significant staffing resources, which are very costly and difficult to appropriate in challenging budgetary environments.

Challenge 12: Self-imposed isolation, even when out-of-cell opportunities are granted, remains a considerable challenge. Prisoners choose these environments in a significant number of circumstances.

Challenge 13: It is a continuing challenge to ensure conditions of confinement differ between restrictive housing, limited privilege housing, and general population in a meaningful way that sufficiently deters prisoners from engaging in misbehavior. The more you give prisoners in restrictive housing/extended restrictive housing/limited privilege housing, the less appealing rule compliant behavior becomes for prisoners in general population. Over-compensating to assist restrictive housing/extended restrictive housing prisoners can exacerbate the problems associated with Challenge 12 and, as has been proven by some cases in Ohio, actively encourage prisoner misbehavior to achieve a placement into extended restrictive housing.

Reform Initiative F: Limiting Extended Restrictive Housing for Seriously Mentally Ill Prisoners and Enhanced Monitoring: The DRC recognizes the potential effects of restrictive housing on the seriously mentally ill. However, seriously mentally ill prisoners, like others, can commit very serious acts of violence and disruption unrelated to their mental illness. Furthermore, even if the violence is related to their mental illness, the threat to the safety of others cannot be ignored. Therefore, the DRC has implemented practices to closely monitor the utilization of extended restrictive housing for prisoners with serious mental illness, and placement in extended restrictive housing for a person with serious mental illness must be approved at the departmental level. We also use and have expanded high security Residential Treatment Units [RTUs] as an assessment/diversion opportunity to avoid placement in extended restrictive housing for some people with serious mental illness.

Challenge 14: The single greatest challenge in this effort is to develop and implement a “space between” restrictive housing and general population for dangerous, disruptive, and violent seriously mentally ill prisoners. Efforts to operate a “secure adjustment unit” for violent, seriously mentally ill offenders were

unsuccessful. We have added a significant number of Residential Treatment Unit [RTU] beds for the seriously mentally ill. There remain prisoners who are seriously mentally ill and violent/disruptive, but do not meet the standard of our mental health staff for an RTU level of care.

Challenge 15: DRC has expanded the number of high security RTUs, but there remains a substantial need for more beds and staff.

Challenge 16: Although philosophically we understand the need to treat seriously mentally ill prisoners differently, if one lessens the sanctions on prisoners solely because they are seriously mentally ill, other prisoners may perceive a tremendous injustice. This can cause disruption in housing units where both seriously mentally ill and non-caseload prisoners are held. In addition, as we attempt to grant more out-of-cell time and increased staff engagement for seriously mentally ill prisoners even after they have committed serious acts of violence against staff, we experience a growing cultural resistance to reform. Staff who are victimized, sometimes repeatedly, by these prisoners perceive these acts as being unfair and proof there is lack of care for staff and for the impact that violence by prisoners has on them. Thus the challenge continues.

Reform Initiative G: Tracking and Data Collection: The DOTS system, our tracking system, in present form, cannot effectively track people placed in restrictive housing or limited privilege housing. Since 2013, the DRC has continually developed new methods for measuring restrictive housing, primarily by using snapshots. Currently, Operations and IT staff are developing a restrictive housing/limited privilege housing Disciplinary Tracking System integrated into the DOTS system that, once completed, will provide a comprehensive system for examining disciplinary sanctions and their utilization, as well as profiles and real-time data on prisoners in restrictive housing/limited privilege housing. It will track the work flows associated with major job processes which may affect length of stay in restrictive housing/limited privilege housing including, but not limited to:

- 1) Hearing Officer and RIB Decisions
- 2) SMP referrals, extended restrictive housing placements, and extended restrictive housing reviews
- 3) Investigations regarding prison administrative functions such as misbehavior, protective control, separations, and staff nexus
- 4) Security Classification Reviews and Increases/Decreases
- 5) Prisoner Movement and Transfers

Challenge 17: While waiting for these changes, it is not acceptable to forgo efforts to track restrictive housing. Reporting mechanisms have changed somewhat over time and to get accurate data is a cumbersome process that is very labor-intensive.

Conclusion: On December 27, 2010, when I met with Governor Kasich and decided to accept this journey to oversee the Ohio Department of Rehabilitation and Correction, he asked me to do two things. First, we could not afford another Lucasville, the riot that lasted 11 days and resulted in 10 deaths. Secondly, “Go reform the most unreformed part of government.” While we have made some very progressive changes in creating reintegration environments, expanded programming including treatment of the addicted both in and outside our prison walls, expanded residential treatment beds for the mentally ill, employment partnerships with employers with experiences both inside the prisons and out in the communities, and engagement with community faith partners, the challenge of reforming restrictive housing is at the core of that challenge. Restrictive housing reform remains a challenge to us in Ohio and many other jurisdictions around our great country.

A National Shift in Perspective

These four narrative accounts are illustrative of a significant change in restrictive housing policies. As ASCA-Liman reported in 2013, the rules promulgated by corrections departments then gave wide discretion to correctional staff to place individuals in restrictive housing. The policies had broad criteria for putting people into isolation, and little focus on moving people out of restrictive housing. In contrast, in 2018, directors around the country are revisiting their rules on restrictive housing and, in many instances, seeking to narrow the bases for entry, to increase time out-of-cell, and to expand opportunities for sociability. Moreover, time-based categories of restrictive housing have emerged. Correction policies distinguish between “*restrictive housing*” (defined as requiring a prisoner “to be confined to a cell at least 22 hours per day”) and “*extended restrictive housing*” (defined as separating a prisoner “from contact with general population while restricting” the prisoner to his cell “for at least 22 hours per day and for more than 30 days”).³

One illustration of the revised approaches to limiting the use of restrictive housing comes from the American Correctional Association (ACA), which in 2016 issued new Performance Based Standards on Restrictive Housing. The ACA called on jurisdictions to ensure that prisoners not be released directly to the community from restrictive housing. Further, the ACA Standards placed a prohibition on assigning individuals under the age of 18 or pregnant females to extended restrictive housing. The ACA Standards also stated that prisoners “will not be placed in Restrictive Housing on the basis of gender identity alone.”⁴ In addition, the Standards provided that correctional departments “not place a person with serious mental illness in Extended Restrictive Housing.”⁵

The ASCA-Liman 2018 survey mapped the impact of these ACA Standards. Thirty-six jurisdictions reported that they had reviewed their restrictive housing policies since the release of the 2016 Standards, and 25 described relying on the ACA Standards when making policies. For example, 21 jurisdictions reported that they had implemented the ACA Standard that persons with serious mental illness not be placed in extended restrictive housing.

More generally, in the larger monograph from which these materials are excerpted, we report on responses from 43 jurisdictions discussing a range of policy changes, including narrowing the criteria for entry into restrictive housing. For example, in one jurisdiction, infractions such as “horse play” or possession of small amounts of marijuana, which previously could have formed the basis for placement in restrictive housing, would no longer lead to isolation.

³ AMERICAN CORRECTIONAL ASSOCIATION RESTRICTIVE HOUSING PERFORMANCE BASED STANDARDS (Aug. 2016), p. 3, *available at* <https://www.asca.net/pdfdocs/8.pdf>.

⁴ *Id.* at Standard 4-RH-0035, p. 40.

⁵ *Id.* at Standard 4-RH-031, p. 46

In addition, jurisdictions reported expanding the oversight of placement, altering the amount of time spent in-cell, and offering more opportunities for sociability through programs, recreation and social interactions. More than half of the 43 responding jurisdictions discussed requiring consideration of less-restrictive alternatives before placement in restrictive housing.

One of the longstanding goals of the ASCA-Liman surveys has been to build a longitudinal database to enable evidence-based analysis. The 2015 ASCA-Liman Report found that more than 66,000 prisoners were in restrictive housing in 34 jurisdictions. Based on Bureau of Justice Statistics (BJS) on prison populations, the 2015 Report estimated that between 80,000 to 100,000 prisoners were in restrictive housing across the country. The 2016 Report found that about 67,500 prisoners were in restrictive housing in 48 jurisdictions, which accounted for 96.4% of the prison population. The 2018 Report identified a total of about 49,197 prisoners in restrictive housing in 43 jurisdictions which accounted for 80.5% of the U.S. prison population. Thus, the 2018 Report estimates that 61,000 prisoners were in restrictive housing as of 2017. The caveats on these numbers are that the definitions of restrictive housing varied somewhat among the three reports, and that the data do not generally include juveniles or individuals in jails. Further, no inquiries were made about individuals held in immigration or military detention.

Forty jurisdictions provided restrictive housing data in both 2016 and 2018. The 2018 Report compared this information and identified a reduction in 29 jurisdictions in the numbers of prisoners in restrictive housing and an increase in 11 jurisdictions. Across the 40 jurisdictions, the percentage of prisoners in restrictive housing decreased from 5.0% in 2015 to 4.4% in 2017.

Another window into changes over time comes from information about how long people spend in restrictive housing. Thirty-one jurisdictions responded with information on length of stay in both the 2015-2016 and in the 2017-2018 surveys. We asked jurisdictions for information on different lengths of confinement in restrictive housing: 15 days to one month, one to three months, three to six months, six months to one year, one to three years, three to six years, and longer than six years. Overall, the numbers of individuals in restrictive housing across most lengths of time decreased from 2016 to 2018. The number of prisoners in restrictive housing for time periods six months or less decreased in about as many jurisdictions as it increased. The number of prisoners in restrictive housing for time periods longer than six months decreased in more jurisdictions than it increased.

The monograph on the 2017-2018 data and policies, coupled with the narratives from four jurisdictions, makes plain that many correctional systems around the United States are seeking to lower the numbers of people in their cells for 22 hours or more on average for fifteen days or more and to alter the activities and opportunities for those held in restrictive housing. The reports from correctional officials reflect the national and international consensus that restrictive housing can impose grave harms on individuals confined, on staff, and on the communities to which prisoners return.

Association of State Correctional Administrators (ASCA)

ASCA is the most exclusive correctional association in the world. ASCA members are the leaders of each U.S. state corrections agency, Los Angeles County, the District of Columbia, New York City, Philadelphia, the Federal Bureau of Prisons, U.S. Military Correctional Services (Army, Navy, Air Force, Marines), and United States territories, possessions, and commonwealths. ASCA members lead over 400,000 correctional professionals and supervise approximately eight million prisoners, probationers, and parolees. ASCA's goal is to increase public safety by utilizing correctional best practices, accountability, and providing opportunities for people to change.

The Arthur Liman Center for Public Interest Law, Yale Law School

The Liman Center was endowed to honor Arthur Liman, who graduated from Yale Law School in 1957. Throughout his distinguished career, he demonstrated how dedicated lawyers, in both private practice and public life, can respond to the needs of individuals and of causes that might otherwise go unrepresented. The Liman Center, which began as the Liman Program in 1997, continues the commitments of Arthur Liman by supporting work, in and outside of the academy, dedicated to public service in the furtherance of justice.

Acknowledgements

The Report from which these excerpts are taken is based on a survey co-authored by ASCA and by the Liman Center at Yale Law School. The research and report teams were led at ASCA by Leann Bertsch, Kevin Kempf, Bob Lampert, Gary Mohr, Rick Raemisch, A.T. Wall, and Wayne Choinski, and at Yale by Judith Resnik, Anna VanCleave, Kristen Bell, and Alexandra Harrington. Yale Law students Greg Conyers, Catherine McCarthy, Jenny Tumas, and Annie Wang played major roles in the research, analysis, and drafting of that Report. Yale Law students Faith Barksdale, Stephanie Garlock, and Daniel Phillips reviewed and edited the final drafts. We also received helpful suggestions from the Vera Institute of Justice.

Thanks are due to all the jurisdictions that responded to the survey and provided comments and reviews thereafter. This research has been supported by Yale Law School, the Liman Center, the Vital Projects Fund, and the Oscar M. Ruebhausen Fund at Yale Law School. This monograph was also made possible in part by a grant from Carnegie Corporation of New York to Judith Resnik, who is a 2018–2020 Andrew Carnegie Fellow. The Vital Projects Fund, the Ruebhausen Fund, and Carnegie Foundation are not responsible for the research and views expressed here. Special thanks are due to Bonnie Posick of Yale Law School's staff for expert editorial advice and to Elizabeth Keane, Program Coordinator of the Liman Center.

This Report is part of a series of ASCA-Liman and Liman research projects, which include *Prison Visitation Policies: A Fifty State Survey* (2012); *Administrative Segregation, Degrees of Isolation, and Incarceration* (2013); *Time in Cell* (2014); *Aiming to Reduce Time in Cell* (2016); *Rethinking Death Row* (2016); and *Reforming Restrictive Housing* (2018). To download copies of these reports, please visit the Liman Center's website at <https://law.yale.edu/centers-workshops/arthur-liman-center-public-interest-law/liman-center-publications>. These reports can also be found on ASCA's website at <http://asca.net/documents/>. This Report may be reproduced free of charge and without the need for additional permission. Total Agency Expenditures (FY 2017 and FY 2018)

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "39. Please list all costs included in SCDC's metric on total cost per inmate per year."

SCDC FY 2017 and FY 2018 Total Agency Expenditure Comparison

Inmate Work-Related Performance Measure Terms Defined

Included in the Department of Corrections' (SCDC) April 29, 2019 letter to the House Legislative Oversight Committee (LOC). This information was provided in response to the following question in LOC's March 27, 2019 letter to the Department of Corrections: "42. Please provide a chart summarizing the different ways in which SCDC categories "work," and note the applicable statutory authority. Also, please compare and contrast these categories with the categories SCDC uses for its performance measures. Below are some examples of terms and categories in statutes and SCDC performance measures."

Work-Related Performance Measure Terms Defined

Percentage of inmates participating in work program or earned work credit jobs

- Definition: Number of inmates who are currently earning work credits divided by the total number of inmates in the SCDC custody count.
- Applicable SC Statutes: Work Release, Work Credits, Labor on Public improvement or development, Labor for public service work or related activities, Labor on public works and ways, Statehouse landscaping, State institutions utilizing inmate labor, Paid employment in the community

Recidivism rate of inmates who participate in a work program

- Definition: Among inmates who were assigned to a work release program at any time during their incarceration, the number who return to SCDC within three years of release (for supervision revocations or new offenses that occur after their release) divided by the number released during that fiscal year.
- Applicable SC Statutes: Work Release, Paid employment in the community, Work Credits

Recidivism rate of inmates who participate on a labor crew

- Definition: Among inmates who were placed on a labor crew assignment at any time during their incarceration, the number who return to SCDC within three years of release (for supervision revocations or new offenses that occur after their release) divided by the number released during that fiscal year.
- Applicable SC Statutes: Work Credits, Labor on Public improvement or development, Labor for public service work or related activities, Labor on public works and ways, Statehouse landscaping, State institutions utilizing inmate labor, Paid employment in the community, Litter control program

Recidivism rate of inmates who participate in prison industries

- Definition: Among inmates who were paid for a prison industry job at any time during their incarceration, the number who return to SCDC within three years of release (for supervision revocations or new offenses that occur after their release) divided by the number released during that fiscal year.
- Applicable SC Statutes: Prison Industries-Private sector service business, Prison Industry program (traditional)
